Such is the age of this immense structure, that the perpendicular joints between the blocks are worn away to the width of from five to ten inches at the bottom of each joint, and the entire of the pyramid so much worn by the storms, the vicissitudes and the corrodings of centuries, as to make it easy of ascent, particularly upon one of its sides.—We say one of its sides, because a singular fact connected with this remarkable structure is, that it inclines nearly ten degrees to one side of the vertical or prependicular. There is not the slightest probability that it was thus erected, but the cause of its inclination is not easily accounted for.

By whom, at what age of the world, and for what purpose, this pyramid was erected, will probably forever remain a hidden mystery. The party, in their unsuccessful attempt to cross the desert at this point, in their wanderings, discovered other evidences of a nature that would seem to make it certain that portion of country upon the Colorado, now the most barren, was once the garden and granary of the continent, and the abode of millions of our race.

## THE TERRITORY OF NEBRASKA.

As the white immigrants into the Indian territory have organized a provisional government in Nebraska, and are about to send a delegate to Congress, and the question of the legality of their acts will probably come before Congress, at its next session, the following facts, from the New York Express, are interesting:

Nebraska is that region of the country which, after Gen. Jackson's onset upon the Cherokees and other Indians, in 1829-30, was *consecrated* for an Indian refuge—a perpetual Indian home for all time and through all ages. This onset, the history of it, the excitement about it, and the treaties after it, every reader of American history must know. The result was the consecration of Nebraska to the Indians for ever and for ever. There are altogethr twenty-four tribes, of greater or less extent, now on this land. They are the Delewares, under treaty of 1830; Shawnees, of Mo.; Osages, Seneca and Shawnee; Senecas, Ottawas, Shawnees of Ohio; Kaskias, Peorias, Wears and Piankesaws, Miss.; Sacs and Foxes, Kickapoos, Quanpaws, Cherokees, Iowas, Sacs and Foxes, of Mo.; Miamis, Kansas and Potowatomies. The various treaties with these tribes commenced in 1818 and closed in 1846. In almost every treaty, there is this or a simizar clause on the part of the United States:

"Will grant by patent or fee simple to them or their heirs for ever, as long as they shall remain a nation," &c.

In several of the treaties there is an express guarantee that there shall never be in the country so ceded any territorial government, and that "the same shall never become subject to any State authority or laws." The amount of land thus conveyed amounts to several millions of acres.

We never supposed, and we do not now suppose, that these were treaties to be kept as stipulated; but we have never supposed, and we will never suppose otherwise, till we are compelled, that they will be broken without consent, without renumeration, without fair and full agreement. As the Indians must perish, let us strip them with grace.

A provisional territorial government, we see, is organized in Nebraska, despite these treaties. Settlers are going and have gone there, in the face of these treaties, and the strong arm of force is threatened, if necessary, for their maintenance. The Federal Government has but one course, if it be just, to maintian the faith of treaties while it renegotiates. The Indians, foreseeing their fate, in all probability, will sell their soil; and if so, though we rob and plunder, we shall do it with something of grace if not of dignity.

What is man without the hope of future life? How feeble! how disconsolate! how unsatisfied! Earth it is true, has a thousand allurements, and opens to our tastes unnumbered sources of joy; but in the midst of them there is a certain something wanting to gratify the soul, if the hope of immortality be absent.

# Sunday Reading.

## LINES BY MILTON IN HIS OLD AGE.

LATELY DISCOVERED, AND FIRST PUBLISHED IN THE RECENT OXFORD EDITION OF THE POET'S WORKS.

I am old and blind!
Men point at me as smitten by God's frown,
Afflicted, and deserted of my mind,—
Yet I am not cast down.

I am weak, yet strong,—
I murmur not that I no longer see,—
Poor, old and helpless, I the more belong,
Father Supreme! to Thee!

O merciful One!
When men are farthest, then Thou art most near;
When friends pass by—my weakness shun—
Thy chariot I hear.

Thy glorious face
Is leaning towards me,—and its holy light
Shines in upon my lonely dwelling place,
And there is no more night.

On my bended knee
I recognize Thy purpose clearly shown—
My vision Thou hast dimmed that I may see
Thyself, Thyself alone.

I have naught to fear;
This darkness is the shadow of Thy wing,—
Beneath it I am almost sacred—here
Can come no evil thing.

Oh! I seem to stand
Trembling where foot or mortal ne'er hath been,
Wrapped in the radiance of Thy sinless land,
Which eye hath never seen.

Visions come and go—
Shapes of resplendent beauty round me throng—
From angels lips I seem to hear the flow
Of soft and holy song.

It is nothing now,
When heaven is opening on my sightless eyes,
When airs from Paradise refresh my brow,
The earth in darkness lies.

In a purer clime
My being fills with rapture,—waves of thought,
Roll in upon my spirit—strains sublime
Break over me unsought.

Give me now my lyre!
I feel the stirrings of a gift divine,
Within my bosom glows unearthly fire
Lit by no skill of mine.

## COMING HOME.

Coming home. Glad words! The water dashes upon the prow of the gallant vessel. She stands on the deck, and while the winds woo her ringlets, look anxiously for the headlands of home. In thought there are warm kisses on her lips, and hands on her temple.

Many arms press her to a throbbing heart and one voice sweeter than all the rest, whispers, "My child!" Coming home! Full to bursting in her young heart, and she seeks the cabin to give vent in blessed tears.

Coming home! The best room is set apart for his chamber. Again and again have loving hands folded away the curtains and shook out the drapery. The vases are filled every day with fresh flowers, and every evening tremulous, loving voices whisper, "He will be here to-morrow, perhaps."

At each meal the table is set with superfluous care. The newly embroidered slippers, the gown, the study cap that he will like so well, are prepared to meet his eye.

That student brother! He could leap the waters, and fly like a bird home. Tho' he has seen all the splendor of olden cities, there is but one spot that fills his heart, and that spot he will soon reach—"sweet home."

Coming home! What sees the sun-browned sailor in the darkling waters? He smiles! There are pictures there of a blue eyed babe and its mother.

He sees her watching from her cottage door; he feels the beating of her heart in the pulse of his own, when a familiar foot-fall touches only the threshold of memory.

The bronzed sailor loves his home; as an eagle, whose wing seeks oftenest the tracks of the air, loves his mountain eyrie—his treasures are there.

Coming home! Sadly the worn Californian folds his arms, and sinks back upon his fevered pillow. What to him is his yellow gold? Oh! for one sweet smile of kindred! But that may not be. Lightly they tread by his bedside, watch the dim eye, moisten the parched lips.

A pleasant face bends over him—a rough palm gently pushes back the moist hair, and a familiar voice whispers—"Cheer up my friend, we are in port, you are going home."

The film falls from the sick man's eye.—Home is near! Can he be almost there? A thrill sends the blood circling through his limbs—what! shall he see those eyes before the night of darkness settles down forever? Will his babes fold their little arms about him and press their cherry lips to his? What wonder if new vigor gathers in that manly chest! He feels strength in every nerve; strength to reach home; strength to bear the overwhelming joy of meeting these dear ones.

Coming home! The very words are rapturous—bear import of everything sweet and holy in the domestic life—nay more, they are stamped with the seal of heaven; for the angels say of the dying saint, "He is coming home."

Jewish Worship.—The following is part of the daily prayer of every devout Jew:—"Blessed art thou, O Lord our God, King of the universe, who hast not made me a woman." The Jewess on the other hand, says:—"Blessed art thou, O, Lord, King of the universe, who hast made me according to thy will." In a Jewish synagogue, the females constitute no part of the congregation, consequently they are separated from the males—nor are they allowed to join in any part of the public worship. All the duties of congregational worship, whether in a private *minyan*, or in the synagogue, devolve entirely upon the male members.

## GLIMPSES IN THE "OLD COLONY."

BY MRS. M. W. H.

No. IV.—Early Scenes Revisited.

When young persons visit their homes, after an absence of a few years, it is always with the hope of meeting their friends and enjoying all the pleasures of social reunion; and if a few of the familiar faces of dear ones whom they were wont to see, are missed from the circle, perchance they drop a tear and ask

"Who hath not lost a friend?
There is no union here of hearts,
That hath not here an end!"

And soon the vortex of human activity swallows up the remembrance. But when older people, who have been sobered by earnest wrestling with the cares and duties of life, return to the place of their nativity after long years of absence, they not only enjoy a renewal of youthful friendships, but feel a melancholy satisfaction in visiting those quiet resting places, where so many of the fathers and mothers whom they knew in childhood, as well as their former associates, so calmly sleep "that sleep that knows no waking."

With such feelings, I recently set out one summer morning to spend a day among the old burial grounds of my native town. My footsteps instinctively turned to that consecrated spot among the pines, to which in childhood I frequently followed the remains of dearly loved friends. Beneath the shade of those venerable pines, rests all that is earthly of my *Mother*. All too early for the happiness of her little ones, was that sainted mother called home. This place, gloomy as it was, became the favorite haunt of my early days. Whilst sitting in their shade,

Oft did I list, till every breeze
That sighed among those dear old trees,
To my sad spirit seemed to say,
"Now, in thy spring-time soar away,
Ere sin hath spread for the its toil,
Or thou shalt struggle in the coil
That binds, as with a thousand strings,
Immortal mind, to mortal things."

Then would that blest one's shade arise.
And pass before my mist-clad eyes,
The hopes, the joys, the griefs and tears,
Full sure to come, with coming years—
Would bid me bear the humble part,
With full integrity of heart,
Assigned by my Creator's will,
Upon life's "fitful stage" to fill—
Then meekly give my dust to earth,
My soul to God who gave it birth.

Let us pass on to another of those old burial places, which has been suffered to become overgrown with briars and bushes, so that we can scarcely find an upright monument. Here are indeed some few tolerably preserved: let us put aside this bramble and see who occupies this narrow bed, for beneath the overgrown moss we decipher

"The sweet remembrance of the just,
Shall flourish when they sleep in dust."

By scraping off a little more of the moss, we find it is the grave of Dr. Abiel Howard, who was born 1704 and died 1777. This was the great-grand father of a poet* whose name is dear to every American heart. Dr. H. was a graduate of "Old Hanard" in the class of 1728, the first man in Bridgewater who received a collegiate education. Near by, in this "corner obscure and alone," rests one of his daughters, who was quite celebrated in early life for the quantity and beauty of her needle-work. Being born in 1748, instead of 1848, she had no advantages of buying materials with patterns ready drawn, as we now can, but was compelled not only to originate the patterns, spin and dye the different shades of thread to work with, but to manufacture from the raw flax or wool, the fabric to receive the beautiful creations of her brain. I have in my possession a portion of a suit of linen bed-curtains manufactured and embroidered by her about 1765. I think this specimen worthy of a place in the State Fair, to remind us of the superior advantages we enjoy, as well as to show what obstacles perseverance and industry will overcome. Its substantial and durable character is strikingly illustrative of the people, and the times when a good thing, once obtained, did not go out of fashion with the next arrival from France.

We can resort to no places that tell more emphatically of improvement and progress than the various localities where lie the dead of the last two hundred years. I am told that almost within the shade of the towering trees of Mt. Auburn, may at this moment be seen large flat stones, that were drawn thither by oxen to cover the graves of the dead, to prevent the wolves from digging up the remains.

Let us rejoice that, notwithstanding the lightning speed which characterizes all the undertakings of the present day, we find time to pause and strew flowers on the ashes of the dead. It would seem that in former times, the most gloomy and least valued spot was selected in which to hide the dead out of sight. An improved taste is fast making our cemeteries the most attractive features in the country. They are becoming the repositories of the most beautiful and touching creations of art and taste. Wherever churches and school-houses meet the eye, not far off will be found a home for the dead, from which every revolting feature has been sedulously excluded — where the "Death's-head and cross-bones" has given place to some sweet emblem of man's destiny—some perennial that is deemed to be cut down by the frosts of Autumn, only to bloom again under the genial influence of revivifying Spring. It is pleasant to find that in some localities the ancient burial grounds have been rescued from utter oblivion, and made attractive to the eye.

As we pass along the highway, on the corner of this farm is a small enclosure, and a tomb within it surrounded by willows, roses, petunias, violets and numerous other choice plants and shrubs. Knowing the family to whom it belongs, I must be pardoned for lingering a moment to view the scene of a sad accident that consigned an inmate to the ruthless embrace of that cold dormitory.

Miss D., a beautiful and interesting girl, became the victim of a violent fever, which terminated her life. Her father was inconsolable for her loss, and conceived the idea of constructing a tomb, and depositing her remains within it, where he could visit them at pleasure; he could not bear the idea of having his beloved daughter "buried out of his sight." Accordingly he built this tomb, and when about to put the finishing stroke to it, he sent an assistant for some implement with which to give the last touch. Scarcely had the man reached the outside when the structure caved in, burying Mr. D. in the ruins, whence he was taken a lifeless corpse. His family had the tomb reconstructed, and placed his remains within it by the side of that daughter from whom he was so unreconciled to be parted in life. The hand of affection surrounds their resting place with those silent teachers, that point

Through *cheerful* vistas to those skies,
Where are no dimmed and tearful eyes.

Within a few rods of this place may still be seen the first spot that was ever used for burial purposes in the township. There too, are the site and remains of the foundation for the first church in that vicinity—if that expression is allowable in regard to a church that never was built. Ecclesiastical quarrels were not uncommon, even at that remote day; local and party spirit ran high, and on some other more-favored place was erected the sanctuary. This spot was never enclosed, and ceased to be used before the memory of the oldest living inhabitant, except on some occasion when an old man might wish to be buried there, because many years before that spot received the bride of his youth, for whom his love had not perished, even in the winter of his years. Or, perhaps some aged matron, whose husband had died in the spring-time of life and was buried there, thought the clods of the valley would lie lighter on her breast could she rest by *his* side. The "old burying ground" was for many years shunned with superstitious terror, not only by *little* children, but by those of larger growth. But few were found with hardihood sufficient to bear them through its "haunted" precincts after night-fall. A pilgrimage to "Old Tom Laney's grave," which is still easily found, was considered the hardest test to which the courage of a school-boy could be subjected, ever since I was old enough to listen to the exploits of courageous youths who had braved the "spirits" that did not in these days treat mortality quite so familiarly as they are said to do at present.

A history of the facts connected with "Old Tom Laney's grave," has been written out for me by "Kate Kooley," furnishing ample warp and woof from which to weave a Temperance Tale, for a future number of the "Rural Sketch Book."

---

A Beautiful Mind.—A beautiful mind is like a precious and prolific seed—the mother of loveliness—the fountain of bliss—the produce of many treasured and inestimable flowers—no canker can deface, nor time destroy. Even should there be those of its lovely produce that pass away, yet the source is there—the seed remains to revive, to modify—to place again on our bosom, and near our hearts, in renewed beauty—in the same deep interest and winning power as at first. We would gather it in as the richest possession—as the well spring of the purest, most abundant and enduring joys—as our support, our comfort, and the cherished object, worthy of our highest admiration; and we would cling to it, thanking God that it is immortal—living forever.

---

The entrance of a single woman of talent into a family is sufficient to keep it clear of fools for several generations.

* William Cullen Bryant.

## A GEM IN THE RIVER.

A young mother, with tears of bereavement in her eyes, stood over the River of Death gazing wistfully into its black and sluggish waters, as if she would fain rest her gaze upon some object away down—*down* in its fathomless depths. She gazed long and wistfully, and the black waves rolled sullenly, sluggishly onward.

And the mother laid her hands submissively on her bosom and wept, and said "My Gem!—My Gem!"

And a celestial being like an Angel stood near the hidden door of her heart, and whispered in a silvery voice like music:—

"What seekest thou, mourning sister!"

"Alas!" said the mourner, "I once, even yesterday, were a beautiful gem in my bosom. To me it was invaluable—it was no trivial gem, it was one that kings and monarchs might well have been proud of. The riches of the east could not have purchased it from me. In an hour that was to me evil and miserable, the gem dropped from my bosom into the black night of this deep river. I saw it floating away from me gently as the coming of an eastern shadow, and I reached after it, but it was beyond my grasp, and my gem—my babe smiled upon me, as it was riding on the waves farther and farther from me. It began to sink—to sink from my sight, and in a moment my gem was gone—and *gone forever*!" And she turned sorrowfully away.

And the Angel voice whispered again;

"Stay, sister, grieve not—look again into the dark river."

She looked as she was bid, and a cry of sweet and rapturous joy burst from her lips. "Thanks to the Father; I see my gem floating gently in a great black wave. O! may I not wear it in my bosom again?"

"Stay my sister, thou art deceived; what thou seest in the river is not thy gem; it is the shadow of what was given thee in trust. Look, sister, Heavenwards, and bid thy mourning heart rejoice."

She looked aloft, and away up in the dark beclouded sky, she saw a single spot clear and blue, and in it a bright star was gleaming, and its silvery rays came down and danced on the gloomy river, giving the black wave a brightness, as if silvered through and through; and away down many fathoms the bright reflection rested, and this the mourner thought was her lost gem. She gazed silently upon the scene, and the star from Heaven was shining!

And the voice of the Angel came again, like unto the sweet song of many instruments of music saying:

"Sistor, the gloomy wave thou seest, though cold and dark, and terrible, rolls ceaselessly onward up to the great gate of Heaven, and thither they bore thy mourned for gem, which thy Good Father lent thee: the waves have borne it back to Him, and it blooms and shines forever near the Throne like yon brightly beaming star!"

The voice was hushed, and the sorrowing mother turned away with her eyes lifted from the earth and the gloomy river, and fixed them hopefully and wistfully on Heaven.

And the bright star she saw, when tears filled her eyes mourning for her loss yet beams brightly and it shines on he little baby's grave.

## DEAR WOMAN IN PARAGUAY.

The author of "sketches in Paraguay," gives us this fragrant morsel:—"Everybody smokes in Paraguay, and every female above thirteen years of age, chews. I am wrong. They do not chew, but put tobacco in their mouths, keep it there constantly, except when eating, and, instead of chewing, roll it about with their tongue, and suck it. Only imagine yourself about to salute the red lips of a magnificent little Hebe, arrayed in satin and flashing with diamonds—she puts you back with one delicate hand, while with the fair taper fingers of the other, she draws forth from her mouth a brownish black roll of tobacco, quite two inches long, looking like a monster grub, and then, depositing the savory lozenge on the rim of your sombrero, puts up her face, and is ready for your salute. I have sometimes seen an over delicate foreigner turn away with a shudder of loathing under such circumstances, and got the epithet of *el salvaco* (the savage), applied to him by the offended beauty, for his sensitive squeamishness. However, one soon gets used to this in Paraguay, where you are, perforce of custom, obliged to kiss every lady you are introduced to; and one-half you meet are really tempting enough to render you reckless of consequences, and you would sip the dew of the proffered lip, in the face of a tobacco battery, even the double-distilled 'honey-dew' of old Virginia."

## PARENTAL SYMPATHY.

Domestic rule is founded upon truth and love. If it have not both of these, it is nothing better than despotism. It requires the constant exercise of love in its most extended form. You must learn the disposition of those under you, and teach them to understand yours. In order to do this, you must sympathize with them, and convince them of your doing so: for upon your sympathy will often depend their truthfulness. Thus you must persuade a child to place confidence in you, if you wish to form an open, upright character. You cannot terrify it into the half of its truth. On the contrary, are not its earliest falsehoods caused by fear much oftener than from any wish to obtain any of its little ends by deceit? How often the complaint is heard from those in domestic authority,—they are not confided in. But they forget how hard it is for an inferior to confide in a superior, and that he will scarcely venture to do so without the hope of some sympathy on the part of the latter.

## SIGNERS OF THE DECLARATION.

Of the fifty-six signers of the Declaration of Independence, it is stated that nine were born in Massachusetts; eight in Virginia; five in Maryland; four in Connecticut; four in New Jersey; four in Pennsylvania; four in South Carolina; three in New York; three in Delaware; two in Rhode Island; one in Maine; three in Ireland; two in England; two in Scotland; and one in Wales. Twenty-one were lawyers; ten merchants; four physicians; three farmers; one clergyman; one printer; and sixteen were men of fortune. Eight were graduates of Harvard College; four of Yale; three of New Jersey; two of Philadelphia; two of William and Mary; three of Cambridge, England; two of Edinburgh, and one of St. Omers.

At the time of their deaths five were over ninety years of age, seven between eighty and ninety, eleven between seventy and eighty, twelve between sixty and seventy, eleven between fifty and sixty, seven between forty and fifty; one died at the age of twenty-seven, and the age of two is uncertain. At the time of signing the declaration, the average age of the members was forty-four years. Three lived to the average age of more than sixty-five years and ten months. The youngest member was Edward Rutledge, of South Carolina, who was in his twenty-seventh year. He lived to the age of fifty-one. The next youngest member was Thomas Lynch, of the same State, who was also in his twenty-seventh year. He was lost at sea, in the fall of 1776.

Benjamin Franklin was the oldest member. He was in his seventy-first year when he signed the Declaration. He lived to 1790, and survived sixteen of his younger brethren. Stephen Hopkins, of Rhode Island, the next oldest member, was born in 1707, and died in 1778. Charles Carroll attained the greatest age, dying in his ninety-sixth year. William Ellery, of Rhode Island died in his ninety-third year, and John Adams in his ninety-first.

## BABY HATERS.

Whenever you find a man that hates babies, you will be quite safe in hating him.—No one that does not deserve to be shunned or disliked ever shows an antipathy to babies. What! hate a little creature with a cotton-ball head, that can only manifest its joy by smiles, kicks, and an inarticulate gurgle; that, in anguish cannot tell the seat of its pain, but must endure martyrdom while you are guessing out the source of its agonies; that has the holiest of all claims of human sympathies—utter helplessness, utter dependence! What! hate the little thing that you yourself were, and from which you never would have grown to man's estate if your parents had been like you, a baby hater! Fie on it! Even dogs love babies, and will suffer them to bestride them, pull their ears, and buffet them by the hour without responding to their annoyances with even a growl. Mothers, if you happen to know any male biped that dislikes the species in its infancy, don't, if you can help it, suffer him to marry one of your female friends or acquaintances. Be sure he will make a sour, morose, icy-hearted husband.

But what shall be said of a baby-hating woman? We have known some of that sort—married ones, that had babies, and did hate them, and, as we verily believe, would have gladly put them to bed for the last time, where they would require neither rocking or paregoric—under the sod. Yes, we have known such—the Lord confound them! And if there is a spinster who harbors in her virgin breast a distaste for the fruits of matrimony, may she never have an opportunity of raising any, but be left blossomless, budless and unproductive, beyond the range of love's sunshine, and never have her sensibilities warmed by a kiss, an embrace, or even a chuck under the chin.

## THE HERMIT OF CHICAGO.

In Lake Chicago there are a number of small and lovely islands, varying in size from one to ten acres, lying high above the clear waters, and displaying a level surface, beautifully wooded with maple and lindens.—Upon one of the smallest of these islands, a young man resides alone, as far as human companionship is concerned, and cultivates a few acres of ground with his own hands—sufficient to supply him with the necessaries of life. He is a gentleman of education and fine literary taste, and has quite a library of well selected standard works. He seldom visits the settlements, but is always pleased to have people visit him, paying marked attention to his guests and entertaining them in the best style his domicil affords. Why he has chosen this secluded way of life, no one knows. He appears happy and contented, neither a misanthrope, blunted to the social enjoyments of the world by misfortune and disappointment, or a bigoted anchorite, nor yet a romantic fool We have no desire to invade his privacy, and only refer to him as an illustration of one of the strange freaks of human fancy which we meet occasionally on our journey through life.

---

A Man Nine Feet High.—A giant, nearly nine feet in height, is shortly expected to arrive in Madrid. He is a native of Lachar, in the province of Grenada, and is only twenty-three years of age. He eats as much as five men, walks with extreme raddity, and has been twice married, but both his wives are dead. His object in visiting Madrid is to demand the hand of a female, of great beauty, who keeps a coffee house. He is described as so great a coward that he will allow a child to ill treat him. Until to the age of six he was of the ordinary stature, but then he began to grow rapidly.—*English paper.*

# For the Ladies.

Written for the Rural New-Yorker.

## WHAT IS IT?

What is it that we always prize,
The most of all below the skies,
Which neither gold nor silver buys?
'Tis the Likeness of a Father.

What is it, when no friends are near
Our weary pilgrimage to cheer,
That says, "Do right and never fear?"
'Tis the Likeness of a Mother.

What is it, when far from home
And friends who're but in mem'ry known,
That seems to cheer and guide us on?
'Tis the Likeness of a Sister.

What is it wakes the genial smile
Of kindred hearts that knew no guile,
And makes us happy all the while?
'Tis the Likeness of a Brother.

Albany, N. Y., 1853. Ellen.

## MARY, QUEEN OF SCOTS.

Her regal mantel and train were of a bluish grey cut velvet, richly embroidered with white silk and pearls. It was of a marvelous length, full six toises, covered with precious stones, and was supported by young ladies. Her Scottish Maries, doubtless, were entitled to that honor; but neither they nor the commissioners for the marriage, who were present as the representatives of three Estates of Scotland, are mentioned in our cotemporary French authorities. The estates of Scotland, had positively refused to allow their regalia to be carried over to France, to decorate their young liege Lady and her consort at the nuptial solemnity.—Yet Mary, to denote her rank as a Sovereign Queen, wore a crown royal upon the occasion—a crown far more costly than any previous Scottish monarch could ever boast of.

It was probably made expressly for her, at the expense either of the King of France, or her wealthy uncle, the Cardinal de Lorraine and is described in the Rouen cotemporary record of the ceremonial as being composed of the finest gold, and most exquisite workman-ship, set with diamonds, pearls, rubies, and emeralds of inestimable worth—having in the centre a pendant carbuncle, the value of which was computed at 500,000 crowns. Around her neck hung a matchless jewel, suspended by chains of precious stones, which, from its description, must have been no other than that well known in Scottish records by the familiar name of the *Great Harry*. This was not one of the crown jewels, but her own personal property having been derived from her royal English grandfather, Henry VII., by whom it was presented to her grandmother, Margaret Tudor.

Mary lived in an atmosphere of elegance as regarded her personal habits. She ate moderately, but she liked her table to be trimly set and daintily served. Her board cloths and napkins were of the finest quality, fringed and embroidered with bullion and colored silks,—a queenly fashion, which gave employment to female hands. She introduced the fashion of having the claws and beaks of the roasted patridges and moor fowl, that were served at her table, silvered and gilt. She rose early in the morning, and transacted much business while walking in the garden.

On horticulture she bestowed great attention, and introduced exotic fruits, flowers, and vegetables into the gardens of her country palaces, rarely visiting a strange place without planting a tree with her own hands. These were long pointed out, and consecrated by tradition as memorials of her. She was fond of pets of every kind, especially dogs and birds; but she doated on children. She loved her attendant ladies, and treated them with the greatest indulgence. No instance of ill-nature, envy, or tyranny towards her own sex has ever been recorded of Mary, but on the contrary, her privy purse expenses and private letters abound with characteristic traits of her generosity and benevolence.

Mary sat daily in council several hours, in earnest deliberations with her ministers and advisers; but while thus occupied, she employed her hands with her needle—a little table of sandal wood, with her work basket and implements of industry, being always placed by her chair of state.

Every rightly constituted mind must appreciate this characteristic trait of femenine propriety in a young female Sovereign, whom duty compelled to take the presiding place in a male assembly. It was necessary for her to listen with profound attention to the opinion of every one, and to deliver her own; but, instead of allowing her native modesty to assume the awkward appearance of embarrassment or bashfulness, she took refuge from encountering the gaze of so many gentlemen by bending her eyes on her embroidery, or whatever work she was engaged in. She entered the Council chamber in her regal capacity, but she never forgot the delicacy of her sex while there.

---

Advice to a Bride.—I beg to remind my new daughter that the husband has a thousand elements of disturbance in his daily avocations to which his wife is an utter stranger; and it will be her privilege, and her title to the respect of all whose respect is worth having, to make his own fireside the most attractive place in the universe for the calm repose of a weary body or excited mind. The minor comforts, which are the most valuable, because the most constantly in requisition, will depend more upon her looks, her manner and the evidences of her forethought, than upon all other occurrences of life.

---

The men who flatter women do not know them sufficiently, and the men who only abuse them, do not know them at all.

ROCHESTER, SEPTEMBER 17, 1853.

PUBLISHER'S NOTICES.

☞ AGENTS.—Any person so disposed can act as agent for the RURAL NEW-YORKER,—and all who remit according to terms will be entitled to premiums, &c.

☞ THE RURAL is published strictly upon the CASH SYSTEM—sent no longer than paid for—and all orders should be in accordance with terms.

☞ ADVERTISEMENTS must be brief, appropriate to the objects of the paper, and accompanied with the cash.

☞ FOR TERMS, &c., see last page.

## The Foreign News.—Breadstuffs.

THE advices by the Asia, published in another column, fully sustain the views of those who anticipated a further advance in Breadstuffs. This will of course produce a corresponding advance, and no little excitement, in our own markets—while various views and speculations will receive publicity. A paragraph in a city paper of Monday morning strikes us as a little singular. Remarking upon the recent foreign news, our contemporary says:

"Flour and grain have advanced to a high figure in the English markets, causing a like increase in prices here. The reason for this is not altogether apparent. In the absence of any general failure of crops in Europe, and with the prospect that war will be averted, the sudden and continued rise in Breadstuffs does not seem well founded. Dealers are fully aware of the instability and danger of such excitements, and will look out for a decline as sudden as the advance. We are not prepared to predict a fall in prices; but simply express our doubts as to the present excitement being well founded."

Though the reason for the advance is not altogether apparent to our neighbor, we are confident that English dealers are pretty well satisfied on the subject. Unlike our quick, excitable, touch-and-go Yankee speculators, English dealers are generally cool and cautious in all commercial and monetary affairs, and not apt to burn their fingers by entering into hazardous transactions. The beef-eaters are no visionaries concerning the produce and provision markets—and no doubt "are fully aware of the instability and danger of [such] excitements." As a nation they go for reliability and permanency—rarely if ever indulging in such luxuries as paper cities, wild-cat funds, Morus Multicaulis, *et id omne genus*.

With no better means of judging than our contemporary possesses, we do not anticipate as sudden a decline as the advance—neither do we think our dealers expect any such thing. If so, why are they so universally guided by the action of foreign dealers? We have heretofore expressed the opinion that the foreign demand for Breadstuffs was frequently overrated by both producers and dealers, and it may be so in this instance—but we see no good reason why the market which was a good index when prices were low, should not also be reliable when they are high or advancing. Can our contemporary, or any city dealer, enlighten us on this point? When prices are very low, purchasers are wont to refer farmers to foreign quotations as their guide. Will not the rule hold good when prices are high?—and may not farmers with propriety refer dealers to the same authority? "It's a poor rule," &c.

We are not prepared to predict either a rise or decline. Heretofore we have given our reasons for believing Breadstuffs would advance, since which wheat has risen some three shillings per bushel. Of the present prospect others can judge for themselves, but we think it unwise for those who *wish to sell*, to wait for a material advance upon present prices. Yet we should not be surprised at a further advance.

## Notes from Court.

ALBANY, Sept. 12, 1853.

EDS. RURAL:—I have not deemed it proper to lay before your readers the lengthy testimony in the impeachment case, nor yet the elaborate arguments of the learned counsel, but now that both have been brought to a conclusion, it may be of some profit to give a brief synopsis of the whole, as a matter of record and information.

The Assembly preferred against the Hon. JOHN C. MATHER, fourteen charges, the substance of which is—

1. That he was guilty of corruption in the canal lettings of 1851, by letting the contracts to political and personal favorites, instead of awarding the same to the lowest bidder.

2. That he purchased a large amount of timber and lumber, without having the contract made in writing, and that he paid extravagant prices for the same.

3. In regard to building a dock at West Troy, he assumed a power not supported by law in changing the original plan by which it was to be constructed of plank, and substituting and using *timber* only, thus increasing the expense even beyond the legal authority of the Canal Board; and all of this in contempt and defiance of the law and statutes of the State.

4. That he did not comply with the law requiring him to visit the line of canal under his charge once in thirty days,—and did not give public notice of such visitation in accordance with the law.

5. That he received $800 from the Treasury of the State for mileage, when he had not traveled sufficiently to warrant the same.

6. That he did not appear before the canal appraisers to defend the interests of the State, as required by law.

The above six heads present a brief synopsis of the fourteen articles. To substantiate the first charge, witnesses were brought to show that there was an understanding among the members of the Letting Board, that the contracts should be distributed between the whig and democratic parties. The managers also introduced documents to prove that the Board did not adhere to the lowest-bidder principle, as required to do by the law and resolution of the Canal Board. Mr. MATHER'S counsel admitted that they made no pretensions of adopting that principle, and claimed that the law conferred on the Board a discretionary power, in the exercise of which they distributed the work to members of both parties, so as to keep it out of politics hereafter. They brought witnesses who swore to these items.

In regard to the high price of timber, the Managers proved that an extravagant amount had been purchased, and at enormous rates. Mr. MATHER brought in as defence, that the circumstances rendered these necessary, such as the season of the year, the large amount to be purchased, and the probable demand for lumber, caused by the passage of the canal law of 1851. Witnesses were called to show this to be a fact. It was also claimed for Mr. MATHER that the price for the lumber was fixed by one of the engineers, and although he admitted it to be high, he did the best he could, and was not guilty of any corruption. No corruption was proved.

With reference to the West Troy dock, the Managers brought evidence that Mr. MATHER had no right to make a change in the plan of dockage, and that in so doing he had assumed a power vested alone in the Canal Board. Mr. MATHER brought forward a witness who swore that such change was ordered by the Canal Board, although the records did not show it. Mr. FOLLET and Mr. RUGGLES swore to this. Mr. MATHER also proved that the Canal Board afterwards approved his course by a resolution which was on file. The counsel for Mr. M. urged that there was no corruption in the whole proceeding.

The question of visitation was sustained by the Managers by introducing evidence to the effect that Mr. MATHER had never given public notice of any visits on the Canal. They also brought witnesses to prove that Mr. M. had not been seen more than three or four times in a year on certain parts of the line of canal in his charge. They called Mr. BEACH, a former Canal Commissioner, who swore that he did rarely comply with the law when he held the office. Mr. MATHER'S counsel introduced evidence to show that Mr. MATHER had visited portions of the line when the witnesses did not see him. They also called Mr. FOLLET, who swore that he had not complied with that law, and it was unnecessary and impossible in connection with the other duties of the Canal Commissioner. Mr. M.'s counsel also introduced proof that the public interests had not suffered by any such omissions.

On the mileage question, it was proved that Mr. MATHER took the money on the authority of the annual supply bill, and the judges of the Supreme Court, as well as the Attorney General, had given their opinion of its legality. The other Canal Commissioners had also taken the same amount.

As to his appearance before the canal appraisers, the counsel for Mr. M. declared that the law did not *absolutely require* such attendance, but it was somewhat discretionary. They argued the question of the law on the point, and left it at that.

The evidence on all the points closed Saturday, Sept. 3d, and the last week has been occupied by arguments—Messrs. CHAMPLIN, HASTINGS, LOOMIS and PORTER against Mr. MATHER, and Messrs. REYNOLDS and PECKHAM for him. When I tell you that I have given you the arguments of the whole week, made by these long-winded lawyers, you will not be offended at the length of my letter. The case was given to the Court this morning, and they are in private consultation upon it. A decision will be given without doubt during the present week. The importance of this decision and its important bearing on the politics of the State, will cause much anxiety in the public mind to know what it is to be. My next will give you the decision in full. *OWE.*

## Literary Notices.

THE HIVE AND HONEY-BEE,—A Bee Keepers' Manual. By Rev. L. L. LANGSTROTH. Hopkins, Bridgman & Co: Northampton, 1853.

IN a volume of some four hundred pages, the public are furnished with the results of the observation and experience of one who has devoted years to the subject. Every thing relating to the habits, preservation and successful labors of the Honey Bee possesses value and interest, and when a work like the one before us is presented to the public, it should claim a large share of attention. Hereafter we may find it profitable to draw from its stores of knowledge for the benefit of our readers. For sale at DARROW'S.

THE MYSTERIOUS PARCHMENT, OR THE SATANIC LICENSE.—This is a promising volume, written by Rev. JOEL WAKEMAN, of Almond, N. Y. In a well told series of scenes, it furnishes a strong argument against the present license system, and in favor of the "Maine Law," and temperance in general. It would be well that books of this character were oftener written, and more generally read. The work was published at the office of the Dansville Herald, and reflects great credit upon friend E. C. DAUGHERTY, to whom we are indebted for a copy. †

YOUTH'S MANUAL OF GEOGRAPHY, combined with History and Astronomy. By JAMES MONTEITH.

THIS is a valuable volume for young students, in the form of question and answer, with wood cut illustrations, from the press of A. S. BARNES & Co., New York. It will be found to contain, in a condensed form, more information than can be obtained from many larger works. Sold by G. W. FISHER.

## World's Temperance Convention.

THIS Convention,—a rival and successor of the "Whole World's," noticed in our last—was held in Metropolitan Hall, New York, last week. It met on Tuesday, and organized by electing NEAL DOW President, with twenty-one Vice Presidents, one from England, and a Business Committee of one from each State. The first three sessions were stormy—the time being chiefly consumed in determining who should, and who should not, participate in the proceedings. Rev. Miss ANTOINETTE BROWN presented herself as a regularly constituted delegate, and attempted to address the Convention, but was declared out of order, and on a second attempt could not be heard on account of the "noise and confusion." A resolution was passed declaring the platform not the appropriate sphere of woman.

The first three days proceedings are thus summed up in the Tribune of Friday morning:

"The World's Temperance Convention has completed the third of its four business sessions. The results may be summed up as follows:

*First Day*—Crowding a woman off the platform;

*Second Day*—Gagging her;

*Third Day*—Voting that she shall *stay* gagged.

Having thus disposed of the main question, we presume the incidentals will be finished up this morning."

FRIDAY, being the fourth and last day of the Convention, the members set to work early, and organized shortly after 3 o'clock P. M., by calling Mr. CAREY, of Ohio, to the chair, in the absence of the President.

The Committee on the ballot-box requested to be discharged, as, in their opinion, the subject was exhausted by previous reports.

The Committee on permanent organization submitted a report, recommending the adoption of the following resolutions:

Resolved, That a national committee of nine be appointed by this Convention, a majority of whom shall reside in Philadelphia, who shall superintend the general movement in favor of the prohibition of the manufacture and sale of intoxicating liquor as a beverage; who shall employ such agents and issue such publications as may be required; who shall correspond with the central committee of the several States and foreign countries, and report at such National Convention as shall be held.

Resolved, That we commend each State organization, by the appointment of a State Central Committee, whose duty shall be to superintend the affairs of such State, and to appoint corresponding committees in the several counties, townships and wards, to have charge of the business necessary for carrying out a vigorous campaign against the liquor traffic.

Resolved, That the National Committee be authorized to call National Conventions at such times and places as they may deem proper, not less frequently than once in two years.

Resolved, That we recommend to all counties the adoption of similar organizations, through which we can correspond with them and they with us.

Resolved, That we now proceed to raise the sum of $10,000 to be used under the direction of the National Committee, in promoting the objects of this Convention.

Resolved, That at each National Convention a new election shall be held for a National Committee.

Resolved, That the National Committee shall make annual reports through the same temperance periodical, of the receipt and disbursement of funds.

These resolutions were sharply debated upon from all points, and various amendments were proposed. It appearing difficult to agree, the Convention finally "agreed to disagree," and resolved to lay the whole subject on the table, by a vote of 100 to 83.

On motion of the Rev. Mr. DUFFIELD, it was

Resolved, That Hon. Neal Dow, of Maine; Edward C. Delevan, of New York; Gen. S. F. Carey, of Ohio; Hon. J. B. O'Niel, of South Carolina; Christian Keener, of Maryland, and Hon. Malcolm Cameron, of Canada, be constituted a general committee to call a general Convention at least once in two years, to devise such measures as may be desirable for the general cause of prohibition of the sale of intoxicating liquor throughout the world; and that they have power to supply vacancies from death or resignation.

Mr. ISAAC OLIVER, Treasurer of the Convention, announced that there was nearly $1,600 in the treasury, and after paying all expenses that probably one-half would be left, and he desired to know what disposition should be made of it. It was expected by the donors, who had contributed about $1,000 of the whole amount, that it would be appropriated to the publication and circulation of tracts to aid the progress of the cause.

WORTHY OF IMITATION.—We learn from Western papers, that the Michigan Southern Railroad, adopting the practice of the Hudson River road, have stationed guards of flag men over the whole line of the road, in addition to requiring the track to be passed over and examined in advance of every train. This provision for the security of life and property, commends this road to the traveling public.

A passenger over the Mich. Central road says he observed things that ought to be introduced on every road in the country. The first was a request, posted up in the cars at every seat, that any want of courtesy on the part of the employees of the road, should be reported to the Superintendent. The second was the planting of shade trees at the stations; at every depot there was a small but handsome park; at some depots two or three, with trees of quite large growth, and casting a refreshing shade.

CANADA COMING.—The Quebec Morning Chronicle says the Americans want Cuba and Canada, and adds that "Canada is fast going to them. Our lumber goes to New York, our flour and cattle to Boston or Portland; our very steamships go to Portland in the winter, and it must be borne in mind that a commercial is the most solid of all political annexations. Canada is already part and parcel of the United States, and we are sorry at it. Nothing but a rush of emigration can save us.—The tide of public opinion and of public power is on the turn. Loyalty to Great Britain is on the ebb."

## The Next Western Hog Crop.

WE glean the following from the correspondence of the Cincinnati Price Current:

In Higginsport, Ohio, the present stock of hogs is one-fourth over that of last year. About Beardstown, Illinois, the hogs are fewer than last year, but of better quality. Feeders say pork will range from $3 to 3,50 per cwt. There will be a large crop in Racine, Wisconsin. Fifty per cent. will be added to last year's product for Knox county, Illinois, and nearly that for adjoining counties; 3 and 5 cents for pork is spoken of next fall. Around Economy, Indiana, there are about one-fifth more hogs than last season, but not in as good order. There are more hogs in the vicinity of Gratis, Preble county, Ohio, than last season, the quality not quite so good. In Boyle and the adjacent counties of Kentucky, the number fattened will be larger. Six or eight counties about Lagrange will raise a third more, and the hogs will be large and well fattened. The State of Wisconsin is full of them, and pork will bring $4. Hogs about Graysville, Illinois, will exceed the crop of last season one-fourth or one-third; 6,500 will be packed there next season, and will be 8 or 10 per cent. heavier. In Waverly, Ohio, hogs number about the same, but are held 20 per cent less in weight. The crop about Dubuque, Iowa, is 25 per cent. larger than last year's.—Rockport, Illinois, will turn off one-fourth more, or 800 to 1,000 more.

## Fatal Railroad Accidents.

ON Wednesday evening last a train of empty cars arrived at the junction of the Newburyport and Georgetown Railroads, for the purpose of conveying home a large pic nic party; when, soon after stopping, the locomotive exploded with a tremendous noise, instantly killing the fireman, Mr. Spofford, of Georgetown, whose body was thrown a distance of 150 rods from the scene of the explosion. He leaves a wife and two children. Mr. Morse, the engineer, had just left the locomotive, and escaped without injury, although fragments of the machine were thrown in all directions.

The same day, at Syracuse, N. Y., a man named Patrick Gallagher attempted to jump on a dirt car while the train was in full motion, but slipped, and the wheels passed over his left arm and leg. They were amputated, but he cannot recover.

An unknown man was killed near Syracuse, by the Oswego train, as he was walking on the track. The locomotive hurled him into a ditch beside the road, severing his head from his body.

EDITORIAL CONVENTION.—There were twenty-seven editors and publishers present at the Elmira Convention on Thursday last. They were principally connected with the country press in the Western and Southern part of the State, from Cayuga to Chautauque. A series of propositions, regulating the subscription prices of newspapers, charges for advertising and publishing notices of personal interest, and for the mutual protection of the fraternity from fraud, were discussed and adopted. We are glad to see that the hospitalities of the village were extended to our brethren of the press who were present at this gathering. A Railroad Excursion concluded the proceedings. —*Rochester Democrat.*

A FINE SPECIMEN OF WHEAT.—We were shown, at the ware-rooms of Emery & Co., in this city, a very fine specimen of Soule's White Chaff Wheat, raised by Joseph Watson, of Clyde, Wayne Co. A sheaf, which we are assured was a fair sample of the entire field, showed the stalks of uniform hight, and every head perfectly filled. The grain is plump and bright, entirely free from any foul substance, and weighs 63 pounds to the bushel. Mr. Watson is already known as among the best farmers in the State, and we are glad to notice so choice an evidence of his skill in wheat-growing. —*Albany paper.*

REV. DR. JUSTIN EDWARDS.—Those who have any documents which would throw any light on the life and character of Dr. Edwards, are respectfully requested to send them without delay, by mail or otherwise, to Mrs. Justin Edwards, at Andover, Mass., or to Rev. Seth Bliss, of the American Tract Society, 28 Cornhill, Boston; or to Rev. Dr. Hallock, of the American Tract Society, 150 Nassau st., New York. Letters which any may wish to retain, will in due time be carefully returned.

LAKE SUPERIOR NEWS.—The Lake Superior Journal speaks encouragingly of the progress of the Ship Canal. It is expected the excavation of earth will be complete this fall. The rock will be worked through the winter. A new town has been laid out around the bay of Grand Mardia. It is about 80 miles above the Saut Ste Marie.—The Journal reports favorably of the operations at the various mines.

THE WESTERN PORK TRADE.—According to statistics published in the Economist, the total imports of pork, bacon, &c., at Cincinnati, were, in 1851,—26,346,730 lbs.; in '52,—29,898,584; in '53,—47,325,000. The exports for the same period were, in 1851,—54,824,794; in '52,—75,690,743; in '53,—83,331,040.

☞ "Table Rock," at Niagara Falls, has fallen into the abyss. The event happened on Friday morning last at 8 o'clock. This Rock was the best single point of observation about the Falls. A seam divided it from the adjacent soil and rock, which has doubtless opened until the immense mass became entirely separated. A small portion of Table Rock fell some years ago.

☞ A dreadful accident occured on board the steamer Bay State, Long Island Sound, at four o'clock on Thursday morning last, whereby several lives were lost. By the giving away of a crank-pin, the usual pressure upon the steam was taken off, and the head of the cylinder blown out.

☞ One of the huge granite boulders on the summit of Mt. Washington, has been selected and set aside for the apex or crowning stone of the Washington Monument, and measures will be immediately taken to have this gigantic stone on its way to the National Capital.

☞ In the case of Endymoin, charged with obtaining his pardon from the State Prison by forged papers, Judge Humphreys decided that he could not go behind the Governor's pardon, and therefore Endymoin must be discharged.

☞ Lola Montez has quarrelled with her new husband because he was jealous of a violinist from whom she "had received some polite attentions." The husband raised a row and was kicked out of the house.

☞ The boats "J. M. French, of Rochester," and "J. Crombie, of Rochester," both of the Mercantile Line, arrived at Albany, Sept. 12, from Rochester, being the first enlarged boats through the the new Canal.

## News Brevities.

—— Two men lost their lives at a fire in Portland (Me.) on Thursday night week.

—— Two buckets of good butter were recently found in a well at Lawrenceburg, Ind., after being inclosed in it for 14 years.

—— Col. Forney will commence the publication of an Administration Journal in N. Y., about the 1st of October.

—— The rice harvest in Georgia has fairly commenced, and the yield is unusually fine.

—— A State Temperance Convention is to be held at Boston this week.

—— The latest news from the Fisheries reports the seizure of four American fishing vessels.

—— A coal mine is said to have been discovered on Mount Sinai.

—— Flour is held at Toronto C. W., at $5,50, and wheat at $1,15.

—— Thomas Jennings, an auctioneer, fell dead in Toronto, C. W.

—— There are about three lawyers to one clergyman in New York.

—— Yale College has existed one hundred and fifty-three years, and educated 6,000 students.

—— Fire wood is very dear at Toronto, C. W., and sells at $3,25, at wholesale.

—— Barnum is lecturing on Temperance in Ohio, and will make the tour of the other States farther west.

—— The Jews of New York, are taking measures for the relief of their suffering co-religionists in New Orleans.

—— Journeymen tailors of Milwaukie are on a strike, demanding an advance of from 15 to 40 per cent. on former rates.

—— At Natchez the yellow fever is rapidly increasing and the town is almost deserted. At Vicksburg it has abated.

—— A National Woman's Rights Convention will be held in Cleveland, Ohio, on the 5th and 6th of October.

—— A cattle fair for the sale and exchange of stock has been established at New Market, C. W., and works well.

—— The N. Y., Eve. Post announces that on the 5th of Aug., Madame Otto Goldsmidth, (Jenny Lind) presented her husband with a son.

—— A new railroad, denominated the Stanstead, Shefford and Chambly, is enjoying the attention of the people of Montreal.

—— Brown University, at its recent Commencement, conferred the Degree of D. D. upon Prof. E. G. Robinson, of the University of Rochester.

—— The New Bedford Standard says that a shock of an earthquake was very sensibly felt in that city on Wednesday night week.

—— A son of Hon. W. B. Pierce, of Milton, Massachusetts, died last week, from eating mushrooms.

—— It was stated in New York, on Monday, that 2,000 chests of Hyson Skin teas had been sold for Australia.

—— It is said that the Secretary of State is preparing a high-toned Reply to the Austrian Protest in regard to the Koszta affair.

—— There were seventeen persons drowned by the wreck of the British ship Sea, of Liverpool, on the 31st of May.

—— The Lockport Courier chronicles the death of George Shoemaker, an active business man of that village.

—— They have a plan on foot in Boston to get up a grand jollification, and invite the Governors of all the States to attend.

—— Mary Simondson, aged *one hundred and twenty-six years*, and who had long resided near Shippensburg, Pa., died last week.

—— An old man named Walter Woolfred committed suicide near Hamilton, (C. W.,) on Thursday week, by hanging himself upon a pine tree.

—— The number of deaths in New Orleans, from yellow fever, from May 28 to August 27, was 6,449!

—— Three hundred and four persons were arrested in Philadelphia during the month of August, for drunkenness.

—— Mr. Gilmore, Superintendent of the Rock Island Railroad, has prohibited the running of trains on that road on the Sabbath.

—— The deaths from yellow fever in New Orleans on the 8th numbered 59; in Mobile, same time, 31.

—— Two Post Office clerks have been arrested in New Orleans for stealing money from letters to a large amount.

—— Hon. Wm. H. Seward has been elected orator for Yale College anniversary of 1854, and James Russell Lowell, poet.

—— Gen. Cass has declined all foreign appointments, but says he shall sustain the President with a hearty good will.

—— A schooner of 300 tons burthen, named the Syracuse, and a barge of 376 tons, were recently launched at Oswego.

—— The Canastota Artillery and the Syracuse Citizens' Corps are to encamp at Chittenango Springs for a few days, commencing on the 19th.

—— Since the new divorce bill went into operation in Ohio, marriages are placed under the head of "limited partnerships."

—— A fire in Amsterdam, N. Y., on Tuesday morning, destroyed property to the amount of $30,000.

—— The numerous fires at Constantinople are considered a certain sign of the increasing discontent of the people with the measures of government.

—— Some one advertises in the London Times "Dear Kate is nicely, and the boy, and a fine boy he is. The event came off about half-past 5 o'clock this afternoon."

—— According to the Worcester Transcript, the Shirley Shakers have been deserted by seven members of the Society the past week. Of the number five were females.

—— The Peace Congress at Edinburgh is now fixed for the 12th and 13th of October, and a very large attendance is expected from both the Old and New World.

—— A weekly paper in the Magyar language is to be started in New York. It will be called *Mereknltek Lafia*, which means the *Hungarian Exile's Journal.*

—— The yellow fever is so bad at Pensacola, that Captain Tatnall, the commandant of the Navy Yard there, had stopped all work in the yard.

—— The Jury in the case of the Camden road accident, say that it was the work of design on the part of some person recently discharged from the Company's service. The Company offers $10,000 for the conviction of the murderer.

# Foreign Intelligence.

## Arrival of the Asia.

*BREADSTUFFS ADVANCING.*

The steamship Asia, which left Liverpool on the 27th ult., arrived in New York on Thursday evening last. We annex the most interesting items—the most important being the further advance in Breadstuffs.

There is nothing new from the East. Matters dull and unsettled.

Liverpool Markets.—Cotton quiet and unchanged. Sales of the week 31,710 bales.

Liverpool Breadstuffs.—Market continues excited, with weather again unsettled, and prices undiminished.

The advance on the week ranges from 4d to 8d per bushel on wheat, and 1sa1s 6da2s per brl on flour.

Indian corn began to be inquired for at 6da1s advance.

Quotations of American white wheat 8s 6da8s 8d; red mixed 8sa8s 6d.

Western canal flour 28s 6da29s 6d; Baltimore and Philadelphia 30sa30s 6d; Ohio 30s 6d; sour 26s 6d.

White and yellow corn 31sa32s 6d.

Provision Market.—Beef.—Considerable sales of inferior and ordinary at fair prices.

Pork steady, transactions small.

Bacon, sides and shoulders quiet.

Cheese sells freely at full prices.

Lard in fair demand. Sales 59a60.

Linseed cake active.

Tallow—Considerable done in the North at 52s3d.

Ashes in moderate demand at 27s 3da27s 6d Pots and pearls 27s.

No news of interest. The eastern question was totally unchanged nothing having transpired, but everybody regards it as settled.

It was reported that the Russians had commenced to recross the Pruth, but it was untrue.

The troubles in Servia as before reported, do not reach the dignity of a revolt, but were mere squabbles for and against Prince Miloch.

England.—On the 24th ult., Mr. Ingersoll announced his recall and Mr. Buchanan was presented to Queen Victoria.

France.—Napoleon and wife were rusticating at Diepe. All quiet in France.

Belgium.—The recent matrimonial alliance with Austria was not well received at Paris.

The Marquis Andrew Tagliacarne has been appointed Sardinian Minister at Washington.

There has been some fighting in Morocco.—The Emperor was victorious.

---

[From Richardson Brothers & Co,'s Circular of Aug. 26.]

Liverpool Markets—*Breadstuffs still Rising—Harvest Weather bad.*—At this morning's market we had a good attendance, and the excitement noted in the trade for the past week was quite kept up. A fair extent of business was again reported both in Wheat and Flour for shipment to France. We quote the advance upon Wheat from Tuesday fully 2d. per 70 lbs. upon all descriptions. A parcel of very fine White American sold at 8s. 8d. per 70 lbs. The advance on Flour is fully 6da9d. per bbl., and with but little really good offering. Indian Corn sold more readily at prices rather in favor of the seller.

Our imports for the past seven days consist of 6,969 qrs. Wheat, 9,881 qrs. Indian Corn, 119,942 bbls. and 8,666 sacks Flour. Exports for the same period 1,554 qrs. Wheat, 880 qrs. Indian Corn, 2,799 bbls. and 1,010 sacks Flour. We quote the value of American cereals at this day's market as follows:—White Genesee and Ohio Wheat, 8s. 6d a8s. 8d.; Canadian, 8s. 4d.a8s. 6d.; Red Ohio 8s.a8s. 2d. per lbs.; Baltimore and Philadelphia Flour 30s.a30s. 6d.; Western Canal 29s.a29s. 6d.; Canadian 28s. 9d.a29s. 3d.; as in quality.

London Markets.—London, Aug. 26, 1853—5 P. M.—The Corn trade has been very excited, and large purchases of Wheat and Flour have again been made for France and Holland; the weather has been rather unsettled, but harvest operations are being proceeded with rapidly, and complaints of injury to the crops are only quite partial.

The Corn market has been in a very excited state, and on Monday an advance on that day week of 4s. per qr. was obtained on English Wheat, owing to large purchases for France and Holland, while Foreign was quoted 2s.a3s. dearer; last week's average of English was 51s. 1d., and 76,986 qrs. returned. The top price of English Flour has been advanced to 55s. per sack; but for American at over 30s., there was very little demand, though 31s. was paid for 500 bbls. fine Baltimore. Oats 1s. dearer; no change in other Spring Corn. We quote American Wheat 52sa 62s.; Flour 28s.6da31s. per bbl. Floating cargoes of Wheat are held for very high prices. Nothing done in Indian Corn. At to-day's market prices were 1sa2s. dearer for Wheat; and United States Flour sold from 30s.a32s.; the latter price for fine Ohio.

# California News,

## Arrival of the Star of the West.

### LATER FROM CALIFORNIA.

The steamer Star of the West, eight days from San Juan, arrived at New York on Friday morning last, with San Francisco dates to Aug. 15th. She has nearly 600 passengers—$1,000,000 on freight, and $500,000 in the hands of passengers.

The steamer Winfield Scott sailed from San Francisco, for Panama, on the 16th, with 100 passengers and $1,000,000 on freight. The Sierra Nevada also sailed on the 15th, with over 600 passengers for San Juan, who came on the Star of the West. The United States frigate Columbia left San Juan, August 31st, bound for Pensacola.

Hon. Solomon Borland, Minister to Central America, would proceed to Grenada, on the 3d of September.

The Sierra Nevada arrived at San Francisco on the 31st of July, the Oregon on the 5th of Aug., and the sloop of war Portsmouth on the 11th, from the Sandwich Islands. She reports that the small pox was raging there. There had been 500 new cases in a week.

A fire occurred at Sacramento city. Loss $25,000.

Mr. Peter Smith, formerly connected with the Lopez expedition, killed Lieut. Scott in a duel on the 3d ult.

The head of Joaquin, the bandit, has been brought to San Francisco, and was about to be exhibited.

The Rogue River Indians had attacked the white settlers in the northern part of the State and murdered a number of the citizens. Detachments of U. S. troops had been sent in pursuit.

The taxable property of San Francisco is estimated at over $30,000,000, or $11,000,000 more than last year's estimate.

The clipper ships Hornet and Flying Cloud arrived on the 12th—the Hornet 40 minutes ahead. The Flying Cloud lost her chief officer and a seaman in a gale.

Much uneasiness was felt at San Francisco on account of the non-arrival of Lieut. Beale and party.

Gold had been discovered at Santa Cruz.

O. Hilton, alias S. G. Gordan, the Ohio mail robber, had been arrested.

Petitions are in circulation calling on Congress to take immediate measures for building the Great Pacific and Atlantic Railroad.

The Squatter difficulties had nearly subsided. Politics are waxing warm.

Edmond Rondolph has taken the stump against Gov. Bigler.

The city license law has been declared by the Recorder to be unconstitutional.

Some Chinese merchants were about to open a Banking office at San Francisco.

C. T. Buffon, the agent of Cobb's Express committed suicide in Calveras Co.

Dr. John Baldwin was shot dead in the streets of San Francisco, Aug. 1st., by Joseph Harrington, in a squatter difficulty.

Wells, Fargo & Co.'s Express office at Sacramento, was robbed of $8,000 on the 9th.

San Francisco, Aug. 16.—The market is extremely languid to-day. Flour firm at $21@22 for Gallego and Haxalland. Corn meal $4,75@5,81.

## From Oregon and Washington Territory.

The mail steamer Columbia, brings dates from Oregon to the 13th of July, and from Olympia, Washington Territory, to August 6th.

Mining is reported to be carried on with great success by some secreted parties in the Cascade mountains, near the base of Mt. Hood. The Oregonian concludes that the day is not far distant when mining will be as profitable in the Cascade range as in Rogue river or Shasta.

The Oregonian of August 13th, states that the harvest is nearly completed. Those who are competent to judge say the crops are abundant.

The Columbian says that gold discoveries have recently been made near New Dunginess.

The Pacific Railroad Exploring party under Capt. McClelland, U. S. A., had left Vancouver, and were at Mt. St. Helens when last heard from. They expect to meet Gov. Stevens' party between the Cascade and Rocky Mountains.

The ox teams arrived at Portland, across the plains, on the 31st of July. They left St. Joseph, Mo., on the 20th April. The party represented the grass to be good on the whole route.

In regard to coal mining, the Columbian learns that the brig Cabot is on her way to the mines in Bellingham Bay, with miners, provisions, &c., and that they will open these mines without delay.

Arrangements are being made to build a railroad from Olympia to the Skookum mines, with the view of opening them at no distant day.

## Arrival of the Illinois.

The steamer Illinois, from Aspinwall the 2nd inst., arrived in New York on Saturday last, with $685,000 in specie and 400 passengers.

The health of the Isthmus was better than usual.

Dates from Peru are to the 10th August.—Nothing new concerning the difficulties between Bolivia and Peru. Internal affairs of the former country were very unsettled. A revolution had broken out in Cocharnbamba, but was speedily quelled by President Belzus' son-in-law.

There had been revolutionary outbreaks in the South, under the lead of General Velasco and Agreda. They were defeated, however, in an encounter at Mojo, with Colonel Cordova and General Velasco killed.

The provinces of Chicas and Cinti had previously declared in favor of Velasco, but it was thought they would be easily defeated since the fall of that General.

The south of Peru is tranquil.

---

☞ A shocking accident took place recently at the new Crystal Palace, at Sydenham, England. The scaffolding or platform used in the fixing of the roof, broke, and fell from a hight of 150 feet, killing on the spot ten men, and so shockingly untilating seven others that two of them died soon afterwards. The amount of material damage caused by the accident is computed to exceed £6,000.

---

The Best and Cheapest.—The New York Journal, an illustrated Literary monthly, each part consisting of 64 large quarto pages (equal to more than 120 of the usual magazine size,) is the handsomest monthly published as well as the cheapest. Terms only one dollar and fifty cents a year, in advance—shorter periods at the same rate. Local agents wanted to procure subscribers in the neighborhoods in which they reside. A very large percentage given. Circulars with full particulars mailed to any address on post-paid application to the publisher. Send twelve cents to the undersigned and receive by return mail a copy of the "Journal;" it is its own best recommendation. P. D. ORVIS, Publisher,
194-1t 75 Nassau st., New York.

# Market Intelligence.

Rural New-Yorker Office,
Rochester, Sept. 14, 1853.

During the past week there has been considerable activity in our market, and Breadstuff's have again advanced. Prices are, however, yet unsettled—the next arrival from Europe, now due, being anxiously awaited.

Flour rules high, selling to the trade at $6,25 for extra Genesee. There is no Western in market, and we hear of no heavy sales.

Wheat is in good demand. Some of our large mills are short of stock, and the owners are purchasing freely—while other dealers are awaiting further advices. Small lots were sold yesterday at $1,32@1,35. Several thousand bushels were sold on private terms—probably at 2 or 3 cts. above our quotations. Farmers who are ready to sell, can now obtain good prices, and may miss the figure by holding too long.

For prices of other articles see quotations below.

### Rochester Wholesale Prices.

## NEW YORK MARKET.

NEW YORK, September 13.

Ashes—Market firm for Pots at $5,25; Pearls $5,31.

Flour, &c.—Demand for Western and State flour fair, market steady. Supply not large. Canadian easier and nominal. Sales Western canal at $6,44@6,50 for common to straight State $6,50@6,62 for mixed to fancy Michigan and Indiana and common to good Ohio.

Grain—Better feeling in our wheat market. Prices better and demand good. Sales Ohio at $1,40@1,43; $1,44@1,45 for Michigan; choice Canadian $1,43; Genesee $1,50; white Southern $1,40. Barley more plenty. Sales prime four-rowed at 75c—the first new lot. Oats easier 47@49c for State and Western. Corn firmer, demand good; sales at 80@81c unsound, 82@83c Western mixed and Southern white.

Provisions—Pork in good demand. Holders firm at $15,62@15,68 for mess; $12,75@13 for prime. Beef in steady request $6,75@9,25 for country mess; $12@12,50 for city mess and re-packed Chicago.

Lard better and in request at 11@11½c.

Butter firm and in demand at 18@20c State.

Cheese in good demand at 8¾@9¼c.

## ALBANY MARKET.

Albany, Sept. 12.—Flour and Meal.—We have only to notice a moderate Eastern and local demand for Western and State Flour, with limited receipts. The medium grades of State are scarce, and for this description very full prices are obtained. Sales at $6.37@6,50 for common to good State; $6,37@6,62 for mixed to fancy Michigan and Indiana and common to good Ohio; $6.62@6,87 for fancy Genesee and extra Western, and $6.87@7 for extra Genesee. Corn Meal is firmer and in good request at $1,56@1.62 ℔ 100 lbs.

Grain—Wheat is in moderate supply with a good eastern and home inquiry at very full prices. Sales Genesee at $1,46 for fair, and $1,48 for prime. Corn is in steady demand for the east and home consumption at previous rates. Sales Western mixed at 82c afloat and 83c for lots at the depot. Barley sells rather more freely but for inferior lots the market favors the buyer,—sales at 73@71c for fair to good two-rowed; 76c for Jefferson county; 81c for inferior, and 83c for prime four-rowed, closing steady. Oats are not plenty and the market is rather firmer; sales State at 47@48 for good to prime.

Hops—A quiet market at 32c for old and 40c for new.

Feed—None offered except in store and no sales made.

## BUFFALO MARKET.

Buffalo, Sept. 12.—Flour quiet and demand moderate at Saturday's rates. The sales up to noon are about 1,500 bls. at $5,50@5,56 for good brands of Michigan and Ohio.

Wheat quiet and market dull. Very little inquiry, buyers awaiting steamer's news. A cargo of white Michigan offering at $1,22 afloat, without takers. Sales of only small parcels of white to clear up cargoes or fill out boats; and 2,800 bu. red wheat at $1,15½.

Corn market quiet and inquiry light. Sales 5,000 bu. at 66c in two lots.

Oats dull. Sales 4,000 bu. at 35c.

Canal Freights dull and very little offering. The rates are 7⅞@9c on flour, 22c on wheat, and 18½c on corn to New York, and 7⅞c on flour, 20c on wheat and 16½c on corn to Albany and Troy.

## NEW YORK CATTLE MARKET.

NEW YORK, Sept. 5.—At Washington Drove Yard—The supplies of cattle since our last have been unusually large, but the demand has been correspondingly active—Prices, however, as compared with the quotations of the last report, have given way a little especially for the poorer qualities. The range of the market to-day is from 7½ to 9½ ℔ lb. The warm weather exercised a rather depressing effect on business to-day. Market closed dull with some 300 head left over.

At Browning's—Offered, 81 Cows and Calves—all sold at prices ranging from $20 to $50, as in quality.

Sheep and Lambs—At market 5,735. Sales of Sheep at from $2 to $4,50@6. Lambs from $1,50 to 3@4,25. Left over 600.

At Chamberlain's—Offered, 300 Beef Cattle, 50 Cows and Calves, and 1,500 Sheep and Lambs.

The Beeves sold at from 7@8½c per lb.

Cows $25 to $35@50. Calves 4½ to 7c. ℔ lb.

Sheep $2,50 3,50, 4,50@6,00. Lambs $1,50 to $3@4.

## ALBANY CATTLE MARKET.

ALBANY, Sept. 12.—W. W. Woolford's, Bulls' Head, Washington street.

Beef Cattle—769 at market. Prices—Extra, $7,00; 1st quality, $6,50; 2d do. 6,00; 3d do, $5@5,50.

Cows and Calves—25 in market. Prices from $25@30, 35 to $40.

Sheep and Lambs—1,516 in market. Prices of Lambs $1,62, 1,75, 2@2,50. Sheep $2,50, 2,75, 3, 3,25 3,50.

Swine—260 in market. Prices, per hundred, $4,50, 5, 5,25@5,50.

## CAMERIDGE CATTLE MARKET

CAMBRIDGE, Sept. 7.—At market, 2,964 Cattle, about 2,000 Beeves, and 964 Stores, consisting of Working Oxen, Cows and Calves, yearlings, 2 and 3 years old.

Prices—Market Beef—Extra sold at $7,50 per cwt.; 1st. quality, $7@7,25; 2d do, $6,25@6,50; 3d do, $5,50@6; ordinary, $4,00@5,00.

Hides—$6 per cwt.

Tallow—$7@7.50 per cwt.

Pelts—75c@1,25.

Calf Skins 11c per lb. quick.

Veal Calves—$6, 8, 10@12.

Cows and Calves—$24, 26, 29 to 74.

Stores — Working Oxen—$96, 107, 112, 118@160.

Yearlings—$8, 9, 10@10,50.

Two years old—$15, 18, 21@28.

Three years old—$21, 28, 31@51.

Sheep and Lambs—5,187 at market.

Extra, $1, 4¼, 4½, 5@6.

By lot—$2¼, 2¾, 3@3½.

Swine—None.

## BRIGHTON CATTLE MARKET.

BRIGHTON, Sept. 8.—At market 3,300 Cattle, 1,900 Beef, and 1,400 Stores, 6,500 Sheep, and 1,400 Swine.—Several hundred Cattle (stores and small and thin Beef Cattle) unsold.

Prices—Beef Cattle—For the best quality of Beef Cattle—prices were sustained; on second and third quality prices declined. Extra, $7.50@8; 1st quality $6,75@7,25; 2d do, $6@6,50; 3d do. $4,75@5.75.

Working Oxen—Supply large—sales $75, 82, 90, 100, 110, 125@140.

Cows and Calves—Sales $22, 26, 31, 33, 38, 42, 47@55.

Stores—Two years old $15@22.

Three years old—$24@31.

Sheep—Small lots $2,75, 3, 3.25, 3,75, 3.92, 4, 4.50@5.50.

Swine—Shoats to peddle 6¼@6½c; old hogs 5¾, 6@6¼; still hogs to slaughter 5¾; at retail from 7@8½.

## PHILADELPHIA CATTLE MARKET.

PHILADELPHIA, Sept. 9.—Beef Cattle—The offerings this week amounted to 2,000 head, of which number about 500 were driven to New York. There has been an increased demand, and the sales were large, being within the range of $8@9 ℔ cwt. Prices are firmly maintained.

Cows and Calves—About 200 were offered, all of which were disposed of at $12@36 each, as in quality.

Hogs—900 head offered, nearly all of which were sold to city butchers at $6,50@7 ℔ 100 lbs, principally at the former quotation, which is a decline.

Sheep and Lambs—The supply is somewhat increased. There were 1,200 head offered, which were sold at $2 to $6 each, according to quality.

# Marriages.

In Liverpool, Onondaga co., on the 5th inst., by the Rev. W. W. Newell, O. C. CHILDS, Esq., of Salina, and Miss MARTHA DICKSON, of the former place.

In Wilson, Niagara co., N. Y., on the 7th inst., by the Rev. J. H. Morrison, Mr EBENEZER SCARBOROUGH and Miss MARY E. WILLIAMS, both of Wilson.

In Wilson, Aug. 11, by Rev. G. E. Delavan, Mr. DAVID M. KNOX and Miss ANN M. PLACE, all of Wilson.

# Deaths.

In Dixon, Illinois, on the evening of Sunday last, the 11th inst., HORACE SIBLEY, Esq., son of Hon. Joseph Sibley of this county.

In this city, on the 13th inst., WILLIAM BURNETT, aged 81 years, formerly of Dutchess co.

☞ Poughkeepsie papers please copy.

**MERINO SHEEP FOR SALE.**

The subscriber would again call the attention of wool growers to his superior flock of Merino Sheep, which he still continues to breed without regard to expense where an improvement can be made.

I have now on hand a lot of pure Spanish ewes. A few bucks and ewes, a cross of Spanish and French Merino; and a lot of bucks and ewes, one and two years old, bred from an Atwood buck with the above ewes. These sheep will be sold on reasonable terms.

For the benefit of those coming from the west, I would say, there is a daily stage leaves Amsterdam at 2 o'clock, P. M. [194-1tw1m*] A. H. AVERY.
Galway, Saratoga co., N. Y., Sept. 8, 1853.

**DURHAM BULLS FOR SALE.**

A Good Chance for Procuring Fine Stock.

I HAVE seven Short-horn Durham Bulls and Bull Calves of the best stock in Western New York, which I will offer for sale at the Monroe County Fair, to be held at Rush, on the 29th inst., as I do not wish to breed from them, being related to the balance of my stock. I shall compete for premiums, and invite the owners of stock to turn out largely, so that I may have some opposition in that department. D McHARDY.
West Rush, Sept. 12, 1853. 194-2t*

**1,000 BOOK AGENTS WANTED.**

INTELLIGENT AND INDUSTRIOUS MEN WANTed in every part of the United States, to engage in the sale of the best assortment of illustrated

POPULAR AND USEFUL BOOKS

published in the country.

Men of good address, having a small capital of from $25 to $100 can do well by engaging in this business, as the inducements offered are of the most liberal character.

For further particulars, address, (postage paid)
ROBERT SEARS, Publisher,
194-4t 181 William St., New York.

**FARM FOR SALE.**

ONE HUNDRED ACRES of the very best kind of farming land are offered for sale, in one of the western counties of this State. The farm lies within 2 miles of an important station on the line of the N. Y. & Erie Railroad, is well watered, under superior cultivation, and is not surpassed for grazing purposes by any equal portion of land in the State. A large portion is bottom land, well adapted to the growth of any kind of farm produce. On the farm are two barns and a very comfortable house, nearly new. The price is $25 per acre, to be paid as follows:—three-fifths down, and the balance in two equal annual installments. This property will double in value within six years. For further particulars address FARMER, Olean, Cattaraugus co., N. Y. 194-3t.

**CHINESE FOWLS.**

FOR SALE, a number of pairs of genuine Black Shanghai chickens, strongly marked and embracing all the fine points of Chinese fowls. No one wishing a superior breed of fowls for laying or for the table, will be disappointed by procuring this variety. Also, a few pairs of the celebrated Brahma Pootra stock, in fine condition. Orders received from any part of the country will be promptly executed, and the fowls caged in such a manner that they can be transported safely for any distance.

Terms:—Black Shanghai, $5 per pair; Brahma Pootra $10 per pair. Address the subscriber at the office of the Genesee Farmer, Rochester, N. Y.
194-4t CHAS. W. SEELYE.

A CHANCE TO MAKE MONEY!—Profitable and Honorable Employment.—The subscriber is desirous of having an agent in each county and town of the Union. A capital of from $5 to $10 only will be required, and anything like an efficient, energetic man can make from three to five dollars per day;—indeed some of the agents now employed are realizing twice that sum.—Every information will be given by addressing, (postage paid.) WM. A KINSLER,
194-1t* Box 601, Philadelphia Post-Office.

**Ornamental and Domestic Poultry.**

THE subscriber having invested a large amount in this business, is now prepared to fill any orders which he may receive. The celebrated Brahma, Sumata, Game, Pabner, Marsh and White Shanghais, with many other popular varieties, are from the yard of C. C. Plaisted, Esq., Great Falls, N. H., and of course cannot be surpassed in the world. My Imperial Cochin China Fowls are from Col. B. P. Johnson, his stock imported last year, '52, from the best breeders in England. All who well know Col. J., will understand that he has the best or none. My black Spanish are quite late, and will not be ready for market before next spring. They are from Mr. John Giles, late imported, the best blood in the country. These birds are so fast coming into repute that the price will doubtless run high for some years to come, as will also be the case with the Brahma, Sumatra, Game, &c. All persons purchasing fowls from me, can enjoy the benefit of my advertising, in case they wish to sell Chickens next year.

I am quite sure that our southern and western fanciers can be better suited here than farther east, as the long distance on railroad much injures the health and growth of the fowls.

As there are many fowls in market which have no claim upon the public favor, I will give my patrons something more tangible than my own words, for

"If self the wavering balance shake,
It's rarely right adjusted."

I am therefore permitted to refer all who entertain any scepticism, to the following gentlemen:—Col. B. P. Johnson, Secretary N. Y. State Agricultural Society, Albany, N. Y.; Hon. Ambrose Stevens, N. Y. City; Hon. Lewis F. Allen, Black Rock, N. Y.

Address O. B. EVANS, 211 Main street,
194-3m Buffalo, N. Y., Box 1662.

**SYRACUSE NURSERIES, SYRACUSE, N. Y.**

THORP, SMITH, HANCHETT & CO., particularly invite the attention of Nurserymen, venders and planters, to their immense stock of Trees of every description, being of unusually fine growth.

Standard Fruits—*Apples, Pears, Cherries, Plums, Peaches, &c.*, for orchard planting, vigorous, stocky and well formed.

Dwarf and Pyramidal Pear Trees on the best *Angers* or *French Quince stocks*, (embracing every good variety that will work well,) 2 yrs. old, very beautiful, vigorous and well formed.

Dwarf Cherries on *Mahaleb stocks*, 1, 2 and 3 yrs. old trees, finely formed and handsome.

Gooseberries, Currants and Raspberries—Our stock consists of the choicest varieties, including the new celebrated sorts.

Grape Vines of all the hardy sorts, with some forty Foreign varieties, grown in pots from single eyes.

We would particularly request persons who are desirous of purchasing, to examine the above trees, as they are not only worked on the best stocks that can be procured, and grown in good soil, but they are stout, stocky and vigorous, and mature their wood early in the fall; and as we personally pay the most strict attention to our trees, in every stage of their growth, we feel that no stronger guarantee of accuracy can be given in this respect.

Ornamental Trees—such as *Horse Chestnut, Sugar and Silver Maples, Elms, Black Walnuts, Silver Abeles, Tulip Trees*, &c.—We have large and fine for street planting.

Shrubbery—A splendid collection containting every thing new and rare.

Roses—One of the largest collections in the country, including all the novelties. Also the celebrated "Augusta" Rose, which has given such universal satisfaction the present summer.

Bulbous Roots—We are now receiving from Holland, by steamer, a splendid importation of *Bulbous roots*, comprising all the choicest varieties.

Green House Plants, *Cuschias, Pompon, Chrysanthemums, Verbenas, Dahlias*, Strawberry and Hedge Plants, &c., &c.

All articles packed in the best manner for transportation to any part of the United States, and all orders strictly complied with in every respect. For further particulars and prices, see Catalogues:

No. 1, A general descriptive Catalogue, combining Nos. 2, 3 and 4 in one volume. No. 2, a general Catalogue of Fruit Trees. No. 3, a new descriptive Catalogue of Ornamental Trees, Shrubs, Roses, Flowering Plants, &c. No. 4, a descriptive Catalogue of Dahlias, Verbenas, Chrysanthemums, Geraniums, Fuschias, bedding out and green house plants. Also a wholesale Nursery trade list.

The above Catalogues will be sent gratis to all applications (post-paid) enclosing for the wholesale list 1 penny stamp—for No. 1, a letter stamp—and Nos. 2, 3 and 4, two penny stamps each.

THORP, SMITH, HANCHETT & CO.
Syracuse, N. Y., Sept. 5, 1853. 193-3t

**American Botanic Garden & Nurseries.**

5,000 STANDARD PEAR TREES, 3 years old, 5 to 7 feet high, mostly Virgalieu and Bartlett. 5,000 do. 2 yrs. old, 3 to 5 feet high, including many other leading varieties. These trees are all healthy and vigorous.

5,000 Peach, one year from bud, strong and fine.
20,000 Balsam Fir, 3 years cultivated, very fine.
10,000 American Arbor vitæ, 2 years cultivated.

The above, and many other articles, are offered at *wholesale* at *very low prices*. Also a general assortment of FRUIT AND ORNAMENTAL TREES, *Shrubs, Roses, Paonias, Phloxes, Spireas, Tulips, Hyacinths*, &c., &c., *at retail*. Particular attention is given to the cultivation of Hardy Evergreens, for door-yards and for hedges.

Catalogues furnished *gratis*. Orders solicited.
Address DELL & COLLINS.
Waterloo, Seneca Co., N. Y. 193-3t*

**Monroe Academy, Henrietta, N. Y.**

THE Fall Term of fifteen weeks will commence on the 12th of Sept. inst. The Rev. H. H. Harp, formerly Principal of the Darien Centre Seminary, and well known as an able and successful instructor, takes charge of the Institution.

Tuition from three to six dollars per term, according to the age of the pupil and the studies pursued. Board can be had with the family of the Principal at cost, by paying five dollars per term for room rent, use of furniture and oversight of kitchen, &c., or good rooms can be had for students to board themselves at moderate charge. The building is to be thoroughly repaired and refitted. Circulars at Sage & Bros. Bookstore, Rochester.

J. H. M. C. HASELTINE, *Sec'y.*
East Henrietta, N. Y., Sept., 1853. 193-3t.

**CIRCULAR.**

WE have just published, and would respectfully invite the attention of the trade to

DANIEL WEBSTER'S LIFE, EULOGY, AND FOUR GREAT ORATIONS.

This volume is printed in the best style of typographical art, on a superior quality of paper. It contains one hundred and eighty-four pages, and is illustrated with the most accurate and splendid Steel Portrait of Mr. Webster extant. The Life is from the accomplished pen of Louis Gaylord Clark, the able and popular editor of the Knickerbocker Magazine. The Eulogy is by an eloquent and appreciating American writer. The four great Orations comprise the most eloquent and popular of Mr. Webster's intellectual efforts, viz:

Adams and Jefferson, Bunker Hill Monument, First Settlement of New England, and Reply to Hayne.

The work is duly entered according to Act of Congress, and is stereotyped in the best manner. It is an authorized edition, and sanctioned by Mr. Webster's family and executors.

Terms:—Paper bound—For 100 copies, 35 cents; 1,000 copies, 30 cts.; retail, 50 cts. Muslin bound—for 100 copies 50 cts.; 1,000 do., 45 cts.; retail, 75 cts.

Liberal terms of exchange. Address all orders to
WILBUR M. HAYWARD & CO,
Publishers, Rochester, N. Y.

N. B.—Agents wanted to wholesale and retail the above work. 193-1t
Rochester, Sept. 5, 1853.

**FOR SALE.**

A VALUABLE FARM OF 163 ACRES, four miles North-west of Weedsport, (a good market, on Erie Canal,) and 3½ miles from the Syracuse and Rochester direct Railroad. The said Farm has 140 acres improved, and in a good state of cultivation, and is well situated for two farms if desirable, as there are two houses, two barns, two orchards of a good variety of fruit, and a fine timbered lot on each end of the farm. Fifty acres is seeded to Clover and Timothy, and 30 acres is intended for wheat this fall. For further particulars, inquire of, or apply to the subscriber on the premises.

N. B.—Purchasers wishing only a hundred, or fifty acres can be accommodated. JACOB EAKER.
Conquest, Cayuga Co., N. Y., Aug. 5, 1853. 193-3t*

**FINE FOWLS.**

HAVING raised from select stock, a few broods of buff Cochins and Shanghais, in order to obtain for private use, a small flock known to be pure and genuine, I have for sale about twenty pairs, and at prices that any one can pay, who is able to own half a dozen common fowls. They are broods of April, May, and June—genuine as imported:—being of stock received from the importer, bred immediately from fowls brought from China.
193tf D. ELY, 69 So. Fitzhugh St.,
Sept. 1, 1853. Rochester, N. Y.

PURE BRAMAH POOTRA FOWLS for sale by the Subscriber. Price, $10 per pair, or a cock and two pullets for $12. Address, post-paid,
JAS. M. HARPER, New Hartford, N. Y.
Sept. 5, 1853. 193-2t*

**ALBANY DRAIN TILE WORKS,**

*No. 60 Lancaster St., Albany, West of Medical College.*

THE subscriber, successor to JOHN GOTT, formerly A. S. BABCOCK & CO., is prepared to furnish Draining Tile of both Horse Shoe and Sole patterns, at from $12 to $18 per 1000 pieces. The tile are more than a foot in length, and fully equal to any of American or Foreign manufacture. They are so formed as to admit water at every joint, and drain the land perfectly from 12 to 20 feet on each side, according to the nature of the soil.

Also, Large Tile for drains about dwellings, yards, &c., at from $1 to $8 per 100 pieces. These are cheaper and more durable than brick drains.

Full directions for preparing ditches, laying tile, &c., will be sent free to those addressing the subscriber, post-paid. The tiles can be sent safely any distance. Orders are respectfully solicited. DAVID CALLANAN,
192-3t. Albany, N. Y.

**A RARE CHANCE.**

PERSONS wishing to add an agreeable and lucrative business, to the pleasure of traveling can have the opportunity, by purchasing the Patent right for a State, for *Mumma's Premium Corn Sheller and Vegetable Grinder*. This Sheller is certainly better adapted to the wants of the farmer than any other, as it is simple, durable and easy to work with one hand, yet it has the advantage of two cranks, or horse power. It shells *large* and *small* ears perfectly clean at the same moment, and separates the cob. It is fed moderately by the shovel, or thrown promiscuously in by hand, and is capable of shelling from 30 to 40 bushels per hour. It is also adapted to grinding vegetables for feed for stock.

Extensive sales have been, and are being made for the right for this sheller, in different States. The Proprietor will wholesale the right for one or more States, at a rate the purchaser can make *large profits*, with proper exertion. His terms will be easy, so that the buyer can soon realize the most of his money from the proceeds of sales.
Address E. ROBINSON,
192-3t Greencastle, Franklin Co., Penn.

**Improved Portable Cider Mill and Press.**

HICKOK'S Improved Portable Cider Mill and Press, received the following premiums in 1852, viz.:—A Silver Medal at the Fair of the American Institute, N. York. Diploma at the Franklin Institute, Philadelphia. First premiums at the State Fair at Utica, and at the Columbia and Rensselaer County Fairs, and diploma at the Westchester County Fair.

Descriptive circulars sent free to all post-paid applications. See page 254 of this paper, for engraving. Price, $40,—and all persons living near Rochester or away from any agency, may order of me, and when they get the mill they may deduct the freight and remit the balance to me.
Manufactured by W. O. HICKOK,
Harrisburg, Pa.

Sold by LONGETT & GRIFFING, 25 Cliff-st., N. Y.
EMERY & CO., Albany.
DANA BROTHERS, Utica.
PROUTY & CHEW, Geneva.
HIGGINS & CALKINS, Castile, Wyoming Co.
C. E. YOUNG, Main-st., Buffalo.
O. GREGORY, Binghamton.
CHAS. ASHLEY, Ogdensburg.
D. LANDRETH, Philadelphia. 188-8tw1m

Springfield, Ohio, May 1, 1852.

Mr. W. O. Hickok: *Dear Sir*,—I purchased one of your improved cider mills at the State Fair at Lancaster, Pa., last year. Since then I have tested it effectually, and must say it surpasses any machine, for the purpose it is intended for, that I have ever seen, and I have examined a good many, before purchasing and since. Its construction being simple, it never gets out of order. It surpasses my most sanguine expectation. Could I not procure another one, I would not part with mine for four times the price of them, as I know its value.
Yours truly, CHAS. M. CLARK.

**ATKINS' SELF-RAKING REAPER.**

THIS MACHINE is now offered to the public and warranted to be a good Self-Raking Reaper. It is also believed to be a good mower, but not yet having been sufficiently tested in grass (though it soon will be) it is not warranted to be equal to a machine made mainly or wholly to mow.

The raking apparatus is of novel and very simple construction, and not liable to derangement, and every farmer who has seen it in the harvest field, says it performs the raking better than a man can possibly do it.

Price of machines at Chicago, $175, of which, $75 must be paid on giving the order, $50 upon successful trial, and $50 in note payable 1st Dec.

The machines are most thoroughly built and warranted.

☞ Descriptive circulars, with cuts, sent to post-paid applications. [182m3.] J. S. WRIGHT.
"Prairie Farmer" Warehouse, Chicago, June, 1853.

TO BOOKBINDERS.—FOR SALE—The Tools, Stock and Fixtures in a well established BINDERY, now doing a good business. The owner has been in it for the last twelve years, and only wishes to leave to do other business that will be better for his health.

For particulars concerning the business, address Democrat Office, Rochester, N. Y., or to the subscriber,
F. H. MARSHALL.
Rochester, July 21, 1853. 187-tf

**SUFFOLK PIGS.**

THE subscribers are prepared to receive orders for pure Suffolk Pigs, bred from stock imported by the late William Stickney in 1848,—also by the subscriber in January last. Address
JOSIAH STICKNEY, Boston or Watertown,
or ISAAC STICKNEY, Boston, Mass.
Boston, August, 1853. 190-13w-1m

**SUFFOLK PIGS FOR SALE.**

TWENTY PAIRS of pure bred Suffolk Pigs for sale by the subscriber. Also Breeding Sows. They can be safely forwarded by Railroad, Express, &c., to almost any part of the country. C. J. HOLDEN,
June, 1853. [186m3] Walpole, N. H.

MONEY TO LOAN on Bond and Mortgage, on improved farms. L. A. WARD,

# Poetical.

Written for the Rural New-Yorker.

## "ANGELS UNAWARES."

BY IDA FAIRFIELD.

With laugh of ringing music
Forever by our side,
Gladdening like the sunbeams,
Across our paths they glide.

Bounding on before us,
Wherever we may stray,
Their tiny feet scarce crushing,
The blossoms in their way.

No wings upon the shoulders,
No crown upon the brow,
We know them not, for angels,
As they sport beside me now.

We fold them to our bosoms,
We claim them as our own—
We hush our hearts wild throbbings,
To catch each music tone.

We know they bring no gladness,
They crown our life with love;
But we pause not to consider
That they bring it from above.

A sudden chill creeps o'er them,
A breath, and they are gone,
Our homes become so desolate,
Our little birds have flown.

And then in that wild sorrow,
A whisper in our hearts—
A gleam of seraph pinions,
The sudden truth imparts.

And we know that in these objects
Of all our hopes and cares,
Like some of old, we've cherished
Bright "Angels unawares."

Walton, N. Y., Sept., 1853.

## UNCLE JAKE'S EXPERIENCE:

### OR, THE AGONIES OF COMPOSITION-WRITING.

Some years subsequent to that desperate struggle which secured the independence of no inconsiderable portion of the Western Continent, there lived in one of our semi-barbarous western frontier towns a curious compound of flesh and blood known under the very euphonious appellation of Jacob Powderhorn, familiarly denominated Uncle Jake. The natal place of this original was a matter of profound mystery, even to his most intimate associates; and it is the generally received opinion that every person on this terrestrial ball is kin to some other persons, it was shrewdly conjectured by some of the most renowned savans of the neighborhood that *he* might have been a spontaneous production of the western wilds, inasmuch as he was discovered there by the first emigrants who had gathered courage to penetrate the trackless depths of the great American forests beyond the Mississippi.

Our hero was at the time of which we speak, far beyond the meridian of his years and strength; yet, having no other means of subsistence, he engaged with all the zeal and ardor of youth in those hunting and fishing excursions which to many a lover of the wild and romantic in nature constitute one of the principal charms of border life. His keen, gray eye, peering out from under its heavy lashes with a somewhat cautious, guarded expression, coldly et take unerring aim, and no rifle was more fatal to whatever game chanced to cross the track and desire of its master than the rusty time-worn one of that same Uncle Jake. The rudely constructed log habitation of which he had been for many years sole occupant, with the exception of a faithful hound, was situated under the brow of a hill, remote from the settlements, and scantily furnished with utensils necessary for preparing the rustic fare of a real, genuine backwoodsman. His companions in the chase were often invited to partake the hospitalities of his hut, and, seated with them around his humble board spread with venison, buffalo meat and the varieties of fowl usually afforded by the lodge of an experienced hunter, he knew no wish ungratified.

Every means that curiosity could devise, not excepting direct interrogation, had been employed to ferret out something in relation to the origin of the lone one; but no satisfaction was received, and now myriad-tongued rumor was beginning to busy herself with the fate of the unconscious squatter. Some of his comrades entering the hut unexpectedly, at a certain time, had surprised the old man in the midst of several rusty, ancient-looking volumes, and, though he colored somewhat and seemed slightly embarrassed, he did not refuse their very civil request to be allowed to examine them, but if the exterior was sufficiently remarkable to excite observation, what astonishment seized their senses, when, on opening the lids, pages of letters and words wholly unknown to them before, met their gaze.—Instinctively they turned to each other for a solution of the mystery; yet the same vacant look of wonder was depicted on every countenance, and no word of explanation escaped the lips of the hunter; but, hastily gathering up the books, without any apology for his withdrawal, for Uncle Jake was no stickler in the matter of outward forms and ceremonies, he abruptly retired behind a rude partition that screened one corner of his cabin from the eyes of the intruders, and there remained until they had taken leave. From this time forth there was a very perceptible change in the feelings of that little community toward the hunter.—One recollected to have heard him muttering over some unintelligible words which he now verily believed were an invocation to some evil spirit; another had seen the old man seated under a tree near the door of his hut intently studying one of the aforementioned wonderful volumes, and a third sagaciously remarked that it was evident enough he was a sorcerer in league with the Prince of Darkness. By degrees, all came to look upon him with an eye of suspicion, and he, naturally enough divined the cause, secluded himself more and more from society, less frequently invited friends to his house, and finally became strictly a hermit. Good old Uncle Jake! he has long since settled his account with this world of trial and tribulation, of which he had his full share; but never was there a warmer heart than that which beat beneath the deer-skin vest of Jacob Powderhorn.

After his decease the old hut underwent a thorough examination, the fruit of which was a discovery of those self-same mysterious volumes, together with a package carefully sealed and directed to an individual in the eastern part of Mass. The books, being considered the work of demons and vile spirits, were religiously consigned to the flames; the package, with a few words of explanation, was sent as directed.

While visiting Massachusetts in the summer of 184— chance threw me in the way of a lady, who in the course of conversation on the school systems of our respective States, introduced the subject of Composition; and on my expressing an opinion that every individual possesses some degree of literary talent, she narrated to me the following story, related to her by one of the oldest inhabitants of the place in which she resided.

James Sanford was to finish his school education at a flourishing Academy, a few miles from his native town, at the age of nineteen, about which period young people are usually most keenly alive to disgrace of whatever nature. Possessing an uncommonly retentive memory, together with an ardent love of the sublime and beautiful, he naturally succeeded well in the polite literature of the ancients, which constituted, in the institution at which he was educated, a large share of the regular academic course. It was then as now the custom in higher institutions of learning for the teacher to require of each pupil at stated intervals a a literary exercise, which was submitted to him for criticism and then returned to its author; and this regulation was in the school which our friend James attended rigidly enforced. In that duty at least no scholar dared be delinquent. James, with all the fine qualities of his mind, seemed to possess no command of language. No one doubted that he had ideas, and good ones too, but the attempt to commit them to paper induced a singular embarrassment and hesitation; so that composition week, as it was called, was looked forward to by him with feelings of dread and despair. No commendation was ever bestowed upon his productions, for they never merited any; and he toiled hopelessly on without the least perceptible improvement. Too proud to solicit aid, too honest to indulge in literary pilfering, he taxed his own powers to the utmost; and although unable to equal those who in other respects were far inferior to him, yet, as his effusion never met the eye of any one except his teacher, in whom he had implicit confidence, he was able to present them to him with some degree of composure. But the trying time was yet to come. The term which was to be James' last closed the academic year, and the Principal, desirous of having his school do credit to his instruction, in due season set himself about making preparations for the annual examination. He strongly urged upon his pupils the necessity of making an extra effort if they expected to sustain the credit of their institution, and finished by requesting that they should particularly exert themselves in the matter of Composition. Poor James! after having vainly protested his utter inability to produce anything that would pass muster, he betook himself to the solitude of his own room and there sat down to meditate. The first thing to be decided upon was a subject, such a variety of which presented themselves to his mind that it was next to impossible to make a choice; however, as it was to be a masterpiece, he finally selected The Progress of the British Empire, and collecting some authors around him, in case he should need to consult them, commenced his laborious task.

Night and day, every hour he could spare from other duties, was spent endeavoring to avert the terrible disgrace that must attend a failure. Page after page was written, erasures and interlineations made, then the whole destroyed and commenced anew.—Several weeks were spent in this manner, and yet nothing had been accomplished.—Finally he relinquished the idea of attempting to give even a sketch of so extensive a subject, and, after much more deliberation decided upon the Present State of the British Colonies in North America, and applying himself with unwearied diligence, succeeded in penning something, though to his entire dissatisfaction. It seemed to him there was not one sentence expressed with any degree of ease or propriety; and heart sick, he awaited the dreadful day, which, alas! came much sooner than he desired.

The usual examination of classes was made the first business of the day and everything had proceeded to the complete satisfaction of all concerned, when, after an announcement that the compositions would now be read, the name of James Sanford was pronounced in a loud voice. He started to his feet, proceeded a few steps, dropped his paper, stopped to pick it up, and, at last, mounted the stand: all eyes were upon him, for no one had acquitted himself more creditably in the recent proceedings than James Sanford. No sound escaped his lips. There he stood, trembling like a leaf, his arms suspended as if weights were attached to them, his hair erect, and cold prespiration standing in large drops on his face.—The floor seemed sinking beneath his feet, and making a desperate rally he succeeded in taking himself off the stage and made his exit through the street door. No one attempted to stop him, and hurrying on with the utmost speed he could command, to his boarding place, he packed a few necessaries, with the books which by long association had become endeared to him, lay concealed in a neighboring barn the remainder of the day, and at night-fall, without stopping to bid one friend farewell, departed from the scene of his mortification and ere morning's dawn was far on his journey toward the west. All search for him was fruitless: nothing was learned of his destiny, and the name of James Sanford was gradually forgotten. After the lapse of about fifty years a curious-looking package entered the P. O. of his native town, directed to Jonas Blank, Esq., which, on examination, proved to be from James Sanford, alias Jacob Powderhorn, the cousin of the former and at the time of writing a man over seventy years of age. It appeared to have been written shortly before his death; gave an account of his principal adventures since leaving home so unceremoniously, his change of name to Jacob Powderhorn, the pleasure he had derived from perusing the books he carried with him, and ended by reminding him of his adventure at the Academy. This, then, was the identical Uncle Jake—one of thousands driven by the force of circumstances to pioneer the way for the march of civilization to the shores of the Pacific.

South Livonia, N. Y.

### BREAD AND BUTTER.

Bread and butter is a theme, however homely, on which a volume might be written. Although the appetite may tire of other things, on this substantial ground it makes a stand. It must be trained to the liking of far-fetched cookery, while the taste acquired at so much pains departs suddenly. Civilized men enjoy one kind of food, and cannibals another. Some are very simple in their habits, and like the boy Cyrus, at the courtly table of his grandfather, wonder at the multitude of dishes. But no man, Christian or heathen, ever quarrels with his bread and butter. It is acceptable the year round; and the taste for it is universal, and never palls. You cannot eat it to a surfeit or ever return to it with disgust. If it is of a bad quality, that does not destroy your affection. You blame the baker, but stick to the bread. *Good* bread and butter in the summer-time are peculiarly delicious, the very staff of life. When the flour is of the finest wheat, the yeast of a buoyant nature, and the loaf, with its crust properly baked, has the whiteness of snow and lightness of a sponge; when the butter has the flavor of the fresh grass and the color of new-minted gold, eat to your heart's content, and desire nothing else. When you have come in at the noon-tide hour, wearied with your expedition to the mountain-top, your walk in the woods, your sail on the lake, or your botanizing in the meadows; when you have labored faithfully in the garden, rooting out the weeds from the cucumbers green peas the sweet corn and cauliflowers, which are to grace your table, contracting a sharp appetite from the smell of the mold; when you have returned with woodcock from the swamp, or have been "a fishynge;" and then the golden butter and fresh bread are set before you, garnished, perhaps, with a well-dressed lettuce, or a few short-top scarlet radishes, each crackling and brittle as glass, well may you disdain the aid of cooks—for it is a feast which an anchorite might not refuse, and which an epicure might envy.—*Knickerbocker.*

"Be just and fear not."

### LOUD CROWING.

Kendall, writing to the New Orleans Picayune from Paris, says:

"I feel a disposition to crow this morning. Do not our clippers outsail them all. her steamers outrun them all, our Colt's revolvers out-shoot them all, and our thrashing machines out-thrash them all, or thrash them all out if you will? If a man on this side wishes to keep his throat moist, does he not swallow an American julep, cobbler or cocktail? If he wishes to keep his feet dry, does he not wear an American overshoe? If he wishes to keep his blood purified does he not use American sarsaparilla and pills? If he wishes to keep ahead on the road, does he not buy an American trotter? If he wishes to keep warm does he not procure an American stove? If he wishes to keep cool does he not send for American ice? If he wishes to keep his money and effects safe, does he not purchase one of Hobb's American locks? If he wishes to keep himself and family from want and starvation, does he not go to America, or turn his eyes and thoughts in that direction? I tell you that I feel Chapmanish this morning—I repeat, that I have a desire to crow, and lustily, over the advantages and handiwork of my own countrymen.

Are not American authors now more read than any others on this side? Certainly. Where does the Englishman obtain a knowledge of his own vernacular? From Noah Webster and Lindley Murray, to be sure, for the dictionary of the one, and the grammar of the other have crowded almost everything else from the schools where the language is taught in its purity. In history, and law, and theology are not our authors considered among the first? Do not Prescott, and Story, and Channing occupy the front rank? And in poetry, fiction and sculpture, do we not take precedence? Are not the works of Bryant, Hawthorne, Longfellow, Poe, Cooper and Powers, and a host of others, hold in the highest reverence in the old world? Let us all crow."

### THE "LAST BEST GIFT."

Somebody, writing from Australia, says that society is growing wild, and that nothing but women can bring it back to civilization again. He is right! You may build prisons and erect gibbets, pass laws, establish courts of justice, and appoint sheriffs and constables, but until you induce men to become husbands, they will run into all sorts of wickedness,—beginning with unshaved beards, and ending with dirty shirts, drunkenness, and highway robbery. A virtuous woman is a sedative in dimity; her presence exerts a soothing influence that makes the most brutal not only tractable, but tidy. Wherever she moves, there you will find cleanliness and churches, well kept door yards and Sabbath-schools. Without her ministering aid, men drift away from decency and religion, and revel in broken inexpressibles, ill-kept neckties, and outer darkness. Woman is a glorious "institution"—the only created being that takes precedence of sunshine.

Quaker Toast.—"This from me and mine to thee and thine. I wish when thou and thine come to see me and mine, that me and mine will treat thee and thine as kindly as thou and thine have treated me and mine." This is a new version of the old compliment which runs somewhat after this wise—"I wish thee and thy folks loved me and my folks as well as me and my folks love thee and thy folks. For sure there never was folks, since folks was folks, that ever loved folks half so well as me and my folks love thee and thy folks."

Curious.—The following is a fine specimen of literary ingenuity. Two words of opposite meanings, spelled with exactly the same letters, form a Telestick; that is, the letters beginning the lines—when united—are to give one of the words, and the letters at the end are to produce the other—thus:

U-nite and untie are the same—so say yo-U
N-ot in wedlock, I ween, has the unity bee-N
I-n the drama of marriage, each wandering gou-T
T-o a new face would fly—all except you and I
E-ach seeking to alter the SPELL in their scen-E

# Youth's Corner.

"Attempt the end, and never stand to doubt;
Nothing's so hard, but search will find it out."

For the Rural New-Yorker.

### MISCELLANEOUS ENIGMA.

I am composed of 31 letters.
My 1, 5, 8, 6 is a kind of fruit.
My 7, 24, 9, 6, 18, 28 cannot be seen.
My 11, 22, 1, 20, 3, 30, 15, 27, 2 is a lady's name.
My 21, 13, 31, 10, 14, 6 is a large species of bird.
My 4, 9, 15, 16, 26 is a county in New York.
My 10, 2, 31, 21, 5 is what many like to do.
My 20, 8, 1, 24, 27, 15, 14, 19, 7 is the chief end of man.
My 3, 2, 4, 5 is used by every farmer.
My 23, 8, 29, 31, 14 is one of the United States.
My 12, 20, 30, 23, 2, 19 was one of the Apostles.
My 25, 17, 10 is old.
My 12, 29, 23 is a nick-name.
My 21, 3, 13, 25, 4, 14, 10 is a Lake in N. Y.
My 26, 21, 22, 28, 12 is a county in Mississippi.
My 16, 8, 6, 10, 5, 31 should be kept in order on every farm.
My last eleven should be practiced by all.
My whole should be in the possession of every student

### ANSWER TO ENIGMA, &c., IN NO. 37.

Answer to Miscellaneous Enigma—*Battle of Lundy's Lane.*

### FRUIT AND ORNAMENTAL TREES, &c.

THE Subscribers have the pleasure of announcing an immense stock of trees, &c., for the Autumn trade, embracing

Standard Trees for Orchards.
Dwarf and Pyramidal Trees for Gardens.
Ornamental Trees for streets, parks and pleasure grounds.
Rare and beautiful Lawn Trees.
New and Rare Weeping Trees.
Evergreen Trees, embracing the rarest species of Pines, Firs, Spruces, Yews, Cedars, Junipers, &c.
Hardy Flowering Shrubs.
Roses, of all classes and embracing the newest and best sorts.
Dahlias, the finest English prize sorts.
Chrysanthemums, including the finest of the new pompone varieties.
Phloxes, and Peonies, superb collections.
Bedding Plants, a complete assortment.
Bulbous Roots, just imported from Holland and of the first quality.
Hedge Plants.
Box Edging.
Rhubarb, Asparagus, &c, &c.

The favorable season has given everything a vigorous and fine growth.

All orders, whether for large or small quantities, executed with the greatest care and in strict compliance with the wishes of the purchaser.

Packing done in the most secure and skillful manner, so that parcels can be transmitted thousands of miles with safety.

Nurserymen and dealers in trees will be supplied on the most reasonable terms. The following Catalogues are sent gratis and pre-paid to all who apply and enclose one postage stamp for each. No. 1. Descriptive Catalogue of Fruits. No. 2. Descriptive Catalogue of Ornamental Trees, &c. No. 3, Descriptive Catalogue of Dahlias, Greenhouse Plants, &c. No. 4, Wholesale Catalogue.

ELLWANGER & BARRY,
Mount Hope Nurseries, Rochester, N. Y.

Sept. 1, 1853. 191-3t

### N. Y. State Agricultural College.

This Institution was chartered by the Legislature of the State of New York, for the purpose of presenting to Agriculturists the means for acquiring a knowledge of the Arts and Sciences appropriate to their vocation; to prepare Students for practical, active labor, by training the mind in a system which shall inculcate an intimate acquaintance with the sciences essential to agricultural success.

To insure the development of principles and their application to the soil, the Legislature has required the purchase of not less than three hundred acres of land.

The Trustees, having accepted the trust confided to them by the Legislature, organized the State Agricultural College, by the following appointments:

JOHN DELAFIELD, President of the College.
Hon. JOHN A. KING, Ch'n of the Board of Trustees.
JOEL W. BACON, Secretary.
N. B. KIDDER, Treasurer.

At a meeting of the Board, on the 4th of June, a Report was presented by B. P. Johnson, from a Special Committee, on the Location of the College, declaring "that after an examination of the Oaklands Farm in Seneca County, they are entirely satisfied that the price asked for it, is its fair value in the market, for farming purposes; that it is, by previous preparation, by position and variety of soil, in every respect adapted to the objects of the Institution; that the title is perfect, and recommend that the chain of title be entered at large on the minutes of the Board," &c. This farm is situated midway between the market towns of Waterloo and Geneva, and in full view of the Seneca Lake, and overlooking the village of Geneva; elevated about 125 feet above the lake, it is free from causes disturbing health; its soil varies from a strong clay to a sandy loam, presenting varieties sufficient for testing by experiment every doubtful question in relation to soils, and to exhibit the most approved system of cultivation.

The Trustees are prepared to receive from Farmers and friends of agriculture, proposals for the Capital Stock of the Institution, which will be distributed in shares of fifty dollars each, payable

10 per cent on Subscribing.
40 " 1st July.
50 " 1st October.

The Trustees may be addressed (post-paid) at their respective residences, as follows:

Hon. John A. King, Jamaica, Queens County.
Henry Wager, Westernville, Oneida "
B. P. Johnson, Agricultural Rooms, Albany.
Wm. Kelly, Rhinebeck, Duchess Co.
N. B. Kidder, Geneva, Ontario Co.
Joel W. Bacon, Waterloo, Seneca Co.
Tallmadge Delafield, Geneva, Ontario Co.
Wm. Buel, Rochester, Monroe Co.
John Delafield, Oaklands, Seneca Co.

The Officers of the College will endeavor to present subscription books in each County, that the College, so entirely agricultural and peculiarly the Farmer's institution, may find its support widely diffused throughout the State.

The President will, upon application to him, give all needful information in relation to the ordinances, rules and regulations of the College, and the courses of instruction to be pursued.

By order of the Board of Trustees,
JOEL W. BACON, *Secretary.*

### CLOVER STREET SEMINARY.

THE Fall Term of this Institution will commence Sept. 12th, and continue 15 weeks. After a vacation of the Holidays there will be another term of 15 weeks, closed by the Annual Examination.

Terms.—Prices for board, room rent, furniture, fuel, washing and tuition in the common branches, $15,00 per term. Students are expected to furnish their own lights and table napkins.

Pupils expecting to join the Teacher's Class must enter the first week of the term, to ensure the payment of their tuition bills by the State. Circulars may be found at Wanzer & Co.'s, 24 Buffalo street, Rochester.

J. H. COGSWELL,
191-4t Secretary of Board of Trustees.

Terms of Advertising

One Dollar per square (ten lines—100 words, or less,) for each insertion,—*in advance.* ☞ The circulation of the New-Yorker is much larger than that of any other newspaper published in the State, out of New York city. Only a limited space, however, is devoted to advertisements, and hence preference is given to those most appropriate—such as the cards and notices of dealers in Agricultural Implements and Machinery,—Horticulturists and Seedsmen,—Booksellers and Publishers,—Inventors, etc. All orders by mail should be accompanied with the cash.

To enable us to accommodate as many as possible, brief advertisements are preferred. Patent medicines, &c., will not be advertised in this paper on any terms.

☞ All communications, and business letters, should be addressed to D. D. T. Moore, Rochester, N. Y.

### THE WOOL GROWER AND STOCK REGISTER.

This is the only American Journal primarily devoted to the interest of Wool and Stock Growers, and should be in the hands of *every owner of Domestic Animals.* It is ably conducted, published in the best style, and finely illustrated. Each number contains a careful Review of the Wool and Cattle Markets, and much other *useful* and *reliable* information which can be obtained from no other source. The Fifth Volume commences with July, 1853.

Terms:—Fifty Cents a Year; Five Copies for $2; Eight for $3; Eleven for $4. Back volumes, bound in paper, at 40 cts. each,—unbound at 35 cts., or three for $1.

Published monthly, in octavo form. Specimen numbers sent free. Money, properly enclosed, at our risk.

Address D. D. T. MOORE, Rochester, N. Y.

MOORE'S RURAL NEW-YORKER.

VOLUME IV. NO. 39. ROCHESTER, N. Y.—SATURDAY, SEPTEMBER 24, 1853. WHOLE NO. 195.

MOORE'S RURAL NEW-YORKER:
A QUARTO WEEKLY
Agricultural, Literary and Family Newspaper.
CONDUCTED BY D. D. T. MOORE,
WITH AN ABLE CORPS OF ASSISTANT EDITORS.

THE RURAL NEW-YORKER is designed to be unique and beautiful in appearance, and unsurpassed in Value, Purity and Variety of Contents. Its conductors earnestly labor to make it a Reliable Guide on the important Practical Subjects connected with the business of those whose interests it advocates. It embraces more Agricultural, Horticultural, Scientific, Mechanical, Literary and News Matter—interspersed with many appropriate and handsome engravings—than any other paper published in this Country.

☞ FOR TERMS, &c., see last page.

# Rural New-Yorker.

## Progress and Improvement.

### SECURING POTATOES.

THE POTATO, by its universal diffusion, and admirable adaptation to the wants of mankind as a means of sustaining life, has become second in importance only to the Wheat and Corn crops. Its cheapness, and great productiveness, render it emphatically the poor man's friend. For some years that inscrutable disease, the Rot, so far affected the potato as to greatly check its extended cultivation, while at one time it seemed to threaten its extinction. Of late, however, the disease itself seems to be wasting away and the cultivator encourages himself that again he may plant his potato field with a good prospect of realizing, as of old, a remunerating harvest of sound tubers. Still the disease lingers here and there; rages, it may be said, in some localities—and it is well not to be too sanguine, but profit from past experience and take the most advantage that can be in the cultivation, and securing of the crop, in order to ward off or head the disease.

The object, however, of this article is not to speak so much of this disease, as to throw out some hints on the harvesting and securing the crop. It may be some of these are old fashioned, nevertheless we think them none the less wothy of attention. To have good potatoes, it is essential to secure them in good order. And to do this the work must be commenced in time and performed with care. It is all important that the ground should be dry when dug—then the potatoes can be immediately pitted or housed, with the least exposure to light, which causes them to deteriorate pretty fast.—They should not therefore be exposed to the sun or wind, unless in cases where they are taken from muddy ground. Hence, the work of gathering them should be performed as soon as they are ripe, which may be with the earlier planted, or the earlier varieties, in September.

If the cellar be dry and cool, an excellent plan, and one which may preserve them in all their mealy purity—where there is no pre-disposition to "rot"—is to mingle fine, dry dirt or sand with them in the bin, and to cover them entirely with it. This method will keep them in their natural condition, which is best. But we would not recommend it in a damp or warm location. The cooler the potato can be kept above freezing, and the more perfect its exclusion from the light and the external air, the better it will be. This is proven by the fact that potatoes, escaping the frost but remaining in the ground till spring, retain all the dry, mealy flavor of fresh potatoes.

Many potatoes are pitted or buried in the field. Where the subsoil is sufficiently porous to readily pass off all the wet, the best method of pitting is to dig a trench of such a width and depth as may be thought most convenient. This may be filled nearly to the top, then a coating of straw and over that a cover of boards, sufficiently inclined to pass off water; upon this shovel from 8 to 12 inches of dirt, and you may rest content your potatoes will come out in prime order in the spring, unless they are attacked with the epidemic, and no place will save them from that. Where the subsoil is not porous, but retentive of water, pitting is done upon the surface. A slight elevation is selected, a ring of earth raised sufficiently large to hold the desired quantity, which should not as a general thing exceed thirty bushels. The potatoes as they are dug are emptied within the ring, until it is full, and the pile assumes the shape of a cone. A liberal coating of good, straight straw is carefully placed on the heap, in such a manner as to effectually shed all water that may fall on it. One should not begrudge straw on such a pit, for it is by this the frost is the most effectually kept out. Dirt is then shoveled on at the bottom all around and gradually upward till the apex is covered. If it is early in the season the covering of earth may be light; and it is the more proper it should be, that the heap may be examined and its condition known before it is fully fitted for standing the winter rigors. Before cold weather sets in, another layer of earth should be given, and that sufficient to withstand the frost. If a coating of straw be placed over the first layer of earth, it will be all the better for it. Where the frost is apt to penetrate deeply, a covering of manure from the horse-stable will act as a great resistant to the cold.

Where the rot has appeared in the fields, or symptoms of it have occurred, more care is required and other methods may be adopted. The tubers should be very closely sorted, that if possible none affected shall find their way to the cellar or pit. An out cellar may be the most convenient for storing them, where they can be often seen to and the decaying or affected ones removed at once. Charcoal, from its antiseptic qualities, might be very beneficially mingled with them in a powdered state. Perfectly dry sand is also good. Where potatoes are liable to the disease, they should be stored together in small quantities. Sorting the potatoes as they are dug, and removing the small and unsaleable ones for feeding to the hogs and stock, can be more economically done than afterward. For winter and spring use they should be stored by themselves,—and then your crop is secured in good salcable condition, you have the best of seed for planting, and stand the better chance of increasing crops hereafter.

### FALL PLOWING.

EDS. RURAL:—Will you, or some of your correspondents, be so kind as to favor your readers with some information on the subject of fall plowing? We wish to know what kind of soils are most benefited, and what kind are injured by fall plowing, &c. Please give us some information on this subject through the RURAL.

Respectfully yours, R. B. ELDER.
Indiana Co., Pa., 1853.

WE have ever advocated fall plowing, and so given our testimony on various occasions. We know of no crop, nor kind of soil, but what it is an advantageous process, except on a clean clover lay for spring crops. It combines various advantages. It is so much labor done, at a time when the general work of the farm is past, and the teams in good heart. It exposes heavy soils to the decomposing effects of winter frosts, and the action that the elements have upon the earthy and mineral materials of the soil—exposing the subsoil in a loose and pulverent state, to absorb the ammonia of snow, which chemical investigation shows to contain a large per cent over the same amount of rain water. All fall plowing should be performed as late in the fall as possible, so that foul grasses shall not be able to vegetate and send up suckers.

For worn out soils plow deeper than they have been accustomed to, and bring up a new strata for the disintegrating and decomposing effect of winter and the elements, particularly in shales and gravelly soils.—Heavy clays and quicksand will need plowing again in the spring, but as late as possible before planting.

The best process that we have ever tried, for making corn and potatoes on stubborn foul grass swards, was to plow as late in the fall as frost would permit; and in the spring, as soon as the grass began to shoot, thoroughly harrow—longthwise with the furrow—then as late as it would answer to distribute the manure if used, cross plow, and under a good sun again harrow and plant immediately. The *rationale* of this process for so thoroughly killing foul grass is, that lying a winter without air or light it becomes bleached and feeble, like all plants growing in the shade, and when turned up, the sod is so tender and the grass roots and suckers so easily pulverized that one day's good sun entirely destroys them and will produce the cleanest field of any process that we have ever tried.

Planting on a foul grass sward, turned over for the first time in the spring, frequently makes laborious hooing and a grassy field, and the surface is raw and contains no nutriment for the young plant until it pushes its roots to reach the decomposing vegetable matter turned under. The process of top dressing with manure is little better than lost. So that we say emphatically, that fall plowing may be advantageously performed in all cases, except in a clean clover sward, in which case, if the land is in good heart, we should not think it would pay.

The comminuting and decomposing effect upon new and unused soils, when brought to the surface, is much greater than the elements have credit for generally among farmers, and was one of the great and powerful causes of the disintegration of the rocks of this globe, to form the very soil that now covers its surface.

### THE IMMUTABILITY OF SPECIES.

YOUR correspondents, FARMER D., and H. C. W., in their late communications on "In-and-in Breeding," incidentally raised the important question of the *Permanence of Species*. Without offering, at present, any suggestions on the main point at issue between them, I wish to submit a few statements on the interesting question collaterally raised.

H. C. W. not only seems to have misapprehended Farmer D. on the point now before us, but he has also inadvertently misstated the testimony of the Geological records. "There are unquestionably on the earth, at the present moment, (says Farmer D.,) precisely those kinds of animals, birds, and reptiles, with all their original characteristics, that passed in review to receive their names, before their first lord and master, at the dawn of the creation."—"Others (replies H. C. W.) have not so read the history of ages. The geologist assigns different eras and ages to creation, whose history is distinctly written upon the enduring rocks by the hand of God, and from whose unerring pages may be traced records of animals and reptiles unknown except from information thus obtained."

It is evident, however, that Farmer D., in the extract given, is speaking not of the *number* of species, but of the species themselves with reference to their *distinct preservation*, though left by the Creator to the operation of the natural law of unrestricted intercourse. But even on the first supposition, his statement is almost literally true. For "only *two or three species* of animals have, so far as we know, died out during the sixty or seventy centuries of man's historic existence upon earth."—(Harris' Pre-Adamite Earth, p. 71.)

The animals and reptiles spoken of by H. C. W., as known only from the earth's rocky records, were all *pre-Adamic*. On this point we quote the following authority:—"From the phenomena of organic remains, it appears that the species of animals and plants now existing on the globe, could not, with a few exceptions, have been cotemporaries with those found in the rocks." * * * "Comparative anatomists decide, from the structure of the extinct animals and plants, that they were intended for a climate and other physical circumstances so different from those now existing, that the organic beings adapted to one state could not have endured the other."—(Hitchcock's Geology page 159.)

On the subject of the immutability of species, the following statements are interesting and reliable:—"While fossil geology exhibits abundant remains of distinct species, it presents no remains of any species in a state of transition into other species." (Pre-Ad. Earth, p. 216.) "Amidst all the vast accumulations of animal remains, not a single abnormal specimen has yet been found. * * * Accordingly, the verdict returned by all the enlightened geologists of the day—some of them by no means unduly biased in favor of the view—is, 'that species have a real existence, and that each was endowed at the time of its creation, with the attributes and organs by which it is now distinguished.'"—(Pre-Ad. Earth, p. 225.)

The above conclusion is given by HARRIS in the words of Mr. LYELL; and he also quotes the testimony of AGASSIZ in these terms:—"I cannot admit the idea of the transformation of species from one [geological] formation to another."

The following testimony of the Rev. E. S. DIXON, author of a standard treatise on Domestic Poultry, has also a practical interest and relevancy:—"It will be found, I imagine, on strict inquiry, that the most careful breeding will only fix and make prominent peculiar features or points that are observed in certain families of the same aboriginal species, or sub-species,—no more: and that the whole world might be challenged to bring evidence (such as would be admitted in an English court of justice) that any *permanent intermediate variety* of bird or animal, that would *continue to reproduce offspring like itself*, and not reverting to either original type, had been originated by the crossing of any two wild species." * * "My present conviction is, that the diversities which we see in even the most nearly allied species of birds, are not produced by any such influences, [as climate, time, food] nor by hybridization; but that each distinct species, however nearly resembling any other, has been produced by a Creative Power." M.

### THE POLAND OAT.

THIS variety of Oat is mentioned in a late No. of the RURAL, and information solicited from those who may have tested it. The writer received a small sample by mail the last spring from Mr. I. W. BRIGGS. They were planted the same day as his other oats were, upon the same sort of soil, and received the same attention. Judging from so small a sample—hardly a spoonful—the result is exceedingly satisfactory, and well accords with that mentioned in the article alluded to above. The amount harvested from the sample is a trifle less than a quart of very plump berries, having a weight, bulk for bulk, of nearly one quarter more than ordinary oats.

This variety very closely resembles the "Imperial Oat" mentioned by Mr. LEE, of Penn Yan, N. Y., in the Pat. Office Report for 1850, at page 105. The shape, size and weight of the grain and the growth of the plants, seem almost if not quite identical, unless it be that the Poland Oat has a stouter, heavier straw. Mr. LEE, in speaking of the Imperial Oats, of which the first seeds were received by him from the Pat. Office in 1846, says, in the Report mentioned,—"I tested them the past season with the common kind, and received the following results:

Imperial Oats, 1 acre, 51 bushels, weighing 40 lbs; or at 32 lbs. to the bushel, 63 bushels and 24 lbs.

Common Oats, 1 acre, 40 bushels, weighing 31 lbs; or at 32 lbs. to the bushel, 38 bushels and 24 lbs."

The reader can readily compute the difference in favor of the Imperial.

Last season I received a small sample of these oats from Mr. LEE, and I find they sustain their character nearly as well with me. The product of last year's planting was sowed in the same field with my common oats, and received the same care and attention throughout. Indeed their position as to strength of soil was unfavorable. The yield amounts to over a half bushel—yielding, by the bushel, fully one fifth more, and weighing to the bushel exactly one fifth more, making in fact almost half difference in favor of the Imperial.

The diligent, progressive farmer, will seek to increase his crops, and the yield of them by all judicious means. Where he can meet a variety that will, with the same care give enlarged returns, he is careful to select it, knowing that the profit realized is in fact much more than what is apparent to the mere observer. And yet he is cautious that he does not run after every new fanglod notion, that is loudly encored by the unscrupulous who would fill their pockets in humbugging the innocent. His motto is, "Buy the Truth and sell it not." T. E. W.

### RISE IN REAL ESTATE.

EDS. RURAL:—In a late number of the RURAL, I observe a paragraph mentioning the sale of Mr. H. N. LANGWORTHY'S fruit farm in the town of Irondequoit. If I recollect correctly Mr. L., in an advertisement published in your paper in the Autumn of 1851, offered the above mentioned property of about 40 acres, for $6,500—showing an advance of $1,500 in less than two years. This is an advance in real estate worthy of being chronicled; yet it is by no means a solitary instance of farms advancing greatly in price within the past two years. From $50 to upwards of $100 per acre have been paid for farms in this (Ontario) county; and seldom have those who have thus sold succeeded in improving in property interest or happiness.

It is believed that Ontario county has within its territory, as good soil, as pleasant locations, good buildings, and all in as healthy a section of country, as any in the State. To my personal knowledge many good farms might now be purchased at good bargains; but I am sometimes surprised at the disposition manifested by farmers to sell—especially those who have almost Paradise-appearing homes. In traveling through some parts of the county I observe farm buildings which must have cost upwards of $3,000, and indeed in some instances the dwelling house alone has cost near or quite that amount—and even now and then one of those can be purchased at a bargain.

But when we take a more extensive view, we observe that real estate is advancing steadily in almost every section of the State. Nor is this rise illusive, but substantial and permanent. It is one of the legitimate and natural consequences of the increase of money capital, seeking safe investment. In this county, grain, grass, fruit, vegetables and stock are raised to advantage and in great abundance—while we possess all the conveniences of transportation and markets, that the farmer can wish. G.
Phelps, N. Y., Sept., 1853.

### FEEDING APPLES TO CATTLE.

THAT refuse apples are valuable as food for stock has long been known; but as my manner of feeding is different from that generally practiced, permit me to state it for the benefit of others: and it is simply this—to let the cattle feed themselves.

After gathering what is wanted for family use the cattle are turned into the orchard and allowed to remain for the first two or three days, 15 minutes each day—then 20 and 25 minutes, until at the end of six or seven days they are permitted to remain half an hour each day, and so on through the season. If managed in this way no danger need be apprehended from their eating to excess, even if there are hundreds of bushels on the ground. This method saves the labor of carrying into the cellar and feeding out—also the loss from decay; and we think that cows fed in this manner will make as much butter in the month commencing the 5th of October, as in any other of the year. C.

THE Steuben Co. Ag. Society is to hold its first Annual Fair at Bath, on the 12th and 13th days of October. The Livonia Town Fair is to be on the 14th of October.

### LOCATION OF THE STATE FAIRS.

Eds. Rural New Yorker:—I have ever been a stickler for a permanent location for the State Fairs, and deprecate the course pursued of peddling so important an institution about the country—selling its usefulness and benefits to the highest bidder, as we used to do with the town's poor. Has it come to that pass, that no important point in this great and flourishing State can be found that will pay the price—that will sign the bond? It certainly shows an ominous squinting that way, when Saratoga, a small village situated on the extreme verge of agricultural improvement,—all north being rocks, sand and water, and with only a single railway to transport the immense paraphernalia that goes to constitute a successful State Agricultural Show and fair,—is selected as the site of the Annual Exhibition. I predict a great falling off in the receipts, and in the respectability of the exhibition, in implements, and animals, as compared with other periods which have, and should continue to increase continually, with the advance of improvements and population.

Is not this course beneath the dignity of this great State, and will the persons that control the destinies of this all important institution, be held blameless if my surmises are just?

The true course should have been to have located the institution in some central portion, purchased a site and erected permanent and respectable buildings and protection, in a style commensurate with its importance, and the means they possess—means now lying idle and hoarded up for not even an ostensible purpose. But this course would not suit the *central power*, the *Regency* that so authoritively controls its affairs. It would remove the officers from their quarters and depreciate the powers of the throne.

The course pursued by the managers of the institution, will inevitably bring public opinion to one of two courses; either that it shall be permanently located at some important central point, or that the Society shall be divided into a Western and Eastern institution, auxiliary to the State organization, the dividing line to be at Utica or Cayuga Bridge. The public will never stand this hawking about the interests of so important a trust, giving its benefits to any locality that is verdant enough to sign the bond. The next appointment may be Elmira or Cape Vincent.

I have no envious feelings against Saratoga, although I am aware that by some management it was carried there by surprise some four or five years ago; with the present appointment, I am not advised that any course was taken that can be complained of, but it is so far removed from the great central marts of business, and so illy provided for land or water carriage, and so near the confines of sterility, that in my view it involves a most remarkable obliquity of vision in the locating powers.

If my views are correct, you will hear more on this subject from your correspondent, for I think the public are waking up on this topic, and a proper and temperate agitation may draw out important suggestions and opinions that may have an important influence on its future usefulness.

Unity, Sept., 1853. H. Y.

### "BLOOD CATTLE.—PEDIGREES, &c."

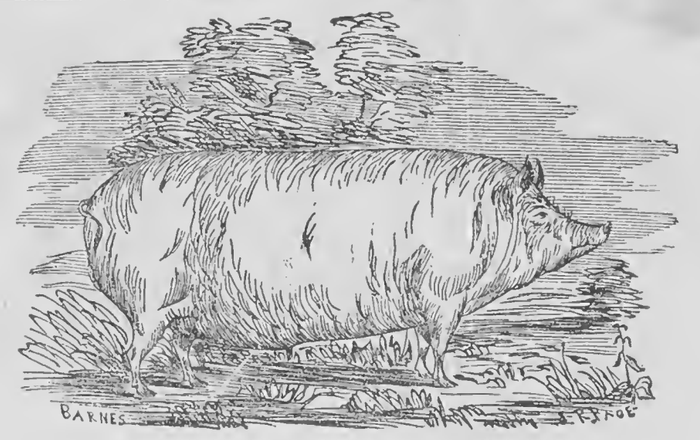
Eds. Rural:—In your paper of the 17th inst., we observe an article headed as above, and signed P. Whoever P. may be we think he is ashamed of his name or of unfairness. He complains of attending a cattle sale a few days since, and of losing both time and money; but as he has withheld names he has left it for all to guess at.—The reason of our writing this is, we had a sale of cattle about the time P. speaks of, and as there are no names given by him, it is just as likely he intends a slur on us as any one else, and we think in fairness he is bound to come out and state particulars.—As it now stands there is no chance to refute what the writer says. We have of late seen more than one man looking for pedigrees of blood cattle that in our humble opinion could not tell a half blood from a pure animal, and yet appear willing to pay almost any price if the pedigree is to their notion, without any other recommend.

Mr. P. play fair. Come out and show your name and give names, and then the others will have a fair chance to defend themselves.

David Brooks & Son.

Avon, N. Y., Sept. 19, 1853.

Banner Wheat.—Winter wheat is raised in Maine of a variety called "Banner Wheat," in compliment, we believe, to Rev. W. A. Drew, editor of the Gospel Banner, who has been instrumental in bringing it into notice. He assures us it is hardy, standing the winter well, and yields thirty to forty bushels per acre. We have promise of seed for another season. †



IMPORTED SUFFOLK BOAR, "PRINCE."

In the month of January, 1852, John C. Jackson, of New York, imported from the yard of His Royal Highness, Prince Albert, 8 Suffolk pigs, of which number, "Prince," above represented, was one. Shortly after their arrival these pigs were transferred to Col. Sherwood, of Auburn, of whom the subscriber purchased the subject of this notice. As an evidence of the value of this stock of swine, I mention the fact that I have this day sold "Prince" to Mr. John S. Clark, of Throopsville, N. Y. for the sum of one hundred dollars. ($100.)

John R. Page.

Sennet, Cayuga Co., N. Y., Aug. 25, 1853.

### PATENT OFFICE SEEDS.

We observe that the Commissioner of Patents has issued circulars, addressed to all the Post-Masters in the United States, requesting them to send him a certain number of names in their respective counties, (eighty being the ratio allowed to this county,) who would be proper persons to receive and experiment with grain, grass and flower seeds, to be forwarded from that office. Why the duty of seed peddling should be charged on that department, is difficult to divine; but such has been the practice for a number of years, to dispose in some way of the seeds and plants, which it is made the duty of every commander of a vessel on a foreign station to aid in procuring. The duties of the Patent Office, and the duties of a seedsman, are wholly incongruous, and should be resolved into an Agricultural Department.

Much good ought to grow out of a judicious management of the immense amount and variety of productions procured from foreign countries; but thus far (and we have for a number of years been in the reception of large packages for distribution,) very little if any benefits have been derived from them, as far as we are advised, or our experience goes. Probably from the age of the seeds, or the improper manner of keeping, not one quarter ever germinate at all, while many are not adapted to the climate, and others are of the commonest varieties, or worthless kinds.

It is a pity Uncle Sam had not us there to peddle his seeds. We *rayther* think we would find out whether they had been parboiled or roasted, before we sent them thousands of miles to be tried.

### POULTRY.—FOREIGN FOWLS.

Mr. Moore:—Your correspondent from Chesnut Ridge, is altogether too severe in his remarks on the "chicken fever." That the speculation has gone to an unwarrantable extent in many cases, is certain. But to class it with others of absolute worthlessness, is wrong. He takes positions that are not tenable—are not correct. Referring to the foreign varieties of fowls, he says, "they are no better layers, nor produce larger eggs, nor indeed near so large, as the Dorkings, Malays, and their crosses; and their flesh is coarse and lacks flavor," &c.—Now I have cultivated the Dorking with care for many years—and the China and India fowls for two years. The Oriental fowl is just twice as good a layer as the English, and lays a larger egg. They have commenced laying before six months old, which the Dorking has never done, and have laid during the severity of winter weather, while the Dorking, in the same circumstances, has not. *They are intrinsically worth, for all valuable purposes* to the farmer, full twice as much as any English or American fowl within my knowledge. As to their quality, it is excellent. I speak not without book, for I had on my table, a few days since, two large, broiled chickens, superior in every item that constitutes the excellence of the article. And on my dinner table recently had a single one, that weighed over six pounds, as excellent in quality as need be desired.

Now that the farmer can obtain genuine stock at a small price, it is altogether a mistaken policy not to do it. The cost of the stock will be repaid from eggs this winter, while common fowls will not lay at all.

A Farmer.

September, 1853.

Cut up Corn.—If it is not all quite ripe cut it up at the roots, and put it in good, snug stooks. It will cure well, and every ton of it, if cut fine, is nearly equal for cows and cattle to a ton of hay.

Manure is to the soil, what bread is to the human system—its life, nutriment and strength.

### THE BEST FOWLS FOR FARMERS.

My blooded fowls do not prove equally profitable: the Polands, being yarded and well fed, having lime and gravel and a little fresh meat, have laid more eggs than most other varieties; but when without meat the eggs have been few.

My Bolton Greys have eat little and laid well, without setting; but several litters of their chickens have all been taken by the rats, and I have labored in vain to raise any, where rats could get to them.

The Golden Pheasants are more beautiful; have laid almost continually, and none of their chickens have been taken, though running upon the same ground with the Greys. The Grey chicks are weakly, while the pheasants are too sprightly to be caught.

Guilderlands, after being with a cock of another variety, produced half-breeds at first; but the second litter was obviously pure. They lay the largest eggs, though less in number, and propagate their marks of purity like a wild original breed.

The Black Shanghais I find no demand for, nor any satisfactory specification of their faults, leaving us to reflect upon their likeness to an unfortunate race. The Dominique or Grey Shanghais seem every way valuable. The White are delicate, and do not rear as well. I had 7 chickens hatch from 60 eggs, and 5 of them lived; while nearly all of the Buff color hatched and are doing well.

I can discover no superior utility in the longer legs and necks of the Cochin Chinas, yet their *great size* and other faultless qualities, speak volumes in their praise.—Of the 8 varieties which I breed, the Buff Shanghais (sometimes called red, sometimes yellow) I like the best. With me they have reared the best, even the common dunghill not excepted. They have laid a good number of large eggs of the best quality, and have nursed their broods well. Those of the best stock weigh from 8 to 10 lbs. One of my breeders weighed 8½ lbs., another 9½ lbs. If the farmer who has not yards for separate breeding would supplant all others with this variety, it could not fail to increase his income. And when the hen fever shall be past, and its high prices fall away, his chickens in common market would sell. not for a shilling, but for half a dollar, and would give a proportionable supply of the finest meat at home.—*Cor. Ohio Cultivator.*

### CHINA FOWLS.

Chittagongs, Cochin-Chinas, Shanghais. Of these varieties of fowls, a writer in the Pa. Farm Journal says:

"For my part, I have seen some large and very fine collections of the three breeds, and I have never been able to discriminate so nicely as to point out the distinctive features of the *three* breeds, and that there is really any very marked difference in them is a question as yet unsolved in my mind.

"I have had what were represented to me to be the *three* distinct species, and when placed together in the same yard, I could discover really no difference in them.

"They are all represented as originating from the same source—a wild fowl of China—and so far as I am informed, derive their names from the respective States from which they are exported, and in my humble opinion there are no distinctive features in either of the *three*, other than those which persons *interested* in their *traffic* are pleased to *fancy*."

Drilling in of Winter Wheat.—L. Hamblin, in *Prairie Farmer*, says:—"The importance of drilling in winter wheat, and the benefit derived from it, on our prairie soil, is not yet properly appreciated, and but little practiced. Had I time and space, I would give you my reasons more fully of its utility, from practical experience. I can with the utmost confidence recommend the practice to my brother farmers. If it is well done, the difference in favor of drilling over broad cast sowing, will be from one-third to one-half increase of the wheat crop. It will also give greater certainty of a crop. Illinois has the reputation of not being a first rate (or good) wheat growing State. By the use of the seed drill a fair reputation may yet be won."

Mr. Milton Draper, at Flynn's Lick, Jackson city, Miss., recently raised on his plantation a watermelon weighing sixty-two and a half pounds. He says that he has also taken from his vines five watermelons weighing together two hundred pounds.

### NATIONAL HORSE EXHIBITION.

To be held at Springfield, Mass., Oct. 19 to 22.

The first National Exhibition of Imported Blood and American breeds of Horses will be held as above, under the auspices of the U. S. Agricultural Society. The idea is a novel and good one, and has already been most cordially responded to by the press and the public. The Board of Managers is apparently of the right stamp, and it is believed every arrangement will be made to secure a highly creditable and satisfactory exhibition.

A Circular just received from the Board says they "anticipate by far the largest and finest collection of Horses ever known in this Country, at least. They believe it will inaugurate a new interest in that noble and useful animal,—and be the precursor of similar annual exhibitions, whose influence will tend to elevate the character of the Horse, by improving the breeds, securing to him greater care and attention, and in every way multiplying the causes and sources of improvement." They anticipate a large collection of people, including eminent men of all professions. The Committee announce "an Agricultural Banquet—learned, eloquent and popular addresses—and a large and magnificent display of Fruits and flowers."

We annex the Rules and Regulations, and List of Premiums:

#### RULES AND REGULATIONS.

1. Horses intended for exhibition and premium, or for sale, should be entered with the Recording Secretary H. S. Noyes, on or before Saturday, Oct. 15, 1853. On payment of the entrance fee, a check will be given, which must be presented when the horse is brought to the exhibition ground.

2. Horses intended for sale will be labeled accordingly, but cannot be withdrawn until the close of the exhibition, except by written permission of the Board of Managers, and there will be no return of freight money by the Railroads on all horses sold.

3. Pedigree, proofs of origin and age, must be furnished, if required, for every horse offered for premium.

4. A Board of Judges will be appointed to examine all horses entered, who will award premiums agreeably to the annexed list, which will be paid or delivered at the close of the exhibition.

5. All horses entered will be at the risk of the owners. The most effectual means will be taken through the agency of the police and otherwise, to guard and protect the horses exhibited, but the Managers cannot be responsible for injuries that may be occasioned by accident or otherwise.

6. Owners or agents offering horses for premium or exhibition, will receive tickets of admission to the exhibition grounds, but in no case transferable.

7. The exhibition will occupy "Government Square," directly East of the United States Armory grounds, which will be properly enclosed for the purpose. Stalls for horses and seats for spectators will be provided; also, a suitable course for trials of speed and the display of horses.

8. Entrance fees will be charged as follows, viz: For all horses or spans of horses entered for premium, $5. For all horses or spans entered for exhibition and sale, $3. For each person, with privilege of seat, season ticket, $1. For each person, single ticket, 25 cents. Seats, 12½ cents.

9. Persons wishing for more particular information will address (post-paid) William Stowe, Corresponding Secretary and General Agent of the Exhibition, Springfield, Mass.

#### LIST OF PREMIUMS

To be awarded at the Great National Exhibition of Imported Blood and American Breeds of Horses at Springfield Mass., Oct. 19th, 20th, 21st and 22d, 1853.

Stallions.—For the best Stallion of 7 years and over, first Premium, $200; 2d do. 100; 3d do. 50; 4th do. a silver goblet valued at $25.

For the best Stallion of 4 years and under 7, first premium $100; 2d do. 50; 3d do. a silver goblet valued at $25.

Geldings.—For the best gelding of 4 years and over, first premium $100; 2d do. 50; 3d do. 25; 4th do. a silver goblet valued at $20.

Breeding Mares.—For the best Breeding Mare of 4 years and over, first premium $100; 2d do. 50; 3d do. 25; 4th do. a silver goblet valued at $20.

Breeding Mares with Foal by their side.—First premium $50; 2d do. a silver goblet valued at $25.

Matched Horses.—For the best span of Matched Horses of 4 years and over, first premium $100; 2d do. 50; 3d do. 25; 4th do. a silver goblet valued at $20.

Fancy Horses.—For the best span of Fancy Horses 4 years and over, first premium $100; 2d do. 50; 3d do. a silver goblet valued at $25.

Colts.—For the best Stallion of 3 years old, first premium $50; 2d do. 25; 3d do. a silver goblet valued at $20. Best Filly, $25.

For the best Stallion of 2 years, first premium $25; 2d do. a silver goblet valued at $20. Best Filly, a silver goblet valued at $20.

For the best Stallion of 1 year, first premium $25; 2d do. a silver goblet valued at $20. Best Filly $20.

Farm or Draught Horses.—For the best pair of Farm or Draught Horses, first premium $50; 2d do. 25; 3d do. a silver goblet valued at $20

Best single do., first premium $25; 2d do. a silver goblet valued at $20.

Ponies.—For the best pair of Ponies, first premium $50; 2d do. 25; 3d do. a silver goblet valued at $20.

In addition to the Premiums above stated, a liberal sum of money, with Medals and Diplomas, will be placed in the hands of the Committee on Premiums, to be distributed by them to such exhibitors as, in their discretion, they shall deem most deserving.

George Dwight, President.
Jas. M. Thompson, Vice President.
William Stowe, Secretary.

### ON THE IMPROVEMENT OF DOMESTIC ANIMALS.

From the comparative perfection to which Stock Breeding has been carried in England, it is natural that we should look there for information on this all important subject. The following article from the London *Farmers' Magazine*, though somewhat lengthy, will be found worthy of perusal and careful consideration:

"The first quarrel on earth took place between a farmer and a grazier." So commenced a sermon by a living divine, in a large manufacturing town; and well it might, when there were no men but farmers and graziers to quarrel. But the controversy between the two, and between each other, has not yet been settled. One class of opinions prevail in one district, and another in another; some preferring Southdown, others Leicester, and some Cotswold sheep; some praising Shorthorn cattle exclusively, others Hereford, and others Devons; some again insisting on large, others on small animals being the best and most profitable.

There are points where controversies begin to converge; and there are others where they diverge with almost the same rapidity. For instance, all can agree that the power which a breeder possesses over plastic nature is perfectly wonderful. There is not a breed, how far soever it may be from beauty or excellence, which may not be vastly improved in itself. The Highland sheep has perhaps undergone more real improvement than any other kind of animal. Take the ordinary run, say twenty years ago, and compare it with those often shown at the Highland Society's Shows, and while you have every absolute characteristic of the breed, you have animals as far superior as if the species had no alliance whatever.

Now had all these varieties one common origin? Were they varieties improved or changed by circumstances from one common stock, of which we have not any types? or were they followers of one common ancestor, now defunct?

That the first is a much more reasonable supposition appears evident from the fact that altho' changes will pass over domesticated breeds of animals, it is not only easy to change for better or for worse by proper or judicious attention on the part of the grazier, but it is equally difficult, without the same care being exercised, to keep a breed in its state of purity and caste; yet in wild animals no change whatever seems to take place. The wild cattle at Chillingham, for instance, are the same as they were centuries ago; nor can we see any changes pass over wild animals of any description. It is artificial domestication which produces all these changes in the characteristics of a race.

It now seems to be generally admitted that at least all kinds of sheep had one common origin; here the controversy between the farmer and the grazier converges into unanimity; but when the identical original animal is to be pointed out, the divergence is as wide as possible. The treatise by Milburn on the sheep and shepherding, published by Orr, contains a discussion of the question at some length, and inclines, for reasons there given, to the *Argali* as the original of the sheep. Quoting first the opinions of the best and most observant zoologists as to the natural history of that animal, its faculty of domestication, its tendency to lay on fat, the shape of its horns, &c., he traces the earliest indications of history, and applies these incidental allusions to the animal, to the habits which Cuvier and other naturalists prove possessed by the *Argali*, and then appealing to the drawings discovered by Belzoni in Egypt and Layard at Nineveh, shows the Egyptian and Assyrian sheep of these early ages to be in *Argali* in its transition state.

He says, "Applying our knowledge as obtained inferentially from the most ancient records, we find incidental notices leading to fix the character of the earliest sheep of which history informs us, with one or other of the class of animals alone referred to, but especially the latter, (the *Argali*,) Abel had firstlings of his flock, hence he possessed domesticated animals. The lambs of the *Argali* would be a ready means of procreating a flock, as they are even now easily domesticated, and which would hardly be the case with the untameable *Musmon*. Abel also offered fat, which is a secretion common to the *Argali*, but of which the *Musmon* is said to be destitute. The sheep of the patriarchs too had horns; at any rate the rams had that distinction. Nor could they be simply upright; as a ram, it will be remembered, was caught in a thicket by his horns, when the staying angel arrested the hand of Abraham. The curvature of the horns being much more nearly complete in the *Argali* than in the *Musmon*, which are nearly bent backwards, renders it most likely of the two to be entangled in a thicket. That the sheep were some of them brown in Jacob's day, is quite certain, from their being set apart for his wages, and this again agrees with the color of the *Argali*."

Carrying the proofs onward, beyond the written and to the pictorial, he speaks of the Nimroud sketches as "giving a very accurate idea of the progress the *Argali* had been made in supplying the wants of man at this early period. The tail had lengthened and thickened, the fat had begun to accumulate, and the hair had become woolly; the horn, which was still nearly circular, had become smaller, and the legs and head thicker." In reference to the Belzoni sketches, he says, among other marks of progress, "there is a long, thick tail, exhibiting either fat or wool, either of which would be an approach towards some of our modern breeds. The legs and feet are clearly those of a sheep, but the body is deer-like, and very much resembling the *Argali*." He goes on in a subsequent part of the work to give a list of sheep now existing, showing types of what he conceives to be every step between the Argali and the Leicester, tracing the changes, one by one from the Barbary and Cape sheep, down to the Welsh, Shetland, Dorset, Cotswold, and ends with the Leicester.

Through these we shall not now go; but the practical bearing of the question is one highly interesting to the farmer. Cannot a Dorset sheep, for instance, be vastly improved? If the remarkable tendencies of that animal to breed all the year round, and twice a year, could be combined with a little improvement of fleece and carcass, would it not amply repay the breeder?

The same writer gives some hints on improving a flock, which, as it applies to all kinds of animals, is worth quoting: "Uniformity," he says, "is best attained by drafting off regularly the failing ewes, and breeding from one common sire, which appears to have a peculiarly favorable influence in the breed, greater even than the mother appears to exercise in the flock; for while a mother can only influence two animals, the ram will influence the whole of the produce in a greater or less degree." The mode of going about this he thus lays down: Speaking of improving and giving uniformity to a flock, he says, "The breeder does not select at first that which has the most of these qualifications, but which is perhaps the widest from and most unlike his own flock; but he takes those which show a tendency to pervade in one uniform direction—not an individual, but the whole of his flock; and this he takes to mend his own. By this means all are a little improved in the direction he requires, and all keeping alike in their general contour, there is a kind of permanency and uniformity in the main features of the improvement." We consider it no bad sign for a breeder to have his flock as near alike as possible. Many men may have accidental animals, of remarkable good qualities; but when all are alike, it looks like skill. Milburn says, "No unskilful man ever long kept a flock in a state of anything like similarity to each other. Uniformity is as important to the jobber and butcher as it is to the grazier. The merit of being 'even' is always appreciated in a market, because they ever suit the same class of customers."

The breeder must try higher and higher; he must aim at cultivating a combination of more wool. This has been somewhat neglected. Now that it pays even better than mutton itself, it is deserving of the greatest attention. It is possible to carry more wool and still secure as much fat and yield as much mutton. The tendency in the animal and plenty of food will do it; and the effort of the breeder is simply to consider the sheep as a vitalized machine for converting food into money; and he will find no animal, which in the run of years, will pay better for attention than the sheep.

# Orchard and Garden.

### SEEDLING FRUIT TREES.

MANY of our best pomologists are speculating on the necessity of reproducing our valuable fruits from the seed; some maintaining that many of the old varieties are running out, have passed the period of their vitality, and will soon be extinct. One thing is sure, that certain kinds are subject to diseases that others are not, and others only partially, which it is very possible to avoid in new, fresh and youthful varieties.

Our good apples are numerous, and adapted in their times of ripening to all periods of the year, and leave little to be hoped for or desired; and yet we conceive perfection in flavor and other qualities is not yet reached. There is quite a marked difference in the aptitude of the plum to take the *blotch*, or leprosy of limbs, and in liability to be attacked by insects.

The peach, one of the easiest to experiment upon; as it fruits so soon from the seed, requires more attention than any other, particularly since the prevalence of the *curl*. Many varieties of this fruit are found to be almost exempt from this disease, but they are in no case our best peaches; therefore from a seedling orchard, some new kinds may be produced as good as the best, and perhaps superior, and not subject to this disease.

All of our fine fruits were once seedlings and accidentally produced; but as no one now-a-days sets out uncultivated trees, particularly apples, the day is past for improving that fruit, unless such a course is taken.

One curious fact has been observed relative to like producing like, that is, that the seeds of the highest and finest flavored—of the best blood—are not as like to produce any thing valuable, as the coarser varieties. It holds good in all the fruits, down to the grape. The Isabella has been known to bring the poorest kind of frost grapes.—Many facts relative to the leaf and wood, in the early stages of a seedling, indicate the value of the forthcoming fruit—the thick, velvelty, glossy leaf—sparse and strong twigs, without thorns or spurs—and that general appearance of *blood*, as we say of the horse.

If every amateur of fine fruit would experiment upon a very small scale, we are satisfied astonishing results would be produced.

### ISABELLA RAISINS.

EDS. RURAL:—In your paper of Sept. 3d, you copied a short account of my "*Isabella Raisins*," from the Horticulturist, and thereby caused me to be flooded with inquiries, from Maine to Iowa, in regard to my mode of preparing them—"whether their preparation is expensive"—whether "sugar is used," &c., &c.,—nearly all offering to remit the amount charged for the information sought.

Now I do not complain of all this, for it indicates a laudable desire on the part of cultivators to avail themselves of all the improvements suggested in the preparation of the fruits of the earth for the use of man. But I think it will only be an act of justice on your part, to allow me to answer all these inquiries "at wholesale," through the RURAL. I cannot answer in fewer words than by giving the account of their preparation published in the Naples Weekly Journal, of Feb. 25, in answer to similar inquiries, made at that time by the editor of the Country Gentleman, which was substantially as follows:

First then as to the expense, for I propose to come to the point at once. The expense of preparation is nothing at all, except so far as "sun shine," or a little fire heat, may be expensive. The raisins presented to Mr. BARRY, and forming the subject of his notice, were nothing more than well ripened Isabella grapes, dried slowly upon shelves in a closet adjoining my dining-room, in which there was sufficient fire maintained for ordinary use and for comfort, during the months of November and December. They received no more care or attention than would have been demanded by an equal quantity of apples, after being spread out in a similar manner to dry. It is confidently believed that it would be an improvement to wring the stems while yet on the vines and let them remain there and dry in the sun, as is the practice in preparing our best imported raisins. I shall try this mode of treatment the coming season, and if the result seems to be of any importance to the public, shall not fail to report progress. But my friend, the Country Gentleman, says:—"It can hardly be that the Isabella grape will afford good raisins without addition of other ingredients." I do not say that they will; but I do say that the raisins in question were prepared as above stated, and wholly "without the addition of other ingredients."

I have said the manufacture of them is not expensive, but in this statement I am not exactly correct. There is a loss of weight in the process which may prove a barrier in the way of the profitableness of their preparation. On this point however, the figures cannot be given, as no means were taken to ascertain the amount of that loss. Next time I prepare Isabella raisins I will use the necessary means to enable me to report fully on this important point.—All my friends who have tasted these raisins, have expressed themselves in as strong terms of approbation of them as did Mr. BARRY. I have in every instance been told that they were preferred to the imported article. The Isabella raisins are a little tart, and this is the secret, I apprehend, of their being perferred. To most tastes the foreign article is altogether too sweet.

Naples, N. Y., Sept., 1853. E. A. MCKAY.

### THE MEXICAN WATERMELON.

THIS is a variety of Watermelon brought from Candalia in Northern Mexico. I received a few seeds the past winter from J. H. ROGERS, Esq., of Texana, Texas. Planted them at the usual time and have had the pleasure of eating some of the best melons that I ever tasted. One vine in particular bore three large sized melons, quite long and large around. These when ripe were white-fleshed, with white seeds having colored spots on the edges near the chit end. These melons were very juicy, very sweet, and so tender as to melt on the tongue, and yet they were not over ripe and had thin rinds.

Other vines produced red-fleshed melons, with reddish seeds. These were also a long melon, but smaller in size, not quite as luscious, nor quite as melting, yet much better than our ordinary melons. Others again were more nealy round with black seeds.—These were not as good as the red seeded ones, but still better than our common ones. They probably had been somewhat mixed. I was careful myself to plant them at a distance from any other melons, whilst I have saved the seeds, distinct from each other, hoping to secure the best ones pure, and if possible improve them. If they maintain their quality under further trial, they will prove a very desirable variety. It is proper to say the vines had no extra care, and but a moderately rich location. I might furnish a limited supply of the seeds to post paid applicants and will charge nothing for it, except a postage stamp from each to cover time and trouble in putting them up and mailing. Those who wish to address me will notice the change in my P. O. address, which is now T. E. WETMORE,

Sept., 1853. North Cannon, Kent Co., Mich.

### GATHERING AND KEEPING THE PEAR.

NEARLY all pears ripen with a much finer flavor if picked and matured in the house. The exceptions are very few. Some which prove only second or third rate when allowed to remain till they soften, on the tree, become rich, melting and delicious if house ripened. Gathering the fruit while yet hard, will in nearly all cases prevent or greatly diminish the *rotting at the the core*, which otherwise nearly destroys the value of many early sorts.

Winter pears should hang upon the tree as late as safety will allow, and when gathered should be kept in a cool room till near their usual period of maturity, when the ripening is to be completed in a warm room, at a temperature of 60° to 70°. They should be kept covered to prevent shriveling. Some cultivators have wholly repudiated winter pears, merely for want of skill in the management of their ripening, or the want of a good cellar to keep them in.—Some sorts, however, as the Beurre d'Aremberg, require but little care; others, as the Vicar of Winkfield, need particular attention. But the transfer from the cool to the warm room is of great importance to most, and will convert tough and hard specimens into those which are juicy, melting and excellent.—*Thomas.*

THE LOVE OF GARDENING.—No truth in political statistics is more established than that wherever a love of gardening prevails among a population, there also prevails comfort, virtuous habits, and little of evil. This is no mere assertion of hope, but is the verdict given by those who have devoted themselves to the study of such questions; and it is sustained not only by the evidence of every beneficed clergyman watching over the habits of his flock, but by the personal experience of every one who reads these pages. No one in town or country, who has noticed the pursuits and the condition of his neighbors, whether wealthy or poor, but can testify that regular habits and respectability of character are the invariable accompaniments of attachment to the culture of the garden plot.—*Cottage Gardener.*

THE Kingston (N. Y.) Press, makes mention of a cluster of ten tomatoes on exhibition at the store of J. R. Hallenbeck, which were raised in the garden of Tobias Van Buren, of that village. The largest of the cluster measures 16 inches, and the others are of nearly the same size. The whole grew on a single branch, and weigh 9 pounds.

A NEW CATALPA.—Dr. Warder, in the August number of the Western Horticultural Review, gives an account of a new variety of the catalpa, which he found growing in Dayton, Ohio. It blooms two or three weeks earlier than the other variety. The bark of the young trees is lighter in color, the foliage of a deep green, and more luxuriant; the seed pods much longer, the form of the tree more upright and compact, the flower larger and a purer white. They are very plenty in Dayton, where they were first introduced some years since by Dr. J. Haines, from two trees which he found on a farm two miles south of that city. Where the original trees were obtained is not known.—*Ohio Farmer.*

# Domestic Economy.

PRESERVING PEACHES.—To twelve pounds peaches take six pounds clear brown sugar and one pint best cider vinegar. Simmer the sugar and vinegar together, which will make a clear syrup. Pour boiling water upon the peaches, and remove them in two minutes from the water, and wipe them dry without breaking the skin. Put them into the syrup, and boil gently till the fruit is cooked to the stone. Keep the preserves in jars, covered close, in a cool place; inspect occasionally, and if white mould appears skim it off, scald the syrup and return it to the peaches. K.

THE following recipe was obtained some twenty years since, of the widow of an eminent physician, and has been found to be an excellent family medicine for Diarrhea and Dysentery.—H.

RHUBARB SYRUP.—Forty grains pulverized rhubarb, forty grains saleratus, put into a pint of strong peppermint or spearmint tea. Three table spoonsful of *best* brandy, and loaf sugar enough to make a syrup. A table spoonful for a child of five years once in three hours till it operates, and twice the quantity for an adult.

ELDERBERRY JELLY.—Take the berries that are fully ripe and remove all unsound ones, pour a little water over them and press the juice out through a strong cloth. Put equal quantities of the juice and molasses into the preserving kettle and boil to the consistency of very thick molasses, stirring in three or four drops of lemon oil to the gallon. Put it up in stone or glass jars, and if to keep for the following summer, fit the covers air-tight by using bladder, or white of egg on paper, or sealing them, and put them in a cool place, and they will keep good as long as you wish.

ELDERBERRY PRESERVES.—These can be made by the same recipes as other fruit, and are the most healthy of any preserves I know of.

ELDERBERRY WINE.—Press out the juice as you would for jelly, and let it stand until it ferments, then add a quart of sugar and a few drops of cinnamon oil to the gallon, and bottle it for use, and you will have an excellent quality of wine.—*Ohio Cultivator.*

TOMATO KETCHUP.—Take one bushel of ripe tomatoes. Bruise them and boil over a slow fire one hour in a brass kettle. Then work the mass through a brass sieve with a wooden ladle, and add one quart of salt, one ounce of cloves, one ounce of allspice, and two ounces of pepper. Boil again for half an hour, guarding against burning; turn into a tub, or an earthen vessel, and add one quart of vinegar and eight ounces of pepper sauce. When cold, strain through a coarse sieve or cellander, and immediately bottle. Let the spices be ground.

TO PRESERVE TOMATOES FOR WINTER USE.—Select perfectly ripe, sound tomatoes, wipe them dry, and boil them half an hour in a porcelain preserving kettle, then strain them through a collander, and boil again one and a half hours; they are then ready to bottle.

The air should be expelled from the bottles by placing them in cold water and raising it to the boiling point, care being taken to keep them perfectly dry inside. The fruit should be put in boiling hot, and the bottles corked with new corks, and sealed immediately.

BELL PEPPER MANGOES.—Take green peppers, and take the seeds out carefully so as not to mangle them. Pour weak, boiling brine over them, and let them stand four days, renewing the brine daily, boiling hot. Stuff them with chopped cabbage, seasoned with cloves, cinnamon and mace; sew them up nicely, and turn the same sharp vinegar over them three successive weeks, adding a little alum the last. Tomatoes, if green and small, are good pickled with the peppers.—*Nor. Farmer.*

A HINT FOR HOUSEKEEPERS.—A few drops of carbonate of ammonia, in a small quantity of warm rain water, will prove a safe and easy anti-acid, &c., and will change, if carefully applied, discolored spots upon carpets, and indeed all spots, whether produced by acid or alkalies. If one has the misfortune to have a carpet injured by whitewash, this will immediately restore it.

ANOTHER HINT.—Soap or strong soap suds will destroy green paint more readily than other colors. The ley has the same effect on oil paints that it has with grease. Many painted rooms, window blinds, &c., are soiled by carelessness or ignorance of washer-women, in the application of soap or strong soap water. When it does not destroy the paint it affects the lustre.

# Mechanic Arts, &c.

### LIST OF PATENT CLAIMS

ISSUED FROM THE UNITED STATES PATENT OFFICE

For the week ending Aug. 30, 1853.

M. B. Dyott, of Philadelphia, Pa., for improvement in hot-air furanees.

Oliver P. Drake, of Boston, Mass., for improvement in benzole vapor apparatus.

R. R. Finch, Jr., of New York city, N. Y., for improvement in stove pipe collar.

Thos. S. Gore, of Jersey city, N. J., for improvement in stoves.

Benj. Irving, of Green Point, N. Y., for improvement in steam boilers. Patented in France, May 12, 1853.

John Krauser, of Reading, Pa., for improvement in cider mills.

O. S. Leavitt, of Maysville, Ky., for improvement in hemp and flax breaking machines.

Wm. H. Mitchel, of Brooklyn, N. Y., for improvement in machine for distributing and composing type.

Frederick Nishwitz, of Williamsburgh, N. Y., for improvement in grain harvesters.

Samuel Darling, of Bangor, Me., for improvement in grinding and shaping metals.

Audrew Ralston, of West Middletown, Pa., for improvement in saw mills.

Stephen P. Ruggles, of Boston, Mass., for improvement in machines for cutting sheet metal.

Daniel Winslow, of Westbrook, and Perley D. Cummings, of Portland, Me., for improvement in paper files.

Charles Weston, of Salem, Mass., for improvement in machines for splitting leather.

William Wigston, of New York city, N. Y., for improvement in apparatus for purifying gas.

Elliot Savage, of Berlin, Conn., (assignor to F. Roys and Edward Wilcox, of same place,) for improvement in machinery for cutting and bending metallic discs.

Elijah Valentine, of Palmer, Mass., (assignor to Abel Bradway, of Monson, Mass.,) for improvement in shingle machines.

For the week ending September 6, 1853.

James T. Asbury, of Taylorsville, N. C., for improvement in straw cutters.

Philos Blake, Eli W. Blake and Jno. A. Blake, of New Haven, Conn., for improvement in nut crackers. Ante-dated March 6, 1853.

James Barnes, of Franklin, N. Y., for improvement in machine for edging leather straps.

Victor Beaumont, of New York city, N. Y., for improvement in printing presses.

Wm. Compton, of New York city, N. Y., for improvement in piano fortes.

Henry Hunt, of Brooklyn, N. Y., for improvement in sealing preserve canisters.

Jos. R. Lindner, of New York city, N. Y., for improvement in horse collars.

John Moyle, of Martinsburgh, Va., for improvement in straw cutters.

Charles Montague, of Pittsfield, Mass., for improvements in printing presses.

Stephen Meredith, of Erie, Pa., for improvement in feed apparatus to gas generators.

James Spratt, of Cincinnati, Ohio, for improvement in bottle fastenings.

W. W. Spafford, of Boston, Mass., for improvement in machinery for planing metals.

Gideon B. Smith, of Baltimore, Md., for improvement in counterfeit coin detector.

Henry L. Weeks, of Hannahatchie, Geo., for improvement in cotton gins.

Thomas Warner, of Chicopee, Mass., for improvement in making twisted gun barrels.

Benj. Irving, of Green Point, N. Y., for improvement in paddle wheels.

Thomas Allison, of Milton, N. Y., for improvement in straw cutters.

L. H. Davis, of Keunet Square, Pa., for improvement in corn shellers.

Porter Dickinson, of Amherst, Mass., for improvement in corn shellers.

Stephen Morse, of Springfield, Mass., for improvement in iron car brakes.

Hiram Sands, of Cambridge, Mass., and Gary Cummings, of West Derby, Vt., for improvement in brick makers.

Samuel H. Turner, of Brooklyn, N. Y., for improvement in printing ink.

DESIGNS.

P. A. Palmer, of Leroy, N. Y., for a design for milk stool frame.

Frederick Schultz, (assignor to Chas. & Samuel Gilbert, of Philadelphia, Pa.,) for a design for cook stove.

Garrettson Smith & Henry Brown, (assignor to J. G. Abbott & Archilus Lawrence,) of Philadelphia, Pa.,) for a design for parlor stoves.

S. W. Gibbs, of Albany, N. Y., (assignor to North, Chase & North, of Philadelphia, Pa.,) for a design for stoves.

Wm. F. Gray, of Penn Township, Pa., (assignor to Abram & Jos. Cox, of Philadelphia Pa.,) for a design for cooking stoves.

### PAINT YOUR HOUSES.

Now is the time for preparation; soon after the heat of summer is over, say in September and October, is the best time to paint. One coat laid in Autumn is equal to two in Summer; the lead dries more evenly, and oil holds it much longer than when spread in hot weather. Paint laid on in Fall weather is more lasting than when put on in the Spring, because the surface becomes hardened through the winter without exposure to the intense heat of July and August, and is therefore much less likely to suffer from the effects of the ensuing summer. Whenever white lead adheres to the hand when rubbed over it, put on a thin coat. A house once well painted, if rightly coated every third year succeeding, will be more economically painted and kept in better preservation than in any other way. Use none but the best material at any time. —*Worcester Transcript.*

### ZINC AND TIN FOR COVERING ROOFS.

MR. MOORE:—Can you, or some of the numerous readers of the RURAL, give me any information in reference to covering dwelling houses (in the country,) with zinc? 1st. Its durability and cost compared with tin? 2d. Will it injure water for drinking or other purposes?

An answer to the above will oblige a subscriber to the RURAL. W. J. G.

Lebanon, Tenn., Aug., 1853.

THE covering of roofs with Zinc will not be found a desirable process, in comparison with Tin. It is more expensive, nearly double, as a sheet of tin contains a superficial foot of surface and costs less than six cents.

The contraction and expansion of metallic coverings for roofs, are the great troubles met with in using that material. The heat and cold in our climate, produce such an effect on all of the metels, that a great deal of study and ingenuity have been expended to overcome the laws by which they are governed, and been the subject of patent rights. No soldering or nailing will answer the purpose, but a peculiar locking of the joints is requisite to allow it to expand or contract.

Of the common metals adapted to roofing, lead is the most expansible by heat, zinc the next and iron, of which tin plate is composed, the least. An objection to the use of zinc also is its width, causing a much greater expansion on each lock or joint, and as it is not a very flexible, or malleable metal, in our opinion is not adapted for the purpose.

A tin roof, if well constructed and with a fair pitch of elevation, will last a hundred years. The tin coating of the iron plate, protects it from rust and the tin will not sensibly oxidate or corrode by exposure to the elements for long periods. Neither zinc nor tin will injure water for domestic purposes.

A good pine shingle roof, with a sharp elevation, will last fifty years or more.—Painting is of no use, as it does not reach the covered part that first rots. Very flat roofs for valuable buildings, should be covered with tin, or cement, as shingles cannot be depended upon against leakage in heavy and driving storms, and they soon decay in such situations.

### TO PREVENT WOOD FROM WARPING.

FRANCOIS TATCHET, of Paris, has taken out a patent for the following method of preparing wood, to prevent it from warping or shrinking. The ordinary method of doing this is to employ two or more thin pieces, which are united together with the grain cross-wise, by means of glue or liquid cement, but this only partially answers its intended purpose, as glue, or cement, applied in a liquid state, is always liable to be affected by a moist atmosphere, and the expansion produced thereby, and the subsequent unequal contraction in drying, causes a certain amount of warping. Now the object of the patentee is to unite pieces of wood together, so as to render them independent of atmospheric influences, and this he effects by employing the cement in a dry and powdered state, and applying heat to the exterior of the pieces of wood to be united, so as to effect the melting of the cement by transmission. The cement which the patentee employs is gum lac, alone or in combination with other materials. This he reduces to a powder, and sprinkles evenly over the surface of one of the pieces of wood to be united. He then lays the other pieces of wood on the cement-covered surface, and repeats the process of sprinkling cement and applying thicknesses of wood, according to the ultimate required thickness to be produced. He then clamps the pieces of wood together, and applies sand, heated to about 300 deg. Centigrade, to the exterior surfaces, and continues his application of heated sand until the cement is melted, when the sand is removed, and the air admitted to cool the wood and set the cement. When quite cold, the prepared wood is removed from the clamping press, and may then be applied to any useful purpose.—*London Mechanics' Magazine.*

### METALLIC CASKS.

A SPECIMEN of Clare's metallic cask has been placed in the Exchange-room, where it has attracted considerable attention. The advantages of iron over wooden casks appear to be that they can be taken in pieces and put together again with despatch and nicety of fitting. They are not liable to shrink, while they preserve their contents from the effects of fire, and from the attacks of vermin. The leakage which they save is also a matter of great importance, inasmuch as the loss from leakage by wooden casks, every shipper and merchant knows, is very considerable. Their capacity, also, is stated to be one-fourth greater than that of casks of wood. The tare, in proportion to the size of the iron cask, is also much less than in the wooden cask. With the model of the metallic cask is placed a wooden cask of similar proportions, by which the relative advantages of the two may be compared.—It is said that the metallic cask is adapted to carry any kind of liquid, that it may be prevented from external oxidization by galvanizing, or coating with hot lime or tar, and that it is applicable to many branches of commerce where wooden casks cannot be employed.—*English paper.*

# Educational.

## EDUCATION OF FARMERS.

That Education is not necessary to successful farming has long been a prevailing sentiment. It has been considered important for the professional man, but as useless, or a luxury at most, to the agriculturist. Industry—plodding, patient industry—qualified for success in carrying on a farm; but that boy whose aversion to work and love of mischief, made his parents at a loss how to employ his energies, must study some profession. Did one seem rather dull and stupid, he could never be qualified for anything but farming. Another, who seemed unusually bright—who thirsted for knowledge—must be a minister, physician or lawyer; the life of a farmer could furnish no facilities for improvement or the gratification of his desires.

Now, this is all wrong—for no good reason can be shown why every farmer should not be liberally educated—why he should not find use for a good education in carrying on the operations of his farm. If his knowledge need be of a different quality, it should not be less in quantity than that of the professional man. All general arguments in favor of the thorough culture of our mental powers, will apply with equal force to the particular education of those who till the soil. That knowledge is valuable for its own sake—that it furnishes a continual feast for the mind—that it qualifies its possessor for a large measure of enjoyment during the whole course of his being, are truths generally admitted. But leaving out of the account such axiomatic truths, we propose to offer some reasons for the acquisition of knowledge which we trust will commend themselves to the consideration of farmers.

First—it makes labor more productive. The great object of toil is not to wear away the weary hours, but to secure the greatest possible useful product. Knowledge enables a man to bestow his labor where it will be best rewarded. The farmer should know the nature of the soil he cultivates, what crops are best adapted to it, what succession of the same will yield most profit, what kind and quantity of manure it needs to keep it in proper condition; and this requires knowledge of Agricultural Chemistry. And, to understand Chemistry, other general knowledge is indispensable. How much labor is lost by this want of adaption of crops to the soil on which they are attempted to be cultivated!

The facilities for improvement are constantly increasing, and educated enterprise already making use of Nature's powers and machinery to save labor. That millenium will never come, when the soil will yield abundant harvests without labor, but the improvements of the age will aid continually to diminish the amount required. And yet we need never fear we shall be out of employment—and enough of it, too.

Some protest against the introduction of the improvements referred to, simply because they interfere with manual labor.—When Railroads first began to take the place of the old stage routes, some men who never see but an inch ahead, cried out, "This will spoil our market for horses and oats"—and yet horses and oats have been rising in value ever since. An amusing story is told of the first introduction of fanning mills into Scotland. A preacher denounced the new invention in no gentle terms. "We used to trust to Providence" said he, "for wind to fan our grain, and it is but wicked presumption thus to interfere with the Divine prerogatives and manufacture wind for ourselves!"

The general truth that knowledge saves labor is seen in every department of life—In ancient times the grain for bread was pounded or ground by hand, but now we have single mills which will make more and better flour than ten thousand hands could prepare in the same time. So of a thousand operations connected with agriculture, mechanics, &c. "Knowledge is Power," and may be successfully used in every department of human industry and enterprise.

Second—the genius of our government makes it the privilege and duty of every farmer to be educated. As citizens, they owe to our common country certain duties. If the people of our country were divided as they are in Europe into two great classes, the laboring people and the aristocracy, the latter furnishing all the law-makers, then farmers might have a better excuse for neglecting their own and their children's education. But here, where the great problem of self-government is to be decided, every man is a sovereign, and a plowman may be called to fill the highest office of the nation. In Rome's best day she was indebted for her power to the general education of her laborers. "The most distinguished generals," says a late writer, "after a series of victories and triumphs, and illustrious statesmen after guiding for a time the helm of the Republic—disdaining the pomp and splendor of rank—did not hesitate to return to the plow, and pass the remainder of their days in the quiet enjoyment of rural life. It was held that the highest virtues were cherished amid rustic pursuits, and that for a censor to say of any one that he was a good husbandman and farmer was to confer the highest praise."

The policy that has heretofore prevailed of selecting lawyers for our State Legislatures, is wrong from the foundation. The design of legislation is to subserve the interests of the masses: and who is so well acquainted with them as the farmer? Everybody knows that lawyers have made a thousand intricacies in the law, only—we naturally conclude—so they may be called upon to unravel them. There has in this respect been considerable improvement, but there is room for more. This state of things has arisen, in part, from the fact that it has been difficult to find men out of the professions, who have so familiarized themselves with our State and National polity as to be qualified for Legislators. Farmers have not felt the importance of these qualifications, and hence have not been called out into their active duties.

The great conservative power of this nation must ever lie with this class of our citizens, and that farmer who neglects the proper culture of his children is guilty of the double sin of wronging them and his country also.

S. H.

Royalton, N. Y., 1853.

## BOYS, GET AHEAD.

When we see young men spending all they make, as fast as they make it, and when we consider the great importance of a little cash capital to their future prosperity, we are amazed that their own common sense does not urge with sufficient importunity the duty of trying to save, if it be ever so little, from present earnings towards a future capital.

We once heard a gentleman who had risen from poverty to wealth and influence, by his own prudence and industry, enforcing the saving plan in this way. Suppose, said he, you had six eggs to live upon daily. Now, it is clear, if you eat all the eggs every day, you will never have any ahead to depend upon. But if, by self-denial, you can save one of these eggs to-day, or this week, and another next day or week, you can soon have, besides your six eggs daily, one, two or more hens, that will give you one, two or three dozen eggs, instead of the half-dozen you had at first. You will not suffer in any respect from the little self-denial necessary at first, and when once you have set in train the egg-producing influence, it goes on of itself, as it were. The one egg saved, gives you a hen which produces indefinitely, and then, if you choose, you can eat your half-dozen eggs daily, and still be gaining from the first saving.

We have often thought of this simple illustration as comprehending in an egg shell whole volumes of political economy, and recommend it to our young readers as worthy of study and practice.—*People's Organ.*

## PHYSICAL TRAINING.

Parents too frequently commit the error of giving their children a merely literary education—without the moral or the physical training necessary to fit them for a life of usefulness to themselves and society.—They too often make them lawyers, physicians, and merchants, without making them honest men—and turn out drones, or (not restrained by correct principles,) stir up litigation as pettifoggers, poison the public as quacks, and cheat it by adulterations. This is the too common result with such as have not the capacity to succeed in those occupations, nor the Christian honesty to starve at them. How much better to give every lad an opportunity of acquiring such knowledge, in his youth, as will enable him to earn a subsistence by physical labor—should the demand for mental labor be met with an over supply. Every boy should have a good trade, were his parents as rich as Crœsus, and then his knowledge, acquired by the most liberal education, would be less likely to become a weapon for despoiling the less informed when he has spent his father's fortune.

## IMPORTANCE OF A COMMA.

We yesterday published an article on the importance of a correct punctuation. We have seen a letter from a gentleman in Ohio to Mr. D. Bennett, which more fully illustrates the importance of a *comma*. The letter inquires about an advertisement which was inserted some years ago in the Observer, which stated that a legacy of several millions of dollars was left to the heirs of Hugh, John, and Daniel Mosier; but another paper in copying the advertisement carelessly *omitted* the comma after Hugh, so that it read Hugh John. The descendants of Mr. Hugh John reading the notice, supposed that they might be heirs to a large property, and went to considerable expense to investigate the matter, when they found that in the original notice it read the heirs of three brothers of the name of Mosier—Hugh, John and Daniel.—*Utica Observer.*

Make sure, first, and principally, of that knowledge which is necessary for you, as a a man and a member of Society. Next, of what is necessary in your particular way of life. Afterwards improve yourself in all useful and ornamental knowledge as far as your capacity, leisure and fortune will allow.

## THE LIVING GIRAFFES.

Our engraving presents a striking likeness of the two living giraffes, as they arrived at New York recently, in the steamer Washington, from Egypt, via. Bremen.—They are the tallest as well as most beautiful creatures of this rare kind, ever seen in this country—the one reaching to a hight of seventeen feet, and the other standing about a foot or so less. They were captured in Abyssinia, in the interior of Africa, among the tangled mazes of the dense forests, and in the pestilent atmospheres that few Europeans have ever ventured with impunity to invade; and they are admitted by naturalists to be among the most superb specimens yet placed before the eyes of the civilized world.

These colossal giraffes, or cameleopards, as they are sometimes called, belong to a German, named Herr Bernhard Hartmann, who is said to have expended upwards of $20,000 in obtaining them; conveying them by land over the deserts, to the Nile, and transporting them thence to Germany, whence he accompanied them in the steamer to New York. As, however, we have no curiosity of this kind, alive, in America—and the two that were here, and died so suddenly, some fifteen years ago, were valued at $50,000—Herr Hartmann will, in all probability, realize a handsome sum by his enterprize, should they survive the perilous changes of this climate.

The giraffe, or camelcopard, is the largest and tallest of all animals. It is found throughout Central Africa, and in Abyssinia, usually in herds of six or seven—generally called a family.

It is remarkable for the great length of neck, and its head sometimes attains a height of eighteen or twenty feet. The neck is usually five feet long, very flat and disproportioned in size to the throat, which is eighteen inches or less, while the parts where it joins the body increases to a size which gives the animal an oblique appearance, quite extraordinary. Upon the head of both male and female, is two short horns, covered with a velvet skin. It never sheds the horns. Its legs are very long—the forelegs are a few inches longer than the hind ones. The whole body is somewhat flat on the sides and towards the chest. The tail is sufficiently long, terminating, like the tail of a cow, in a brush. The color of its skin is usually white, or whitish-grey, more or less regularly spotted with *fawn* or ground-colored spots, extending from the back of the ears to the tail. The giraffe, by its organization, is compelled to amble along—that is, carrying forward the two feet of the same side at the same time—a movement that does not increase the grace of its motion. Levaillant says its neck never bends, and looks as if it was balanced at the fore shoulders, and played backwards and forwards, similar to the pendulum of a clock. For the purpose of drinking, it is obliged to kneel, or enter the water, and to get at any thing on the ground it is obliged to open its fore legs wide, or lay down. Its upper lip is very movable; the tongue is long, rough, black and pointed, and it has the faculty of forcing it a foot or more out of its mouth, thus to encircle branches that would otherwise be out of its reach. Its eyes are large, black, and of soft expression. It does not bear a ferocious character. In confinement its manners are docile to timidity. In its native forests, where it hears the roaring of lions, tigers, &c., it has no other mode to oppose them but flight. It is very fleet, and the best race-horse would be incapable of keeping up with it. The female carries its young for one year, and never has more than one at a birth.

These animals were known to the ancients. Cæsar caused them to be introduced into the circus at Rome.

All Paris remembers the giraffe sent to the King of France, by Mehemet Ali, the Pacha of Egypt, which lived for fifteen years in the public Menagerie of Paris. It was then eleven feet high, and was accompanied by two cows, for whom it manifested the greatest attachment—they being its nurses. It was eighteen feet high in 1845. To M. Levaillant, (who died several years since, in the most abject poverty, after sacrificing a large fortune in long and perilous voyages to Africa,) is Europe indebted for the first stuffed specimen of this animal. The first live ones seen in Europe, were given by the Prince of Damas to Frederick II. Their names were Anabulla and Geraph—from the latter name writers have derived the word giraffe.

The Hottentots prize the flesh of this animal for food, and from its skin they manufacture various domestic articles.—*N. Y. Illustrated News.*

## AN INCIDENT IN REAL LIFE.

Sixty-nine years ago a party of adventurers from the Eastern States, after a long and toilsome journey, decended the Ohio river, and encamped upon the spot where Newport Barracks now stand. They were separated from the several "stations" in Kentuckey, and turned their steps through the wilderness, first pledging each other, in a spirit that may be termed as prophetically romantic, to meet on the same spot fifty years from that day. This agreement was made on the 4th day of November, 1782.—In the year 1832, on the 4th day of November, precisely fifty years after the time of the agreement, four of the old band met on the spot to fulfill their promise. One of them was over ninety years of age; the rest were under three score and ten. After remaining a few days, they turned their steps homeward—not through a wilderness as they did half a century before, but through scenes of busy life, and the hum of industrial millions! Nor did they promise any other meeting, as that was an event fixed by a higher will: and it has taken place!—they are all dead!

A Musical Mouse.—A correspondent of the Savannah Georgian, writing from the southern part of the State, says he has in his possession a very extraordinary mouse, recently caught by his overseer.—In general appearance the little animal does not differ from others of its species; what renders it extraordinary is its musical gifts. "To hear the little creature warbling the exquisite notes of the canary bird, its imitation of the quail or partridge, the peculiar yelp of the wild turkey, with an occasional imitation of the mocking bird," says our correspondent, "is truly wonderful. Its notes are very sweet, but not very loud, though sufficiently so to be heard distinctly in any ordinary sized room."

The gentleman who writes the above facts, is an extensive planter in Glynn county, and is said to be incapable of committing an impositon upon the public.

Sleep.—Few of our readers, perhaps, are aware that the human body falls asleep by degrees. According to M. Carbinis, a French Physiologist, "the muscles of the legs and arms lose their power before those which support the head; and these last sooner than those which support the back, and he illustrates this by cases of persons who sleep on horseback, or while they are standing or walking." He conceives that the sense of sight sleeps first; then the sense of taste; next the sense of smell; next that of hearing; and, lastly, that of touch. He maintains, also, that the viscera falls asleep, one after another, and sleep with different degrees of soundness.

A modern writer, in discussiug the present relative merits of the United States and the mother country, says:—"Mrs. Britannia was once a very respectable old woman, and when she 'ruled the waves' very straight, she could, no doubt, behave herself; but when her daughter Columbia got up a breeze, the old lady was terribly seasick, and threw up the trident, which she evidently could no longer keep on her stomach."

## HOMES OF THE DEPARTED.

If yon bright stars which gem the night
Be each a blissful dwelling sphere,
Where kindred spirits re-unite
Whom death hath torn asunder here—
How sweet it were at once to die,
And leave this blighted orb afar,
Mix soul with soul to cleave the sky,
And soar away from star to star!

But, oh! how dark, how drear, how lone
Would seem the brightest world of bliss,
If, wandering through each radiant zone,
We failed to find the loved of this!
If there no more the ties should twine,
Which death's cold hand alone can sever,
Ah! then these stars in mockery shine,
More hateful as they shine forever!

It cannot be—each hope and fear
That lights the eye and clouds the brow,
Proclaims there is a happier sphere
Than this bleak world that holds us now:
There is a voice which sorrow hears,
When heaviest weighs life's galling chain;
'Tis Heaven that whispers, "Dry thy tears;
The pure in heart shall meet again!"

Written for Moore's Rural New-Yorker.

## A SKETCH.

A young person lay upon a bed of pain. He thought of his sufferings, which were past description—of the toil and trouble which his friends had for his sake, and his inability to render them anything in return—and, devoid as he was of heavenly wisdom, why wonder that he exclaimed in his agony "For what was I ever created?" Another stood beside his couch. It was a child.—Though surrounded by poverty and affliction from infancy, that child had been taught by a mother to say "Seek first the kingdom of God and its righteousness, and all other things shall be added unto you." His mind sparkled wtih the pearl of intellect, and gems of moral purity and beauty,

"Which never could have sparkled there,
But for their bright originals in heaven."

He drew near the sick ones couch, and with all the artlessness of childhood pictured to the sufferer the purity and happiness of man at his first creation—his ingratitude and disobedience in transgressing God's law, thereby bringing upon him God's curse; then he showed the utter helplessness of man, and the prospect before him of eternal destruction, when the son of God came to his relief saying, "All that will come may come." The sufferer raised his eyes in hope; he saw the object of his creation—that he was placed in this world but to prepare for another, and if he accepted the atonement of the Son of God his trials would soon be over, and he be forever at rest. Learning this, the expression of anguish was changed to a smile of resignation; he was enabled to repay in some degree the kindness of those around him, by cheering words of consolation, and, by his calm peace, to inspire their hearts to bear the ills of life with fortitude, and at last he was ushered into the eternal world fully prepared to meet the object for which he was created.

A lady was sitting in an elegant apartment, surrounded by every luxury of life. With a refined taste and liberal education she was spending her time in idleness, while thousands of her fellows were nearly perishing for the bread of life, the knowledge of which it was in her power to impart.—While sitting here, pining for something still, and feeling that ennui which idleness always produces, she exclaimed, "what was I created for?" Something whispered, "God has given much to your care, and to whom much is given, of him much will be required. Employ your time, your talent, in building up the cause of God in your own heart, and in the world, and endeavor by your example and constant exertions, to do all the good you can. If you fail to do this you will fail to meet the object of your creation, and unto you it will be said, 'ye know your duty, but ye did it not.'"

A student was poring over his lessons at midnight. At times his mind wandered from the volume that lay before him and was occupied with the occurrences of the day. He had been unsuccessful in his studies, had received unjust treatment from those around him, and now in his retirement brooded over his troubles and said to himself, "O, what do I live for?" He was immediately answered, "To serve and glorify Him who created you." Here a new train of thought presented itself. He thought of his duty to his Creator, of the many manifestations of His love already received, and the small return he had given. After long reasoning and striving he yielded up all to his Creator. It was then he learned to forgive those who by their unkindness caused him to pass his nights in restless anxiety, and he endeavored by example as well as precept, to teach all to obey the rule, "Do unto others as ye would others should do unto you." His dreams of earthly fame vanished, and his talents and vast acquirements were laid, a humble, consecrated offering, at the foot of the Cross.

Victor, N. Y., 1853. ELIZA.

# Miscellaneous.

### WHERE IS HOME?

Home's not merely four square walls,
Though with pictures hung and gilded;
Home is where affection calls—
Filled with shrines the earth has builded!
Home—go watch the faithful dove,
Sailing 'neath the heaven above us—
Home is where there's one to love!
Home is where there's one to love us!

Home's not merely roof and room;
It needs something to endear it;
Home is where the heart can bloom,
Where there's some kind lip to cheer it!
What is home with none to meet,
None to welcome, none to greet us?
Home is sweet and only sweet,
When there's one we love to meet us!

[Parable from the German.—Translated for the Rural.]

### THE BURDEN.

A poor old man here, panting, a heavy load up a steep path. "O Lord," he cried, "is there no sympathizing soul near to bear a part of this burden?" "Yes, there is!" cried a friendly voice behind. Surprised, the old man looked around, and beheld a beautiful, fair-haired youth, whose friendly appearance immediately infused confidence into him. "My dear youth," said the old man, "you come like an angel of God from heaven. To earn some bread for my little grand-children, whom I must support because their parents are dead, I have undertaken to carry this load into the next town, but, as I perceive too late, my strength is not sufficient to bear it. May I ask you to take a part of it upon your vigorous shoulders?"

"At first, let us rest, dear old man," replied the youth, "and then try again what your own shoulders can do." Herewith he lifted the burden from the back of the old man, went with him beneath the shade of an aged oak, and drew forth a piece of nutritious bread and a bottle of strengthening drink. "Eat and drink now, father," said the youth, handing both to him. With trembling eagerness the old man accepted and ate with great appetite while the friendly youth conversed with him.

"Up now, that we may reach the city before the sun sets," said the youth, at last, at the same time rising from the mossy seat. Sadly the old man looked upon his burden, and then beseechingly into the blue eyes of his companion. He believed that now the youth was about to fulfil his wish as he actually stretched his hands at the load; but alas! instead of putting it upon his own shoulders, or even taking a part of the burden, to put it upon the shoulders of the aged man. Struck with fear, the gray-haired man saw this, but to his surprise, he found himself so strengthened from what he had eaten, that he scarcely felt the burden half as heavy as before. And when, having arrived at the end of the wood, they were about to separate, the old man said:—"Generous youth, you have helped me in a better way than I desired; my wish was that you should take away the burden from me, instead of which you have given me strength to bear it myself. But now, tell me, before we separate, who are you, dear, friendly soul?" "An imitator of the Godly Providence," replied the youth. "She does not release man from his burden, but grants to the confident suppliant the nutritious bread and the cup of consolation, and thus assists him with his burden to gain the end of his zeal.

### THE OLD MAN.

Bow low the head, boy; do reverence to the old man. Once young like you, the vicissitudes of life have silvered the hair and changed the round merry face to the care-worn visage before you. Once that heart beat with aspirations coequal to any that you have felt; aspirations crushed by disappointment, as yours are perhaps destined to be. Once that form stalked proudly through the gay scenes of pleasure, the beau ideal of grace; now the hand of Time that withers the flower of yesterday, has warped the figure and destroyed the noble carriage. Once, at your age, he possessed the thousand thoughts that daily throng your brain; now wishing to accomplish deeds worthy of a nook in fame, anon imagining life a dream that the sooner he awoke from the better. But he has lived the dream very near through. The time to awake is very near at hand; yet his eye ever kindles at old deeds of daring, and the hand takes a firmer grasp of the staff.—Bow low the head, boy, as you would in your old age be reverenced.

Remember This.—Every loathsome inmate of Penitentiaries and State Prisons, was once a gentle, inoffensive and prattling child; and every criminal who has expiated his crimes on the gallows was once pressed to a mother's breast, and drew from her bosom his life-giving nourishment. But immoral training, wrong influences, and debasing examples do their work, and transform endearing off-spring to be ferocious men; they shock humanity by the foulness of their guilt, and monstrous audacity of their crimes. Yet how seldom has one of these direful transformations been effected without the aid of strong drink.

### SELECT THOUGHTS FOR THE FIRESIDE.

Words and Actions never Die.—Man's deeds are of an imperishable character.—Not only are they recorded in the book of Divine remembrance, but modern discoveries of science have established a fact peculiarly calculated to impress creatures of sense, that their every word and action produce an abiding impression on the globe we inhabit. The pulsations of the air, we are told in Babbage's North Bridgewater Treatise, once set in motion, cease not to exist; its waves, raised by each sound or muscular exertion, perambulate the earth's and ocean's surface, and in less than twenty-four hours, every atom of atmosphere takes up the altered movement, resulting to it from that sound or action. The air itself is one vast library, on whose pages are forever written all that man has ever said or ever whispered.—*Elliott.*

The Lesson of Life.—We all seem to learn the lesson of life too late. I think it is the want of charity, of love to all men, which keeps us so far apart, and makes the experience of each one more or less an unreality to every one one else. How much might we learn, even from the poorest and most wretched creature whom we meet in our daily walk! See how this common bond of humanity unites us all one to another; how the links of this chain from the lowest to the highest, are unbroken, and how we are reminded of this every day and every hour, if we will but look into the faces and eyes of our fellow men, and read the words which are written there. There are none so high as not to need our sympathy and love, and none so low that we cannot reach them by means of it.—*Wayside Words.*

Home.—Love watches over the cradle of the infant—over the couch of the aged—over the welfare of each and all; to be happy, man retires from the out-door world to his home. In the household circle the troubled heart finds consolation, the disturbed finds rest, the joyous finds itself in its true element. Pious souls, when they speak of death, say that they go home.—Their longing for heaven is to them a home-sickness. Jesus also represents the abodes of eternal happiness under the picture of a home, a father's house. Does not this tell us that the earthly home is appointed to be a picture of heaven and a foretaste of that higher home?—*National Magazine.*

Enjoyments.—There is often, (says Sir Archibald Allison,) no material difference between the enjoyments of the highest ranks and those of the rudest stage of society. If the life of many young English noblemen, and an Iroquois in the forest or an Arab in the desert are compared, it will be found that their real sources of happiness are nearly the same. The treasures of science, the refinement of taste, the luxuries of wealth are disregarded or forgotten, and the real excitation of life depends upon the destruction of wild animals, or the management of impetuous steeds.

Affability.—In the world, he who speaks sweetly and with affability, will have many friends; but he whose words are bitter will have few or none. This we may learn from the sun and moon. The sun, by reason of its dazzling light, drives away every star and planet from the heavens, while it is above the horizon, and is thus obliged to run its course solitary and unattended; but the moon, shedding a soft and tender light, moves on in the midst of stars and constellations, escorted by a numerous company.

Pride.—Theophrastus, an ancient Greek writer, says that the proud man regards the whole human race with contempt, himself excepted. If he has rendered a service to any man, he will remind him of it as he meets him in the street, and in a loud voice goad him with the obligation. He is never the first to accost any man; he returns the salute of no one in the public way.

Domestic Peace.—The less of physical force or menacing language we use—the less, to take an expressive word, we scold our children, the more order and quiet we shall commonly secure. I have seen a family where a single word, or a look even would allay a rising storm. The gentle but firm method is the very best security for domestic peace.—*Rev. A. B. Muzzy.*

Society.—Might I give counsel to any young hearer, I would say to him, try to frequent the company of your betters. In book and life it is the most wholesome society; learn to admire rightly; the great pleasure of life is that. Note what the great men admired—they admired great things: narrow spirits admire basely, and worship meanly.—*Thackeray.*

### THE PEDIGREE OF GREAT MEN.

One often hears the question, what kind of families have produced men of distinction, brought up in conversation. As we have said before, it is not always fairly put. For instance, when it is recorded that Milton's father was a scrivener, it should be remembered that he was of ancient lineage. The families may claim among poets, Spenser, Dryden, Waller, Surrey, George Herbert, Beaumont, Byron, Shelley, Cowper; among the great writers generally, Bacon, Boyle, Gibbon, Hume, Fielding, Smollet, Congreve, Swift, Sterne, Arbuthnot, Walter Scott, Goldsmith. These men were all what a herald would designats gentlemen. Doubtless, we omit others, for we quote from memory; but the opposite side has a formidable list:—Ben Jonson, Cowley, Prior, Jeremy Taylor, Dr. Johnson, Collins, Gray, Selden, Keats, Richardson, Franklin, Bunyan, (by some supposed to descend from the gipsies, a point worth inquiring into,) Moore, Crabbe, all came out of the inferior *strata* of society.—*West'r Review.*

### HISTORY OF THE AMERICAN FLAG.

The first colors spoken of in connection with the American Revolution were significantly enough called "Union Flags." No account is given of the devices upon them. They are frequently spoken of in the news papers of 1774.

The Connecticut Troops fixed upon thei drums, in 1775, the motto, "*Qui Transtuli Sustinet*," round it, in letters of gold, literally—"God, who transplanted us hither, wil support us." This was the motto. Each regiment was distinguished by its color—blue, orange, &c.

July 18, 1775, General Israel Putnam—glorious "Old Put"—unfurled at Cambridge, Mass., on the joyful occasion of the reception in that town of the Declaration of Independence, a standard bearing this motto on one side, "*An appeal to Heaven*," and on the other, "*Qui Transtulit Sustinet*."—This Flag was flung to the breeze amid the roar of cannon and the shouts of the people. It is said at the time that "the *Philistines* on Bunker's Hill, heard the cheers of the *Israelites* (*Israel* Putnam,) and being fearful, paraded themselves in battle array." This Flag was a *red* one—the signal of defiance, or battle, since the days of the Romans.

In September, 1775, Col. Moultrie unfurled a large blue Flag with a crescent in one corner. This was the first American Flag displayed in South Carolina, and was used at the taking of Fort Johnston, on James' Island. The crescent is the emblem of sovereignty.

A standard, with a white ground, a pine tree in the middle, and the motto "*Appeal to Heaven*," was adopted in October, 1775 as the Flag of the Floating Batteries.

On January 2d, 1776—the day that gave birth to the new American Army—the Flag designated as *The Great Union Standard*, was hoisted. This was the basis of the present day.

In 1776 was adopted the Standard to be used by the Commander-in-Chief of the American Navy, "being a lively representation of a rattlesnake in the middle, in the attitude of striking." Underneath were the words, "Don't tread on me."

The same year the Cruisers of the Colony of Massachusetts hosted a white Flag, with a green pine tree, and the motto—"*Appeal to Heaven.*"

June 14th, 1777, Congress passed the following resolution:

*Resolved*, That the Flag of the Thirteen United States be thirteen stripes, alternate red and white; that the Union be thirteen stars, white in a blue field, representing a new Constitution.

This was the origin of the National Flag of the United States—the glorious "Stars and Stripes"—which has proudly waved, since that day, over many of the greatest victories of modern times; that stirs the blood of every true-hearted citizen, when ever or wherever he beholds it floating in the breeze; that waves in every part of the world, and that is everywhere respected on sea and on shore.

The above resolution was made public September 3d, 1777. According to Col Trumbull, the Flag made in pursuance of it was first used at the surrender of Burgoyne, Oct. 17th of the same year. This was a glorious beginning, truly, for that was one of the most important victories of the American Arms during the Revolution.

The first change in the National Colors was directed in the following enactment of Congress, adopted Jan. 13th, 1794:

"*Be it enacted &c.*, That from and after the first day of May, 1795, the Flag of the United States be fifteen Stripes, alternate red and white. That the Union be fifteen Stars, white, in a blue field."

This was the Flag of the United States during the war of 1812-14.

In 1798 the Flag of the United States was again altered. On the suggestion of the Hon. Mr. Wendover, of this State, a return was made to the thirteen stripes; as it was anticipated that the Flag would become unwieldy if a stripe was added on the admission of each State; and moreover, by the plan proposed, the Union of the old Thirteen States, as well as the number of States comprising the existing Union, would be presented by the Flag of the United States. Mr. W. also proposed the arrangement of the Stars of the Union into the form of a single Star.

The Resolutions of 1818 were as follows:

"*Resolved*, That from and after the fourth day of July next, the Flag of the United States be thirteen horizontal stripes, alternate red and white. That the Union be twenty stars, white in a blue field.

"And that, on the admission of a new State into the Union, one Star be added to the Union of the Flag; and that such addition shall take effect on the fourth day of July succeeding such admission."

The Flag planted on the National Palace in the city of Mexico had thirty Stars in the Union. It is now deposited in the Department of State at Washington.

The Union of the Flag of the United States now contains thirty-one Stars.—*Albany Express.*

There once lived a strong and vigorous man. His powerful arm had often wielded the axe, the sickle, and the scythe. He cleared away the forest, tilled the soil, and created plenty and comfort around his mansion. But old age paralized his strength, and sickness confined him to his couch. In a lonely room, in his once happy mansion, he lies unnoticed and unattended. He has sons and daughters, to each of whom he has given the earnings of a thousand days, after they had arrived to man and womanhood. But his labors were no longer serviceable to them—so he lingered, solitary and alone, and died neglected, and is forgotten.

Reader, wouldst thou know a like history, look around thy own neighborhood, and notice the condition of the aged and infirm.

# For the Ladies.

### WHY DO I LOVE HER?

Why do I love her?—I cannot well answer,
Except in a negative way;
It is not because she is famed as a dancer,
And trips o'er the floor like a fay;
Nor is it because that she warbles so sweetly,
While touching the tuneful guitar;
'Tis not that she dresses with taste and so neatly—
'Tis something more exquisite far.

Why do I love her?—'Tis not that her beauty
Is equalled alone by her worth;
'Tis not that in filial affection and duty
She has not an equal on earth;
Nor is it because she has genius and talents,
With all that the schools can instil
A rich cultured intellect, fancy to balance—
'Tis something more exquisite still.

Why do I love her?—because I have reason
To know that her heart is an urn,
Where purest affection, a stranger to treason,
Will warmly and brillantly burn.
Because she will love with as fervent devotion
As glows in a seraph above;
Because she's alive to each tender emotion—
I love her because she can love.

For the Rural New-Yorker.

### UNITY OF FEELING BETWEEN HUSBAND AND WIFE.

The fireside is often a scene of unpleasantness from the very fact that there is not that unity of feeling existing between husband and wife that is necessary to make home pleasant, and the marriage relation what it was intended to be. When a man takes unto himself the companion of his choice—the one that is to be his partner through life—it is the mutual agreement, or rather ought to be, that they be helpers one of the other—sharers in each others joys and sorrows. When this union takes place "they are no more twain, but one flesh;" hence they should become of *one* mind—be governed by one and the same principle, and be "all things" to each other. The welfare of the one should be the welfare of both. No selfish motives should be propagated,—both should be free to act, free to think, and free to converse with each other upon every thing connected with the prosperity of either. By thus entering into this bond of union two are brought into one,—and consequently the two should act and work together with the same zeal and good feeling for each other, as either did for themselves while in a state of celibacy.

There should be no secrets between husband and wife; for since the wife has been taken into partnership, she, of course, has an equal interest in the "concern;" and has a right to put such questions to her husband in relation to the "standing affairs" as she desires; and if the husband is what he ought to be, satisfactory answers will be given. This is one of the principal causes why there is disunity and unpleasantness between husband and wife—the latter is kept from knowing that which she has a right to know. The husband who is not willing to make a confidant of a faithful and deserving wife, is not entitled to the *name* of husband. For who, more than she, is deserving of confidence? Did the husband more generally consult with his interested and care-taking companion, and ask her advice in matters pertaining to the management of a family, there is sufficient reason to believe that a greater degree of prosperity and happiness would attend the married pair in their connubial journey.

It is necessary that there should be unity of feeling between husband and wife, and that there should be confidence reposed in each other,—for the journey of life cannot otherwise be made pleasant and cheerful. Long years are passed by many in the connubial state, who do not, in reality know what the real, sold enjoyments of a wedded life are—do not know what they *may* be.—And why? Because there seems to be a barrier between the two joined together, which neither will condescend to step over or brake down; hence the common age of man is often lived out by many of our fellow creatures without having experienced the *sweets* of domestic felicity.

Man and woman were created and placed here for each other—to enjoy this life together; and of course there are many that do, in *reality, enjoy* it. The marriage state has the sanction of our Heavenly Father, and those who have pledged themselves to live together as husband and wife, fall far short of their obligations unless they fulfill to each other the duties binding upon them *in* the marriage relation. "They twain shall be one flesh;" hence if man and woman become joined together, and have pledged their love and fidelity to each other before God, they ought to walk very circumspectly in such relation to be deservingly called "one flesh." Would it not be well for many who are traveling on in the connubial state, to look around their own firesides and see if there is that unity and good feeling existing which is necessary to make home cheerful and life desirable? In order to have love and unity maintained in the married state, a spirit of condescension must be manifested by both husband and wife—both must yield to each others desires and wishes; otherwise all will not be calm and sunshine.

Reader, if thou art a husband, or a wife, study to know thyself; and endeavor if possible to ascertain whether *thou* art in the right or in the wrong. If we will but do our duty—fulfill our obligations to each other, we may all live happily together, and journey on in peace and quiet.

August, 1853. ALBERT TODD.

### FROM EARTH TO HEAVEN.

The crawling clock-hands told the hour of night, and the Death Angel spread his dark wings, shadowing my little, meek, suffering Nellie. A smile, the "signet ring of Heaven," lit up her face, as she opened her eyes upon me once again. "Mamma, when Nellie is dead, don't forget to plant that snow-drop on her grave beside little Willy's. And remember, mamma, your two little blossoms will look down upon you, and be yours just the same in Heaven."

These were the last sweet words. No struggle marked the exit of the freed spirit, and as dark shadows stole across that face, removing the smile of Heaven that rested there, I closed the once bright, laughing eyes,—folded the fair hands upon her breast,—straightened the wax-like limbs, and then sat down to sorrow for the dead. No! not to sorrow, for, transplanted in the "heavenly gardens," purer and happier seraphs were my little blossoms, guarded by a Father's fostering care. I could not but contrast my present anguish with my uncontrollable, fearful agony, when I felt that little Willy, my eldest born, must die. Now my grief was calm; then my wicked heart uprose at the decree; now I meekly kissed the rod of affliction; then I denounced the author of my sorrows.

Three weeks ago, and even as o'er my little Nellie's couch, I stood beside my Willy. Not lying pale and still, but tossing in fever and delirium, my other little cherub lay dying. His expressive eyes, all bloodshot and wild, no longer rested lovingly upon me: his "fair, clustering curls," ever my delight, were matted now and in disorder; to my passionate call, he gave no reply. Reason had fled from her throne—the shaft from the Destroyer sped, and dying he knew me, recognized me not. My stricken heart rebelled, my lips murmured, "I will not give him up," and I strained my little Nellie to my aching breast, and bade defiance to death, and his minions dread.

And now that shadow had fallen again. "Unannounced and unattended," the grim visitor had entered my dwelling, and summoned my only remaining blossom *home*, to meet Willy. Yet my grief found a vent in sinful murmurings; my heart bowed under the chastening stroke, and my lips uttered, "so best, so best." Calmly I laid that little beauteous babe beside my other blossom, and the same snow drop droops its head over those two little graves, in which my hopes lie buried. Yet at night, in the still, dark hours, those seraph voices call from out their star-lit home,—"We may not come to you, but you can come to us." Aye! a sad and bitter lesson was mine, and although now a lonely and saddened woman, my eyes look up and seem to see these angel forms, and my lips in joy and gratitude, respond,—"God grant it."

Maggie.

### MARRIAGE COMPARED WITH CELIBACY.

Marriage is a school and exercise of virtue; and though marriage hath cares, yet single life hath desires, which are more troublesome and more dangerous, and often end in sin; while the cares are but exercises of piety; and therefore, if the single life hath more privacy of devotion, yet marriage hath more variety of it, and is an exercise of more graces. Marriage is the proper scene of piety and patience, of the duty of parents and the charity of relations: here kindness is spread abroad, and love is united and made firm as a centre. Marriage is the nursery of Heaven. The virgin sends prayers to God; but she carries but one soul to Him; but the state of her marriage fills up the numbers of the elect, and hath in it the labor of love, and the delicacies of friendship, the blessings of society, and the union of hearts and hands. It hath in it more safety than the single life; it hath more care, it is more merry and more sad; is fuller of sorrows and fuller of joys; it lies under more burdens, but is supported by all the strength of love and charity, which makes these burdens delightful. Marriage is the mother of the world, and preserves kingdoms, and fills cities, and churches, and heaven itself, and is that state of good things to which God hath designed the present constitution of the world.—*Bishop Taylor.*

A good inclination is but the first rude draught of virtue; but the finishing strokes are from the will; which if well disposed, will by degrees perfect; if ill disposed, will by the superinduction of ill habits, quickly deface it.—*South.*

MOORE'S RURAL NEW-YORKER.

ROCHESTER, SEPTEMBER 24, 1853.

PUBLISHER'S NOTICES.

☞ AGENTS.—Any person so disposed can act as agent for the RURAL NEW-YORKER,—and all who remit according to terms will be entitled to premiums, &c.

☞ THE RURAL is published strictly upon the CASH SYSTEM—sent no longer than paid for—and all orders should be in accordance with terms.

☞ ADVERTISEMENTS must be brief, appropriate to the objects of the paper, and accompanied with the cash.

☞ FOR TERMS, &c., see last page.

## Another Quarter.—A Suggestion.

THE next number will commence the last quarter of our present volume. Those who wish the RURAL—and their name is legion, now that long evenings, and a season of comparative leisure, have commenced—should embrace the opportunity and at once subscribe. Notwithstanding the large, and continued increase to our subscription list this year, there are a few blank pages in our books which we shall be happy to fill with the names of any who consider this the paper for their money. We wish our friends—including constant readers and casual or regular borrowers, whose name ought to be yet are not "booked," and all other outsiders (non-subscribers) who like the RURAL, to forward taugible evidence of their faith in its orthodoxy as an Agricultural, Literary and Family Newspaper. Moreover we trust every subscriber—and we ask all to constitute themselves agents—will assume the responsibility of obtaining and forwardiug subscriptions. Subscribers make the best ageuts—they know the paper, can show a number, and influeuce their friends to subscribe. Think of it, reader, and if convenient, please act upon the suggestion.

—Those whose subscriptions expire this week, will find "time up" printed upon the margins of their papers. In renewing their subscriptions, (which our friends are, somehow, in the habit of doing very promptly—thus evincing their good taste and judgment!) we hope subscribers will not forget to invite their neighbors and acquaintances to join them—and if they thereby obtain the paper at the club rate, or free, we shall not complain.

## Democratic State Convention.—Results.

THE Democratic State Convention, held at Syracuse last week, resulted in a complete division of the party, and the nomination of separate tickets. The two sections first met in Brintnall Hall, on Tuesday morning, when two Chairmen—IRA P. BARNES, Hunker, and J. B. SKINNER, Barnburner,—were simultaneously nominated, and declared elected by their respective friends. This produced abundant "noise and confusion"—and, as the reporters have it, "a scene indescribable ensued." Fists were freely shaken, but no claret lost on either side. The Convention finally took a recess until 4 o'clock.

At the time appointed the Baruburners reassembled, but lo! their Hunker brethren did not appear. On sending a Committee requesting Mr. BARNES' attendance, that gentleman replied, in writiug, that himself and friends were in fear of their lives, and therefore declined the invitation. Whereupon the Barnburners proceeded to organize permanently. Some Hunkers joined them, on the supposition probably that theirs was, or would be, the legitimate Convention of the party. After the orgauization, and the trausaction of some preliminary business, the Couvention adjourned until Wednesday morning.

Meantime the Hunkers organized in the Ladies' Parlor of the Globe Hotel, and had an orderly and spirited meeting. The same evening they nominated a State ticket, adopted resolutions, &c.

On Wednesday the Barnburners completed their business by nominating a distinct ticket, assisted by some prominent Hunkers who acquiesced iu the regularity of their proceedings. We annex the tickets of the two divisions in the order of their productiou, as follows:

| HUNKERS. | BARNBURNERS. |
|---|---|
| *Appeal Judges,* | *Appeal Judges,* |
| Charles H. Ruggles, | Charles H. Ruggles, |
| Hiram Denio. | Hiram Denio. |
| *Secretary of State,* | *Secretary of State,* |
| George W. Clinton. | I. A. Verplanck. |
| *Comptroller,* | *Comptroller,* |
| James E. Cooley. | Robert Kelly. |
| *Treasurer,* | *Treasurer,* |
| W. C. Watson. | F. Segur. |
| *State Engineer,* | *State Engineer,* |
| J. D. Fay, | W. H. Bristol. |
| *Canal Commissioner,* | *Canal Commissiner,* |
| John C. Mather. | A. J. Yates. |
| *Attorney General,* | *Attorney General,* |
| James T. Brady. | M. Grover. |
| *State Prison Inspector,* | *State Prison Inspector,* |
| M. W. Bennet. | W. C. Dryer. |
| *Clerk of Appeals,* | *Clerk of Appeals,* |
| S. S. Bowne. | A. Edgerton. |

—These are both pretty fair tickets, but which will prove most successful, is quite uncertain. In their resolutions both proclaim about the same principles, so that there is scarcely any issue between them. For consistency of principles, however, we thiuk the Hunkers (or Adamantines,) have the start—while the Barnburners (Softs,) possess the great advantage of regularity in their nominations. They denounce the Hunkers as bolters—or the *terrified* democracy. So far as State spoils are concerned, however, our opiuion is that the Whigs—unless their Convention results in a similar "muss"—will have matters their own way.

☞ The Buffalo papers chronicle the decease of Hon. Thos. C. Love, an aged and prominent resident of that county.

## Sight Notes, drawn at Buffalo.

BUFFALO, Sept. 20, 1853.

FRIEND MOORE:—Though a commercial city may not be the most proper place from which to indite an agricultural epistle, there is still such an intimate connection between commerce and agricultural pursuits, that a few notes of the former may not be unprofitable.

Buffalo is emphatically a great, a growing city, whose business, enterprise and position, conspire to place it in the front rank as the western key to the trade and commercial transit of the Empire State. Within the memory of those now resident here scarcely a sail, and not a steamboat, traversed the waters of Lake Erie; now their number is so great, and the business transacted through that channel so vast, that one not posted up would be lost in conjecture, in endeavoring to give an estimate.

Some twelve years since we resided here for a few months, just at the time Buffalo was emerging from the ruinous reverses of the speculating mania which had overrun the whole country, and though even then it was a place of much business, its increase in the few years passed has hardly been paralleled on the contiuent. Recently railroads have added much to the facilities and given increased impetus to trade. One of the most important roads now building is that designed to form a branch of, or connection with, the Great Western road from Niagara Falls to Detroit, known as the Buffalo and Brantford road. It will open a communication with the rich farming lands of Canada West along the line of the roads now building. Another is projected, to be known as the Buffalo and Pittsburgh road, which is to pass through the south part of the county, into Cattaraugus and on to the Allegany river. When all these roads are completed, with those now in use, they will intersect all portions of the adjoining country, and add materially to the wealth of both city and country.

We notice in passing the streets some elegant residences, with spacious grounds well filled with trees, shrubs and plants, giving evidence of a refined and cultivated taste. Much attention is paid to horticulture, and we observe some fine fruits, and flowers in great profusion. A good Horticultural Society has been in existence heretofore, but of the mesure of its present prosperity we are not informed. Fruits are not as extensively cultivated as at and in the vicinity of Rochester, and probably do uot flourish as well. Of vegetable gardening the greater part is done by the Germans, who form a large and worthy portion of the population of the city, and country to the north on the route to Williamsville.

One of the improvements which benfit this city should early claim the attention of Rochester—the introduction of a good supply of pure soft water. The supply for this city is taken from the bottom of Niagara river, near Black Rock, by tunne ing under the stream, and tapping it at the bottom. The water is elevated by means of stationary engines, worked by steam, and thrown into a reservoir on the highlands above Black Rock, from whence it is distributed throughout the city.

Of some Nurseries, Green Houses, and Gardens, public and private, we may furnish notices at a future time, as matters interesting to all lovers of improvement. Peaches are abundant, the main supply coming from the vicinity of Cleveland, though some of the largest and finest hail from Rochester.

Buffalo is an important point for the sale of produce. Western dealers have found it more profitable to sell here than to send to New York, as the oftener they get returns from the outlay of capital, the larger the season's profit, and the less risk from fluctuations of the market. The recent foreign advices have given operations much of a speculative character, though former lessons here, as well as elsewhere, should teach purchasers as well as sellers, the important maxim—keep cool. †

## Great Break in the Canal.

ON Sunday morning last an extensive break occurred in the Erie Canal about two miles below Bushnell's Basin, and some ten miles east of this city. The breach is said to be about 40 rods wide. Two boats were drawn into it and wrecked. The water made a channel through an orchard some 300 feet wide and 12 or 15 feet deep, and also swept away the rear part of a brick dwelling house—causing considerable damage on the premises. The break is a very serious one at this season of the year, as it will cause much embarrasment to business men. It will take from 8 to 12 days to repair the breach.

—We also learn that two breaks occurred near Amsterdam on Saturday night—one at Hoffman's Ferry, and the other at Phillips's Lock. They were caused by the heavy rain—and can be repaired in three days.

LIFE, EULOGY AND ORATIONS OF WEBSTER.—We have had occasion heretofore to commend the Orations of WEBSTER, published by our townsman W. M. HAYWARD. As a successful and discriminating caterer to public taste, he has enlarged the volume by a Memoir of the distinguished Statesman from the pen of L. GAYLORD CLARK, editor of the *Knickerbocker Magazine*. This, of itself, should ensure the ready sale of the work. It also contains an Eulogy, one of the best which has been pronounced since his death. The whole makes a volume which cannot be too highly commended to the youth of America, that they may learn the great lessons therein contained. W. M. HAYWARD & Co., publishers, No. 4 Burns' Block, Rochester, N. Y.

CHOATE'S EULOGY ON WEBSTER.—This is a classic production, and possesses an interest which will ensure its perusal, aside from the great renown of the lamented dead. DARROW has it.

## Our Albany Correspondence.

ALBANY, Sept. 19, 1853.

EDS. RURAL:—The long-suspended Impeachment Trial is over. A little more than a month of precious time has been expended, and a large amount of the people's earnings has been squandered—for what? Simply to gratify party malice. This is conceded to be the motive that caused the instigation of the trial, and the prosecution and decision of the cause seemed to have been conducted on party principles.

The Court were engaged in private consultation the first four days of last week. On Friday morning the doors were opened to the public, and the final question was taken. The form of question was in these words:—"Senator," [mentioning the name] "how say you? Is the respondent guilty or not guilty, as charged in the" [mentioning the number] "article of impeachment?" Each Senator and Judge, rising in his place, would reply "Guilty," or "Not Guilty." This form was adhered to throughout, the thirty-two members of the Court being separately called upon for each of the fourteen articles.

On the question of the alleged corruption in letting canal contracts, the highest number voting "guilty" was six. Twenty-two were necessary to convict.

On the ninth article, which referred to corruption in purchasing lumber, the vote stood, "guilty," 18; "not guilty," 14. This was the strongest vote given against him on any of the articles.

The number who voted "guilty" on the other articles, varied from thirteen down to nothing.—The Hunkers voted uniformly "not guilty." The Whigs divided up, but voted mostly "not guilty." The Barnburners voted, with a few exceptions, "guilty," or declined to vote. Considerable excitement prevailed, though all was in usual order. At the conclusion of the voting, the decision of acquital was ordered to be entered on the journal, and the Court adjourned without day.

On reaching the hall, Mr. MATHER was greeted with six hearty cheers by his friends. Soon after the large cannon was brought out, and 100 guns fired in honor of his triumphant acquittal.

Thus has terminated this first trial of Impeachment in the State of New York. It should not be understood that Mr. MATHER is free from all censure. By no means. On one of these charges EIGHTEEN members of the Court were of the opinion that he was guilty. But the difficulty lies in our present political favortism. The whole government is corrupt from the President of the U. S. down to the Street Inspector; and in this very case other officers were equally implicated and a vote to impeach Mr. MATHER would impeach the whole crowd of office holders about the Capitol.

But there is a faint hope that some "good may come out of evil" in this transaction. The eyes of the people may be opened to the method of procedure adopted by politicians, and they may hereafter choose better public servants. Would that this may be so, though it could not be attributed to the instigators of the case.

Albany is at present the centre of a very heated political strife. No stone will be left unturned by any of the factions, to carry their base ends. It is to be feared that even the first election after this solemn display of judicial admiuistration, will prove to be more corrupt than any of its predecessors. Money will flow like water, and lies enough will be told on every side to sink a nation.

To cap the climax of excitement, LUCY STONE has been lecturing here on the subject of Woman's Rights. But I think she did some good. Her audiences were quite select and orderly, and her lectures were well worth hearing. There are worse women in the world than LUCY STONE.

The Supreme Court have heard the arguments on the motion to grant a new trial to HENDERSON, who was found guilty of murder, and sentenced to be hung. A decision is withheld till the October term.

The State Fair, which is to be held at Saratoga, begins to excite some interest here among a certain class of producers. The Railroad arrangements are completed between here and Saratoga on quite favorable terms.

You may expect some political items next week. *OWE.*

HEAVY RAINS.—During the past week a great amount of rain has fallen in this region. Wednesday and Thursday of last week were decided "soakers," and quite equinoctialish. The rain guage gave the amount as one inch on the level. Saturday morning, "the clouds poured down, before sunrise, nearly two inches, flooding the streets." On Saturday evening we were favored with one of the grandest thunder storms of the season. For a short time the rain poured down in floods, winding up with heavy hail and some wind. It is said the hail did considerable damage in Irondequoit and Brighton. Some 200 bushels of peaches were knocked from the trees in one orchard. We had another copious rain on Monday afternoon and evening.

DISCONTINUED.—We learn that the *New York Agriculdor* (weekly,) and the *Farm and Garden* (monthly,) have been discontinued. *The Library and Garden*, a weekly published for some months at Buffalo, has also been discontinued for want of support—leaving but one of the four agricultural or horticultural journals commenced withiu a year past in this State. We fear our contemporaries did not count the cost, or greatly over-estimated the wants of the agricultural public. But as they were engaged in other business than journalism, and used their papers to some extent as mediums of advertising such business, we presume the loss sustained, if any, is not material.

THE CHIMES is the title of a new monthly devoted to Fact, Fun and Fancy, published by O. H. HESS, Dansville, N. Y.

## More Railroad Murders.

ON Friday morning last a serious accident occurred at Oneida Station (a little east of Syracuse,) on the New York Ceutral Railroad. The A. M. Express train coming west, while standing at Oneida Station was run into by a freight train coming west. A despatch from Oneida says:

"The Express Train was behind time. The passenger cars of the express were terribly broken. Many of the passengers were injured. The following is the list of serious casualties:—Buckley Thatcher, of Litchfield, Medina co., Ohio, killed, Patrick Wall, of Manchester, Vt., both thighs broken. His brother, in same car, injured in the foot. John Vaughn, of Syracuse, both thighs fractured; Edward Jewett, of New Haven, Conn., badly hurt about the head and neck. Many passengers, more or less injured, left on a train sent from Syracuse. Coroner White is holding an inquest."

Later accounts show that the collision was the result of the most culpable carelessness. And it would have proved most destructive to life but for the fact that just at the moment the collision occurred most of the passengers had left the rear car. It is said no signal was displayed to show that a train was standing at the station. When will such criminal recklessness cease?—or rather, when will sufficient penalties be instituted to prevent such disasters?

ANOTHER!—A serious collision also occurred on Thursday last on the Hudson River Railroad, between a single engine and the Poughkeepsie afternoon down train. Three persons were killed and two injured very badly. No passengers hurt.

FOREIGN DEMAND FOR BREADSTUFFS.—Gen. Webb, editor of the N. Y. Courier and Enquirer, in a letter to his paper, under date of London, Sept. 2, speaks thus of the demand in Europe for our Breadstuffs:

"The only effect of the short crop, so far as the Money Market is concerned, will be to keep up the rate of interest to about three per cent instead of its receding to two. The great question is can her wants be supplied, and from what quarter? Our Free Trade adventurers have made the English public believe that we can easily supply all their wants; but I have told those with whom I have conversed, that under existing circumstances, it is utterly impossible for us to furnish more than two millions of barrels of Flour for exportation. *There will be a foreign demand for every barrel we can spare;* and the result will show whether I am right or wrong."

## News Paragraphs.

☞ Suicide, by young women, is becoming fearfully prevalent in New England. Here is a *fourth* within the last three weeks. We copy from the Bangor Mercury:—"On Saturday evening, about five o'clock, Miss Laura A. Sealand, a girl of irreproachable character, about 19 years old, took an ounce of arsenic which caused her death in about five hours. The deceased left a letter, in which she stated her determination to rid herself of life, and that she had procured and mixed the poison."

☞ The Franklin brings us the intelligence of the death of the veteran Sir Charles Napier.—He was one of the most distingnished generals of the British army, and had been an officer, in different ranks and in various parts of the world, for sixty years. He was seventy-one years of age, and had received, in the course of his numerous campaigns, a greater number of wounds than were perhaps ever survived by any other soldier.

☞ The friends of the Madiai, in England, are busily engaged in raising a thousand pounds, by penny subscriptions; the sum to be applied to the purchase of an annuity for those unfortunate people. Copies of the subscription paper have been sent to this country; and we learn from it, that contributions may be transmitted to the "Library, Castle street, Windsor, England.

☞ Some villain placed a rail upon the Camden and Amboy railroad, which threw the New York evening train off the track. A brakeman, named J. Redell, was instantly killed; the engineer, John Cobson, was somewhat bruised. No passenger was injured. The company have offered a reward of $10,000 for the arrest and conviction of the author of the outrage.

☞ It is proposed to erect a National Monument on Plymouth Rock in honor of the immortal names of the passengers by the May-Flower. The Plymouth people have given the thing a start by subscribing $6,000. Contributions may be sent to Allen Danforth, at Plymouth, or Richard Warren, President of the Plymouth Society, New York.

☞ The valuable cabinet of many thousand specimens in Comparative Anatomy, Mineralogy, and other sciences, collected in the course of years by that distinguished *savant*, Prof. Agassiz, has been purchased for the University at Cambridge, at the price, as is rumored, of $12,000.

☞ All the new cars for the N. Y. Central Railroad are to be nine feet eight inches in width, which is only four inches narrower than the broad guage cars,—making a difference in each seat of only two inches. This change will conduce vastly to the comfort of passengers.

☞ A letter dated at Summit House, on the top of Mt. Washingtou, Sept. 12, says that the thermometer was then at 23°, and the snow whizzing merrily through the air. Where the wind had a fair sweep across the Summit, a man could not stand erect.

☞ It is said a Union (Soft) Hunker paper is to be started in Albany, to support the National and State Administrations. It will support the State ticket headed by Kelly for Comptroller.

—Benjamin Ferris, of Utah, reports that seditious feelings are rife among the Mormons, and the men and women are in a state of the deepest degradation. Brigham Young has forty wives.

☞ Hon. Victor Birdseye, long an eminent citizen of Central New York, (residing at Pompey, Onondaga Co.,) was found dead in his bed on Saturday morning last. His age was 70.

☞ The reports from New Orleans show a gratifying abatement in the number of deaths from Yellow Fever. The Lake Coast, however, was suffering severely.

☞ Late news from Mexico reports Santa Anna more tyrannical than ever. He has now a fine army of 50,000 men. Our new Minister was worthily received.

☞ The Wyoming County Teacher's Association hold their eleventh annual Institute, at Warsaw, during the two weeks commencing Oct. 10.

—John McAlister, Esq., an eminent lawyer, for some years a resident of Waterloo, N. Y., died recently at Oshkosh, Wis., aged 56 years.

—The jail in Buffalo contains three murderers under sentence, Fogarty, Darry, and Bielar, and four others awaiting trial for murder.

—Hon. W. H. Seward delivered an oration at Columbus, Ohio, last week, upon the occasion of laying the corner stone of the University.

—A terrible crowd of locusts are ravishing Southern Mexico, for a distance of four hundred miles, destroying the indigo and corn crops.

—Our dates from New Orleans are up to Saturday. The fever is decreasing, the deaths being not more than 30 per day of pestilence.

—Something like a dozen military companies were encamped at Utica last week. Reckon the copious weather tested their patriotism.

—S. C. Hitchcock has been nominated for Senator by the Democrats of the 20th district, comprising the counties of Madison and Oswego.

—The schr. Arcturus, which arrived at Chicago recently was compelled to throw overboard a locomotive on Lake Huron, in stress of weather.

# Foreign Intelligence.

## Arrival of the Franklin.

THE steamship Franklin reached New York at 7 o'clock on Wednesday morning, 14th inst., with London dates to Sept. 1st.

The Niagara arrived out on the 23th, and the Arctic on the 30th ult.

The Franklin brings 160 passengers — among them Messrs. Lanitz and Greenough, sculptors.

The U. S. brig Dolphin put into Southampton to refit, on the 26th ult.

The French Government says officially that the fears which existed respecting the harvest are groundless, as the crop of grain is of average amount and of excellent quality.

Accounts from Constantinople of the 19th, state that the Sultan had adpoted the Vienna route without material alteration.

A courier had arrived at Vienna from Constantinople who states that the Sultan will send an ambassador to St. Petersburgh simultaneously with the evacuation of the Principalities.

Accounts from Buckhardt state that the Russians will evacuate the Principalities in Sept., on which the fleets of England and France would return to Malta and Toulon.

The cholera was spreading in the north of Europe. The overland India and China mails arrived in London on the 29th.

At the London corn market on the 29th and 31st, considerable business was done. Flour firm at 30s. 6d@31s.

Money market had suddenly become tighter. Capitalists were drawing in their loans, and a further rise in interest was expected. Consols 97¾@97⅞.

LIVERPOOL, Aug. 31.—Cotton rather firmer.—Sales 700 to 800 bales this day. The following is from Richardson's Circular, of Aug. 29:

On the evening of our last market day, Friday, a good deal of rain fell, which circumstance together with the continued demand for France, caused a very active inquiry in wheat and flour at 1d@2d. advance on the former and 1s. per bbl. on the latter on the rates current the day previous. In the interim, having become more settled the activity of Saturday, was not general to-day, but holders were firm at extreme rates, and where sales were effected, such prices were obtained.

Tuesday, Aug. 30th, we had a full attendance at the morning's market. The speculative feeling which existed since our last noted above, rather subsided to-day, and the trade generally operated with great caution. However, a fair demand was experienced for wheat at the improvement mentioned above. Flour met with only a moderate consumptive demand, large purchasers not being willing to follow up the large advance required. Western canal 29s. 6d@30s. 6d.

Indian corn in fair request at the extreme rates. Yellow, of good quality held at 32s@33s. 6d. per quarter. No good white on the market.

The following is from the Circular of Jas. McHenry, dated Liverpool, 30th Aug.:—Lard scarce, but not dearer. Beef and pork continue to meet a moderate request. Bacon attracts more general attention. Its present cheapness forces consumption. Shoulders saleable at the advance.—Cheese much wanted.

The death of Lt. Gen. Sir Charles Jas. Napier, the conquerer of Scinde, is announced. It occurred near Portsmouth on the 30th Aug.

PARIS, Aug. 31—P. M.—An extraordinary rise in the Odessa grain market. The stores were inadequate to contain the arrivals, and depots had been established in the open air.

The United States Frigate Cumberland had arrived at Marseilles.

## Arrival of the Niagara.

THE steamer Niagara, with Liverpool dates to the 3d inst., three days later than per Franklin, arrived at Halifax on the 14th.

Liverpool corn market has undergone no change during the week. The prices of last week are generally reported by the leading brokers.

Cotton—Sales of the week 30,000 bales.

Breadstuffs—Market continues very feverish and excited and settled quotations cannot be given.

Brown, Shipley & Co., quote white wheat 8s 8d, Western canal flour 29s 6d, Philadelphia, Baltimore and Ohio, 30s 6d.

Indian corn less active at advanced prices.

Provisions generally unchanged.

The weather at the close of the week was less favorable for agricultural purposes.

The latest reports from the East are less favorable for the speedy adjustment of the difficulties between Turkey and Russia.

## Arrival of the Arctic.

THE steamer Arctic, from Liverpool, Sept., 7th, at noon, (bringing news four days later than per Niagara,) arrived at her dock in New York, on Sunday morning, the 18th.

She brings over 200 passengers, among whom are Harriet Beecher Stowe, and Mr. and Mrs. Chas. Beecher.

The Africa arrived out on the 4th.

Turkish affairs are unchanged, and nothing is yet known of the Czar's intention of accepting the amended note.

Turkey had sent to the powers an explanatory manifesto.

It was reported that France had imformed the Sultan that any further steps taken are at his own peril; but, on the whole, prospects are no worse than at last advices.

Nothing important from Great Britain. The harvest was progressing favorably.

The French Government was using every means to keep down the prices of the grain market, and the prices were quoted lower.

The Prussian Government has concluded not to interfere with the prices of grain in Prussia.

There was an immense accumulation of corn at Odessa, awaiting shipment.

AUSTRIA.—Lieut. Schwarz, notorious in the Koszta affair, is promoted.

Nothing else notable.

LIVERPOOL MARKETS.—Cotton market very dull, favoring buyers. Sales for three days 14,000 bales.

BREADSTUFFS.—Owing to fine weather and the decline in France causing re-sales on French orders, prices were irregular causing a decline of 4d on wheat and 1s on flour since the Niagara sailed. Indian corn, a moderate demand and little variation in prices.

PROVISIONS.—Beef and pork quiet. Lard 1s lower. Consols declined, closing on Tuesday at 95⅛ a 97¼.

GOLD.—Taking the value of the cube yard of gold at $10,000,000, which it is in round numbers, all the gold in the world at this estimate, might, if melted into ingots, be contained in a cellar 24 feet square, by 16 feet high. All the boasted wealth already obtained from California and Australia would go into an iron safe nine feet high.

## Review of the Corn Trade.

[From the Mark-lane Express.]

The weather was tolerably fine during the first three days of last week, of which farmers took advantage to cart grain as fast as possible, and some quantity was carried rather hurriedly. Since then a great fall of rain has taken place, which has put a complete stop to harvest work. This untoward change in the weather is like to do much injury, and the prospects for the future are at present of the most gloomy character. A continuance of wet would be productive of the most disasterous consequences, by far the greater proportion of the grain crops being still in the fields. Under these circumstances it is not to be wondered at that serious apprehensions should be entertained respecting the result of the harvest; indeed it may be regarded as somewhat singular, that the excitement has not been much greater. The last rise in the value of wheat was caused almost entirely by the extensive export demand; and the weather up to this time has had much less influence than it usually exercises at the period of harvest. This is no doubt attributable to the uncertainty felt as to what may be the extent of future supplies. Holders cannot as yet realize the idea of searcity under free trade, hence few are disposed to hold heavy stocks. Our position is altogether novel, and we want the guide of experience. For several consecutive years we have had good average crops, (the wheat of last year's growth was, it is true, of inferior quality,) and the seasons have generally been favorable since 1846; there has, consequently, been no case at all similar to the present, and we are, in a great measure, in the dark as to the working of free trade under the new aspect. Our merchants are deterred by this uncertainty from acting with decision; they are willing to pay the high prices now current in the Baltic and Black Sea ports.—France is, meanwhile, buying wheat wherever it can be obtained; and if our necessities should hereafter force us to import largely, the chances are that we shall have to pay dearly for supplies.

That the produce of Wheat of the United Kingdom will be the smallest gathered for many years does not admit of question. We were strongly of this opinion before the cutting was commenced, and the information which has since reached us from various quarters, has tended to confirm our worst fears. On the best Wheat lands the deficiency will be the most serious; and we know of many instances where the yield will not exceed two or three quarters to the acre, on farms which produced five quarters per acre last year.—We do not wish to be understood to imply that this will prove the case generally; but that the yield per acre will fall materially short in almost all parts of the Kingdon cannot be doubted; independent of which, it must be borne in mind that the breadth of land sown was, owing to the unpropitious weather during the seeding time, at least one-fourth less than usual.

By the latest advices from the *Baltic*, it appears that the weather had become cold and unsettled. Harvest had consequently progressed but slowly; and the ultimate result would, it was estimated, be much less satisfactory than anticipated earlier in the season. Under these circumstances, the continued rise in the British, French, and Belgian markets had told with double effect, and holders had become very extravagant in their demands.

It is yet too early to obtain information of a sufficiently definite character to be of much service in estimating the probable yield of Wheat in Russia, Prussia, &c.; but the weather has been similar on the continent to that experienced here.

"SOLITARY AND ALONE."—The Philadelphia Inquirer says Col. Benton is now seventy-one years old, and adds:—"We saw him the other day on the pavement, near his house in Washington. He is the youngest looking man of seventy we have ever seen; rather fuller in habit and broader than he used to appear. He wears his hat with a knowing expression a little on the left side, walks with a deliberate and measured tread, having something like pride in its seeming — something that bespeaks a consciousness that he is Thomas Hart Benton. He feels his powers, and so does his country, and so will it ever. His mark will be left upon the era of his life. Few men of equal intellectual power and knowledge have appeared on this stage of action."

THE PLAINS.—From the reports of those who have crossed the Plains this season, it appears that not more than 30,000 emigrants are on the way to the Pacific coast, and of these nearly one-half are destined for Oregon. They have encountered many hardships in their long journey; those who are late, must suffer still more. For many days after they left the western frontiers, they were almost deluged with rain—the roads were heavy, and all the streams high. Arriving at Salt Lake they discovered that the Mormons had put up provisions of all kinds to famine prices, and were extorting the most extravagant rates for ferriage across the numerous streams in their territory.

THE COINAGE.—It is shown by a return to Parliament, that, in three months, from the 1st of April to the 30th of June last, the gold coinage made at the Mint amounted to £4,763,826, 3s. 1d., consisting of 4,471,242 sovereigns and 585,167 half sovereigns. The silver coinage in the quarter was £155,100. 1s. 8d., consisting of 1,141,563 florins, 717,763 shillings, 194,304 sixpences, and 15,480 threepences. Of copper coinage the return is *none.—London paper.*

REVOLUTIONARY WIDOWS.—Twenty-four hundred claims have been made upon the department for pensions to the widows of officers and soldiers of the Revolution, who were married subsequent to the year 1800. When the law was enacted it was generally supposed that there would not be more than three hundred claims in all.

# Marriages.

On the 14th inst., by the Rev. J. H. McIlvaine, DANIEL COOPER and SARAH ELOUD, of Rochester. On the same day, by the same, at the Blossom Hotel, LEWIS D. NEWTON and ELIZABETH A. BREWSTER. Also, SILAS G. DEWEY and MARY J. NEWTON, all of Manchester, Ontario co., N. Y.

In this city, on the 15th inst., by Rev. H. Hickok, Mr. W. B. WILLIAMS and Miss MARIETTA T. OSBOND.

At Little Falls, N. Y., on the 12th instant, by Rev. Mr. Morris, Mr. BOWEN H. STONE, of Grand Rapids, Mich. and Miss JANE A. McEWAN, of the former place.

At Manchester, Ontario co., N. Y., on the 11th inst., by Rev. David Bellamy, Mr. AVERY S. DURFEE, of Palmyra, and Miss ALARAN M. OUDERKIRK, of the former place.

### SUFFOLK PIGS.

THE subscribers are prepared to receive orders for pure Suffolk Pigs, bred from stock imported by the late William Stickney in 1848,—also by the subscriber in January last. Address

JOSIAH STICKNEY, Boston or Watertown,
or ISAAC STICKNEY, Boston, Mass.

Boston, August, 1853. 190-13w-1m

# Market Intelligence.

RURAL NEW-YORKER OFFICE,
Rochester, Sept. 21, 1853.

SINCE our last report there has been a decline in prices of Wheat and Flour. This has been produced by the news of a decline in Europe, and the serious break in the Canal east of this city. The break puts a damper upon milling operations.

FLOUR sells to the trade at $5,50@6 for good to extra brands. Dealers evidently anticipate a further decline in foreign markets, in which we think they may be disappointed.

WHEAT is not in much demand, and there is little offering. Prices range from $1,23 to $1,25. We hear of a sale of 6,000 bushels at the latter figure. The break in the canal will affect prices of both wheat and flour for some days.

No material change in other articles.

### Rochester Wholesale Prices.

| | | | |
|---|---|---|---|
| Flour, bbl | $5,50@6,00 | Butter, lb | 17@18 |
| Pork, mess, | 16,00@17,00 | Cheese, | 7@8 |

## NEW YORK MARKET.

NEW YORK, September 20.

Ashes—Market firm for Pearls at $5,75@5,81; $5,50 for Pots.

Flour—Market for Western and State better, and demand more active for export. The decline in freights favors shipments. There is more doing for the home trade and the East. Canadian easier and inquiry moderate—sales at $5,68. Sales of Western Canal 8,000 bls. $6@6,-12½ for State; $6,25 for common to good Ohio; $6,06@6,18 for mixed to fancy Michigan and Indiana.

Grain—Holders of wheat firmer, and demand more general. Sales Canadian at $1,38@1,40; $1,40 for Ohio to arrive; $1,41@1,42 for Michigan; $1,33 for prime red Southern. Genesee firm at $1,50@1,52.

Oats—In fair demand, 45@47c for State and Western.

Barley—Scarce—sales common two-rowed at 78c.

Corn—Easier and arrivals large. Sales 79@80c for unsound; 80@81c for Western mixed; 81c for Southern yellow.

Provisions—A good demand for Pork, $15,91@16 for mess; $12,75@13 for prime, and for large lots these prices are maintained.

Lard firm without change, 11¼@11¾ for fair to prime.

Butter—In good demand and firmer, 18@20c State.

Cheese—Selling freely, 9@9¼c.

## ALBANY MARKET.

ALBANY, Sept. 19.—The foreign advices are unfavorable for Breadstuffs, but the reported extensive breaks in the canal tended in some degree to check the downward tendency of prices which was apparent on the opening of the market. Flour, Wheat and Corn met with a limited demand at reduced prices, while holders of Barley, in view of the canal breaks, evinced much firmness, and towards the close sales to a fair extent were made at the closing prices of last week.

Flour and Meal.—Our market for Western and State Flour opened heavy and closed dull, at a decline of full 12½c. ℔ bbl. on all descriptions. The Eastern demand is quite limited, and the home trade are buying quite sparingly. Some holders of common Western are free sellers at a decline of 25c. ℔ bbl. The market at the close was unsettled and very quiet. The sales of the morning were $6,12@6,25 for common to good State; $6,25@6,50 for mixed to fancy Mich. and Indiana and common to good Ohio. In extra brands but little has been done at the reduced prices. Corn Meal is rather firmer. Sales at $1,62 ℔ 100 lbs.

Grain—For Wheat our market is dull and prices are lower. Prime Genesee afloat is held at $1,41, which is above the views of buyers. Corn rules dull and lower.—Western mixed may be quoted nominal at 80@82c, the extreme views of buyers and sellers. Barley—sales good two-rowed at 76c; mixed at 80c; and four-rowed at 83@83½c for good to prime, and 84c for choice; but the bulk of the sales were made at 83@83½c. Oats are steady and in good request with a small supply—sales at 46@46½c.

Feed—A quiet market. Sales two tons fine middlings at $1,31 ℔ 100 lbs.

## BUFFALO MARKET.

BUFFALO, Sept. 16—The market for all kinds of produce opened very dull this morning, and up to noon there was but little done. There was but a limited inquiry for flour, and the sales of this morning do not exceed 600 bbls at $5,37½@5,50 for choice to fancy brands Ohio and Michigan.

Wheat dull and no sales. Red held at $1,15c; white $1,20.

Corn dull, and the only sale we have to note is 2,600 bu. at 66c.

Oats dull and nominal at 35c.

Rye quiet at 72c.

## NEW YORK CATTLE MARKET.

NEW YORK, Sept. 12.—At Washington Drove Yard—The offerings this day comprised 2,675 Beeves, of which 621 were New York State cattle. Prices ranged from 6@9½c. The cool weather tends to stiffen the market.

At Browning's—At market, 70 Cows and Calves; prices ranged at from $25 to $50, as in quality; all sold.

7,228 Sheep and Lambs, at from $2,50 to 3,75@6; all sold.

At O'Brien's—On sale 30 Beeves and 20 Cows; all sold at $7@9 for the former, and $20@60 for the latter.

At Chamberlain's—250 Beeves, 50 Cows and Calves, and 4,000 Sheep and Lambs offered.

The Beeves sold at from 7@9¼c per lb.

Cows $25 to $35@50. Calves 4½ to 7c. ℔ lb.

Sheep $2,50 3,50, 4,50@6,00. Lambs $1,50 to $3@4.

## ALBANY CATTLE MARKET.

ALBANY, Sept. 19.—W. W. Woolford's, Bulls' Head' Washington street.

Beef Cattle—520 at market. Prices—Extra, $7,00; 1st quality, $6,50; 2d do. 6,00; 3d do, $5.

Cows and Calves—30 in market. Prices from $25@30, 35 to $10.

Sheep and Lambs—864 in market. Prices of Lambs $1,-75, 2. 2,25, 2,50, 2,75@3. Prices of Sheep $2,50, 2,75, 3, 3,25 3,50.

## CAMBRIDGE CATTLE MARKET

CAMBRIDGE, Sept 14.—At market, 2,669 Cattle, about 1,500 Beeves, and 1,169 Stores, consisting of Working Oxen, Cows and Calves, yearlings, 2 and 3 years old.

Prices—Market Beef—Extra sold at $7.50@7,75 pr cwt.; 1st. quality, $6,75@7; 2d do, $6,25@6,50; 3d do, $5,25@6; ordinary, $4,00@5,00.

Hides—$6 per cwt.

Tallow—$7@7.50 per cwt.

Pelts—75c@1,25.

Calf Skins 11c per lb.

Veal Calves—$7, 9@12. 89 at market.

Cows and Calves—$21, 24, 28, 30, 49 to 56.

Stores — Working Oxen—$104, 107, 112, 117, 119@125.

Yearlings—$9, 10@10,50@11.

Two years old—$16, 19, 21, 24, 30@33.

Three years old—$26, 29, 32, 35, 44@59

A large number of Cattle remained unsold at the close.

TIMOTHY SEED—100 Bushels pure reapt Illinois Timothy Seed. 400 do. Canada do. Now on hand and for sale at the Genesee Seed Store, 65 Buffalo st., by

195-2t J. RAPALJE & CO.

### GENESEE VALLEY NURSERIES.

A. FROST & CO., Rochester, N. Y., solicit the attention of amateurs, orchardists, nurserymen, and others about to plant, to their stock of FRUIT TREES, which is the largest and much the finest that they have ever offered, consisting in part of the following:

**Standard Fruit Trees**—of Apple 60 varieties; Pear 75 var.; Cherry 50 var.; Plum 25 var.; Peach 30 var.; Nectarine 6 var.; Apricot 6 var.;—comprising every sort of merit.

**Dwarf Fruit Trees** on the best stocks of Apple, Pear, and Cherry, and of the above large collection of sorts.

**Small Fruits**—Currants 15 varieties, Gooseberries 100 var., Grapes native and foreign 25 var., Raspberries 5 var, Strawberries 20 var., etc.

Deciduous and Evergreen Trees for lawns, parks, streets, etc.

Evergreen and Deciduous Shrubs in great variety, including 400 sorts of the Rose.

Bulbs in variety; Crocus, Crown Imperials, Gladiolus, Hyacinths, Lilies, including the Lancifolium of sorts, Tulips, etc.

Chrysanthemums, the finest new Pompone, or Daisy variety.

Dahlias, the best and highest prize varieties shown in England during 1851-2, including all the best old sorts.

Green House and Bedding Plants, etc., etc., of every description.

**Plants for Hedges**—Buckthorn, Osage Orange, Privet, American Arbor Vitæ, (White Cedar,) Norway Spruce, etc., all of which will be supplied at the lowest rates.

All articles are put up in the most superior manner, so that the plants, etc., may go thousands of miles, and reach their destination in perfect safety.

Parties giving their orders may depend that perfect satisfaction will be given them.

The following Catalogues containing the prices, are published for gratuitous distribution, but as we are obliged to pre-pay the postage if they are mailed, correspondents will please enclose a one cent postage stamp for each catalogue wanted:

No. 1—A deseriptive catalogue of Fruits, Ornamental Trees, Shrubs, Roses, etc.

No. 2—A descriptive catalogue of Dahlias, Verbenas, and other bedding plants, etc., including many new articles which may be introduced up to the time of its publication and is issued every spring.

No. 3—A wholesale catalogue, a trade list just published for the fall of 1853, and spring of 1854, comprising Fruits, Ornamental Trees, such as Evergreens, &c., which are offered in large quantities. 195-2t.

### AGRICULTURAL MACHINES, &c.

Railroad or Endless Chain Horse-Powers, Threshers and Separators,

WARRANTED equal to the best. A large number has been sold, giving the most perfect satisfaction.

PORTABLE CIDER MILLS

for hand or horse-power, the best article for the purpose yet made.

IRON AND WOODEN CORN SHELLERS

from $7 to $12, the best in use.

IRON AND WOODEN SAUSAGE MEAT CUTTERS, AND SAUSAGE STUFFERS,

great labor-saving machines, and such as every family or neighborhood should have.

STRAW AND HAY CUTTERS.

A fresh and large arrival of the best styles and manufacture.

The above for sale by the subscribers and on terms that will make it an object for all who want, to purchase of them. It will cost nothing to call and see if this statement is not correct. Then do so. We can do business on small profits. BRIGGS & BROTHER,

Seed Store and Agricultural Warehouse,
195-3teow 68 State street, Rochester, N. Y.

### Buffalo Agricultural Warehouse and Seed Store.

*Nos. 11 & 13 West Seneca Street, Buffalo.*

HIRAM C. WHITE & CO., successors to Mason & Lovering, wholesale and retail dealers in all kinds of Agricultural Implements and Machines, Field, Garden and Flower Seeds; Fruit and Ornamental Trees, Shrubs and Flowers; Oriental Poultry, &c. Also, Agents for the Boston Belting Company's Vulcanized India Rubber goods, Belting, Hose Packing, &c.

Orders solicited, all of which shall receive prompt attention at lowest market rates, and all articles warranted as represented. HIRAM C. WHITE & CO.

HIRAM C. WHITE. [195tf] AMASA MASON.

### American Botanic Garden & Nurseries.

5,000 STANDARD PEAR TREES, 3 years old, 5 to 7 feet high, mostly Virgalieu and Bartlett. 5,000 do. 2 yrs. old, 3 to 5 feet high, including many other leading varieties. These trees are all healthy and vigorous.

5,000 PEACH, one year from bud, strong and fine.

20,000 BALSAM FIR, 3 years cultivated, very fine.

10,000 AMERICAN ARBOR VITÆ, 2 years cultivated.

The above, and many other articles, are offered at *wholesale at very low prices.* Also a general assortment of FRUIT AND ORNAMENTAL TREES, *Shrubs, Roses, Pæonias, Phloxes, Spireas, Tulips, Hyacinths,* &c., &c., *at retail.* Particular attention is given to the cultivation of HARDY EVERGREENS, for door-yards and for hedges.

Catalogues furnished *gratis.* Orders solicited.

Address DELL & COLLINS.
Waterloo, Seneca Co., N. Y. 193-3t*

### Monroe Academy, Henrietta, N. Y.

THE Fall Term of fifteen weeks will commence on the 12th of Sept. inst. The Rev. H. H. HAFF, formerly Principal of the Darien Centre Seminary, and well known as an able and successful instructor, takes charge of the Institution.

Tuition from three to six dollars per term, according to the age of the pupil and the studies pursued. Board can be had with the family of the Principal at cost, by paying five dollars per term for room rent, use of furniture and oversight of kitchen, &c., or good rooms can be had for students to board themselves at moderate charge. The building is to be thoroughly repaired and refitted. Circulars at SAGE & BROS. Bookstore, Rochester.

J. H. M. C. HASELTINE, *Sec'y.*
East Henrietta, N. Y., Sept., 1853. 193-3t.

### FARM FOR SALE.

ONE HUNDRED ACRES of the VERY BEST kind of farming land are offered for sale, in one of the western counties of this State. The farm lies within 2 miles of an important station on the line of the N. Y. & Erie Railroad, is well watered, under superior cultivation, and is not surpassed for grazing purposes by any equal portion of land in the State. A large portion is bottom land, well adapted to the growth of any kind of farm produce. On the farm are two barns and a very comfortable house, nearly new. The price is $25 per acre, to be paid as follows:—three-fifths down, and the balance in two equal annual installments. This property will double in value within six years. For further particulars address FARMER, Olean, Cattaraugus co., N. Y. 194-3t.

### CHINESE FOWLS.

FOR SALE, a number of pairs of genuine Black Shanghai chickens, strongly marked and embracing all the fine points of Chinese fowls. No one wishing a superior breed of fowls for laying or for the table, will be disappointed by procuring this variety. Also, a few pairs of the celebrated Brahma Pootra stock, in fine condition. Orders received from any part of the country will be promptly executed, and the fowls caged in such a manner that they can be transported safely for any distance.

TERMS:—Black Shanghai, $5 per pair; Brahma Pootra $10 per pair. Address the subscriber at the office of the Genesee Farmer, Rochester, N. Y.

194-4t CHAS. W. SEELYE

### FINE FOWLS.

HAVING raised from select stock, a few broods of buff Cochins and Shanghais, in order to obtain for private use, a small flock known to be pure and genuine, I have for sale about twenty pairs, and at prices that any one can pay, who is able to own half a dozen common fowls. They are broods of April, May, and June—genuine as imported;—being of stock received from the importer, bred immediately from fowls brought from China.

193tf D. ELY, 69 So. Fitzhugh St.,
Sept. 1, 1853. Rochester, N. Y.

### DURHAM BULLS FOR SALE.

A Good Chance for Procuring Fine Stock.

I HAVE seven Short-horn Durham Bulls and Bull Calves of the best stock in Western New York, which I will offer for sale at the Monroe County Fair, to be held at Rush, on the 29th inst., as I do not wish to breed from them, being related to the balance of my stock. I shall compete for premiums, and invite the owners of stock to turn out largely, so that I may have some opposition in that department. D McHARDY.

West Rush, Sept. 12, 1853. 194-2t*

### 1,000 BOOK AGENTS WANTED.

INTELLIGENT AND INDUSTRIOUS MEN WANTed in every part of the United States, to engage in the sale of the best assortment of illustrated

POPULAR AND USEFUL BOOKS

published in the country.

Men of good address, having a small capital of from $25 to $100 can do well by engaging in this business, as the inducements offered are of the most liberal character.

For further particulars, address, (postage paid)

ROBERT SEARS, Publisher,
194-4t 181 William St., New York.

### SYRACUSE NURSERIES, SYRACUSE, N. Y.

THORP, SMITH, HANCHETT & CO., particularly invite the attention of Nurserymen, venders and planters, to their immense stock of Trees of every description, being of unusually fine growth.

**Standard Fruits**—*Apples, Pears, Cherries, Plums, Peaches, &c.,* for orchard planting, vigorous, stocky and well formed.

**Dwarf and Pyramidal Pear Trees** on the best *Angers* or *French Quince stocks,* (embracing every good variety that will work well,) 2 yrs. old, very beautiful, vigorous and well formed.

**Dwarf Cherries** on *Mahaleb stocks,* 1, 2 and 3 yrs. old trees, finely formed and handsome.

**Gooseberries, Currants and Raspberries**—Our stock consists of the choicest varieties, including the new celebrated sorts.

**Grape Vines** of all the hardy sorts, with some FORTY FOREIGN VARIETIES, grown in pots from single eyes.

We would particularly request persons who are desirous of purchasing, to examine the above trees, as they are not only worked on the best stocks that can be procured, and grown in good soil, but they are stout, stocky and vigorous, and mature their wood early in the fall; and as we personally pay the most strict attention to our trees, in every stage of their growth, we feel that no stronger guarantee of accuracy can be given in this respect.

**Ornamental Trees**—such as *Horse Chestnut, Sugar* and *Silver Maples, Elms, Black Walnuts, Silver Abeles, Tulip Trees,* &c.—We have large and fine for street planting.

**Shrubbery**—A splendid collection containting every thing new and rare.

**Roses**—One of the largest collections in the country, including all the novelties. Also the celebrated "AUGUSTA" ROSE, which has given such universal satisfaction the present summer.

**Bulbous Roots**—We are now receiving from Holland, by steamer, a splendid importation of *Bulbous roots,* comprising all the choicest varieties.

**Green House Plants,** *Fuschias, Pompom, Chrysanthemums, Verbenas, Dahlias,* Strawberry and Hedge Plants, &c., &c.

All articles packed in the best manner for transportation to any part of the United States, and all orders strictly complied with in every respect. For further particulars and prices, see Catalogues:

No. 1, A general descriptive Catalogue, combining Nos. 2, 3 and 4 in one volume. No. 2, a general Catalogue of Fruit Trees. No. 3, a new descriptive Catalogue of Ornamental Trees, Shrubs, Roses, Flowering Plants, &c. No. 4, a descriptive Catalogue of Dahlias, Verbenas, Chrysanthemums, Geraniums, Fuschias, bedding out and green house plants. Also a wholesale Nursery trade list.

The above Catalogues will be sent gratis to all applications (post-paid) enclosing for the wholesale list 1 penny stamp—for No. 1, a letter stamp—and Nos. 2, 3 and 4, two penny stamps each.

THORP, SMITH, HANCHETT & CO.
Syracuse, N. Y., Sept. 5, 1853. 193-3t

## N. Y. State Agricultural College.

THIS Institution was chartered by the Legislature of the State of New York, for the purpose of presenting to Agriculturists the means for acquiring a knowledge of the Arts and Sciences appropriate to their vocation; to prepare Students for practical, active labor, by training the mind in a system which shall inculcate an intimate acquaintance with the sciences essential to agricultural success.

To insure the development of principles and their application to the soil, the Legislature has required the purchase of not less than three hundred acres of land.

The Trustees, having accepted the trust confided to them by the Legislature, organized the State Agricultural College, by the following appointments:

JOHN DELAFIELD, President of the College.
Hon. JOHN A. KING, Ch'n of the Board of Trustees.
JOEL W. BACON, Secretary.
N. B. KIDDER, Treasurer.

At a meeting of the Board, on the 4th of June, a Report was presented by B. P. Johnson, from a Special Committee, on the Location of the College, declaring "that after an examination o' the Oaklands Farm in Seneca County, they are entirely satisfied that the price asked for it, is its fair value in the market, for farming purposes; that it is, by previous preparation, by position and variety of soil, in every respect adapted to the objects of the Institution; that the title is perfect, and recommend that the chain of title be entered at large on the minutes of the Board," &c. This farm is situated midway between the market towns of Waterloo and Geneva, and in full view of the Seneca Lake, and overlooking the village of Geneva; elevated about 125 feet above the lake, it is free from causes disturbing health; its soil varies from a strong clay to a sandy loam, presenting varieties sufficient for testing by experiment every doubtful question in relation to soils, and to exhibit the most approved system of cultivation.

The Trustees are prepared to receive from Farmers and friends of agriculture, proposals for the Capital Stock of the Institution, which will be distributed in shares of fifty dollars each, payable

10 per cent on Subscribing.
40 " 1st July.
50 " 1st October.

The Trustees may be addressed (post-paid) at their respective residences, as follows:

Hon. JOHN A. KING, Jamaica, Queens County.
HENRY WAGER, Westernville, Oneida "
B. P. JOHNSON, Agricultural Rooms, Albany.
WM. KELLY, Rhinebeck, Duchess Co.
N. B. KIDDER, Geneva, Ontario Co.
JOEL W. BACON, Waterloo, Seneca Co.
TALLMADGE DELAFIELD, Geneva, Ontario Co.
WM. BUEL, Rochester, Monroe Co.
JOHN DELAFIELD, Oaklands, Seneca Co.

The Officers of the College will endeavor to present subscription books in each County, that the College, so entirely agricultural and peculiarly the Farmer's institution, may find its support widely diffused throughout the State.

The President will, upon application to him, give all needful information in relation to the ordinances, rules and regulations of the College, and the courses of instruction to be pursued.

By order of the Board of Trustees,
JOEL W. BACON, *Secretary.*

☞ PEOPLE'S COLLEGE OF THE STATE OF NEW YORK, INCORPORATED APRIL 12, 1853.—This Institution has been chartered by the Legislature of this State, for the purpose of reducing the expenses of Academic and Collegiate Education, and thereby open the Halls of Science to all classes of society by reducing the cost of tuition, board and clothing, and enabling the student to defray the greater part of the expense in labor.

Provision will be made to educate young men corporeally and mentally for specific purposes, by pursuing full and definite courses of study for each of the pursuits represented in the College—either Agricultural, Mechanical or Professional—and thus graduates will be qualified for entering at once upon the business of their choice.

At a regular meeting of the Trustees named in the Charter, held at Owego, on the 25th day of May, the following appointments were made:

D. C. MCCALLUM, of Owego, President of the Board of Trustees.
A. I. WYNKOOP, of Chemung, Vice President.
TRACY MORGAN, of Binghamton, Treasurer.
HARRISON HOWARD, of Lockport, Secretary and General Agent.

Agents are being commissioned in each county of the State, that the people may have an opportunity to contribute to the capital stock, which is distributed in shares so small that every individual may become interested in an institution which commends itself to the favorable consideration of every intelligent person.

For further information upon the subject, application may be made, post-paid, to the Secretary, who will send a pamphlet containing the act of incorporation and objects of the Institution, and other needful information.

188-tf H HOWARD, Secretary.

The undersigned, having been appointed Agent for Rochester and Monroe county, will be most happy to furnish any new information desired, in reference to the College, to receive stock subscriptions, (the shares are one dollar each,) or to address audiences, on invitation, explaining at length the plans and objects of the People's College, and also as he views the idea of a true education.

Respectfully, G. F. NEEDHAM.

### ATKINS' SELF-RAKING REAPER.

THIS MACHINE is now offered to the public and warranted to be a good Self-Raking Reaper. It is also believed to be a good mower, but not yet having been sufficiently tested in grass (though it soon will be) it is not warranted to be equal to a machine made mainly or wholly to mow.

The raking apparatus is of novel and very simple construction, and not liable to derangement, and every farmer who has seen it in the harvest field, says it performs the raking better than a man can possibly do it.

Price of machines at Chicago, $175, of which, $75 must be paid on giving the order, $50 upon successful trial, and $50 in note payable 1st Dec.

The machines are most thoroughly built and warranted.

☞ Descriptive circulars, with cuts, sent to post-paid applications. [182m3.] J. S. WRIGHT.

"Prairie Farmer" Warehouse, Chicago, June, 1853

MONEY TO LOAN on Bond and Mortgage, on improved farms. L. A. WARD,

# Poetical.

## SONG FOR THINKERS.

BY CHARLES SWAIN.

Take the Spade of Perseverance,
Dig the field of Progress wide;
Every rotten root of faction
Hurry out, and cast aside;
Every stubborn weed of Error
Every seed that hurts the soil;
Tares whose very growth is terror—
Dig them out, whate'er the toil!

Give the stream of Education
Broader channel, bolder force;
Hurl the stones of Persecution
Out, where'er they block its course;
Seek for strength in self-exertion;
Work, and still have faith to wait;
Close the crook to fortune;
Make the road to honor straight.

Men are agents for the Future!
As they work, so ages win
Either harvest of advancement,
Or the product of their sin!
Follow out true Cultivation,
Widen Education's plan;
From the Majesty of Nature
Teach the Majesty of Man!

Take the Spade of Perseveranee;
Dig the field of Progress wide;
Every bar to true Instruction
Carry out and cast aside;
Feed the Plant whose Fruit is Wisdom;
Cleanse from crime the common sod;
So that from the Throne of Heaven
It may bear the glance of Gon.

# Rural Sketch Book.

Written for Moore's Rural New-Yorker.

## FARMER GUINESS AND THE GENII.

### A LEGEND OF OLD IRELAND,

NOT GIVEN IN THE "ROYAL HIBERNIAN TALES."

A GREAT many years ago, when pigs were swine, and the Evil Genii held communication with mortals on earth, there lived in the north of Ireland a good-natured, industrious farmer by the name of Guiness. His farm, consisting of a few acres of land, was not in the best possible condition for tillage, one portion being dry and barren, another wet and marshy, while the whole was almost entirely destitute of an enclosure. Still farmer Guiness entered upon his agricultural life with commendable industry, not doubting that with perseverance he would be able to bring his farm under a tolerable state of cultivation.

Now the neighbors of farmer Guiness, who also owned a like quantity of land, chose rather to idle away their time at the ale-house, than in the laudable endeavor of improving their estates. Yet, when they saw that their neighbor's farm produced crops far superior to their own, they began to feel envious, and made complaint to the Chief of the Evil Genii, their master. The Chief was well aware that farmer Guiness said prayers regularly to all the Saints, and was a devout worshipper of his old enemy, St. Patrick, in particular,—and he knew that unless he could make the crops of the farmer decrease to an equality with those of his own servants, he might lose their allegiance. So the Chief called together the evil genius of the woods, the evil genius of the swamps, and the evil genius of the mountains, and desired that some plan might be devised by which the crops of the farmer might be greatly decreased. Then the evil genius of the woods proposed a scheme for injurying the farmer, to which the others assented, and went their way.

Now, at this time there were very few fences in Ireland, and it was customary for every person to protect his cattle from wild beasts, by shutting them into a covered enclosure at night, and allowing them to run at large during the day. Such a state of things required that those fields devoted to cultivation should be constantly watched, lest the cattle, pigs, and donkeys should run over the fields and destroy the crops. Accordingly farmer Guiness had made a neat pathway around his fields, in which his children were daily to be seen walking back and forth, for the purpose of watching the grounds and protecting them from the cattle and other animals that ranged the commons.

When the convocation of genii had broken up, and the evil genius of the woods had received his commands from the Chief, he prepared immediately to execute them.—Having plucked up a large quantity of black thorns by the roots, he carried them from the forest, and transplanted them in the paths that surrounded the grounds of farmer Guiness. By this means he hoped it would be impossible to protect the cultivated fields from depredations, inasmuch as it would be exceedingly difficult for any one, much less children, to walk in these paths.

On the same night on which this convocation of evil genii had been held, the holy St. Patrick was informed of the injury that was projected against the farmer, and he determined to protect his faithful servant. So he sent a fairy to the farmer with a beautiful ring of very curious workmanship. And the fairy put the ring upon the little-finger of the farmer, and informed him of its virtues. "Whenever an evil is meditated against your estate," said the fairy, "you have only to press your finger on this ring, and that which was intended for a curse will become a great blessing."

When, therefore, on the next morning, the farmer went forth to his daily labor, and saw the thorns in the path, he guessed that it was the work of an evil genius, and he bethought himself of the ring. Pressing the talisman on his finger, he commenced praying:—"O, St. Patrick, let it so happen that whenever a path of thorns shall be placed around a field, it may prove a blessing instead of a curse."

Scarcely had he uttered these words when St. Patrick himself appeared before him, holding in one hand a sun-glass, and in the other a watering-pot. And as soon as the Saint concentrated the rays of the sun upon the thorns, and sprinkled water upon them, they took root and began to grow; and they increased in size so rapidly that in a few hours they were changed into a beautiful hedge. Then the farmer saw that this hedge would be of great value to him, and that it would of itself protect his farm from the depredations of the cattle, while his children could be otherwise employed in cultivating the lands. So that at the end of the year, it was found that the crops of the farmer were increased instead of being diminished.

Now, when the Chief saw that the evil that had been projected against the farmer had proved a blessing instead of a curse, he called together the genius, in order that another plan might be devised for injuring his crops. At this convocation the evil genius of the swamp promised to take the matter in hand, whereupon the Chief and the other genii went their way.

Then the evil genii of the swamp went to the grounds of farmer Guiness, and dug several long trenches across his fields, which immediately became filled with water, and into these trenches he put frogs, lizards, and other reptiles. Moreover he made large piles of stones near these trenches, and conveyed serpents to them, hoping by these means to prevent the farmer from cultivating at least one-half of his estate.

When farmer Guiness arose in the morning and saw these trenches, and these piles of stones across his fields, he again conjectured that it was the work of an enemy. And having bethought himself of his ring, he pressed it upon his finger and said:—"O, St. Patrick, let it so happen that whenever ditches shall be dug through wet and marshy fields, it shall prove a blessing instead of a curse."

Then St. Patrick again appeared, holding a large shillalah in one hand, and a shovel in the other. And he threw the stones into the ditches, and having covered them with earth, the wet land became dry, so that at the close of the next year the lands of farmer Guiness produced crops very much larger than they had during the year preceding. And as for the toads, lizards and serpents, the holy Saint drove them out of the country, and cast them into the depths of the sea, and they have never ventured to show themselves in the Island to the present day. It is reported that the father of these reptiles, known as the "Sea Serpent," is occasionally seen to raise his head above the waters of the Irish coast, entreating St. Patrick to be permitted to return to the Island. But the Saint gives him a blow with his shillalah that drives him far away towards the American shores.

Again the Chief saw that his project for injuring the crops of farmer Guiness had proved ineffective, and he called another convocation of the evil genii. At this meeting the evil genius of the mountains agreed to execute a plan that could not fail greatly to injure the crops of the farmer. So after the convocation was ended, the evil genius of the mountains went to the giants of the Island, who were his servants, and ordered them to carry a vast number of rocks from the mountains, and place them on the grounds of the farmer, and thus entirely cover a large part of his possessions.

But when, on the following morning, the farmer saw what had been done to his land, he again pressed his finger upon his ring, and said:—"O, St. Patrick, let it so happen that whenever such rocks as these shall be placed upon such fields, it may prove a blessing instead of a curse." Now the rocks were a species of gypsum, and the land was dry and barren. And St. Patrick heard the farmer's prayer, and immediately appeared with a huge sledge-hammer and broke up the rocks, so that they crumbled like salt. And when these rocks were dissolved, and scattered over the land, the barren places became productive, insomuch that at the end of the third year the crops of farmer Guiness were the largest of all the farmers on the Island.

And as for the giants, who thought to do so much mischief to the farmer, the Saint ordered them to quit the country forever. So the giants took a vast quantity of rocks and craigs from the mountains and carried them three leagues into the sea, and attempted to build for themselves a castle.—And they thought to outwit the Saint by leaving an Isthmus connecting with the Island, on which they might return when his ire should be assuaged. But St. Patrick, knowing their design, destroyed a portion of their Isthmus by a storm, and the ruins are known as the "Giant's Causeway" to the present time; and the Island, in commemoration of the wrath of St. Patrick, is called IRE-LAND.

Farmer Guiness prospered, and became one of the greatest farmers in the whole Island. And it has so happened that since the days of farmer Guiness, that agriculturists, not only in Ireland but of the whole world, have found the following phenomena to be verified, viz:—"*A hedge of thorns around a farm—ditches through wet and marshy lands—and a certain kind of dissolved rock scattered over a barren soil—each do prove a great blessing instead of a curse, to all farmers.*"

## MOUNT VERNON.

WHEN Washington died, Mount Vernon was a beautiful spot. The house—the lawn sloping down to the river—the gardens—the roads—the gateways—the old trees—everything indicated care and taste. For years afterwards when visitors came there, they were shown the chair in which he used to sit and the marble mantle-piece and the key to the Bastile, sent to him from France by Lafayette—and a hundred other relics, preserved with jealous care by the family. And until recently they found there a grey haired negro, a faithful and attached servant of Washington, who kept the key to the enclosure where his master's tomb was situated. It was his greatest pride and pleasure to talk by the hour of "Massa Washington," and to relate the incidents of his life and death. Then he would take you down to the vault itself, on whose steps he had so long sat sentinel, and as he approached, his voice would sink to a reverential whisper.

There was an air of quiet neatness everywhere. The tolling of some passing steamboat bell was the only sound that broke the solemn stillness. There was something everywhere to remind you of the respect due to the grave where Washington lay buried.

Go to Mount Vernon now. After toiling up the long, sandy road from Alexandria, you come to the shady entrance. There was a gate once, but it has fallen down, and you drive over it. The lodge that stands near it is dilapidated and empty. The avenue to the house is overgrown with grass and weeds. A crumbling brick wall on one side shuts off the neglected flower garden. The house looks old and decaying. One of the posts of the veranda has fallen out, and the roof is cracked and bent, over it. Moss grows on the door step. There is no guide to show you on the way, but there is a low range of hovels on one side, from which two or three ragged negro boys run out, to offer you a hickory stick, as a relic of Mount Vernon—for a sixpence. You follow a winding footpath down towards the river side. An unsightly red brick structure stands before you. It is long since it was painted, and the masonry is decaying and broken. You trample down the long grass to get up to it, and look through the rusty grating. Inside there is a plain marble slab, covered with dust and discolored with mildew. On it you may read the carved inscription that time and exposure may leave legible:

GEORGE WASHINGTON.

And that is the grave of the first in the hearts of his countrymen!

We do not wish to be understood as desiring to blame the present owner of the estate—Mr. John A. Washington. Not rich, surrounded by needy dependents, and subjected to a constant stream of visitors, who certainly have no claim to his hospitality, whatever title they may fancy they have to look at his grounds—it would be impossible for any one to keep the extensive estate in suitable order, or even in repair. The fault is not his, but ours, who ought to have made Mount Vernon a National Monument, owned and kept by the government, and open to every American citizen.

The State of New York has set an example for Congress, in its purchase and presentation of the old head-quarters at Newburgh. Who is there of us that does not take a just pride in that expenditure?

It is said that Mr. Washington, being no longer able to maintain Mount Vernon, has sold it to a company, with the reservation that Congress shall first have an opportunity of buying it if they will. We know nothing of the company. They maybe patriotic men, who have determined to take upon themselves the duty that Congress has neglected; or they may be a set of speculators, who intend to make it a show and place of amusement for their own profit. But in either case, Congress should avail itself of the opportunity now offered. Washington's home and his grave should pass only from the guardianship of his family to that of his country.—*Alb. Eve. Journal.*

IN all evils which admit a remedy, impatience should be avoided, because it wastes that time and attention in complaints, which if properly applied, might remove the cause.

# Wit and Humor.

## WE ALL HAD TO DO IT.

A HALF score of young urchins were gathering around a companion whose pallid face indicated that he was very sick, the result of some juvenile indiscretion. The little fellows were busy offering their sympathy in various homely phrases. The truth is he had taken a chew of tobacco for the first time in his life, and having swallowed a portion of the weed, grew deadly sick. One little fellow, who seemed to understand more fully his companion's situation, than any of the others, gently placed on the sick boy's shoulder his hand, and said in a voice of deep condolence:

"Never mind, Jimmy, *we all had to go through this very severe trial.*"

POOR DELIVERY.—A waggish fellow, somewhat troubled with an impediment in his speech, whose quibs and quibbles have been relished by many of us, while one day sitting at a public table, had occasion to use a pepper-box. After shaking it with all due vehemence, and turning it in various ways, he found that the crushed peppercorns were in nowise inclined to come forth. "T-t-th-this p-pe-pepper-box," he exclaimed with a facetious grin, "is so-some-something li-like myself." "Why so?" interogated a neighbor. "P-poo-poor delivery," was the reply.

DOWN ON HIM.—A dandy, not very remarkable for the acuteness of his feelings or his wit, wishing to banter a testy old gentleman, who had lately garnished his mouth with a complete set of false teeth, flippantly inquired—

"Well, my good sir, I have often heard you complain of your teeth; pray when do you expect to be again troubled with the tooth-ache?"

"When you have an affection of the heart or a brain fever!" was the reply.

PUBLIC-SPIRITED YOUTH.—The other day a small boy came tearing round a corner with his rags fluttering in the wind, his face smeared with molasses and a shingle flourishing in his hand, while he was shouting to another boy, about the size of a pepper box, who stood near a quarter of a mile down the street:—"Oh, Bill, Bill! git as many boys as *ever* you can, and as many shingles as *ever* you can, and hurry down here as fast as *ever* you can, for there's a great big, large hogsit of 'lasses busted on the pavement—busted all to smash."

LOVE.—The best thing to resist vice with is love. The man who worships a virtuous woman, is as impregnable to the allurements of a wanton as Gibralter is to apple-dumplings.

# Youth's Corner.

"Attempt the end, and never stand to doubt;
Nothing's so hard, but search will find it out."

For the Rural New-Yorker.

## MISCELLANEOUS ENIGMA.

I am composed of 25 letters.
My 2, 16, 12, 18 we cannot do without.
My 7, 3, 19, 16, 4, 9 is the name of a river in the State of New York.
My 10, 3, 11, 24, 23, 7, 22 is an ancient disease.
My 15, 23, 5, 19 whiskey is chiefly made of.
My 6, 9, 8, 3, 7 is a county in New York.
My 11, 10, 23, 21 is a valuable farming tool.
My 13, 23, 4, 25 is a defence against thieves.
My 16, 22, 20 almost every person has.
My 1, 14, 8, 13, 20, 24 should be avoided.
My 19, 23, 17, 2 was a great sea captain.
My 9, 10, 13 like the New-Yorker.
My whole is quite attractive.

Waterloo, N. Y. H. S.

For the Rural New-Yorker.

## CHARADE.

My *first* may be seen on many a farm,
Giving protection and guarding from harm;
My *second* you use when you journey or visit—
But when you return be sure you don't miss it;
My *third* oft enjoys the farmer's kind care,
Without it my first would hardly be there.
My whole may be bought in the marts of brisk trade,
Would you like to purchase? or are you afraid—
Or, perhaps 'tis nearer the truth to declare,
You can't well afford the money to spare.

South Butler, N. Y., 1853. ALONZO.

☞ Answer next week.

## AN EXPLANATION.

MR. RURAL:—If Alonzo will be so kind as to correct a typographical error in the first word of the Enigma in No. 32, and read, "*In triumph* I've headed a veteran band,"—instead of "*I triumph*," &c.,—he will find more *truth*, if not more *poetry* in it. He will also observe that the *cross* little fellow *has* headed, (at least in *triumph*,) a band of fellows who have grown old in service, and have with their bold captain taken part in many a *battle*. I have not said, in my first or my last, that without the little fellow "time cannot exist."

So you've found him at last, and put him in *pot*,
And told what he can do, and what he can *not*;
But with all your witty, poetical freaks,
You never can find Mr. T in *four weeks*.

Williamsville, Sept., 1853. TOMAS WITMER.

## ANSWER TO ENIGMA, &c., IN NO. 38.

Answer to Miscellaneous Enigma—*Parkers Aids to English Composition.*

**Ornamental and Domestic Poultry.**

THE subscriber having invested a large amount in this business, is now prepared to fill any orders which he may receive. The celebrated Brahma, Sumatra, Game, Palmer, Marsh and White Shanghais, with many other popular varieties, are from the yard of C. C. Plaisted, Esq., Great Falls, N. H., and of course cannot be surpassed in the world. My Imperial Cochin China Fowls are from Col. B. P. Johnson, his stock imported last year, '52, from the best breeders in England. All who well know Col. J., will understand that he has the best or none. My black Spanish are quite late, and will not be ready for market before next spring. They are from Mr. John Giles, late imported, the best blood in the country. These birds are so fast coming into repute that the price will doubtless run high for some years to come, as will also be the case with the Brahma, Sumatra, Game, &c. All persons purchasing fowls from me, can enjoy the benefit of my advertising, in case they wish to sell Chickens next year.

I am quite sure that our southern and western fanciers can be better suited here than farther east, as the long distance on railroad much injures the health and growth of the fowls.

As there are many fowls in market which have no claim upon the public favor, I will give my patrons something more tangible than my own words, for

"If self the wavering balance shake,
It's rarely right adjusted."

I am therefore permitted to refer all who entertain any scepticism, to the following gentlemen:—Col. B. P. Johnson, Secretary N. Y. State Agricultural Society, Albany, N. Y.; Hon. Ambrose Stevens, N. Y. City; Hon. Lewis F. Allen, Black Rock, N. Y.

Address O. B. EVANS, 214 Main street,
194-3m Buffalo, N. Y., Box 1662.

**CIRCULAR.**

WE have just published, and would respectfully invite the attention of the trade to

**DANIEL WEBSTER'S LIFE, EULOGY, AND FOUR GREAT ORATIONS.**

This volume is printed in the best style of typographical art, on a superior quality of paper. It contains one hundred and eighty-four pages, and is illustrated with the most accurate and splendid Steel Portrait of Mr. Webster extant. The Life is from the accomplished pen of LOUIS GAYLORD CLARK, the able and popular editor of the Knickerbocker Magazine. The Eulogy is by an eloquent and appreciating American writer. The four great Orations comprise the most eloquent and popular of Mr. Webster's intellectual efforts, viz:

Adams and Jefferson, Bunker Hill Monument, First Settlement of New England, and Reply to Hayne.

The work is duly entered according to Act of Congress, and is stereotyped in the best manner. It is an authorized edition, and sanctioned by Mr. Webster's family and executors.

TERMS:—Paper bound—For 100 copies, 35 cents; 1,000 copies, 30 cts.; retail, 50 cts. Muslin bound—for 100 copies 50 cts.; 1,000 do., 45 cts.; retail, 75 cts.

Liberal terms of exchange. Address all orders to
WIBUR M. HAYWARD & CO.,
Publishers, Rochester, N. Y.

CHAS. ASHLEY, Ogdensburg.
D. LANDRETH, Philadelphia. 188-8tw1m

SPRINGFIELD, Ohio, May 1, 1852.

MR. W. O. HICKOK: *Dear Sir*,—I purchased one of your improved cider mills at the State Fair at Lancaster, Pa., last year. Since then I have tested it effectually, and must say it surpasses any machine, for the purpose it is intended for, that I have ever seen, and I have examined a good many, before purchasing and since. Its construction being simple, it never gets out of order. It surpasses my most sanguine expectation. Could I not procure another one, I would not part with mine for four times the price of them, as I know its value.

Yours truly, CHAS. M. CLARK.

**FOR SALE.**

A VALUABLE FARM OF 163 ACRES, four miles North-west of Weedsport, (a good market, on Erie Canal,) and 3½ miles from the Syracuse and Rochester direct Railroad. The said Farm has 140 acres improved, and in a good state of cultivation, and is well situated for two farms if desirable, as there are two houses, two barns, two orchards of a good variety of fruit, and a fine timbered lot on each end of the farm. Fifty acres is seeded to Clover and Timothy, and 30 acres is intended for wheat this fall. For further particulars, inquire of, or apply to the subscriber on the premises.

N. B.—Purchasers wishing only a hundred, or fifty acres can be accommodated. JACOB EAKER.

Conquest, Cayuga Co., N. Y., Aug. 5, 1853. 193-3t*

**SUFFOLK PIGS FOR SALE.**

TWENTY PAIRS of pure bred SUFFOLK PIGS for sale by the subscriber. Also Breeding Sows. They can be safely forwarded by Railroad, Express, &c., to almost any part of the country. C. J. HOLDEN,

June, 1853. [186m3] Walpole, N. H.

**MOORE'S RURAL NEW-YORKER:**

A WEEKLY HOME JOURNAL,

**For both Country and Town Residents.**

PUBLICATION OFFICE,
BURNS' BLOCK, CORNER STATE AND BUFFALO STS.,
ROCHESTER, N. Y.

**TERMS, IN ADVANCE:**

TWO DOLLARS A YEAR—$1 for six months. To Clubs and Agents as follows:—Three Copies one year, for $5; Six Copies (and one to Agent or getter up of club,) for $10; Ten Copies (and one to Agent,) for $15; Twenty Copies for $25, and any additional number, directed to individuals at the same rate. Six months subscriptions in proportion.

☞ Subscription money, properly enclosed, may be sent by mail at the risk of the Publisher.

**Terms of Advertising**

ONE DOLLAR per square (ten lines—100 words, or less,) for each insertion,—*in advance*. ☞ The circulation of the NEW-YORKER is much larger than that of any other newspaper published in the State, out of New York city. Only a limited space, however, is devoted to advertisements, and hence preference is given to those most appropriate—such as the cards and notices of dealers in Agricultural Implements and Machinery,—Horticulturists and Seedsmen,—Booksellers and Publishers,—Inventors, etc. All orders by mail should be accompanied with the cash.

To enable us to accommodate as many as possible, brief advertisements are preferred. Patent medicines, &c., will not be advertised in this paper on any terms.

☞ All communications, and business letters, should be addressed to D. D. T. MOORE, Rochester, N. Y.

**THE WOOL GROWER AND STOCK REGISTER.**

THIS is the only American Journal primarily devoted to the interest of Wool and Stock Growers, and should be in the hands of *every owner of Domestic Animals*. It is ably conducted, published in the best style, and finely illustrated. Each number contains a careful Review of the WOOL and CATTLE MARKETS, and much other *useful* and *reliable* information which can be obtained from no other source. The Fifth Volume commences with July, 1853.

TERMS:—FIFTY CENTS A YEAR; Five Copies for $2; Eight for $3; Eleven for $4. Back volumes, bound in paper, at 40 cts. each,—unbound at 35 cts., or three for $1.

Published monthly, in octavo form. Specimen numbers sent free. Money, properly enclosed, at our risk.

Address D. D. T. MOORE, Rochester, N. Y.

# MOORE'S RURAL NEW-YORKER.

VOLUME IV. NO. 40. ROCHESTER, N. Y.—SATURDAY, OCTOBER 1, 1853. WHOLE NO. 196.

MOORE'S RURAL NEW-YORKER:
A QUARTO WEEKLY
Agricultural, Literary and Family Newspaper.

CONDUCTED BY D. D. T. MOORE,
WITH AN ABLE CORPS OF ASSISTANT EDITORS.

THE RURAL NEW-YORKER is designed to be unique and beautiful in appearance, and unsurpassed in Value, Purity and Variety of Contents. Its conductors earnestly labor to make it a Reliable Guide on the important Practical Subjects connected with the business of those whose interests it advocates. It embraces more Agricultural, Horticultural, Scientific, Mechanical, Literary and News Matter—interspersed with many appropriate and handsome engravings—than any other paper published in this Country.

## Rural New-Yorker.

### Progress and Improvement.

### HINTS FOR THE MONTH.

BURLY, good natured, cozy old October, with his frosted beard, smiling face and seedy, russet coat, has crossed our fields and forests, gardens and orchards, and where he goes he always leaves his mark.—He has even poked his nose into our domiciles, and is now fairly seated by the fireside. Well, old fellow, take an apple and a drink of new cider and spin us a yarn.

"October (said he,) of all the months in the year, is *the* month, *par excellence;* 'tis my natal jubilee. The unchangeable, eternal, pulling green, is now taking all the vivid hues of the rainbow—the golden, the purple and the brown are blending into mellow shades, to relieve the sameness of youthful, skylarking summer. The lusty yellow corn gleams forth its manly face, and the grateful, healthy apple droops his loaded boughs to the gatherer—while the luscious, bursting grape, drops wine and gladness.—The rolling, many-hued clouds, driven by the frost-purified winds, add health and strength and light and shade. The fires are made to blaze, that warms and melts the affections of congregated friends at the evening fireside. The truths and reasons and speculations of the great minds of literature, or even of the RURAL, are more welcome, when studied before the healthful glow of the genial fireside, than in the enervating heats of insect-loaded, scorching summer. So hand us a pipe and let us hear what the Prompter says."

Are the wheat fields properly drained?—Are all the furrows opened? Have you looked to them since the rain; for water is a great judge of grades and levels—it can't be cheated nor coaxed out of its straightforward way. Don't begrudge a few hours, or even days labor with the shovel, for on this hang the laws and the profits of growing wheat, which, at the present and prospective prices, is an item worth looking after.

Look to well digging and cleaning (and even *well doing* if you have the grace,) before the next great rains put the ability to do beyond your reach,—for good water is getting at a premium and whiskey at a discount, about these days.

Fattening hogs should now be in good, warm, dry pens; every night they are out, exposed to the cold, consumes a pound of fat, to keep up the heat of the animal system. Corn not being yet husked, nor potatoes dug, keep them along with boiled pumpkins and windfall and uncultivated apples, and a little mill stuffs.

Cut up the Indian corn as soon as may be. It will cure perfectly in the shock and greatly improve the foddering, if done before it is frosted.

Early and other varieties of potatoes, that are not growing, should now be dug, and if presenting any appearance of the rot, be immediately dried and secured. The most diseased tubers may be safely fed when boiled. The virus of the plague, yellow fever and small pox is destroyed at the heat of 212°, the boiling point. The poison of the rattlesnake and all other animals, as well as of many vegetables, becomes harmless when subjected to that degree of heat.

Apples should be gathered in all of this month, or before heavy frosts. Those designed to keep beyond February must be hand-picked, and carefully at that, and dried two or three weeks on protected floors. It is useless to think of preserving fruit till the spring months, if after hand-picking they are pitched head and heels into barrels or bins. Imagine them eggs and handle them as such and you will do the thing right. Apples keep better in good tight barrels and deposited in cool dry cellars, than in any other situation.

See what arrangements can be made for stabling your milch cows, as it is of just as much importance as it is to your horses, and will pay well in the quantity of manure saved—in milk and honey—cream and butter for slap-jacks.

Take an interest in, and look well after the school library and encourage the young brood to read and understand. Study the RURAL and other kindred works, and let the Hunkers and Barnburners, Hards and Softs, Woolleys and Silver Greys, skin their own coons, for there is but little principle among any of them. It is only a scramble for the loaves and fishes, which is a polite *fixin* for Johnny-cake and suckers. Go to election next month and vote for the enlargement of the canal and human liberty, and eschew demagogues, party ralllers, pretenders and *rummies*. PROMPTER.

### PLOWS AND PLOWING.

WHAT are the mechanical effects required in the operation of plowing the soil? Are they generally understood and philosophically followed? Are the plows now in use so constructed as to meet all the requirements of properly tilling and preparing the soil for producing the various crops, at the maximum rate of their ability?

The mechanical effect of plowing, is the bringing up a new portion of soil, mixing, abrading and pulverizing all its particles; and not the simple operation of turning over and over without breaking or disturbing the furrow slice. In first plowings, for subduing sward land, the furrow should be turned over without disturbance, but often and in all other cases, the great desideratum is, the dividing and comminution of its constituent parts, not only for the benefit of the roots of the future plant, but to admit air and moisture in intimate division to each particle and atom of the soil, to carry on the mysterious chemistry of nature in the decomposition of its mineral elements, for the sustenance and growth of vegetable life.

If a soil, particularly when mineral or vegetable manures are used, could be put through a grinding process like a bark mill, thoroughly dividing and mixing all its parts, the result would astonish all expectations. The process called *spade husbandry* has been extensively introduced on some estates in England, by setting apart and erecting cottages on lots of from two to ten acres, on the condition that the land should be cultivated entirely by the spade, so far as the preparing of the soil was concerned, and the result would shame the productions of many a hundred acre farm in this country, and is entirely attributable to the depth worked and perfect pulverization.

The most perfect realization of preparing the soil was attained by an instrument moved on wheels, having in the rear a revolving cylinder fitted with hooked teeth, not unlike the ordinary pick in shape, which was made to revolve with great power and velocity as the machine moved along, tearing up the earth and pitching it several feet in the rear. It performed the work to perfection, but was found to be impracticable from the great power required; nothing short of a locomotive was equal to meeting the resistance for any length of time.

It is self-evident, that lumps of earth and manure huddled into juxtaposition, are not in a proper state to supply food to the fine and almost invisible fibres and spongioles of the young plant. Nothing but the infinite divisibility of the earth of the seed bed, will cause it to produce its maximum effects.

The form of the plow has an important influence on the proper tillage of land; and except for green sward, our plows are generally too long and too slim and tapering, taking up the earth too carefully and turning it over without mixing or pulverizing.—Plows for stubble and cross plowing, should have a fuller breast in the mould board—be more stunt in common parlance, so as to push the earth more before it, and crush and divide its particles. It would not produce the required operation of plowing to take up carefully a shovel full of earth and carefully turn it over and then back again, if done a thousand times,—and such is the effect, in a measure, of cross plowing with the long tapering and pointed green sward plow. Different plows are required for different soils and periods of plowing.

In many soils, especially those that are not naturally friable, heavy rollers and clod crushers have a very beneficial effect in pulverizing the lumps and particles that neither the plow or harrow can effect, but rollers must not be used when the particles are sufficiently wet to pack and adhere. Every farmer subscribes to the importance of mellowing, by frequent plowings, the fields he intends to cultivate, and that process which will do it best is a subject worth close scrutiny and observation.

### CHIDHAM WHEAT.

THIS is an English variety of choice white wheat. It was introduced from that country the past season by the Sec'y of the N. Y. State Ag. Society, B. P. JOHNSON, Esq., and by him distributed for trial. In acknowledging the reception of the seed from England, in the Journal of the Society for April, 1852, Mr. JOHNSON says:

"It was exhibited from the Royal Farm, Windsor, by His Royal Highness, Prince ALBERT, and was one of the best English varieties: weighed 66½ lbs. per bushel. The following is an extract from a letter written by the gentleman who raised the wheat:—'I have forwarded two bushels of the best Chidham wheat I have left, the same as sent to Gen. WEYMES, for His Royal Highness, Prince ALBERT, at seed time. You may be certain it is the same description as that shown at the Crystal Palace. I have sown no other sort of wheat for the last thirty years, and have grown it several times *from one grain*, that it might be true.'"

It was a very fine sample of wheat, much resembling the finest of the Soule's variety. Through the kindness of Mr. JOHNSON, I received a sample of this wheat, but owing to delay on the way, it came so late to hand that it was quite the first of October that it was put into the ground. It came up quickly, and made a fair growth before the setting in of winter. The soil, a light sandy loam, and unmanured. In spring a dressing of gypsum and ashes was given it. It came forward, and was ready for harvesting nearly as soon as my Soule's and Flint varieties, sown a few days earlier on similar soil, with same cultivation and the same application of plaster. Compared with them the odds were in favor of the Chidham, as the heads of the latter would average about one-third more in length, whilst they were fully as well filled with as plump and as good a quality of wheat as the Soule's. The straw was bright, and not at all affected with rust, and possessed more of the qualities of the Flint straw, and like it with white chaff bald heads. Both the Flint and Soule's were slightly rusted, but not enough to shrink the berry.

Whether on trial it will prove superior to our choice varieties that are already well tested, remains to be seen. If it shall prove equal to them, it will be a valuable addition; and the object of the writer in this article, is to notice it, and call out responses from those who have tried it the past season, and thus compare notes. It is by knowing the result of many trials under different circumstances, in different soils, and in different localities, that a correct judgment may be formed, and if it is not a valuable variety, the unwary may hereafter be saved from being "sold" by the designing. Nor will one year's testing with so small quantities decide the value of it either. Another season will give better data. T. E. W.

ROMNEY MARSH BUCK.

THIS breed of sheep, according to SPOONER and other authorities, has from time immemorial been found on the southern coast of Kent, denominated the Romney Marsh. This marsh is nearly on a level with the sea, from which it was reclaimed many centuries ago, and from its encroachment is preserved by means of dikes similar to the land of Holland. It extends fourteen miles in length, and ten in its greatest breadth, and, for the most part, consists of a rich clay soil, well adapted for the production of a large breed of sheep. And, consequently, we find they are more numerous than on any other space of land of equal extent—it being not uncommon for seven young sheep, and as many fattening wethers to be placed on an acre.

The native breed of this district were large, coarse animals, though somewhat smaller than the old Lincoln. They had long, coarse, thick heads and limbs, narrow chests, and flat sides, but with large bellies. They fatted slowly, not being fit for the butcher till three years old; at which age the wethers averaged from 35 to 40 lbs. per quarter and yielded much internal fat. Their fleeces averaged from 6 to 7 lbs. Their wool is long and not fine. They have much hardihood: they bear their cold and exposed situation well and they require no artificial food during the hardest winter, except a little hay.

For the most part they have been extensively crossed with the New Leicester, and have, in consequence, been greatly improved in form. With less bulk, they have an earlier maturity, and greater disposition to fatten.

### CLOSE BREEDING.

MR. EDITOR:—Your correspondent has replied to my suggestions on the subject of "breeding in-and-in," making as good an argument, I grant, as the subject will allow. Still I am not convinced of error. Were I to answer in the affirmative, the questions there proposed, it would not avail to establish his position. Aware that the general sentiment was adverse to the practice of breeding from near relatives, and considering this opinion as based in error,—as subjecting the farmer to inconvenience, and as not tending to beneficial results,—I submitted the suggestions alluded to above; the sole object being, to correct an erroneous sentiment, and to promote the interest and convenience of the producers of stock. I still wish to enforce the views there presented, and beg therefore, to recommend them to the sober second thought of those interested in the subject. There is no subject in the science of farming, on which it is more important to have correct notions, than the one under consideration.

As no sound, philosophical reason can be assigned, why "breeding in-and-in" should tend to injurious results, the question must, of course, be finally decided by reference to facts.

Now I maintain, that where depreciation has resulted in breeding from near relatives, it has not been owing to the consanguinity of the parties, but has resulted from other causes; and that precisely the same results would have been realized, had not the parties been related at all. The failure of improvement has been owing to some constitutional tendencies, some imperfection, some defect, in one or both of the parties, and not to their relationship. Generally, if not invariably, where failure has occurred, it has been the result of careless breeding: of unsuitable, injudicious blending of parties. No disappointment has resulted from this practice, in the experience of such intelligent, skillful breeders as Bakewell, Colling, and others of this class. Where should we have found the unrivaled families of the Duchess and Princess breed of Short-horns, but in this connection? Now, one such fact is worth a thousand adverse theories.

The celebrated Mr. Fergusson, of Canada, it is urged, sent "Halton" to this State, to avoid the penalty of breeding in-and-in. Be it so. Did Mr. F. ever suffer from this practice? By no means. He took for granted the correctness of the general opinion, and acted accordingly; not testing that opinion by actual experiment.

Your correspondent adds,—"Youatt says, breeding in-and-in has many advantages, to a certain extent. It may be pursued till the excellent form and quality of the breed is developed and established. It was the source whence sprung the cattle and sheep of Bakewell, and the superior cattle of Colling." Indeed! How can this be possible, if the necessary, certain tendency of the practice is to deterioration and decay?—But Youatt adds, "To this source also, is to be traced the impaired constitution, and diminished value of the Leicester sheep and cattle." And why? Because of careless, negligent, unskillful breeding; and not because of consanguinity.

"Blacklock, Dickinson, and Morrell, each testify to the depreciation, and comparative worthlessness of flocks of sheep, throughout the length and breadth of the land, arising from this cause." Suppose I add, this result has arisen among heedless, negligent farmers, "throughout the land," from careless promiscuous breeding, blending the good, bad and indifferent. From such a course no other result could be expected. No such result was ever realized by Bakewell, nor by any careful, skilful breeder, who had selected superior animals for this purpose, whatever may have been their relationship. The success and benefits of crossing have resulted from the fact, that the most perfect animals have been selected for this purpose.

I prefer no claim to the reputation of the three names quoted above. Still, my experience, (and it has been large and long continued,) though adverse to their testimony, is conclusive with me, in derogation of their expressed opinions, derived as they have been from casual observation among careless farmers, throughout "the length and breadth of the land." And first, in regard to sheep. I have been interested in sheep husbandry for forty years, beginning with a small number of imported sheep, and gradually progressing, until the flock has numbered 1,000 per annum, for ten years of this period. But not a pair were ever purchased for the purpose of crossing,—nothing but the original stock and their increase. And this increase has often, to a large extent, been the product of a single, superior, favorite buck, bred annually during his greatest efficiency, to his own progeny equally

with others. The smallest average weight of fleece at an early period, the wool well washed and divested of tags and worthless trimmings, was 2¼ lbs. The weight of carcass perhaps 60 or 65 lbs. The result, after years of careful breeding, the best reserved annually for production of increase, without reference to relationship, has been a carcass of 80 to 100 lbs., and fleeces of 4½ to rising 5 lbs., of quality not to be excelled, together with perfection of form, and vigor of constitution. Like favorable results have also been realized, for ten years in succession, in the use of a superior Short-horn bull, bred annually, among others, to his own progeny, during that period. Decided, and manifest, and uniform progress towards his own superiority, has characterized the stock so produced and so related. Such also, though on a more limited scale, have been the results in regard to blood horses. And in regard to poultry, since that is now a prominent subject, I may be allowed a word.—I have cultivated with great care, for some eight to twelve years past, the Poland and English Dorking fowl, beginning with a single pair of each, blending original stock and increase without discrimination, being careful to reserve annually the best specimens for future use. The result has been regular, manifest improvement. In view of these facts in my own experience, and in view of the experience of others, I am satisfied that, there is no reason why breeding from near affinities should necessarily be prejudicial. FARMER D.

Monroe Co., N. Y., Sept., 1853.

## AGRICULTURAL PREMIUMS.

It is hardly conceivable how there can be two opinions upon the propriety of giving something more lasting, endurable and palpable to sight and ennobling to the feelings of true manhood, for superiority in his calling and profession, than *money*—filthy lucre—rags that may have done service to the sores of LAZARUS, stamped with the false promises of perhaps an insolvent institution—fading, fugitive and evanescent,—possessing nothing to perpetuate proud and noble feelings,—nothing to stimulate the action of the rising generation—nothing they can point to as proofs of honorable and respectable rewards of ancestry in future time.—Money—pah! it is no better, nor has any more sanctity or virtue in it, than if gained at the gambling table. It smells of the "almighty dollar," the worship of which our nation is obnoxious to.

"Now look on *that* picture and then on *this*," as HAMLET says. Let all premiums for excelling in any branch of art or production consist in something of real, intrinsic value—gold and silver plate—implements—watches—books;—something tangible—something that would please the eye and decorate the side-board, or the person—something that can be exhibited hereafter to gratify an honest and commendable pride.

Is there any one so devoid of sensibility, and those feelings that ennoble humanity, that he would not look with proud and exulting feelings upon a gold medal granted to his progenitors for the noble act of saving human beings from the ravages of fire, or a wreck at sea, or some noble and daring act in the cause of his country? How could such feelings be generated or felt, if the reward had been in continental money, that required six hundred of the paltry dollars to procure a breakfast.

Let all awards for meritorious production be made in tea setts, goblets, urns, vases, cups, spoons, forks, watches, pencils, medals in gold and silver, properly enveloped and engraved with particulars—time-honored family books—Bibles, History, Shakspeare and Milton—and a hundred other desirables useless here to repeat, that could be handed down as heir looms, not only beautiful in exhibition, but useful in the voyage of life.

If a friend should desire some article as a memento when you was leaving for a far distant land, would you think of giving him or her a *rag*, a *promise to pay?* Nay, we opine not, unless it was on the principle that one remembers a refusal longer than a gift. It is said "a better time is coming," and then these views will prevail we trust, when we shall cease to bow and worship at the juggernaut of the "almighty dollar." *

JOHN LOWE, Jr., of Exeter, N. H., set sixty-six trees from the nursery, in the spring of 1843, and forty-two more in the fall of the same year. They bore a few apples in 1847 and 1848. In 1850, he picked six barrels; in 1851, twenty-one barrels; in 1852, fifty barrels of fruit of the best quality.—This is a fair example of the success of good cultivation among us, although trees frequently come into bearing more speedily.

AMONG the curiosities exhibited at the Horticultural Fair at Boston, on the 19th inst., were several stalks of millet, grown from seed taken a few years since from the case of an Egyptian mummy, by Mr. Seth Davis, at West Newton.

## NEW YORK STATE FAIR.

As we anticipated the Fair held last week, at Saratoga Spa., was not as largely attended, nor as well patronized, as former exhibitions of the Society. The show was inferior in all except the Stock Department.—We learn that the receipts were only about $6,000, and of course less than the expenses. There was a very fine show of Fruit and Flowers, but the arrangement of Floral Hall was not creditable. The exhibition of Implements was very good, including some new articles worthy of notice. We may hereafter mention the prominent features of each department, from notes taken during the Fair, but have no space for extended comments in this number. Elsewhere we publish the Premiums on Stock, and below give a review of that department.

### Exhibition of Stock.

Of all Fairs we have attended on this side the Atlantic, that at Saratoga, in the Stock Department, was the best. Usually an immense number of inferior animals are shown that had better been kept at home, but this year the exhibition was, what a State Fair should be—select.

The right-hand side, as you enter, is devoted to chickens. Large numbers of the Asiatic breeds, as well as the good old Dorking and Game, Spanish, Poland, and other well known breeds were largely shown. J. T. ANDREW, West Cornwall, Ct., and D. P. NEWELL, Rochester, figured largely in this line.

Fine wooled sheep came next. Few were shown in quality and numbers, the Fairs at Rochester and Utica were much the best. F. W. DEAN, West Cornwall, Vt., exhibited some good Spanish ewes and a very large Spanish Merino buck. JOSEPH HASWELL, Hoosic, N. Y., also showed some fine ewes of this breed. French Merinos were poorly represented. G. W. MCKEE, Cambridge, Wash. Co., exhibited three very superior bucks. A two year old, bought of Maj. SANFORD, Vt., was a perfect beauty. A first-rate three-year old from JEWETT, Vt.; another, a yearling, was a very good sheep. FELIX WEEDEN, Preston Hollow, Alb. Co., showed a good buck and ewe.

The mutton sheep were well represented — not so many from Canada as in former shows, but from our own State. We are sorry to miss the fine animals of our Canadian brethren, but at the same time we are very glad to see that New York farmers are entering with their usual energy and go-a-headativeness into the breeding of superior mutton sheep.

Of Leicesters, J. A. and S. N. RATHBONE showed some very fine animals. HUNGERFORD & BRODIE, Jeff. Co., were the largest exhibitors. Seven yearling ewes, recently imported, are excellent, as are also the six two year old ewes which took the first prize as yearlings last year. Their imported buck did not please us, but the yearling bucks are first-rate—one of them is very superior. One fat ewe—a beauty—was sold for $30 to go to Ky. One of the four buck lambs shown bids fair to be a fine fellow.

South-Downs were shown in fine perfection.—L. G. MORRIS, Mt. Fordham, N. Y., exhibited a recently imported buck from JONAS WEBB, which for one of his stock, struck us as rather coarse, but it had a corresponding degree of strength and masculinity, and is on the whole an animal of rare merit. Z. B. WAKEMAN, Herkimer, exhibited a large number of superior South-Downs.

There were but seven animals of the Cotswold and New Oxfordshire breeds exhibited, at least that we saw. E. GAZLEY, Clinton, showed four splendid bucks of the Cotswold breed. WYANT and YOUNGHAMS, Sand Lake, Rens. Co., exhibited three New Oxfordshire sheep which we took for good Cotswolds.

SWINE.—In this department the exhibition has never been excelled. L. G. MORRIS showed some splendid Berkshires; quite a number of FISHER HOBBS' Black Essex, and some very superior Suffolks. Those who have a prejudice against color will not like the Essex so well as the Suffolks or Middlesex; they are nevertheless a remarkable breed, fatting with great rapidity and maturing early. Suffolks were well and largely represented. This breed evidently stands high in public estimation. Besides the fine animals of L. G. MORRIS, NELSON RICHARDS, Vergennes, Vt., showed a superior 2 year old boar of the Stickney breed.—LE ROY MOWRY, Union Village, Wash. Co., and ZOAR RIDER, Cambridge, Wash. Co., exhibited good two year old boars. Other exhibitors deserve mention, but our space forbids. SETH WHALEN, West Milton, Sar. Co., exhibited 9 very good shoats of the White Leicester breed. Z. B. WAKEMAN, Herkimer, showed a boar, a cross of the celebrated Leicester and Berkshire breeds, of enormous size. B. DAVIS, Vernon, also exhibited a very good 6 month old boar and sow. There were no Chinese, Middlesex, or Yorkshire pigs exhibited.

HORSES.—Owing to the number of Black Hawks brought from Vermont and other States, the show of Horses was the best ever witnessed in this State. The old original Black Hawk, 22 years old, was on the ground, as active and sprightly and at the same time more compact and powerful than many of his colts. This breed, unsurpassed in the world, is exposed to deterioration from the go-a-head tendencies of the age. The mares and colts were a sorry set. Many mares were exhibited that had evidently been selected as breeders because they were good for nothing else. We suppose the object of the exhibitors was to show how good a colt a poor mare might be made to produce.

CATTLE.—The show of Short-horns, though not large, was never so good in quality at any previous fair. MORRIS & BECAR, of New York exhibited 28 head. Their recently imported 4 year old bull, "Balco" (not shown for a premium,) is one of the finest animals we ever saw. Many of the Short-horns exhibited by the same gentlemen are bad in the crops,—especially is this true of the "Marquis of Carribus." "Balco," "Songstress," "Beauty,' and other recently imported animals will do much to correct this deficiency. GEO. VAIL showed five head—for sale. E. J. ALDEN, Boston, showed a very good three year old bull. DAVID CALKINS, China, Wyom. Co., exhibited a very good 4 year old bull. Mr. Wm. BULLOCK, Bethlehem, Alb. Co., showed some fair animals. WOOD, CONVERSE, & Co., Woodville, Jeff. Co., showed a first rate 4 year old bull.

Devons were not so well or so numerously represented as at Rochester. There were, however, some splendid animals exhibited. Those of W. G. FAILE, West Farms, and of the Messrs. WAINWRIGHT, Rhinebeck, particularly pleased us.—L. G. MORRIS had some very good animals. J. B. TUCKERMAN, Richfield, Ots. Co., showed a very good two year old bull. GEO. VAIL, Troy, showed some good animals, but not quite what we should expect from so celebrated and skillful a breeder.

The largest breeder of Herefords in the State, Wm. H. SOTHAM, Piffard, Liv. Co., did not exhibit in consequence of the points of excellence adopted by the Society. Nevertheless there was a good show, indicating that his breed is looking up. E. CORNING, Jr., Albany, showed 14 very superior animals,—a three year old bull, a yearling bull, and two cows, particularly pleased us. REMINGTON, & BOWEN, Semnet, Cay. Co., exhibited some first rate animals bought of Mr. SOTHAM.

For the shambles and the dairy the Ayshire breed is unsurpassed, yet it was poorly represented. E. P. PRENTICE, Albany, and HUNGERFORD & BRODIE, Jeff. Co., were about the only exhibitors. The animals of Mr. PRENTICE are well known—they have few superiors. The other gentlemen showed a two year old bull, an imported and very superior animal, and also a very pretty heifer with the milking points well developed.

In grade animals there was rather a meagre show. There was, however, some very fair animals exhibited. There was a tolerably good herd of fat cattle from Ky. on the ground. Working oxen were well represented, and what is better were *well trained*. ELON SHELDON, Semnet, Cay. Co., Showed 14 yoke.

## FRENCH AND SPANISH FLEECES.

MR. MOORE:—In the RURAL of Sept. 17, I notice, over the signature of "Fair Play," a criticism of an article on the question, "Is a cross of the French an improvement on the Spanish Merino?" It was hardly *fair play* for the writer to quote part of a sentence, and omit the remainder, when that remainder accounted for the fact that he drew forth by his garbled extract. If the dams of the Spanish lambs had been of no higher grade than those of the French lambs, and if, instead of falling three grades below their dams, as they did, they had fallen but one grade as did the French lambs, their fleeces would have amounted to but $8,09—while the amount in dollars and cents in exact proportion to their weight, as compared with the French lambs, would have been $8,39.

I had no prejudice in favor of the French Merinos, but tried the experiment to get the facts in the case; and having, as I believe, obtained them by a fair and impartial test. I have communicated them for the benefit of all interested in the subject.

MILTON G. NORTON.

Gouverneur, St. Law. Co., N. Y., Sept. 12, 1853.

## ADULTERATION OF BUTTER.

FROM the last report of the Analytical Sanitary Commission, published in the London Lancet, it appears that, on examination of 48 samples of different butters, they all contained large quantities (more or less) of water and salt—in many cases as much as a fourth, or even a third, of the former, and of the latter article a great quantity is purposely added to increase the weight and bulk, over and above that which may be necessary for the preservation of the butter.

A simple method of determining approximately the amount of water present in any sample is to melt the butter, fill a small bottle with it, and place it near the fire for half an hour or so.

The water, as well as the salt, will sink, on account of their weight.

The water thus separated has usually a milky appearance, conveying the impression, however, which, in all the samples examined, had proved to be erroneous. This appearance has doubtless deceived many, and has led to the report that butter is frequently adulterated with farinaceous substances.

The low kinds of butter known by the terms 'bosh' were formerly adulterated in this way, and they may still be so in some rare cases.

Some years since the adulteration of butter with flour was so common that Mr. Miller, a very intelligent butter factor, of Wellington Chambers, London Bridge, brought the subject before the Provost of Glasgow, who declared the whole of the butter so adulterated to be forfeited.

More recently Mr. Miller directed the attention of the city authorities of London to this matter, but did not succeed in moving them to take any steps in it.—*Foreign paper.*

TO MAKE YELLOW BUTTER IN WINTER.—Put in yolk of eggs just before the butter comes, near the termination of the churning. This has been repeatedly tried, and it makes very fine, sweet butter. It is kept by many as a great secret, but its great value requires publicity.—*Far. Museum.*

## PREMIUMS AWARDED

### At the N. Y. State Agricultural Society's Fair,

AT SARATOGA SPA, SEPTEMBER 20, 1853.

### CATTLE.

SHORT-HORNS.—*Bulls*—Three years old and upwards—Morris & Becar, New York, 'Romeo,' $25; 2d. Amos F Wood, Ellisburgh, 'Robinhood,' 15; 3d. David Calkins, China, 'Grand Duke,' 5. Two years old.—1st. Morris & Becar, 'Marquis of Carrabas,' 20; 2d. E G Alden, Sullivan, Mad. co., 'Favorite,' 10; 3d. Joseph Haswell, Hoosick, 'North Star,' 5. One year old.—Lewis G Morris, Mt. Fordham, 'Tommy Bates,' 15. Bull calf.—George Vail, Troy, 'Barry,' 5.

*Cows.*—Three years old.—1st. Noel J Becar, New York, 'Oxford,' 25; 2d. L G Morris, 'Bloom,' 15; 3d. Morris & Becar, 'Songstress,' 5. Two years old.—1st. Noel J Becar, 'Lady Booth,' 20; 2d. L G Morris, 'Kate Hays,' 10. One year old.—1st. Morris & Becar, 'Beauty,' 15; 2d. Noel J Becar, 'Maid of Oxford,' 10; 3d. Noel J Becar, 'Lady Elgin,' 5. Heifer calf.—L G Morris, 'Superior,' 2d, 5.

DEVONS.—*Bulls*—Three years old.—1st. Remington & Bowen, Sennett, Cayuga co., 'Prince,' $25; 2d. J H Casswell, Exeter, 'Osceola,' 15; 3d. D C Howe, Brutus, 'Criterion,' 5. Two years old.—L G Morris, 'Frank Quartley,' 20; 2d. W P & C S Wainwright, Rhinebeck, 'Uncas,' 10; 3d. J B Tuckerman, Richfield, 'Young Major,' 5. One year old.—1st. Geo Vail, 'May Boy,' 15; 2d. L H Colby, Scipio, 'Valient,' 10; 3d. P Weeden, Preston Hollow, 5.—Bull calf.—1st. W P & C S Wainwright, 'Dacotah,' 5; 2d. L G Morris, 'Cake,' Trans. and 3.

*Cows.*—Three years old.—1st. L G Morris, 'Birthday,' $25; 2d. E G Faile, West Farms, 'Adah,' 15; 3d. L G Morris, 'Virtue,' 5. Two years old.—1st. W P & C S Wainwright, 'Kate Kearney,' 20; 2d. W P & C S Wainwright, 'Helena,' 10; 3d. Remington & Bowen, 'Pocahontas,' 5. One year old.—1st. W P & C S Wainwright, 'Nora' 15; 2d. E G Faile, 'Amy,' 10; 3d. M G Morris, 'Helen,' 5. Heifer calf.—1st. L G Morris, 'Birthday 2d,' 5; 2d. L H Colby, Trans. and 3.

HEREFORDS.—*Bulls*—Three years old.—E Corning, Jr., Albany, 'Cardinal Wiseman,' $25. One year old—1st E Corning, Jr., 'Berwick,' 15; 2d. Remington & Bowen, 'Defiance,' 10. Bull calf.—1st. E Corning, Jr., 'B P Johnson,' 5; 2d. Remington & Bowen, 'Warrior,' trans. and 3.

*Cows.*—Three years old.—1st. E Corning, Jr., 'Marchioness,' $25; 2d. E Corning, Jr., 'Victoria 3d,' 15. Two years old.—1st. Remington & Bowen, 'Woodbine,' 20; 2d. E Corning, Jr., 'Grace,' 10; 3d. E Corning, Jr., 'Beauty,' 5. One year old—E Corning, Jr., 'Perfection,' 15. Heifer calf.—E Corning, Jr, 'Matchless,' 5.

AYRSHIRES.—*Bulls*—Three years old.—1st. E P Prentice, Albany, 'Dundee 2d,' $25; 2d. S A Curtis, Canaan, 15.—Two years old.—Hungerford & Brodie, Adams, 20. One year old.—E P Prentice, 15. Bull calf,—E P Prentice, 5.

*Cows.*—Three years old.—E P Prentice, 'Libby,' $25.—Two years old.—1st. E P Prentice, 'Daisy,' 20; 2d E P Prentice, 'Jennie Dean,' 10. One year old.—Hungerford & Brodie, 'White Lily,' 15 Heifer calf—1st. E P Prentice, 'Minnie 3d,' 5; 2d. E P Prentice, trans. and 3.

GRADE CATTLE.—*Cows.*—Three years old.—O Howland, Owasco, 'Red Rose,' $25; 2d. Seth Whalen, West Milton, 15; 3d. Wm Wilson, Milton, 5. Two years old.—1st. Geo Sheldon, Sennett, 20; 2d. O Howland, 10; 3d. Seth Whalen, 5. One year old.—1st J B Finlay, Sar. Springs, 15; 2d. Geo Sheldon, 10. Heifer calf.—1st. J W Hamlin, Buffalo, 5; 2d. Wm Wilson, Milton, 3.

NATIVES.—The Committee on Native Cattle regret that they have to report, that the liberal premiums offered by this Society, in their opinion, has failed to bring out animals, in this class, of any age, worthy or *worth* the amounts offered. We decline making awards.

JOHN R. PAGE, *Ch'n.*

WORKING OXEN.—Best team from any town, not less than 10 yoke—E H Sheldon, $25; 2d. S Daniels, Milton, 20.—Best yoke of Oxen—Adam A Haysradt, Kinderhook, 20; 2d. Luther Comstock, Kirkland, 15; 3d. Geo. Sheldon, 5.—Discretionary Prem. for single yoke—E H Sheldon, Dip.

STEERS—Three years old.—Best single yoke—Geo Sheldon, $10; 2d. H O'Hara Owasco Lake, 8; 3d. A F Wood, Jefferson co., trans. and 3.

STEERS—Two years old.—Best single yoke—A F Wood, $10; 2d. Richard Shaver, Blenheim, (twin steers,) 8; 3d. H O'Hara, trans. and 3.

STEERS—One year old—Best single yoke, A F Wood, $8; 2d. John Garrison, Stillwater, 5.

To boys under 16, training yoke of steers best, John Skillman, Stillwater, sil. med.; 2d. Sam'l N. Fish, St. Lawrence co., trans. and 2.

MILCH COWS.—Best milch cow, none offered.

FAT CATTLE—On hay and grass after one year old.—2d. best ox, 4 years.—H Sheldon, Sennett, $6; 2d. best cow, 4 years, O Howland, 4. Discretionary Prem. to Jas. Duell, West Stockbridge, Mass., $5.

### HORSES.

FOR ALL WORK.—Stallions four years old.—1st. W Trip, Half Moon, 'Revenge,' $25; 2d. J Quimby, Ballston, 'Sir Charles,' 15; 3d. Jas Bogart, Kingsbury, 'Rattler,' 5; 4th. L North, Champion, 'Sherman Black Hawk,' Youatt.

MARE AND FOAL.—1st. Jos. Daniels, Greenfield, Sar. co., $25; 2d. John W White, Greenwich, Wash. co., 5; 3d. H Lincoln, Greenfield, 15; 4th. S L Burton, Bolton, Youatt.

DRAUGHT.—Stallions.—1st. J D Spinner, Herkimer, 'Sir Henry Eclipse,' $25; 2d. R Mosher, Sar. Springs, 'Genesee Grey,' 15.

THOROUGH BRED.—Best brood mare with foal at her foot—J B Finlay, $25.

The Committee recommend a premium to horse 'Waxy,' owned by C C Lansing, of Watervliet.

TWO YEARS OLD—Stallions.—1st. J N Herdman, Essex co., $15; 2d. H B Howard, Westfield, 10; 3d. D C Taylor, Waldham Mills, Youatt.

DISCRETIONARY PREMIUMS.—On two year old colt and saddle mare, omitted to be examined by regular committee.—G G Reynolds, Norway, black colt, Dip.; W M Ryskdyk, Orange co., small sil. med.; J B Finlay, bay filley, Youatt; Miss A B Finlay, white saddle mare, sil. cup.

ONE YEAR OLD.—Stallions.—1st. W Coliman, Kingsbury, DISCRETIONARY.—Wm Gypson, 2 buck lambs, s s med. $10 Youatt; 2d. G W Herrick, Wilton, 5; 3d. A M Hart, Stillwater. Mares.—1st. J B Burnett, Syracuse, $10; 2d. P S Baldwin, Essex, 5.

MATCHED HORSES.—Carriage.—1st. J Barber, Auburn, $15; 2d. A Patten, North Troy, 10; 3d. Geo. Lasher, Bethel, 5; 3d. E D Pierson, Macedon, Youatt.

MATCHED HORSES.—1st. G B Powell, Millit. $15; 2d. R Barber, Stillwater, 10; 3d. E F Seymour, Westmoreland, 5; 4th. N W Burnett, Saratoga, Youatt.

GELDINGS.—1st. J M Smith, Mechanicville, $10; 2d. S M Burroughs, Medina, 8; 3d. J B Burnet, 6; 4th. George B Moore, Fort Ann. Youatt. A horse owned by I T Grant, Schaghticoke, highly commended, Youatt.

SINGLE MARES.—1st. L R Proctor, Hartwick, $10; 2d. I B Dederick, Troy, 8; 3d. C & W Rockwell, Hadley, 6; 4th. R W Higbee, Glen's Falls, Youatt.

FOREIGN HORSES.—Blood Stallions.—1st. D E Hills, Bridport, Vt., 'Black Hawk Chief,' $15; 2d. R M Adams, Burlington, Vt., Dip. and 10. Best Stallion—F M Wilcox, Shoreham, Vt., 'Hamiltonian Black Hawk,' Dip. and 15. Best Draught Stallion.—W M Alcott, Albion, Mich., Dip. and 15.

COMMENDED.—A 2 years old colt, owned by O Eldridge, Bridport, Vt., vol trans.; Black stud by J Ayres, Grafton, Vt., do.; 3 years old colt by E A Burchard, Vt., do; yearling colt by E C Everett, Vergennes, Vt., do; E D Hall, Bridport, Vt., 'Black Hawk,' 18 years old, having before received first premium, is rewarded a Dip.; J Ashford, C W, draught horse, Dip. and 15.

### SHEEP.

FAT SHEEP—*Long Wooled*—Over two years—1st. D Rice, Easton, $5; 2d. Hungerford & Brodie, Adams, 3. Long Wooled—1st. J. A. & L. W. Rathbone, Springfield, 5; 3d. cross breed, O. Howland, Owasco, Mor. Shep. E. Gazley had very superior fat sheep which were not seen by the Judges, by mistake of entry. A special committee award him 1st, 2d and 3d premiums of $5, $3, and Mor. Shep.

LONG WOOLED.—*Bucks*—Over two years old.—1st. Enkathan Gazley, Clinton, Duchess co., $10; 2d. E Gazley, 8; 3d. D. Rice, Easton, 5. Under two years.—1st. Hungerford & Brodie, 10; 2d. J A & L W Rathbone, 8; 3d. Jas A Jackson, Butternuts. 5. *Five Ewes*—Over two years—1st Hungerford & Brodie, 10; 2d. J A & L W Rathbone, 8; 3d. S A Curtiss, 5. *Five Ewes*—Under two years old.—1st. Hungerford & Brodie, 10; 2d. J A & L W Rathbone, 8; 3d. S A Curtiss, 5. Three Buck Lambs—1st. Wm S Gypson, Westmoreland, 5; 2d. Hungerford & Brodie, Mor. Shep. Three Ewe Lambs—1st D Rice, 5; 2d. Wm S Gypson, Mor. Shep.

MIDDLE WOOLED—*Bucks.*—Over 2 years old.—1st. Morris & Becar, New York, $10; 2d. Z. B. Wakeman, Herkimer, 8; 3d. Leroy Mowrey, Union Village, 5. Under two years old.—1st. Morris & Becar, $10; 1d. Z. B. Wakeman, 8. *Five Ewes*—Over two years old.—1st. Morris & Becar, 10; 2d. Z. B. Wakeman, 8; 3d. Obadiah Howland, Owasco, 5. Under two years old—1st. Morris & Becar, 10; 2d. Z. B. Wakeman, 8. Three buck lambs.—1st. Morris & Becar, 5; 2d. Leroy Mowrey, Morrells Shep. Three ewe lambs.—1st. Z. B. Wakeman, 5; 2d. Morris & Becar, Morrells Shepherd. Geo. W. McKie, Cambridge, French Merino buck, 10. Peleg Weeden. French Merino ewe, 5.

MERINOS—*Bucks*—Over two years old.—1st. Joseph Haswell, Hoosic, $16. *Five Ewes*—Over two years old.—Jos Haswell, 10. Under 2 years old—J. Haswell, 10. Three buck lambs.—J. Haswell, 5. Three ewe lambs.—J. Haswell, 5.

SAXONS—*Bucks*—Under two years old.—1st. Joseph Haswell, $10; 2d. Charles W. Hull, New Lebanon, 8. *Five Ewes*—Over two years old.—1st. Charles W. Hull, 10; 2d. Joseph Haswell, 8. Three Buck Lambs.—Jos. Haswell, 5.

*Highly Commended.*—Best samples of wool, not less than five fleeces, Charles Morrell, Ludlowville, Silver Medal.

CROSS BREED SHEEP—*Bucks*—Over two years old.—1st. Daniel S. Curtis Canaan, $10; 2d. Daniel W. Curtis, 8. Under two years old.—1st. Daniel S. Curtis, 10; 2d. Jos. Haswell, 8; 3d. Daniel W. Curtis, 5. *Five Ewe*—Over two years old.—1st. Daniel S. Curtis, 10; 2d. Daniel W. Curtis, 8. Three buck lambs.—1st. Joseph Haswell, 5; 2d. Daniel S. Curtis, Morrells Shepherd. Three ewe lambs.—1st. Daniel S. Curtis, 5; 2d. Joseph Haswell, Morrells Shep.

FOREIGN SHEEP—*Bucks.*—Green & Pease, West Cornwall, $10. *Five Ewes*—G. Campbell, West Westminster, Vt., 10.

*Highly Commended.*—A fine "Silesian Merino Buck," owned by Geo. Campbell, Dip. Also a fine lot "French Merino Buck and Ewes," owned by Green & Pease, Dip. And a fine lot of "Spanish Merino Bucks and Ewes," owned by F. H. Dean, West Cornwall, Vt., Dip.

### SWINE.

LARGE BREED—*Boars*—Over two years old.—L. G. Morris, Mount Fordham, $10. One year old.—L. G. Morris, 5. Over six months and under one year.—1st. Barnes Davis, Vernon, 8; 2d. L. G. Morris, 4. Best breeding sow over two years old.—L. G. Morris, 10. One year old.—1st. L. G. Morris, 10; 2d. Geo. W. Herrick, Milton, 5. Six months and under one year.—1st. L. G. Morris, 8; 2d. Barnes Davis, 4 Best lot of pigs, not less than five under ten months.—Seth Whalen, Saratoga co., 10; 2d. Thomas Bardwell, N. H., (foreign,) 5.

*Highly Commended.*—A superior Suffolk boar and five pigs, Nelson Richards, Vergennes, Vt., (foreign,) 5.

SMALL BREED—*Boars*—Over two years old.—Leroy Mowrey, Union Village, $10. One year old.—1st. L. G. Morris, 10; 2d. L. G. Morris, 5. Six months and under one year.—1st. L. G. Morris, 8; 2d. L. G. Morris, 4.—Breeding sow 1 year old.—L. G. Morris, Mt Fordham, 10. Breeding sow over two years old.—L. G. Morris, 10 Six months and under one year.—1st. L. G. Morris, 8; 2d. G. W Wilcox, Saratoga, 4. Best lot of pigs, not less than 5, under ten months old.—L. G. Morris, 10.

### POULTRY.

DORKINGS—not less than three, one cock and two hens.—1st. W. H. Southwick, New Baltimore, $3; 2d. D. P. Newell & Co, Rochester, 2.

POLANDS—not less than three, one cock and two hens.—1st. Isaac Fowler, Ballston Spa, 3; 1d. John T. Andrews, West Cornwall, Ct., 2.

BLACK SPANISH—not less than three, one cock and two hens.—W. H. Southwick, $3.

BOLTON GRAYS—not less than three, one cock and two hens.—1st. W. H. Southwick, $3; 2d. J. T. Andrews, 2.

SHANGHAS, COCHIN CHINA, MALAY OR CHITTAGONG FOWLS—not less than three, one cock and two hens.—1st. D. P. Newell & Co., $3; 2d. W. H. Southwick, 2.

BANTAMS—not less than three, one cock and two hens.—1st. W. H. Southwick, $3; 2d. D. P. Newell, 2.

GAME—not less than three, one cock and two hens (Mexican)—1st. D. P. Newell, 3; 2d. S. Fensworth, Ballston Spa, 2.

TURKEYS—not less than three,—W. H. Southwick, $3.

SMALL DUCKS—not less than three.—Jos. Daniels, Greenfield 3.

LARGE GEESE.—2st. W. H. Southwick, 3; 2d. D. Price, Easton, 2.

Best lot of poultry, owned by exhibitor, (statement to be furnished and verified,) W. H. Southwick, $10; 2d. D. P. Newell, 5.

Best exhibition of Pigeons.—W. H Southwick, 3.

Best pair Jackoons.—W. H. Southwick, Vol. Trans.

Sealright and African Bantams.—C. S. Haines, Elizabethtown, N. J., Vol. Trans,

## THE POETRY OF AGRICULTURE.

THE principles of agriculture are exceedingly simple. That they might be so God himself was the first great planter. He wrote his laws visibly, in the brightest, loveliest, and most intelligible characters, everywhere, upon the broad face of the liberal earth; in greenest leaves, in delicious fruits, in beguiling and delicate flowers.—But he does not content himself with this alone. He bestows the heritage along with the example. He prepares the garden and the home, before he creates the being who is to possess them. He fills them with all those objects of sense and sentiment which are to supply his moral and physical necessities. Birds sing in the boughs above him odors blossom in the air, and fruits and flowers cover the earth with a glory to which that of Soloman, in all its magnificence, was vain and valueless. To his hand we owe these fine groves, these tall ranks of majestic trees, these deep forests, these broad plains covered with verdure, and these mighty arteries of flood and river, which wind along, beautifying them with the loveliest inequalities, and irrigating them with a seasonable fertilization.

Thus did the Almighty planter dedicate the great plantation to the uses of that various and wondrous family which was to follow. His home prepared—supplied with all resources, adorned with every variety of fruit and flower, and checkered with abundance, man is conducted within its present limits, and ordained its cultivator under the very eye and sanction of Heaven. The angels of Heaven descend upon its hills. God himself appears within its valleys at noonday—its groves are instinct with life and purity, and the blessed stars rise at night above the celestial mountains to keep watch over its consecrated interests. Its gorgeous forests, its broad savannahs, its levels of flood and prairie, are surrendered into the hands of the wondrously favored; the new created heir of Heaven. The fowl summons him at morning to his labors, and the evening chant of the night bird warns him to repose. The ox submits his neck to the yoke; the horse moves at his bidding in the plow, and the toils of all are rendered sacred and successful by the gentle showers and the genial sunshine which descend from Heaven, to ripen the grain in its seasons, and to make earth pleasant with its fruits.

LARGE YIELD OF WHEAT.—In several of our late exchanges we have noticed accounts of large yields of wheat on thirty and forty acres of land in this vicinity, but have not as yet seen anything in the line of wheat raising this season that equals, or bears any comparison to the quantity produced on the farm of the Hon. A. S. Upham, of this village. From a field of one hundred acres, he has raised and gathered in good order, *three thousand six hundred bushels of wheat* the present season. Can any farmer in this region show as good a crop produced from one field of this number of acres?—*Le Roy Democrat.*

BLOODY URINE.—For the benefit of your subscriber who wrote the inquiry respecting a cure for "bloody urine," I wish you would say to him that a little nitric acid is all that he needs, if his cow is not too far gone to effect a cure. Poscription:—Give to the animal once in two days in a quart of water, a table spoonful of nitric acid. In ordinary cases a cure may be looked for after the first or second dose.—*Cor. Maine Farmer.*

# Orchard and Garden.

### GATHERING APPLES.

The keeping of apples and other fruits depends very much upon the care with which they are gathered, and the place in which they are deposited; hence a few hints on the subject will not be valueless to the orchardist and gardener.

Late autumn and winter apples belong to that class of fruits which are gathered before maturity and ripened in the fruit-room or cellar, and they should be picked when they have received from the tree all the valuable elements the season will allow it to give them. English gardeners have a rule that no fruit should be suffered to remain on the trees after they cease to vegetate, and this is in general a good one. The apples above spoken of, as well as pears of the same class, may remain ungathered until there is danger of injury from frost, as the sun and air, and the still remaining vigor of the tree, seems necessary to their perfection and maturity.

Apples designed for long preservation should, as far as practicable, be picked by hand, carefully and separately, and when they are not wet by dew or rain. They should be handled so as not to bruise them in the least—as carefully almost as eggs or glass-ware. Lay them gently upon the floor of a cool dry room, a foot deep, to sweat and season for two or three weeks, and then on a clear dry day, sort and pack the apples carefully in clean dry barrels, filling them so full that the apples cannot move after being headed in. The very best,—which will keep, longest—may be wrapped up separately in soft paper before packing, or they may be placed in layers with dry chaff around and between them.

Most cellars and ground floors are too damp for the perfect keeping of apples through the winter and spring, and also of too variable a temperature—the latter should not vary much from 40°. If an upper room can be so prepared as to retain about the same degree of heat, dryness and darkness is a very desirable locality for the preservation of fruit, not only apples, but pears, grapes, &c., To the preservation of the two last named, considerable attention has recently been given.

### A CHAPTER ON CELERY.

Dear Mr. Editor:—Will you please to give us a chapter on *Celery?* *What* is it?—*how* is it to be cultivated? *Whence* came it?—*how* is it to be used?—and *what* is it good for.

Yours, truly, L. C.

Cazenovia, N. Y., Sept., 1853.

The plant known as Celery, is the *Apium graveolens* of the Botanists, and is used as a salad in the raw state, and also in soups and in flavoring catsups. It is very grateful to many stomachs and considered a valuable condiment with roast meats. It is a native of Great Britain, growing in sedgy and wet bottoms along the banks of rivers, and in the cultivated state thrives best in a moist, open soil; in heavy clays it rusts in bleaching and is unfit for the table.

The seed should be forwarded in a hot bed, or sown very early, as soon as the middle of April, as they are from three to four weeks in coming up; and when they become good strong plants, by about the middle of June, they are transplanted into beds and the trenches shaded by boards or other means for a few days, until they strike and become vigorous. Trenches should be dug with the spade about two feet wide and 18 inches deep. The surface soil should be kept separate from the subsoil, to return for a bed for the plants, after being well mixed with a liberal quantity of old and well rotted manure, or compost of vegetable and excremental substances: with which, fill about half the trench, pack down properly and set the plants four to six inches apart, and shade as before directed.

When they are about six inches high, bring the leaves nicely together, to avoid getting earth into the center, and fill in the earth that was taken from the bottom about four inches in depth around the plants, which many gardeners continue to do every ten days or a fortnight till frost; but a better process is after the first earthing, to allow them to grow till about the first or middle of September, and then to give them a final earthing, up as high as they will bear without choking the center leaves. By this process you bleach it beautifully, and avoid *rusting*, which it is liable to do in the old process, which is fatal to its goodness and appearance on table. Such part as is wanted for use early in the season, must be earthed up oftener and sooner than the main crop for winter. It may be protected in the trenches against frost, or set in boxes with sand in the cellar and keep well till spring.

The tenderest, most crisp and thoroughly bleached Celery that we have ever seen, was a bed that had the loose leaves clipped off and about a foot of earth banked over the whole trench, where it remained till spring, after the frost was out of the ground. Perhaps it was not quite as high flavored, but most delicious, and in eating till warm weather. This process should not be performed till frost and the first freezing nights commence in the fall.

In retentive soils, the trenches should be on descending slopes, or so situated as that heavy rains shall not drench and drown the plants. In setting the plants, by pressing the stems next the roots the hollow stems can be readily determined and should be rejected, and none but these that are solid retained.

Thus we have complied with the request of our correspondent, as far as our experience and knowledge go on this subject, without reference to any authority.

### THE AMERICAN PITCHER PLANT.

This is one of the most curious plants in all North America. Its Botanical name is *Sarracenia purpurea*, named in honor of Dr. Sarragin, of Quebec, its discoverer, and who first sent specimens to Tournefort, in France. It is also known by the common name of Side Saddle flower. There are six known species of the genus, one only of which is found in the Northern States. A variety with yellow flowers is found in Massachusetts. A genus somewhat similar inhabits Guiana, and the two constitute the natural family of the Sarraceniaceæ.

The Side Saddle is quite generally diffused among the sphagnous swamps of the Northern States and Canada, and in its structure there is a beautiful display of the wonderful contrivance of the Great Architect. The flower, which expands in June, rises on a scape from a foot to eighteen inches, and while in blossom is nodding.—Its color is purple and the divisions of the calyx, corol, seed-vessel, &c., are fine. The color of the petals, which are incurved, is much more delicate than that of the larger sepals. The latter overlap the joints of the former, and these are again overlapped at their base, by a three-leaved involucel. By this means, all moisture is effectually warded from the delicate farina of the stamens, which gives vitality to the minute embryos in the seed-vessel. The pistil which receives and conveys this fertilizing principle to the seed is a large umbrella-shaped organ, attached to the geneva so as to cover the stamens, which by reason of the pendant position of the flower shed their pollen directly into its cup-like structure. When this important object is accomplished, the fibres of the stem become more rigid and the capsule takes an upright position on its stalk, and the persistent pistil now is a defence to it in warding off the falling rain or the too direct heat of the sun.

Wonderful as the structure of the flower may be, it is perhaps exceeded by that of the leaf. Springing directly from the fibrous roots, they recline like a cluster of fairy pitchers around the flower stem, each leaf being in fact a little vessel of the capacity of a gill or thereabouts, containing usually a quantity of water and dead insects.

This sort of leaf is rare and is called assidium. It is supposed to be formed by a very deep channeling of the petiole, and the uniting together of the involute edges of its winged margin, so as to form a complete vase, with a broad expansion at the top, which may be regarded as the true leaf.—Along the upper or inner edge extends a wavy, winged appendage, while a broad cordate lamina, (or the true leaf,) is articulated to the mouth or the back of the opening. This, with the entrance to a considerable distance, is thickly covered with stiff hairs, over which insects may readily creep, but against which it is impossible to pass.

To the inquiring mind the question may arise, what is the design in the wonderful structure of the Sarracenia? For what purpose were its leaves scooped out to be filled with water and entomb insects? What is the purpose served in its economy?—There must be some wise end in view, tho' it seems at present to be one of the unravelled mysteries of nature. Possibly, from the decaying animal matter, some essential nutriment is derived and conveyed through the petiole of the leaf for the sustenance of the plant. T. E. W.

Grapes should be fully ripe before they are picked from the vine. They need the sun and air to give them perfection and flavor. They can be preserved for some months by packing in dry jars or boxes, with kiln dried bran, or saw-dust, or cotton between them, and then keeping them in a cool, dry place.—B.

A "White English" peach, weighing thirteen and a half ounces, and measuring ten and three quarter inches in circumference, was raised this season on the plantation of John L. Evins, at Atlanta, Ga.

### SMITH'S ORLEANS PLUM.

Smith's Orleans, the largest and finest of this class of plums, is a native variety raised from the old Orleans about 20 years ago by Mr. Smith, of Gowanus, Long Island. It is one of the most vigorous of all plum trees, making straight, glossy, reddish-purple shoots, seven or eight feet long in the nursery, with dark green, crimped leaves. It bears regularly and well, in almost any soil; its fruit is large and handsome, and has that blending of sweet and acid in its flavor which renders it, to our taste, one of the most agreeable of all plums. It is deservedly a favorite in American gardens.

Bearing branches smooth or nearly so.—Fruit large, often of the largest size, oval, rather widest towards the stalk, a little irregular, with a strongly marked suture on one side. Stalk quite small and slender, little more than half an inch long, inserted in a deep narrow cavity. Skin reddish purple, covered with a deep blue bloom. Flesh deep yellow, a little firm, very juicy, with a brisk, rich vinous flavor, (not sweet and cloying,) and adheres to the stone. Ripens from the 20th to the last of August, and hangs for some time on the tree, becoming very dark in color.

By an error, this variety was sent out from the garden here for several years, as the Violet, or Blue Perdrigon, a smaller, and very different fruit, and bears this name still in some collections.—*Downing*

### THE CURCULIO.

J. Lake, writing to the *N. E. Farmer*, says:—I see by your last paper, from extracts from the Greenfield Republican, that a writer in that journal has found a remedy for the bite of the curculio. His remedy may be a good one for a man of leisure, but the days and nights are not of sufficient length to warrant its general adoption. I will tell you briefly what I have done for my plum trees. My remedy for the *curculio* is this: as soon as the insect had made his appearance, and the plum had fairly commenced growing, I sprinkled the leaves and plums on the trees all over with *air slacked lime*, selecting a wet morning for the operation, and after that the insects all left. On some trees that had no lime, scarcely a plum was left; on one tree that I put lime on one side, the curiculio did not trouble; while on the side that had no lime, the plums were completely destroyed. When the drought came on, I found that my plums failed for the want of moisture; I took a barrel, and made a small hole in the bottom, and placed it on the root of the trees, and then filled it with water, and as often as the water was exhausted I filled it up; and now I shall have a rich crop of plums, and free from the *rot* that prevails in this country; the limb I sent to you a few days ago was from one of those, and is a fair specimen."

# Domestic Economy.

### TO KEEP AWAY MOTHS.

A great fuss is usually made about this time to keep off that delicate little insect, the moth miller. She has certain instincts as well as other people, and they lead her to deposit her eggs where food can be found when her young are born into the world. So she, like a good mother, looks about industriously, and deposits an egg here and there, under the seams of our best coat, or in madam's wrist-cuffs, or boas, or for want of better shelter and more refined feeling, will deposit half a score of eggs among the hair of the buffalo robes that hang in the carriage house. Now this is very innocent and commendable conduct throughout all bugdom, but it is looked upon by us as a peculiarly insinuating proceeding by the bugs, and a form of deposit not altogether approved. So the good housewife tries to defend herself with cedar closets, camphor draws, rosemary, sassafras leaves and other delectable odors; but the bugs care no more for them than does the hectoring gallant for a tap of his lady's fan; they are true to the instinct still, and will continue to be so in spite of all the nostrums of Æsculapius and all his disciples. But, fair lady, there is one infallible remedy, simple, and always within reach. Shake your garments or furs well, and tie them up tight in a pillow case, or anywhere under cover, and your valuables will always be perfectly safe from the ravages of moths.

Peach Figs.—The American Farmer gives the following mode of preparing peach figs. Other fruits have been successfully dried in a similar way:—"The peaches are first peeled, then cut in halves, the stones removed: next placed on plates with their hollow sides up, and containing one-sixth of their weight of sugar. After having sufficiently dried in the oven they are stowed away in jars or boxes, like figs, the texture of which they materially resemble, while their flavor is entirely superior. They may be swollen by water, and used for pies, tarts, &c., and are very superior in quality to the ordinary dried peaches."

Potato Pie.—Boil until soft as many potatoes as you like; then peel and mash them through a tin sieve. To a quarter of a pound of potatoes add one quart of milk, three spoonful of melted butter, four beaten eggs, and sugar and nutmeg to the taste. Bake in tins as you would custard or pumpkin. S. A.

Clove Cake.—Three pounds of flour, one of butter, one of sugar, three eggs, two spoonfuls of powdered cloves. Sweeten with molasses, if preferred.

# Mechanic Arts, &c.

### LIST OF PATENT CLAIMS

ISSUED FROM THE UNITED STATES PATENT OFFICE

For the week ending September 13, 1853.

M. W. Baldwin, of Philadelphia, Pa., for improvement in gear of variable cut-off valves for steam engines.

John Chilcott & Robert Snell, of Brooklyn, N. Y., for improvement in India rubber soles for boots and shoes.

John Chilcott & Robert Snell, of Brooklyn, N. Y., for improvement in cutting boots and shoes. Patented in Belgium, Sept. 16, 1852; in France, Sept. 17, 1852; in England, Sept. 30, 1852.

Pierre Demeure and Auguste Mauritz, of New York city, N. Y., for improvement in bed bottoms.

Wm. P. Greenleaf, of Washington, N. H., for improvement in shape of scythes.

Z. H. Mann, of Cincinnati, Ohio, for improvement in safety valves for steam boilers.

George Potts, of Cincinnati, Ohio, for improvement in revolving mandrel for lining cylinders with metal.

Andrew Robeson, Jr., of Newport, R. I., for improvement in bucking cloth. Patented in England, Nov. 8, 1853.

Hervey S. Ross, of Cleveland, Ohio, for improvement in fences.

Samuel B. Sumner, of Grantville, Mass., for improvement in boot jacks.

Frederick W. Norton, of Lasswade, Great Britain, for improvement in the manufacture of plain and figured fabrics.

James Rakin, of Detroit, Mich., for improvement in hanging mill saws.

John Chilcott & Robert Snell, of Brooklyn, N. Y., for improvement in screw fastenings for boots and shoes.

L. A. Stockwell, of Batavia, N. Y., for improvement in lard lamps.

RE-ISSUE.

Wm. Crompton, of Hartford, Conn., (assignor to Merrill H. Furbush & Geo. Crompton, of Worcester, Mass.,) for improvement in fancy power looms.

ADDITIONAL IMPROVEMENT.

Geo. F. S. Zimmerman, of Charlestown, Va., for improvement in Winnowers and Threshers.

### GLASS WALLS.

When the late Sir Cobert Peel proposed his measure for the removal of the duty from glass, he wisely remarked, there was no foreseeing the limits of the novel application of this beautiful manufacture. The most recent of these is the use of glass for the construction of walls for the growing of fruits and plants, as well as the introduction of a new style of architecture. The variableness of the British climate, and the great disappointment in procuring, with anything like certainty, a crop of fruit from brick or stone walls, led Mr. Ewing to consider whether this could not be obviated by substituting hollow walls of glass and iron: and the invention has proved perfectly successful.

By constructing the walls of sufficient width to enter, they become hot-houses on the best principle, the trees they contain are completely surrounded by light and exposed to the action of the sun's rays during the whole day; they form a delightful promenade in our uncertain climate during the winter months.—*English Paper.*

### AMERICAN AND ENGLISH IRON.

Owing to some unfortunate circumstances, the iron of American manufacture used on some of our railways has proved very poor, and compares hardly with the early importations of English iron. This is owing, not to any deficiency in the American ores, but the deficiency of the manufacture. A large percentage of the late importations of English railway iron, however, has proved very defective, not because the English cannot make good iron, but because our railway managers have been so over-anxious to iron their roads without delay that they have taken whatever has been offered them in exchange for their bonds. It is time that the matter should be more sharply looked after. In almost every fair trial of the iron manufacture of the two countries our bars have stood the tests, and have come off ahead of the foreign competitors.—*Railway Times.*

### NEW BRICK MACHINE.

Mr. L. E. Ransom, of Huron county, O., has shown us a Brick Machine, for which he has filed his caveat for a patent. Instead of a simple mould, shallow boxes of the width of six bricks are laid the whole length of the yard, and the clay, made to a soft consistency, is turned in and pressed down evenly and smoothly by a roller. A few moments suffices to set the clay, and the boxes—being made in pieces—are removed; and by a simple contrivance of six knives in a frame, the paste is severed by lengthwise and crosswise cutting, into brick; which, after due drying, are ready for the kiln. By this process the bricks are made with great rapidity and economy, and are said to be far superior to those made by the old and tedious manner of moulding. If this machinery of Mr. Ransom's answers the general expectation, it is estimated the price of the article will be reduced at least 25 per cent.—*Sandusky Register.*

New Building Material.—A light colored, friable species of stone, resembling fire-brick, is brought from Normandy and used for the interior lining of the walls of public buildings. It is easily carved in any desired form. Trinity Church Chapel, in New York, is to have interior walls of this material.

### AGRICULTURAL INSTRUCTION IN EUROPE.

The Royal Agricultural College at Cincerets, England, has six professors. The instruction extends over three years, and the studies pursued are as follows:

1. Science and Practice of Agriculture; 2. Chemistry and Chemical Manipulation; 3. Practical Chemistry; 4. Botany, Geology, and Zoology; 5. Veterinary practice; 6. Mathematics; 7. Natural Philosophy; 8. Surveying and Practical Engineering.

The lectures are as complete and practical as they can be rendered. The agricultural colleges of Germany and France are still more complete and efficient. That at Hohenheim, in Wurtemberg, employs one director six professors, four functionaries, and two tutors, and has connected with it an estate of 3,325 acres. The instruction is embraced in 40 courses, such as—1. Practical Agriculture, including Meteorology and Practical Mechanics; 2. Culture of the Grape; 3. Fruit trees; 4. Raising and Management of Cattle; 5. Of Horses with Veterinary practice, Pathology, and Therapeutics, &c.; 6. Silk culture; 7. Rural Industry; 8. Rural Economy, Surveying, Engineering Valuing, &c.; 9. Book-keeping; 10; Working a farm; 11. Algebra, and Pure Mathematics as far as Geometry; 12. Physics, Mechanics, and Chemistry, including Analysis; 13. Rural Law; and 14. Constructions, Architecture, and Drawing in all its branches. This is a mere imperfect outline of the studies, the whole being much too long to copy in this place.

Europe contains 22 superior schools equal to the best colleges in the United States; 54 equal to our inferior colleges or High Schools; and 214 Elementary schools, while there are 14 Agricultural departments connected with colleges and universities, making a total of 352 institutions, solely devoted to education in this art.

### A TRAVELING HOTEL.

A Paris correspondent of the Cincinnati Gazette, in a letter dated Aug. 11th, gives the following account of a novel mode of traveling in France. He writes:

If we are in advance of the world in sea yachts, the French have beaten us in the article of railroad yachts. A rich capitalist, Monsieur the Count of L.——,has invented and superintended the construction of a railroad hotel, for his own private use, with which he intends to travel with his family over all the railroads of France. It is a complete house with all its dependencies, principal and accessory. There is a parlor, bedrooms, with beds, billard room, kitchen, office, a cellar which will hold a good store of wine, ice-house, &c.—in one no word all the elegance and the comfort, the useful and the agreeable, of a dwelling the most complete and the most rich. It is very long, and like all the French cars, very wide. It is made so that it can be transferred from one set of wheels to another, though that seems of no importance, since the roads of France are all, I believe, of the same wide guage. This traveling hotel has cost its proprietor about 50,000 francs, and is at this moment attracting great attention at the depot of the Orleans Railway.

### CAST IRON INTERIOR WALLS.

L. A. Gouch, architect, Harlem, N. Y., has shown us plans for cast-iron partition walls, which appears to be far superior in every respect, and can be put up for less than those of brick. They are formed of perforated plates bolted together, each of about one-sixteenth of an inch in thickness, and secured so as to make a partition of 4 inches in thickness, having an air space between which will answer for ventilation, gas pipes, water pipes and hot air pipes. These plates can be covered with plaster and made to resemble a hard-finish wall. These partitions will be fire-proof and flanges are cast upon them for joists and beams of flooring and stairs. Such a partition can be taken down at any time, by merely unscrewing the bolts, and not like brick, mortar and lath walls, it will be as good as ever, and can answer the same purpose a thousand times over, and last for a thousand years. The application of iron to architecture is an invention which should attract universal attention.—*Sci. Am.*

How to make a Cistern.—For a cistern to hold 25 barrels of water, procure one barrel of water lime—hydraulic cement—and three barrels of clean coarse sand; if your soil is clay or any kind of compact earth, dig a hole as near the shape of an egg as far as you can; mix your cement, a little at a time, and plaster it directly upon the earth. If there is any considerable cavity in the sides of the pit, fill it with clay mortar and thus save your cement. When the first coat is dry put on the second, and perhaps a third, though much thinner than the first. Cover the top with a large flat stone, if procurable, having a man hole and a place for a pump broken through the centre. A cistern eight feet in diameter and nine feet deep will hold a hundred barrels.

Improvement in Grist Mills.—The Worcester Spy speaks of an improvement in the manner of pecking mill stones by which their capacity for grinding can be doubled. The editor of the Spy saw it applied to a mill in Worcester, and the result of its application was that a bushel of Northern corn was ground in a minute and a half—and that an old fashioned mill, with a single run of stones, with the impovement, will grind *forty-six bushels an hour.*

There is philosophy in the remark, that "every man has in his own life follies enough—in his own mind, trouble enough—in the performance of his duties, deficiencies enough—in his own fortunes, evils enough—without being curious after the affairs of others."

# Educational.

Written for Moore's Rural New-Yorker.

## WISCONSIN.—No. III.

### EDUCATION.

In speaking of Wisconsin, I should do injustice to my feelings and to the subject, if I did not say something in regard to the Edneational interests and prospects of the State. There is no one thing of which sho has so much reason to bo proud, as of the provision sho has mado for the mental wants of hor children. In no Stato of tho Union is the foundation for education moro broad, its benefits moro heartily appreciated, or its prospects more encouraging. Tho University, which is loeatod at Madison, is not only chartered, but in successful operation; and for its support it has already the grant of forty-six thousand and eighty acres, which is equivalent to two townships or seventy-two sections. These lands, which lie in eighteen counties, and aro now in the market, at their appraised valuo, aro rapidly selling, and thus supplying funds for tho Universority. By tho terms of salo, ten per eent. is required in advanee, ten years' time is given, and seven per cent. interest is required annually, in advanee, on the balance. The provision for tho University will, it is probable, bo onlarged by futuro grants; and fifty years henee, Madison will doubtless bo tho seat of one of the best endowed and most flourishing Colleges in the U. States.

Liberal provision has been made for the support of Common Schools. Tho bounty of Congress has set apart the sixteenth section of overy township in the State for that purpose, and something liko a million aeres will thus accrue to the State. To this may be added fivo thousand acres received according to tho provision of the constitution, under tho act of 1841, together with the reservation of five por eent. on all govornment lands disposed of in tho State. Asido from theso feeders of the School Fund, are tho swamp and overflowed lands, whieh have been granted, and millions of acres of which will one day bo reclaimed. Somo of theso are among the most fertilo lands in the State, and by being drained and othorwiso improved, they will becomo highly important sources of ineomo. It is stated in the now Gazetteer of the State—to which I am indebted for other facts—that this grant alone will amount to fivo million aeres.—Thoso capablo of judging, estimate that tho School Fund of Wiseonsin will ultimately amount to threo million dollars. I should not bo surprised if it some day reached nearly twico that sum.

The system of instruetion in this young and enterprising eommonwealth, contemplates tho introduetion of union schools of the grade of our academies. Somo of those schools I havo roeently visited, during my rambles in different parts of the Stato, and find them under the eare of as good teachers and in as thriving a condition, as similar schools in tho older States. Learning and talent are well appreciated in Wisconsin, and reeeive good encouragement. Wages for school-teaching will raise as fast as tho resources of the State aro dovoloped and its wealth is increased.

Aside from provisions made by the State for edueation, academies and colleges, based on privato subscriptions, aro springing up in all parts of the State. I have reeently visited colleges at Boloit, Racino, Milwaukio and Waukesha, and anothor has lately been opened at Appleton. The first montioned has an ablo faculty, is well endowed, and is doing a good work; the others are getting cleverly under way. It is not to be expected that colleges at tho West, ean be filled at oneo. The homes of the people are comparatively new, and many of them aro not wholly paid for; eonsequently only horo and thoro a farmer, a mechanic or a tradesman is able, as yet, to give his sons a liberal education. Thoro is no lack of a dispesition, on the part of the Anglo-Amorican portion of the settlers, at least, to thoroughly educato their children; the want of means is the chief obstaele.

Tho spirit which prompted the Pilgrim Fathors to build the school house by the side of the church, is boautifully manifested in the rising West. As soon as a sottlement is eommenced, the mental wants of children aro eonsidered, and among the buildings early erected, is one of the "eradles of Democraey," as Gov. MORTON, of Massachusetts, once called the little red nurserios of learning. This high appreciation of knowledge, whieh has characterized us as a people, from the beginning, is one of the most promising features of our government.—Our freedom and faith are founded on intelligenco; and with school houses and churches multiplying with the increase of population in the West, and dotting the hamlets and standing at the forks of the roads, all over the land, we cannot help fooling that our country is safe. J. CLEMENT.

## FORCED BLOSSOMS.

A SKETCH FOR PARENTS AND TEACHERS.

THERE is a moral in the following littlo story, which it would bo well if somo parents and teachers would catch. Thero are far too many instances of children who are injured by study and sedentary habits In fact, when a boy *will* learn—when he takes kindly to his books, most parents are inclined to urge him on to his highest intellectual speed. There is a selfish reason for this. Boys who aro fond of books, or who can be kept by compulsion or persuasion for a greater part of the day at their studies, are far less troublesome and expensive than those reckless, whooping juveniles who wear out clothes and smash windows. But the e is a day of reckoning for all things, and in after years, the boy who has paled over books, if he lives at all, shows the early want of air, exercise, and cheerful sport, in delicate health, or in a fearfully excitable nervous system. We can recall an instance of a child who, after being put through Virgil and Homer at seven or eight years of age, ended as an idiot at seventeen. Unfortunately the ruined health is never attributed to its true cause. "Growing," or constitutional infirmity, is supposed to be the reason, and medical treatment and change of air is resorted to when no remedy can be of any aid.

"No dangor of Harry's making himself ill with study; and as he will learn I shall let him. He is at the head in all his classes, and his teacher tells us that the boy is really a genius. He came yesterday for permission to commence French lessons— but as he had a long task in Latin I hesitated."

"How old is Harry, sister?"

"Nine last month; and for a boy of his age, I must say he is doing uncommonly well. He has gone through Blaker's Natural Philosophy, and now is delighted with an abridgment of Wayland's Moral Science.—I confess I do not understand it all myself; but he must, for he repeats chapter after chaptor without missing a word There are boys in his class seventeen and eighteen years old. Why, what are you doing Laura?"

Her sister was busily employed, and did not look up at first. As the conversation progressed, she seemed quiet unconscios that she had taken a waxen bud from a rich cluster of tube roses, that stood in a vase upon the table before her and had forced the pure petals outward till the bud became a blossom.

"Is it not beautiful?" said she, giving it to her sister; "and out so long before the rest."

"Yes, very beautiful just now; but how long do yon think it will stay so? It droops already; why could yon not let it be till it was developed naturally?

Her remark was just—beautiful as it was at first, the petals soon became brown, then shivered. Its freshness and fragrance were fast passing away. Just then a fine little fellow came into the room, and, taking a book from the center-table, threw himself languidly upon the sofa, and brushing back the wavy hair from a full, pale forehead, commenced reading very intently.

"Why do you not go and play with your cousins, Harry?" said his mother.

"O, they are so rude, so noisy, I mean—I am in a hurry to finish this, too," and the boy's eyes were once more fastened upon the page before him.

His mother smiled, well pleased at his studiousness; but his aunt looked grave, and pointed to his flushed cheek, and the peculiar brilliancy of his eye.

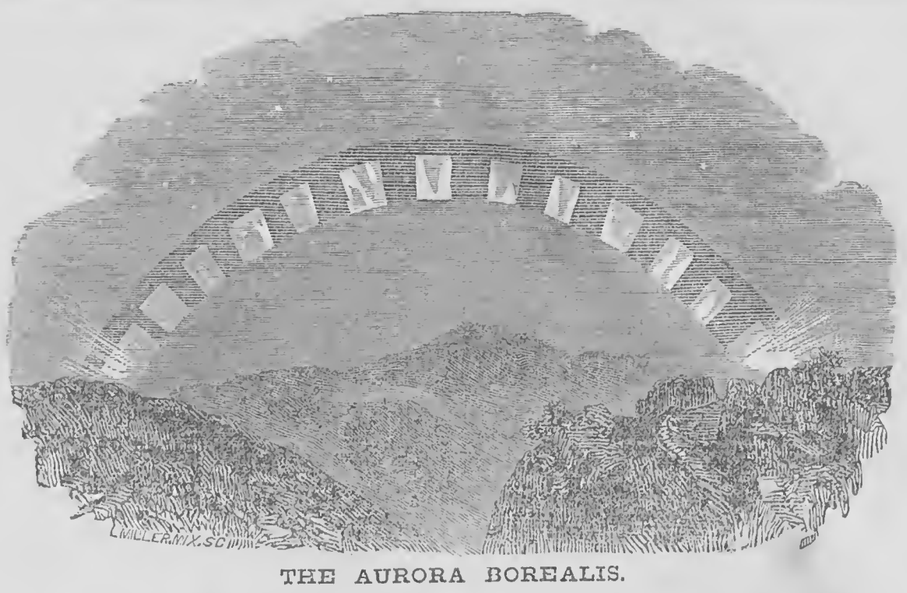
"He needs exercise; you should insist upon his going out," said she. "I do not wish to alarm you needlessly, but you will find the truth of your own words," and she held up the withering blossom. "Beautiful just now; but how long think you it will stay so? It droops already; why could you not let it be till it develops naturally?"

"Harry," said his mother, starting as if a new light had flashed upon her mind, "I insist that you go into the air for half an hour at least. You can finish your book this evening."

She had seen the justice of her sister's delicate reproof; and we trust that if this little paragraph falls under the notice of parents who are given to the "forcing system," they also may be warned in time.—Henry is not an imaginary example, neither is he a solitary instance, where the mind is suffered to develop itself at the expense of the physical powers.

THE HIDDEN LIFE.—Among the workings of the hidden life within us which we may experience but cannot explain, are there any more remarkable than those mysterious moral influences constantly exercised, either for attraction or repulsion, by one human being over another? In the simplest, as in the most important affairs of life, how startling, how irresistible is their power! How often we feel and know, either pleasurably or painfully, that another is looking on us, before we have ascertained the fact with our own eyes! How often we prophesy truly to ourselves the approach of friend or enemy just before either have really appeared!—How strangely and abruptly we become convinced, at a first introduction, that we shall secretly love this person and loathe that, before experience has guided us with a single fact in relation to their characters.—*Collin's Basil.*

A PROMISE.—A promise should be given with caution and kept with care. A promise should be made by the heart and remembered by the head, A promise is the offspring of the intention, and should be nurtured by recollection. A promise and its performance should, like the scales of a true balance, always present a mutual adjustment. A promise delayed is justice deferred. A promise neglected is an untruth told. A promise attended to is a debt paid.



THE AURORA BOREALIS.

OF all optical phenomena, the Aurora Borealis, or the Northern day-break, is one of the most striking, especially in the regions where its full glory is revealed. The site of the appearance, in the north part of the heavens, and its close resemblance to the aspect of the sky before sunrise, have originated the name. The "Derwentwater Lights" was long the appellation common in the north of England, owing to their display on the night after the execution of the unfortunate Earl of that name.

The appearances exhibited by the Aurora are so various as to ren or it impossible to comprehend every particular in a description that must be necessarily brief and general. A cloud, or haze, is commonly seen in the Northern region of the heavens, but often bearing toward the East or West, assuming the form of an arc, seldom attaining a greater altitude than 40 degrees, but varying in extent from 5 to 100 degrees.—The upper edge of the cloud is luminous, sometimes brilliant and irregular. The lower part is frequently dark and thick, with the clear sky appearing between it and the horizon. Streams of light shoot up in columnar forms from the upper part of the cloud, now extending but a few degrees, then as far as the zenith, and even beyond it. Instances occur in which the whole hemisphere is covered with these coruscations; but the brilliancy is the greatest, and the light the strongest in the North, near the main body of the meteor. The streamers have in general a tremulous motion, and when close together present the appearance of waves, or sheets of light, following each other in rapid succession. But no rule obtains with reference to these streaks, which have acquired the name of "the merry dancers," from their volatility, becoming more quick in their motions in stormy weather, as if sympathizing with the wildness of the blast. Such is the extraordinary aspect they present, that it is not surprising the rude Indians should gaze upon them as the spirits of their fathers roaming through the land of souls. They are variously white, pale red, or of a deep blood color; and sometimes the appearance of the whole rainbow as to hue is presented. When several streamers emerging from different points unite at the zenith, a small and dense meteor is formed, which seems to burn with greater violence than the separate parts, and glows with a green, blue, or purple light. The display is over sometimes in a few minutes, or continues for hours, or thro' the whole night, and appears for several nights in succession. Captain Beechey remarked a sudden illumination to occur at one extremity of the auroral arch, the light passing along the belt with a tremulous, hesitating movement toward the opposite end, exhibiting the colors of the rainbow; and as an illustration of this appearance, he refers to that presented by the rays of some molluscous animals in motion. Captain Parry notices the same effect as a common one with the Aurora, and compares it, as far as its motion is concerned, to a person holding a long ribbon by one end, and giving it an undulatory movement through its whole length, though its general position remains the same. Captain Sabine likewise speaks of the arch being bent into convulsions, resembling those of a snake. Both Parry, Franklin, and Beechey, agree in the observation that no streamers were ever noticed shooting downward from the arch.

The preceding statement refers to the Aurora in high Northern latitudes, where the full magnificence of the phenomenon is displayed. It forms a fine compensation for the long and dreary night to which these regions are subject, the gay and varying aspect of the heavens contrasting refreshingly with the repelling and monotonous appearance of the earth. We have already stated that the direction in which the Aurora generally makes its first appearance, or the quarter in which the arch formed by this meteor is usually seen, is to the Northward. But this does not hold good of very high latitudes, for by the expeditions which have wintered in the ice, it was almost always seen to the Southward, while by Capt. Beechey, in the Blossom, in Kotzerne Sound, 250 miles to the Southward of the ice, it was always observed in a Northern direction. It would appear, therefore, from this fact, that the margin of the region of packed ice is most favorable to the production of the meteor. The reports of the Greenland ships confirms this idea; for, according to their concurrent testimony, the meteoric display has a more brilliant aspect to vessels passing near the situation of the compact ice, than to others entered far within it. Instances, however, are not wanting of the Aurora appearing to the South of the zenith in comparatively low latitudes.—Lieutenant Chappell, in his voyage to Hudson's Bay, speaks of its forming in the zenith, in a shape resembling that of an umbrella, pouring down streams of light from all parts of its periphery, which fell vertically over the hemisphere in every direction. As we retire from the Pole, the phenomenon becomes a rarer occurrence, and is less perfectly and distinctly developed.—In September, 1828, it was observed in England as a vast arch of silvery light, extending over nearly the whole of the heavens, transient gleams of light separating from the main body of the luminosity; but in September, 1827, its hues were red and brilliant. Dr. Dalton has furnished the following account of an Aurora, as observed by him on the 15th of October, 1792:—Attention, he remarks, "was first excited by a remarkably red appearance of the clouds to the South, which afforded sufficient light to read by at 8 o'clock in the evening, though there was no moon nor light in the North. From half-past nine to ten there was a large, luminous, horizontal arch to the Southward, and several faint concentric arches Northward. It was particularly noticed that all the arches seemed exactly bisected by the plain of the magnectic meridian. At half-past ten o'clock streamers appeared, very low in the South-east, running to and fro from West to East. They increased in number, and began to approach the zenith apparently with an accelerated velocity, when all on a sudden the whole hemisphere was covered with them, and exhibited such an appearance as surpasses all description. The intensity of the light, the prodigious number and volatility of the beams, the grand intermixture of all the prismatic colors in their utmost splendor, variegating the glowing canopy with the most luxuriant and enchanting scenery, afforded an awful, but at the same time the most pleasing and sublime spectacle in nature. Every one gazed with astonishment, but the uncommon grandour of the scene only lasted one minute. The variety of colors disappeared, and the beams lost their lateral motion, and were converted into the flashing radiations. The Aurora continued for several hours."

A correspondent of the National Intelligencer, writing over a year since, offers the following remarks on the causes of the Aurora. He says:

"A vast number of theories and hypotheses have engaged the attention and ingenuity of philosophers regarding the Aurora Borealis. Among other things, it has been ascribed to particles thrown off from the sun's atmosphere, to reflections of the sun upon the polar ices, to broken up comets and to electricity in vacuo; while in an earlier age it awakened superstituous terrors, being deemed ominous of war, pestilence and famine, and a fearful supernatural precursor of the Day of Judgment.

The revelations of science have brushed away those delusions, and late experiments and discoveries show that it is an atmospherical phenomena, that all the elements necessary to account for it exist in the air and are regulated and governed by atmospherical laws, as plainly as the rainbow, or the hues which glow in the evening sky.

The basis or 'substrate' of the Aurora is unmistakably a light, thin, transparent vapor, approaching the condition of the cloud, called Cirus, by meteorologists—each stratum peculiarly susceptible of magnetic influences.

Mr. Faraday, in his recent explanation of the power and force of electro-magnetism, states that 'the magnetic force invests the earth from pole to pole, rising in one hemisphere, and passing over the equatorial regions into the other hemisphere, which completes its circuit of power.'

These 'lines of magnetic force' rise at greater angles in the high than in the equatorial latitudes. In the higher latitudes they encounter, and act upon, and irradiate the vaporous media which form the basis of the Aurora Borealis—while the coruscations—the fantastic motions—the sunny hues—the almost heat lightning glances, and the prismatic colors, are due to the electro-magnetic light reflected on the watery part of the vapor, and the chemical agitations of the elements in the mysterious meteorological processes.

It appears from the foregoing data that the Aurora Borealis consists of a translucent humid vapor, analagous to and not higher than the clouds; inflated, condensed, spread abroad and otherwise modified by gases and chemical affinities, and illuminated by a 'meteorological process evolving Electro-Magnetic Light.'"

"I AM rich enough," says Pope to Swift, "and can afford to give away a hundred pounds a year. I would not crawl upon the earth without doing a little good. I will enjoy the pleasure of what I give by giving it alive, and seeing another enjoy it. When I die," he added, "I should be ashamed to leave enough for a monument, if there was a wanting friend above ground."

# Sunday Reading.

## A PRAYER FOR THE MILLION.

God of the mountain, God of the storm,
God of the flowers, God of the worm!
Hear us and bless us,
Forgive us, redress us;
Breathe on our spirits thy love and thy healing,
Teach us content with thy fatherly dealing;
Teach us to love thee;
To love one another, brother his brother,
And make us all free—
Free from the shackles of ancient Tradition;
And show us 'tis manly, 'tis godlike to labor!

God of the darkness, God of the sun,
God of the beautiful, God of each one—
Clothe us and feed us,
Illume us and lead us;
Show us that avarice holds us in thrall—
That the land is all thine, and thou givest to all.
Scatter our blindness;
Help us do right all the day and the night—
To love mercy and kindness:
Aid us to conquer mistakes of the past,
Show us our future to cheer us and arm us
The upper, the better, the mansions thou hast;
And God of the grave, whom the grave cannot harm.

## THE BELL IS TOLLING.

WHAT sounds more solemn, than the tolling bell, which announces to its hearers the sad tidings that another of our fellow mortals has passed from time to eternity? And what suspense, until we ascertain the family which has been so severely afflicted.

This evening, as I sat busily engaged with my sowing, the room was very quiet, for the others were all either reading or writing; all was calm without; we were startled by the ringing of the bell. How doleful and mournful it sounded! Soon it ceased to ring, and commenced tolling. [As it tells the number of years of the person deceased, we should know whether the deceased was an old, middle aged, or young person.]

It struck, one,—two—three—four. "A child!" we all exclaimed, and then wondered whose it could be. Perhaps it is an idolized, and only child. How sad the thought! But was it not kind in God to take it, ere it had tasted the sorrows and trials of this wicked world? Yet how much its childish prattle will be missed! The sight of the now useless toys, will but add to the doting mother's agony.

Well do I remember losing a little sister, nearly four years of age. She was the flower of the flock, and none knew her but to love her, she was so mild and gentle.—Oh how much we missed her! It appeared as though more than one was taken, when our band of eight was broken. Indeed we thought her almost perfect. She was too pure for earth, and was borne on angels wings to that Being before whom we must all sooner or later stand. D****

Farmer, N. Y., 1853.

How thankful ought he to be whom God blesses with buoyant health, and to whom he imparts a hearty will for labor, and upon whose path His smile of prosperity rests. Such a one can take sweet enjoyment with his own thoughts, and look forward with a strong hope for the continual coming of better things. There is no thorn in the past to harass—nor desire to dwell on the dark pictures of life. He is content to live and struggle with the world, for his crowning success, though his path lies along the humbler lanes of life. There is a reward he feels above price in doing his duty, hoping through the merits of the Intercession to reach that "home of Glory" where his task is done and Earth fades as in a vision.

T. E. W.

NATURE.—Beautiful is nature! Mountain, wood, and valley speak,—*There is a God.* From the moss of the tree and the bosom of the earth it sounds,—*There is a God.* Everything around me, the Omniscient has created,—the sun, the moon and stars are the work of the Lord,—witnesses of his power. O how great is He who holds the earth and the host of heaven, who conducts the clouds and rules the thunder and lightning and the whole universe.

O, my soul, bless thy Creator—be glad of his grace! All is his, He will not forget thee. T.

## A GOLDEN THOUGHT.

WE know not the author of the following, but it is pretty:—Nature will be reported. All things are engaged in writing their history. The planet, the pebble, goes attended by its shadow. The rolling rock leaves its scratches on the mountain, the river its channels in the soil, the animal its bones in the stratum, the fern and leaf their modest epitaph in the coal. The falling drop makes its sculpture in sand or the stone; not a foot steps into the snow, or along the ground, but prints in characters more or less lasting a map of its march; every act of the man inscribes itself on the memories of its fellows, and in his own face. The air is full of sounds, the sky of tokens; the ground is all memoranda and signatures, and every object is covered over with hints, which speak to the intelligent.

# Miscellaneous.

## THE DAYS GONE BY.

BY CHARLES SWAIN.

The days gone by—'tis sad yet sweet,
To list the strain of parted hours;
To think of those we loved to meet
When children 'mid a thousand flowers!
The scenes we roved—romantic—lone—
Ere yet our hearts had learned to sigh—
The dreams of glory once our own—
In days gone by—in days gone by!

The days gone by—O! is there not
A charm—a feeling in those words—
A music ne'er to be forgot—
Struck out from memory's sweetest chords!
With many a tone to wake a tear,
And many a thought we fain would fly;
O! still to every heart are dear
The days gone by—the days gone by!

The days gone by—they have a spell
To burst the cerements of the grave;
And from oblivion's deepest cell,
The forms we loved and lost—to save!
Time may not fade those locks of light,—
Still beauteous to the mental eye,
As the first hour they blest our sight,
In days gone by—in days gone by!

The days gone by—Man's best essay—
One fadeless work to leave behind—
Before their might hath passed away,
Like dust upon the desert wind:
The very mountains have grown grey—
And stars have vanished from the sky—
The young—the fair—oh! where are they?
With days gone by—with days gone by!

The days gone by—from shore to shore
Their ever lengthening shadows spread,
On—on till time shall breathe no more—
And earth itself be with the dead;
Each brief—unnoticed—minute bears
The mandate of its God on high;
And death and silence are the heirs
Of days gone by—of days gone by!

Written for the Rural New-Yorker.

## WOMAN'S RIGHTS, BY LAW.

MR. MOORE:—Permit me through the medium of your much valued journal, to make a few remarks relative to Woman's Rights, as they ought to be secured by law, (or rather, *not violated by law.*) The laws of the State of New York give a married woman no right to any part or potion of the family possessions; they make her a dependent slave on the will of her husband, which is a direct violation of her natural rights. It is unjust, and a disgrace to the maternal sympathies of civiziled society.

The wife, by law has no right, no control, no management of any portion of the family property, which is intended for the family's support, and its joint and mutual benefit; all by law belongs to the husband—every thing is his, and at his disposal; lot him be a worthless vagrant, or a wilful spendthrift, all is at the disposal of his caprice or whim. The wife may be prudent, industrious, and economical; she may daily do more for the comfort and support of the family than he does; she may have earned more of the family domain than he; yet it availeth her nothing—she is a mere cypher *by law*, having no right to the fruits of her industry, no power to stay the wasteful extravagance of her husband, no means of saving a pittance from the general wreck, which she sees daily wasting the family support. She realizes the awful consequences, the wretchedness and poverty of herself and children, but it availeth her nothing, for she has not the power to prevent, nor the right to control, even one-third of their mutual possessions—no right to say, Thy wasteful hand can come thus far, but no further. All can be destroyed by her husband's wickedness or folly, and she and her helpless children cast on the cold charity of the frigid world for their support.

And provided she survives her husband, her case is not much better, unless he had the prudence to make his will, and the magnanimity to protect by it the rights of his wife (which is much too often neglected.) She is considered by law, not only a mere novice, destitute of natural rights, but insulted, and her wounded feelings lacerated by the tyrant law, under the form of legal settlements. The death bed of her husband is scarcely vacated before legal steps must be taken to settle the estate, and dispossess her of her home, which perhaps was more the fruit of her industry and skill, than that of her husband; but that matters not, all must be sold, and she turned adrift with the pittance of a life lease of one-third of the possessions—not one cent that she can call her own, not one cent that she can leave at her death to reward a kind and faithful attendance through sickness or a lonely old age. But that is not all she is made to suffer; she is such an inhuman and unfeeling being that she cannot be intrusted with the management of her children. A humane being in shape of a man must be appointed guardian, to prevent her from neglecting, or perhaps robbing her infant babe. Such is the usage that the law deals out to the afflicted widow.

But how is it with the man, on the death of his wife. He is not made to pass through the trying ordeals of window-hood; he is treated with tenderness and care—no legal steps are taken to harrass his wounded feelings, nothing about his mansion is disturbed to increase his loss, or aggravate his sufferings. And man is naturally so much more affectionate and humane than woman, that he can be intrusted with the care of his children; no guardian is necessary to protect them from the husband's neglect; he can live unmolested until he forgets his sorrow; then he may increase his possessions by taking to himself another wife with a fortune.

But how can these evils be remedied?—Give the wife, by law, a right to one-third of their mutual possessions, so that her husband cannot waste it by extravagance or folly, nor dispose of it without her consent—and at the death of the husband, the third of the property to belong to the widow through life, and at her disposal by will at her death. The dwelling house, with furniture, ought to remain her undisturbed home as long as she lives, as a resting place for herself and children, and she be their guardian; there will not be any more danger of the children being robbed, or misused by a groveling and avaricious father-in-law, than there is under the present law, by a selfish and petulant step-mother. Nor is there any more danger that the wife will be unreasonable, and control the property adverse to the general good, than as it now is under the absolute management of the husband. Women are not generally any more unreasonable, ungenerous, or unjust, than the men, and there is no more probability that the wife will say that this is wrong and you shall not touch it, than there is of the husband declaring that the property is all mine and you have no business with it. Nor will it be any more derogatory to the dignity of human nature, that an unreasonable man should be under a portion of petticoat government, than that the women shall be under absolute breeches control.

The matrimonial union is not a stock-jobbing firm for making money, where the profits are to be divided in proportion to the capital invested by each; but it is a mutual insurance union, for the general good and common benefit of all concerned. Their interests are mutual, (at least ought to be,) and the property should be considered the common stock of both. That this is mine, and that yours, is a feeling that never should exist between man and wife, and never will where peace and happines is secured by the union; and when the parties are what they ought to be there is no call for laws to regulate their actions nor their property.

But all mankind are not virtuous, prudent and wise; therefore laws are enacted to prevent the evil effects of the wicked and foolish, and it would not be any more of a disgrace to a wise and prudent man, that his wife should by law have the control of a portion of the property, provided that he should be profligate and extravagant, than it is to an honest man, that laws are made against stealing. The settled usages of society ought not to be changed for the removal of trifling defects, nor imaginary inconveniences; but it is equally true, that the relics of barbarism linger too long in the statutes of civilized men. A poor victim suffers from the cruelty of the edict—his fate is regretted—it is talked of with feelings of sorrow for a time—but it is forgotten, and the evil remains to be reacted, until we are astonished that such an outrage on the feelings of humanity has been allowed to continue so long.

Making the wife a passive slave of her husband is the dreg of savage life, which has long been discarded by civilized society, and the laws which foster it ought to be expunged from the statute books. J. D.

Monroe County, N. Y., 1853.

## TO MAKE A GOOD WIFE UNHAPPY.

WE apprehend there are many husbands who will read the following with a blush:

See your wife as seldom as possible. If she is warm-hearted and cheerful in temper, or if after days or weeks of absence she meets you with a smiling face and in an affectionate manner, be sure to look coolly upon her and answer her with monosyllables. If she force back her tears and is resolved to look cheerful, sit down and gape in her presence till she is fully convinced of your indifference. Never think you have anything to do to make her happy—but that her happiness is to flow from gratifying your caprices; and when she has done all that a woman can, be sure you do not appear gratified. Never take an interest in any of her pursuits; and if she asks your advice, make her feel that she is troublesome and impertinent. If she attempts to rally you good humoredly on any of your peculiarities, never join in the laugh but frown her into silence. If she has faults, (which without doubt she will have, and perhaps may be ignorant of,) never attempt with kindness to correct them. By such a course you will not fail to make an unhappy wife; and if you have children, they will not fail to be inoculated with the example, which they will shew in their respect to their parents.

## THE SUNBEAM, DEW DROP AND ROSE.

A DEW-DROP hung trembling like a timid thing upon the soft velvet leaf of a rose.—It sparkled and flashed, each time the breeze wooed the rose buds with myriads of brilliant hues, till it seemed as if a rainbow had been imprisoned within its crystal bosom, and was struggling to escape. Now the rose beheld its beauty, and thought she had never seen so lovely a creature; so she spoke to it gently, in a voice that seemed like the essence of a summer wind.

"Beautiful dew-drop!" said the rose, "I love you. You are like the stars that I see looking down from heaven on me when the wind wakens me at night; but I love you more than I do them, for *you* are near me, and they are far away. Come dwell with me ever, sweet gem of the morning, and to thee will I unlock all the fragrance of my bosom."

The rose as she spoke, unfolded her delicate leaves, until the dew-drop beheld the crimson depths of her heart, glowing with love and passion.

Just then a sly sunbeam peeped out from behind an embroidered cloud, and saw the dew-drop, which was quivering with emotion at the declaration of the rose.

"Heed not that foolish flower, sweet dew-drop!" cried the sunbeam; "she would never love you as I can. Be mine, and I will bear thee up amongst the highest stars of heaven, and when I look at thee thou shalt outshine them all."

The dew-drop was bewildered, and knew not what to say. It would gladly have reigned in the golden heavens, and been the queen of the stars, but it feared the fierce ardor of the sunbeam; and then the rose kept whispering such sweet things to it with its mossy lips, that it could not help loving its gentle voice. So it thought a little, and then replied to the sunbeam thus—

"O, golden sunbeam! who gazest at me with thine eyes of splendor; thou art far too great for me to love thee. What would I, a poor timid dew-drop, do, wedded to such magnificence as thine? At thy first embrace, I should melt away and vanish like the morning mist upon the hills. But the sweet rose I love dearly. Her kisses are laden with perfume, and from her bosom steals forth all the fragrance of love. O fond and beautiful flower! in thy rosy chalice I will dwell forever and be happy!"

So saying, the dew-drop slid gently down into the glowing bosom of the rose, and nestled among her velvet leaves.

Sensible dew-drop! well didst thou know that it is not the love that dazzles most which brings the greatest peace. The love of the sunbeam would have been fatal to thee, while that of the rose gave thee happiness and contentment. Love, like the skylark, though sometimes soaring to Heaven, still builds its nest upon the earth!

## TEST OF SUCCESS.

THE truest test of success in life is character. Has a man built up, not a fortune, but a well-disciplined, well-regulated character? Has he acquired not more gold or acres, but virtue, benevolence and wisdom? Is he distinguished, not for his ingots, but for his philanthropy? That is the only true test of a man.

Gold is every day becoming of less consideration in society. There are so many rich men already, and likely to be so many richer still, that the possession of mere wealth will entitle a man to no consideration of itself, unless accompanied by some other and more rational claims to distinction and respect. The rulers of opinion—the men of mark in society in this day, are most of them self-made men. They may be rich men—that is very well so far, but they are also men of moral power—of scientific skill—of enlightened judgment—and of large public spirit. It is not the mere power of the till which these men wield, but the power which works in their moral character and disciplined experience. These are the strong men of Parliament now—one of whom was a weaver boy. Yet these individuals exercise a greater power in society than the roll of dukes or the bench of bishops. One has distinguished himself by his pen, another by his legislative power, and the third by his works—unrivalled in any age. These men are the embodiments of success in the truest and highest sense.

THE MOST BEAUTIFUL HAND.—Two charming women were discussing one day what it is that constitutes beauty in the hand.—They differed in opinion as much as in the shape of the beautiful member whose merits they were discussing. A gentleman friend presented himself, and, by common consent, the question was referred to him. It was a delicate matter. He thought of Paris and the three goddesses. Glancing from one to the other of the beautiful white hands presented to him, which, by the way, he had the cunning to hold for some time in his own, for purposes of examination, he replied at last:—"I give it up—the question is too hard for me; but ask the poor, and they will tell you that the most beautiful hand in the world is the hand that gives."

TIPPED WITH THE ROMANTIC.—There is now in the mountain regions of western Virginia a lady from Kentucky, described by the Parkersburg Gazette as young pretty, educated and sprightly, who is there to protect her rights to a large tract of land which descended to her from her ancestors, to whom it was patented for Revolutionary services, but is now claimed by a land pirate, who formerly acted as her agent. To defend her rights "solitary and alone" to the disputed territory, she went, made a clearing, built a log cabin and located a tenant. She always carries one of Colt's revolvers, and thus armed roams fearlessly over the mountains, following paths seldom trod save by the panther and bear.

## A PARAGRAPH FOR POSITIVE PEOPLE.

How quietly, yet strongly expressed, is the valuable idea of the paragraph annexed. It is the opening passage of an article in the last *Westminster Review*:

From time to time there returns upon the cautious thinker the conclusion that, considered simply as a question of probabilities, it is decidedly unlikely that his views on any debateable topic are correct.—"Here," he reflects, "are thousands around me holding on this or that point opinions differing from mine—wholly in most cases; partially in the rest. Each is as confident as I am of the truth of his convictions.—Many of them are possessed of great intelligence; and, rank myself as high as I may, I must admit that some are my equals—perhaps my superiors. Yet whilst every one of us is sure he is right, unquestionably most of us are wrong. Why should not I be amongst the mistaken? True, I cannot realize the likelihood that I am so: but this proves nothing; for though the majority of us are necessarily in error, we all labor under the inability to think we are in error. Is it not, then, foolish thus to trust myself? When I turn and look back into the past, I find nations, sects, philosophers, cherishing beliefs in science, morals, politics and religion, which we decisively reject.—Yet they hold them with a faith quite as strong as ours: nay—stronger, if their intolerance of dissent is any criterion. Of what little worth, therefore, seems this strength of my conviction that I am right! A like warrant has been felt by men all the world through; and, in nine cases out of ten, has proved a delusive warrant. Is it not, then, absurd in me to put so much faith in my judgments?"

## THE RISE OF NEWSPAPERS.

THE Boston Post furnishes some interesting facts in regard to the rise and early progress of newspapers. In James 1st's day, in England, news was occasionally circulated in small pamphlets. The earliest one preserved in the British Museum is entitled "News out of Holland," of the date of 1619, and printed by N. Newbury; and there are others of the date of 1620, 1621, 1622. In 1622, these quarto issues were converted into a regular weekly issue entitled, "News of the present week," edited by Nathaniel Butler;—and this was the first weekly newspaper printed in England. In Charles 1st's day, these news pamphlets multiplied greatly. In 1622 the "Kingdom's Intelligencer" was commenced in London, which contained a greater variety of matter than had been customary. In a few years the advertisement feature began. It was not until Queen Anne's time, in 1709, that the Londoners had the luxury of a daily journal—"The Daily Courant." Scotland had a newspaper in 1653; Ireland in 1641; Germany in 1612; the American colonies in 1704. The earliest country that had them is supposed to be Italy.

## CAUSE FOR NATIONAL GRATULATION.

IN a recent address, Hon. Edward Everett, while referring to the vast sum paid in the United States for the relief of poor emigrants from Europe, said that when he was Minister to the Court of St. James, he received a letter from one of the interior counties of England, telling him that they had in their House of Correction an American seaman, whom they were desirous of being rid of. He wrote back that he might be sent to London, where he would be shipped to the United States; adding the suggestion, that if her Majesty's minister at Washington were applied to in a similar way by the overseers of the poor and wardens of the prisons in the United States, he would be pretty busily engaged. "I really felt pleased," said he, "at a time when my own little State of Massachusetts was assisting from ten to twelve thousand destitute British subjects annually, to be able to relieve the British empire, 'upon whose dominions the sun never sets,' of the only American pauper quartered upon it."

## IMPORTANCE OF TRIFLES.

ONE of the earlier founders of the cotton trade in England purchased an estate in a neighboring county, from a peer, for several hundred thousand pounds. The house with its furniture was to remain precisely as it stood. When the purchaser took possession, he missed a small cabinet from the hall, worth some three or four pounds. He applied to the late owner about it.

"Well," said the noble lord, "I certainly did order it to be removed. It is an old family cabinet, worth more from its associations than any thing else: I hardly thought you would have cared about so trifling a matter in so large a purchase."

"My lord," was the characteristic answer, "if I had not all my life attended to trifles, I should not have been able to purchase this estate; and, excuse me for saying so, perhaps if your lordship had cared more about trifles, you might not have had to sell it."

LOVE OF THE COUNTRY.—To be happy is the object of life, and all that the world can give toward it, is health and competence. "Health of body is above all riches, and a strong body is above infinite wealth." And where is health to be found? There is no need of an audible answer. Look around on an assembly from the rural districts of the country, and we shall see bright eyes and blooming cheeks, as well as strong arms and untiring strength, giving testimony that earth's first blessing is bestowed upon those who labor upon her bosom.

Why is our food so very sweet?
Because we earn before we eat.
Why are our wants so very few?
Because we Nature's call pursue.
Whence our complacency of mind?
Because we act our parts assigned.

# For the Ladies.

## UNOCCUPIED FEMALES.

THERE are certain unoccupied females so overfriendly as to take the entree of the whole house. These are generally ultra-neighbors, who run in at all hours of the day and evening; ferret out the ladies of the family wherever they may be, up-stairs or down; watch all their proceedings when engaged, like good housewives, in inspecting the attics, the store-rooms, the cellars, or the kitchens. If they find that the front door is kept locked, they glide down the area steps, and get in through the basement. Or else they discover some back entrance by which they can slip in at the "postern gate"—that is, alley-wise; sociablists are not proud. At first, the sociablist will say, on making her third or fourth appearance for the day, "Who comes to see you oftener than I? But after a while even this faint shadow of an apology is omitted, or changed to, "Nobody minds *me*." She is quite domesticated in your house—an absolute *habitue*. She sees all, hears all, knows all your concerns. Her talk *to* you is chiefly gossip, and, therefore, her talk *about* you is chiefly the same. After she has had her dinner at her own home, she comes bolting into your dining-room, and "sits by," and sees you eat yours. It is well if she does not begin with "a look in" upon you before breakfast. She finds out every body that comes to your house; knows all your plans for going to this place or that; is well acquainted with every article that you wear; is present at the visits of all your friends, and hears all their conversation. Her own is usually "an infinite deal of nothing," which expression the intelligent reader, without any comment of our own, will, we believe, perfectly understand.—*The Behavior Book.*

## DUE MATURITY FOR MARRIAGE.

WHEN the mother takes no pains, the marriage of the daughter, even if not in itself ineligible, is likely to be deferred. For the age at which marriage is to be contracted, is a very material consideration. Aristotle was of the opinion that the bridegroom should be thirty-seven years of age, and the bride eighteen, alleging physical relation which I venture to think exceedingly inconclusive. Eighteen for the bride is the least to be objected to, and would yet be rather earlier in this climate. A girl of that age may not be absolutely unprepared for marriage; but she has hardly had time for that longing and yearning affection which is to be her best security afterwards.

The woman should marry rather before than after that culminating period of personal charms which, varying much in different individuals, is but a short period in any, and occurs in early youth in almost all.—She should marry between twenty and thirty years of age, but nearer the former than the latter period.

Now the man at such an age would probably be too light for the man's part in such a marriage; and the more so when marrying a wife equally young. For it is very well known that when two people join together in matrimony, it is as if one sweet pea should be put up as a prop to another. The man, therefore may be considered the most marriageable when he is a little beyond thirty. In the case of a serious and thoughtful man, it need not be deferred so long, for in such a case, a remark made in a letter of Lord Bacon's will probably be verified—that a man finds himself several years older after his marriage.—*Henry Taylor's Notes on Life.*

## BABIES ON THE ISTHMUS.

A GENTLEMAN who has lately "traveled over Jordan," on his way to the promised land of California, relates a queer incident that took place while he was crossing. It seems there was quite a number of ladies in the company from Aspinwall to Panama, and many of them were bountifully supplied with responsibilities, whose ages floated from one to eight years. On these occasions, female timidity is apt to get a little the better of maternal anxiety, and the said responsibilities, instead of being attached to the apron strings of their anxious mammas, were packed in baskets and carried on the backs of the natives, with the trunks and other baggage, and fell considerably in the rear. When night came on, and the party halted at a hotel on the road, the babes in the wood were among the list of missing.—There was great wailing and weeping among the bereaved, and probably some gnashing of teeth by the "children," who were desperately hungry. A party was dispatched in the rear in search of the lost treasures, and they found the natives coolly encamped in the woods with "Young America," utterly unconscious of the fuss that was going on, and no doubt supposing that, if the children and other baggage were got to the steamer in time for sailing, it would be all right.—The young ones were handed to their several mothers about day-light, and grief was speedily changed to rejoicing.

MISTRESS OF ARTS.—The honorary degree of Mistress of Arts was recently conferred by the Trustees and Faculty of Franklin Female College, upon Mrs. Sarah J. Hale and Mrs. Lydia H. Sigourney. So far as we recollect, this is the first instance in which honorary degrees of this kind have been conferred. Few ladies of the present age are more fairly entitled to literary distinction that Mrs. Hale and Mrs. Sigourney.

A GOLDEN rule for a young lady, is to converse always with your female friends, as if a gentleman were of the party; and with young men, as if your female companions were present.

MOORE'S RURAL NEW-YORKER.

ROCHESTER, OCTOBER 1, 1853.

PUBLISHER'S NOTICES.

☞ AGENTS.—Any person so disposed can act as agent for the RURAL NEW-YORKER,—and all who remit according to terms will be entitled to premiums, &c.

☞ THE RURAL is published strictly upon the CASH SYSTEM—sent no longer than paid for—and all orders should be in accordance with terms.

☞ ADVERTISEMENTS must be brief, appropriate to the objects of the paper, and accompanied with the cash.

☞ FOR TERMS, &c., see last page.

## An Explanation.

FOR over three months the writer has been the only regular occupant of the Sanctum, and subjected to the principal labor and detail of filling and arranging each of the many departments of the RURAL. Though valuable aid has been rendered by absent assistants, contributors and correspondents, we have not had (Sundays excepted) a half day or even an evening's leisure—scarce an hour for either rest, recreation or amusement.—Our principal associate, Mr. BIXBY, has been absent since June, in consequence of the severe and protracted illness of his lately chosen partner for life—a most painful affliction. Mr. WHITE has often rendered timely assistance, but his business engagements have prevented him from contributing regularly.

Although a portion of our time and attention have necessarily been devoted to the business affairs of the paper, and to the management of our monthly, the RURAL has received all the care and labor we could well bestow upon its pages. Yet one person cannot properly perform the labor of two or three, and hence we often—perhaps oftener than many readers—notice defects and imperfections. Our present number is incomplete—the more so from the fact that we are obliged to furnish much of the matter while watching, (as we now are,) in the chamber of illness. Under such circumstances, we need not ask the indulgence of readers for imperfection in contents or arrangement. We are happy to assure all interested, however, that arrangements are nearly completed whereby two gentlemen of superior talent and experience will soon be added to the editorial corps of this journal. By this addition to improve its Contents, and the decided improvements which will ere long be made in its Appearance, we hope to prove to our readers, not only that the unexampled measure of support accorded to the RURAL NEW YORKER is fully appreciated, but that we adhere to its motto—"Progress and Improvement."

—This explanation and allusion to private affairs, which some may consider unnecessary, is made in justice to the parties most interested—subscribers and ourselves.

## The Russo-Turkish Affair.

WE have further intelligence of the situations in this tedious drama, by the arrival of the Arctic. The precise stage of the matter is portrayed in the following terms by the London correspondent of the *Tribune;*

The political atmosphere is sultry, and difficulties are again looming in the future, which put the skill of diplomacy to a serious trial. It has now been ascertained that the majority of the Turkish Ministry refused to accept the Vienna note, and that it was only the personal interference of the Sultan which decided its acceptance together with modifications which the Moniteur and the Times have termed unimportant, but which excite some uneasiness with the Russian Organ. "Great doubt," says the oracle of Printing House Square, "may be entertained as to the acceptance of these terms at St. Petersburgh in their altered form," while its Vienna correspondent tells us, "but according to all the advices from the Principalities, Russia can hardly quit them now, and the inclemency of the autumnal weather will soon render their complete evacuation perfectly impossible." Now this is serious enough after the declarations which have fallen from the English Ministers about the evacuation, but the complication is augmented by the claim of the Porte for a guaranty against any further Russian interference and against these periodical occupations of Moldavia and Wallachia.

LEAD IN NORTHERN NEW YORK.—The Albany State Register says one of the most valuable minerals found in the Northern States is lead, which has lately been discovered in immense veins in Northern New York, near Ogdensburgh. Two incorporated companies have recently commenced operations there with satisfactory results, although they are yet comparatively in their infancy, namely—"The Victoria Lead Company," and the "Great Northern Lead Company." A letter from one of the directors of the last named corporation, states that a vein of "solid galena" has just been discovered, eighteen inches wide, worth $500 per fathom. From five hundred feet in length, $240,000 worth of lead has been realized, and there is little doubt that the new vein will yield in like proportion.

THE EMPEROR OF JAPAN is about twenty-one years of age; his title is Thin-Kew, which means Heaven beneath. His palace is in the city of Jeddo; it is surrounded by a strong wall, and outside the wall is a deep canal full of water; his arsenal is close to his palace, built on a mound, where he retreats in case of war, which he is always afraid of. He keeps a strong life-guard about him, and when he rides out, which is very seldom, he has ten or twelve of his ministers dressed in the same uniform with himself, so no person may know him, he is so much afraid of his own subjects.

CHOLERA IN EUROPE.—According to the late advices, this disease has assumed an epidemic form at Hamburg. So far there has been from 160 to 180 cases, about two-thirds of them were fatal. The last accounts from Copenhagen give for that city, attacks 7,287, deaths 3,946. This is in a population of 200,000. The epidemic continues to rage in the Province. At Stockholm 268 had been attacked and 100 died. At Christiana 174 cases and 102 deaths.

## Our Albany Correspondence.

ALBANY, Sept. 26, 1853.

EDS. RURAL:—Politically, Albany is to the Empire State what Washington is to Uncle Sam's united powers. Here, as at the "city of magnificent distances," the political forces are congregated, public sentiment is manufactured and sent abroad, party platforms are prepared for erection, and the "pipe" and "wire" adjusted to suit the times. To be sure, the efficiency of the central power was nearly destroyed by the adoption of the present Constitution, so far as the administration is concerned, yet the political journals at this point exercise a leading and controlling influence on the press and the people at large. Dr. WEED, of the *Journal*; Dr. CROSWELL, of the *Argus*; Dr. HAMMOND, of the *Register*, and Dr. CASSIDY, of the *Atlas*, if not actually *called* as the responsible practitioners in every case, are (one at a time) most certainly summoned as principal Counsel.

At present the parties are cut up and confused to a greater extent than has occurred for many years. The rupture in the Democratic ranks is permanent and incurable. The hostile combatants are arrayed in full armor, and will carry the war certainly as far as into Africa.

The Independent Democracy are seldom spoken of here, although the *people* may speak in tones clear and distinct next November. The friends of Temperance are rallying their forces, and have recently established a paper to further their noble purposes. Several meetings have been held and more are provided for. The papers say but little of the movement, yet the work goes on quietly and effectually.

The Whigs have been very industrious in arranging their programme for the fall campaign. It is generally understood that the two factions have buried the hatchet in the "quick-sands" brought to view by "impeachment diggings," and have commenced their superstructure on the "hard-pan" foundation. It is rumored that the ticket will be headed by Senator BEEKMAN, as Secretary of State, and if it is throughout of a similar character, which it is claimed to be, it will, under existing circumstances, command the strongest vote ever polled in the State for one set of men. The office of Secretary of State is the most important one, as it embraces the supervision of the school system. Mr. BEEKMAN would not only be a good Secretary of State, but as Superintendent of Schools, he would take a course that would place him by the side of the late Col. YOUNG, and others who found *time*, and *improved* it too, for visiting the leading institutions, and actually *doing* something for the cause, which the present incumbent has failed to do. The election of the present Superintendent (it is said,) was effected by the supposition that his name was *Samuel* S. RANDALL, a man who really *had done* something for schools.

But I am digressing. The Barnburners have a ratification meeting to-morrow night, and the Hunkers have theirs Thursday night. Scores of their best speakers have been announced, and a large gathering may be expected. As the political journals are of too partizan a character to tell the *truth* in such matters, I shall try to keep your readers informed of the true rise and fall of the political thermometer in this latitude.

Much excitement has been caused by the publication of letters from GREENE C. BRONSON, Collector, and CHAS. O'CONNER, U. S. District Attorney, declining to attend the Barnburner ratification meeting in New York. *Such* denunciations, from *such* authority, operate like a wet blanket on the hopes of the Barnburners. *OWE.*

## Mr. Rives' Address at Saratoga.

THE address at the agricultural fair held in Saratoga, during the past week, was delivered by William C. Rives, of Virginia. Its subject was the importance of agriculture, and the duties as well as the prospects of agricultural life. After a brief allusion to the times when Virginians were summoned to Saratoga, not to assist in subduing the earth, but to assist in subduing those who had taken forcible possession of it; contrasting the present scene with that presented in the same place seventy-six years ago, the orator spoke of the necessity, the dignity, and the relations of agricultural employment. He next compared the condition of the agricultural laborer in the Old World with that of the same laborer in the United States, dwelling particularly upon the state of the English farm-tenant and of the French peasant—the former seldom the owner of the land he works, and the latter owning, generally, only a few yards of it, and marking the superior productiveness, as well as the more fruitful ingenuity of the American farmer.

Mr. Rives closed with an argument against the common supposition that farming is a comparatively unprofitable branch of industry.

PUBLIC BUILDINGS IN WASHINGTON.—A correspondent of the N. Y. Courier and Enquirer says improvement has been less rapid in Washington during the present season, than for several preceding ones. The work on the Capitol extension, the Monument and Patent Office, has proceeded but slowly. The Superintendent of the Capitol has refused to receive a large portion of the brick made under the contract of the Messrs. Mendall & Co. The whole contract was for fifty millions, and more than two millions have been refused, as inferior to the standard.

MONROE CO. FAIRS.—The three Fairs of our Society are all held this week—at Brockport on Tuesday,—East Rush on Thursday—and at the Court House in Rochester on Saturday. The Annual Address will be delivered at 4 o'clock, on Saturday by JOHN DELAFIELD, Esq., of Seneca county.

LE ROY FAIR.—The Le Roy papers state that the Farmers, Mechanics, Artizans, and amateur gardeners are making extensive preparations for a magnificent Show and Fair in that village, on Thursday next, the 6th of October.

ANTIOCH COLLEGE, Yellow Springs, Ohio, will be dedicated on Wednesday, Oct. 5th. Dedicatory Addresses by Hon. Horace Mann, LLD., whose inauguration as President will take place on the same day.

## The Revolution in China.

WE have before us a letter, not designed for publication, written by an American and Christian gentleman long resident in China, principally at Macao, and favored with rare opportunities for acquaintance with the social and national character of the Chinese, which thus speaks of the insurgent movement in the Celestial Empire: "The civil war in China is another mysterious feature in the politics of the East, with respect to its beneficial results on the well-being of the Chinese. Thus far its consequences have been disastrous and bad in every point of view, and worse seems likely to result, whichever party prevails. The Empire is weakened by the want of specie, long ago paid out for opium, and the Government is crippled by the want of confidence in its ability and resources among the masses of the people.—Hereabout the insurgents have no great number of decided adherents, yet the appearance of even a small army would nearly overthrow the constituted authorities, owing to the prestige they have obtained. Foreigners generally wish them success."—*Com. Adv.*

LATE FROM LIBERIA.—Letters from Liberia of the 6th August have been received. The barque Shirley arrived at Monrovia on the 29th July.

The Methodist missionaries at the different points along the coast were in good health.

The Rev. Mr. Horne, the superintendent of the Monrovia Academy, has suffered less from the effects of the climate than any of his predecessors.

Advices to this date say that the relations of the Government with the native tribes on all sides are such that it is thought lasting peace may be expected, or if there be interruptions at any time or place, it seems impossible that they should be either extensive or of long duration.

"The international relations of the Republic are decidedly harmonious and profitable as far as we are able to take advantage of our treaty stipulations."

THE GOVERNOR OF NEBRASKA has Indian blood in his veins. He was born in Wayne Co., Michigan, in 1809. His father was captured when a child, by the Wyandot Indians, and married a half blood Wyandot girl. The Governor, Wm. Walker, is her son. He was educated at Kenyon College, Ohio. He was seventeen years Postmaster at Upper Sandusky, Ohio. In 1836 he was elected Chief of his nation, the Wyandots. In 1843, he removed with them to their new home west of the Mississippi, and on the 26th July, of the present year, as our readers already know, was elected Provisional Governor of Nebraska. Such an amalgamation of savage and civilized life as that involved in the history of Governor Walker could not be comprehended by our Trans-Atlantic friends.

THE MAINE GOLD MINES.—The Waterville *Mail* says that several persons have just returned from the diggings at Madrid, on Sandy river, Me. The company engaged in digging consists of six persons, most of them from Springfield, Mass. They have bought twenty or thirty acres of land, and are engaged in sinking a shaft and washing the earth for gold. The amount obtained thus far will pay them moderate wages, nothing more.—The gold is found in fine black sand, in places ranging from about the size of a wheat kernel to the smallest perceptible particles—though pieces are said to have been found as large as a kernel of corn. The opinion is expressed that the quantity is small, and that the mines will not pay for working.

REGULATING THE PRICE OF BREAD.—The following is a sample of the manner in which the French Government regulates the price of bread:

*Messieurs et chers Confreres*—We hasten to announce to you that by superior decision the Prefect of Police maintains the price of bread at 40c. the kilogramme for the first fortnight of September, instead of 45c., to which the return of the last fortnight of August had brought it. The Government has formally engaged to indemnify the bakers for this loss by some ulterior compensation. Accept, &c. Signed by the Syndics.

NEW ORLEANS, Sept. 26.—The steamer Texas, with dates from Vera Cruz to the 22d, and Mexico city to the 18th, arrived here last evening. Gen. Tomell, Minister of War, died on the 15th, of apoplexy. No successor has been appointed.—Gen. Manuel Michael Torrena died in Mexico on the 7th ult.

The number of deaths in the 24 hours ending on Sunday morning were 35—of yellow fever 16. The deaths this A. M. were 40—of fever 17. No more daily reports are to be issued.

The deaths at Mobile in the 24 hours ending the 26th were 16—of fever 9.

INSANITY FROM EXCESSIVE STUDY.—In Buffalo, N. Y., a young man belonging to Rochester, but for the past six years a student in the schools of the former city, became a raving maniac. His physician attributes his melancholy condition to an excess of study, and the constant ambition to excel, by which he was inspired. He bit off one of his attendant's fingers, and also assaulted a young lady to whom he was engaged.

UNIVERSALIST CONVENTION.—The general Convention of Universalists has just closed a session at Columbus, Ohio. They adopted unanimously a series of resolutions against the sins of Slavery, Intemperance and War. A resolution fully endorsing the Maine Law, was passed with but one dissenting voice. A resolution in favor of establishing a Theological Seminary in the State of New York, has also been adopted.

SMALL GAME FOR A THUNDERBOLT.—In New Burne, N. C., recently during a severe thunder shower, a large turkey buzzard was soaring at a great hight. A vived flash of lightning was seen and the bird came tumgling from aloft, but literally torn to pieces. The electricity, probably, in passing from one cloud to the other, struck him, and sealed his fate.

FEMALE COLLEGE.—Miss Mary S. Legare, sister of the late Hugh S. Legare, of South Carolina, has given $1,000 to the Des Moines College in Iowa, and $3,000 for a Female College in the same place. The latter will open in November next, with Miss L. as its Principal, and Professor of Literature and the Modern Languages.

A CRUEL WAGER.—A piece of outrageous cruelty was lately committed upon two noble horses in Oramel, Alleghany county. They were raced eighty miles for a stake of $400, the winning horse making the distance in eight hours and eight minutes, including stoppages, and the other dying in less than half an hour after the race.

☞ The State Normal School opened on Monday, Sept. 19th, under the most favorable auspices. Nearly every seat was filled during the first week.

## News Paragraphs.

☞ The Boston Medical and Surgical Journal says that there is a man in Fairhaven, Mr. James Webb, aged 58, who, from infancy, has lived in a state of perpetual thirst. Under ordinary circumstances three gallons of water is rather a short daily allowance for him, and it would be impossible, it seems, for him to live through the night with less than a pailful. With this amount of cold water daily poured into the stomach, Mr. Webb has been in good health and spirits.

☞ The catalogue of railway disasters in the United States, for the last eight months, is thus summed up:—"Sixty five casualities, one hundred and seventy-six deaths, three hundred and sixty-three maimed or injured." On the other hand, in the Empire of France, not one life has been lost in two years, on all its Railroads. Truly, these old and new despotisms do care for the lives of their subjects.

☞ Mr. De Lamater, President of the Long Island Fire Insurance Company, gives a list embracing *one hundred and twenty Explosions of Burning Fluid*, from July, 1851, to August, 1853!—The list is confined mostly to New York, Brooklyn and Philadelphia. In a majority of the cases two or more persons were either killed or seriously injured.

☞ At the Cattle Show and Fair held at Canton, St. Lawrence county, a spirited horse was being exhibited, which, on passing an old man, was struck by him with his cane on the flank.—The horse returned the blow with his heels with compound interest, and with such violence that the man died of the injury in about fifteen minutes.

☞ We learn that Manlius W. Gage, Post Master at Port Glasgow in this county, has been arrested by a United States Marshal and held to bail in the sum of $1,000, charged with breaking open and detaining letters addressed to persons at that office. We forbear to mention farther particulars at present.—*Wayne Co. Whig.*

☞ The printery of the Manchester De Laine works, at Manchester, N. H., was destroyed by fire on Thursday morning week. The loss of building and machinery is estimated at from $200,000 to $250,000. Finished de laine goods worth $25,000 were destroyed. An insurance of $150,000 mitigates the loss of the Company,

☞ An engine on the Ohio and Pennsylvania Railroad exploded lately, instantly killing the engineer and fireman. The force of the explosion was tremendous, lifting the locomotive from the track and hurling it over the bank, a distance of some fifty feet, leaving the track entirely uninjured.

☞ A French Catholic Missionary, conspicuous a few years since as a bible burner at Champlain, has become a Protestant, publicly disowning the Church of Rome, at Burlington, Vt., a brother missionary and six other persons were his companions in the act.

☞ The Boston Advertiser of Tuesday, the 22d ult., states that Prof. Andrews Norton, for many years connected with Harvard University, and a distinguished Theological writer and eminent scholar, died on Sunday evening in Newport, after a protracted illness, aged about 68 years.

☞ A meeting of parties interested in the Saratoga and Sackets Harbor Railroad, was held in New York last Tuesday. The road is under contract at $5,000,000 and it is understood that about one half of the line at the eastern end of the road will be completed by December, '54.

☞ The latest novelty in the way of fraud, is that of making chicory to resemble the coffee-berry. The chicory is ground and made into a stiff paste, and in this state is so moulded as to resemble the real berry. The imitation is so perfect as to deceive the keenest eye.

☞ Mr. Robinson, a justice of the peace in Milford, Ohio, was whipping his dog, when the animal caught him by the throat; his wife with an axe aimed a blow at the dog, but it fell upon the head of her husband, and killed him. Mrs. R. was nearly deranged in consequence.

☞ The Mormons are making an effort for the conversion of India to the creed of Joe Smith.—Thirteen "ministers" arrived there from the city of the Salt Lake, *via* California, and their "high priest" has induced one of the newspapers to publish his manifesto.

☞ Mrs. Maria Hatch, of North Leverett, Mass., has raised the present season a Dahlia, which is seven feet and seven inches in height—measures four inches round the trunk, and has on it at the present time seventy buds and blossoms. It was raised in a box.

☞ A steam saw mill on the Tonawanda Creek in the town of Pembleton, owned by Messrs. I. G. and J. B. Atwood, was destroyed by fire, Friday morning. It was a very fine establishment, and the loss is estimated at $4,000; partly insured.

☞ The project of a railroad from Hoboken to Canandaigua is attracting considerable attention in New York. Boston capitalists are connected with those from this state in canvassing the probabilities of its success if attempted.

☞ The grand jury of the city of Quebec has found bills against fourteen persons "for riotously beginning to demolish the Chalmer's Church, and dwelling house," during the outbreak when Gavazzi was lecturing in the church.

☞ The story of "Uncle Tom," dramatized on the European stage, has caused the death of an actor, Mr. Loeve, who was wounded by a pistol shot during the mock attack of Legree in the reeks, and died from the wounds.

☞ Miss Kline has recovered $500 of Mr. Snydam, a widower in New Jersey, for breach of marriage promise. She proved her case by a female friend, who overheard the contract through a hole in the floor!

☞ In Biddeford, Me., at the late election, an old man who performed the duties of sweeper at the machine shop, was brought forward as a candidate for the State Legislature—*and elected* by a majority of 198!

☞ A Virginia farmer has introduced successfully a beautiful variety of wheat, called the white Mediterranean, from which he has obtained the extraordinary yield of forty-two bushels to the acre.

☞ The aggregate valuation of the real and personal property in Michigan, as fixed by the State Board of Equalization, is $120,362,474—nearly four times as much as in 1851.

☞ The Manchester (N. H.) Mirror estimates the loss of the fire in that city on Thursday morning at $125,000. Three firemen were seriously injured at the same fire,

☞ Mrs. Thompson, a widow lady, last week obtained a judgment against R. Barnes, at Bardstown, Kentucky, for $2,000. He had publicly impeached her chastity.

—— Three men were instantly killed at Cohoes on Thursday week, by the falling of a heavy stick of timber, which was being placed in the frame of a factory.

—— Mr. Tufts, of Medford, who gave the site for the Universalist College on Walnut Hill, has made his will, giving two hundred thousand dollars to the College.

# Foreign Intelligence.

### Arrival of the Steamship Africa.

The steamship Africa, with Liverpool dates to the 10th, reached New York on the 22d ultimo. She brings 534 passengers. The Humboldt arrived out on the 8th. Liverpool cotton market dull—prices favor buyers—but quotations are about the same. Sales of the week, 32,590 bales.

Breadstuff market was lower in the early part of the week, but had partially rallied since the Arctic's sailing, but closed with a decline on the week of 3d in wheat, and 6d@1s. on flour, with fair sales.

Indian corn 6d dearer, and free inquiry. Richardson & Bros. quote white wheat at 8s. 4d@8s. 8d, red 7s. 10d@8s. Canadian, 8s.@8s. 6d. Western canal flour 28s@29s.; Baltimore, 28s. 6d@29s 6d.; Sour 25s. 6d@26s. Indian Corn—Yellow, 32s. 6d@33.; white scarce, and held at 34s. Denniston & Co. quote 6d per bbl. over the above prices.

Beef without improvement; sales of the week moderate at previous rates. More doing in pork at former quotations. Bacon unchanged and inanimate, stock small, shoulders unchanged. In lard small business done—stock in hands of few holders, who demand extreme rates, 58@60s.

Nothing decisive on the Turkish question. The Czar's reply could not arrive by couriers for some days—say fifteen; but the fact that he hesitates to telegraph his reply, had awakened symptoms of renewed anxiety, and had depressed the British and French funds. The answer many think will be peaceful.

The French government is anxiously laboring to make it seem that it is not interfering with the legitimate trade in buying up breadstuffs. The Moniteur publishes an announcement that the Government is not buying up corn—a most extraordinary statement, it being notoriously known that she was buying immensely.

All was quiet in France, except some insignificant bread riots. The Emperor is still at Dieppe. Navigation dues were repealed till December on all vessels passing the French rivers or canals with corn.

The Roman territories were in a very disturbed state, the nominal cause being the scarcity of bread.

Com. Vanderbilt had arrived at Bosphorus with his yacht.

The following is the latest from the second edition of the London Times of Friday:

It is rumored from Paris on the authority of the Russian Ambassador, that the Czar will refuse to accept the modifications coming directly from the Porte.

# California News,

### Arrival of the Northern Light.

### $1,850,000 IN GOLD.

*Destructive Fire in Sonora—Indian Hostilities in Oregon—Butchery of the Whites—Expedition of General Lane.*

New York, Sept. 25.

The steamer Northern Light from San Juan, arrived this forenoon at 1 o'clock.

She brings dates from San Francisco to Sept. 1st. and $1,350,000 in specie on freight, and $500,000 in the hands of passengers. She has 650 passengers from the Brother Jonathan, which brought down 700.

The Cortez arrived at San Francisco August 24th, with the passengers who left New York by the Northern Light on the 5th of Aug. All well.

The markets had been dull since the sailing of the previous steamer. The demand for the interior is light, with no prospect of immediate improvement. Flour was in favor of the buyer, with light sales. Gallego and Haxall fetched $22@23 for inspected. Clear pork $26; mess $24. Hams 16½c. Butter 24@29c. Clear Bacon 15c. Keg Lard 14@15.

The miners are generally doing well.

Emigrants from China and across the plains were arriving in great numbers.

Large shipments of quicksilver are being made to China.

Excess shipments of gold dust for eight months of 1853 over 1852, nearly $10,250,000.

Strikes among the laborers continue, and are generally successful.

Two men who murdered Mr. Beckwith, of Volcano-diggings, were arrested on board the Brother Jonathan on her voyage down to the Isthmus. Their names are Dutch Harry and Jas. Fox.

The steamer Oregon sailed for Panama on the 1st of Sept., with nearly $1,000,000 in gold.

Large meetings had been held in San Francisco, in favor of the immediate construction of the Pacific railway.

Politics are waxing warm. Several prominent Democrats are stumping the State in opposition to Bigler. Dr. H. M. Gray is named by the Whigs for Mayor of San Francisco. The Democrats had named Capt. C. H. Harrison, agent of the Nicaragua Steamship Company, for Mayor.

Bricklayers had struck for $12 a day, and hod carriers for $6—both successful. Vast numbers of buildings were going up at a cost of from $75,000 to $200,000 each. The taxable property of San Francisco is assessed at $29,000,000.

Nearly half of the town of Sonora has been destroyed by fire; it commenced at Barnum's Hotel, and swept down the whole of the north portion of Main street. The business portion of the city was uninjured.

The town of Kelsey Diggings, Eldorado county, was burned down on the night of the 25th of August. Mr. Miller's Bakery, Woodruff & Johnson of the Tremont House, Kossuth House, Empire State House, &c., destroyed.

Dates from Oregon are to August 26th. The Indian insurrection in Rogue River Valley had created great consternation among the inhabitants. The several tribes had united and commenced a war of extermination upon the whites. Many massacres had already been committed. Among the victims are Dr. Wm. R. Rose and John R. Harding. Lieut. B. O. Griffin, with a company of troops, had made an attack upon a party of Indians, and was obliged to retreat with the loss of one man, and himself wounded. An expedition under Gen. Lane had gone to the scene of action, and bloody work was expected. At the last accounts twenty whites had been butchered by the Indians.

---

Going Up.—Wood is now selling in this city for eight dollars a cord, with the prospect of a decided upward tendency. Coal is also advancing Flour sells for seven dollars, and seven dollars and twenty-five cents. All kinds of provisions are sold at enormous prices. Every article of groceries, too, has risen within the last month, and dealers assure purchasers that it will be for their interest to make immediate purchases, as provisions are still "going up."—*Bos. Chron.*

### Important to Postmasters and Others.

We are requested by the Postmaster General to call attention to the following regulations in regard to postage on letters to foreign countries:

*In the mail to Great Britain* the single rate of postage is 24 cents, pre-payment optional. On either a letter or packet of any weight, the *whole* postage or *none at all* should be pre-paid. If anything less than the whole is pre-paid, no account is taken of it, and *it is entirely lost to the sender.*—The British Post Office declines to change this rule, except on conditions considered inadmissible.

*In the Prussian closed Mail to Germany* 30 cents is the single rate, pre-payment optional. This pays from any part of the United States to any part of the German Austrian Postal Union. A pre-payment of any sum less than the regular rate of 30 cents is not recognized, and is of course lost to the sender. A note of fractions of the rate could not be taken without seriously complicating the accounts, besides causing much additional labor and trouble at the exchange offices. But, contrary to the practice under the United States and British Postal Convention, in the Prussian mail every full rate of 30 cents is credited, whether the whole postage on a letter or packet is pre-paid or not, leaving any balance due to be collected at the office of delivery.

*By the Bremen Mail* the rule is the same as under the Prussian arrangement. The single rate to Bremen is 10 cents, to Oldenburg 12, Hamburg 15, to Altona and Hanover 21 cents, and to any other place in Germany 22 cents, pre-payment optional. In either case a pre-payment of any fraction of the full rate goes for nothing.

The rule for rating letters to all foreign countries (except the British North American Provinces) is to charge one rate for half an ounce or under, two rates if the weight is over one-half and not exceeding one ounce, four rates if over one and not exceeding two ounces, six rates if over two and not exceeding three ounces, and so on, charging two rates for every ounce or fractional part of an ounce over the first ounce. As this rule differs from that followed in respect to domestic letters, where each half ounce or fraction of a half ounce counts as one rate only, post-masters who are not careful to observe this difference are liable of course to commit mistakes.

We beg to suggest that in calling attention to this subject editors generally would render to many of their readers an essential service, and we would suggest to those of our readers who have any foreign correspondence, to preserve the above explanations for future reference.—*Nat. Int.*

---

Washington Territory.—We have dates from Olympia to the 29th of August—fourteen days later.

The only subject engrossing the attention of the people of this Territory is what is called the "Cascade Road," which offers a passage-way to the immigrants from the Atlantic State into the Territory. Parties had been sent out for the purpose of opening the road, and had transmitted back flattering accounts of their progress. By means of this road it is said that Washington intends to divide the immigration with her sister, Oregon Territory; the consequence is, quite a spirit of rivalry exists between them.

---

Hogs on the Wabash.—The Louisville Daily Courier learns from a gentleman from the Wabash Valley, and particularly in the neighborhood of Terre Haute, Ia., that hogs are more abundant than ever known in that region before, and the farmers are offering to contract for packing at 2½ to 3 cents net. The corn crops are also represented as in a flourishing condition, and large crops anticipated.

---

Synod of Genesee.—The Dansville Herald of the 21st says the Synod of Genesee, according to previous announcement, met at the Second Presbyterian Church, in that village, Tuesday afternoon. The Synod is one of the largest of the Constitutional General Assembly, numbering 128 ministers, belonging to six different Presbyteries with an equal number of Elders of Churches entitled to seats.

---

Vermont.—The Vermont State Journal sums up the different parties in the ensuing Legislature as follows:

Senate—Whigs 16, Democrat 11, Free Soil 1.
House—Whigs 95, Democrats 82, Free Soil 37.

The whole number of members being 214, 108 is a majority. The Whigs, therefore, are 13 short of that number, and the Democrats 26.

---

Large Cattle Train.—The cattle train which went down over the Boston, Concord and Montreal Railroad on Monday night week, consisted of 125 cars, loaded with cattle and sheep. The cattle trains on this thriving and well managed road are seldom less than a hundred car loads.

---

☞ It is said that sixty thousand dollars is to be expended on the mule road over the Isthmus between Cruces and Panama, and that thro' tickets will be issued about the first of October, when passengers and their luggage will be carried through from the Atlantic to the Pacific, in from twelve to fifteen hours.

☞ The yellow fever is abating at Mobile.—There were only 13 deaths on the 23d. The fever prevails extensively at Galveston, Texas.—Over 100 citizens, including several eminent physicians, have already died. It is also raging at Houston.

☞ A citizen of New Haven, named August Baffet, was murdered in Gold street, New York, on Wednesday night. He was met by rowdies, who knocked him down and killed him. The murderers were not apprehended.

☞ Two hundred Camanche Indians attacked 14 Americans near El Paso and massacred 11 of them. The Mexican and American troops continue to concentrate on the Rio Grande.

☞ The contracts for cleaning the streets in New York have been let for the coming year for $99,970—being a saving over the present year, exclusive of the street manure, of $195,340.

☞ The total number of deaths by yellow fever in the city of New Orleans, from May 20th to September 18th, inclusive, was 7,481.

☞ The Hornellsville Tribune, heretofore an independent or neutral journal, has hoisted the "Adamantime Democratic Ticket."

# Marriages.

In Lyons, on the 22d inst., Mr. CHAS. HAMILTON, of Canandaigua, and Miss CAROLINE A. HOVEY, of the former place.

# Deaths.

In this city, on the 19th inst., of consumption, CHAS. FOSTER, for 15 years a resident of Rochester, aged 53 years and 20 days.

# Market Intelligence.

Rural New-Yorker Office,
Rochester, Sept. 28, 1853.

There has been but little change in prices of marketable commodities since our last report. Breadstuffs are a little firmer. Wheat has again advanced under the influence of the late foreign advices. The street price for good parcels is $1,31½, though some lots have been sold at a higher figure. We hear of sales of some 10,000 bushels during the week at from $1,25 to $1,31.

The break in the Canal is repaired, and the crowd of boats is diminishing, though the low water on the level impedes their progress.

**Rochester Wholesale Prices.**

## NEW YORK MARKET.

NEW YORK, September 27.

Ashes—Steady with fair demand. Pots $5,87½; pearls $5,50.

Flour—Western is buoyant, and in good demand for the home trade and export, and more inquiry for future delivery. State not active but firm. Canadian scarce. Sales at $6.81. Sales of Western Canal $6,31½@6,37½ for common to straight State; $6,37½@6.50 for mixed to fancy Michigan, and common to good Ohio.

Grain—Prime wheat buoyant for immediate delivery, and for some descriptions better prices are obtained.—Sales fair to prime white Genesee $1,50@1.54; ordinary to fair white Canadian $1,37@1.39; good white Michigan to arrive soon $1,45; white Southern $1,49; red do $1,32 for prime; common do $1,25; heated $1,30; 7,500 bush. white Ohio to arrive on p. t.; mixed Genesee $1,43; unsound red 90c.

Rye—Easier and more plenty. Sales at 90@91c.

Oats—Firm and wanted, 47@49c for State and Western.

Corn—Easier and demand less active. Sales at 79@80c. for unsound; 80c. for Southern white and mixed; 80@81c for Western mixed; 84c for Southern yellow.

Provisions—Pork in good demand and firm at $15,87@16 for mess; $12,75@13 for prime.

Beef—In good request at $7@9 for country mess.

Lard—Firm at 11½@11¾c.

Butter—Lower and more plenty. Sales at 14@17c for Ohio; 18@20c for State dairies.

Cheese—Firm at 9½@10¼.

## ALBANY MARKET.

Albany, Sept. 26.—Boats continue to arrive freely from the West, laden with the rich products of the earth.

Flour and Meal—There is not an active demand for Western and State flour, but a fair business is doing at full prices. The Eastern demand is somewhat restricted, but the home and river trade is fair. Sales at $6,12@6,25 for common to good State; $6,19@6,50 for mixed to fancy Michigan and Indiana; $6,12@6,37 for common to good Ohio; $6,50@6,75 for fancy Genesee and extra Western; $6,75@7 for extra Genesee. Corn meal is steady at $1,56 @1,62.

Grain—There is a good home and Eastern milling demand for wheat, and the market is firm with a fair supply of prime. Sales good to prime Genesee at $1,47@1,48—Corn is rather easier, and in moderate request. Sales Western mixed at 79½c afloat, and 80c at road. Barley opened firm with a good home and shipping demand, but closed rather quiet. Sales at 77@77½c for good two rowed, and 84@85c for good to prime four rowed. Oats are not plenty and in fair request. Sales State at 46½c.

Hops—A quiet market, small sales. New at 36@38c and old 30@32c.

Feed—A firm market with a small supply and a good demand. Sales 1,800 bu. second quality at 96c per 100 lbs, and 1,900 bu. fine middlings at $1,81.

## BUFFALO MARKET.

Buffalo, Sept. 26.—There is a fair inquiry for flour this morning and market firm. The receipts are light. Sales at $5.37½ for good brands of Michigan and Ohio.

Wheat in good demand at better rates and market firm. Sales at $1,16@1,18 for white Ohio and Michigan, and $1.12 for Wabash and Michigan City; mixed Michigan at $1,12, and prime Wabash at $1,12 from store. Corn quiet and without sales. Oats in moderate demand and lower, market quiet. Sales at 31c afloat.

Sales 20 bbls. flax seed at $1,25 per bushel.

## NEW YORK CATTLE MARKET.

NEW YORK, Sept. 19—At Washington Drove Yard—The offerings this day comprised 3,958 Beeves, of which 1,600 were New York State cattle. Prices ranged from 5½ to 6¾c. according to quality.

At O'Brien's—On sale 100 Beef Cattle and Cows; all sold at $6@9 for the former, and $40@60 for the latter.

At Chamberlain's—625 Beeves, 90 Cows and Calves, and 1,200 Sheep and Lambs.

The Beeves sold at from 7@9½c per lb.

Cows $25 to $50. Calves 4½ to 7c. ₱ lb.

Sheep $2,50 2,75, 5@6,50. Lambs $1,50 to $3@4. All sold.

## ALBANY CATTLE MARKET.

ALBANY, Sept. 26.—W. W. Woolford's, Bulls' Head, Washington street.

Beef Cattle—567 at market. Prices—Extra, $7,00; 1st quality, $6,50; 2d do. 6,00; 3d do, $5@5,50.

Cows and Calves—18 in market. Prices from $25@30 to 35. All sold.

Sheep and Lambs—1,208 in market. Prices of Lambs $1,75, 2, 2,50@2,75. Prices of Sheep $2,50, 2,75, 3, 3,25, 3,50@4.

Hogs—Few in market. Prices ₱ cwt. $5@5,50, and one choice lot at $6.

Remarks—The market is firm and steady.

## CAMBRIDGE CATTLE MARKET

CAMBRIDGE, Sept 21.—At market, 2,701 Cattle, about 1,800 Beeves, and 901 Stores, consisting of Working Oxen, Cows and Calves, yearlings, 2 and 3 years old.

Prices—Market Beef—Extra sold at $7.50@7,75 pr cwt.; 1st. quality, $7@7,25; 2d do, $6,50@6,75; 3d do, $5,50 @6; ordinary, $4,25@5,00.

Hides—$6,50 per cwt.

Tallow—$7@7.50 per cwt.

Pelts—$1@1,25.

Calf Skins 12c per lb.

Veal Calves—$7, 9@13. Very scarce.

Stores—Working Oxen—$169, 118, 129, 136, 142@172.

## BRIGHTON CATTLE MARKET.

BRIGHTON, Sept. 22.—At market 2,100 Cattle, 1,500 Stores, 7,000 Sheep, and 900 Swine.

Prices—Beef Cattle—A fair supply at market and prices about the same as last week viz: Extra, $7,50@8; 1st quality $6,75@7,25; 2d do, $6@6,50; 3d do. $4,75@5.75.

Working Oxen—Sales $73, 85, 92, 108 122, 135@165.

Cows and Calves—Sales $20, 25, 31, 35, 42, 47@55.

Stores—Yearlings $9@12.

Two years old $15@22.

Three years old—$24@34.

Sheep—Small lots $2.75, 3, 3,12, 3.33, 3.50, 4.75, 5,50@6.

Swine—"Dull;" lots to peddle 5¼@5¾, Old Hogs 5¼, 5¼@5¾. Still hogs 5½, 5⅝@5¾.

## PHILADELPHIA CATTLE MARKET.

PHILADELPHIA, Sept. 23.—Beef Cattle—The offerings this week amounted to 2,000 head, of which number about 400 were driven to New York. There has been a good demand, but prices have declined fully 50 cents per hundred, the sales being within the range of $7,50@8 per cwt.

Cows and Calves—About 200 were offered, all of which were disposed of at $12@36 each, as in quality.

Hogs—700 head offered, nearly all of which were sold to city butchers at $7@7.37½ ₱ 100 lbs, principally at the former quotation, which is an advance.

Sheep and Lambs—The supply is somewhat increased. There were 1,300 head offered, which were sold at $2 to $6,25 each, according to quality.

---

**SAMUEL MOULSON,**
AT THE OLD ROCHESTER NURSERY.
**Office, No. 26 Front St., Rochester, N. Y.**

Is prepared to furnish inventories, to post-paid applicants, of the present very extensive stock of Nursery items, consisting in part of

120,000 Dwarf and standard Pear Trees.
90,000 Apple Trees.
50,000 Peach Trees.
30,000 Plum, Cherry and Apricot Trees.
Over 100,000 Hardy Evergreens.

Also, extra large Northern Spy Apple Trees, Dwarf and Standard Pear, Cherry, &c., &c.

Also, for immediate effect, a large quantity of extra sized Ornamental Trees, among which are fine specimens of Norway Spruce, Silver Maple, Pawlonias, Catalpas, Mountain Ash, Horse Chesnut, &c.

And a fine selection of Weeping Deciduous Trees, Ornamental Shrubs, Hybrid Perpetual Roses, together with such novelties as may be classed strictly hardy. Also a very limited assortment of half hardy plants of small size, such as Cryptomeria Japonica, Cedrus Deodara, &c., &c.

The amateur wishing prime fruits of well established repute, or the agriculturist needing fine cropping, thoroughly tested varieties, may rely upon the most careful execution of their orders.

The Ornamental items are entirely grown in the Nursery, consequently none of the heavy losses are sustained that usually occur to recent imported subjects.

The Evergreens are very robust and admirably furnished to the surface of the ground, none presenting the naked stems usual to imported plants.

Dealers are invited to give a call before making their purchases.

☞ Peach and Plum pits wanted.
September 1, 1853. 196-tf.

**A SMALL FARM FOR SALE,**

THREE miles S. W. of the village of Macedon, Wayne Co., N. Y., consisting of about 56 acres of excellent land, three-fourths good wheat soil, and the rest pasture and meadow, with about 5 acres of woodland. It has a dwelling-house, barn, corn-house and granary, &c., and a never-failing spring of water. The price, if sold soon, is fifty dollars per acre. A portion, or the whole, may be paid when possession is given, the first of 4 mo. (April) next. For further particulars, apply to the subscriber personally, at his residence in Macedon. 196-3t
Macedon, 9 mo. 27, 1853. J. J. THOMAS.

**GENESEE VALLEY NURSERIES.**

A. FROST & CO., Rochester, N. Y., solicit the attention of amateurs, orchardists, nurserymen, and others about to plant, to their stock of Fruit Trees, which is the largest and much the finest that they have ever offered, consisting in part of the following:

**Standard Fruit Trees**—of Apple 60 varieties; Pear 75 var.; Cherry 50 var.; Plum 25 var.; Peach 30 var.; Nectarine 6 var.; Apricot 6 var.;—comprising every sort of merit.

**Dwarf Fruit Trees** on the best stocks of Apple, Pear, and Cherry, and of the above large collection of sorts.

**Small Fruits**—Currants 15 varieties, Gooseberries 100 var., Grapes native and foreign 25 var., Raspberries 5 var, Strawberries 20 var., etc.

Deciduous and Evergreen Trees for lawns, parks, streets, etc.

Evergreen and Deciduous Shrubs in great variety, including 400 sorts of the Rose.

Bulbs in variety; Crocus, Crown Imperials, Gladiolus, Hyacinths, Lilies, including the Lancifolium of sorts, Tulips, etc.

Chrysanthemums, the finest new Pompone, or Daisy variety.

Dahlias, the best and highest prize varieties shown in England during 1851-2, including all the best old sorts.

Green House and Bedding Plants, etc., etc., of every description.

**Plants for Hedges**—Buckthorn, Osage Orange, Privet, American Arbor Vitæ, (White Cedar,) Norway Spruce, etc., all of which will be supplied at the lowest rates.

All articles are put up in the most superior manner, so that the plants, etc., may go thousands of miles, and reach their destination in perfect safety.

Parties giving their orders may depend that perfect satisfaction will be given them.

The following Catalogues containing the prices, are published for gratuitous distribution, but as we are obliged to pre-pay the postage if they are mailed, correspondents will please enclose a one cent postage stamp for each catalogue wanted:

No. 1—A descriptive catalogue of Fruits, Ornamental Trees, Shrubs, Roses, etc.

No. 2—A descriptive catalogue of Dahlias, Verbenas, and other bedding plants, etc., including many new articles which may be introduced up to the time of its publication and is issued every spring.

No. 3—A wholesale catalogue, a trade list just published for the fall of 1853, and spring of 1854, comprising Fruits, Ornamental Trees, such as Evergreens, &c., which are offered in large quantities. 195 2t.

Boston, August, 1853. 190-13w-1m

**FARM FOR SALE.**

ONE HUNDRED ACRES of the very best kind of farming land are offered for sale, in one of the western counties of this State. The farm lies within 2 miles of an important station on the line of the N. Y. & Erie Railroad, is well watered, under superior cultivation, and is not surpassed for grazing purposes by any equal portion of land in the State. A large portion is bottom land, well adapted to the growth of any kind of farm produce. On the farm are two barns and a very comfortable house, nearly new. The price is $25 per acre, to be paid as follows:—three-fifths down, and the balance in two equal annual installments. This property will double in value within six years. For further particulars address FARMER, Olean, Cattaraugus co., N. Y. 194-3t.

**CHINESE FOWLS.**

FOR SALE, a number of pairs of genuine Black Shanghai chickens, strongly marked and embracing all the fine points of Chinese fowls. No one wishing a superior breed of fowls for laying or for the table, will be disappointed by procuring this variety. Also, a few pairs of the celebrated Brahma Pootra stock, in fine condition. Orders received from any part of the country will be promptly executed, and the fowls caged in such a manner that they can be transported safely for any distance.

Terms:—Black Shanghai, $5 per pair; Brahma Pootra $10 per pair. Address the subscriber at the office of the Genesee Farmer, Rochester, N. Y.
194-4t CHAS. W. SEELYE.

**FINE FOWLS.**

HAVING raised from select stock, a few broods of buff Cochins and Shanghais, in order to obtain for private use, a small flock known to be pure and genuine, I have for sale about twenty pairs, and at prices that any one can pay, who is able to own half a dozen common fowls. They are broods of April, May, and June—genuine as imported;—being of stock received from the importer, bred immediately from fowls brought from China.
193tf D. ELY, 69 So. Fitzhugh St.,
Sept. 1, 1853. Rochester, N. Y.

**1,000 BOOK AGENTS WANTED.**

INTELLIGENT AND INDUSTRIOUS MEN WANTed in every part of the United States, to engage in the sale of the best assortment of illustrated

**POPULAR AND USEFUL BOOKS**

published in the country.

Men of good address, having a small capital of from $25 to $100 can do well by engaging in this business, as the inducements offered are of the most liberal character.

MONEY TO LOAN on Bond and Mortgage, on improved farms. L. A. WARD,
[169m6.] 36 State St., Rochester, N. Y.

**N. Y. State Agricultural College.**

This Institution was chartered by the Legislature of the State of New York, for the purpose of presenting to Agriculturists the means for acquiring a knowledge of the Arts and Sciences appropriate to their vocation; to prepare Students for practical, active labor, by training the mind in a system which shall inculcate an intimate acquaintance with the sciences essential to agricultural success.

To insure the development of principles and their application to the soil, the Legislature has required the purchase of not less than three hundred acres of land.

The Trustees, having accepted the trust confided to them by the Legislature, organized the State Agricultural College, by the following appointments:

JOHN DELAFIELD, President of the College.
Hon. JOHN A. KING, Ch'n of the Board of Trustees.
JOEL W. BACON, Secretary.
N. B. KIDDER, Treasurer.

At a meeting of the Board, on the 4th of June, a Report was presented by B. P. Johnson, from a Special Committee, on the Location of the College, declaring "that after an examination of the Oaklands Farm in Seneca County, they are entirely satisfied that the price asked for it, is its fair value in the market, for farming purposes; that it is, by previous preparation, by position and variety of soil, in every respect adapted to the objects of the Institution; that the title is perfect, and recommend that the chain of title be entered at large on the minutes of the Board," &c. This farm is situated midway between the market towns of Waterloo and Geneva, and in full view of the Seneca Lake, and overlooking the village of Geneva: elevated about 125 feet above the lake, it is free from causes disturbing health; its soil varies from a strong clay to a sandy loam, presenting varieties sufficient for testing by experiment every doubtful question in relation to soils, and to exhibit the most approved system of cultivation.

The Trustees are prepared to receive from Farmers and friends of agriculture, proposals for the Capital Stock of the Institution, which will be distributed in shares of fifty dollars each, payable

10 per cent on Subscribing.
40 " 1st July.
50 " 1st October.

The Trustees may be addressed (post-paid) at their respective residences, as follows:

Hon JOHN A. KING, Jamaica, Queens County.
HENRY WAGER, Westerville, Oneida "
B. P. JOHNSON, Agricultural Rooms, Albany.
WM. KELLY, Rhinebeck, Duchess Co.
N. B. KIDDER, Geneva, Ontario Co.
JOEL W. BACON, Waterloo, Seneca Co.
TALLMADGE DELAFIELD, Geneva, Ontario Co.
WM. BOEL, Rochester, Monroe Co.
JOHN DELAFIELD, Oaklands, Seneca Co.

The Officers of the College will endeavor to present subscription books in each County, that the College, so entirely agricultural and peculiarly the Farmer's institution, may find its support widely diffused throughout the State.

The President will, upon application to him, give all needful information in relation to the ordinances, rules and regulations of the College, and the courses of instruction to be pursued.

By order of the Board of Trustees,
JOEL W. BACON, *Secretary.*

☞ **PEOPLE'S COLLEGE OF THE STATE** of New York, Incorporated April 12, 1853.—This Institution has been chartered by the Legislature of this State, for the purpose of reducing the expenses of Academic and Collegiate Education, and thereby open the Halls of Science to all classes of society by reducing the cost of tuition, board and clothing, and enabling the student to defray the greater part of the expense in labor.

Provision will be made to educate young men corporeally and mentally for specific purposes, by pursuing full and definite courses of study for each of the pursuits represented in the College—either Agricultural, Mechanical or Professional—and thus graduates will be qualified for entering at once upon the business of their choice.

At a regular meeting of the Trustees named in the Charter, held at Owego, on the 25th day of May, the following appointments were made:

D. C. McCallum, of Owego, President of the Board of Trustees.
A. I. Wynkoop, of Chemung, Vice President.
Tracy Morgan, of Binghamton, Treasurer.
Harrison Howard, of Lockport, Secretary and General Agent.

Agents are being commissioned in each county of the State, that the people may have an opportunity to contribute to the capital stock, which is distributed in shares so small that every individual may become interested in an institution which commends itself to the favorable consideration of every intelligent person.

For further information upon the subject, application may be made, post-paid, to the Secretary, who will send a pamphlet containing the act of incorporation and objects of the Institution, and other needful information.
188-tf H HOWARD, Secretary.

The undersigned, having been appointed Agent for Rochester and Monroe county, will be most happy to furnish any new information desired, in reference to the College, to receive stock subscriptions, (the shares are one dollar each,) or to address audiences, on invitation, explaining at length the plans and objects of the People's College, and also as he views the idea of a true education.
Respectfully, G. F. NEEDHAM.

**PROF. BROWN'S NEW STORE,**
**With New Goods, and Enlarged Accommodations**

CITIZENS OF ROCHESTER and Surrounding Country:—Grateful for past favors, I hope for a continuance and increase of the same. The front part of the store is exclusively for the sale of Goods; the rear for Shaving and Hair Cutting; the basement is a private room, divided into two, for the purpose of Coloring the Human Hair.

Gentlemen's Furnishing Goods.—Every article in this line. Collars of the latest make, and a larger stock than can be found elsewhere in this city.

Hair Work of every kind—the largest assortment made from the best materials, and shall be sold at the lowest prices. Perfumery, of my own and foreign make. Hair Oils that cannot be excelled. Brown's Antispassis and Hair Restorative, a well known article. Brown's Liquid Hair Dye, the best in the world.

A variety of Useful and Ornamental Articles too numerous to mention, at retail, but which I respectfully invite the public to examine.

Fishing Tackle.—Sportsmen, call and see.

To Ladies.—A lady will be in attendance in the front Store.

☞ Eight Chairs are kept in this establishment, giving that number of persons a chance to be shaved at once—Nine persons are employed, showing the popularity and success of the proprietor. PROF. BROWN,
[129-tf] No. 26 Buffalo St., Rochester, N. Y.

**ROCHESTER STEREOTYPE FOUNDRY.**

THE undersigned would respectfully inform the public—and especially book and periodical publishers, authors, &c.—that he has established a Stereotype Foundry in Rochester. His establishment is furnished with every facility for Stereotyping, in the best manner, Books, Pamphlets, Periodicals, Cuts of all kinds, (including figures of animals, implements, etc.) Patent Medicine Advertisements, &c., &c. Plates blocked in a superior style on mahogany. All work executed with promptness and on reasonable terms, and equal in style and finish to that done at any other Foundry in the country.

An establishment of this kind has long been a desideratum in this city, and now that one is in operation, it is hoped a liberal share of patronage will be awarded to the enterprise.

☞ Foundry in Talman Block, Buffalo street. All orders from a distance may be addressed to
J. W. BROWN,
April, 1852. [122-1am-tf] Rochester, N. Y.
N. B.—Old type taken in exchange for work.

**ATKINS' SELF-RAKING REAPER.**

THIS MACHINE is now offered to the public and warranted to be a good Self-Raking Reaper. It is also believed to be a good mower, but not yet having been sufficiently tested in grass (though it soon will be) it is not warranted to be equal to a machine made mainly or wholly to mow.

The raking apparatus is of novel and very simple construction, and not liable to derangement, and every farmer who has seen it in the harvest field, says it performs the raking better than a man can possibly do it.

Price of machines at Chicago, $175, of which, $75 must be paid on giving the order, $50 upon successful trial, and $50 in note payable 1st Dec.

The machines are most thoroughly built and warranted.

☞ Descriptive circulars, with cuts, sent to post-paid applications. [182m3.] J. S. WRIGHT.
"Prairie Farmer" Warehouse, Chicago, June, 1853.

**MARSHALL'S BOOK BINDERY,**

BURNS' BLOCK corner of State and Buffalo street, over Sage & Brother's Bookstore, Rochester, N. Y.

Music Books, Pamphlets, Periodicals, &c., bound in plain and fancy bindings; old books rebound; Blank Books ruled to any pattern, and bound to order; Public and Private Libraries repaired at short notice. Packages containing irections for binding, punctually attended to.

N. B.—All work warranted, and done at low prices.
April, 1852. [122tf] F. H. MARSHALL.

# Poetical.

For the Rural New-Yorker.

## LINES ADDRESSED TO GERALD.

When bright Flora's wreaths were forming,
And the Spring was earth adorning,
In my balmy girlhood morning;
When all life was merry laughter,
And in joy no storm came after;
When the children, birds were greeting,
And I smiled to see the meeting—
In joy I met thee, Gerald.

When we culled Life's flowers together,
Never dreaming friends would sever
And the dearest fled forever,—
When our friend of love's own making
Slept "the sleep that knows no waking;"
When dark sorrow, like a shadow,
Veiled all earth, each grove and meadow—
In grief I met thee, Gerald.

When no tears are vainly streaming,
And a heavenly light is gleaming,
In a land of joyous dreaming;
When in thought a fancy rover,
And bright angels round me hover;
When lost friends are seen all smiling,
And no sin is aught beguiling—
In dreams I've met thee, Gerald.

When the birds, no longer singing,
Far off South their way are winging;
When I loved a school bell's ringing;
When the autumn winds were sighing,
And the flowers like friends were dying;
When in thoughts deep regions mining,
Gems to find, pure gold outshining—
In school I met thee, Gerald.

When to God, I'm nightly kneeling,
And a joyful, tranquil feeling,
Every care and grief is stealing;
When thy name I'm gently saying,
And for friends, I'm ever praying;
When fond hearts will hold communion,
By the christian's spirit union—
In prayer I've met thee, Gerald.

When to friendship cold and fleeting,
I compare thy hearty greeting,
And the last, our farewell meeting;
When the burning tear is starting,
For the bitter woes of parting;
When the first bright star is twinkling,
Oh! I'm sad, and sadly thinking—
When shall I meet thee, Gerald?

When my grief is all too choking,
And on earth, no lonely token,
Speaks of ties so rudely broken;
When "the bow of Promise's" keeping,
Is reflected through my weeping;
When new light the tear is staying,
All my joy is found in praying,
In Heav'n to meet thee, Gerald.

MISSOURIE.

# Rural Sketch Book.

## THE LOST FLOWERS.

It was a beautiful morning in May, when Jeanie Gray, with a small bundle in her hand, took her leave of the farm house of Drylaw, on the expiration of her half year's term of service. She had but a short distance to walk, the village of Elsington, about three miles off, being her destination. As she passed down the little lane leading from the farm to the main road, two or three fair-haired children came bounding over the stile to her side, and clung affectionately around their late attendant.

"Oh, Jeanie, what for maun ye gang away? Mamma wadna let us see you out on the road a bit, but we wan away to you by rinnin' round the stack yard."

Jeanie stood still as the oldest of her late charges spoke thus, and said:

"Marion, you should have had mair sense than to come when your mother forbade you. Rin away back, like guid bairns," continued she, caressing them kindly. "Rin away hame. I'll may be come and see you again."

"Oh, be sure and do that then, Jeanie," said the eldest.

"Come back again, Jeanie," cried the younger ones, as they turned sorrowfully away.

From such marks of affection, displayed by those who had been under her care, our readers may conceive that Jeanie Gray was possessed of engaging and amiable qualities. This was indeed the case; a more neat, modest and kind hearted creature perhaps never drew the breath of life. Separated at an early age from her parents, like so many of her class—that class so perfectly represented in the character of Jenny, in the "Cotter's Saturday Night"—she had conducted herself in the several families which she had entered, in such a way as to acquire uniformly their love and esteem. Some mistresses, it is true, are scarcely able to appreciate a good and faithful servant; and of this class was Mrs. Smith, of Drylaw; a cold, haughty, mistrustful woman, who, having suffered by bad servants, had come to look upon the best of them as sordid workers for the penny fee. To such a person, the timidity and reserve which distinguished Jeanie Gray's character to a fault, seemed only a screen, cunningly and deliberately assumed; and the proud distance which Mrs. Smith preserved, prevented her from ever discovering the error. Excepting for the sake of the children, therefore, it is not to be wondered at that Jeanie felt no regret at leaving Drylaw.

Her destination on departing from her late abode was, as we have already mentioned, the village of Elsington; and it is now necessary that we should divulge a more important matter—she was going there to be married. Jeanie Gray could not be called a beautiful girl, yet her cheerful, though pale countenance, her soft dark eye and glossy hair, and her somewhat handsome form, had attracted not a few admirers. Her matrimonial fate, however, had been early decided; the circumstances under which it was to be brought to a happy issue, were most honorable to both parties interested. At the age of eighteen, Jeanie's heart had been sought and won by William Ainslie, a young tradesman in the neighboring town. Deep was the affection that sprang up between the pair; but they combined prudence with love, and resolved, after binding themselves by the simple love vows of their class, to defer their union until they should have earned enough to insure them a happy and comfortable home. For six long years they had been true to each other, though they had met only at rare intervals during the whole of that period. By industry and good conduct, William had managed to lay up the sum of forty pounds, a great deal for one in his station; and this, joined by Jeanie's lesser earnings, had encouraged them to give way to the long cherished wishes of their hearts. A but-and-a-ben, or a cottage with two apartments, had been taken and furnished by William, and the wedding was to take place on the day following the May-term, in the house of the bride's sister-in-law.

We left Jeanie Gray on her way from the farm house of Drylaw. After her momentary regret at parting with the children, whom the affectionate creature dearly loved, as she was disposed to every living thing around her, her mind reverted naturally to the object nearest her heart. The bright sun above sent his cheering radiance thro' the light fleecy clouds of the young summer, the revivified trees cast their shade over her path, the merry lark rose leapingly from the fields, and the sparrow chirped from the hedge at her side; every thing around her breathed of happiness and joy, and her mind soon brightened into unison with the pleasing influence. Yet ever and anon a flutter of indescribable emotion thrilled through the maiden's heart, and made her cheeks, though unseen, vary in hue. At an angle of the road, while she was moving along aborbed in her own thoughts, a manly voice exclaimed, "Jeanie!" and a well known form started up from a seat on the wayside. It was William Ainslie. The conversation which followed, as the betrothed pair pursued their way and laid open their hearts to each other, we cannot, and shall not attempt to describe.

After Jeanie had parted for a time with William, and was seated quietly in her sister-in-law's house, a parcel was handed in to her from a lady in whose service she had formerly been. On being opened, it was found to contain some artificial flowers, which the lady destined as a present to adorn the wedding cap—an ornament regarding which brides among the Scottish peasantry are rather particular. The kindness displayed in the gift, more than its value, affected Jeanie's heart, and brought tears to her eyes. She fitted the flowers to her cap, and was pleased to hear her sister-in-law's praises of their beautiful effect.—Fatal present! but let us not anticipate.

The wedding came and passed, not accompanied with boisterous mirth and uproar, but in quiet cheerfulness; for William, like his bride, was peaceful in his tastes and habits. Let the reader then suppose the festive occasion over in decent order, and the newly married pair seated in their new house—their own house—at dinner, on the following day. William had been at his work that morning as he was wont, and his young wife had prepared their humble and neat dinner. Oh! how delicious was the food to both. Their happiness was almost too deep for language. Looks of intense affection and tenderness were its only expression.

"I maun be a truant, Jeanie, to-night," said the husband. "My comrades in the shop maun hae a foy frae me, since we couldna ask them a' to the wedding, ye ken."

"Surely," said the wife, raising her timid, confiding eyes to his face, "whatever you think right, William; I ken you are nae waster, and they wad hae shewn the same kindness to you."

"I hope you'll find me nae waster," returned her husband smiling; "nor am I fear'd for you turning out ane either, Jeanie, lass, though ye was sae very braw about the head last night." By the direction of his eyes to the artificial flowers which had adorned her wedding cap, and which were lying on the top of her new stand of drawers at the moment, Jeanie saw to what her husband alluded.

"Oh, the flowers!" said she, blushing; "they didna cost me a muckle, William."

The conversation of the pair was at this moment interrupted by the entrance of Mrs. Smith, of Drylaw, who mentioned, with an appearance of kindness, that, having been accidentally in Elsington that day, she had thought it her duty to pay a friendly visit to Jeanie and her good man. Whether curiosity had any share in bringing about the visit or friendly feeling, it matters not. Jeanie and William received her as became her rank, and the relation in which the former had lately stood regarding her.—Bread and cheese were brought out, and she was pressed to taste a drop of the best liquer they possessed.

Alas! how sudden are the revolutions in human affairs. The party was in the midst of an amicable conversation, when Mrs. Smith's eye happened to be caught by the boquet on the top of the drawers, and a remarkable change was at once observed in her manner.

"Jeanie," said she with deep emphasis, and rising anger, "I did not expect to find my flowers lying there. Say not a word—I see it all—I see it all—you have been a thief—there is the evidence of it—I shall not stay another instant in your house!"

So saying, the infuriated and reckless woman rushed from the dwelling of the wonder-stricken pair. Jeanie, as we have already mentioned, was timid and modest to a fault. When her late mistress thus addressed her, she motioned to speak, but could not, though the blood rushed to her face, and her bosom heaved convulsively. When left alone with her husband, she turned her eyes wildly towards him, and a flood of tears gushed over her cheeks.—What thought William of all this? His emotion was scarcely less on hearing the accusation, and recollecting her saying that the flowers cost her nothing, alas! he feared that the charge was but too true. The more than feminine delicacy and timidity of his wife was not fully known to him, and her voiceless agitation appeared, too, like an inability to confute the imputation.—He rose, and while Jeanie, still incapable of utterance, could only hold up her hands deprecatingly, he cast on her a glance of mingled sorrow and rebuke, and left the room. His wife—his bride—stricken in the first flush of her matronly joy and pride, sunk from her chair on his departure—insensible!

It was rather late, from a cause that has been alluded to, before William Ainslie returned to his home that night. His wife had retired to rest, but her sister-in-law, who had been sent for by Jeanie, was in waiting for him and revealed the utter falsehood of Mrs. Smith's accusation, she having been an eye witness of the receipt of the flowers, as a present from another lady.

"Take care o' Jeanie, William," said the sister-in-law; she is ill—a charge o' that kind is enough to kill her."

This prediction unhappily had truth in it. On the ensuing morning, the young wife was raving incoherently, in a state between slumber and awaking. A deep flush remained permanently upon her countenance, most unlike her usual fair complexion. Her muttered exclamations shocked her husband to the soul.

"Oh, William, you believed it! but it's not true; it's not true; it is false!" was the language she continually murmured forth.

Medical skill was speedily seen to be necessary, and the surgeon who was called in, informed William that, in consequence of strong excitement, incipient symptons of brain fever had made their appearance.—The utmost quiet was prescribed, and blood withdrawn from the temples in considerable quantity. For a time, these and other remedies seemed to give relief, and the poor husband never left the side of the sufferer. Indeed, it seemed as if she could not bear him to be absent; her mind always reverting, when he was out of her sight, to the idea that he believed the charge which had been made against her, and had left her forever. The oft-repeated assurances to the contrary, from his own lips, seemed at length to produce conviction, for she at last was silent on the subject. But the charge—the blow—had struck too deep.—Jeanie Ainslie, if we may call her by a name she was destined so short a time to bear, fell, after two or three day's illness into a state of stupor, which continued with short and rare intervals, and on the eighth day after her nuptials, her pure spirit departed.

William Ainslie had shown on many occasions in life, great firmness and self command; and now, though deep suffering was written on his brow, he made, with at least external composure, the requisite preparations for laying in the grave the remains of her he had loved so long and so truly.—As to retribution upon the head of the person who had been instrumental, through inconsiderate hastiness only, it is to be hoped, in producing his misery, the bereaved husband thought not of calling for it. Yet it did come to a certain extent; for our errors seldom pass, even in this life, without a pang of punishment and remorse.

Several days after charging the innocent Jeanie with the abduction of her flowers, Mrs. Smith of Drylaw, found, by a discovery of her new servant, that one of her younger children, impatient for the flowering of a rose bush in the little garden nigh the farm house, had lighted upon an artificial flower in her mother's dressing room, and had carried it out and stuck it upon the bush. There the flowers were accordingly found; and Mrs. Smith, who was far from being an evil-intentioned woman, did feel regret at having charged the loss upon the guiltless. Ignorant of all that had passed at Elsington in the interval, she determined to call at William Ainslie's on her visit to the village, and explain her mistake.

The call was made two days after Jeanie's death; and on Mrs. Smith's entering the room, she found William sitting by his bereaved hearth with his sister-in-law, and another kind neighbor, bearing him company.

"Oh—by the by—those flowers!" said the unwelcome visitor, in a tone and in a manner which she meant to be condescending and insinuating, "how sorry I am for what happened about those flowers! Where do you think I found them after all?—on a rose bush in the garden where Jemima had put them. And now I am come to say I am sorry for it, and hope that it will be all over."

William Anslie had risen slowly during this extraordinary speech; and, now, raising his finger towards his lips, he approached and took Mrs. Smith by the hand beckoning at the same time to the two women who were seated with him. They seemed intuitively to comprehend his wishes, and rising, moved towards the bed, around which the curtains were closely drawn, William leading forward also the unresisting and bewildered visitor. The women drew the curtain aside, and William, fixing his eyes on Mrs. Smith, pointed silently to the body of his wife, shrouded in the cerements of death, and lying with the pale uncovered face upturned to that heaven for which her pure life had been a fitting preparation. The wretched and false accuser gazed with changing color on the corse of the dead innocent; and, turning her looks for a moment on the silent faces around, that regarded her more in sorrow than in anger, she uttered a groan of anguish as the truth broke on her, then bursting from the hand that held her, she hastily departed from the house.

There is little now to add to this melancholy story, which, unhappily, is but too true. The little we have to add, is but in accordance with what has been told. After the burial of his Jeanie, William Ainslie departed from Elsington; and what was his future fortune no one can tell, for he never was seen or heard of again in his native place. As for the unhappy woman who was the occasion of the lamentable catastrophe which we have related, she lived to deplore the rashness of which she was guilty. Let us hope that circumstances had an influence on her future conduct, and will not be without its moral efficacy in the midst of our readers.

# Wit and Humor.

The Barrister Matched.—At a late quarter sessions a man was brought up by a farmer and accused of stealing some ducks. The farmer said he should know them anywhere, and went on to describe their peculiarity. "Why," said the counsel for the prisonor, "they can't be such a rare breed—I have some like them in my yard."—"That's very likely, sir," said the farmor. "they are not the *only* ducks I have had stolen lately!"

She had Him.—Dr. Boynton, in a recent lecture, stated that wishing, on one occasion, to explain to a little girl the manner in which the lobster casts its shell, when it has outgrown it, he said: what do you do, when you have outgrown your clothes? You throw them aside, don't you? "O no," replied the little one, "we let out the tucks!" The Doctor confessed that she had the advantage of him there.

A Drunken Fellow ran against a house which had been newly painted. Shoving himself clear by a vigorous effort, he took one glimpse at his shoulder, another at the house, and a third at his hand, and exclaimed:—"Well, that is a darned careless trick in whoever painted that house, to leave it standing out all night for people to run against!"

The Chatauque Democrat tells a pretty good story concerning the post-office in Westfield. A letter was put into the box, the appearance of which denoted that the writer was unaccostomed to the use of stamps, and had failed to make one stick at all. He had tried and vainly tried, but the inveterate portrait of Benjamin Franklin would *curl up*. At last, in despair, he *pinned* it to the envelope, and wrote just under it—"*paid if the thing sticks!*"

An old Count paid his addresses to one of the richest heiresses of Paris. In asking her hand in marriage, he frankly said to her: "Miss B., I am very old and you are very young—will you do me the honor to become my *widow?*"

The reason that the organ in Dr. S——'s church, did not "play," last Sabbath, says a Boston paper, was caused we learn, by its having a new "stop" put to it. It was added, we believe, by the deputy sheriff.

Wide Awake.—A good lady at Frankford refused to let her daughter dance with a young University man, because she understood he was a Bachelor of Arts.

A Puzzle.—I tied a knot in a cord of wood, ‖ I caused the wood to grow,‖ I now would like to see the man ‖ That made a hay-cock crow.

One friend asked another why he married so little a wife. "Why," said he "I thought you had known that of all evils we should choose the least."

# Youth's Corner.

"Attempt the end, and never stand to doubt;
Nothing's so hard, but search will find it out."

For the Rural New-Yorker.

## MISCELLANEOUS ENIGMA.

I am composed of 22 letters.

My 7, 1, 19, 15, 6, 9, 4 is a town in the State of New York.

My 12, 3, 5, 16, 1 is a part of the human body.

My 14, 15, 1, 3, 8 is the name of the apostle who sat with the servants in the high priests palace.

My 11, 5, 6, 6, 13, 15 is the name of my friend,

My 10, 5, 22, 3 is most frequently used by the gentlemen.

My 17 is one of the letters of the alphabet.

My 8, 21, 20, 15 is a beautiful flower.

My 18, 2, 17, 22, 5 is the name of a far distant country.

My whole is one of the great inventions of modern times. L. W. S.

Mecklenburgh, N. Y., 1853.

## RIDDLE FOR YOUNG AMERICANS.

The North British Advertiser gives the following dialogue over a draper's counter:

*Old Woman*—(looking at a piece of cloth)—Aw oo?

*Shopman*—Oo i, aw oo.

*Old Woman*—Aw ae oo?

*Shopman*—Oo i, aw ae oo.

☞Translation next week.

## ANSWER TO ENIGMA, &c., IN NO. 39.

Answer to Charade—*Rail-road Stock.*

Answer to Miscellaneous Enigma—*The Crystal Palace at New York.*

### Ornamental and Domestic Poultry.

THE subscriber having invested a large amount in this business, is now prepared to fill any orders which he may receive. The celebrated Brahma, Sumata, Game, Palmer, Marsh and White Shanghais, with many other popular varieties, are from the yard of C. C. Plaisted, Esq., Great Falls, N. H., and of course cannot be surpassed in the world. My Imperial Cochin China Fowls are from Col. B. P. Johnson, his stock imported last year, '52, from the best breeders in England. All who well know Col. J., will understand that he has the best or none. My black Spanish are quite late, and will not be ready for market before next spring. They are from Mr. John Giles, late imported, the best blood in the country. These birds are so fast coming into repute that the price will doubtless run high for some years to come, as will also be the case with the Brahma, Sumatra, Game, &c. All persons purchasing fowls from me, can enjoy the benefit of my advertising, in case they wish to sell Chickens next year.

I am quite sure that our southern and western fanciers can be better suited here than farther east, as the long distance on railroad much injures the health and growth of the fowls.

As there are many fowls in market which have no claim upon the public favor, I will give my patrons something more tangible than my own words, for

"If self the wavering balance shake,
It's rarely right adjusted."

I am therefore permitted to refer all who entertain any scepticism, to the following gentlemen:—Col. B. P. Johnson, Secretary N. Y. State Agricultural Society, Albany, N. Y.; Hon. Ambrose Stevens, N. Y. City; Hon. Lewis F. Allen, Black Rock, N. Y.

Address O. B. EVANS, 214 Main street,
191-3m Buffalo, N. Y., Box 1662.

### CIRCULAR.

WE have just published, and would respectfully invite the attention of the trade to

DANIEL WEBSTER'S LIFE, EULOGY, AND FOUR GREAT ORATIONS.

This volume is printed in the best style of typographical art, on a superior quality of paper. It contains one hundred and eighty-four pages, and is illustrated with the most accurate and splendid Steel Portrait of Mr. Webster extant. The Life is from the accomplished pen of Louis Gaylord Clark, the able and popular editor of the Knickerbocker Magazine. The Eulogy is by an eloquent and appreciating American writer. The four great Orations comprise the most eloquent and popular of Mr. Webster's intellectual efforts, viz:

Adams and Jefferson, Bunker Hill Monument, First Settlement of New England, and Reply to Hayne.

The work is duly entered according to Act of Congress, and is stereotyped in the best manner. It is an authorized edition, and sanctioned by Mr. Webster's family and executors.

Terms:—Paper bound—For 100 copies, 35 cents; 1,000 copies, 30 cts.; retail, 50 cts. Muslin bound—for 100 copies 50 cts.; 1,000 do., 45 cts.; retail, 75 cts.

Liberal terms of exchange. Address all orders to
WILBUR M. HAYWARD & CO.,
Publishers, Rochester, N. Y.

N. B.—Agents wanted to wholesale and retail the above work. 193-4t

Rochester, Sept. 5, 1853.

### Improved Portable Cider Mill and Press.

HICKOK'S Improved Portable Cider Mill and Press, received the following premiums in 1852, viz.:—A Silver Medal at the Fair of the American Institute, N. York. Diploma at the Franklin Institute, Philadelphia. First premiums at the State Fair at Utica, and at the Columbia and Rensselaer County Fairs, and diploma at the Westchester County Fair.

Descriptive circulars sent free to all post-paid applications. See page 254 of this paper, for engraving. Price, $10,—and all persons living near Rochester or away from any agency, may order of me, and when they get the mill they may deduct the freight and remit the balance to me.

Manufactured by W. O. HICKOK,
Harrisburg, Pa.

Sold by LONGETT & GRIFFING, 25 Cliff-st., N. Y.
EMERY & CO., Albany.
DANA BROTHERS, Utica.
PROUTY & CHEW, Geneva.
HIGGINS & CALKINS, Castile, Wyoming Co.
C. E. YOUNG, Main-st., Buffalo.
O. GREGORY, Binghamton.
CHAS. ASHLEY, Ogdensburg.
D. LANDRETH, Philadelphia. 188-Stwlm

Springfield, Ohio, May 1, 1852.

Mr. W. O. Hickok: *Dear Sir,*—I purchased one of your improved cider mills at the State Fair at Lancaster, Pa., last year. Since then I have tested it effectually, and must say it surpasses any machine, for the purpose it is intended for, that I have ever seen, and I have examined a good many, before purchasing and since. Its construction being simple, it never gets out of order. It supasses my most sanguine expectation. Could I not procure another one, I would not part with mine for four times the price of them, as I know its value.

Yours truly, CHAS. M. CLARK.

### FOR SALE.

A VALUABLE FARM OF 163 ACRES, four miles North-west of Weedsport, (a good market, on Erie Canal,) and 3½ miles from the Syracuse and Rochester direct Railroad. The said Farm has 140 acres improved, and in a good state of cultivation, and is well situated for two farms if desirable, as there are two houses, two barns, two orchards of a good variety of fruit, and a fine timbered lot on each end of the farm. Fifty acres is seeded to Clover and Timothy, and 30 acres is intended for wheat this fall. For further particulars, inquire of, or apply to the subscriber on the premises.

N. B.—Purchasers wishing only a hundred, or fifty acres can be accommodated. JACOB BAKER.

Conquest, Cayuga Co., N. Y., Aug. 5, 1853. 193-3t*

### SUFFOLK PIGS FOR SALE.

TWENTY PAIRS of pure bred Suffolk Pigs for sale by the subscriber. Also Breeding Sows. They can be safely forwarded by Railroad, Express, &c., to almost any part of the country. C. J. HOLDEN,

June, 1853. [186m3] Walepole, N. H.

## MOORE'S RURAL NEW-YORKER:

A WEEKLY HOME JOURNAL,

For both Country and Town Residents.

PUBLICATION OFFICE,

Burns' Block, corner State and Buffalo Sts.,
Rochester, N. Y.

TERMS, IN ADVANCE:

Two Dollars a Year—$1 for six months. To Clubs and Agents as follows:—Three Copies one year, for $5; Six Copies (and one to Agent or getter up of club,) for $10; Ten Copies (and one to Agent,) for $15; Twenty Copies for $25, and any additional number, directed to individuals at the same rate. Six months subscriptions in proportion.

☞Subscription money, properly enclosed, may be sent by mail at the risk of the Publisher.

Terms of Advertising

One Dollar per square (ten lines—100 words, or less,) for each insertion,—*in advance.* ☞The circulation of the New-Yorker is much larger than that of any other newspaper published in the State, out of New York city. Only a limited space, however, is devoted to advertisements, and hence preference is given to those most appropriate—such as the cards and notices of dealers in Agricultural Implements and Machinery,—Horticulturists and Seedsmen,—Booksellers and Publishers,—Inventors, etc. All orders by mail should be accompanied with the cash.

To enable us to accommodate as many as possible, brief advertisements are preferred. Patent medicines, &c., will not be advertised in this paper on any terms.

☞All communications, and business letters, should be addressed to D. D. T. Moore, Rochester, N. Y.

### THE WOOL GROWER AND STOCK REGISTER.

This is the only American Journal primarily devoted to the interest of Wool and Stock Growers, and should be in the hands of *every owner of Domestic Animals.* It is ably conducted, published in the best style, and finely illustrated. Each number contains a careful Review of the Wool and Cattle Markets, and much other *useful* and *reliable* information which can be obtained from no other source. The Fifth Volume commences with July, 1853.

Terms:—Fifty Cents a Year; Five Copies for $2; Eight for $3; Eleven for $4. Back volumes, bound in paper, at 40 cts. each,—unbound at 35 cts., or three for $1.

Published monthly, in octavo form. Specimen numbers sent free. Money, properly enclosed, at our risk.

Address D. D. T. MOORE, Rochester, N. Y.

MOORE'S RURAL NEW-YORKER.

VOLUME IV. NO. 41. ROCHESTER, N. Y.—SATURDAY, OCTOBER 8, 1853. WHOLE NO. 197.

MOORE'S RURAL NEW-YORKER:
A QUARTO WEEKLY
Agricultural, Literary and Family Newspaper.
CONDUCTED BY D. D. T. MOORE,
WITH AN ABLE CORPS OF ASSISTANT EDITORS.

THE RURAL NEW-YORKER is designed to be unique and beautiful in appearance, and unsurpassed in Value, Purity and Variety of Contents. Its conductors earnestly labor to make it a Reliable Guide on the important Practical Subjects connected with the business of those whose interests it advocates. It embraces more Agricultural, Horticultural, Scientific, Mechanical, Literary and News Matter—interspersed with many appropriate and handsome engravings—than any other paper published in this Country.

☞ FOR TERMS, &c., see last page. ☜

# Rural New-Yorker.

## Progress and Improvement.

### FATTENING HOGS.

IT is pretty generally conceded that the cheapest way to make pork is to keep a breed of swine that, coming in April, shall be fat and weigh 250 to 300 lbs. by the first of November. We have no doubt but this is the case,—that pork can be made, all things considered, much cheaper in this way than in any other. Yet we have a liking for a "twenty score" hog. Hams from such a pig are deservedly esteemed by all epicures, and will over command, if well cured and dried, high prices.

Some will say that you can make spring hogs weigh 400 lbs. by the fall. This in rare instances has been done, but we know of no breed which, under ordinary treatment, will average any such weight. If heavy hogs are desired they must be farrowed in the fall and killed when 12 to 15 months old.

In this, as in most other cases, an exclusive adherence to one system, to the entire abandonment of the other, is unwise. On an average sized farm, we would always have one litter of pigs in the fall, and one, or two if you like, in the spring. If you have more fall shoats than you can winter well on offal, sell a few to your neighbors when six weeks or two months old for $1,50 or $2. The rest will run in the barn yard, eat up what would otherwise be wasted, and be fine follows in spring, ready to graze as soon as clover is ready for them. Clover, sour milk, whey, wash of the kitchen, &c., will keep them in good growing condition during the summer,—green corn, small potatoes, wind-fall apples, nubbins, and buggy peas will finish the work,—and in this way pork will be produced without the consumption of any of the high priced cereal grains which require that their effect on the animal shall be *greatly beneficial* to componsate for their exhausting effect on the soil producing them. On the other hand, as we said before, an hundred weight of pork can, probably, be made from spring pigs cheaper and at less expense to the farmer than from any other. To do it, however, more forcing food is required.—You must not keep too many. The shoats must be kept fat all the time or they will not mature early enough.

Nothing will pay better on a wheat farm, taking manure into consideration, than to grow peas for feeding green to pigs during summer and early fall. They do well on them, and what they do not eat they will trample into the richest kind of manure.—To fat hogs on good corn worth 70 cents per bushel will not pay, unless an unusually high price is obtained for the pork. The price of cattle food, and the price of meat produced by its consumption, would, under, normal conditions, always indicate the *true* relation which they bear to each other.—But this normal condition does not exist; thousands of bushels of corn are annually produced, in the fertile vallies of the West, that are not worth 25 cents per bushel.—This corn can be used for pork making and the pork be shipped to our market at little cost, thus disturbing the natural equilibrium and rendering it necessary that we should sell our corn rather than convert it into pork or beef.

We must not attempt competition with our Western brethren in raising *corn* for pork making, but rather aim at raising those crops which from their bulk and weight are not subject to such competition. But to do this we must have manure, and to make this we must make pork or beef or mutton.—Ah! there's the rub. To grow two tons of timothy hay per acre, or 40 bushels of wheat, we must sooner or later return to the soil. Without at present entering into the reasons for our belief, we think that fattening hogs by growing peas to feed to them green and early in the fall, before they are much injured by the bug, will be found one of the most economical means of enriching a farm.

### SOILING ANIMALS.

THE term soiling, seems to be a misnomer; it means, as now used, the feeding of cattle in the stable with fresh grass cut daily for their use. It would seem from the derivation of the term, that turning out the animals to crop their food from the soil, would be a more congenial term,—but it has been otherwise appropriated, has become technical, and so it must be used.

It has been incontestibly shown, that by the proper cultivation of the root crops, as much nutriment for animal subsistence can be obtained from one acre, as from the average product from fifteen acres of grass; and it would seem from the practice of *soiling*, now in extensive use in Europe and more or less practiced in this country, that results and profits still more extraordinary are produced by this process. Rye grass is mostly preferred in the old country, which does not seem to succeed well in our climate of hot suns and arid atmosphere; but it is held that our clovers, which recover quick after clipping and from their long tap roots withstand the drouth, with a sprinkling of timothy, or some other nutricious grass, produces a better article for that purpose than any of the English grasses. Indian corn, sown broad-cast on a clean lay, or in narrow drills, has been used with great success.

Some of the reports of the results in soiling would not claim credibility in this country, did we not take into consideration the process followed of dressing with liquid manure; as it is self-evident that without some thorough and powerful feeding of the soil it would soon lose its capability of producing and become barren.

Animals turned into fresh pastures, destroy by bruising with the tread of their feet, as much as they eat. Tender herbage, and particularly clover, soon ferments and decomposes after being bruised, and is distasteful to the palates of cattle, which is one of the losses saved by soiling over promiscuous pasturage.

There appears to be no objection on the score of the health of animals, when kept in stalls for years, cows give more milk and of a richer consistency. It obviates fencing and saves a much greater quantity of manure and of a better quality, as it can be kept under cover, or in large piles. Soiling animals requires more labor, but not of a costly kind, as boys and old persons can perform all the duties required.

In very stony or hilly land, this process would not be applicable; but on good gravelly or loamy soils, in good heart for producing, it was the opinion and experience of the Hon. JOSIAH QUINCY, of Mass., that one square rod of land was sufficient for a cow a day, which would be considered a very small pasture field for her to clip.

MR. KENNEDY, of Ayrshire, Scotland, kept last year 220 oxen, 460 sheep, 20 horses, and 150 store pigs, on 90 acres of rye grass. The year before, he fed on the same food, sheep at the rate of 56 head per acre for four months. They had a daily quantity of steamed food, what or how much is not stated; but they fattened rapidly, and he estimates, after a long experience, that by this process, at least four times as many animals can be sustained, and in better order, on the same land, as in the usual manner of field pasturing.

While land is as cheap, and individual farms as large as they now are, this process will not probably extensively provail; but about those days that emigration is exhausted, (and that is a remote contingency,) and when public improvements gets the rot on the weevil, (not so remote a contingency,) and consumers turn producers, this course may be as common as turning cattle into the highway, or bush pastures are at present.

### BENEFITS OF DRAINING.

EDS RURAL:—In none of the original articles from practical men upon the various branches of Agriculture which enrich your paper, am I so much interested as in those upon the subject of *draining*. This is perhaps easily accounted for from the fact that soon after I commenced farming, I found myself in possession of a homestead of near 300 acres, 200 of which had been cleared forty years, the most of it more or less marred by springs and swamps and streams beyond a needful supply, and some portions so wet as to preclude the thought of plowing even for a spring crop. Ever since the original forest was cleared away, the farm had been mainly used for grazing until the grass upon the dry portions was pretty much run out by the yellow daisy and the strawberry vine, while the wet parts produced a quality of grass upon which stock would not thrive, and which only grew up each year to die down in the fall. Such being the condition of my land (for I am going to give you my experience,) I found that farming in the usual way was not going to be a paying business, and accordingly, for that and other reasons, concluded to reduce my improved land to something over one hundred acres, reserving of necessity the wettest because my buildings were on that side of the street, and begin to farm on a different system.

My first attempt was with a piece of some twenty acres, about half of which was rather low, damp, meadow ground, in the centre of which was a swamp of a half acre or so, impassable for a team generally, but which nevertheless produced a little wild grass, which year after year used to be raked out on to the dry ground, at the expense of wet feet to the workmen, where it coul be got hold of, to take to the barn for cattle to snuff at and tread under foot the following winter. Into this piece of twenty acres I put in about 300 rods of ditch (nearly half of the piece was dry and no drains were needed,) only from 2 feet to 2 feet 4 inches deep, in the bottom of which a small sluiceway was made by means of small cobblestone laid in rows on each side, and covered with suitable sized flat stone, with small stone above up to within perhaps 15 inches of the surface. A coat of straw was afterwards spread evenly upon the top of the stone and the earth plowed in. This was done in the fore part of the season, and afterwards, all but four acres fitted and sowed to wheat. The result the following season was, that while the general crop in this section was considerably below the usual mark, mine yielded an average of about 35 bushels. It would have done much better, but the work was not thoroughly performed. The drains were not deep enough, and many of them were not skillfully placed. Where ground is wet from springs and overflowing, it requires more study and experience to judiciously place the drains than would be at first supposed. Let any man undertake to make a wet farm dry, and if it be at all the character of mine, before he gets through he will look back and see dollars wasted and lost because of a lack of skill in the outset in this single matter of placing drains.

My second trial, made last season, was more thorough and more successful. The field chosen contained 13½ acres. The ground was all hard, much of it was ordinary wet land; one swale of 40 rods length was always unpleasant to get across because of the amount of water; another 30 rods in length and five or six rods wide, was impassable for a team and portions were never trodden by hoof; two flag swamps of considerable size sent up their rank growth of green each year, while springs in great numbers made out from the ground in the upper part of the field, and in the wet season overflowed the land below: altogether, it had a hard look for winter wheat. Into this field I put 398 rods of ditch 2½ feet deep and upwards, and covered all but about 30 rods. From this field I harvested this season 546 bushels of clean dry wheat, machine measure, which, from my knowledge of the capacity of the bins in which it is stored, will a good deal more than hold out. This is an average of over 40 bushels to the acre, though a portion of the field was sadly injured by the wire worm, while other parts lodged so early in the season that the berry did not fill. I did not keep an accurate account of the cost of the crop; I wish I had, but if you please, suppose the whole cost was $30 per acre, the price of wheat being $125, I am left with a clean profit of $20 per acre, my land is pretty free from stone, and will be doubled and even trebled in productiveness hereafter.—What say you, Mr. EDITOR, is my system of farming the right one?

The present season I have put in something over 300 rods in a field of 11 acres.—The ground was pretty wet, but the work is done thoroughly. The growing wheat promises better even than last year. To effect such a change in a piece of land, is, to me, about the most pleasant part of farming.

It is a matter of surprise that more attention has not been given to this subject—that more is not being given now. I have seen farmers year after year reap from ten to twenty bushels per acre, when by judicious draining, they might easily have gathered twice as much. I have seen a farmer—called a *good* farmer by his neighbors, with money at interest—time after time wiggle and twist his team around a stagnant swamp in his wheat field, and as often sworn that the high water would kill so much of the grain about, when a few dollars,—a few rods of drain,—would have made the stagnant pool productive, and given him dry, straight furrows. It must be, Mr. EDITOR, that more attention will be given to this subject, and if machinery is to be perfected so that the digging can be done by horse power and the expense thereby be reduced, an obstacle, and a serious one with some, will be removed.

WM. B. PRATT.

Prattsburgh, N. Y., Sept., 1853.

REMARKS.—The subject of underdraining is one destined to occupy the attention of Agriculturists the next twenty years, more than any other connected with the art of tillage. We have abundance of theoretical evidence of the value of underdraining. It has been most successfully carried into practical operation in Great Britain, and is one the principal causes of its superior acreage productiveness. Our soil, climate and circumstances, however, are very different from those of the British Isles, and to make the benefits and *economy* of underdraining demonstrative to American farmers, it is necessary to have experiments made in this country. Happily we need wait no longer. The *profit* of underdraining has been clearly shown in this State, by Mr. JOHNSON, Mr. SWAN, and other gentlemen in Seneca county, by the Hon. T. G. YEOMANS, of Walworth, Wayne County, and by many other excellent farmers.—The above article of our esteemed correspondent, affords striking and satisfactory evidence on this point. Underdraining will pay. Drains may be badly and expensively cut; they may be laid too shallow and in the wrong spot; yet we have no fear but after a little experience, combined with theoretical knowledge, underdraining will be carried to great perfection in this country, and that it will be found the most profitable investment a farmer can make. As in the case of Mr. PRATT, we believe the produce on three-fourths of our farms may be doubled for some years by judicious underdraining.

Will Mr. PRATT be kind enough to give us the width of his drains, the cost of cutting them, of laying the stone, and of filling up? Do you like to cut the drains up the natural slope or fall of the land, or across it? As you have not many stones on the farm, would not drain tiles be more economical? We shall be glad to hear, also, from others who have experimented in draining.

### ABOUT GRASSHOPPERS.

THIS insect belongs to the ordor *Orthoptera saltatoria*, and is of the species of locusts that proves so destructive in Asia,—and not the *cicada*, or seventeen year locust, as known in this country. Naturalists say that they deposit their eggs in vast numbers in a hole in the ground, which they form by a contrivance they are endowed with, like four-bladed nippers, which remain till spring when they hatch out and immediately commence depredations on vegetation.

They do not pass through the marked transformations that most of the insect tribes do, but only a kind of moulting, or partial metamorphosis by the development of wing cases and wings. Their appearance in great numbers is not periodical, but are governed by some strange and anomalous law, that is not well understood, and it may be doubted whether they are an annual production from the egg, or whether they do not obey some period of the *larvæ* state not yet discovered.

It does not follow that because immense numbers of insects infest and overrun the country, or particular localities, that they are to greatly increase, or be equally abundant the next year; rather the contrary; therefore it would be fair reasoning to conjecture that the great abundance of the parent should produce a large increase of progeny, which does not follow, and rarely is the same locality visited two successive years, with destructive hordes of these insects. One year they are not plentiful enough for fishing bait, and the next are a desolating pest.

It is not very comprehensible, why they prevail in dry seasons, as is generally supposed to be the case; nor is the reason very palpable why they are so abundant this year, which has in the northern and eastern States been so overrun with this pest, when the spring was so wet, cold and unfavorable to the development of all insect life, whose *nidus* is in the earth. In fact it may be doubted whether the habits, history and *modus operandi* of the increase of this insect is well understood; at any rate its peculiarities of reproduction and the law that governs its simultaneous appearance in great swarms over a large extent of country, is worthy the study and observation of every one interested in vegetable culture.

It is asserted, and there is no doubt of the fact, that in one of the northern counties of this State, the grasshoppers were so numerous that they impeded the railroad trains, and absolutely stopped the whole force and impetus of the engine and cars, by so smearing the surfaces with their crushed bodies, as to destroy the traction between the driving wheels and rails. They traveled toward the lake shore and on reaching the water were pushed on by such immense and countless hordes, that they drowned and floated up in winrows for miles, and became during the hot weather very offensive.—They destroyed all vegetation within their reach, and a garment could not be left, but it was destroyed in a very few minutes.—Scythe snaths, rake and fork handles were eaten so as to very materially injure them. In short their depredations in some localities were equal to the accounts we have of the flying locust of Egypt.

In one of our own eastern counties, some thirty years ago, during an afflictive season of this insect, a farmer assisted by his men and boys, with ropes, drove the grasshoppers from his fields into his neighbors premises to the great injury of the latter.—A suit was commenced for damages, which was fiercely contested, and after a number of years, and passing through all the courts, finally provailed and resulted in the entire ruin of the wrong doer. He got rid of his grasshoppers, but lost his farm.

This insect possesses an extraordinary power of leaping, and it has been calculated, that if man possessed the same muscular power in proportion to his weight and bulk, he could jump over half a mile at one leap—which might be a desirable acquistion, occassionally, in heading unruly cattle.

## NOTES MADE ON A TRIP EASTWARD.

Crops of corn and potatoes rather light east of Syracuse. Did not see but two fields of corn topped; cutting up is evidently the popular mode of harvesting corn and, all things considered, certainly much the best. The crops of Broom corn on the Mohawk flats were very heavy. A great many men were engaged cutting off the tops, which were immediately placed in a wagon and taken to the drying room or factory.—The corn was quite green. The stalks which are some six feet high are left standing on the land, and are plowed in next spring as manure for the next crop of broom corn.

Maize luxuriates on these rich bottoms.—From 60 to 100 bushels of shelled corn per acre are annually obtained on many farms. They plant their corn much thicker than we do. The rows are certainly not more than three feet apart.

We stayed a day in Albany, and spent it most agreeably in the State Geological and Agricultural Rooms, and in visiting the manufactory of the Messrs. Emery. These gentlemen have a most extensive agricultural implement factory in the heart of the city. Any of our readers who may have an hour to spare in Albany, could spend it no where with more interest and profit than in this extensive establishment. Everything is done by machinery, from drilling *square* holes to the production of a perfect wheel. "Those unpainted horse power threshing machines are going to Austria. If we were to paint them, 15 per cent more duty would be charged to admit them into the Austrian market." Emery & Co. do a large and increasing foreign business. Our agricultural implements are undoubtedly far superior for simplicity, efficacy and cheapness to those of any other nation, and, thanks to the London Exposition of 1851, European countries are becoming aware of the fact. With *our* implements, and their *own* cheap labor and cheap land and, in many countries, with superior knowledge of the scientific principles of agriculture and the art of tillage, we must look well to our science or these old world nations will undersell us in the great marts of agricultural produce. We do not fear however. There is ingenuity and elasticity enough in the American mind to surmount or remove all difficulties of this nature. Farmers, and especially young farmers—young America in its best aspect—are beginning, with energy and determination, to study the science of their noble calling.—With science, mechanical genius, youth, ardor and perseverance on our side; with a vast continent of fertile soil and every variety of climate; with natural and artificial means of transit unequalled in the world; with three thousand daily and weekly papers scattering light and knowledge on our paths; with a population of thirty million speaking the same language, and having liberty to speak it freely, and fearlessly to interchange thoughts on all subjects, *need we fear competition?* "Come on Mac Duff."

At 4 P. M. we took the cars for Pittsfield, Mass. The country as you leave Albany is truly magnificent, the scenery picturesque and romantic, while the soil for maize and grass is unsurpassed in the State.

Pittsfield contains some 7,000 inhabitants. It is a most delightful village. The streets are well shaded with *healthy* hard maples, locusts and American elm trees, giving a pleasing and healthful character to the place.

There are several woolen and cotton factories doing a prosperous business.

The scenery around Lenox and Lee recalled vividly to mind the view obtained from the hills of Yorkshire and Derbyshire in *Old* England. Like most picturesque districts, the soil here is not of the most fertile character.

The corn, hay and oat crops have been unusually good this year. Potatoes are but an indifferent crop, and are much affected by the disease.

Topping corn is practiced here much more than in Western New York. The best farmers, however, are in favor of cutting up. They always sow a bushel of plaster per acre on the hills of corn at the first hoeing. On the upland it has a very beneficial effect. On the low land it does no good, either on clover, grass, maize or potatoes. This, we believe, is universal experience. Corn is planted thicker than with us, not more than three feet apart in the rows, and often less than that when the soil is rich. Lee owes its growth and wealth to paper mills. The water here is peculiarly adapted for the manufacture of paper, while the Housatonic, falling 14 feet, affords admirable water power. There are several very large factories. Another source of wealth is the large *marble* quarries. The marble for the Washington monument is obtained here. It is of a superior quality and will it is thought equal the Italian as the quarries are deepened.

## NEW YORK STATE FAIR.

The ground chosen was the most desirable, and the fitting up upon a commendable scale, though unfortunately not completed until at too late an hour. Bad weather and other causes are assigned for the tardiness. The exhibition, as a whole, was far short of that of preceding years, and not at all in keeping with the expectations of the visitors, or the good character of the Society. The blame unquestionably belongs to the farmers, mechanics and others who failed to bring out their farm productions. Of these things we may have occasion to say more in future time. The implement department was meagre indeed, hardly embracing as large a variety as could be presented by the dealers of Rochester. Atkin's Automaton or Self-Raking Reaper, and H. L. Emery's new Reaper and Mower combined, were all the new and desirable implements that rewarded our search, if we except Seymour's Grain Drill and Seed Sower with the improvements and additions of another year, rendering it, in our view, a perfect machine for those purposes.

Dairy Hall was scarcely any where, the Society offering very little encouragement to this most important branch of productive industry. The same may with truth be said of choice grain and seeds, as well as vegetables.

The Horticultural contributions were the great features of the Fair, equal to any we have seen at any former time. Of this Western New York furnished a commanding portion. The show made by Thorp, Smith, Hanchett & Co., of Syracuse; Cherry & Co., A. Frost & Co., and Ellwanger & Barry, of Rochester; Wilson, & Co., Albany; and Hovey, & Co., Boston, reflected much credit upon the different exhibitors, all of whom are nurserymen. The collection of N. & E. S. Hayward, of Brighton, near Rochester, who are farmers, was little inferior to that of the most extensive amateurs, and shows what may be done by a little care and labor, assisted by good taste.

The assortment of stoves, new patent jimcracks, and wonderful money making inventions, heard of only once in a twelvemonth, compared favorably with former efforts, and will be forgotten until some recurring Fair brings them again in contact with the people. It would be improper to say there was no good articles shown, tho' few, if any, embraced new features of real merit.

Manufacturers Hall, containing the contributions of household labor, domestic manufactures, and the fine arts, though very well filled, was, like most of the exhibition, inferior to previous years. The bad weather will account in a measure for this deficiency.

As a whole, we think neither the citizens of Saratoga, nor the State Society, have any reason to feel very proud of the Fair of 1853, and we feel safe in predicting neither will have added but little to their stock of riches by this means.

Many goods, we learn, were taken no farther than Schenectady, as the roads from there to Saratoga were unwilling to receive them and advance the freight. The railroad companies have discovered that it is necessary to carry articles twice over the road to entitle them to go free, from which decision has arisen a disposition to leave them at home, which operates unfavorably upon the State Fair, and will do so still more in future. It may well be doubted whether it is good policy to hold such fairs oftener than once in three years, and then in places convenient of access, and under arrangements which shall not render necessary a contribution of some thousands of dollars on the part of the place where it is held. There are important interests involved, and the whole matters of the State Society, and its Fairs, should receive more attention, that the greatest good to the greatest number may be the rich fruits of well directed efforts. H. C. W.

## "BLOOD CATTLE, &c."

Eds. Rural:—In reply to David Brooks & Son, in your issue of 24th ult., the subscriber would say, that the article in the Rural of the 17th Sept., headed as above, refers to their advertisement and sale; and farther, that he is not in the habit of writing anything of which he is *ashamed*, or which can be *disproved*. His name was withheld, merely because he had not the vanity to suppose that it would give any importance to the article, so long as *facts* were correctly stated.

If Mr. Brooks will be so good as to give some method by which "a man looking for pedigrees of blood cattle, can tell a half blood (or high grade,) from a pure bred animal," otherwise than by pedigree, his information, without doubt, will be thankfully received by many readers of the Rural, and certainly by the subscriber. J. R. Page.

Bennett, Cayuga Co., N. Y., 1853.

## A VOICE FROM NORTHERN PENNSYLVANIA,

Which desires to protest, Friend Rural, against the account of us, the sister counties of Bradford and Tioga, by Mr. Smith, of the Owego Times, as recently quoted in your pages. We are bad enough, when the truth, the whole truth, and nothing but the truth, is told of us; it is quite too bad not to give us all the credit we deserve.

I believe we have land of the very first quality, on some of our river flats— some land on the Cowanosque river has produced 50 bushels of wheat per acre. I question if your "very choicest wheat growing districts" exceed that. Also, within a mile of Wellsboro' upon old upland meadow, (summer fallowed, and not otherwise manured,) 40 bushels per acre have been grow—nnot as an average crop, of course, but some parts of a 40 acre field. "Very little plaster is sown"—too true; and I verily believe, scarcely one in ten of our farmers could distinguish between "bone dust" and "guano," if they should happen to see them.

It is a great error to suppose that the pine timber, for which our counties have been long famous, has disappeared like the Indian from our hills. Messrs. Phelps & Dodge, of Tioga, with other lumbermen, "whose name is legion," will tell you a very different story. It is not *half* gone, from either county—certainly not from Tioga. Bradford Co. is older settled, and much more improved. In the former a large proportion of the farms are yet to be paid for—in part at least,—so that the owners do not find much surplus, over and above their living, and the annual payments on their lands, to be expended in improved stock, &c. Still, a few full-blooded animals are, from time to time imported—though in this, as in other desirable improvements, they must "make haste slowly."

Mr. E. Mercer, of Towanda, has a full blood Durham bull, of the "Red Jacket" variety, from the herd of Gideon Ramsdell, of Egypt, Monroe Co., N. Y. Mr. Ward has an Aldorny, from stock of Nicholas Biddle. We have had full bred Berkshire pigs and Merino sheep; the late Judge Morris brought both into Tioga. I know all this amounts to but little—still it shows that we are not entirely in the dark ages, as to improved stock, &c. We know there are such things, and live in hopes of "A good time coming, coming right along!"

We each have now an Agricultural Society—in Bradford two years old—Tioga just organized, annual meeting 20th December. A great desideratum is the more general circulation of farming journals and newspapers—the Rural, for instance. I think the general diffusion of such reading in a community, will have the effect to turn the minds of our young men to the noble pursuits of Agriculture, and give them a distaste for what now seems the height of their ambition—a post behind the counter of a retail store or grocery, or loafing about for a chance at the loaves and fishes of political life.

The great want of our region is, better farmers—men of mind and means to improve the wondrous capabilities of the land. A famous stock and dairy country, we yet mean to be; for our rich upland pastures make delicious cheese and butter. No lack of the phosphates here, friend Sotham, so, if you will have the benevolence to spare us some of your fine Herefords, Shorthorns, and Devons, (tho' I suppose to avoid "controversy," we must keep their respective owners apart,) we will send you in return, some such dairy products as shall make old Herkimer and Orange "hide their diminished heads."

By the way, Friend Moore, *when* have you "visited" our counties? Pray come again, but come not *incog*, that we may improve the acquaintance, so pleasantly carried on by the weekly visit of your ever welcome paper.

I enclose a slip from one of our village papers—the Tioga Eagle—which is only one among many, if our farmers would only tell what they knew. S.

Wellsboro', Pa., Sept. 21, 1853.

Mr. Eagle:—As we are about forming an Agricultural Society in this County, I will give you a statement in relation to a crop of wheat I raised in Westfield township, in this county, this present year.—Here is the cost of raising the crop referred to. In the year 1852 I let out a job to clear ten acres of new land and fit it for sowing. The land cost me $100. Expenses of clearing and seeding, sixty-nine dollars. The crop was threshed in the field—cost of harvesting, thrashing and drawing, thirty dollars. I estimate the land at $5 per acre which is $50. The whole of the expenses including the land was $269. I sowed only *nine* acres and harvested three hundred and five bushels of good wheat, weighing sixty-three pounds to the bushel. You will see at once that the crop has paid all expenses, land included, and leaves a balance of *thirty-six* dollars clear profit. Ansel Purple.

Westfield, Sept. 12th, 1853.

## PREMIUMS AWARDED

**At the N. Y. State Agricultural Society's Fair,**

Saratoga Spa, September 20, 1853

[Last week we published a complete list of the Premiums on Stock, and now give those awarded in the other principal departments. We omit only the awards on matters of minor or local interest.]

### PLOWING MATCH.

1st. premium, Alex Denton, Malta, 'Trojan Plow,' $10; 2d, Lawrence Kennedy, Galway, 'Scotch plow,' 8: 3d, D B Westfall, Lyons, 'Wisconsin plow,' 6; 4th, Darius Clisby, Amsterdam, (Peter Ross, plowman,) 'Amsterdam plow,' 4; 5th, Luther Comstock, Kirkland, (James Brydon, plowman,) 'Scotch plow,' 2.

### FARM IMPLEMENTS.

*No.* 1.—Farm Wagon—1st, Wm Cook, Saratoga Springs, $6; 2d, R Lewis, Deerfield, 3.

Harrow—1st, J E Morgan, Deerfield, $6.

Fanning Mill—1st, D W Seeley & Co., Carlisle, $6; 2d, J H Vandercook, Rockwood, 3.

Hay and Straw Cutter—1st, Bailey West, 'Self-sharpening Yankee feed cutter,' Chickopee Falls, Mass., $6; 2d, Eddy, Dyer & Co., Union Village, 3

Horse Rake—1st, D C Colby, Westmoreland, N H., $4.

Hay, straw or corn stalk cutter, on a new and improved principle, Walworth & Truair, Syracuse, silver medal.

*Discretionary Premiums.*—To J N & D Elmore, Elmira, for grain separator, adapted to be attached to flouring mills, to clean wheat from chess, &c., small sil med.

To E Britton, Schenectady, for rockaway, open and roll up top, and close top buggies and road sulkey, diploma and $5.

*No.* 2.—Carriage Harness—Thos Joy, Troy, $5.

Churn—1st, Jno H Remington, Castleton, Vt., $5; 2d, Geo B Clark, Madison Co., 2.

Cheese Press—1st, Nathan Cole, Herkimer co., $5; 2d, M A Hackley, Bellville, 2.

Grain Cradle—John Bailey, Onondada co., $3.

Scythe Snath—1st, John Bailey, $3.

Wire Brooms—1st, C H Toll, Schenectady, 3.

Twine Brooms—1st, C H Toll, $3; 2d, J L Brownson, Amsterdam, 2.

Very fine specimen fancy brushes, discretionary, to J L Brownson, trans.

*No.* 3.—Best portable saw-mill, for wood, fences and farm use, E W Badger & Co., Fly Creek, Otsego co., $10; 2d, Messrs. Emery & Co., Alb., 8.

Best corn sheller, hand power, Eddy, Dyer & Co., $6; 2d, John Benedict, Saratoga, 4.

Best dog power machine, John Benedict, $5.

Best and most numerous collection of agricultural implements, Messrs. Emery & Co., $25; 2d, Eddy, Dyer & Co., 15.

### MACHINERY.

For the most valuable machine or implement for the farmer, either newly invented, or an improvement on any one in use, J D Wright, Chicago, Ill., Atkins' Self-Raking Reaper, dip. & s. m.

Best hay and cattle weighing scale, E & T Fairbanks, St. Johnsbury, Vt., $20.

Best hay press, for pressing hay, Dearing & Dedrick, Albany, sil med.

### BUTTER.

Best 25 lbs. of butter made in June, O P Frazier, LeRay, Jeff. co., $15.

Best lot of butter, not less than 10 lbs., made at any time, Henrietta Daniels, Greenfield, sil cup; 2d, Helen M Parker, Trenton, pair butter knives.

### CHEESE.

Best 100 lbs. of cheese, S & D Bonfoy, Winfield, $20; 2d, S & D Bonfoy, 10.

### SUGAR AND HONEY.

Best 20 lbs. honey, J S Eastman, Deerfield, $5.

### GRAIN AND SEEDS.

Best sample white winter wheat, not less than 1 bbl. O Howland, Owasco, Cayuga co., $2; 2d, Geo B Powell, Milton, 3.

Best sample of red winter wheat, 1 bbl. O Howland, $5; 2d, Peter Crispell, Jr., Hurley, Ulster co., 3.

Best sample of rye. 1 bbl., P Crispell, Jr., $5.

Best sample of oats, 1 bbl., P Crispell, Jr., $5; 2d, Geo B Powell, 3.

Best sample of barley, 1 bbl., O Howland, $5.

Best sample of Indian corn, 1 bbl., P Crispell, Jr., $5; 2d, S H Williams, New Hartford, 3.

Best sample of buckwheat, 1 bushel, J Daniels, Greenfield, $3; 2d, O Howland, 2.

Best sample Timothy seed, 1 bushel, O Howland, $3.

*Discretionary Premiums.*—O Howland, for a barrel of marrow fat peas, $1.

D S Davis, Saratoga, for a bushel of very fine white flint wheat, vol trans.

### VEGETABLES.

12 best white table turnips, J C Rouse, Saratoga Springs, $3; 2d, P Raley, Saratoga Springs, 2.

12 best carrots, P Raley, $3; 2d, J C Rouse, 2.

12 best beets, N Culver, Wayne co., $3; 2d, J Gifford, Saratoga, 2.

12 best parsnips, P Raley, $3; 2d, Theodore Backus, Rochester, 2.

12 best onions, J C Rouse, $3; 2d, T Backus, 2.

6 best heads of cabbage, N Culver, $3; 2d, J C Rouse, 2.

12 best tomatoes, P Bennett, Mechanicville, $3; 2d, P Raley, 2.

2 best purple egg plants, A M Hart, Saratoga, 3.

12 best sweet potatoes, Geo. W Herrick, Saratoga, $3; 2d, P Raley, 2.

Best half peck of Lima beans, N Culver, $3; 2d, N & E S Hayward, Rochester, 2.

Best bunch double parsley, Z M Saunders, $3; 2d, P Raley, 2.

3 best garden squashes, J C Rouse, $3; 2d, S Whalen, West Milton, 2.

3 best large squashes, J C Rouse, $3.

12 best ears of yellow seed corn, O Howland, $3; 2d, Isaac Frink, Saratoga, 2.

12 best ears of white seed corn, N Culver, $3; 2d, O L Barbour, Saratoga, 2.

Best half peck of table potatoes, S G Smith, Halfmoon, $3; 2d, K Howland, Mechanicsville, 2.

Best and greatest variety of vegetables raised by exhibitor, Sheldon Backus, Rochester, $5; 2d, N Culver, 3.

Best new and valuable variety of vegetables, with evidence of its superiority, C E Goodrich, Utica, $3.

*Discretionary Premium.*—To Z M Saunders, for a sample of celery, vol trans.

### FLOUR.

Best sample of corn or wheat farina, D S Davis, Saratoga, small sil. med.

Hill & Son, Rochester, barrel flour, dip.

*Discretionary Premium.*—Jonathan T Johnson, New York, for three samples of soap, and sample of starch polish, dip. and sil med.

### FLOWERS.

Greatest variety and quantity of flowers, Wm Newcomb, Pittstown, $8; 2d, J Wilson, Albany, 5.

Greatest variety dahlias, J Wilson, $5; 2d, J Battey, Keeseville, 3.

Best 24 dissimilar blooms, J Battey, $3; 2d, W Newcomb, 2.

Best single dahlia, W Newcomb, $2; 2d, Jas Wilson, 1.

Greatest variety of roses, A Frost & Co., Rochester, $5; 2d, Ellwanger & Barry, Rochester, 3.

Best 10 varieties phloxes, J Wilson, $3; 2d, Ellwanger & Barry, 2.

Greatest variety of verbenas, Ellwanger & Barry, $5; 2d, J Wilson, 3.

Best 12 varieties, A Frost & Co., $2.

Best collection German asters, Wm Newcomb, $5: best seedling, Wm Newcomb, 2; best and greatest varieties of pansies, Wm Newcomb, 3.

*Amateur List.*—Greatest variety and quantity of flowers, Mrs J T Van Namee, Pittstown, $5; 2d, Mrs P Bennett, Mechanicville, 3.

Greatest variety of dahlias, Mrs L E Smith, Mechanicville, $5; 2d, Mrs P Bennett, 3.

Best 12 dissimilar blooms, Geo Warren, Mechanicville, $3; 2d, Mrs L E Smith, 2.

Best 6 var. Geo Warren, 2; 2d, Mrs P Bennett, 1; best single var. Geo. Warren, small sil med.

Best 6 var. of phloxes, Mrs Wm Newcomb, $3; best seedling, Mrs Wm Newcomb, 1.

Greatest var. of verbenas, Mrs. Wm Newcomb, $5; 2d, Mrs T Mabbett, Mechanicville, 3.

Best 6 varieties Mrs T Mabbett, 3: 2d Mrs Wm Newcomb, 2; best 3 var., Mrs Wm Newcomb, 2.

Best seedling, Mrs T Mabbett, $2; 2d, Mrs J B Finlay, Saratoga, 1.

Best collection of German asters, Mrs T Mabbett, $5: 2d, Mrs Van Namee, 3.

*General List, open to all Competitors.*—Best floral ornament, Geo Warren, $5.

Best floral design Mrs T Mabbett $5; 2d, Mrs P Bennett, 3.

Best hand boquet flat Jas Wilson, $3; 2d, Mrs P Bennett, 2.

Best hand boquet round, Jas Wilson, $3; 2d, Mrs G W Wilcox, Saratoga, 2.

Best basket boquet with handle, Eliza D Palmer, Greenfield, $3. For the most beautifully arranged basket of flowers, Mrs Emily Newcomb, Pittstown, 3. Best exhibition of dried specimens of dried plants, Mrs I Clement, Halfmoon, s s med.

### FRUIT.

*Amateur List.—Apples, Pears and Peaches.*—For the best 20 varieties of good table apples, 3 of each variety, named and labeled, grown by exhibitor, N & E S Hayward, Rochester, $10; 2d, S H Case, N. Hartford, 7; 3d, E R Jones, Ballston, 5.

19 best var. table apples, J Van Namee, $8; 2d, N & E S Hayward, 5; 3d, E R Jones, 3; 4th, J H Case, Downing's Fruit Cult.

Best fall seedling apple for all purposes, E R Jones, $5.

Best basket standard fruits, 3 var., R McDonnell, Saratoga, $6; 2d, J T Van Namee, 4.

12 best var. pears, D T Vail, Troy, $8; 2d, E R Jones, 6.

6 best var. pears, D T Vail, $5; 2d, Elisha Dorr, Albany, 3; 3d, H G Dickinson, Lyons, 2; 4th, E R Jones, Thomas' Fruit Cult.

Best collection newly introduced pears, D T Vail, dip. and Hovey's Colored Fruits.

6 best var. peaches, N & E S Hayward, $5.

3 best var. peaches, P Bennett, $3; 2d, N & E S Hayward, 2.

12 best peaches, R McDonnell, $3; 2d, N & E S Hayward, 2; 3d, H G Dickinson, Trans.

Best seedling var., 6 specimens, E Dorr, $3.

*Plums, Nectarines, Quinces, Grapes, &c.*—Best collection plums, E Dorr, $5; 2d, P Bennett, 3; 3d, J T Van Namee, 1.

4 best var. good plums, E Dorr, $3.

12 best plums, E Dorr, $2; 2d, J T Van Namee Trans.

12 best quinces, P Bennett, $3; 2d, N & E S Hayward, 2; 3d, R McDonnell, trans.

Best col. native grapes, N & E S Hayward, $5; 2d, P Bennett, 3; 3d, E Dorr, 2.

3 best var. foreign grapes, John Greig, Canandaigua, $5. Discretionary—3 bunches sweet water grapes, P Barber, dip. Best dish native grapes, E Dorr, trans.

Best watermelons, J Ingersoll, Milton, $3; 2d, N Culver, 2; 3d, J M Andrews, Saratoga Spa, 1. Discretionary—Mr Cruger's gardener, s s med.

Best collection watermelons, J M Andrews, $3; 2d, J Ingersoll, 2.

Best specimen muskmelons, J Ingersoll, $3; 2d, G H Cherry, Rochester, 2; 3d, C M Davidson, Whitehall, 1.

Best peck domestic culture cranberries, K Howland, $5. Discretionary—Ever-bearing raspberry, K Howland, Thomas' Fruit Cult.

*Professional List.—Apples, Pears and Peaches.*—20 best var. table apples, G H Cherry, $10; 2d, A Frost & Co., Rochester, 7; 3d, Ellwanger & Barry, 5; 4th, J Morse, Cayuga Bridge, trans.

10 best var. table apples, J Morse, $8; 2d, Thorp, Smith, Hanchett & Co., Syracuse, 5.

Best basket standard fruits, J Morse, $6.

12 best var. pears, Ellwanger & Barry, $8; 2d, J Morse, 6; 3d, Thorp, Smith, Hanchett & Co., 4; 4th, J Wilson, Barry's Fruit Garden.

6 best var. pears, Ellwanger & Barry, $5; 2d, Maxwell Bros., Geneva, 3; 3d, J Morse, 2; 4th, Thorp, Smith, Hanchett & Co., Thomas' Fr. Cult.

Best collection of newly introduced pears, Ellwanger & Barry, dip. and Hovey's Cold. Fruit.

6 best var. peaches, J Morse, $5; 2d, J Morse, 3. 3 best var. peaches, J Morse, 3; 2d, J Morse, 2. 12 best peaches, J Morse, 3; 2d, J Morse, 2.

*Plums, Nectarines, Quinces, Grapes, &c.*—Best collection of plums, Ellwanger & Barry, $5.

4 best var. good plums, J Wilson, $3.

Best collection native grapes, A Frost & Co, 5.

*Foreign Fruits.*—151 var. pears, Hovey & Co., Boston, sil med.

9 var. apples, N Richards, Vergennes, Vt., trans

1 pomagrenate, B F Mosely, Albany, trans.

---

Irish Butter—*How Prepared.*—We have already noticed the sale at auction in Boston, of a lot of Irish Butter. In reference to the article a Boston paper says:

"The choice Irish butter which finds a market at Cork, is said to be the best butter in the world. It cost the present season there 80s. per cwt., equal to about twenty cents per pound. This butter is packed in tubs containing from 66 to 70 lbs. each.—The quantity of salt used in making is about one pound of salt to ten or eleven pounds of butter; the buttermilk well worked out of the butter without using the hand too much. Space is left at the top of the cask for pickle, and at the port of exportation the pickle is added, with one or two pounds of salt additional to each cask, to keep the pickle at full strength.

---

Figs.—S. F. Chandler, of Monsen, has ripened in his garden this season about 20 green figs. One is 6¼ inches in circumference. They are plump, soft, sweet and rich, and altogether a different matter from the dry fig. The tree must be housed in winter, and the fruit is two seasons in coming to maturity.—*F. E. Farmer.*

### INTRODUCTION OF DOMESTIC ANIMALS INTO AMERICA.

The following account of the introduction of Domestic Animals into this country, has been condensed from the late Census Report, and will be found to possess much interest. It furnishes a key to the origin of our Native Cattle, of which mention is often made, and concerning which an article was published in our August number:

The first animals brought to America from Europe, were imported by Columbus in his second voyage, in 1493. He left Spain as Admiral of seventeen ships, bringing a collection of European trees, plants, and seeds of various kinds, a number of horses, a bull, and several cows.

The first horses brought into any part of the territory at present embraced in the United States were landed in Florida by Cabeca de Vaca, in 1527, forty-two in number, all of which perished or were otherwise killed. The next importation was also brought to Florida, by De Soto, in 1539, which consisted of a large number of horses and swine, among which were thirteen sows, the progeny of the latter soon increasing to several hundred.

The Portuguese took cattle and swine to Newfoundland and Nova Scotia in the year 1553.—Thirty years after they had multiplied so abundantly that Sir Richard Gilbert attempted to land there to obtain supplies of cattle and hogs for his crew, but was wrecked.

Swine and other domestic animals were brought over to Arcada by M. L'Escarbot, a French lawyer, in 1604, the year that country was settled. In 1608, the French extended their settlement into Canada, and soon after introduced various animals.

In 1609, three ships from England landed at Jamestown, in Virginia, with many immigrants, and the following domestic animals, namely: six mares, one horse, six hundred swine, five hundred domestic fowls, with a few sheep and goats.—Other animals had been previously introduced there. In 1611, Sir Thos. Gates brought over to the same settlement one hundred cows, besides other cattle. In 1610, an edict was issued in Virginia, prohibiting the killing of domestic animals of any kind, on penalty of death to the accessory and twenty-four hours whipping to the concealer. As early as the year 1617, the swine had multiplied so rapidly in the colony that the people were obliged to palisade Jamestown to prevent being overrun with them. In 1627, the Indians near the settlement fed upon hogs, which had become wild, instead of game. Every family in Virginia at that time which had not an abundance of tame hogs and poultry, was considered very poor. In 1648, some of the settlers had a good stock of bees. In 1667 sheep and mares were forbidden to be exported from the province. By the year 1722, or before, sheep had somewhat multiplied, and yielded good fleeces.

The first animals introduced into Massachusetts was by Edward Winslow, in 1624, consisting of three heifers and a bull. In 1626, twelve cows were sent to Cape Ann. In 1629, one hundred and fifteen cattle were imported into the plantations on Massachusetts Bay, besides some horses and mares, several conies and forty-one goats. They were mostly ordered by Francis Higginson, formerly of Leicestershire, whence several of the animals were brought.

The first importation into New York was made from Holland, by the West India company, in 1625, comprising one hundred and three animals, consisting of horses and cattle for breeding, besides as many sheep and hogs as was thought expedient.

### TO CLEANSE FINE WOOL.

There are a few old fashioned houses from which the spinning wheel is not yet entirely abandoned. The inmates of such do not always know how to cleanse the gum out of Merino wool, before sending it to the carding machine. Let them remember this direction, by which we have cleaned many a hundred weight, some of which was almost as black as my hat, with dirt and gum, characteristic of all fine wool sheep.

For 100 lbs of wool, take 4 gallons of urine, and 8 gallons of rain water; mix and heat a little above blood heat, until the skum rises, which skim off. Keep it at the same heat in a kettle on coals or a little fire out of doors. Put in what wool the kettle will conveniently hold, and let it remain about five minutes—take it out on a board that will drain the liquid back into the kettle, or else put it in a basket over a tub, so as not to waste the liquid, for it will be equally good for the last batch as the first. When it is drained, put the basket under a stream of water running on it it convenient, or in a running stream if you can, or else with plenty of clear water in a large tub. It will wash very easy, and be as "white as wool."

Don't forget to sprinkle the dirty liquid upon the poorest spot in the garden, for it is a powerful manure. The same kind of liquid is the best thing known to take the dirt and grease out of any kind of foul woolen cloths or yarn.—*Sel.*

### LEICESTER SHEEP IN OHIO.

A Young Englishman, of Granger, Medina county, writing to the Ohio Cultivator, says:—"From a flock of fifteen Leicester Sheep in ordinary keeping, and wool of one year's growth, I sheared 100 lbs. and 11 oz., giving an average of 6 lbs. and 11¾ oz. each. One buck two years old, weighing 232 lbs., sheared 11 lbs. and 4 oz.; one yearling sheared 8 lbs. and 12 oz. Eight of the ewes had lambs; six were yearlings.

On the whole, I believe the Leicesters to be the most profitable breed of sheep raised in this country; as they not only yield more wool, but mature earlier, fat sooner, and make better mutton, according to the amount of food and care, than any other breed of sheep. Mr. R. Jackson, of Cuyahoga county, from whom I purchased my sheep, has sold his wethers for the New York market, at $8 per head."

The following are results of feeding different kinds of roots and grains for the production of wool:—1,000 lbs. of potatoes, raw, with salt, make 6½ lbs. wool; do. do. mangel wurtzel, raw, make 5½ lbs. wool; do. do. wheat, make 14 lbs. wool; do. do. oats make 10 lbs. wool; do. do. rye, without salt, make 12½ lbs. wool; do. do. barley make 11½ lbs. wool; do. do. peas, make 14½ lbs. wool; do. do. buckwheat make 10 lbs. wool.

# Orchard and Garden.

### THE CLINTON GRAPE.

A writer in the *Horticulturist* speaking of this grape, says:—"It has been cultivated in the vicinity of Rochester for the last twenty or twenty-five years; yet it is but little known, although well worthy of a more general cultivation, on account of its hardiness and productiveness. With us [Lat. 42,] in backward seasons it is the only grape that ripens. My opinion is, that before many years it will be extensively cultivated as a wine grape."

Upward of twenty years ago Dr. Samuel Freeman of Ballston Springs, now residing at Saratoga, wrote to his friend L. B. Langworthy, Esq., of this city, (accompanied by a box of grapes,) as follows:—"After many years spent in experimenting with the grape, this variety has given me more satisfaction than any I have cultivated. It is hardy and always ripens and is very prolific. It is not as sweet as the Isabella, but to my taste a very superior grape."

This grape was found in an uncared for state, in the garden of the old Peebles farm on the banks of the Hudson river, a little above the village of Waterford, and nothing was known by the then possessor concerning its origin. Mr. Langworthy gave it the name of *Clinton*, in compliment to the memory of that accomplished statesman, by which it has since been known.

The Clinton grape is not as palatable to most tastes as the Isabella and Catawba, being a little tart, but when fully ripe is well sweetened up. The bunches are small, close and almost black in color, not unlike the *Munier* or Purple Madeira. The leaves are small, thin and sharply serrated, much like the wild frost grape of the woods. The wood strikes freely from cuttings and is not injured by a temperature of 15 below zero. It is nearly a fortnight earlier than the Isabella and will ripen as far north as Quebec.

No grape grown north of a good way down south, how far we will not undertake to say, will make wine—*wine as is wine.*—The grape here does not contain sufficient of the saccharine principle, nor the tartaric acid at all—only the malic acid, like the apple, currant, &c.

To Keep Grapes.—Several laborious and far-fetched processes for preserving the grape fresh through the winter months, are now going the rounds of the papers; but we can assure the lovers of that most pleasant and healthy fruit, that there is nothing more required in that process than to pick them when perfectly dry, without breaking or bruising the berries, and to lay them down in boxes, or other conveniences not so deep as to allow them to crush of their own weight in single layers, with good, clean cotton batting between—*stratum super stratum*—and keep in the coldest condition possible without freezing. It is the easiest thing in the world to have them on the 4th July as fresh as in October, and will well repay the little labor required to secure one of the most delicious table fruits of the country. Vitis.

A Long Vine.—I have a raspberry vine that has one stalk that has grown 15 feet 5 inches in length, this year, and two others from the same root, one of which is 15 feet 2 in., the other 14 feet 10. I have a rose bush, one stalk of which has grown 15 feet 2 inches this year. A cherry tree 3 years old, in my door yard, measures at the ground, 22 inches, 3 feet from the ground 17 inches, and at the first limb 15. This is as large growth as I have seen; who can show a larger? Pigeon Hill.

Pears.—Men do not gather grapes of thorns nor figs of thistles, but I have a mountain ash tree with pears on it. The tree is an inch or more in diameter. Three years ago last spring I grafted it with Madelaine pear grafts, and this summer, it produced two dozen pears, one half of which are on the tree. They are as good flavored as if grown on their own stocks.

Amery Wilson.

Marcellus, N. Y., Aug. 22, 1853.

Preservation of Grapes—*Russian Mode.*—A traveler who lived at St. Petersburg during the winter season, states that he ate there the freshest and most beautiful grapes he had ever seen. To preserve them they should be cut before being entirely ripe.—Do not handle the berries—reject all the damaged ones, then lay the grapes in a large stone jar holding about thirty gallons: the mouth should be narrow so that the grapes will not touch each other; fill the spaces between them with millet; cover closely with a stone cover, well fitted and cemented. Over this paste a thick paper, and let it be hermetically sealed so as to entirely exclude the air. In this air-tight jar the grapes ripen fully, and acquire a flavor seldom attained by any other method and are preserved for two years in the best condition.

### HEADING CABBAGES IN THE WINTER.

A friend and correspondent complains to us, that his cabbages do not manifest any disposition to form close and compact heads, and inquires what he shall do with them.

We should advise him to let them stand the usual time, and if they are not sufficiently formed then, to give them a chance to head during the winter, by adopting the following plan:

Dig a trench on the side of a hill say a foot wide, and two deep. Let it slope down hill sufficiently to drain off any water that may chance to find its way in.

Put a layer of straw on the bottom.—Pull the cabbages up by the roots, close the leaves together, and place them in the trench, head down, and roots up. Place some straw between them and the sides of the trench. Then take a couple of boards and set them over the trench so as to form a roof, and cover the whole over with earth. In this way we have caused cabbages to form good heads during the winter, and take them out for use in the spring. By putting them down roots up, you prevent any dirt from getting in among the leaves. If the water gets in and stands among them they will be in danger of rotting.—*Maine Farmer.*

### ROSES FROM CUTTINGS.

Propagation by cuttings may be performed with success all through the growing season. As soon as the forced plants have bloomed, the shoots taken off, (when pruning for second bloom) may be cut to a joint with two or three eyes, allowing the leaves to remain on all excepting the bottom eye intended to be inserted in the soil. About six of these cuttings placed round a four-inch pot, in equal parts of loam, leaf mold, and sand, will be sufficient. They should be placed firmly in the pots, and afterwards well watered through a fine rose; then plunged where they will have a moderate bottom heat, and be shaded from a mid-day sun. In a few weeks when rooted they may be potted separately into three-inch pots, and gradually hardened off. The same soil may be used as before, but broken up fine, or sifted, with the addition of a little sand. Cuttings will strike through the summer, and any period when the young wood can be obtained well ripened. They may be taken so late as September, but must remain in the cutting-pots during the winter, and be potted off early in spring.—*Cottage Gar.*

### A HANDSOME PEACH ORCHARD.

James M. Whitney, Esq., of Rochester, has a peach orchard of upward one thousand trees about half way between this city and Lake Ontario, which we visited on the 13th September. The trees generally are in a vigorous and healthy condition, and the crop very heavy. This orchard occupies a warm, sheltered situation, and seems to have escaped the severe weather last spring, so ruinous to the peach generally in this section. Among those particularly fine we noted Large Early York, Crawfords' Early Melocoton, Yellow Alberge, Jaques' Rare Ripe, Morris' White, Old Mixon Free, and Crawford's Late Melocoton. Early Tillotson is an utter failure—thirty or forty trees stand without a single fruit and *nearly dead*, in the midst of luxuriant and heavily laden trees of other varieties. The Red Cheek Melocoton does not succeed well here. Mr. Whitney has also a fine young peach orchard of some seven hundred trees just beginning to bear.

# Domestic Economy.

Apple Jam.—The apples, which should be ripe, and of the best eating sort, being pared and quartered, as for making apple jelly, are put into a pan with water enough to cover them, and boiled until they can be reduced to a mash. Then, for each pound of the pared apples, a pound of sifted sugar is added, being sprinkled over the boiling mixture. Agitate it well until reduced to a jam; then put it into pots. The above is the most simple way of making it; but to have it of the best possible clearness, make a thick syrup with 3 pounds of sugar to each pint of water, and clarify it with an egg. Then add one pint of this syrup for every three pounds of apples, and boil the jam to a proper thickness.—*Vor. Farmer.*

To Clean Combs and Brushes.—To enough tepid water to cover the bristles, not the top of the brush, add a few drops of the spirits of hartshorn, an ounce of which may be had at any apothecary's for a few cents; dip the brush in several times, shaking out the water carefully, and the mixture will act like magic, leaving it clear and pure, needing only to be dried by a towel; no rubbing is needed. Combs may be done in the same way without injury.—*Lady's Book.*

To make Crackers.—One quart of flour with two ounces of butter rubbed in; one teaspoonful of saleratus in a wine glass of warm water; half a teaspoonful of salt, and milk enough to rub it out. Beat it half an hour with a pestle, cut it into thin round cakes, prick them, and set them in the oven when other things are taken out. Let them bake till crisp.

Apple Sago.—One cup of sago, one quart of boiling water poured upon it, season with milk, lemons and sugar. Pare and core as many apples as will stand in your dish, pour the sago over them and bake on hour. Serve with sugar and cream.

# Mechanic Arts, &c.

### LIST OF PATENT CLAIMS

ISSUED FROM THE UNITED STATES PATENT OFFICE

For the week ending September 20, 1853.

T. J. Alexander, of Westerville, Ohio, for improvement in sawing sticks for broom-handles.

Jas. Black, of Philadelphia, Pa., for improvement in planetary hydraulic steam engine.

Uriah A. Boyden, of Boston, Mass., for improvements in turbines.

Uriah A. Boyden, of Boston, Mass., for improvement in hydraulic motors.

Alfred F. Chatman, New York city, N. Y., for improvement in razor strops.

Isaac Fay, of Cambridge, Mass., for improvement in railroad car seats.

David Freed, of Huntingdon, Pa., for improvement in toilet furniture.

Samuel Hulbert, of Ogdensburgh, N. Y., for improvement in plows. Patented in Canada, Sept. 20, 1852.

Samuel Jenkins, of Portsmouth, Pa., for improvement in seed planters.

Oliver S. Leavitt, of Marcellus, N. Y., for improvement in hemp breakers.

Oliver S. Leavitt, of Marcellus, N. Y., for improvement in drawing frames for hemp and flax.

Warren Lyon, of New York city, N. Y., for improvement in metal drills.

James R. Nichols, of Haverhill, Mass., for improvement in fluid cans.

Henry Perrin and Wm. Rudduck, of Wilmington, Ohio, for improvement in seed planters.

Philo Sylla and Augustus Adams, of Elgin, Ill., for improvement in grain and grass harvesters.

Ancil Stickney, of Norwich, Vt., for improvement in blow pipes for enlarging blasting cavities. Ante-dated May 10, 1853.

Ancil Stickney, of Norwich, Vt., for improvement in compound blow pipe for enlarging blasting cavities. Ante-dated June 11, 1853.

Abel Shawk, of Cincinnati, Ohio, for improvement in steam generators.

O. Willis, of McDowell Co., N. C., for improvement in saw for water wheels.

Geo. Gorman, of Lamar, Mass., for improvement in cotton stalk cutters, or pulverizers.

For the week ending September 27, 1853.

Halvor Halvorson, of Hartford, Conn., for improvement in looms for weaving hair cloth.

Henry Hochstrasser, of Philadelphia, Pa., for improved sash fastener.

Nicholas Mason, of Roxbury, Mass., for improvement in cooking ranges.

Henry McCarty, of Pittsburg, Pa, for improvements in the manufacture of sheet iron.

Jordon L. Mott, of New York, N. Y., for improvement in cooking stoves.

Jordon L. Mott, of New York, N. Y., for improvement in bathing tubs.

Christian Sleppy, of Newport, Pa., for improvement in making chains.

David Stuart, of Philadelphia, Pa., for improvements in annealing hollow iron ware.

Robert Waskey, of Mill Creek, Va., for improvement in smut machines.

Wm. Zimmerman, of Quincy, Ill., for improvement in smut machines.

Chas. E. John and Samuel Wethered, of Baltimore, Md., for improvements in the use of steam for actuating engines. Patented in England, May 25, 1853.

Wm. Brown, of Glasgow, Scotland, for improvement in preparing paraffine oil.

Caleb B. Burnap, of Hartford, Conn., assignor to Lucius F. Robinson, of same place, for improved method of veneering.

Daniel P. Fales, of West Poultney, Vt., for improvement in car wheels.

James M. Dick, of Buffalo, N. Y., for improvement in railroad switches.

Chas. H. Platt, of New York, N. Y., for improvement in ships' blocks.

Wm. Richardson, of New Orleans, La., for improved centrifugal draining machine.

Stephen E. Parrish, of New York, N. Y., for improved clamp for laying floors.

### WATER LIME AND COMMON LIME MORTARS

Mr. Moore:—I am about constructing some walls, which are occasionally exposed to water. Will you, or some of your correspondents, advise me of the advantages of water lime over common lime, and the whys and wherefores? A. K.

Medina, Orleans Co., 1853.

It is a very mistaken idea of masons and builders, that water lime, or hydraulic cement, is better in walls above the water line, than common lime mortar, when in fact it is not as good, and is no better under water, if time could be allowed for common lime to set and become firm. The great advantage of water lime consists in its ability to set and go on hardening under water, or when water must be let on before common mortar could attain a consistency sufficient to resist its dissolving power.

The setting of mortar is a subject not perfectly understood. Age, moisture and exposure to the air are the agents that confer hardness and solidity. The mortar used for plastering the walls and ceilings of buildings, is no harder after fifty years than when first dried—while the mortar in old stone and brick buildings, have become as hard as the materials it cemented. The old Scotch saying is, that

> "When a hundred years are dead and gone,
> Good lime mortar is turned to stone."

The first *setting* of mortar, is undoubtedly owing to the loss of water by evaporation, or absorption—contracting its bulk, and causing a fitting and adhesion of the faces and angles of the particles of sand, and this is the only process that inside plastering undergoes; but in exposed walls, an entirely different and chemical change is effected. Water dissolves and holds in solution a four to a six hundredth part of its weight of lime, and when in that state has a strong affinity for the carbonic acid of the air, which at once precipitates in the state of original lime-stone, or carbonate of lime, and this process goes on as long as it can absorb moisture, until it becomes rock—a silica calcareous lime-stone.

This hypothesis is probably the true solution of the hardening of mortar, and may be illustrated by making a quantity of lime-water, or taking the clean part that will rise on common white-wash after standing a few hours, and putting it into a glass vessel and exposing it to the air, when it will in a short time form a pellicle or scum on the surface, which when disturbed will fall to the bottom, and another form, until the water has given up all its lime, and the material at the bottom is perfect carbonate of lime, composed exactly of the same materials as the original stone from which it was made. The same operation and the same effects are produced in exposed mortars.

Too much lime is, in nine cases out of ten, used in the every day cases of building.—No more lime is required than to fill up the interstices between the particles of sand; every atom more is a loss—a detriment. Some very reliable experiments, made by order of the British Government, go to show that one part of pure quick, or unslacked lime, to ten or eleven parts of washed, sharp sand, by measure, made mortar stronger and harder than any other proportion. Mortar for brick work, requires a greater proportion of lime, to render it more plastic, as it is rather brittle and difficult to use.

### A NEW BUILDING MATERIAL.

An invention has, it is stated, just been patented, for the adaption of a preparation of coke and other substances, by which bricks, paving slabs, door and stair steps, tiles, pipes, blocks, railway sleepers, and other articles of general use by builders, can be produced with a perfection and a cost which it is expected by the inventor will effect a complete revolution in the building trade. The price at which it is proposed to offer the coke brick to the public is scarcely one-third of the clay-brick, while in point of durability it is superior to the best article supplied from the kilns.—The manufacture, according to the specification, is effected by means of cast-iron moulds, the interior of which are of the exact dimensions of the common brick; in this mould a certain quantity of duff, or waste coal, powdered coke, charcoal, or cinders is placed, and being carbonized, the amalgamated material swells to the exact form required.

When taken from the mould, it undergoes a finishing process, in which varnish is applied to the end or side, having while wet a coating of powdered glass, with an admixture of a mineral coloring matter, sifted over it. The brick is then vitrified, when a beautiful glaze of any required color is produced, and the article is ready for use.—During the manufacturing process, the fumes are passed through water. The finishing process is only required for particular purposes, as in many instances the coke brick is equally available without it. The material is rendered fire proof by the application of the muriate of alumina, and is impervious to atmospheric influence by the nature of its formation. When articles of coke fabric are required of extraordinary density, a variation of the filling material, and also an extraordinary amount of compression, are necessary; and then there is hardly any limit to the degree of solidity which may be obtained. It is further stated that there is no description of article used in the erection or ornamenting of buildings, but may be produced from the material; thus columns for interior use, cornices, capitals of plain or ornamental design, can be manufactured and supplied in a finished state.—*London Paper.*

New kind of Boots and Shoes.—Measures are said to have been taken to secure a patent for a new kind of boots and shoes, invented by Albert L. Murdock, of Boston. They are thus described:—The soles and the lower portions of boots and shoes are made of India rubber, or gutta percha, while the upper portions are formed of some textile fabric, such as woolen, cotton, &c.—The lower portions of the boots and shoes protect the bottoms and sides of the feet from wet or moisture, while the upper portions form an elastic covering for the upper part of the feet or legs, and keep the lower portions properly adjusted to the feet, and at the same time allow the free perspiration to pass off.

Iron in England.—There are at present 178 different iron works in the kingdom of Great Britain, with an aggregate capital of nearly £4,000,000. The production of pig iron during the last twelve months was estimated at 2,697,249 tons, calling it 2,000,000 tons at £3 per ton, would make the annual value, £6,000,000. The entire exports of iron are now double what they were in 1825. The United States is the principal market. The shipment of manufactured iron from Liverpool to the three ports of New York, Philadelphia, and Boston, amounted, the last year, to 168,728 tons, of which New York took the greatest part.

# The Essayist.

## ABUSE OF HEALTH AND WEALTH.

BY HORACE MANN.

The young man walks in the midst of temptations to appetite, the improper indulgence of which is in danger of proving his ruin. Health, longevity and virtue depend upon his resisting these temptations. The providence of God is no more responsible because a man by improper indulgence becomes a subject of disease, than for picking his pockets. For a young man to injure his health, is to waste his patrimony and destroy his capacity for virtuous deeds.

Should a man love God, he will have ten times the strength for the exercise of it with a sound body. Not only the *amount* but the *quality* of a man's labor depends upon his health. Not only lying lips, but a dyspeptic stomach, is an abomination to the Lord. The productions of the poet, the man of science, or the orator, must be affected by his health. The man who neglects to control his appetites, is to himself what a state of barbarism is to society—the brutish part predominates. He is to himself what Nicholas is to Hungary.

Men buy pains, and the purveyor and market man bring home disease. Our ancestors used to bury the suicides where four roads met; yet every gentleman and lady who lay the foundation of disease with turtle soup and lobster salad, as readily commit suicide as if they had used the rope or the pistol; and were the old law revived, how many who are now honored with a resting place at Mount Auburn, would be found on the cross roads? It is amazing that man, invited to a repast worthy of the gods, should stop to feed on cabbage; or when called to partake of the Circean cup, should stop to guzzle with the swine.

If young men imagine that the gratification of appetite is the great source of enjoyment, they will find this in the highest degree with industry and temperance. The epicure, who seeks it in a dinner which costs five dollars, will find less enjoyment of appetite than the laborer who dines on a shilling. If the devotee of appetite desires its high gratification, he must not send for beef tongues, but climb a mountain or swing an axe. Without health there is no delicacy that can provoke an appetite. Whoever destroys his health, turns the most delicate viands into ipecac and aloes. The man that is physically wicked does not live out half his days, and he is not half alive while he does live. However gracious God may be to the heart, he never pardons the stomach.

Let a young man pursue a course of temperance, sobriety and industry, and he may retain his vigor till three score years and ten, with his cup of enjoyment full, and depart painlessly; as the candle burns out in its socket, so will he expire.

But look at the opposite. When a man suffers his appetites to control him, he turns his dwelling into a lazar house, whether he lives in a hovel, clothed with rags, or in the splendid mansion and gorgeous clothing of the upper ten.

I ask the young man, who is just forming his habits of life, or just beginning to indulge those habitual traits of thought out of which habits grow, to look around him, and mark the examples whose fortunes he would covet, or whose fate he would abhor. Even as we walk the streets we meet with each extreme. Here behold a patriarch, whose stock of vigor three score years and ten seems hardly to have impaired. His erect form, his firm step, his elastic limbs and undimmed senses, are so many certificates of good conduct; or rather, so many jewels and orders of nobility with which nature has honored him for fidelity to her law. His fair complexion shows that his blood has never been corrupted; his pure breath that he has never yielded his digestive apparatus for a vinter's cesspool; his exact language and keen apprehension, that his brain has never been drugged or stupefied by the poison of distillers or tobacconists. Enjoying his appetites to the highest, he has preserved the power of enjoying them. Despite the moral of the schoolboy's story, he has eaten his cake and still kept it. As he drains the cup of life, there are no lees at the bottom. His organs will reach the goal of existence together. Painlessly as a candle burns down in the socket, so will he expire, and a little imagination would convert him into another Enoch, translated from earth to a better world without the sting of death.

But look at an opposite extreme, where an opposite history is recorded. What wreck so shocking to behold as the wreck of a dissolute man; the vigor of life exhausted, and yet the first steps in an honorable career not yet taken; in himself a lazar house of disease; dead, but by a heathenish custom not yet buried? Rogues have had the initial letter of their title burnt into the palms of their hands; even for murder, Cane was only branded in the forehead; but over the whole person of the debauchee or the inebriate, the signatures of infamy are written. How nature brands him with stigma and opprobrium! How she hangs labels over him, to testify her disgust at his existence, and to admonish others to beware of his example! How she loosens all his joints, sends tremors along his muscles, and bends forward his frame, as if to bring him upon all fours with kindred brutes, or to degrade him with reptile's crawling! How she disfigures his countenance, as if intent upon obliterating all traces of his own image, so that she may swear she never made him! How she pours rheum over his eyes, sends foul spirits to inhabit his breast, and shrieks, as if with a trumpet, from every pore of his body, "Behold a Beast!" Such a man may be seen in the streets of our cities every day; if rich enough he may be found in the saloons and at the tables of the "supreme *ton*;" but surely to every man of purity and honor; to every man whose wisdom as well as whose heart stands unblemished, the wretch who comes crooped and bleeding from the pillory, and redolent with its appropriate perfumes, would be a guest or companion far less offensive and disgusting.

Now let the young man rejoicing in his manly proportions and in his comeliness, look on *this* picture and on *that*, and then say after the likeness of which model he intends his own erect stature and sublime countenance shall be configured.

## SELF MADE MEN.

It is the surprise of Europe that the United States has so many really great self made men. In the old invidiously privileged and distinctive classifications of European social organization, nothing, or less than nothing, can be self made, because all is made by theories and arbitrary distinctions. In such a distinction of the social compact, everybody is trying to find out what his ancestors were *by birth*, instead of what he himself is intellectually by nature. This is certainly the fittest way possible to make a fool of any man, who has not had the misfortune to be born one, while nothing could more effectually stifle ambition, or even hope, on the part of those not born aright. Self made men, under such a state of things, are out of the question. There is nothing to make them of. The masculine gender, in such lands, must needs become *routine* men, so far as they become men in any sense.

Why, then, should it not be a matter of surprise, in Europe, that it is easy for brains in this country, to make its way in the crowd? The law asks not when or of whom one was born, nor does it define any position which one is given to occupy, by reason of any contingents of that birth. Here, then, man has only, in the freest manner possible, to employ his capacity as he sees occasion, in a field open to all. His own free choice can alone direct his efforts as regards the object of his exertions, and his capacity in the premises will solely determine his measure of success. With these contingents in view, and their vast influence duly appreciated, neither Europe nor the world need longer wonder that Franklin the mechanic, rose as he did; or that the thousands who have come after him from equally obscure beginnings have so certainly risen and so gloriously shone along the paths of greatness which our nation has trod.

Genius is certainly not the exclusive inhabitant of any one realm or clime; but genius is naught, even if existent, without development can only be full and complete when all restriction is absent. When this is the case, genius, if it exist, will be found—will come forth into activity, mingling its results with passing events, and lending its aid in their direction. Such is genius here; and such is the result of its activity and its freedom. Europe has stood amazed at our progress, for the last half century. It has never comprehended the secret, as it seemed, of our national success; the reason has been that it has never realized the facts of which we speak. Hence, every new move that this Republic has made in the form of progress, has been promptly pointed out by Europe, as the sure element of our destruction. When we purchased Louisiana, England instantly saw that *such an extension of our borders* was to be fatal to the Union! So, again at the formation of each new State, at the west, the English press has faithfully repeated to the world, that the last hour of our confederation had come. But still the Union survived, strengthened and prospered; and its calumniators wondered, while waiting in silence. We added California; and again the announcement came from London, that we had now finished our career, and that the sun of our glory was soon to set in Lynch law and in blood. Since that the London *Times*, as if tired of waiting for the fulfilment of its own evil prophecies, has found the seeds of our national chaos and ruin in the Japan expedition; and again still in the report that we were to take part in some way in the Chinese rebellion.

One would think that such constant disappointment, in predictions, would induce the suspicion that erroneous data had been employed, and so provoke a revision of these. But it has not. That we could receive into the body of our nation such masses of emigrants from Europe, and still only grow stronger and richer, by the process, has more than once been declared by the London press, a mystery past finding out; for that press has again and again predicted our ruin from that infusion of population.

Nothing, then, results, with us, as Europe predicts and foretells; and hence the certainty that Europe does not see things as they are, here. Europe does not know, because Europe has never seen, that man, in all his despotisms, is governed too much and above all, *not by his own consent*. His capacity for self government is there treated as a fallacy; and hence the sluggard inactivity of his mental existence, there. It is only in a state of self-governed freedom that can be developed the powers which men possess; and when Europe shall have fully comprehended this noble idea, then will it cease to wonder at the strong and steady step of this nation onward, and above all at the constantly recurring cases of really great and valuble men rising from obscurity, in the midst of our people, to intellectual positions that astonish while they benefit mankind.

---

Misery assails riches as lightning does the highest towers; or as a tree that is heavy laden with fruit breaks its own boughs, so do riches destroy the virtue of their possessor. —*Burton.*

BARON JUSTUS LIEBIG.

In his late work entitled "A Visit to Europe in 1851," Prof. Silliman gives the following interesting account of a visit to Baron Liebig, the distinguished Agricultural Chemist:

Our principal object in Geissen, however, was to pay our respects to Liebig, its celebrated Professor of Chemistry. We had sent in our cards, and while we were waiting for the arrival of the hour which he had named for an interview, we drove about the town, and obtained access to the library of the University, which contains 200,000 volumes. It is arranged in a large and handsome building, and we were attended by a very intelligent librarian, who spoke English fluently. He made our brief visit interesting by leading us through the different departments of this large collection. The books are divided by subjects: theology, physics, mathematics, &c., being placed in separate departments, which is obviously the most useful and convenient arrangement. * * * * At the door of Prof. Liebig's lecture-room we were detained a little by the reluctance of the janitor, under orders not to admit any one after the lecture had begun, but our German attendant, whom we had engaged at the inn, overcame his objections, and we were admitted. Prof. Leibig, who was sitting and lecturing in his chair, perceiving our entrance, gave us a pleasant smile of recognition and welcome, and the young men courteously gave us seats. He spoke about 15 minutes after we entered. His pupils were very attentive, and most of them were engaged in taking notes. Their appearance was very much like that of a similar collection of American students. The room was crowded and from its dimensions, it could not have contained over 100 students. The table was full of the usual accompaniments of a chemical lecture. Everything was plain and business like.

We have been surprised at the small size of the lecture rooms in several of the European Universities which we have visited, and at the small number of pupils who generally frequent them. In Heidelberg, for example, Prof. Leonhard threw open, for our inspection, the doors of his lecture-room, which was in his house, and contiguous to his geological collection. The apartment had a rough, appearance, and the benches did not imply more than 30 pupils.

Prof. Liebig's manner of lecturing is calm and quiet; his voice is musical, and his fine, dark, deep set eye sparkles with a depth of intellectual expression and fire indicative of high genius. He has nothing of the action and vehemence of some of the Parisian Professors, and with a manner perfectly natural, he appeared to command entirely the attention of his audience. His subject was morphine and other alkaloids of opium.—When his lecture was finished he came immediately to us, gave us a very warm reception, and showed us about his working laboratory. There are four rooms, in two of which the working students are employed in their analytical labors. The tables exhibited every appearance of actual labor.—They were full of chemical vessels and reagents, and of course in the disorder which necessarily attends on numerous operations in which many persons are engaged. The number of working pupils in this department of the laboratory was from 20 to 30. It being the hour of dinner (at 1 o'clock, as in New England,) there were only a few young men present, and they appeared to be employed as private pupils: but Prof. Liebig told us that there were forty young men at work in another department, under an assistant teacher. We were conducted, last of all, into a private room, where delicate balances, and other nice articles of apparatus are kept.

Prof. Liebig is a very pleasing man. In his person, he is tall and genteel, and apparently about 50, or not much beyond that age. He is very affable and courteous; and as he speaks the English language perfectly, with only a slight German accent, our interview was particularly interesting and agreeable. He showed us some new chemical products, among which was *cordein*, which, in prosecution of his researches on the flesh fluids, has been extracted from the heart of the ox. Cordein crystalizes and appears to be similar to sugar, having a sweet taste.—Nitrogen does not enter into its composition, which is the more remarkable, especially for a principle extracted from muscle. Prof. Liebig also called our attention to the result of a process for obtaining barberine from the bark or alburnum of the barberry; it is a yellow crystalized substance.

The expression in the published print of Prof. Liebig, is very different from that of his speaking face. The print is true to the form of features, but it does not give the impression of suavity and mildness which he wears in conversation. It is however, a common misfortune to men whose minds have been much exercised with thought, that the artist often catches the settled fixed expression in which intensity is easily mistaken for severity.

Prof. Liebig expressed much regret, which we of course felt still more, that our interview must be so brief; but he was going to London, and we exchanged addresses hoping to meet again in that city.

To our earnest invitation that he would visit the United States and lecture in our institutions, he gave no encouragement, expressing great reluctance to speak in a foreign language, and when we named Prof. Agassiz as an example of great success in the United States, he added that he had a peculiar facility in acquiring a foreign language.

## THEOLOGY AND EDUCATION.—A FABLE.

One winter's night, a poor boy, worn out with cold and hunger, lay senseless before a rich man's door; and the rich man seeing him, was moved with pity, and carried him into his house. In a little while the warmth of the fire, which was blazing in the room where the boy was laid, restored him to life, and, feebly opening his eyes, and raising his head from the ground, in a faint, low voice, he cried: "I have had nothing to eat these two days; give me food or I shall die." Bread, and meat, and wine were placed before him; but as he stretched forth his hand towards the food, the rich man removed it from within his reach, saying, "Stop, before you eat you must say grace." And he repeated a form of grace which he ordered the boy to say after him.

But another man who was present, and who was a dissenter, interrupted him, and cried: "Your words are wicked, the boy shall not use them; this is the grace which he must pronounce"—and he then gave another form of grace, which he would have spoken. And when he had finished talking, a third man, who was a Catholic, more vehemently than the other two, exclaimed, "Both of you are wrong, I cannot suffer the boy to sin by doing as you would urge. *This* is what he ought to say"—and he repeated, in a loud voice, a third form of grace. And then all three spoke together, each one insisting that he alone was right. And they became angry, and abused one another, and the altercation continued for more than an hour, for they could come to no agreement. And as they were still debating and quarreling, they heard a groan; then suddenly they stopped talking, and turned towards the boy, and found that he was dead.—*Diogenes.*

## PRIVATE CHARACTER OF A LOCOMOTIVE

People who may see a locomotive tearing up and down the land at the rate of forty miles an hour, making the earth groan beneath its giant tread, and the heavens reverberate with its fearful clatter, scaring nature with its unearthly din, and frightening all creation almost from its propriety—people who only see it in its terrible activity, have no idea what eminently social virtues it is endowed with. This is its public character. Its private one is another affair. Now and then one of these huge monsters, in whose iron bowels slumber more than a thousand giants' power, comes up and stands under our window, and smokes away as gently as the most exemplary cooking stove, its huge steam pipes singing a strain as soft and as dulcet as the most amiable tea kettle, and its huge lungs of steel breathing as sweetly as an infant in its slumbers. But the demon of power is there Let any one but pinch its ears, and no venerable spinster cat will spit more fiercely; let him gripe those iron hands, and the pipes, which were tuned to so soft a strain, send forth a yell, as if heaven and earth were coming together, and those lungs, which breathed so quietly, cough like a volcano; and off it goes, darkening heaven with its volume of smoke.—*Home Companion.*

# Sunday Reading.

## "ALL FOR THE BEST."

FROM A LADY'S ALBUM.

All's for the best! be sanguine and cheerful;
Trouble and sorrow are friends in disguise;
Folly alone goes faithless and fearful;
Courage forever is happy and wise;
All's for the best—if men would but know it;
Providence wishes us all to be blest;
This is no dream of pundit or poet;—
Heaven is gracious, and—all's for the best.

All for the best! set this on your standard,
Soldier of sadness or pilgrim of love,
Who to the shores of despair may have wandered,
A way-wearied swallow, or heart-stricken dove.
All for the best! be a man, but confiding:
Providence tenderly governs the rest;
The frail bark of His creature He's guiding,
Wisely and warily, all for the best.

All for the best! then fling away terrors,
Meet all your foes and your fears in the van;
In the midst of your dangers or errors,
Trust like a child, while you strive like a man.
All's for the best! unbiassed, unbounded,
Providence reigns from the East to the West,
And by wisdom and mercy surrounded,
Hope and be happy that's all for the best.

---

[Parable from the German.—Translated for the Rural.]

## THE THREE FRIENDS.

There was a man who had three friends; two of these he loved exceedingly, but was indifferent to the third, who nevertheless dealt most honestly with him. One day he was summoned to appear before the tribunal, where he was severely accused. Thinking himself innocent, he spoke thus to his three friends:—Who of you will go with me and give evidence of my innocence? For I have been severely accused, and the King is angry." The first of his friends immediately excused himself that he could not, on account of other affairs, go with him. The second accompanied him as far as the door of the court of justice, and then turned away and went home, fearing the anger of the judge. The third, upon whom he had least reckoned, went in, spoke in his behalf, and testified his innocence so joyfully that the judge released the accused and loaded him with presents.

Man has three friends in this world.—How do they conduct themselves, in the hour of death, when God summons him to his tribunal? Wealth, his best worldly friend, is the first to abandon him. His relatives and friends follow him to the opening of the grave, and then return to their homes. The third friend, whom he often during his life forget, are his beneficent deeds. These alone accompany him to the throne of the Judge; they lead the way, speak in his behalf, and obtain mercy and grace. T.

## THE BETTER LAND.

A father and mother were living with their two children on a desert island in the midst of the ocean, on which they had been shipwrecked. Roots and vegetables served them for food; a spring supplied them with water, and a cavern in the rock with a dwelling. Storm and tempest often raged fearfully on the island.

The children could not remember how they had reached the island; they knew nothing of the vast continent; bread, milk, fruit, and whatever other luxury is yielded there, were unknown to them.

There landed one day upon the island four Moors in a small boat. The parents felt great joy, and hoped now to be rescued from their troubles; but the boat was too small to take them all over together to the adjoining land, so the father determined to risk the passage first.

Mother and children wept when he embarked in the boat with its frail planks, and four black men were about to take him away. But he said, "Weep not! It is better yonder; and you will all follow soon."

When the little boat returned and took away the mother, the children wept still more. But she also said, "Weep not! In the better land we shall all meet again."

At last the boat came to take away the two children. They were frightened at the black men and shuddered at the fearful sea over which they had to pass. With fear and trembling they drew near the land. But how rejoiced they were when their parents appeared upon the shore, offered them their hands, led them into the shade of lofty palm-trees, and regaled upon the flowery turf with milk, honey, and delicious fruits. "Oh! how groundless was our fear!" said the children; "we ought not to have feared but to have rejoiced, when the black men came to take us away to the better land."

"Dear children," said their father, "our voyage from the desert island into this beautiful country conveys to us a still higher meaning. There is appointed for us a still longer voyage to a more beautiful country. The whole earth, on which we dwell, is like an island. The land here is, indeed, a noble one in our eyes, although only a faint shadow of heaven. The passage hither over the stormy sea is—death; that little boat resembles the bier, upon which men in black apparel shall at some time carry us forth. But when that hour strikes, then we, myself, your mother, or you must leave this world. So fear not.—Death is for pious men who have loved God, and have done his will—nothing else but a voyage to the better land."

---

If there was no future life, our souls would not thirst for it.—*Richter.*

# Miscellaneous.

## WOULD YOU?

Baby crowing on your knee,
While you sing some little ditty,
Pulls your hair or thumbs your "ee,"
Would you think it wasn't pretty?
Tell me, could you?
If you owned the "baby," would you?

Wife, with arm about your neck,
Says you look just like the baby;
Wants some cash to make a "spec;"
And you would refuse her—may be:—
Would you? should you?
If you owned the "woman," would you?

Little labor, little strife,
Little care and little cot;
Would you sing for single life?
Would you murmur at your lot?
Tell me, should you?
If you owned the "cottage" would you?

Health and comforts, children fair,
Wife to meet you at the door,
Fond hearts throbbing for you there;—
Tell me, would you ask for more?
Should you? could you?
If you owned the "ready," would you?

Re-written for Moore's Rural New-Yorker.

## A STORY FOR BOYS.

### Frank Eastman's Garden and Library.

Books were not always as easy to be obtained as at present, and papers like the Rural — so interesting, instructive and cheap — are among the inventions of a later age. Many a farmer's son, forty years ago, seldom saw a book, except the few he used at school, and often these he so learned by heart that their contents could never be forgotten. Now-a-days, we change our school-books so frequently, that it rather puzzles a scholar to remember what, and how many, he has used. Their pictures, too, are great improvements on the cuts of "the Boy that Stole Apples," "the Fox and the Brambles," &c., which adorned the old "Webster Spelling Book," for instance.

But I have a story to tell — or something of one — of a farmer's boy, and his way of getting books and an education — a library and a profession — by his own exertions. This *way*, it will be seen, was proposed by his sister,— and many a man owes his prosperity to the influence and advice of his sister,— and very few boys ever have cause to repent that they listen to, and heed her love-prompted admonitions.

Frank Eastman was as bright and merry a lad as you could find in all Western New York. At the time my little history commences, he was just thirteen; active and hearty, with a frank, open countenance very winning to look upon. Children generally, if healthy and well used, wear more or less of the impress of good nature upon their faces, and some seem the embodiment of merry, innocent childhood. Such a one was Frank, who lived with his parents in a little brown house on the hill-side, half hidden from view by trees and shubberry. There was lovely and peaceful scenery around them — not without its influences on those who daily looked upon it. A little brook wound along the base of the hill, sparkling and singing in the sunshine, and giving back a pleasant picture of the flowers which peeped into its crystal waters. It had its work, too, as the mill on its bank proved every day by its useful activity.

Mr. Eastman's small farm afforded by its products all the necessaries of life, but left little for luxuries or superfluities; yet he and his family were contented and happy. It is not the abundance of a man's possessions which constitute his happiness; if it were, those who now enjoy the brightest sunshine would soon change places with the most care-worn and miserable. Frank was sent to school, and loved to go, and had already become quite a proficient in the branches there taught; but felt anxious to advance still farther, could he only get the proper books to study. His father, too, was willing to assist him as far as he was able, and encouraged him in seeking for a better education than had been in his own power to obtain.

It was a beautiful morning in spring, that Frank was walking through the garden with his sister Amy, two years older than himself, and telling her with great earnestness, of his plans for a garden of his own, the spot for which his father had just given him, to encourage him to work and plan for himself.

"See, Amy, here it is, all ready to commence. What shall I plant in it?" said he.

"It is not dug up yet, brother Frank," said Amy with a smile.

"But it soon will be, you know, and now is a good time to plan the planting of it. I want to know what you think it would be best to do. Besides, you shall have a place in it for your flowers, and I will make a border for you."

Amy had heard her father and mother talking of Frank's education, and how much they wished they could give him better advantages for study, and, naturally thoughtful, she readily perceived that here was a chance to earn money, so she replied:

"My plan, Frank, is something like this: In the course of the week you can dig it up deeply and well, and then as the proper season comes, can plant and sow it to garden vegetables. My place shall be near this shady corner; this shall be as pretty as possible with flowers. You may plant three rows of corn on the north side, and then three rows of climbing beans, with a few pumpkin vines among the corn, as Father does in the brook lot The south part you can sow to beets and onions, and a few hills of melons and squashes would fill the middle of your garden. All these, if well taken care of, will grow well, and the miller and store-keeper, I dare say, will buy some of them, so you can get money to pay for a Geography and Atlas, and the Grammar you want so badly; and perhaps there will be enough over for a large "Robinson Crusoe," telling the whole story, some of which we have read in the primer mother bought you. She said she saw one in the store, you know."

"Thank you! Amy, thank you!" exclaimed Frank, clapping his hands, delighted at the scheme. "I did not think so far as that; it is just what I will do, and have my books yet."

The ground was prepared with much labor, thoroughly and well—the seeds were planted under the direction of his parents and Amy; and earnestly did he watch their first springing up, and patiently did he tend them in those hours when he could be spared from his father's service. Amy did not allow him to despond for want of word and act of encouragement. She not only set him an example of clean culture in her flower border, but she aided him in keeping his beds free from weeds, and in neat and thrifty order. The soil seemed kindly, and its care and culture was well repaid by the products which it yielded. The miller did happen to want a bushel of onions, half a bushel of beets and all his pumpkins, and paid him well for them; and the store-keeper took onions, beets, beans and squashes enough to pay for the Geography and Grammar, and threw in a half-quire of paper and two slate pencils. For some service to a neighbor he had been rewarded with half-a-dozen duck's eggs; these Amy hatched under a hen, and for keeping them through the winter Frank reserved his bushel of golden corn ears.

We might make a long story of this — telling of the pride and happiness of Frank when he got his first books as the reward of his own exertions, and of the various ways and means by which he became possessor of quite a library. But what we have already told will prove, we hope, a suggestion of value to many a boy of thirteen or thereabouts, anxious for knowledge.

This was years ago, but who could not then predict that Frank would arrive at honor and distinction? Would he who had done thus much, give up at any difficulty? No! not he. The habits of persevering industry he had acquired, enabled him to master them all, mental and pecuniary, and in a few years he fitted himself for College, where he graduated with honor. He became an eminent lawyer, and is still in the practice of his profession, and his talents and integrity are respected by all. Happy, too, in the bosom of his family, he is as happy-hearted as, when a boy, he labored for a worthy object, for such he has kept in view, as all his career of industrious self-reliance.

J. H. B.

---

Bachelor Buchannan.—Few, perhaps, says an exchange, know the real cause of the long, lonely life of our new minister to St. James, Mr. Buchannan. The story is briefly told. When in his early manhood, he paid his addresses to a beautiful lady of his native city of Lancaster, Pa. Each became deeply enamored, and they were engaged. On a given evening, she requested his company to a party at a friend's, which he declined on the plea of business engagements. Circumstances rendering it necessary, he, late in the evening, gallanted a young lady to her home, and on the way—they met. Mortified and chagrined at what she deemed unfaithfulness and desertion, and imagining the worst, she left the city early in the morning, and returned—*a corpse*. Such is the sad story of his early love, nor can the high places of distinction and trust make him forget, nor the wreaths of honor that encircles his brow bury, the memory of the early loved and lost.

---

Juvenile Aeronaut.—Charles Wise, aged 17 years, son of Mr. John Wise, the well known aeronaut, ascended in his father's balloon, the "Ireno," from Shannondale Springs, a few days ago, in the presence of a large concourse of spectators. The ascension took place at 20 minutes past two o'clock p. m., and at 10 minutes after 4 the balloon decended on the farm of Mr. E. Turner, five miles above Shepherdstown, Va. Three ladies, it is said, caught the tow-line and brought the balloon safely to the ground. The youthful aeronaut was soon surrounded by a number of persons, and was kindly entertained by Mr. Turner.

## ABOUT WANTS.

"Man wants but little here below,
Nor wants that little long."

So said the poet; but there are few in this world who concide with his opinion.—He probably never took a newspaper, for if he had, and had cast his eyes over the advertising columns, he could not but have altered his opinion. Our wants commence with the dawn of our reason; we first want toys and gewgaws, candies and gingerbread; then, as our ideas expand, we begin to have a predilection for the the "root of all evil," the possession of which will, we imagine, be the means of gratifying all other wants.—In short, this is "a consummation devoutly to be wished" by all human aspirations, and is about the only want that can never be thoroughly satisfied, as the more we get the more we want. Then a man wants a wife,

"Which want sticks in his head
Till he gets one, and then he wants another instead."

Then come our ambitious wants. The school boy wants to leave school and go to work, the apprentice wants to become a journeyman, the journeyman wants to be an employer, the employer wants to retire, the retired tradesman wants to become a member of Congress, the member of Congress wants to be Governor, the Governor wants to be President, and the President—but we will stop here. The Presidential chair is the beau ideal of republican ambition; but never having occupied that honorable station ourself, and not being on sufficient terms of intimacy with those who have, to ascertain if it was possible for a man after obtaining that dignity, to want anything further in this world, we are unable to state more on this point. The editor wants subscribers to his paper, and wants them to pay for it; he also wants the community in general to advertise, thereby letting "all the world and the rest of mankind" know what they want, at the same time gratifying his want of patronage.

## THE ORATOR AND THE NEWSPAPER.

Compare the orator, one of the noblest vehicles for the diffusion of thought, with the newspaper, and we may gain a faint glimpse of the ubiquitous power of the latter. The orator speaks to hundreds; the newspaper addresses millions. The words of the orator may die on the air; the language of the newspaper is stamped upon tablets imperishable. The arguments of an orator may follow each other so rapidly, that a majority of the audience may struggle in a net of ratiocination; the reasonings of the newspaper may be scanned at leisure, without the danger of perplexity. The passion of an orator inflames an assembly, the feelings of a newspaper electrifies a continent. The orator is for an edifice; the newspaper for a world; the one shines for an hour, the other for all time. The orator may be compared to the lightning, which flashes over a valley for a moment, but leaves it again in darkness; the newspaper to a sun blazing steadily over a whole earth and "fixed on the basis of its own eternity."

Printing has happily been defined the "art preservative of all arts." Printing makes the orator more than an orator. It catches up his dying words and breathes into them the breath of life. It is the speaking gallery through which the orator thunders in the ears of ages. He leans from the tomb over the cradle of the rising generations.

## THE HOME GRANDMOTHER.

She is by the fire—a dear old lady, with nicely crimped and plaited cap-border, and the old fashioned spectacles—as pleasant a picture of the home grandmother as any living heart could wish to see. The oracle of the family—the record of births, deaths, and marriages—the narrator of old revolutionary stories, that keep bright young eyes big and wide awake till the evening logs fall to ashes—what should we do without the home grandmother? How many little faults she hides! What a delightful special pleader is she when the rod trembles over the unfortunate urchin's head.

"Do you get many lickings?" inquired a flaxon-haired youngster of his curly-headed playmate.

"No," was the prompt, half indignant answer; "I've got a grandmother."

Love that good woman. Sit at her feet and learn of her patient lessons from the past. Though she knows no grammar, cannot tell the boundaries of distant States or the history of nations, she has that perhaps which exceeds all lore,—wisdom. She has fought life's battle, and conquered. She has laid her treasures away, and grown purer, stronger, through tears of sorrow.—Never let her feel the sting of ingratitude. Sit at her feet. She will teach you all the dangers of life's journey, and teach you how to go cheerfully and smilingly to the gate of death, trusting like her in a blissful hereafter.

---

Evil Speaking.—It is not good to speak evil of all whom we know bad; it is worse to judge evil of any who may prove good.—To speak ill upon knowledge, shows a want of charity; to speak ill upon suspicion, shows a want of honesty. I will not speak so bad as I know of many; I will not speak worse than I know of any. To know evil of others, and not speak it, is sometimes discretion; to speak evil of others, and not know it, is always dishonesty. He may be evil himself, who speaks good of others upon knowledge; but he can never be good himself, who speaks evil of others upon suspicion.—*Arthur Warwick: "Spare Minutes,"* 1637.

---

People seldom love those who withstand their prejudices, and endeavor to control their passions.

## NIAGARA FALLS ALBUM.

The International Journal gives a variety of extracts from the Album to be found in the immediate vicinity of Niagara Falls. In this album, those who feel particularly inspired by the sights and sounds around them, may record the effect in such language as they happen to have at command.

The first is from the pen of Mr. Foote, criticised by Mr. Legg, and others thus:

To hear this water roar,
To see this water pour,
Is certainly much more,
Than I've seen or heard before.—*A. Foote.*

To hear a jack-ass bray,
Is nothing new to-day—
You can neither sing nor say,
So you may go away.—*A Legg.*

You had better toddle, too,
For you're blockheads through and through;
'Pon my honor it is true—
Cock-a-doodle-doo.—*Francis Head.*

Good morning: how d'ye do?
How much wiser, pray, are you,
Than the other stupid two?
Tell me that, and tell me true.—*Durham.*

"Should the British Lion ever come to the Falls of Niagara, he will there see the proud Eagle of American Liberty sitting in his majesty, and will go roaming down that mighty cataract in despair.—Sam."

"If the American Eagle comes to the British side of the Falls, that same old Lion will pluck his feather, and compel him to take shelter behind a cotton bale."

But the next fellow is disposed to allay all "animosities" and prejudices.

"May the mighty waters of the Niagara smother, in their eternal vortex, all the animosities and rancours that may ever have existed between Great Britain and her fair daughters of the West, and remain an everlasting and indestructible monument of the harmony which I trust will never cease to exist between the two nations, (of one blood) at once the most enlightened in the world.—Geo. Mair."

"How lonely and desolate would the life of man be without—Woman?"

"What has woman to do with the Falls?—Quip."

"If woman has not to do with the Falls, I should like to know who has — she made the first fall herself.—Crank."

"Oh! what a fall was there, my countrymen!—Shakspeare."

"This atmosphere is terribly destructive to starched collars, and takes the curls out of one's whiskers with amazing celerity.—Charles Augustus Mandeville."

"The pretty creature! It should have put itself, whiskers and all, into a band-box. Should'nt it?"

## EMPIRE OF QUEEN VICTORIA.

Finche, in his "Boundaries of Empire," rather grandiloquently dishes up the wonder and greatness of Queen Victoria's empire, as follows:

"The Queen of England is now sovereign over one continent, a hundred peninsulas, five hundred promontories, a thousand lakes, two thousand rivers, and ten thousand islands. She waves her hand, and five hundred warriors march to battle, to conquer or to die. She bends her head, and at the signal a thousand ships of war, and a hundred thousand sailors, perform her bidding on the ocean. She walks upon the earth, and one hundred and twenty millions of human beings feel the slightest pressure of her foot. Come, all ye conquerors, and kneel before the Queen of England, and acknowledge the superior extent of her dependent provinces, her subjugated kingdoms, and her vanquished empires. The Assyrian empire was not so wealthy. The Roman empire was not so populous. The Persian empire was not so extensive. The Arabian empire was not so powerful. The Carthaginian empire was not so much dreaded. The Spanish empire was not so widely diffused. We have over-run a greater extent of country than Attila, that scourge of God, ever ruled! We have subdued more empires, and dethroned more kings than Alexander of Macedon! We have conquered more nations than Napoleon, in the plenitude of his power, ever subdued! We have acquired a larger extent of territory than Tamerlane the Tartar ever spurred his horse's hoof across." This is indeed a proud boast, and should stimulate to good actions.

## AN OWLISH CITY.

If we may believe the local itemizor of the N. Y. Tribune "Gotham never sleeps all over; it always has one eye open. It walks and talks in its sleep, and if it dreams, it is always in the day time. They dream in Wall street among 'fancies;' they dream in the Elysian Fields, among the 'fancy.'—The offices of the morning papers, like bright eyes, never wink all night long, and all night long the typo, like 'the Grand Army,' is wheeling into line, and forming into column for the 'chase.' The lamps of Resturant's 'pale their ineffectual fires,' only at the dawn. Jersey City Ferry swings like a pendulum all night, from shore to shore. The Sixth avenue cars are sleepless.

Vice is wakeful, so are poverty, and pain. There's a stampede of milk wagons from the foot of Courtland street, through every hour, and every avenue, from twelve to breakfast, from Bloomingdale to the Battery. New York has a touch of the owl: half of it sees clearest in the dark; a trace of the vampire: it preys most in the night; and a cross of the butterfly: it's gayest in the sunshine. Full of idols as India, full of Bibles as the 'Union,' full of money changers as the Temple, full of lazzaroni as Naples, it's the marvel of Christendom."

---

A Good Idea.—A sentimental chap intends to petition to Congress for an act to improve the channels of affection, so that henceforth the "course of true love may run smooth."

# For the Ladies.

## GIRLS WHO WANT HUSBANDS.

Girls, you want to get married, don't you? Ah, what a natural thing it is for young ladies who have such a hankering for the sterner sex! It is a weakness that woman has, and for this reason she is called the weaker sex. Well, if you want to get married, don't for conscience sake act like fools about it. Don't go into a fit of the nips every time you see a hat and a pair of whiskers. Don't get the idea into your heads that you must put yourself in the way of every young man in the neighborhood, in order to attract notice, for if you don't run after the men they will run after you.—Mark that.

A husband-hunter is the most detestable of all young ladies. She is full of starch and puckers; she puts on many false airs, and she is so nice that she appears ridiculous in the eyes of every decent person.—She may generally be found at meeting, coming in, of course, about the last one, always at social parties, and invariably takes a front seat at concerts. She tries to be the belle of the place, and thinks she is.—Poor girl! You are fitting yourself for an old maid, just as sure as the Sabbath comes on Sunday. Men will flirt with you, and flatter you, simply because they love to do it; but they have no more idea of making you a wife than they have of committing suicide. If I was a young man, I would have no more to do with such a fancy than I would with a rattlesnake.

Now, girls, let Nelly give you a piece of her advice, and she knows from experience if you practice it, you will gain a reputation of being worthy girls and stand a fair chance of getting respectable husbands. It is all well enough that you learn to finger the piano, work embroidery, study grammar, etc., but don't neglect letting grandma, or your dear mother teach you how to make bread and get a meal of victuals good enough for a king. No part of a housekeeper's duties should be neglected; if you do not marry a wealthy husband you will need to know how to do such work, and if you do, it will be no disadvantage for you to know how to oversee a servant girl, and instruct her to do these things as you would have them done. In the next place, don't pretend to be what you are not. Affectation is the most despicable of accomplishments, and will only cause sensible people to laugh at you. No one but a fool will be caught by affectation—it has a transparent skin, easily to be seen through.

Dress plain, but neatly. Remember that nothing gives a girl so modest, becoming and lovely an appearance, as a neat and plain dress. All the flummery and tinsel work of the dressmaker and milliner are unnecessary.

If you are really handsome, they do not add to your beauty one particle; if you are homely, they only make you look worse.—Gentlemen don't court your faces and jewelry, but your own dear selves.

Finger-rings and folderols may do to look at, but they add nothing to the value of a wife—all young men know that. If you know how to talk, do it naturally, and do not be so distressingly polite as to spoil all you say. If your hair is straight, don't put on the curling-tongs to make people believe you have negro blood in your veins. If your neck is very black, wear a lace collar, but don't be so foolish as to daub on paint, thinking that people are so blind as not to see it; and if your cheeks are rosy, don't apply pink saucers, for the deception will be detected and become the gossip of the neighborhood.

Finally, girls, listen to the counsel of your mothers, and ask their advice in everything. Think less of fashion than you do of kitchen duties—less of romances than you do of the realities of life—and instead of trying to catch a beaux, strive to make yourselves worthy being caught by them.

Nelly Gray.

## "IT'S ME."

Passing a neat little martin box of a house one evening, we happened to see a man waiting at the door for admittance. At the instant a green blind above just opened a little way, and by the gas light we caught a glimpse of a pair of brilliant eyes, and a flutter of something white, and a bird-toned voice softly said, "Who's there?" "It's me," was the brief response. The eye and the flutter disappeared from the window, like stars in a cloud, and we almost fancied, as we passed on, we could hear the pattering of two little feet upon the stairs, winged with welcome.

It was a trifle; it all happened in an instant, but it haunted us for an hour—"It's me!" Amid the jar of the great city, those words fell upon the quick ear aloft, and met a glad response.

"It's me!" and who was "me?" The pride of a heart's life, no doubt; the tree a vine was clinging to; the "defender of the faithful," in the best sense of the term.

"It's me!" Many there are who would give half their hearts, and more than half the hope in them, for one such recognition in this "wide, wide world." On 'Change, in the Directory, at the Post Office, he was known as A. B. C., Esq., but on that threshhold, and within those walls, "it's me," and nothing more; and what more is there one would love to be?

Few of all the hearts that beat so wildly, warmly, sadly, slowly, but can recognize a true soul amid the darkness of the world, in that simple but eloquent "it's me." As if he had said—

"Now I am nothing to all the world,
For I'm all the world to thee."

---

Who cannot keep his own secret ought not to complain if another tells it.

MOORE'S RURAL NEW-YORKER.

ROCHESTER, OCTOBER 8, 1853.

THE FOREIGN NEWS.—*Breadstuffs.*—The late news from Europe is important, especially to producers and holders of Breadstuffs. Each of the three last arrivals brings inielligence of an advance in prices—the aggregate rise being greater than was generally anticipated by the most sanguine. The quotations given in another column show higher prices than have before been reached the present season,—and though they may not soon materially advance, the prospect is that present rates will be sustained.

### Monroe County and Other Fairs.

THE Fairs of the Monroe Co. Society—a trio this year—were well attended, and each presented features and attractions worthy of more notice than we can give them. The show at Brockport was good and the attendance large, though the weather was unfavorable. We understand that the exhibition at Rush, which we were unable to attend, was highly creditable—quite superior in many departments to what was anticipated. The show of stock was superior. The display at the Court House, on Saturday—the Society's third and final show of the season—was very fine and numerously attended, notwithstanding the bad weather. The Horticultural show was the grand feature, and fully sustained the reputation of the County in this department. The display of Fowls was quite choice and superior, and attracted marked attention—so much so that we presume many were thoroughly inoculated with the "fever." The official reports of the Fairs have not been received.

So far as we are aware the County Fairs recently held throughout Western and Central New York, have generally been creditable to the various Societies. We intended to have been present, and taken notes, at several of the shows, but circumstances beyond our control prevented. If possible we shall witness some of the State and County displays yet to be held—and if not, hope to receive brief notes of their prominent features from correspondents.

### An Hour in the Sanctum.

HEY-DAY!—the Editor's gone, and I can for once examine, free from the restraint of his presence, the material with which a popular Editor supplies the mental appetite of the reading public.

Kind reader, perhaps you, like myself, till this moment, have always thought that in the absence of the Editor the most important material, the indespensable part in making up "the paper," that is brains, would be wanting; but see here, and be convinced an Editor is no more than other folks. And first, to prove how little the draft upon his brains, I call your attention to the fact that, he has left his pen upon the table,—I am using it now,—caring little for a thing of which he is so careless, even though made of gold. But his *scissors*,—O! they are too precious; he cannot lose them,—and so for safety has carried them home. If he had only left them, I might mount the throne editorial. I fill the arm chair almost as well as he,—and then, would not the next number of the RURAL satisfy every reader that a very small amount of brains had been used in making it up?

I declare I am getting along finely; this shall be my leader, as they call it, because so heavy! And now for the selections. As I have no scissors, I must tear out the pieces I want, and if there are not some torn selections in the next number of the RURAL, you may understand that Mr. MOORE has blocked the wheels,—no, not that, or folks will know I have been a stage driver,—so, as he would say, has knocked things into pi; but I prefer to have mine made of pumpkins.

But oh! he's coming, and *my* choice selections, poetry and all, are lost. Poor reader, I pity you; but my tears are vain. SUISSAC.

REMARKS.—We regret having interrupted our agreeable friend and occasional correspondent,—for we think he would prove efficient with either pen or scissors. But were he *obliged* to use such implements, with the necessary brain power, for weeks and months in succession, we imagine his enthusiasm, if not his patriotism, would ere long evaporate. And we fear his genial spirits, vigorous mind and strong constitution, would all suffer from the constant labor, attention and confinement to which we are subjected. More than all, the weight of responsibility which every editor should realize — the fact that thousands may be influenced for good or evil by his course, and the desire to discharge his duty conscientiously in catering for so vast a multitude — would paralize his efforts, and affect both physical and mental powers. Again, he would soon find the *judicious* use of the scissors quite as difficult as writing.—The idea that an editor can use the scissors properly without exercising his brains — common sense, sound judgment, and good taste — is altogether incorrect; and the supposition that a *better* paper can be made by attempting to fill it with original articles, is another egregious mistake, as many talented and learned men have proved to their sorrow. The RURAL is called a popular paper, and its success warrants the appellation; but had we not devoted much time and careful attention to *condensing* and *selecting* for its pages — instead of publishing articles simply because they were original, which we could do with less trouble and labor, having usually scores of contributions on hand — it never, in our opinion, would have attained its present standing and circulation.

## Correspondence.

### Sight Notes, Drawn in Boston.

FRIEND MOORE:—We are again in the metropolis of New England, and though almost constantly occupied with business affairs, find a few spare moments to glance at matters of some interest to the general reader. We arrived too late to visit the annual exhibition of the Massachussetts Horticultural Society, which is much regretted as we learn it was exceedingly fine. It was held under a spacious tent upon the Common, and attracted a large number of visitors Receipts. $2,200.

An unusual amount of attention is bestowed upon the culture of fruit, flowers and fine shrubbery around Boston. The practice of having suburban residences, which prevails with many wealthy citizens who transact business daily in the crowded city, has fostered a taste for landscape gardening and its concomitants, fine fruits and flowers, which renders the region of country round about Boston redolent with richness and beauty Nowhere have we seen so much good taste displayed, and nowhere else do the citizens appear so fully to appreciate and enjoy.

Another attractive place just now is found in the Seventh Triennial exhibition of the Massachusetts Chaitable Mechanics Association, which commenced Sept. 14th and closes with the present week. The fair occupies Faneuil Hall, the old cradle of liberty, and the entire hall over Quincy Market, the two being connected by a bridge over the intervening street. We spent an hour in the two halls, and found much that was novel and interesting, blended with some things useful and ornamental. The Manufactures of New England, embracing carpets, cloths, delaines, prints, staple and fancy goods of cotton and wool, form a large and creditable feature of the exhibition. Nearly every branch of manufactures is represented.—Among the attractive articles, the sewing machines of WILSON, SINGER, and others hold a prominent place. A new smoothing iron heated by burning alcohol, and a new combination lock invented by Mr. GALE, of Newport, N. Y., were surrounded by crowds of lookers on. Musical instruments, as organs, pianos, and all the long list of lesser inventions and combinations occupy a section by themselves. Of the really useful we observed a collection of implements by PARKER and WHITE and D. PROUTY & Co., of Boston, also the new ditching machine from New Hampshire, and NICHOLS Corn and Cob Crusher, the two latter of which give promise of the most satisfactory results. Here, as elsewhere, we find too much prominence given to fancy soap, hair oils, patent nostrums, and other goods of this class, which are crowded into every public place where they are tolerated, and thrust upon the attention of the passer by, even at the street corners.

Boston wears an air of bustle and business, and is withal a pleasant city after one has learned to pick his way through its narrow, crooked streets. The city is very clean and quiet, with municipal regulations of the highest character. Great prominence is given to literature and the sciences, while its moral and religious tone is worthy of imitation every where.

In passing over quite a portion of New England we observe, in the main, good crops of corn, tho' we regret to learn the potato crop is suffering much from the disease. On all sides we find large manufactories of various fabrics, impregnating the atmosphere with an air of machinery, stocks, sales and dividends. New England is rich in manufactures, and still they are only in their infancy, giving promise of strength and riches in the future. It is time some of the waste water falls in New York were harnessed to the water wheel, making a motive power that will fill our valleys with villages, and give employment to thousands of our citizens to the advantage of all. †

### Our Albany Correspondence.

ALBANY, Oct. 3, 1853.

THE "Unterrified" Democracy held a ratification meeting on Tuesday evening last, and the "Terrified" on Thursday evening. (The origin of the term "terrified," is the refusal of the Hunkers to return to the Convention at Syracuse, because bullies were said to be in attendance.) Both meetings were very well attended, though the Hunkers had the advantage in numbers and enthusiasm. The resolutions of course differ on personal matters, but as regards canals, &c., they are nearly identical. Both parties claim *regularity* for themselves, and each condems the other faction.

The Barnburners were addressed by DARIUS A. OGDEN and JOHN VAN BUREN, who, for shortness sake, has been dubbed "Prince John." Mr. OGDEN made a long speech to show that the Democratic party which elected Gen. PIERCE, was the result of a *union*, and not a *coalition*, as it had been asserted. He went back to 1847, and reviewed the events that transpired since, to show that if there had been a *coalition* it had been brought about by the Hunkers themselves. They proposed the thing, and drafted the resolutions for union, and now it was very *silly* in them to call it a *coalition*.

Prince John gave a minute account of the transactions at Syracuse, and claimed with much force that their Convention (that is the one headed by Mr. VERPLANCK as Secretary of State,) was the *regular* Democratic Convention, and the other the bolting Convention. He reviewed the Slavery question, and gave his views on that point, which are, that the compromise measures made a settlement of the whole difficulty for the present, and consequently there was no reason for making an issue on the subject. He carried the idea that he had never changed his mind on the questions under discussoin in 1848. He paid his respects to Mr. DICKINSON, to prove that he was a Freesoiler, and read extracts from his (DICKINSON'S) speeches to show it to be so. He said that the great question at issue is the Canals of the State—whether they shall be entrusted to the corrupt Whigs who would put the money into their bellies, or to the Democracy who would put it into the Canals.—He pledged himself in favor of the resolutions to amend the Constitution for enlarging our public works, and exlorted the people to sustain the National and State Administrations, and thus keep the great Democratic party in the ascendency.

The Hunkers were addressed by Hon. GEO. W. CLINTON, S. S. BOWNE, JOHN C. MATHER and R. W. PECKHAM, member of Congress from this district. The burden of their song was, that the present coalition had a tendency to abolitionize the Democratic party—that as such they could no longer continue a party to it—that there could be no confidence placed in the Barnburners on the Canal question—having deceived them once and violated their pledges, it was entirely unsafe to trust them again—that the adoption of their resolutions by the Barnburners was an evidence that their's was the true position—and finally, that the *true* Democrats should stand by their principles, and if defeated in the present contest, time would show the wisdom of their present course. The speakers all sympathized with Mr. MATHER, and predicted his election by a large majority.

Much anxiety is felt as to the course of the President with reference to BRONSON and O'CONNOR. If they should be made to walk the plank, it would lead to many more decapitations, unless the love of office should cause them to repent of their conduct.

The able State paper on the KOSZTA question, from Secretary MARCY, is the subject of much comment. All parties acquiesce in its wisdom and firmness. It will certainly be a feather in the cap of that distinguished statesmen.

The union of the Whig party is still hoped for at their Convention this week, although it is feared that the Silver Grays will not receive enough of the nominations to give full satisfaction. The matter has been thus far managed with the utmost secrecy and caution. The time for the Convention being so near, all speculations are of course useless. It is quite probable that there is to be some undergrounds connivances with the Hunkers, but of this the *uninitiated* cannot be informed. Would that such deeds of darkness might never be transacted. *OWE.*

### Trip thro' New York, Pennsylvania, &c.

EDS. RURAL:—Having just returned from a tour through your State, New Jersey and Pennsylvania, I thought perhaps a few lines might not prove altogether uninteresting to some of the many readers of the RURAL.

This has been a very favorable season for some varieties of fruit—Peaches and Plums have been quite abundant throughout Pennsylvania and New Jersey, and also in some parts of New York. It was enough to make a dyspeptic person's mouth water, to hear the peach dealers in the streets of New York crying out, "*F-i-n-e p-e-a-c-h-e-s, f-o-u-r e-e-n-t-s 'alf peck.*" I found, on my arrival home, that our prices did not vary much from those in New York, as excellent peaches sell here at 37½ cents per bushel—and I am inclined to think they will yet sell freely at a quarter. This is a trifle less than I saw a common article of peaches sell for the other day, at Fredonia, N. Y.—*thirty-one cents a half peck.*

The apple crop I think will be very light—in fact there does not seem, as a general thing, more than one-third of a crop, and in some localities not even that. On the high lands of Chautauque county, apples were much more abundant than in any other locality on my route. Apples were selling at Dunkirk for 25 cents per bushel.

In many parts of Chautauque county the grasshoppers had been exceedingly troublesome, taking possession of almost every green thing—despoiling fruit trees of their foilage, and striping not only the leaves from currant bushes, but also the bark. The tassels and upper blades of whole fields of corn were devoured by them, and in many instances, the ears eat through and through.—Pastures were so reduced that many farmers were compelled to fodder their stock.

Potatoes generally, looked well, and bid fair to yield an abundant harvest. I took particular pains to make inquiry respecting the rot, at different points, but could learn of no place where it had made its appearance, except in low, wet localities—and I am really of the opinion that, notwithstanding the many complaints made thro' the public prints, there will yet be a good supply of this very desirable vegetable.

Corn looks remarkably well, and the universal expression is that there will be an unusually large yield. It is all out of the way of the frost, and very many fields are already cut up, and secured in the shock.

Many farmers, I observed, still persist in the error of planting their corn too close together, and leaving too many stalks in the hill. Several fields in Cayuga and Monroe counties, drew my particular attention, which I found on counting, averaged from five to eight stalks in the hill.—Now if fodder is the object, this kind of culture may answer a tolerable good purpose, although sowing the seed broadcast is said to produce more fodder with less trouble, consequently far more profitable.

We have in our vicinity, a gentleman who has for many years been a very successful cultivator of corn. He says he invariably leaves but *two* stalks in the hill—the result is, he universally has a good crop, and that of the best quality. Several years since, after he had finished thinning out his fields, one of his neighbors, who had adjoining fields of corn, said to him, "*Why, Sir, you have ruined your corn!* You will not have any thing like a crop!" His reply was, "We will see after harvest who will have the best crop." His neighbor's field was more thoroughly manured, and considered in better condition for a large yield, but when harvested, the field with but *two* stalks in the hill, produced *ten bushels* to the acre more than the other. YOURS, E. B.

Greencastle, Pa., Oct. 1, 1853.

[WE are glad to hear that the corn crop is so good. We had feared it was quite a short crop. It certainly is not an average in Western New York. Potatoes, too, in this neighborhood will be rather light. On high, dry, light soils they are but little affected by the disease. It is very injurious to plant corn too thick, and we think our Monroe county farmers know it. As a general thing they plant four feet apart each way, leaving four plants in a hill.—EDS.]

### "Honor to Whom Honor."

IN looking over the exchanges of the Indiana Farmer, I discovered in the "RURAL." (one of our very best exchanges, by the way,) a poem said to have been written by the immortal JOHN MILTON, but lately discovered and published in the Oxford edition of his works. Strange as it may seem to the literary world, this same poem was written by ELIZABETH LLOYD, (now HOWLLS,) of Philadelphia, and *originally* published in "Friend's Review," of that city, some five or six years since. It soon found its way into a London paper, with a remark at its head similar to the one which precedes it in the RURAL. Some doubts as to whether MILTON really was the author of it, arising among the learned in England, E. LEWIS, the editor of the "Review," decided the matter, but, I believe, without giving the author's name.—Though the fair and gifted author seems to rival the immortal bard himself, she has always withheld her name from her productions, with perhaps a single exception, that of her "Appeal for the Boudwoman."

The poem, as published in the RURAL, is somewhat mutilated, and one verse, commencing, "It is nothing now," is added. This verse any one can see is decidedly the poorest in the poem. A genuine copy of this queer fated little production, will be found at page 365 of the "Wheat Sheaf," a suggestive Reader, published by W. P. HAZZARD, Philadelphia, 1853. "Honor to whom honor is due." Very respectfully,

Near Richmond, Ind., 1853. R. T. REED.

INTERESTING TIME.—The Democratic papers of thit State are "enjoying" a revival of bitterness and personality worthy the palmiest days of political warfare. The efforts of the opposing factions (brothers?) exceed those of the Whigs last year. They enter the arena with the most "adamantine" pluck, and "unterrified" bravery, the battle is already nearly as sanguine, and indicates as fatal a termination, as that of the Kilkenny grimalkins. Well, while we hope all the devotees of that gel-orious institution. Politics, will *receive their deserts*, we trust the public's long ears and dim eyes may be elevated and opened during the campaign.

SOCIETY FOR THE IMPROVEMENT OF POULTRY.—During the State Fair, a Society was formed for the purpose indicated. A Constitution was adopted, and the following officers elected:

President—D. S. HEFFRON, of Utica.

Vice Presidents—E. E. Platt, of Albany; M. Vassar, of Poughkeepsie.

Cor. Secretary—R. C. McCormick, Jr., Jamaica, L. I.

Rec. Secretary and Treasurer—R. U. Sherman, Utica.

Managers—N. S. Smith, Buffalo; A. A. Hudson, Syracuse; Geo. Anderson, Albany; D. P. Newell, Rochester; W. H. Southwick, New Baltimore; D. W. Van Slyck, Lyons; B. B. Kirkland, Albany; T. B. Miner, Clinton; —— Cole, M. D., Claverack; S. Russell Childs, M. D., New York city.

LOSS AND GAIN.—According to Lucy Stone the legal advantages and disadvantages of married women are as follows:

GAIN.

1. The right of *protection* (?)
2. The right to be *maintained* (?)
3. The right of having her debts paid.

LOSS.

1. The custody of her person.
2. The right of her personal property.
3. The enjoyment of her real estate.
4. The advantage of her own earnings.
5. The power to make a will.
6. The control of her children.

Let the candidates for matrimony cipher carefully on the above table, and act accordingly.

FINANCES OF THE UNITED STATES.—The New York Courier publishes a statement of the financial affairs of the United States for the last year. The table shows that there had been an increase in the receipts from customs on the year euding June 30, 1853, $11,591,538 90. The receipts from the sales of public lands had declined from $2,-043,239 58 to $1,667,084 99, exhibiting a falling off of $376,154 57. The receipts from miscellaneous sources increased $409,163. The balance in the treasury at the beginning of the present year exceeds that of the preceding by $7,310,756, and on the 1st July, 1853, amounted to $21,942,828. The total available means for the year were $75,-986,050 87.

THIBET AND CASHMERE GOATS IN S. C.—The N. Y. Herald acknowledges the receipt of a quantity of snow white cashmere wool, raised in South Carolina, by Dr. Jas. K. Davis, from goats brought by him from Persia. Dr. Davis went out to Turkey some seven or eight years ago, on invitation tion of the Sultan, to attempt the cultivation of cotton from the best seeds of the South. He failed in the trial, but he brought home some beautiful Persian goats, which produce the cashmere wool, and from them he is raising up a flock of goats, which promise to be a valuable addition to our domestic stock, and may make his return voyage more profitable than his outward one was.

REMARKABLE CASE.—Michael Hogan, of New Hartford, whose skull was fractured by the kick of a horse, Aug. 31st, is fast recovering. And what is very remarkable in the case, although conscious, he could not speak until the eighth day, when he commenced talking in monosyllables, and is now connecting words as a child when beginning to talk. He was trepaned by Dr. Wiser, assisted by Dr. Wolcott, of this city.—*Utica Gaz.*

## News Brebities.

—— The N. Y. Post says Col. Medary will not accept the Chili Mission.

—— The Canal Board will hold a session to hear claims on the 11th inst.

—— We see it stated that Madame Sontag is soon to make a western tour.

——Col. S. P. Jacobs, a well known citizen of Montezuma, died on Friday last.

—— The Governor of South Carolina has appointed a fast on the 13th of October.

—— Timothy Burns, Lieut. Governor of Wisconsin, died on Wednesday morning week.

—— Minnesota papers say that the cranberry crop this season, will be unusually large.

—— Four companies of infantry have been ordered to establish military forts opposite El Paso.

—— The centre of the population of the New England States is very near the city of Lawrence.

—— Five colts were killed by lightning on the farm of Mr. Brown in the town of Owen, Illinois.

—— The Collins steamship Arctic sailed on Saturday, with 109 passengers and $241,000 in specie.

—— At Gorham, N. H., the ground was covered with snow on Wednesday week, and also at Shelburn.

—— The expected trial of the Jerry Rescuers did not take place at Canandaigua. The Court adjourned.

—— It is stated that in all France not a death has been caused by a railroad accident since the year 1851.

—— A company is about starting the manufacture of linen in Lewiston Fall village, Me., with new machinery.

—— The Temperance men in England are about to petition their parliament for a prohibitory liquor law.

—— The Iron Bank, Plattsburgh, has gone into opetation. P. F. Bellinger President, F. C. Bellinger, Cashier.

—— An extension of the patent to Colt for his revolvers has been refused. He has already made a million out of it.

—— It is reported that the President has appointed Rev. C. W. Dennison, of Massachusetts, Consul to Demerara.

—— A temperance meeting at Cincinnati was broken up last week by a gang of rowdies, who stoned the speakers.

—— Lake, who has been on trial in Poughkeepsie for the murder of his wife and children, has been found guilty.

—— All the candidates for Secretary of State in Wisconsin, are editors. Of course their qualifications are indisputable.

—— The monument to designate the spot where Major Andre was captured was to be dedicated at Tarrytown on the 7th.

—— Mrs. Sarah Levy has been appointed keeper of the light house at Havre de Grace, Md., in place of her deceased husband.

—— Lucy Stone mentions as one of the six objections to a woman's being married, that she loses the control of her children!

—— In less than ten months a railroad 265 miles in length, will be completed from Philadelphia to Elmira on the Erie R. R.

—— The New York Baptist State Convention, holds its annual session at Watertown, on the 11th, 12th and 13th days of October.

—— Last week the total number of deaths in New York was 396, showing a decrease of 52 on the mortality of the previous week.

—— Mrs. Catharine Connor, of Hardy county, Va., caught two large bears this summer in a trap. Mrs. C. is very expert with a rifle.

—— No distinction of color is made in the World's Fair in New York in the privileges of exhibitors, or the admission of visitors.

—— The Hartford Times says that a child of Mr. Lorin Field, of Somers, Ct., is supposed to have been killed by eating colored candy.

—— Rev. Dr. Pattison, now of the Newton Theological Seminary, Mass., has been elected President of Waterville College, Maine.

—— An immense ox weighing 4,000 pounds, was exhibited at the State Fair at Montpelier, Vt., —a finely formed animal raised in Maine.

—— James R. Doolittle, Esq., who emigrated from Wyoming county in this State, has just been elected Judge of the first Wisconsin Circuit.

—— The Massachusetts Whig Convention nominated Emory Washburn, of Worcester, for Governor, and Thos. F. Plunket for Lt. Governor.

—— Western papers state measures are on foot for the speedy consolidation of the whole line of Lake Shore Railroad from Toledo to Buffalo.

—— The Geneva Medical College has been discontinued. The students, who were few in number, were dismissed, and the faculty dissolved.

—— The Boston Post states that over 8,500 persons visited the Mechanic's Exhibition at Faneuil and Quincy Halls, on Thursday week.

—— The Richard Stevens has been hauled off Geneva Lake, and no passenger boat will now be run upon the lake until the new one is put on.

—— Ashland, the home of Henry Clay, sold at public sale, was purchased by James B. Clay, his son, at $140 per acre. The tract contans 337 acres.

☞ The New York Courier and Enquirer, hitherto a leading and influential whig journal, has followed the lead of the Tribune, and come out "independent."

—— On Sunday last, Peter Kline and Silas Burton were drowned inside of the stone breakwater, Buffalo. They, with four others, were in a sail boat which capsized.

—— The Michigan State Fair opened at Detroit on the 28th ult., under highly flattering auspices. The entries in all departments exceeded those of any previous year.

—— A lad named Lloyd G. Johnson, aged 15, son of J. W. Johnson, of Mt. Morris, N. Y., was killed on Thursday last, by being caught in a broom corn threshing machine.

—— John S. Dye, publisher of the Bank Mirror, has been convicted at Cincinnati for circulating fraudulent currency, and fined $500 which he paid and was set at liberty.

—— In attempting to jump from a train of cars at the Winchester station on Wednesday week, Justin Hayward, of Woburn, fell and fractured his skull. There is no probability of his recovery.

—— Mr. Ichabod Rogers, of Hudson, raised in his garden the past season, an ear of corn which contained twenty-two rows, and there were seventeen hundred and thirty-eight kernels of corn.

—— Russia and Turkey seem bound to fight, and if they commence hostilities the dynasties of the Old World must "stand from under"—for the moment war is declared, thrones and crowns will be at a discount.

### Three Arrivals From Europe.

*GREAT ADVANCE IN BREADSTUFFS!*

**WAR MORE PROBABLE.**

SINCE our last issue three steamers have arrived from Liverpool—The *Washington, Baltic,* and *America.* We give the most interesting items by each—the most important being the advance in Breadstuffs, and greater probability of war between Russia and Turkey.

**Items by the Washington.**

The steamer Washington arrived in New York on the 29th, from Liverpool the 13th ult.

Breadstuffs buoyant; an advance of 1s on flour since Friday, and fully 3d on wheat. Corn firm and wanted at last quotations.

The Times of the 14th announces that the Emperor of Russia had rejected the Turkish modification. War was now considered inevitable.

The lost jewels of the Hungarian Crown have been found buried near Orschova.

Private accounts state that the English and French Consuls have left Jassy, creating a great panic.

Gen. Lubin was advancing with a fresh corps of Russians upon Moldavia. The Czar was to proceed at once to Warsaw, and was to meet the Emperor of Austria at Olmutz on the 23d inst.

The troops of Amor Pasha, on the lower Danube, insist on fighting the Russians, and it is feared that the Pasha will not be able to repress their fanaticism in time to effect any further negotiations.

The weather in England is again unfavorable for harvest, and breadstuffs in Mark Lane were firmer in consequence. Increased pressure in the money market.

The cholera is progressing in England.

The Clipper ship Marco Paulo had arrived at Liverpool with dates from Australia to the 10th June, and 280,000 lbs. sterling of gold dust. The mining accounts were of a favorable nature.

**Arrival of the America.**

The America arrived at Halifax, Oct. 1, with Liverpool dates to the 17th ult.

Cotton flat and declined ⅛.

Breadstuffs excited. Advancing daily through the week and closing Friday at highest figure yet attained. Advance during the week on wheat 6d to 7d. On flour 1s 6d to 2s. White wheat quoted at 9s @9s 3d. Red 8s @6d 10d. Western canal super flour 21s. Baltimore, Philadelphia, 31s to 32s 6d.

Corn.—Yellow 33s@34s. White 34s@35s 6d. Some quote as high as 36s @37s.

Provisions unchanged.

Ashes.—Pearls 27s. Pots 26s.

War question unchanged. The general feeling is, that hostilities are inevitable. There is a great depression.

LONDON MONEY MARKET. The bank raised interest to 4½ per cent. Consols closed at 95¼ @⅝.

LIVERPOOL CORN MARKET.—The market has again assumed a decided upward tendency. Sales of all articles each day showed a daily rise in prices, closing on Friday, the 16th. At each highest prices attained.

The advance during the week was variously called 6d to 7d on wheat, and 1d to 2d on corn, and 1s 6d to 2s on flour.

The principal houses agree on quoting U. S. wheat 9s @ 9s 3d; red and mixed 8s 6d @ 8s 10d.

Superfine flour 31s; Ohio 32s.

Indian corn in moderate demand 34 @ 35s6d; for yellow do. 34s @ 35s6d.

Some firms quote wheat 36s@37s. The advance was owing to the variable weather with more firmness in the Continental market and the war aspects of the Russian and Turkish question.

A note, since the market closed, by telegraph, indicated more probability that negotiations will be opened instead of war.

American securities are reported by Bell & Co. as dull, and prices lower.

U. S. Bonds of '68, 110½ @ 111½.

**News by the Baltic—Latest Arrival.**

THE Baltic arrived in New York on Monday morning, 3d, with dates from Liverpool to 21st ult.

The Arabia arrived out in 10 days and 14 hours.

The Eastern question was unchanged.

The Vienna conference was in Session, and it was reported that new modifications, conciliatory to both Russia and Turkey were to be made, but in the mean time the armies on the Danube might come in collision.

The Servan Charge had notified the Porte that Servia would remain neutral in the case of war.

The Pasha of Egypt will send Rouchdy Bey as Commissioner to the New York exhibition.

By the overland mail from India, we learn that the U. S. Expedition, comprising the Susquehanna, Mississippi, Plymouth and Saratoga, sailed July 3d, from Shanghi for Japan, followed by two Russian frigates.

The Susquehanna and Potomac on their course touched at several islands and distributed live stock, and also at Beanian, where they found European settlers, where the Commodore purchased 10 acres of land on a fine harbor for a coal depot.

The Chinese revolution continues, but no decisive action was certain.

Cholera was spreading in the English towns.

FRANCE.—Nothing of interest. Activity is reported in the Navy Yards. The critical condition of Breadstuffs continued, with the prices tending upward.

The Hungarian regalia is to be lodged in the Vienna museum.

Letters from Madrid say that another ministerial crisis was coming on in Spain, and in private political circles, the propriety of opposing the Queen was freely discussed.

The Paris papers state that the French government entertains confidence, and hopes the Turkish difficulty will be settled without an appeal to arms. They add that the Emperor of Russia will not, under any circumstances, commence hostilities; but the definite answer of Turkey cannot be known in England until the second week in October.

A telegraph despatch has been received from Vienna saying Austria declines acting with either of the powers, and has forwarded instructions to the Austrian Ambassador at Constantinople to assure the Sultan that he must accept the first note unmodified.

The conference at Vienna now considers affairs very serious.

LIVERPOOL MARKETS.—The market continues animated at an advance of 3d per bushel on wheat and 1s per bbl. on flour.

Corn is in good demand at an advance of former rates; 35s@36s on the spot.

U. S. white wheat 9s@9s 5d; red and mixed 8s 5d@8s 11d.

Western canal flour 31s 6d@32s 6d; Philadelphia and Baltimore 31s 6d@32s; Ohio 32s 6d@34s 6d for choice.

There is considerable variation in the quotations of the different houses. The above gives the average of the various circulars.

Cotton dull and tending downwards. Sales 10,000 bales for 3 days.

No change in provisions.

Money—English funds quiet, and consols closed at 95¼. Account 95½@94⅝. Money light, but plenty for legitimate business.

---

A MAN WITH TWENTY WIVES.—A man calling himself Dr. William Hunter, but whose real name is said to be Nathaniel I. Bird, is in jail at Camden, N. J., on a charge of bigamy and other charges. On Sunday, Elizabeth Harrington, a lady of Philadelphia, visited him in prison, and ascertained that he was the man to whom she was married on the 9th of July last. On the same day he was visited by another lady form Kensington, named Mary Thomas, to whom he was married in May last. It is also stated that he has a wife in Reading, another in Wilmington, Del., and yet another in Philadelphia. The prisoner is about twenty three years of age, and it is stated, declares that he has twenty wives, a statement which may be true, as more than one-fourth of that number has been found within a few days. It is alleged that he abandoned each wife soon after marriage and that they never heard of him after, until his recent arrest. The affair creates the greatest excitement in Camden and has induced an immense number of persons to seek admission for the purpose of seeing him.

---

THE GREAT CANADIAN RAILWAY, for the construction and equipment of which the contract has been taken by a wealthy firm in England, will be 1,000 miles long—commencing at a point on the St. Lawrence 120 miles below Quebec, and terminating at a point opposite Detroit. The road will pass through or near Quebec, Montreal, Kingston, Belleville, Cobourg, Toronto and Hamilton, terminating at the waters of Lake Huron, near Detroit. It is to be constructed with the wide guage, and in every respect to be made in the most substantial manner. The river St. Lawrence is to be spanned by a huge iron bridge, on the feasibility of which a favorable opinion has been given by Mr. Stephenson, the celebrated engineer. The capital has been subscribed in England, and the contract for the entire work, including the right of way, bridges, construction, rails, locomotives, cars, station houses, warehouses, &c., is £9,000 a mile, amounting altogether to from forty to forty-five millions of dollars.

# News Paragraphs.

☞ The Horse show at Springfield, which is is to come off the week after next, is looked to with increasing interest. The Republican says that a New York Bank President will put $2,000 of his surplus profits—not into a pair of nags, because oats and other provender are more suitable feed—but into the pockets of the lucky owner of a tip-top pair. It also says that more than one-half the hotel room is engaged for the show.

☞ The York (Pa.) Free Press announces the death of Mr. John Grissenger, at Lewisburg, in the 98th year of his age. He was a veteran of the revolution, and leaves, as near as can be ascertained, 382 relatives, viz: 14 children, 123 grandchildren, 242 great grand-children, and 3 great great grand-children.

☞ The officers of the Association of Pioneers of Western New York, have issued their call for their annual meeting, to take place at their old headquarters, the Blossom Hotel in this city, on the 12th inst. The gallery, containing about 100 portraits of pioneers, will be open on the occasion.

☞ A geological survey of Illinois, under the supervision of Professor Norwood, is progressing. Southern Illinois has been carefully explored, and great light thrown on the lead region. At the present time the northerly portion of this division of the State is under examination.

☞ Isaac Moore has lately recovered $2,100 from the New Jersey Central R. R. Co., in a suit for damages by a collision of a train with a stage which he drove. The verdict was based on the want of sufficient warning of the approach of the cars.

☞ The Washington Monment has attained the height of 142 feet. The last block came from the Mormons. It is three feet long and two feet wide, and has a bee hive upon it with the inscription "Holiness to the Lord"—"Deseret."

☞ The America's news caused much excitement in the breadstuffs market of Philadelphia and Baltimore. In the former flour advanced two sphillings and wheat five cents. In the latter, flour two shillings, wheat sixpence.

☞ The Evening Post states that the Rev. Dr. Chonles, who accompanied Com. Vanderbilt on his recent excursion, has a journal of the voyage in course of preparation, which he expects to publish about Christmas.

☞ The Rev. Dr. Church, formerly of Rochester, and author of "Mappleton" and "Antioch," has accepted the call of the Second Baptist Church of Williamsburgh, to fill the pastorate vacated by the death of the Rev. F. Snyder.

☞ "Uncle Tom's Cabin," dramatised, is now played at two theatres in Philadelphia—the National and Chesnut. The piece creates great interest, and the places where it is played are crowded nightly.

☞ Gen. Tallmadge, ex Senator and ex-Minister to Russia, and formerly a prominent politician, died very suddenly at the Metropolitan Hotel, last Thursday, on his return from the Crystal Prlace.

☞ Accounts from New Foundland, of Sept. 20, state that the potatoe crop is almost another failure, on account of the rot. Great fears were entertained of a famine among the poor during the winter.

# Marriages.

IN Murray, Sept. 25th, by the Rev. J. Copeland, Mr. ELI WEBSTER and Miss MARTHA A. SPRAGUE, all of Murray.

IN this city, on the 4th inst., by Rev. J. H. McIlvaine, Mr. CHAS. A. BELDEN and Miss CARRIE E., only daughter of E. COOK, Esq.

AT Livonia, on the 28th ult., by Rev. B. G. Riley, Mr. HORTON WILLCOX and Miss JANE E. EASTWOOD daughter of A. Eastwood, Esq.

# Deaths.

IN Macedon, Sept. 27, GEORGE ORESTES, youngest son of I. W. Briggs, aged 2 months.

# Market Intelligence.

RURAL NEW-YORKER OFFICE,
Rochester, Oct. 5, 1853.

THE late foreign news has given considerable animation to our market for Breadstuffs, at a very handsome advance. Flour has advanced fully 50 cts. per barrel, and good brands sell at $6,38@6,62, though we quote the average at a shilling lower.

Wheat sells readily in the street at $1,42@1,45, though some lots have changed hands at $1,48. Coming in pretty freely since the improvement.

**Rochester Wholesale Prices.**

## NEW YORK MARKET.

NEW YORK, October 4.

Flour—Market for Western and State opened yesterday with a lively demand for export, but with a limited supply on the spot. The advance on the low grades was 25 cents per bl. Market closing lame, owing to high freights. Canadian better—sales at $7. Sales Western Canal at $6 94@7,12 for mixed to fancy Michigan and Indiana, and common to good Ohio; State and Ohio for this month's delivery at $7.

Grain—Good business has been done in wheat at 2@3c. advance on steamer's advices. Demand mainly for prime Western and this State for future delivery. Sales inferior to choice white Michigan at $1,50@1,56; Canadian $1,53 @1,56; ordinary to prime Genesee $1,53@1,59—closing dull. Oats dull and plenty at 47@49c for State and Western. Barley scarce and in demand; sales at 83c. Corn better, sales 82@83c for unsound; 83@84c for Western mixed.

Provisions—Advance in Pork continues: market active and tendency upward; sales $16,75@17 for mess—$13@13,25 for prime. Lard more active and firm, 11¼@11⅝c. Butter wanted—State 17@20c.

## ALBANY MARKET.

ALBANY, Oct 3.—Flour and Meal.— Under the foreign news, our market for Western and State Flour became much excited, and holders put up prices full 12½c. ℔ bl. During the entire morning but little has been done, and at the close the market was very unsettled and prices irregular. Holders were not disposed to sell to any extent, and buyers were disposed to await the printed accounts. Buckwheat is selling at $2,25@2,37 ℔ cwt. Corn is held firmly at $1,62.

Grain—The market for Wheat opened firm, with a good milling demand, and closed with an active inquiry at improved prices. Before the receipt of the steamer's news, sales of prime Genesee were made at $1,56, and on 'Change at $1,58½. Corn is quiet, and, in the absence of sales, we omit quotations. There is but little here, and it is held at a high figure. Barley is firm and in active request at steady prices. The transactions have been large this morning. Sales two rowed at 77@77½c for good to prime; 77c for Jefferson county; four rowed Canadian at 83½c, and four rowed State at 83@84c for good to prime, the latter was at the outside figure. Oats are firm but quiet at 48@49½c.

Hops—A quiet market at 30@32c for old, and 36@37c for new.

## BUFFALO MARKET.

BUFFALO, Oct. 3.—The market is again much excited and prices are entirely unsettled by the receipt of the steamer Baltic's news. Holders of flour and wheat await the effect of the intelligence on the Eastern market before operating to any extent. The only sales we note are Bl'k Rock flour at $5,87½; choice Michigan at $6; and inferior white Ohio wheat at $1,26.

There was a good inquiry for corn but holders somewhat averse to operate in advance of New York advices.—Sales about 12,000 bu. at 66c.

Oats quiet. Sales at 35c. This quotation is somewhat above the market.

Sales of 5,000 bu. of Barley at 62½c.

## NEW YORK CATTLE MARKET.

NEW YORK, Sept. 26.—At Washington Drove Yard—The offerings this day comprise 2,152 Beeves; offered during the week, 2,224. Beeves in good demand during the week, and the tone of the market throughout, was firm, prices ranging at 7@9c per lb, with some few transactions at a fraction higher. Cows and Calves sold at from $50 @60. Veal Calves 4@6c. Swine range from 6 to 6¼c.

At O'Brien's—On sale 100 Beef Cattle and 40 Cows and Calves; all sold at $7@9 for the former, and $30 to 36@45 each for the latter.

At Chamberlain's—275 Beeves, 40 Cows and Calves, and 3,600 Sheep and Lambs.

The Beeves sold at from 7@9½c per lb.

Cows $25 to $50. Calves 4½ to 7c. ℔ lb.

Sheep $3 50 to 4,50@7. Lambs $1 to $3@4. All sold.

At Browning's—61 Cows and Calves; prices ranged at from $25 to $50; all sold.

6,204 Sheep and Lambs; prices at from $2,50 to 4@6 for Sheep, and $2@5 for Lambs; all sold.

471 Beef cattle, $7.50@10 per cwt.

## ALBANY CATTLE MARKET.

ALBANY, Oct. 3.— W. W. Woolford's, Bulls' Head, Washington street.

Beef Cattle—685 at market. Prices—Extra, $7,50; 1st quality, $7,00; 2d do. 6,50; 3d do, $5,50@6.

Cows and Calves—17 in market. Prices from $27, 30, 35 to 40.

Sheep and Lambs—1,854 in market. Prices of Lambs $1,75, 2, 2,50, 3, 3,25@3,50. Prices of Sheep $2,75, 3, 3,25 3,50, 3,75@4.

Hogs—175 in market. Prices ℔ cwt. $5.5,50@5,75.

## CAMBRIDGE CATTLE MARKET

CAMBRIDGE, Sept 28.—At market. 3,595 Cattle, about 2,000 Beeves, and 1,595 Stores, consisting of Working Oxen, Cows and Calves, yearlings, 2 and 3 years old.

Prices—Market Beef—Extra sold at $7.50@8,00 pr cwt.; 1st. quality, $7@7,25; 2d do, $6,25@6,50; 3d do, $5,50 @6: ordinary, $4,75@5,00.

Hides—$6,50 per cwt.

Tallow—$7@7,50 per cwt.

Pelts—$1@1,25.

Calf Skins 11c per lb.

Veal Calves—$7, 10, 12@13.

Stores — Working Oxen—$112, 116, 122, 125, 133, 147 @190.

Cows and Calves—$26, 28, 31, 36@40.

Yearlings—$10, 11@13.

Two years old—$18, 21, 25, 31@36.

Three years old—$32, 37@42.

Sheep and Lambs--6,861 at market.

Prices—Extra, $5, 6, 7@8.

By lot—$2,57, 3, 3,25@3,50.

Swine—Wholesale—Still fat hogs at 5½c, and hard cornfed 6c. per lb.

## BRIGHTON CATTLE MARKET.

BRIGHTON, Sept. 29.—At market 3,950 Cattle, 6,500 Sheep, and 1,600 Swine.

Prices—Beef Cattle— A large supply at market of second and third quality; sales quick at last week's prices.—First quality $6,75@7,25; 2d do, $6@6,50; 3d do. $4,75@5,25.

Working Oxen—Sales $80, 88, 92, 105 120, 125, 140@152.

Cows and Calves—Sales $23, 27, 31, 30, 40, 45, 50@62.

Stores—Yearlings $9@12.

Two years old $15@22.

Three years old—$24@34.

Sheep—Small sales $2,75, 2,92, 3,25, 3,50, 4, 4,75, 5,50, and $6,50.

Swine—Still hogs to slaughter 5¼@5¾. Shoats to peddle 5¾@6c. Old hogs 5, 5¼@5½c. At retail from 6 to 7½c.

**FARM FOR SALE.**—The subscriber offers for sale his farm, in the town of Ledyard, Cayuga Co., N. Y., containing 100 acres of land, with good buildings and orchard thereon. Said farm is 3 miles from Cayuga Lake and 1 from the Ridge road at Talcot's Corners. Price $45 per acre. For particulars inquire of CHAS. W. SEARING, at Sherwood's, town of Scipio, Cayuga Co., N. Y.
197-3t*

**PLUM AND PEACH PITS** wanted at 36 Front st., Rochester. SAMUEL MOULSON.
October 4, 1853. 197tf

MOORE'S RURAL NEW-YORKER is a beautifully embellished and richly filled Agricultural, Horticultural, and Pictorial weekly journal.—*Rochester Daily American.*

**Mexican Wild Potatoes, Poland Oats and English Potato Onions.**

THE articles above named are undoubtedly the best varieties now known and cultivated in this country. Mr. A. HALE, of Alloway, N. Y., has the honor of introducing the Mexican Potato. He planted 4 small potatoes not exceeding 3 inches in length and one inch in diameter, obtained from a returned soldier; each successive product has shown an increase in size and beauty, until it is no uncommon thing to find tubers 8 to 9 inches long and about 2 inches thick, as white as the whitest and as good as the best.

The Poland oats are universally approved where known, I have had several reports of the product from the half ounces sent out last Spring to 21 of the States and Territories of this Union; all express themselves in high terms of the quality and productiveness.—Product ranging from 1 quart to 6 quarts from the half ounce by mail, and many have ordered them by the bushel this fall.

The Potato Onion is also in request, and I am receiving inquiries almost daily in regard to these and the articles above named. The crop as far as I have been able to ascertain, will be a good deal short of the demand for seed. for each of these articles. What I have to spare is offered in the advertisements below. I. W. BRIGGS.

**A Rare Opportunity to Procure Rare Seeds.**

THE subscriber will, for a pre-paid order containing One Dollar, send by mail, free of postage, 20 papers of seeds from the following catalogue:

Japan Pea, Butter Bean, Buena Vista Bean, Apple Squash, Sweet Potato Squash, Mammoth do., and 2 other varieties, California Pumpkin, California Melon, Adams's Early Corn, Stowell's Evergreen do., a large Sweet Corn, three varieties of Pop Corn, (small,) Spanish and Connecticut River Tobacco, Mountain Sprout Watermelon, Mountain Sweet do, Spanish do, Long Island do. and several varieties mixed. Citron Nutmeg, Round Green do, and the Long Golden Muskmelons, Carnation, Clover and Buckhara do, Perrennial Rye Grass, Potato Seed, Mammoth Red Tomato, White Vegetable Egg, and Double Sunflower. I. W. BRIGGS,
West Macedon, Wayne Co., N. Y.

**Potatoes, Oats and Onions.**

THE subscriber offers the following products delivered on board cars or canal boats:

Poland Oats at $2 per bushel, or $6 per barrel, containing about 4 bushels.

Mexican Wild Potatoes at $2 per bushel, or $5 per bbl. containing about 3 bushels.

English Potato Onions at $2 per bushel, or $5 per bbl.

No charge for packages. Money promptly returned by mail if I am unable to fill your order.

Address I. W. BRIGGS,
West Macedon, Wayne Co., N. Y.

**NEW YORK STATE AGRICULTURAL COLLEGE.**

AT a meeting of the Trustees of the State Agricultural College, on the 21st Sept., 1853, it was resolved, to arrange and prepare the Veterinary department of the College, simultaneously with the earliest courses of instruction; and that every subscriber to the funds of the College be and hereby is declared to be entitled to the use of the Hospitals of the said department, for all Medical or Surgical treatment, necessary and proper for such diseases or accidents as may afflict any animal belonging to the said subscriber: to be subject to such rules and regulations as the Trustees may from time to time appoint and direct.

No cost or charge shall be made for Medical or Surgical advice or treatment. The necessary expense for the sustenance of animals received into the Hospitals under this resolution, shall be paid by the proprietors of the animals respectively. By Order.
197-4t J. W. BACON, Sec'y.

**CHOICE POULTRY.**

GENTLEMEN, Amateurs, Planters, Farmers and Poultry Breeders generally, who are desirous of procuring Fowls from imported stock, purely bred, can be supplied by the subscriber at reasonable prices, with the following breeds:—Buff, White and Grey Shanghaes, Chittagongs, Great Javas, Black Spanish, White Surrey, and Speckled Dorkings, Royal Cochin Chinas and Malays, carefully boxed and sent by Express or otherwise, to any part of the United States or Canadas.

Address J. W. PLATT,
197-1t* Box 128 Post-office, Rhinebeck, N. Y

**CARTHAGE NURSERY,**

NORTH ST. PAUL STREET, ROCHESTER, N. Y.

THE subscribers offer for sale the present season,
75,000 Apple trees 3 and 4 years old.

HIRAM C. WHITE. [195tf] AMASA MASON.

**SUFFOLK PIGS.**

THE subscribers are prepared to receive orders for pure Suffolk Pigs, bred from stock imported by the late William Stickney in 1848,—also by the subscriber in January last. Address
JOSIAH STICKNEY, Boston or Watertown,
or ISAAC STICKNEY, Boston, Mass.
Boston, August, 1853. 190-13w-1m

**CHINESE FOWLS.**

FOR SALE, a number of pairs of genuine Black Shanghai chickens, strongly marked and embracing all the fine points of Chinese fowls. No one wishing a superior breed of fowls for laying or for the table, will be disappointed by procuring this variety. Also, a few pairs of the celebrated Brahma Pootra stock, in fine condition. Orders received from any part of the country will be promptly executed, and the fowls caged in such a manner that they can be transported safely for any distance.

TERMS:—Black Shanghai, $5 per pair; Brahma Pootra $10 per pair. Address the subscriber at the office of the Genesee Farmer, Rochester, N. Y.
194-4t CHAS. W. SEELYE.

**FINE FOWLS.**

HAVING raised from select stock, a few broods of buff Cochins and Shanghais, in order to obtain for private use, a small flock known to be pure and genuine, I have for sale about twenty pairs, and at prices that any one can pay, who is able to own half a dozen common fowls. They are broods of April, May, and June—genuine as imported;—being of stock received from the importer, bred immediately from fowls brought from China.

Sept. 1, 1853. Rochester, N. Y.

**1,000 BOOK AGENTS WANTED.**

INTELLIGENT AND INDUSTRIOUS MEN WANTED in every part of the United States, to engage in the sale of the best assortment of illustrated

POPULAR AND USEFUL BOOKS

published in the country.

Men of good address, having a small capital of from $25 to $100 can do well by engaging in this business, as the inducements offered are of the most liberal character.

For further particulars, address, (postage paid)
ROBERT SEARS, Publisher,
194-4t 181 William St., New York.

**TO BOOKBINDERS.**—FOR SALE—The Tools, Stock and Fixtures in a well established BINDERY, now doing a good business. The owner has been in it for the last twelve years, and only wishes to leave to do other business that will be better for his health.

For particulars concerning the business, address Democrat Office, Rochester, N. Y., or to the subscriber,
F. H. MARSHALL.
Rochester, July 21, 1853. 187-tf

**TIMOTHY SEED**—100 Bushels pure reapt Illinois Timothy Seed. 400 do. Canada do. Now on hand and for sale at the Genesee Seed Store, 65 Buffalo st., by
195-2t J. RAPALJE & CO.

**SAMUEL MOULSON,**

AT THE OLD ROCHESTER NURSERY.

**Office, No. 36 Front St., Rochester, N. Y.**

IS prepared to furnish inventories, to post-paid applicants, of the present very extensive stock of Nursery items, consisting in part of

120,000 Dwarf and standard Pear Trees.
90,000 Apple Trees.
50,000 Peach Trees.
30,000 Plum, Cherry and Apricot Trees.
Over 100,000 Hardy Evergreens.

Also, extra large Northern Spy Apple Trees, Dwarf and Standard Pear, Cherry, &c., &c.

Also, for immediate effect, a large quantity of extra sized Ornamental Trees, among which are fine specimens of Norway Spruce, Silver Maple, Pawlonias, Catalpas, Mountain Ash, Horse Chestnut, &c.

And a fine selection of Weeping Deciduous Trees, Ornamental Shrubs, Hybrid Perpetual Roses, together with such novelties as may be classed strictly hardy. Also a very limited assortment of half hardy plants of small size, such as Cryptomeria Japonica, Cedrus Deodara, &c., &c.

The amateur wishing prime fruits of well established repute, or the agriculturist needing fine cropping, thoroughly tested varieties, may rely upon the most careful execution of their orders.

The Ornamental items are entirely grown in the Nursery, consequently none of the heavy losses are sustained that usually occur to recent imported subjects.

The Evergreens are very robust and admirably furnished to the surface of the ground, none presenting the naked stems usual to imported plants.

Dealers are invited to give a call before making their purchases.

☞ Peach and Plum pits wanted.
September 1, 1853. 196-tf.

**A SMALL FARM FOR SALE,**

THREE miles S. W. of the village of Macedon, Wayne Co., N. Y., consisting of about 56 acres of excellent land, three-fourths good wheat soil, and the rest pasture and meadow, with about 5 acres of woodland. It has a dwelling-house, barn, corn-house and granary, &c., and a never-failing spring of water. The price, if sold soon, is fifty dollars per acre. A portion, or the whole, may be paid when possession is given, the first of 4 mo. (April) next. For further particulars, apply to the subscriber personally, at his residence in Macedon. 196-3t
Macedon, 9 mo. 27, 1853. J. J. THOMAS.

**N. Y. State Agricultural College.**

THIS Institution was chartered by the Legislature of the State of New York, for the purpose of presenting to Agriculturists the means for acquiring a knowledge of the Arts and Sciences appropriate to their vocation; to prepare Students for practical, active labor, by training the mind in a system which shall inculcate an intimate acquaintance with the sciences essential to agricultural success.

To insure the development of principles and their application to the soil, the Legislature has required the purchase of not less than three hundred acres of land.

The Trustees, having accepted the trust confided to them by the Legislature, organized the State Agricultural College, by the following appointments:

JOHN DELAFIELD, President of the College.
Hon. JOHN A. KING, Ch'n of the Board of Trustees.
JOEL W. BACON, Secretary.
N. B. KIDDER, Treasurer.

At a meeting of the Board, on the 4th of June, a Report was presented by B. P. Johnson, from a Special Committee, on the Location of the College, declaring "that after an examination of the Oaklands Farm in Seneca County, they are entirely satisfied that the price asked for it, is its fair value in the market, for farming purposes; that it is, by previous preparation, by position and variety of soil, in every respect adapted to the objects of the Institution; that the title is perfect, and recommend that the chain of title be entered at large on the minutes of the Board," &c. This farm is situated midway between the market towns of Waterloo and Geneva, and in full view of the Seneca Lake, and overlooking the village of Geneva; elevated about 125 feet above the lake, it is free from causes disturbing health; its soil varies from a strong clay to a sandy loam, presenting varieties sufficient for testing by experiment every doubtful question in relation to soils, and to exhibit the most approved system of cultivation.

The Trustees are prepared to receive from Farmers and friends of agriculture, proposals for the Capital Stock of the Institution, which will be distributed in shares of fifty dollars each, payable

10 per cent on Subscribing.
40 " 1st July.
50 " 1st October.

The Trustees may be addressed (post-paid) at their respective residences, as follows:

HON. JOHN A. KING, Jamaica, Queens County.
HENRY WAGER, Westernville, Oneida "
B. P. JOHNSON, Agricultural Rooms, Albany.
WM. KELLY, Rhinebeck, Dutchess Co.
N. B. KIDDER, Geneva, Ontario Co.
JOEL W. BACON, Waterloo, Seneca Co.
TALLMADGE DELAFIELD, Geneva, Ontario Co.
WM. BUEL, Rochester, Monroe Co.
JOHN DELAFIELD, Oaklands, Seneca Co.

The Officers of the College will endeavor to present subscription books in each County, that the College, so entirely agricultural and peculiarly the Farmer's institution, may find its support widely diffused throughout the State.

The President will, upon application to him, give all needful information in relation to the ordinances, rules and regulations of the College, and the courses of instruction to be pursued.

By order of the Board of Trustees,
JOEL W. BACON, *Secretary.*

☞ **PEOPLE'S COLLEGE OF THE STATE** OF NEW YORK, INCORPORATED APRIL 12, 1853.—This Institution has been chartered by the Legislature of this State, for the purpose of reducing the expenses of Academic and Collegiate Education, and thereby open the Halls of Science to all classes of society by reducing the cost of tuition, board and clothing, and enabling the student to defray the greater part of the expense in labor.

Provision will be made to educate young men corporeally and mentally for specific purposes, by pursuing full and definite courses of study for each of the pursuits represented in the College—either Agricultural, Mechanical or Professional—and thus graduates will be qualified for entering at once upon the business of their choice.

At a regular meeting of the Trustees named in the Charter, held at Owego, on the 25th day of May, the following appointments were made:

D. C. MCCALLUM, of Owego, President of the Board of Trustees.
A. I. WYNKOOP, of Chemung, Vice President.
TRACY MORGAN, of Binghamton, Treasurer.
HARAISON HOWARD, of Lockport, Secretary and General Agent.

Agents are being commissioned in each county of the State, that the people may have an opportunity to contribute to the capital stock, which is distributed in shares so small that every individual may become interested in an institution which commends itself to the favorable consideration of every intelligent person.

For further information upon the subject, application may be made, post-paid, to the Secretary, who will send a pamphlet containing the act of incorporation and objects of the Institution, and other needful information.
188-tf H HOWARD, Secretary.

The undersigned, having been appointed Agent for Rochester and Monroe county, will be most happy to furnish any new information desired, in reference to the College, to receive stock subscriptions, (the shares are one dollar each,) or to address audiences, on invitation, explaining at length the plans and objects of the People's College, and also as he views the idea of a true education.
Respectfully, G. F. NEEDHAM.

**ATKINS' SELF-RAKING REAPER.**

THIS MACHINE is now offered to the public and warranted to be a good Self-Raking Reaper. It is also believed to be a good mower, but not yet having been sufficiently tested in grass (though it soon will be) it is not warranted to be equal to a machine made mainly or wholly to mow.

The raking apparatus is of novel and very simple construction, and not liable to derangement, and every farmer who has seen it in the harvest field, says it performs the raking better than a man can possibly do it.

Price of machines at Chicago, $175, of which, $75 must be paid on giving the order, $50 upon successful trial, and $50 in note payable 1st Dec.

The machines are most thoroughly built and warranted.

☞ Descriptive circulars, with cuts, sent to post-paid applications. [182m3.] J. S. WRIGHT.
"Prairie Farmer" Warehouse, Chicago, June, 1853

**MARSHALL'S BOOK BINDERY,**

BURNS' BLOCK corner of State and Buffalo street, over Sage & Brother's Bookstore, Rochester, N. Y.

Music Books, Pamphlets, Periodicals, &c., bound in plain and fancy bindings; old books rebound; Blank Books ruled to any pattern, and bound to order; Public and Private Libraries repaired at short notice. Packages containing irections for binding, punctually attended to.

N. B.—All work warranted, and done at low prices.
April, 1852. [122tf] F. H. MARSHALL.

**MONEY TO LOAN** on Bond and Mortgage, on improved farms. L. A. WARD,
[169m6.] 36 State St., Rochester, N. Y.

# Poetical.

## THE COTTAGE DOOR.

BY T. K. HERVEY, ESQ.

How sweet the rest that labor yields
The humble and the poor,
Where sits the patriarch of the fields
Before his cottage door:
The lark is singing in the sky,
The swallow in the eaves,
And love is beaming in each eye
Beneath the summer leaves!

The air amid his fragrant bowers
Supplies unpurchased health,
And hearts are bounding 'mid the flowers
More dear to him than wealth!
Peace, like the blessed sunlight, plays
Around his humble cot,
And happy nights and cheerful days
Divide his lowly lot.

And when the village Sabbath bell
Rings out upon the gale,
The father bows his head to tell
The music of its tale—
A fresher verdure seems to fill
The fair and dewy sod,
And every infant tongue is still,
To hear the word of God!

O, happy hearts!—to Him who stills
The ravens when they cry,
And makes the lilly 'neath the hills
So glorious to the eye—
The trusting patriarch prays, to bless
His labors with increase;
Such "ways are ways of pleasantness,"
And all such "paths are peace!"

# Rural Sketch Book.

## FORTUNES OF A YOUNG GIRL.

A ROMANCE OF REALITY.

[THE following singular story is related as a fact, by Mr. Jouy, in his "Hermit in the Provinces," a work professing to detail authentic and curious matters relating to the various provinces of France. Mr. Jouy states that he received the narrative from the lips of Mons. and Mad. Dupre, who were aided in the recital by the actual letters of the heroine.]

In the town of Havre-de-Grace, France, not many years ago, there lived an aged couple, M. and Madame Dupre. In themselves, these personages were worthy and respected, but circumstances of a remarkable and romantic nature connected with their family, rendered them objects of peculiar interest, not only to their neighbors and follow-citizens, but to all who visited the town of Havre.

One of the near relatives of this venerable pair, was destined to a career in life such as we shall only find a parallel to in the pages of Arabian fiction.

Aline Dupre was born at Martinique, in the year 1763. Her father possessed one of the best estates on the island, and spared no pains or expense in educating his daughter, whose rare natural qualities, both of person and mind, well merited development. At the age of fourteen, when womanly charms are almost matured in that clime, Aline was the pride of her family, and the admiration of all the upper circles of the colony. In private society, no one surpassed her in vivacity of spirit, in the ball-room the graces of her person and movements were unrivalled; and she possessed musical talents well fitted to enhance and complete the impression made by her appearance and address. Such was Aline Dupre, when an unforseen accident gave a sudden turn to her prospects and fortunes.

Excited by oppression, real or imaginary, a numerous band of negroes made their escape from their masters, and spread the most serious alarm over the whole island. Profiting by the scantiness of the military force stationed there at the time, these runaways committed various outrages, and made threatening demonstrations at many different points, calling everywhere upon their fellow slaves to join their standard.—None of the negroes employed by M. Dupre had acceded to the insurgent band; but the station of the gentleman, and the high opinion entertained of his superior talents and activity, caused him to be pitched upon as the leader of the militia raised for the suppression of the mutineers. M. Dupre fulfilled with energy and success the duty entrusted to him. The fugitives were surrounded and captured, but only after a desperate struggle, in which M. Dupre received a mortal injury. He survived it long enough to permit him to receive from France the Cross of St. Louis, which the governor of the colony, the Marquis de Bouille, had requested for him. Soon after receiving his reward, M. Dupre died, recommending with his last breath, his daughter Aline and his only son to the care of the governor.

The Marquis de Bouille did not neglect the charge committed to him. It had been the purpose of the late M. Dupre to return to France, where he had a small patrimonial property, and where various members of his family were settled. This intention had been partially formed with a view of completing the education of Aline and her brother, and in the hope of seeing them well established there for life. The Governor of Martinique determined to fulfil the wishes of the father in this respect. Finding the young Dupre, who was a year or two older than Aline, to have an inclination for a military life, the Marquis arranged that he should go to France and enter the regiment of Bouillen; while the sister was placed for a time in the Seminary of St. Cyr, the highest institution then existing for persons of her sex. Aline and her brother accordingly embarked in a vessel bound for France.—That vessel, however, *never reached its destination.* Its fate remained unknown for seven years, at the end of which time, a letter, containing disclosures concerning it, was received by one of the friends of the Dupre family residing in France. This individual was a young lady who had spent some years in Martinique, and had been the playmate and dear friend of the young Aline. The letter alluded to was delivered by the ambassador of a great power, and it was from his sovereign—his crowned queen. That queen was Aline Dupre! The strange vicissitudes which placed Aline in this position were detailed, in the communication to her friend, nearly as follows:

The vessel which bore the brother and sister, intended to land on the Western coast of France, reached the straits of Gibralter in safety. Soon afterwards, however, when the passengers, attracted by the beauty of the evening in that latitude, had assembled in a group on deck, an old negress in attendance on Aline pointed out a dark spot in the sea at a distance. The captain was present at the moment, and was observed to grow pale as he turned his eye on the object pointed out, but he made no remark, and the passengers retired for the night.—In the morning they found nothing but alarm on board. The vessel was pursued by a swift sailing Algerine corsair, of a size which rendered it almost hopeless for a petty merchantman to attempt any resistance. Nevertheless, the crew took to their arms, resolved to sell their liberty dearly. The pirates were not long in coming up and boarding, and, as might have been expected, soon overpowered all opposition. Aline had kept close by the side of her brother, determined to perish with him if he fell, and when the capture took place, she was bound to him to the same chain. This association greatly lightened their sufferings on the occasion, but it did not last long. When the corsair reached the port of Algiers an order was issued for the conveyance of all the male prisoners ashore, and the retention of the females. The language spoken around her was unintelligible to Aline but she soon became sensible of the intended separation. Her agony was dreadful at the moment; the past mishap seemed to her insignificant in comparison with this crowning ill. She fell on her knees before the barbarians of the vessel, and used every entreaty, by word and gestures, which might have a chance of moving them to permit her to accompany her brother. Her tears and imploring looks fully expressed the meaning which her language could not convey, but they were totally disregarded, and her brother was carried off with his companions. All hope seemed to depart with him, and Aline fell down in a swoon.

Her insensibility, at least to a partial extent, was of long continuance, every return of her powers of reflection serving only to renew her grief, and throw her back into a state of lethargy, which rendered her heedless of all around her. Zara, the old negress, meanwhile watched over her with incessant care. When Aline gained something like composure she found herself on board the vessel, and again upon the open sea. Zara informed her that she had been purchased by an Armenian merchant, and was now on the way to Smyrna, whence, after taking on board some Circassian and Georgian captives, Achmet, as the merchant was called, intended to proceed to Constantinople. Zara likewise added that Achmet seemed to take a strong interest in her restoration of health. This last piece of intelligence was anything but pleasing to the poor captive, and her mind was so heavily oppressed with a foreboding dread of the fate that seemed to await her, that she resolved to escape from it at the cost of her life. No other way of effecting this object was in her power, save that of starving herself. For two days she maintained this determination, and was already beginning to feel her strength diminishing, when some proceedings on the part of Zara changed altogether the train of her thoughts. The old negress, like many of her race, affected the power of reading the cards, or telling fortunes, and the art fully led her languid mistress to express a wish to know what would be her brother's fate, the subject ever uppermost in her thoughts. Zara used the opportunity given her most dexterously.

Consulting the cards she assumed, after a time an aspect of great joy. "Your brother will yet be free and great! The cards declare it—and by you—by you—shall he be saved!" The mere suggestion of such a possibility made an instantaneous and striking impression upon Aline, and raised in her mind a new course of action. She resolved to desist from her abstinence, and preserve her life, in the hope that whatever might be her own fate, she might yet have it in her power to alleviate the sufferings of her beloved brother.

When the vessel arrived at Smyrna, it chanced that while Achmet was getting on board his other captives, he met the French consul in society and mentioned his having with him a beautiful slave of French descent. The consul immediately requested to see her, and after some difficulty this was accomplished—and on seeing Aline, Monsieur I———, generously offered to purchase her from the Armenian, and set her at liberty.

"My brother," said Aline, "will you set him, too, at liberty?"

"Alas!" said the consul, "that is not possible. How could he now be found out?—The intervention of the Sultan alone, I fear, could avail to discover his retreat and procure his freedom."

"The Sultan?" replied Aline, and for a few moments she remained in thought.—"Well," continued she at length, "I cannot, and will not, since such is the case, accept of liberty for myself." The consul pressed her to alter her resolution, but the generous girl held firmly by the purpose. The slight hope which existed of her finding in Constantinople some means of liberating the poor captive of Algiers, kept her fixed in the determination of remaining with Achmet. It seemed to her as if some secret power urged her onward to the Turkish capital.

But, as she sailed thither, doubts and fears took possession of her mind. Her whole chance of success was founded on her personally seeing the Sultan, Abdul Hamed, or some great courtier, from whom she might beg the life and liberty of her brother; but she remembered, and shuddered to remember, that she might become the purchased slave of some rich, but obscure Turk, and might be shut out for ever from the light of day from among strangers. With these thoughts in her mind, she proceeded to the presence of Achmet, and assuming a firm and bold tone she said:

"Armenian, *your* fortune and *mine* are now in your hands. If I observe aright, you do not confound me with these poor ignorant slaves, who have bodies, but no souls. Such as these subjugate the eyes, but not the heart. My character is different from theirs, and so will my destiny be. It will be a high one, and your fortunes shall rise with it. Introduce me to the presence of the Sultan, and depend upon my eternal gratitude."

Achmet seemed to be struck by these words, and the confident tone in which they were uttered. His manner assumed a semblance of respect very unusual between master and slave, and he expressed his intention to gratify the wishes of Aline if possible. Accordingly when the vessel entered the port of Constantinople, and the party were conveyed to the house of Achmet, he showed his intentions by bringing to her one of the richest dresses to be found in the city, this being a proper preliminary step, as he thought, to the execution of her design; but Aline declined assuming the garb, and contented herself with one of the most simple kind. To his surprise, the Armenian was compelled to admit that her appearance was more captivating without than with the rich attire obtained for her.

Though Achmet seemed thus desirous of fulfilling her wishes, day after day passed away without any approach of that event on which Aline rested every hope of procuring her brother's liberation. At last, however, Achmet announced that it was impossible for himself to introduce his beautiful slave to the presence of the Sultan in any way. "But do not despond," said he; "I have sold you along with Zary to Isaac Aga, son of the old chief of the old guards. He has promised to place you in the way of seeing the Sultan." It is needless to linger on the issue. The skill of Aline in music was exerted to charm Abdul Hamed, and not in vain. It was not long ere his passion for his accomplished captive grew so deep and strong, that he made her his legitimate wife, and she had also the pleasure of embracing her brother, liberated by the Sultan's orders from the slave chains of Algiers. Under the title of Sultana Valide, Aline outlived Abdul Hamed, to whom she bore the Sultan Mahmoud. Mahmoud did not immediately succeed his father, but lived in seclusion during the intervening reigns of Selim and Mustapha. The civilized spirit of Mahmoud may, in part, be traced to the instructions of his mother, the Sultana Valide. She discovered the retreat of her relatives in France, and, as has been said, sent them letters, which were accompanied by magnificent presents. M. and Madame Dupre, the aged pair described as residing at Havre-de-Grace, were her uncle and aunt, and shared liberally of her bounty. The Sultana Valide died in 1817, at the age of fifty-four.

PROSPERITY.—Prosperity has this property, it puffs up narrow souls, makes them imagine themselves high and mighty, and look down upon the world with contempt; but a truly noble and resolved spirit appears greatest in distress, and then becomes more bright and conspicuous.—*Plutarch's Lives.*

WINE and passion are racks often used to extort words from us.

CITY COCK SPARROWS—GENUINE SPECIMENS.

*First Cock Sparrow*—"What a miwackulous tye, Fwank. How the doose do you manage it?"

*Second Cock Sparrow*—"Yas, I fancy it is rather grand; but then you see, I give the whole of my mind to it!"

MAKING THE BEST OF IT.—A Yankee out walking in Virginia, at Wheeling, while to himself a talking, experienced a feeling, strange, painful and alarming! From his caput to his knees, as he suddenly discovered, he was covered over with bees! They rested on his eyelids, and perched upon his nose; they colonized his peaked face, and swarmed upon his clothes. They explored his swelling nostrils, and dived deep into his ears; they crawled upon his trowsers, and filled his eyes with tears. Did he yell like a hyena? did he holler like a loon? Was he scar't, and did he "cut an' run?" or did the critter swoon? No'er a one! He wasn't scar't a mite; he never swoons—nor hollers; but he hived them in a nail-keg tight! and sold 'em for two dollars!

A BABY SHOW.—Somebody suggests, through the Springfield *Republican*, that a baby show be held somewhere in Western Massachusetts, in order to give those who are bragging about their babies a chance to exhibit the same and receive such premiums as an impartial committee, chosen for the purpose of deciding on their merits, shall award. Such an exhibition ought to follow the "horse show" in Springfield next October; but as we shall not be prepared to contribute anything to the show at so early a date, we trust it will be delayed for a while, just for our sake and the sake of "generations yet unborn!"—*Palmer Jour.*

PUNCH states that "a proposal has been under consideration in the magnetic circles of London, to form on expedition for the purpose of moving Table Bay."

THE man that undertook to wrestle with a gallon of rum, met with a most signal defeat. He was grassed in less time than you could throw a somerset.

A YOUNG LADY in Tennessee, when kissed, says:—"You thief, you, put that right back where you got it."

BYRON says:—"A thousand years scarce serve to form a State." He had never heard of California.

THE man who "fell into raptures" with a pretty girl, was taken out with considerable difficulty.

# Youth's Corner.

"Attempt the end, and never stand to doubt;
Nothing's so hard, but search will find it out."

For the Rural New-Yorker.

## BIBLICAL ENIGMA.

I am composed of 27 letters.

My 24, 3, 8, 16, 3, 4, 2, 18, 21, 14, 3, 15 is a beautiful flower of which Solomon speaks.

My 8, 27, 13, 2, 18, 9, 7 is the name of the place where king 1, 18, 25, 2, 13, 10, 11, 13, 8 gave the decree for the Jews to slay their enemies.

My 12, 22, 14, 10 is the name of an ancient city.

With my 9, 6, 5, 16, 24 many miracles were performed.

My 20, 14, 6, 26, 18 is what Job declares killeth the foolish men.

My 23, 25, 22 of my 17, 14, 13, 5, 27 is what David exhorts all to choose.

My whole is one of the wise sayings of Solomon.

Stump Valley, N. Y., 1853. H. E. M.

## ANSWER TO ENIGMA, &c., IN NO. 40.

Answer to Miscellaneous Enigma—*The Caloric ship Ericsson.*

Translation of Riddle for Young Americans:

*Old Woman*—Aw oo? i. e. All wool?

*Shopman*—Oo i, aw oo. O yes, all wool.

*Old Woman*—Aw ae oo? All one kind of wool?

*Shopman*—Oo i, aw ae oo. O yes, all one kind of wool.

### Ornamental and Domestic Poultry.

THE subscriber having invested a large amount in this business, is now prepared to fill any orders which he may receive. The celebrated Brahma, Sumata, Game, Palmer, Marsh and White Shanghais, with many other popular varieties, are from the yard of C. C. Plaisted, Esq., Great Falls, N. H., and of course cannot be surpassed in the world. My Imperial Cochin China Fowls are from Col. B. P. Johnson, his stock imported last year, '52, from the best breeders in England. All who well know Col. J., will understand that he has the best or none. My black Spanish are quite late, and will not be ready for market before next spring. They are from Mr. John Giles, late imported, the best blood in the country. These birds are so fast coming into repute that the price will doubtless run high for some years to come, as will also be the case with the Brahma, Sumatra, Game, &c. All persons purchasing fowls from me, can enjoy the benefit of my advertising, in case they wish to sell Chickens next year.

I am quite sure that our southern and western fanciers can be better suited here than farther east, as the long distance on railroad much injures the health and growth of the fowls.

As there are many fowls in market which have no claim upon the public favor, I will give my patrons something more tangible than my own words, for

"If self the wavering balance shake,
It's rarely right adjusted."

I am therefore permitted to refer all who entertain any scepticism, to the following gentlemen:—Col. B. P. Johnson, Secretary N. Y. State Agricultural Society, Albany, N. Y.; Hon. Ambrose Stevens, N. Y. City; Hon. Lewis F. Allen, Black Rock, N. Y.

Address O. B. EVANS, 214 Main street,
194-3m Buffalo, N. Y., Box 1662.

### CIRCULAR.

WE have just published, and would respectfully invite the attention of the trade to

DANIEL WEBSTER'S LIFE, EULOGY, AND FOUR GREAT ORATIONS.

This volume is printed in the best style of typographical art, on a superior quality of paper. It contains one hundred and eighty-four pages, and is illustrated with the most accurate and splendid Steel Portrait of Mr. Webster extant. The Life is from the accomplished pen of LOUIS GAYLORD CLARK, the able and popular editor of the Knickerbocker Magazine. The Eulogy is by an eloquent and appreciating American writer. The four great Orations comprise the most eloquent and popular of Mr. Webster's intellectual efforts, viz:

**Adams and Jefferson, Bunker Hill Monument, First Settlement of New England, and Reply to Hayne.**

The work is duly entered according to Act of Congress, and is stereotyped in the best manner. It is an authorized edition, and sanctioned by Mr. Webster's family and executors.

TERMS:—Paper bound—For 100 copies, 35 cents; 1,000 copies, 30 cts.; retail, 50 cts. Muslin bound—for 100 copies 50 cts.; 1,000 do., 45 cts.; retail, 75 cts.

Liberal terms of exchange. Address all orders to

SPRINGFIELD, Ohio, May 1, 1852.

MR. W. O. HICKOK: *Dear Sir,*—I purchased one of your improved cider mills at the State Fair at Lancaster, Pa., last year. Since then I have tested it effectually, and must say it surpasses any machine, for the purpose it is intended for, that I have ever seen, and I have examined a good many, before purchasing and since. Its construction being simple, it never gets out of order. It supasses my most sanguine expectation. Could I not procure another one, I would not part with mine for four times the price of them, as I know its value.

Yours truly, CHAS. M. CLARK.

### FOR SALE.

A VALUABLE FARM OF 163 ACRES, four miles North-west of Weedsport, (a good market, on Erie Canal,) and 3½ miles from the Syracuse and Rochester direct Railroad. The said Farm has 140 acres improved, and in a good state of cultivation, and is well situated for two farms if desirable, as there are two houses, two barns, two orchards of a good variety of fruit, and a fine timbered lot on each end of the farm. Fifty acres is seeded to Clover and Timothy, and 30 acres is intended for wheat this fall. For further particulars, inquire of, or apply to the subscriber on the premises.

N. B.—Purchasers wishing only a hundred, or fifty acres can be accommodated. JACOB EAKER.

Conquest, Cayuga Co., N. Y., Aug. 5, 1853. 193-3t*

### SUFFOLK PIGS FOR SALE.

TWENTY PAIRS of pure bred SUFFOLK PIGS for sale by the subscriber. Also Breeding Sows. They can be safely forwarded by Railroad, Express, &c., to almost any part of the country. C. J. HOLDEN,

June, 1853. [186m3] Walpole, N. H.

## MOORE'S RURAL NEW-YORKER:

A WEEKLY HOME JOURNAL,

For both Country and Town Residents.

PUBLICATION OFFICE,

BURNS' BLOCK, CORNER STATE AND BUFFALO STS., ROCHESTER, N. Y.

TERMS, IN ADVANCE:

TWO DOLLARS A YEAR—$1 for six months. To Clubs and Agents as follows:—Three Copies one year, for $5; Six Copies (and one to Agent or getter up of club,) for $10; Ten Copies (and one to Agent,) for $15; Twenty Copies for $25, and any additional number, directed to individuals at the same rate. Six months subscriptions in proportion.

☞ Subscription money, properly enclosed, may be sent by mail at the risk of the Publisher.

Terms of Advertising

ONE DOLLAR per square (ten lines—100 words, or less,) for each insertion,—*in advance.* ☞ The circulation of the NEW-YORKER is much larger than that of any other newspaper published in the State, out of New York city. Only a limited space, however, is devoted to advertisements, and hence preference is given to those most appropriate—such as the cards and notices of dealers in Agricultural Implements and Machinery,—Horticulturists and Seedsmen,—Booksellers and Publishers,—Inventors, etc. All orders by mail should be accompanied with the cash.

To enable us to accommodate as many as possible, brief advertisements are preferred. Patent medicines, &c., will not be advertised in this paper on any terms.

☞ All communications, and business letters, should be addressed to D. D. T. MOORE, Rochester, N. Y.

THE WOOL GROWER AND STOCK REGISTER.

THIS is the only American Journal primarily devoted to the interest of Wool and Stock Growers, and should be in the hands of *every owner of Domestic Animals.* It is ably conducted, published in the best style, and finely illustrated. Each number contains a careful Review of the WOOL and CATTLE MARKETS, and much other *useful* and *reliable* information which can be obtained from no other source. The Fifth Volume commences with July, 1853.

TERMS:—FIFTY CENTS A YEAR; Five Copies for $2; Eight for $3; Eleven for $4. Back volumes, bound in paper, at 40 cts. each,—unbound at 35 cts., or three for $1.

Published monthly, in octavo form. Specimen numbers sent free. Money, properly enclosed, at our risk.

Address D. D. T. MOORE, Rochester, N. Y.

MOORE'S
# RURAL NEW-YORKER.

VOLUME IV. NO. 42. ROCHESTER, N. Y.—SATURDAY, OCTOBER 15, 1853. WHOLE NO. 198.

**MOORE'S RURAL NEW-YORKER:**
A QUARTO WEEKLY
**Agricultural, Literary and Family Newspaper.**

CONDUCTED BY D. D. T. MOORE,
WITH AN ABLE CORPS OF ASSISTANT EDITORS.

The Rural New-Yorker is designed to be unique and beautiful in appearance, and unsurpassed in Value, Purity and Variety of Contents. Its conductors earnestly labor to make it a Reliable Guide on the important Practical Subjects connected with the business of those whose interests it advocates. It embraces more Agricultural, Horticultural, Scientific, Mechanical, Literary and News Matter—interspersed with many appropriate and handsome engravings—than any other paper published in this Country.

☞ For Terms, &c., see last page.

# Rural New-Yorker.

## Progress and Improvement.

### ROOT CROPS.

It is a well established fact that more nutritious matter can be obtained from an acre of land in root crops, than in any other. Thus an acre of Mangel Wurzel, of twenty tons bulbs and eight tons leaves, would yield in bulbs 5,000 pounds, and in leaves 2,000 pounds of *dry* matter,—while forty bushels of wheat contain only 192 lbs., and that of the straw 1,600 lbs. dry matter. A crop of Timothy of two tons of hay would yield not more than 3,500 lbs. of dry matter, while an equal weight of Clover hay contains only 3,200 lbs.

While, then, roots as a class contain some ninety per cent of water, they nevertheless yield more dry substance than any other agricultural crop. Then, again, there is less effete matter in the dry substance of roots than in most other plants. Clover, timothy, straw, corn stalks, bran, and almost everything else commonly used for food, contains a very large proportion of *woody fibre* that is no more nutritious than an equal weight of chips. Common meadow hay and dry potatoes contain nearly the same amount of nitrogenous compounds—say nine per cent. of albumen, the flesh-forming principle. In the potato, however, the other 81 lbs. is starch, while in the hay it is nearly all woody fibre.

We can obtain, then, not only a greater quantity of dry substance, but also a much greater amount of truly nutritious matter in roots than from any other crop. Nor is this all. The impoverishing effects on the soil should also be taken into consideration. In this respect practical experience and scientific experiment alike decide in favor of turnips, ruta bagas, mangels, &c. (We fear potatoes are an exception; there have been no experiments made, that we are aware of, that settle this point, but common experience indicates that the potato is rather an exhausting crop.) It is well known, that where a turnip is abundantly supplied with available inorganic matter, it is comparatively independent of organic matter in the soil, obtaining carbonic acid and ammonia from the atmosphere, sufficient for an average crop.

Root crops, therefore, not only afford a large amount of truly nutritive matter, but this matter is principally obtained from the atmosphere. Hence, the cultivation of roots is one grand means of increasing the amount of organic matter on a farm; and it is of organic matter, especially of ammonia, that our soils are deficient. It is certain that the yield of wheat, in a range of from 20 to 40 bushels per acre, is dependant on the quantity of ammonia in the soil.—Underdraining, and the extensive cultivation of roots, are the two principal causes of the great amount of produce obtained on an *English* farm. With their general introduction here, we shall witness a like improvement in our acreage productions, especially in the yield of wheat.

We had supposed that it was the want of congenial climate that retarded the cultivation of roots in this country, but find that English and Scotch farmers are of opinion that they can, with the same labor, obtain quite as large root crops here as in Great Britain. They all agree, that it is not the climate, but the immense amount of *labor* required that prevents the cultivation of roots. "You know, sir, that we have to pay twice as much for hired help here as in England, and it requires much more labor to cultivate an acre of turnips than an acre of wheat or corn. The ground requires to be made in very fine order; the turnips should be sown in drills; then they must be singled out ten inches apart and hand hoed twice to keep them clean, and after we have got a crop, there is so much work harvesting them that we have given up root cultivation altogether." So say many intelligent English and Scotch farmers, with whom we have conversed on this subject. Will correspondents give us their views?

### SOILS—THEIR COMPOSITION.—No. I.

Mr. Moore:—I find a difficulty in determining what constitutes good soils, and what the radical difference is between two soils of the same general appearance, and when analyzed by the chemists, are so near alike, or the difference so unimportant—yet the one is rich, and the other poor. Now as I understand the theory of the creation and deposition of soil—of the entire earthy matter covering the rocky nucleus of this globe,—it is the result of the decomposition and mechanical abrasion of the original rocks, that composed the entire creation, and that it has been distributed over the surface by the agency of water—great floods anterior to the Noachic deluge; which, if true, would give about the same consistency to all soils, except the difference of density and bulk, which with the velocity of the water would deposit clays at one period and sand of different fineness at others; still it must follow, that from the long action and tremendous power of these ancient floods, that these moving and grinding seas of sand must come to a nearly uniform compound.

I have looked over perhaps one hundred of the analyses of soils made by the best chemists in this country and Europe, and find so little variation in those materials that influence the producing abilities of soil, that I have lost faith in their importance.

All the soils of this globe are nearly uniform in being composed of nine-tenths sand, or silex, and clay, a trace of lime, and a few other adventitious and unimportant minerals. In some, the silex prevails and in others clay greatly predominates, but those two earths compose all the different admixture of soils that are cognizable by any of our senses.

I have very little faith in special manures, that is, particular manures for particular soils, nor in mineral manures of any kind; nor do I believe that a soil can be improved as a soil, independent of its producing ability, except by properly compounding the quantity of clay to the sand.

Then the question recurs, what are the peculiarities or components that constitute a good over a poor one, being in composition so near alike? I have an idea, perhaps not a very clear one or very philosophical: I think that subsoils or stratums of pervious, or impervious matter, have an important influence on vegetation, but the two greatest items required are, vegetable matter in a proper state of decay, and the ability of one soil over another to contain, retain and absorb water.

Water is the grand agent of vegetable life and production, and with it and a proper quantity of decayed vegetable matter, any soil with a proper admixture of clay and sand, and of a proper fineness and division of particles, will produce one as well as another. The gases generated in the earth that are soluble in water, and the constituents of the atmosphere, I have no doubt have some agency in the vegetable economy, and I do not believe that any thing else is taken up or carried into circulation,—and therefore all special manures adapted for particular soils, are of as doubtful benefit, to my conception, as the introduction of *big chickens*.

L. Manly.

Chestnut Ridge, 1853.

Remarks:—What is the composition of soils? is a question that has occupied the attention of the best Chemists of the age,—yet, at the present time, it is involved in much obscurity. Some recent discoveries, however, lead us to hope that we shall receive light on this interesting point ere long. That a Chemist, by analyis, can tell which of two soils is fertile, and which *comparatively* sterile, we know to be impossible in the present state of analytical chemistry. We consider money and time devoted to soil analyses thrown away, so far as any immediate practical benefit is concerned, yet a *thorough* chemical investigation of soils is of much *scientific* value.

The fact that our correspondent has examined one hundred analyses of soils, and finds that they are composed principally of sand and clay, with a trace of lime, is attributable to the imperfection of the analyses. There can be no doubt, that all soils capable of growing a blade of grass, or a Canada thistle, contain every one of the nine inorganic elements of plants. The fact that Chemists do not find them in such soils, only proves that a Canada thistle is much the best analist. The thistle found them in the soil, as proved by the fact that it contains them. Does our friend suppose that the rain brings the potash, soda, magnesia, sulphuric and phosphoric acids found in all agricultural plants? Recent investigations in Paris indicate that this supposition is not so chimerical as it was considered a few months ago. Yet, hat rain-water supplies the mineral elements of plants to anything like the amount required by a crop of wheat or corn, we cannot for one moment suppose.

We have no more faith in special manures, in the popular acceptation of that term, than has our correspondent. That is to say, we do not think, because the ash of wheat contains 50 per cent of phosphoric acid, that phosphoric acid must necessarily be a first rate manure for wheat; nor because the ash of turnips contains 40 per cent of potash, that, therefore, potash is the best manure for turnips, for we know from repeated experiments that such is not the case. Yet, if experience shall show, that ammonia is *specially* beneficial for wheat, and that phosphoric acid is *specially* advantageous to turnips—as it does—we cannot but believe in special manures. The difference between us on this point is referable to what we understand by special manures.—Eds.

PORTRAIT OF A COTSWOLD RAM.

THE PROPERTY OF MR. GEO. HEWER, OF LEY GORE, GLOUCESTERSHIRE, ENGLAND, FOR WHICH THE FIRST PRIZE OF $125 WAS AWARDED AT THE MEETING OF THE ROYAL AG. SOCIETY, HELD AT WINDSOR, JULY, 1851.

### COTSWOLD SHEEP.

The Cotswold, or Gloucester, is one of the oldest and largest breeds of sheep in England. Like the New Leicester they have been much improved by judicious selection in breeding; their aptitude to fatten and mature early has been much increased, though, at the same time, their size has been somewhat reduced. They are, however, at present, quite large enough, *averaging*, when well bred, at a year old 150 lbs. live weight, while 400 lbs. is no uncommon weight for them to attain when kept and fatted for show. Compared with South-Downs, or even with New Leicesters, they are a *coarse* sheep. In the Smithfield market, Cotswold mutton is not worth so much by three cents per lb. as that of the Sussex-Down. They have been termed "the poor man's sheep," on account of the low price at which their mutton can be sold. In this case, as in most others relating to the great practical arts of life, experience indicated what scientific experiment has clearly brought to light. The experiments of Mr. Lawes, as given by that gentleman in the Genesee Farmer for August, "On the comparative fattening qualities of the various English breeds of sheep," demonstrate that the Cotswolds will lay on fat with greater rapidity and more in proportion to the amount of food consumed than that of any other breed. The following table gives the pith of the results of these accurately conducted experiments:

| | Oil-cake. | | Hay. | | Turnips. |
|---|---|---|---|---|---|
| | *lbs.* | *oz.* | *lbs.* | *oz.* | *lbs.* |
| Cotswold, | 259 | 12 | 219 | 1 | 3508 |
| Hampshire, | 291 | | 259 | 12 | 3911 |
| Leicester, | 262 | 8 | 251 | | 3759 |
| Half-breed wethers, | 261 | | 251 | | 3725 |
| do ewes, | 263 | | 250 | | 3666 |
| Sussex, | 344 | 4 | 304 | 3 | 4086 |

The "half-breed" was obtained by placing a Sussex ewe with a Leicester buck—a favorite cross in England, by which it is supposed that the fine flavor of the South-Down is combined with the increased size and superior fattening qualities of the Leicester. It will be seen by the table that the Sussex-Downs consumed 54 lbs. oil-cake, 84 lbs. clover hay, and 478 lbs. ruta baga, to produce 100 lbs. of increase more than the Cotswolds, and that the Cotswolds are superior, in this respect, to all others. They are thus shown to be "the poor man's sheep."

The Cotswold sheep have been imported into this country to some extent. They are held in high estimation by those who possess them,—and their wool is said to be finer, longer and heavier than the Leicester, though this is by no means certain. The Cotswold, Teeswater, Lincoln, New Oxfordshire, and Leicester sheep, being of large size, with long open wool, we should suppose that they would not stand the rigors of our northern winters so well as the South-Down, Merino, or other smaller, close wooled sheep. This, however, does not appear to be the case; those who have kept the Cotswold and Leicesters say they stand the climate well, and we know that intelligent farmers in this vicinity much prefer the Leicesters to the South-Downs. In a recent conversation with Mr. Fergusson, the celebrated Short-horn breeder of Canada, he stated that he had kept both South-Downs and Leicesters, and that the Leicesters stood the climate better than the Downs. With such evidence against us we must, rather reluctantly, yield the point.

When in New York city, recently, we were credibly informed that contracts had been made by the Astor, Metropolitan, and other large hotels to pay *twenty cents per pound* for all good South-Down mutton sent them. We presume under the head South-Down, all coarse wooled sheep are included. With such prices, and there is no prospect that they will be materially lowered, who can doubt the economy of keeping mutton sheep.

We recommend any of our readers who have flocks of common Merino sheep on any of the leading railroads, to place with them a Leicester or South-Down buck the latter end of this month or the beginning of next. Every lamb next summer will fetch from $1,50 to $3. Of course you will not think of breeding from such a cross, but will sell off all the lambs to the butcher. Every farmer we have met with who adopted this plan last year appeared fully satisfied that this was the most profitable sheep to raise.

### SOURING FOOD FOR CATTLE AND HOGS.

The cause is rather remote upon which this principle is based. It is asserted upon good authority that Rye, Barley, or Indian Corn meal, made into a mash and allowed to ferment and pass into the same state, when mixed with cut hay, straw, or other dry vegetable food, exhibits the most marked fattening effects. A very consistent and observing friend of ours remarked the other day, that he could with barley meal alone, properly fermented and soured, make hogs as fat in six weeks, as they could, or ought to be, and that he preferred such process to cooking the food or any other method.

It is a familiar fact to all feeders of swine, that sour and coagulated milk is worth one quarter more for those animals, than fresh and sweet milk; but how its action in that state is to be accounted for, and its operation on the animal economy of the stomach, is not very apparent. It is known by the experiments of Dr. Beaumont, that milk and all substances capable of coagulation are almost instantly changed on mixing with the gastric juice, and the rejection of milk by the infant immediately after sucking, also shows that fact.

Now, whether the souring of the food relieves the action of the digestive process, or whether the *acetic*, malic, or other acids are required by the stomach to effect secretion or simulation, is simple conjecture. With the human subject, pickles are a favorite condiment with rich and highly concentrated food, and many delicate stomachs can endure the use of large quantities of these most indigestible and unnutritive substances, without experiencing any deleterious effects. It is generally held, that those persons who consume much acid food and use vinegar and pickles freely, are apt to be thin and spare, contrary to the doctrine of souring food. We once knew a young lady so fleshy and full of "blood and blue veins," that her skin was almost to the tension of bursting, who reduced herself to very respectable wasp-like dimensions, merely by the free use of vinegar.

Of the good effects of the souring process, when used for fattening animals, we have the most abundant proofs in our own experience, and although the *modus operandi* is not so clear to our preceptions, it is, we opine, sufficient for us to know that such is the fact, at least from its assertion by good authority, to induce our readers to try its effects and its economy.

Remedy for Winter-Kill.—This disease sometimes attacks cattle and sheep early in spring—occasionally terminating fatally, even before that period. The following recipe was given by a Western cattle doctor, and is found a sure preventive or cure:

R.—Refug. opt. q. s.
Zea. pulv. q. s.
Aq. font. q. s.

Which the unprofessional reader may translate: good shelter, corn meal, and clear water—the *Zea. pulv.* to be applied as a poultice to the mucous membrane of the stomach. It may be well to add that the crows denounce the above recipe as rank quackery, and a gross infringement of their rights and privileges. We hope none of our readers will remain strangers to its virtues.

Cattle sometimes break into orchards, and injure themselves by eating apples. Salting them immediately and freely, will prevent bad effects; acting perhaps, to prevent rapid fermentation.

## THE PROVINCIAL FAIR OF UPPER CANADA.

The Agricultural Exhibition of Canada West took place at Hamilton, Oct. 4th to 8th. As we anticipated, the Fair was one of the best ever held in the Province. The weather was most delightful, the grounds in extent and adaptation unequalled, the arrangements admirable, and the attendance unusually large. Twenty thousand shilling tickets were sold on Thursday. The exhibition of stock was the *largest* we ever witnessed; in quality not quite equal to what we expected, though highly creditable. "Comparisons are odious," but as we had just been at our own State Fair at Saratoga it was impossible to avoid comparing these two great rival exhibitions. On the whole, the Hamilton show was much superior to that at Saratoga. We had some few finer animals in the various classes at our State Fair than any that were exhibited at Hamilton,—but the Canada show was very far ahead of ours in the *number* of superior animals. There was, too, a larger show of implements, comprising some of rare excellence; also a better show of seed wheat, dairy products, and manufactures, than at Saratoga. We return from Hamilton with an increased estimation of the energy and skill of our Canadian brethren, especially as applied to Agriculture. We say this not because we received any polite attentions from the Society which predisposed us to judge favorably. In fact, from the officials, who, "armed with a little brief authority," felt so consequential that they would hardly deign to speak to a plain Republican, we experienced nothing but bombastic rebuffs in all attempts to obtain information. On Thursday morning we were at the entrance gate by eight o'clock, intending to give the exhibition a good examination before the crowd came—but, alas for human hopes! we could not gain admittance till the children of the public schools had promenaded through the grounds. Towards 10 o'clock, in conjunction with a perfect avalanche of visitors, we obtained admission, but who could see anything in such a crowd? Again, the names of the exhibitors were not given, and surly John Bull in many instances could only be induced to give his name and residence by much questioning. We spent the best part of the day in examining articles and stock without obtaining, except in rare cases, the slightest knowledge as to their ownership, &c. Fortunately towards evening we met with Mr. Henry Parsons, of Guelph, to whose polite attentions we are greatly indebted; but for him, and other gentlemen to whom he introduced us, we should have give up all attempts to make a report of the exhibition.

Cattle.—The Durhams are evidently the favorite breed in Canada, judging from the number on exhibition. J. Wade of Port Hope, M. Jonas of Darlington, E. Jones of Stamford, A. Harvey of Fergus, F. Welford Blanford, and many others exhibited superior bulls. A yearling bull of R. Wade Jr., of Hope, we thought the best Durham on the ground A. Fergusson of Woodhill, showed a fine yearling, larger and a better handler than Mr. Wade's, but not quite so good from the hips to the rump as is desirable. R. Wade Jr., and H. Parsons of Guelph, showed six mo. old bull calves that particularly pleased us. Alex. Hamilton, St. Catharines, showed a white 4½ months old bull calf, bred by himself, that bids fair to be a very superior animal. In Durham cows and heifers the show was large and good.—R. Wade Jr., exhibited a very superior three year old and a good two year old, as well as many other fine heifers. H. Parsons showed a 6 mo. old heifer which, in our judgment, was second to none. Mr. Wheeler of Scarborough, and Mr. Taylor of Stamford, a good white heifer; A. Hamilton a very fine 10 year old cow.

In Devons the show was large, but while there were many good animals, as a whole it was inferior in point of quality to the Durhams. R. Ferry of Down, showed a most excellent 5 year old bull, and also a very fine cow and bull calf. Mr. Tye of Haysville, showed some good Devons—one two year old heifer very good. W. H. Locke of St. Thomas, had 14 head; one four year old cow very fine—the rest rather coarse, but good.

In Ayrshires the exhibition was *very large* and good. This is quite a favorite breed in Canada, and for dairy purposes undoubtedly superior. J. B. Ure of Dundas, showed eleven head; one aged cow, small but very good; a five year old bull, though imported, did not please us. J. Patterson of Straitsville, a good 5 year old bull. Jos. Webster of Springdale, 4 head; a yearling heifer was very good. Wm. Miller of West Flamborough, also showed some good Ayrshires; as also did R. Denison of Toronto, two cows, one of which was excellent.

W. Baldwell of Toronto, showed a Highland bull. This breed is rough and small, but very hardy, and the beef unsurpassed. There was a large number of superior grades, the Durham predominating. Four fat oxen attracted much attention. We did not see a yoke of oxen on the ground.

Of Farm Horses the show was good, tho' excepting in stallions not large. There were several "Clyde" stallions on the ground.—J. Bell of Weston, G. Bell of Dumfries, T. Nattrass of Cavan, and Wm. Waddel of Pickering, were some of the fortunate owners of these splended animals. G. Buchanan of Oshawa, showed a very good imported Clydesdale stallion, as also did T. Somerville of East Oxford. David Rowntree of York, exhibited an imported and very heavy stallion of the Cumberland breed. S. Powell of Lewiston, N. Y., an imported Yorkshire stallion, a fine animal, but, thro' accident, blind. B. Pettit of Palmyra, N. Y., a heavy English Draught horse. John Wilson of Guelph, a Suffolk stallion. We have heretofore expressed an opinion that the Suffolk is the best breed of English farm horses. The horse of Mr. Wilson, though a good animal, is too heavy in the leg and too sluggish and awkward in his momements to come up to what we have said of this breed. R. Swalwell exhibited a very fair "Sovereign" horse.

There was a large show of Swine, the Yorkshire appearing to be the favorite.—They are a large, white hog, and where large hams and bacon are required, a very desirable breed. Mr. Jordison, Hope, had a very fine boar and sow, just imported. John Long, East Flamborough, and others whose names we did not learn, showed good Yorkshires. J. S. Whetenall, Hamilton, a good sow, bred by H. Parsons, Guelph — W. Wright, Hope, superior six months old Berkshire, boar and sow. H. Parsons, Guelph, exhibited a nine months old Chinese sow, just imported from Canton. She is a perfect beauty, showing all the peculiar characteristics of the breed—hollow in the back, with belly touching the ground, flattened forehead, and extremely small legs. But where is the boar? "Oh, the Captain one day gave orders to the cook to kill one of the hogs; so what does he do but go and kill my Chinese boar and dish him up."—There were no Essex, Suffolk, Middlesex, Neapolitan, or other celebrated small breeds exhibited. In this respect, the Saratoga Fair was far superior.

In Leicester Sheep the show was unsually large; we should think there were 150 exhibited. The Leicesters are at present the most fashionable, and of course the most profitable breed of sheep in Canada. We fear that some of the breeders have yielded to the public taste for large sheep, and crossed their Leicesters with Teeswater Cotswold, Oxfordshire, or other large breeds. James Dixon of Newcastle, exhibited a lot imported last May, that are excellent—two three year old ewes are particularly good. N. Cooper of Cooksville exhibited very fine ewes and two superior yearlings. R. Ireland of Nelson, an excellent three year old and good yearling buck. Wm. Miller of Pickering, very fine ewes and a three year old buck, very large and good. D. Smith, Trafalgar, four ewes—beauties. A. Hamilton, St. Catharines, and many others, exhibited largely.

In South-Downs the show was not large, but there were many very fine sheep. A. Burrows, Brantford, showed a lot imported from the Duke of Richmond's flock. S. Baker of Simcoe, some imported from the late Earl Ducie's flock; the ewes are very good—the bucks not quite so good. E. Jones of Stamford, exhibited a number of superior South-Downs. His 4 year old buck is a splendid fellow. J Spencer of Whitby, J. Webb of St. Catharines, J. Dixon of Stamford, W. Thompson of Toronto, and others, exhibited good animals.

In fine wools, the show was meagre—more so than at Saratoga—and that is putting it down very low. E. Sharp of Lockport, N. Y., showed a three year old French buck and two ewes, noble animals. Also 4 lambs of these two ewes, this year—two bucks and two ewes—which were excellent. E. N. Leet, of Lockport, N. Y., some excellent French Merinos, as also did N. Choate, Port Hope, as well as quite a number of Spanish Merinos which, for this breed, were very large.

The show of Poultry was small, and there was at all times such a crowd round the coops that we could not get even a glimpse.

We fear our readers are as tired of these dull details as we were in getting them, but we are not yet done. We *must* glance at the Implement, *squeeze* thro' Floral Hall, and look for a moment at that sewing machine made by Smith, Schneider & Co., of Hamilton, which is attracting such a crowd.

Yonder are J. Rapalje & Co., of Rochester, N. Y., and of Port Hope, with their whole establishment, large as it is, evidently bent on driving a trade. Look at the thermometer churns, Yankee plows, Wheeler, Melick & Co's. horse powers, Seymour & Morgan's Reapers, and listen to what is said. "Sir, there are half a dozen Canadians on the Fair Ground, who have used these plows you so sneeringly disparage, and they are obliged to admit that they are superior to your heavy, iron, long-tailed plows—and I am willing to wager a $100 bill that any fair judges you may select will give the award to Yankee plows on a fair trial."—Bravo! We would like to see such a test!

Here are some well finished Canadian plows, after the Scotch model, with wooden beam and tail, &c., instead of iron. These long handles must certainly enable the plowman to steer straight, while the little depth and width, and the peculiar construction of the mould-board, turns up a very neat, unbroken furrow slice. They are made by J. Mc.Sherry of St. Davids, J. Morley of Thorold, Barr & Co., of Norwich, and others whose names we could not learn. A. Anderson of Markham, exhibited a potato planter which appears as tho' it would work well.

What a lot of cultivators. Here are Ides and Roots from Rochester, J. Bruce, Glenmorris, Adams & Shaw of Newhope, and many others, indicating that cultivating the soil for wheat is rapidly taking the place of the old fashioned mode of summer fallowing. There are several English and Scotch scarifiers, "grubbers," &c., that deserve attention, but the best English implement of modern invention—Crosskill's Clod-Crusher—is not here. Here are Reaping and Mowing Machines; Atkins, Ellsworth & Co., of Hamilton, have both a Reaper and Mower, and so have Massey, of Newcastle, and C. Wolstencroft of Ancaster. Atkin's Automaton Reaper attracts much attention. Also Hussey's, Seymour & Morgan's, and many others. The country is flooded with Reapers, but there will be work enough for all. Two Corn Crushers from Ancaster seem to work well. E. Kelly's is on the same plan as an old-fashioned coffee mill. D. McPherson's crushes by means of horizontal steel rollers. A good triangular stump-raising machine was shown by J. McLaren of Lowville. The show of implements was said to be smaller than at previous Fairs.

In Floral Hall, the exhibition was exceedingly fine, and the arrangement admirable. In consequence of the crowd, however, it was impossible to examine the articles and obtain the names of exhibitors.—The show of fruit was large and good.—Early Crawford peaches were exhibited in perfection. The show of vegetables was very superior; those from the Normal School at Toronto were very fine—amongst them we noticed some beautiful "Dutch horn carrots," said to yield at the rate of 31½ tons per acre. Duncan Falconer, of Toronto, showed some very fine Chicory roots, (*Taraxacum.*) As is well known, this root is used largely for the adulteration of coffee in England. Some prepared chicory was shown which could not be distinguished in appearance from ground coffee. The cultivation of this root is receiving much attention in Canada. We have tasted coffee chicoried in various proportions, and much prefer the unadulterated article. Cabbage, cauliflower, tomatoes, celery, salsify or oyster plant, beets and turnips, were all remarkbly fine. An address was delivered on Friday, by the Vice-President, the burden of which was protection and the high position Canada was rapidly attaining. After such an address, our Canadian friends should say no more about "the extreme modesty of Brother Jonathan."

## OHIO STATE FAIR.

We were unable to attend this Fair held at Dayton, Sept. 20 to 23, but learn that it was, in most respects, highly successful.—The receipts amounted to about $14,000—$1,000 more than at Cleveland last year.—Among the prizes awarded were 152 silver goblets, 64 silver pitchers, 125 silver medals, two $50 gold medals and 75 of bronze.

The show of Short-horns was good, although none of the recently imported cattle from Madison Co., and but few from the Sciota Valley, were exhibited. In Devons, Herefords and Ayrshires, the show was not large, but good. In sheep the show was small. Lorain County contributed some fair Leicesters, and Vermont some French and Spanish Merinos. Mr. Melindy showed some beautiful Suffolk hogs. Leicesters, Berkshires and mixed breeds were exhibited, though the show was small. In implements, dairy and farm products, and in fruits and flowers the show was generally good—quite equal to former years.

## MICHIGAN STATE FAIR.

Michigan is making rapid progress Agriculturally. Her State Fair at Detroit Sept. 28 to 30, exhibited spirit and enterprise of the right stamp. We learn from Detroit papers that the attendance was very large, the receipts amounting to about $5,000—nearly double what they were last year.

The show of cattle was excellent. There were some fine horses, though not many of them; a few excellent jacks and mules, and a good exhibition of working oxen. In swine, the show was small, though it comprised good specimens of the Leicester, Berkshire, Byfield and Suffolk breeds. A sixteen months old Berkshire boar weighing 600 lbs., attracted much attention. The poultry show was very large and good, embracing all the Asiatic and other fashionable breeds. The address was delivered by Dr. H. P. Sappan, President of the Michigan University. On the whole, the Fair was one of which Michigan may feel proud.

## GUANO AND OTHER FERTILIZERS FOR WHEAT.

Last fall I cut two acres of corn off to seed down wheat. Part of the land was a mellow loam, and part of it was stony—the stone a gray sand stone. I measured it off into three pieces—two pieces half acre each, the other one acre, in the middle, and drilled in the wheat with one of Moore's patent grain drills, the first week of October. On one-half an acre I sowed 150 bushels of Peruvian guano before sowing; on the other I sowed 160 pounds of superphosphate of lime one week after the wheat came up; and on the one acre piece 600 pounds of Chappell's fertilizer before drilling the wheat in. The guano cost $4,50, besides preparing it for use; the superphosphate $4,80, and the fertilizer $8,60. There was no manure of any other kind put on the piece. For want of barn-room, I did not cut and put each lot separate; I cannot therefore state the yield as accurately as I would like. Last fall I could see very little difference in either piece, but in the spring the guanoed piece had a darker green appearance, and was thicker on the ground than either of the other pieces. When the wheat came out in head, the guano piece was about four inches taller than the others, and those who helped cut it, with myself, say that there is about one-third more to the ground than on either of the others; the wheat better filled, and a better yield of straw.

Last fall I plowed in 160 pounds guano on three-fourths of an acre of corn stalk ground, where I had corn two years in succession, the ground inclining to clay, and where the corn was the smallest in the field. On a half acre, rather better land, I plowed in six large ox-cart loads of horse stable manure, kept under cover; the land was also manured in the spring for the second crop of corn. Between these two pieces I could see no difference in the wheat when cut, except that the manured was ripe two or three days sooner, owing, I suppose, to the land being higher. The guano in both cases showed itself to the drill marks.

My conclusion is, that guano is cheaper than manure for wheat, as it costs less per acre. We have to pay $1.50 for an ox-cart load of manure in West Chester, and haul it three miles, which is worth half a dollar more. When I haul wood to West Chester, I haul manure as a back load, or I could not haul at that price. I would prefer good barnyard manure to either of the other three, if I could make enough on the farm for each field. But the farm being out of order when I purchased, I can't make enough as yet, using, as I do, part of it for potatoes in the spring. I put some Patagonian guano and superphosphate of lime in the furrow for potatoes, alongside of manure this spring, and when dug I may give you the results of the experiments.

The kind of wheat raised was the Mediterranean, drilled one bushel and three pecks per acre.—J. F. I. *in Pennsylvania Farm Journal for August.*

Remarks.—There can no longer be any question that Peruvian Guano is an excellent manure for wheat—doubtless the best and most powerful *natural* fertilizer in the world. There is, however, one question, about which we have our doubts,—i. e., will it pay to use it at the present price of Guano and Wheat? In ordinary seasons, and on ordinary wheat soils, good Peruvian Guano will always increase the yield, but whether it will increase it enough to pay for the Guano is the question, in a practical point of view. From repeated experiments on this point, we are prepared to say that if, without any manure, the field will yield 15 bushels of wheat per acre, 100 lbs. of first-rate Peruvian Guano will increase the yield about 3 bushels. There is no limit to the amount of Guano we could profitably use if wheat was worth $2 to $3 per bushel; but when it is less than one dollar the profit will be rather small.—Eds.

Kentucky Sheep.—The Frankfort Yeoman says that a few days since, Robert W. Scott, of that county, sold fifteen of his fine fat wethers at fifteen dollars each, after shearing from eight to ten pounds of superior wool from them. They are of Mr. Scott's new and now quite celebrated breed which he calls "Kentucky Sheep," and which he has produced, during the last 18 years, by judicious crossing with the best imported breeds; having commenced originally with the common sheep of the country. They have large and symmetrical carcasses, and are very thrifty and prolific; and yield heavy fleeces of medium wool, an exceedingly beautiful article that well deserves the premium of from 3 to 5 per cent. per lb., which it usually commands over the common wool of the country.

## RURAL AXIOMS.

It is as cheap to raise one ton of grass or clover, as a ton of burdocks or pig weed.

It costs no more to raise a hundred bushels of cider apples, than the same quantity of choke pears.

An axe costing two dollars, with which a laborer may cut fifty cords of wood a month is a cheaper tool than an axe costing but one dollar, with which he can cut only forty cords.

A "cheap plow" at five dollars, costing in one season three dollars for repairs, and three more in lost time to teams and men, and by putting back crops, is a dearer one than a plow at ten dollars, requiring no repairs.

A cow bought for ten dollars, whose milk but just pays her keeping, affords less profit than one at thirty dollars, giving twice the quantity of milk afforded by the former.

A common dasher churn at two dollars, used one hundred times a year, is not so economical a purchase as a Kendall churn at four dollars requiring but half the labor to work it.

A ten acre field costing fifty dollars an acre, and ditched, manured and improved at fifty dollars more, so as to give twice the crops, is much more valuable than twenty acres unimproved costing the same money.

The man who loses half an hour of his time worth one shilling, and wears his wagon and team equal to two shillings more, by going over a rough road, to avoid a plank road toll of a sixpence, loses just two and sixpence by the operation.

The laborer who wastes half his strength in working all day with a dull saw, because he cannot give a shilling, or afford an hour to get it sharpened, will waste at least twenty-five cents per day, or six dollars per month.

## STORING VEGETABLES.

Potatoes, turnips and other vegetables should be stored so that they will be accessible at any time during the winter, and without liability to injury from the cold.—Not the smallest potato should be suffered to remain upon the ground, but every thing of the kind should be carefully protected. They will be of incalculable advantage to the stock during the winter.

The great aim of the farmer is to maintain his stock in proper condition with the least expense. To accomplish this—have cattle always in good heart—healthy and improving, there must be an occasional change in their diet. Vegetables are as essential to the health of domestic animals, as they are to the health and comfort of mankind. How soon would the human appetite pall, and the form become emicated and the system diseased, if restricted to salted, or preserved food? The same general principles govern the whole animal kingdom. Experiments both in this country and in Europe, have shown that vegetables for winter using are as essential to successful stock feeding, as they are necessary for the health and development of the human frame.

Be careful that they are well protected from the frost, and placed where they can be reached with safety in the coldest weather. Every one can judge for himself as to the best method of protection. Some few farmers have cellars where they can be stored. Those who have none will be compelled to rely upon pits and other temporary expedients. They should by all means be so arranged that they are entered at pleasure, and not, as is too often the case, covered over, so that they cannot be reached before spring.—*Iowa Farmer.*

The Way to pull Turnips.—The Yankee grasps the root by the top and pulls it with his hand, and then cuts off the tops with a knife. The Englishman has a better way. He sharpens his hoe, and passing along, cuts, with a single stroke, the tops off the turnip; then with the same implement strikes under it so as to cut off the roots, and brings it out of the earth. In cutting off the tops he guides his hoe so as to throw them into a sort of row, in one place, and in digging he guides it so as to throw the roots together in another row. He will dig the roots about four times as fast as one Yankee with his pulling and knife.—*Ex.*

Remarks.—We have spent considerable time in several of the best turnip growing districts of England, and have seen thousands of acres of turnips "topped and tailed" in what is described above as the Yankee way, but never witnessed any such ingenious, expeditious method as this so-called English way.—Eds.

Kindness To Animals.—We have seen horses, says the Albany Cultivator, which were used for driving a ferry boat, pass unled from the stable to the boat, step on board, walk to the machinery, and "back" themselves downwards through a narrow door, on the wheel, ready for work, entirely unattended, while most other horses could scarcely be driven on board. An invariable feeding of oats, immediately following the act, sufficiently accounted for this remarkable movement. The animal quickly understood the connection between his position on the wheel and his breakfast.

White Daisies.—The only and effectual cure of the white daisy is comprehended in the two words—plow and manure. The mission of the white dairy seems to be, to force upon the attention of the farmer the necessity of immediately replenishing his earth. Its appearance indeed, is but the famishing cry of an impoverished soil for *—manure.* Let him answer the call, promptly, earnestly, and I will guarantee that he need never entertain any fears of being "ousted" by any intervention on their part. *—Boston Cultivator.*

# Orchard and Garden.

## FALL PLANTING OF TREES.

THERE are some advantages in setting trees in the fall. Usually at this season there is not so much hurry, and the business may be better attended to. In some soils, if the setting be made early, the tree will do better and make a greater growth the ensuing season,—in fact will be scarcely if at all retarded. The earth is then warm and the roots are induced to send out fibres that are prepared to take hold in their proper time and bring in nourishment for the early expansion of the buds.

We would therefore urge the setting out of trees in the fall. But care must be had in the matter, the nature of the soil considered and the sort of tree you would put out. The Peach, Apricot and such like tender trees, generally do better set in the spring; we would not recommend moving these in Autumn. In soil retentive of water, perhaps the spring is more preferable.—Trees, however, set in such soil at any time should be placed very near the surface, and they sohuld have ample drainage. With sufficient pains trees will do as well however set in the fall, but it should be done earlier, in fact as early as it will answer to lift the tree from the nursery. A good broad mound should be thrown around the tree. It will keep it upright, keep the roots warm and serve to shed the autumnal accumulation of water. This mound of earth is beneficial for all trees set in fall on any soil, and is also a preventive of mice girdling the tree or gnawing at the bark.

Trees may be lifted from the nursery as soon as two or three sharp frosts have checked the growth; in fact, before all the leaves are shed. Taking the matter thus early in hand, the operator has a greater length of time to do this business in. He can therefore have no excuse for bestowing all the care necessary to insure a rapid, continuous and healthy growth of the tree. And what he may not have completed in the Autumn can be carried forward in the spring.

When you go to take up a tree don't tear it out as you would some bush you desire to destroy. It is much better to first loosen the earth, note how the roots extend themselves, and then carefully remove them as entire as possible. If one chance to be split, broken or mutilated, it should be carefully cut smoothly off, generally slantingly from the under side. The wound then quickly heals and the granulous matter thus formed often shoots out numerous other rootlets. Don't expose the roots to wind, sun and air, and above all frost. It is better to put damp moss, old wet hay, or any thing that will keep them in their natural state of moistness. When they are to be carried far, puddling, that is dipping the roots in mud so they shall be thoroughly coated, is beneficial, and especially so if something be wrapped around them.—When pulled, the mud should be washed or rinsed off when set in the ground.

Having all right thus far, a great deal of pains should be taken in the preparation of the soil and the planting, for on this will depend the future profits. It is better to expend even a dollar in putting out the tree *well* than doing it poorly at nothing, for the greater and earlier profits would more than compensate for the extra expense. COLE, in his American Fruit Book, tells an incident of a farmer who dismissed a hand because in his absence he set only nine trees in a day. The farmer put out the balance of a hundred himself the next day. The result was, when they bore fruit the nine were more valuable than the ninety-one.

The soil should be made loose, rich and fine, and that to the depth of quite two feet, and some distance around. The hole for the reception of the tree should be ample enough to allow the full extension of the roots in their natural position. If the subsoil is such as will retain water, then the tree should be planted nearer the surface of the ground, which in such cases may be gently elevated by the addition of fine earth, so that in all cases the tree shall stand the same depth it did in the nursery. The rootlets should all be gently extended and the fine earth worked into all the cavities by the hand and fingers, so that the earth shall press all parts, and if when nearly full a pail of water be put in, it will settle the earth more securely about the roots. Cover to the requisite depth and press gently with the foot. The fall rains will make all right in settling the earth. The mound thrown up will keep the roots warm and preserve them from the effects of the frost, while it will preserve the tree upright against the winds. Two hands should be employed in the business, one to hold the tree in its place while the other places the roots and the dirt around them, during the operation, as in such case more or less of the roots are surete be displaced.

Defer the pruning operations till the tree assumes activity in the spring, and then do not be over anxious in the matter. Above all things don't make whip stocks of your orchard; let the limbs grow—they produce the leaves which are the lungs of the plant, the organs that assimilate the food. If there is a generous supply of them, the tree will flourish and grow wonderfully—provided there is aliment enough in the soil.—And then you can remove a little at a time, and just where it should be. Give your trees low heads. They will stand the strong winds better, will shade the trunk from the hot summer suns—will produce better fruit, which can be gathered with less trouble and with less injury to it.

## MR. BRIGGS' S FRUIT AND VEGETABLE FARM

FRIEND MOORE:—Excuse my familiarity; although a stranger to you, you are not so to me, for I am a reader of the RURAL. In a recent tour through Western New York, "to see the folks and eat peaches," among many other friends from the eastern portion of the Empire State I called upon our friend I. W. BRIGGS, of West Macedon, who lives in a very retired, but pleasant and fertile spot, within a few yards of the New York Central Railroad, and in full view of the mighty current of humanity almost incessantly passing on that great thoroughfare.

Mr. BRIGGS' location, soil and skillful culture produce some of the luxuries which more properly belong to the sunny south. Several varieties of the finest melons, sweet potatoes, large and fine, and peaches in the greatest perfection of any that have found their way to my palate among the abundance of that delicious fruit in your vicinity. The superiority of friend B.'s peaches is probably more attributable to soil and location than to culture, though the culture may be unexceptionable; the soil is peculiarly adapted to the kinds of fruit and vegetables he is endeavoring to acclimate, being a sandy loam, slightly inclining to the south and three or four feet deep. In his collection are some foreign and rare grains, grasses and vegetables — prominent among which are the Perrennial Rye Grass, the Carnation Clover, Japan Pea, and the Wild Mexican Potato. Mr. B.'s system of saving seeds is commendable; the best fruit of his vines is eaten at home, by his family and visiting friends, and the seeds preserved for use and distribution.

I fear I have already been tedious, but cannot pass over the Wild Mexican Potato, and do justice to them and the readers of the RURAL, without a few remarks. To say the least of them they are not surpassed by any other potato, both for boiling and baking, with which I am acquainted. They possess qualities that I particularly noticed, which will commend them to producers.—The vines are small, and the potatoes are much more compact in the hill than many of the other best varieties, while the yield is fully equal. Their general appearance will make them command a better price in the eastern market, even if the quality should be deemed no better than that of others—but on that point there can be but one opinion after a trial. Mr. BRIGGS has 16 bushels planted, and estimates his crop at 500 bushels. I have engaged my supply of seed of him at $2 per bushel, and I believe it economy even at $5 per bushel, to plant these potatoes in view of all their qualities.

Yours, &c., ISAAC S. FROST.

Charleston 4 Corners, N. Y., Sept., 1853.

## THE VINE MILDEW.

SOME grape growers in Germany, gave to a correspondent of the *Evening Post*, the following theory of the cause of vine mildew:

"To the eye, the vineyard looks like a promiscuous mass of green foliage. The original rows, either east and west, or north and south, are hardly distinguishable at this season of the year. They tell me that this is done to prevent the sun from warming the ground too much, and to let the sun strike as large a surface of the vines themselves as possible. This, they say, prevents the burn and mildew. What they call the burn, (*brennen*) is something like our rot in the United States. I subsequently saw a vineyard which was totally affected by this *brennen*. It looks exactly like a vineyard does in Ohio, when it has taken the rot. I asked them to explain to me their theory on the subject. It is as follows:

During some very warm day the ground gets heated—a rain follows, or a heavy cold evening dew. The vines are either thereby suddenly over-stimulated, or checked too suddenly. At any rate, the leaves turn yellowish, the grapes fall off or dry up, and the whole vineyard gets a sickly appearance.—Clayey ground is particularly subject to it. Grounds which isolate the rays of the sun are said to be entirely exempt. They say rot in potatoes arises from a similar cause: an over-stimulation and a sudden check.—The remedy, universally adopted here, is so to constitute the soil as to make it keep a vineyard in a steady, even temperature all summer, and less liable to be affected by sudden atmospheric changes. Gypsum is employed for this purpose. I am still looking for more experience on this subject, and beg the reader to excuse the disconnected manner in which I give him the result of my inquiries."

DAHLIAS.—A Washington paper mentions that Mr. Corcoran has dahlias in his garden, four of which had the following height respectively:—11 feet 8 inches, 11 feet 6 inches, 10 feet 6 inches, 9 feet 6 inches; the trunk of the last one is divided into four parts, the largest of which is four inches in circumference, and the plant has on it 341 buds.

# Domestic Economy.

## MORE LEAKS TO BE STOPPED.

EDS. RURAL:—Some months ago I sketched a few brief hints relative to out-door matters, and will now take a peep into the kitchen. I will not attempt to give a long dissertation on Domestic Economy, as my motto is *be short*;—for among other things which I hate, are

"Long stories and short ears of corn,
A costly farm house and a shabby barn,—
More ears than pigs, many guns,
Sore toes, tight shoes, and paper duns."

I trust the fair readers of the RURAL will pardon me for the liberty I take in sketching a few things relative to household affairs, for a well managed kitchen I consider of great importance in a pecuniary point of view, as well as a comfort and convenience to any family. I am a believer in woman's rights, therefore I would not be considered a trespassor. But men have rights as well as women. Have they not a right, after furnishing supplies for the family, to exercise some supervision over it, and if a leak is discovered to endeavor to stop it? That there are some important leaks in many kitchens no one will pretend to deny.—Those little words *out of* are called into requisition oftener (in many families) than is necessary. Why is it that some do not make one half the butter from the same number of cows (other things being equal,) that others do? Perhaps they do not take the RURAL,—consequently do not get the important instruction given from time to time relative to butter making; if the fault is here, subscribe at once, for it certainly *will pay*. At all events seek out a remedy, for in so doing you will increase the quantity, better the quality, add to the price, and perhaps so manage that you can use a knife to spread your bread with, instead of a spoon. Here we find an important leak; *stop it.*

Why is it that some cooks find the bottom of the flour barrel much sooner than others do—families equal? A peep into that common receptacle of tit-bits for the porkers tells the story. Large bakings of bread are often sour and heavy—unwholsome for man and hardly fit for swine—but the cook finds a place for it; also much cake, unskillfully made, shares the same fate. Some may think nothing is lost that the pigs get. Would it not be easier and a little cheaper to cook Indian meal than to bake superfine flour into bread and cake for them? If the bread happens to be good, after it is cut much is left to become hard and dry, consequently is put to soak along with the rest, instead of steamed, or made into toast or puddings, which if properly made are excellent. The pork barrel, the potatoes, apples, in short every thing that pertains to the eatables of the family, are so managed as to be used up in a wonderful short space of time. If any consider these leaks to the pocket of minor importance, to such I would say, as poor Richard said in his alminac,

"Small leaks sink great ships."

Shall I look at the new dresses frequently purchased, and seldom find one fit to wear to church—figure up the store bills, call on the milliner for her account, &c.—But enough for this time. I would not have it understood that I think the ladies are alone guilty in the premises. There are many leaks the other sex cause, that might be stopped, which would figure up largely in the course of a year—and which I may notice at some future time, if some one of our farmers wives or daughters do not.

Yours truly,

Lysander, 1853. S. EATON.

MYSTERIES OF COOKERY.—It is said that some of the great cooks of ancient Greece carried their art to such perfection that they were able to serve up a whole pig, boiled on one side and roasted on the other, and stuffed besides, though without visible mark of the knife upon it. The inventor of this feat was cruel enough to keep the process a secret for a whole year. At length it was revealed that he had bled the animal to death by a very small wound under the shoulder, by which he had also extracted the entrails piecemeal; that he had forced the stuffing down the throat; and that, by means of barley paste, he had prevented the roasting on one side, having boiled it afterwards. It is said also of these Greek cooks, that by their saltings, picklings and fryings, they could actually make a turnip pass for any kind of fish or flesh they chose.

# Mechanic Arts, &c.

## LIST OF PATENT CLAIMS

ISSUED FROM THE UNITED STATES PATENT OFFICE

For the week ending October 4, 1853.

Joel Baker, of Boston, Mass., for improvements in cart wheels.

Elihu R. Benson, of Warsaw, N. Y., for improved slat machine for window blinds.

Gardner A. Bruce, of Mechanicsburgh, Ill., for improvement in corn planters.

A. A. Dickson, of Griffin, Ga., for improvement in machines for topping cotton in the field.

Mark Fisher and John H. Norris, of Trenton, N.J., for improved apparatus for polishing anvils.

Joseph F. Flanders, of Newburyport, Mass., for improvement in machines for rubbing and polishing leather.

Joshua Gibbs, of Canton, Ohio, for improved machine for grinding plow castings.

Robert A. Graham, of New Paris, Ohio, for improvement in plows.

Thomas C. Hargreaves, of Schenectady, N. Y., for improvement in maize husking machine.

Wm. Horsefall, of New York, N. Y., for improvement in annunciators for hotels.

Richard Ketchum, of Seneca Castle, N. Y., improvement in straw-cutters.

Zadock H. Mann, of Newport, Ky., for improvement in car wheels.

Benj. Rutter and Henry Rowzer, of Piqua, O., for improvement in smut machines.

John C. F. Salmon, of Washington, D. C., for improvements in rotary steam engines.

George S. G. Spence, of Boston, Mass., for improvement in cooking ranges.

Edward Brown, of Rindge, N. H., assignor to Josiah Norcross, M. D., of South Reading, Mass., for improvement in burglar alarms.

Ephraim L. Pratt, of Worcester, Mass., assignor to Jas. Sargent and Dan. P. Foster, of Shelburn, Mass., for improvement in machines for pairing apples.

Joseph C. Strode, of East Bradford, Pa., for improved hydraulic ram.

Henry Vandewater, of Albany, N. Y., for improved turbine water wheel.

James A. Woodbury, of Winchester, Mass., and Joshua Merrill and Geo. Patten, of Boston, Mass., for improvements in air engines. Patented in England, 5th January, 1853.

Elizur Wright, of Boston, Mass., for improved stop-cock.

John E. Anderson, of New York, N. Y., for improved throttle valve arrangement.

Edmund H. Graham, of Biddeford, Me., for improvement in magazine guns.

Levi B. Griffith, of Honeybrook, Pa., for improvement in plow beams.

Archibald S. Littlefield, of Portland, Me., for improvement in self-acting switches.

Leonard S. Maring, of Westport, Mass., for improved cutter for boring wheel hubs.

Hiram Powers, nor residing in Florence, Italy, for improvement in files and rasps.

Philip P. Ruger, of New York, N. Y., for improved machine for turning spiral mouldings.

J. H. Ward, of Sonora, Cal., for improvements in gold washers.

Charles T. P. Ware, of New York, N. Y., for improvement in propellers.

Wm. C. Dean, of Jacksonville, N. Y., for improved guide for doweling felloes for wheels.

Marshall Finley, of Canandaigua, N. Y., for improved daguerreotype plate holder.

Chas. B. Hutchinson, of Syracuse, N. Y., for improved machine for joining staves.

J. A. Roth, of Philadelphia, Pa., for improvement in processes for dechlorinating bleached fabrics.

Jas. H. Murrill, of Richmond, Va., for improvement in looms for weaving coach lace.

John T. Hayes, of Boston, Mass., for improvement in cooking ranges.

Ozias J. Davie and Thos. W. Stephens, of Erie, Pa., for improvement in machines for punching metal.

John Newell, of Boston, Mass., for improvement in camphene lamps.

Richard H. Pindell, of Fayette co., Ky., assignor to Wm. J. Thurman, of Washington, Ky., for improved planing machine.

RE-ISSUE.

David Matthew, of Philadelphia, Pa., for improvement in spark and gas consumers.

DESIGNS.

John H. Barth, of Indianapolis, Ind., for design in bedsteads.

Julius Holzer, of Philadelphia, Pa., assignor to North, Chase & North, of Philadelphia, aforesaid, for design for cooking stove.

G. H. Fryday, of the county of Philadelphia, Pa., assignor to North, Chase & North, of Philadelphia, Pa., for design for stoves.

G. Smith & H. Brown, of the county of Philadelphia, Pa., assignors to North, Chase & North, of Philadelphia, Pa., for design for stoves.

Hosea H. Huntly, of Cincinnati, O., assignor to Daniel F. Goodhue, of same place, for design for cooking stoves.

G. Smith and H. Brown, of Philadelphia, Pa., assignors to C. W. Warwick and F. Leibrant, of same place, for design for stoves.

IMPROVED ROOT CLEANER.—J. H. Fairchild and S. Richardson, of Jericho, Vt., have applied for a patent upon an improved root cleaner. The machine consists of two inclined revolving cylinders, the one within the other, the outer being solid and the inner slatted. Between the two there is a spiral slat so constructed that the dirt will, by the revolution of the cylinders, be collected, carried forward to one end of the machine, and discharged separately from the roots.

## CONCRETE CELLAR BOTTOMS.

THE facility and cheapness with which the bottoms of cellars may be made clean, sweet and impervious to water, is generally but little known to house owners,—nor the ease and certainty with which water may be excluded from cellars where it is difficult to drain.

In soft and pervious soils, this process is best performed by paving with small stones laid in sand; but in common compact soils, the natural surface, well leveled, will answer all purposes. Make a thin mortar with water lime and coarse sand, of the consisteney called *grout*, or so thick that it can be poured from a pail on the ground.—Commence with a portion of about eight or ten feet at one end, and throw on sufficient to cover it an inch or more thick, and with a scraper, or rake-head, spread it evenly and smooth; then throw on as much clean, coarse gravel as it will absorb, and so continue until it is finished. In twelve hours, or as soon as it has *set*, sweep the overplus gravel evenly over the surface and tamp it down with a short plank and a pounder, until it is smooth and compact, and in a few days of good weather it will become like a solid rock. It assists its durability and firmness, to give it several good dashes of water after it is dry.

To render the sides impervious to water, where drainage is difficult or costly, requires that the wall should be laid with mortar originally; and at the time of constructing the bottom, a good, well proportioned water lime mortar should be plastered on a little higher than the source of water and well and firmly slicked down when about half dry, and followed by another coat of the same—when, if a proper time intervenes before there is any outward pressure of water, it becomes tight as a barrel or tub, is always sweet, clean and cool, and no vermin can enter or find lodgment.

The sand used in the gruat and mortar should be coarse, clean and sharp, and the gravel from the size of walnuts down to coarse sand.

## IMPROVED CAR FOR TRANSPORTING CATTLE.

ONE of the greatest benefits conferred by railroads upon our people, who dwell in cities like New York, is in the transportation of cattle from distant places. Formerly the cattle which were intended for slaughter in this city, and other cities, were marched from Ohio, Canada, and the Western parts of this State, over bad roads, frequently traveling three and four hundred miles before they reached their destination. The time required to perform such journeys, was long, being no less than six days and a quarter, at the rate of twenty miles per day. This was attended with great expense, great labor, and exposure of drovers and cattle. One of the greatest drawbacks to the old system of droving, was the great loss of beef in cattle from long journeys, and this was a loss, too, as great to the consumers as the drovers.

The transportation of cattle on railroads saves the loss of beef, as they suffer no fatigue, and are but a short time on the road. Cattle can also be brought from much greater distances to cities; indeed, they are brought now from places at such remote distances from New York, that it would have been impossible to bring them thence on foot. They are also brought without trouble, and require but little attendance. With respect to the vehicles—the cars for transporting cattle—it has been found that some improvements were required, and Andrew B. Dickinson, of Hornby, N. Y., has taken measures to secure a patent for such a purpose, the nature of which improvement consists in placing in the body of the car, a rack extending its whole length, and having the lower ends of its uprights secured by pivots to the sill piece, and the upper ends secured by pins between the joists. By this arrangement the racks of the animals, to make each occupy a certain portion of the car; this prevents one interfering with or injuring another. These cars are manufactured by Paine & Alcott, Corning, N. Y.—*Sci. Am.*

## IMPROVED MOWING MACHINE.

MARTIN HALLENBECK, of the city of Albany, N. Y., has taken measures to secure a patent for an improvement in mowing machines, which consists in placing the sickle or cutter at the back of the driving wheel, and attaching the draft pole to the machine out of line with the driving wheel, and at the side of the driving wheel towards the sickle. By this arrangement the line of draught is made to counteract the resistance which the grass offers to the sickle; the sickle consequently moves forward in a steady manner, keeping in the same line; the machine thereby being made to proceed with a very steady motion. The fingers of this machine for holding the grass are peculiarly constructed, so as to prevent the grass being forced out from them when acted upon by the sickle; the recesses in the fingers are also prevented from being clogged or filled with dirt. The sickle is also secured above the fingers by a metal plate in a very superior manner.—*Ib.*

THE editor of the New York Mirror has been examining a new kind of Sewing Machine, which will take five hundred stiches in a minute, and whose work is warranted not to rip. A company has been formed for the manufacture of the new machine.

## ACQUIREMENT OF KNOWLEDGE.—No. I.

It is a fault of the age, that we have too much reading, the tastes of many are becoming vitiated with the flood, and beginners are at a loss where to commence. It is not even a pleasurable task, because too arduous to select from the mass, that which is wholesome. One thing we regret, that so many confine their reading exclusively to the *newspaper* publications of the day. Not that we consider the matter contained in them of immoral tendency—but they are established for a different object. *Principles* must be learned from books—now *illustrations* can be gathered from the papers, whose province it is, to record the transactions and developments of the day. The periodical press may be likened to a note-book: it is only of temporary utility, to be thrown aside when its records are transferred to the various departments of science which they illustrate. To confine a person's self to newspaper reading, is like entering a theatre in the midst of a Drama, we are astonished at what we behold, but we cannot comprehend its meaning, and are uninstructed by the representation. We would invoke *all*, to systematically pursue a course of reading in Philosophy, History, Poetry, and Religion, aside from perusing such publications as may be necessary to inform them of the social, business, and political condition of the country.

When fashions change, opinions change also; and what before seemed ridiculous, is regarded the perfection of gracefulness.—What time do we not waste—what exertions do we not make—what means do we not employ—in what extravagances do we not indulge, to accomplish the desired change, in order that we may be placed beyond the jest, and number ourselves among the *ton* of society? Can we not occupy the same time—can we not employ the same means—can we not indulge in the same expenditures, (when it lies within our power,) to overcome our repugnance to reading and study, to fit ourselves for refined associations, to exalt moral character, and secure the triumph of *Reason* over the passions of the body?

But there are many who tax themselves with being deficient in memory; and therefore, as whatever they read is useful only so far as it amuses a leisure hour, they deem themselves justifiable in leaving unopened the volumes of Truth and Philosophy.—Such an apology argues but little for the ingenuity of those who tender it—it is charging themselves with neglect and contempt of one of the greatest gifts of nature; a talent which, above all others, is susceptible of improvement. To such we would say, *cultivate* your memory. Let not the magnitude of the undertaking appal you. It is not to be expected, that you should impress upon your remembrance all that you read; nor would it be proper for you so to do. As great an effort is necessary, to remember trifles, as matters of importance; and, if alike remembered, in illustrating the subjects of your conversation or essayetical writing, you might often draw upon the former when you should upon the latter. But, with pencil in hand, you should note down such observations of the author you are perusing as are really worthy,—as being novel to you, or illustrating some theory of your own.

The act of transcribing, will cause you to consider more thoroughly the sentiment or fact—more especially, if you do it in your own language, and accompany the subject with relative observations of your own. In this manner, you can proceed onward; constantly gathering mental strength in your progress, till you shall have arrived at that happy point where arduous application receives its just reward—where the acquirement of knowledge becomes a pleasure, and where the wants of the mind supersede the cravings of the body.—L.

---

The Teachers of Ohio, last spring, at a Convention on business pertaining to their vocation, ventured to select and commend to their fellow citizens a candidate for Superintendent of Schools, and their choice fell upon Mr. Lorin Andrews, long identified with the progress of Education in that State, and undisputably qualified for and worthy of the station. In doing this, they made war on no party; for at that time no party had nominated for this office. The Whigs and Free Soilers have since declined to nominate, leaving the field to Mr. Andrews; but the Democrats have recently started a rival candidate, and one who originally united in the Teachers' independent movement. We trust there is no doubt of Mr. A.'s election, as there should be none. The office has no proper connection with politics, and should not be subservient to party. To have it filled by the Teachers' nominee will be a great stride toward popular emancipation from party thraldom.

## LECTURING AND LYCEUMS.

The following article from a late number of the *N. Y. Times* contains many valuable suggestions, and is withal seasonable. We particularly commend the hints in the closing paragraph to the attention of our readers—and especially to the consideration and action of young men—all over the country. Teachers and Clergymen have duties to perform in this matter, and now is the time to act in the premises. Their influence and example may be appropriatetly and beneficially devoted to the organization and management of Lyceums and similar associations, and we trust their efforts in that direction will not be wanting:

To those who have much time for study, hearing lectures is a rather superficial way of gaining knowledge. It is imbibing thoughts quite too fast for digestion. It is making other people's rhetoric and ideas take the place of one's own worked-out thoughts. With the mass of the community, however, it is a useful, and almost indispensable, amusement. The factory workman, or mechanic, after twelve hours' hard stretch of labor, cannot sit down, with any activity of mind, over an improving book. The mind has had a day's toil, too. It has been with the body, and it is dull and heavy now. He nods over anything but the lightest novel. A lecture—an address from a learned or great man, containing the results of long study and thought, uttered with the living voice, and set off with wit or oratory—will rouse him. He feels that magnetic sympathy of an audience. They all see the truth clearer, and remember facts longer, as told to them by the speaker. Knowledge is vivified, and the man watches his shuttle or plies his hammer, next day, with the memories about him of new thoughts and pictures, left by the manner and voice of an earnest speaker.

It is almost equally so with our City business people. A man whose brains have been wracked and strained throughout the day with business, cannot easily read Hume or Locke in the evening. He must have some pleasant excitement with his study. Give him a well-dressed audience, a spirited speaker, and good friends to talk the subject over with, and he can really bear something quite learned and abstract. Even Emerson and Agassiz draw full houses in New York.

In view of this want, we ought to have good lectures. People can afford to pay for them. * * We want well thought, eloquent words, from men of intellect—men of action. We ought to have the matured products of the best minds of the country. So that we get nothing decidedly offensive, our lecture committees should not be too particular about the set or school from which they select. We want to hear various tones of thought. * * *

It is for the country towns and villages, however, that Lecturing is most needed.—It is the only thing in our manufacturing districts which can take the place of that absurd trash of pamphlet novels which is circulating now everywhere with such miserable result among the factory-hands.

The apathy of good men in the country on this matter of Lectures and Libraries is to us unaccountable. We have known a clergyman to mount his pulpit week after week, and with the greatest labor and talent, attack imaginary *theses* of heresy; or apply faithful cures for all sorts of abstract sinfulness, and never utter a living word against the greatest evil of his village—the want of means of education.

It ought to be one of the first duties of a country pastor to establish Lectures and a Library. A true Teacher has something else to do than forever to deal with abstract evil and good. He should come right down among the young men, and see that they have books and reading rooms and lyceums. Let him lecture himself; let him use his high influence to get in others to help the first beginnings; let him aid in selecting books. The Lyceum is in reality a Church institution. What has Religion more to fear than ignorance—and especially what would be the inevitable result in this country—a self-conceited ignorance.

Our manufacturers, if they are men of any liberality, or even if they have a just regard for their own interests, will establish Lecture-rooms and Libraries for their workmen. We know of one manufacturer in Worcester County, Mass., who has built a room, and who allows an evening each week, for this purpose, paying his hands their full wages for the time spent there. A generous and good measure, and it pays him.—Manufacturing is not a pin-head polishing or a needle-pointing, day after day, as it once was. There is comparatively little mechanical work. A good hand must understand his machine; and even if he act by rote, it is a high rote. The employers, for the mass of work, want intelligent men, who know what they are about. Everything that solidly educates his operatives, is an additional advantage for him; though it is not every one who has the good sense to perceive this.

It is these Lyceums through Massachusetts, with their weekly Lectures, and their well-stored Libraries, which have obviated all the worst evils of the manufacturing system, and have, as we fully believe, made the operatives of that State superior to any other working population of the world. It is the want of these which has made some of the agricultural towns of Connecticut the most ignorant and backward places north of the "Cracker" settlements of the Carolinas.

However, whatever clergymen or manufacturers may do, we tell the young men of our country towns to go to work in this matter themselves. Make your own Lyceum—state your wants to some of our best lecturers, and they won't refuse one gratuitous lecture as a help. Go to a liberal bookseller of the city, and tell him you want $50 worth of books at wholesale prices, cash; and that all books afterwards wanted shall be bought of him at usual prices. He will surely start you. Subscribe for a dozen *Times* and *Tribunes*. [first obtaining a few copies of the Rural.] Open your debating clubs, if they only have half a dozen members, and you can discuss nothing but Abbott's *Napoleon*. Anything will do for a beginning. Ply the rich and the politicians for subscriptions; and the clergy for sympathy. Take hold of your Lyceum, as American young men usually do of anything they like, and it is sure to succeed. And if successful, you may have the satisfaction of having accomplished as much good for your town or neighborhood, as many far more famous founders of hospitals, or builders of churches.

# On Health.

## COUGHING IN CONSUMPTION.

The Herald, of July 10th, states that during the week preceding, fifty persons died of consumption in New York city. *Per contra*, a gentleman called upon us yesterday, who actually escaped from the fangs of this disease some years ago; and we are induced to present the circumstances:

"You speak of coughing considerably. Let me suggest to you the query, whether this is not unnecessary and injurious. I have long been satisfied, from experience and observation, that much of the coughing which precedes and attends consumption is voluntary. Several years ago, I boarded with a man who was in the incipient stages of consumption. I slept in a chamber over his bed-room, and was obliged to hear him cough continually and distressingly. I endured the annoyance night after night, till it led me to reflect whether something could not be done to stop it. I watched the sound which the man made, and observed that he evidently made a voluntary effort to cough. After this I made experiments on myself, and found that I could prevent myself from coughing, sneezing, gaping, &c., in case of the strongest propensity to these acts, by a strenuous effort of the will. Then I reflected that coughing must be very irritating and injurious to the delicate organs that are concerned in it, especially when they are in a diseased state. What can be worse for ulcerated bronchia, or lungs, than the violent wrenchings of a cough? It must be worse than speaking. A sore on any part of the body, if it is constantly kept open by violent usage, or made raw again by a contusion just when it is healing (and of course begins to itch,) will grow worse, and end in death. Certainly, then, a sore on the lungs may be expected to terminate fatally, if it is constantly irritated, and never suffered to heal; and this, it seems to me, is just what coughing does for it. On the strength of such considerations as these, I made bold to ask the man if he could not stop coughing. He answered no. I told him what I thought about it, as above. He agreed to make a trial; and, on doing so, he found to his surprise, that he could suppress his cough almost entirely. The power of his will over it increased as he exercised it, and in a few days he was mostly rid of the disposition to cough. His health, at the same time, evidently improved, and when we last saw him he was in strong hopes of getting out of death's hands."

This occurred eighteen years ago, and the man comes round now, an active business man, averring that he has not had a sick day since.

## HOW TO PREVENT A COLD.

Immunity from colds, coughs, bronchitis and influenza, is to be obtained in a certain way, and in only one way. As long as the heat of the surface is sufficient to neutralize the cold of the surrounding embracing atmosphere, so long is it impossible for the person to have a cold. The vigor, resistance, positive character of the entis, must always be greater than the air in which we move. Air loaded with vapor, is a good conductor of caloric. Such an atmosphere rapidly robs all heated bodies of their warmth; and all animal bodies that are unable to furnish heat as fast and a little faster than the air can carry it off, will take cold. This loss of heat by the skin, leaves the blood-vessels of the surface feeble—unable to circulate the blood; as a consequence the blood accumulates in the warm internal organs, and that internal organ whose vessels are weakest will yield to the sudden fullness, the afflux will increase until active congestion or inflamation ensues.

Moderate clothing, much exposure to the air; abundance of exercise; always in good pure air; cold water baths; much dry friction; and a calm, tranquil, circumspect mind, will as certainly prevent colds, coughs, bronchitis, &c., in any climate that God ever made, as warm nights will prevent frosts. The surface must be superior to the conducting power of the air. And this constitutes the immunity that all require. The reason why so many in this country dislike the climate, and why so many have coughs, is that class of people have feeble surfaces; that class are not constantly immersed in the free air; are not calm in the mind; are not fond of bathing and do not enjoy it. The people must have the air that God has made, they must labor, play and sleep in it as birds do. They must not shut it from them, but welcome it; and this simple habit will compel the surface to elaborate an amount of heat that will always be superior to wind, however cold and searching.—*Clay's Journal of Health.*

# Natural History.

## AMERICAN MOCKING-BIRD.

The American mocking-bird is the prince of all song birds, being altogether unrivaled in the extent and variety of his vocal powers; and besides the fullness and melody of his original notes, he has the faculty of imitating the notes of all other birds, from the humming bird to the eagle. Pennant states that he heard a caged one imitate the mowing of a cat, and the creaking of a sign in high winds. Barrington says his pipes come nearest to the nightingale of any bird he ever heard. Wilson tells us that the ease, elegance, and rapidity of his movements, the animation of his eye, and the intelligence he displays in listening to and laying up lessons, mark the peculiarity of his genius. His voice is full, strong and musical, and capable of almost every modulation, from the clear, mellow tones of the thrush, to the savage scream of the bald eagle. In measure and accents he faithfully follows his originals, while in strength and sweetness of expression, he greatly improves upon them. In his native woods upon a dewy morning, his song rises above every competitor; for others appear nearly as inferior accompaniments. His own notes are bold and full, and varied, seeming beyond all limits. They consist of short expressions of two, three, or at most five or six syllables, generally uttered with great emphasis and rapidity, and continued with undiminished ardor for half an hour at a time.

While singing he expands his tail, keeping time to his own music; and the buoyant gaiety of his action is no less fascinating than his song. He sweeps round with enthusiastic ecstacy; he mounts and descends, as his song swells or dies away; he bounds aloft with the celerity of an arrow, as if to recover or recall his very soul, expired in the last elevated strain. A bystander might suppose that the whole feathered tribe had assembled together on a trial of skill—each striving to produce his utmost effort—so perfect are his imitations. He often deceives the sportsman, and even birds themselves are sometimes imposed upon by this admirable mimic. In confinement he loses little of the power or energy of his song.—He whistles for the dog; Cæsar starts up, wags his tail, and runs to meet his master. He cries like a hurt chicken, and the hen hurries about with feathers on end to protect her injured brood.

He repeats the tune taught him, though it be of considerable length, with perfect accuracy. He runs over the notes of the canary and the red bird, with such superior execution and effect, that the mortified songsters confess his triumph by their immediate silence. His fondness for variety, some suppose, injures his song. His imitation of the brown thrush is often interrupted by the crowing of cocks; and his exquisite warblings after the blue bird are mingled with the screaming of swallows, or the cackling of hens. During moonlight, both in wild and tame state, he sings the whole night long. The hunters, in their nocturnal excursions, know that the moon is rising, the instant they hear his delightful solo.—After Shakspeare, Barrington attributes, in part, the exquisitness of the nightingale's song to the silence of the night: but if so, what are we to think of the bird which, in the open glare of day, overpowers and silences all competition? The natural notes of the American mocking bird are similar to those of the brown thrush.

The mocking bird builds its nest of twigs and sticks, with straw, hay, wood, and tow, and fine fibrous roots. It chooses for its home the top of a tall tree in the woods, or some venerable apple-tree in an orchard.—The family loves to remain in the same tree or near the same spot for years. It is a bold bird, and defends itself bravely, especially from the attacks of the black snake.

## THE GOOD HIPPOPOTAMUS AT PARIS.

It is evident that the worthy animal installed in the Jardin des Plantes, is a precise counterpart of his English neighbor. The Parisians too are no less curious than the Londoners were. Every morning at eleven o'clock, before which hour the hippopotamus does not receive company, a great crowd may be seen peering through his park palings, patiently watching the unrippled surface of the miniature lake, at the bottom of which the new inmate delights to dwell until it may be his good pleasure to show himself. Frequently they wait in vain for an hour, during which time the excessive leanness of the thirty she-goats that browse upon the grassy margin of the pool suggests to the imagination the fatness of the "delicate monster," who daily swallows all the milk that can be drawn from them. Suddenly a convulsive shout from the spectators indicates that the amphibious creature's head, or perchance the tip of his nose only has appeared in the upper air, and then a cry of "Coco, Coco," (the name of the animal) is raised; but this generally fails to lure him from his cool bath into the rays of the scorching sun. Except at feeding time he seldom leaves the water, until a keeper, taking pity on the expectant multitude, "stirs him up with a long pole," an operation always the signal for vociferous cheering. Then, with the most perfect good nature, he comes out and walks majestically round the lake, dilating his nostrils like a war-horse, and exhibiting a jolly carcass, as round as a wine butt. The keeper jumps upon his back, kneads his plump haunches, and performs a variety of other experiments, to all of which "Coco" submits with entire docility, not to say indifference, occasionally yawning, and displaying a throat down which Jonah might have slipped.

# Sunday Reading.

Written for Moore's Rural New-Yorker.

## AN EVENTIDE MEDITATION.

"And Isaac went out to meditate in the field at the Eventide."—*Gen.* 24, 63.

Evening—the hour of eventide—has ever been a favorite with the contemplative mind—has ever been hallowed by thoughts of a meditative and devotional character. Isaac went out to meditate at the eventide, and I love to follow the patriarch's pleasant example. To-night, the calm fresh air seemed peculiarly exhilerating, and, strolling down "our lane" in a dreamy mood, I gave myself up to the thoughts which stole upon me, as quietly and sweetly as a strain of distant music in the sleeping lakelet's bosom. What those thoughts were at first, I cannot well express, but, looking upon the myriad stars which begemmed the azure infinitude, a feeling of nothingness and insufficiency awed me into silence, and insensibly led me to confess my weakness, and pray for strength, for guiding grace, for pardon and for peace.

I.

My heart doth speak me in the wrong,
Father Divine, in that I love Thee less—
To whom I owe my all of happiness:
Less than the blessings Thou hast showered on me,
Less than the world which wiles my heart from Thee;
O, free me from these chains—this vile duress—
And I will praise Thee in a grateful song.

II.

Humble my powers are,
Yet I still owe Thee service for their gift,
Still to Thee should they bear
Their best thank-offerings. Our Father! lift
Thy countenance reconciled
Upon Thy child:
Who would, repentant, claim thy watchful care,
That he no more may be by sin beguiled.

O! pure and tranquilizing are the influences of a solitary ramble in the quiet of early evening. Every good impulse seems to gain new vigor, and every passion of the heart to be chastened and subdued.—B.

Maple Hill, N. Y., 1853.

---

## "GOOD BYE."

The editor of the Albany Register thus comments upon this simple phrase, so common and yet so full of solemn and tender meaning:

"How many emotions cluster around that word. How full of sadness, and to us how full of sorrow it sounds. It is with us a consecrated word. We heard it once within the year, as we hope never to hear it again. We spoke it on an occasion such as we hope never to speak it again. It was in the chamber of death, at the still hour of night's noon. The curtains were all closed, the lights were shaded, and we stood in the dim solemn twilight with others around the bed of the dying. The damps of death were on her pale young brow, and coldness was on her lips, as we kissed her for the last time while living. "Good-bye, my daughter," we whispered, and "Good-bye, father," came faintly from her dying lips. We know not if she ever spoke more, but "Good-bye" was the last ever heard of her sweet voice. We hear that last sorrowful word often and often as we sit alone busy with the memories of the past. We hear it in the silence of night, in the hours of nervous wakefulness, as we lay upon our bed thinking of the loved and the lost to us. We hear it in our dreams, when her sweet face comes back to us as it was in its loveliness and beauty. We hear it when we sit beside her grave in the cemetery where she sleeps alone, with no kindred as yet by her side.—She was the hope of our life, the prop upon which to lean when age should come upon us and life should be running to its dregs. The hope and the prop are gone, and we care not how soon we go down to sleep beside our darling, beneath the shadow of the tree in the city of the dead."

---

## BEAUTIFUL EXTRACT.

I saw the temple reared by the hand of man, standing with its high pinnacles in the distant plain: the stream beat upon it—the god of Nature hurled its thunderbolts against it—and yet it stood as firm as adamant. Revelry was in its hall—the gay, the young, the happy and beautiful were there.

I turned and the temple was no more—its high walls scattered in ruins, the moss and ivy grass grew wildly there, and at midnight hour the owl's cry added to the desolation of the scene—the young and the gay, who had reveled there, had passed away.

I saw the child rejoicing in his youth—the idol of his father. I returned and the child had become old. Trembling with weight of years he stood, the last of his generation—a stranger amid the desolation around him.

I saw an oak stand in all its pride on the mountain, the birds were caroling on its boughs. I returned—the oak was leafless and sapless—the winds were playing their pastime through the branches.

"Who is the destroyer?" said I to my guardian angel.

"It is time," said he. "When the morning stars sang together with joy over the new made world, he commenced his course, and when he shall have destroyed all that is beautiful on earth—plucked the sun from its sphere—veiled the moon in blood—yea, when he shall roll the heaven and earth away as a scroll, then shall an angel from the throne of God come forth, and with one foot upon the land, and one upon the sea, lift up his head towards Heaven and Heaven's eternal, and say:

"Time is, Time was, Time shall be no longer."—*Paulding.*

# Miscellaneous.

## HARVEST HOME.

Hark! from woodlands far away,
Sounds the merry roundelay!
Now across the russet plain,
Slowly moves the loaded train.
Greet the reapers as they come—
Happy, happy harvest home!

Never fear the wintry blast;
Summer suns will shine at last;
See the golden grain appear,
See the produce of the year.
Greet the reapers as they come,—
Happy, happy harvest home.

Children join the jocund ring,
Young and old, come forth and sing;
Stripling blithe, and maiden gay,
Hail the rural holiday.
Greet the reapers as they come,—
Happy, happy harvest home.

Written for the Rural New-Yorker.

## VISIT TO "TEN HILLS FARM."

BY MRS. M. W. H.

"Ten Hills" is a place of considerable interest on account of its reminiscences, as well as its being the residence of a man who has acquired an extensive reputation in the agricultural world, as a successful breeder of fine animals. It is scarcely necessary to say that I allude to Col. Samuel Jaques.

I had often heard the location of "*Ten Hills*" described, but in order to have a just appreciation of its beauty, one must stand on that eminence sloping down to the Mystic river which meanders in graceful curves at its base. While standing there in the beauty of a gorgeous golden sunset, with an extensive view on all sides, embracing ocean and river, city and country, mountain, hill and valley, fields of waving grain—

"The orchard, the meadow, the deep-tangled wild-wood,"

I thought there would be nothing left to desire in this perfectly beautiful landscape. It is, too, a richly suggestive spot, from whence to survey some of the localities of Revolutionary incident. While the eye rests for a moment on Winter Hill, you may see in retrospect, the serried files of heroic patriots marching along its gentle acclivity. Then, as you gaze on the calm clear waters of the Mystic river at your feet, their depths reflect back, to your imagination, the hostile invaders sailing cautiously along its tortuous course. Instinctively you turn to look on that towering Monument, that conferred immortality on the names of those heroes who fell at Bunker Hill.

The venerable mansion itself, is rife with memorials of lordly occupants, and tory coadjutors. The plank floor, even at this remote day, bears marks of blows from the axes of the indignant patriots, who used the parlor for a stable for their horses, after expelling their enemies from its possession.

The venerable proprietor of Ten Hills, will, I hope, pardon me for giving here an anecdote which he related while we were standing on that eminence. The anecdote is strikingly illustrative of a generally conceded fact, that when a young man fixes upon, and pursues a definite purpose, he will, as a general thing, finally succeed in the accomplishment of his object. I will give the anecdote, as nearly as I can recollect, in the Colonel's own words.

"When I was a lad about fourteen or fifteen years of age," said he, "I went with my father, and drove the team, to take a load of wood to Gen. E. Haskett Derby, who then owned and occupied this farm. We took back with us a load of hay, and when leaving the farm my father fell behind the team a little, and after a moment called, 'Samuel, stop the oxen and come here.' I did so. 'There,' said he, 'look around and see if you could desire anything more beautiful! The man that owns this farm, and a clear conscience, needs nothing more to make him happy, as far as wordly possessions can do it!' I looked a moment, and exclaimed, '*father, I will have it!*'—and here I am, after all these years of labor!"

There he stood, in the beautiful sunlight, a man of nearly four-score winters, with the activity of youth in his elastic step, and the intellectual vigor of manhood beaming from his countenance, a monument of indomitable energy and perseverance.

At fifty-five years of ago Col. J. found himself a poor man, with the desire of his youth unsatisfied. Some men, at that age, would have relinquished the long-cherished hope, and would have said, "it is of no use, I may as well give it up?" Not so with Col. J. About this time "*Ten Hills*" was to be sold; what was to be done? He could not buy that fine estate unaided—he therefore conceived the project of its purchase by a joint-stock company, reserving to himself the privilege of buying out the interest of the purchasers on such terms as they could agree. He laid his plains before some friends, who readily acceded to his proposition. The long-cherished object was at last accomplished, and he is now the sole proprietor of that lovely spot, where, surrounded by children and grand-children, his numerous guests are entertained with a genial hospitality, and instructed from the rich stores of his experience.

As he from time to time divests himself of the cares to which his earlier life has been devoted, Col. J. becomes more and more devoted to his feathered friends, with whom he is on the most familiar terms; verily, his place is *the home of the birds*. With a little whistle which he always carries in his pocket, he can by varying the sound to the occasion, call the wild birds from the ocean, the marsh, and the river, into his enclosure, where he already has several varieties of wild birds quite tame and familiar. Even the small singing birds are no longer wild at "Ten Hills;" they often build nests in the rose bushes under the window, and the children would as soon think of killing a canary as frightening off "Grandpapa's pots."

Col. J.'s poultry yard comprises about an acre of ground, plentifully supplied with both fresh and salt water, besides every convenience adapted to the wants of all the varieties of birds he wishes to rear or domesticate. For the wood duck, that in a wild state builds in hollow trees, boxes are placed under the shelter of evergreen trees, and covered with turf, only leaving a small opening. For the black duck, which prefers a different locality, he has provided shrubbery. A little island in one of the ponds, which is reached by a plank laid from the shore, is raised like a mound sufficently high to be out of the reach of the tide; near the top of this mound about a half a dozen nests are constructed, opening from the outside of the circle, but having no connection, nor are the entrances in sight of each other. These nests are covered over with turf, so as to be nearly hid from view, and here the ducks and geese were preparing to bring out their little broods, surrounded with all the appliances for meeting the wants of their brief existence. No doubt the great secret of Col. J.'s success in taming wild, and rearing domestic fowls, lies in the kindness with which he treats them, and in varying his treatment to suit their natural habits, which he seems perfectly to understand. He is not satisfied with mediocrity among his fowls; they are constantly improving under the suggestions of his large experience, and no one can fail to be interested and well paid for a visit to this model fowl establishment.

Long may the sound of that tiny whistle continue to wake the echoes of *Ten Hills*, as it calls the feathered denizens to feed from the hand of their benefactor, who delights in seeing every living thing happy according to its capacity.

[Parable from the German.—Translated for the Rural.]

## THE MOON, A PICTURE OF LIFE.

Near the western sky the Moon was floating, like a light skiff in the refulgence of the evening red. The children pointed her out to their father.

"How beautiful and delicate she is!" said Alwin; "she does not always appear so."

"She is in her childhood," said his father. "Day by day she will grow, and her light will increase, till she exhibits to us her full disk. At times, perhaps, clouds will cover her, and she will veil her face; then, after some time, she will decrease more and more, till she entirely disappears, in order to become a perfect image of the human body."

"I don't understand what you mean," said Theodore.

"I know what you wish to say, father," Alwin quickly interrupted his brother.—"Man does also, like the moon, increase and decrease; he shines for a time upon the earth, then he disappears and lies concealed in the grave."

"And the clouds, which sometimes cover the moon?" his father asked his son.

"Those I cannot explain."

"These are the misfortunes which happen to man," his father continued. "No life has departed from this earth without having sometimes passed sad and melancholy days. But from the innocent and good man, the clouds pass away, and the rest of his soul remains undisturbed. And even if, at last, he disappears from our eyes, he is not however ruined, but,

Forever and unchangably,
In other regions shine."

The Dream of Life.—How few of us at the close of life can say, "I have filled and occupied the position to which I looked forward when a boy!" In the onward progress of life, how often, in some stray moment of thought and reflection, do we not find ourselves inquiring, "Is this as I hoped? have I enacted my dream?" And the answer is, invariably—No! We look forward in childhood, and only look forward without reflection. We build gorgeous palaces, we sketch a career of life all gold and sunshine—what are they? And where are they when years sober us.—*True Democrat.*

## A ROMANTIC LIFE.

Obituary notices have nearly monopolized our pen of late. There are few eras in our history which have been marked by so many deaths of prominent individuals, as the last three months.

In our obituary columns, to day, will be found another addition to the list of remarkable deceased, in the death of Madam Zulime Gardette, the mother of Dr. Gardette, of this City, and of Mrs. Myra Clark Gaines. She died in this City, at the residence of her son, Dr. Gardette, at the advanced age of 78 years.

This lady was the heroine of that intensely interesting romance in real life, which was developed in the celebrated lawsuit of Mrs. Gaines.

Her maiden name was Zulime Carriere. She was born in the old French Colony of Biloxi. Her parents were emigrants from the land of poetry and romance—the favorite home of the Troubadours—Provence. The blood of the Gipsey race, which, in the early days of Louisiana, settled along our sea coast, and whose lovely daughters were the special objects of the admiration and love of the gallant French cavaliers who established the first colonies, mingled with that of the poetic Provencal. From such a stock, it is not remarkable that Zulime Carriere should have derived extraordinary personal beauty. The charms of herself and her three sisters, were universal themes in the Colony of Louisiana. The warm and genial climate, and luxurious atmosphere of the sea shore, ripened these charms into full maturity at a very early age.

Zulime had hardly emerged into her teens, before her hand was sought by numerous suitors. The successful aspirant gained his point, as Claude Melnotte in Bulwer's play did, by holding an imaginary coronet, or other insignia of nobility, before the eyes of a beautiful but unsuspecting girl of thirteen. She was caught by the glittering bait. The French nobleman soon dwindled into a confectioner, and, what was worse, a married man, who had never been divorced. He was arrested and tried by an ecclesiastical court in this city, for bigamy; was convicted and sentenced to be punished, but afterward escaped, and was no more heard of. Thus ended Zulime's relation with Jerome De Grange.

Pending this proceeding, and after the discovery of De Grange's previous marriage, there grew up an intimacy between Zulime and Daniel Clark, then a leading man in this colony—a dashing, whole souled Irishman, reported to be very wealthy—of very popular character and agreeable manners. Clark was just the gallant chivalrous man to espouse the cause of an unprotected and wronged woman.

It is said—but as from this point starts the protracted litigation which has recently engaged so much of the time and attention of our courts, we must be understood as giving the version related by the deceased lady herself and her friends,—that Clark having met Zulime in Philadelphia, and satisfied himself as to the existence of De Grange's bigamy, and the consequent nullity of his marriage with Miss Carriere, promptly offered her his hand and heart, but suggested the prudence of keeping their marriage a secret until they could complete the proof of De Grange's crime. They were then married. Of this marriage but one witness was living when the suit was brought by Mrs. Gaines, and that was the sister of Zulime. But there were corroborating circumstances, upon which the proof of the reality of such a connection was rested. After her marriage to Clark, in 1802, Zulime returned to New Orleans, to take further legal proceedings to invalidate, or rather authenticate the illegality, of the marriage with De Grange. A suit was brought for this purpose in the civil courts of the Territory, and judgment was obtained against De Grange. In the meantime, Clark had advanced in years and honors. The gallant youth of 1802 had become the ambitious politician and millionaire.—As the popular man of a powerful party, he was sent as delegate of the Territory to Congress. Here he soon forgot the poor Creole girl, and began to meditate a more brilliant marriage connection. The object of this aspiration was the lovely Miss Caton, of Maryland, a grand daughter of Charles Carroll of Carrollton, who afterwards became the Marchioness of Wellesly. She was a great belle, and Clark's fine manners, distinguished position and great wealth, no doubt, rendered him quite a desirable match for so brilliant and accomplished a beauty. They were engaged; but some stories of his enemies caused a sudden termination of their relations.

On hearing of his courtship of Miss Caton, the unfortunate Zulime again went to Philadelphia to procure proofs of her marriage with Clark. But alas! Clark, it was alleged, under the influence of a reckless ambition, had made way with those proofs, and poor Zulime again found herself the victim of man's treachery. In a feeling of desertion and helplessness, alone among strangers, whose language and habits were foreign to her, she accepted the hand of Dr. Gardette, who generously and magnanimously, relying on her truth and sincerity, united his fate and fortune with hers.—From that period her life flowed smoothly on in the discharge of her duties as a wife and mother.

Shortly after her marriage with Gardette, Clark had suffered his severe rebuff from the lovely Miss Caton. In a spirit of true penitence, he hurried to Philadelphia, saw Zulime, and declared his determination to proclaim their marriage. But it was too late; she informed him that she was Mrs. Gardette. Clark was deeply distressed at this, and exhibited a sincere penitence. He sought to atone for his desertion of the mother, by kindness to the daughter, who was born in 1806, of this secret marriage.—This was Myra Clark. She was placed in charge of an intimate friend of Clark, Col. Davis, who raised and educated her as his own daughter. It was not until she had reached maturity, that Myra discovered the secret of her history.

Since then, as Mrs. Whitney and Mrs. Gaines, she has prosecuted her claim to the property of Daniel Clark, as his lawful heir, with a zeal, earnestness and energy, which have rarely been equaled in the annals of litigation. The difficulty has been to establish the marriage between Zulime and Daniel Clark. Certainly a mystery has long hung over this case, which only the dead could rise from their graves and satisfactorily determine.

The once lovely Zulime, passing through so many reverses and misfortunes, returned in her old age, to New Orleans—her old home—and passed a peaceful and happy life, in the family of her son, respected and beloved for her many virtues. She died at the age of 78, the youngest of her family—two of her sisters having attained their 90th year, a longevity common to the oldest inhabitants of Louisana, and particularly of those born on our sea coast.—*New Orleans Delta, Sept.* 20.

## IMPERIAL RAILROADING.

The Parisian correspondent of the New York Times gives the following sketch of Louis Napoleon's and Mrs. Louis Napoleon's trip on the cars to Dieppe. The astonishing rate of speed attained speaks favorably, we think, of engineers in black with white kids, and of holy water scented with orange flowers, compared with the humbler means used in this country:

"The train consisted of a new and powerful engine, driven by M. de Lasseyriere, in a black suit with white kids; of the imperial car comprising a saloon, and two with drawing rooms, and of five large carriages for the ladies of honor and their suite; besides a car for the managers of the road and sundry counsellors, who had collected to bend and be obsequious. The saloon of the imperial car contained several gilt tables, upon which were albums of views along the railroad to Dieppe, a quantity of daguerreotypes of chateaux in the eighteenth century, a picture of Paris in 1760, and the Tuilleries under Francis I.—These were intended to divert the Empress during the ride. Six ministers accompanied their Majesty from the palace to the train; five aids de camp stood reverentially uncovered, as they ascended the steps, while a dozen directors of the road, waited by the engine, so as to be out of the way. At Asnieres was the prefect of Police, taking the necessary measures for the safety of the august travellers. M. de Lasseyriere drove the train for one hundred and twenty miles at the rate of a mile a minute. I understand that the steam was not generated from common water; holy water was used and besides that, it was scented with orange flowers! The fuel was wood cut from the confiscated Orleans estate."

## EXTRAVAGANCE.

Hon. John A. Dix, in a recent lecture before the Historical Society, made the following just remarks:

"Nothing can be more unwise than the erection of costly dwellings, which can only be maintained by princely fortunes. At the death of the head of a family, and a division of the ancestral property, no one of the children, as a general rule, has enough to support the establishment, and it passes into other hands. Nothing can be more cruel than to bring up children with expectations which cannot be fulfilled, and with habits of life which they are compelled to abandon. The parent, for the sake of a few years of ostentation, invests a large portion of his estate in a splendid dwelling, with the certainty that his death will be the signal for the expulsion of his children from it. Nothing can be more inconsiderate, if it is done without reflection, or more unfeeling, if it is done with a full view of the inevitable consequences. Look for the splendid mansions of thirty years ago, and see what has become of them. Scarcely one remains in the family by which it was constructed. They are boarding-houses, places of public exhibition, or the workshops of fashion."

## TURKISH PROVERBS.

He that speaks truth must have one foot in the stirrup.

The friend looks at the head, the enemy at the foot,—the one to admire the projector, the other to detect his failures.

He that falls to the sea, takes hold of the serpent to be saved.

To him of good judgment the sound of a gnat suffices, to him who lacks it the noise of an orchestra availeth not.

The teeth of a horse of which a present has been made are not observed.

After the carriage is broken, many offer themselves to show the road.

The nest of a blind bird is made by God

Although the tongue has no bones, it breaks bones.

A foolish friend does more harm than a wise enemy.

More flies are caught with a drop of honey than by a hogshead of vinegar.

Do good and throw it into the sea; if the fishes don't know it, God will.

He who knows everything, is often deceived. A friend is more valuable than a relative.

Wealth, honor, and favor, may come upon a man by chance; nay! they may be cast upon him without so much as looking after them; but virtue is the work of industry and labor; and certainly it is worth the while to purchase that good which brings all others along with it.

# For the Ladies.

## MINNA MAY.

'Twas in the "leafy month of June,"
The flow'rs were blooming gay,
While list'ning to the wood-lark's tune
I met sweet Minna May:
Her tresses fair, with buds intwin'd,
Deep o'er her shoulders lay,
In pensive thought the head inclin'd
Of winsome Minna May.
Oh dearest Minna May,
Sweet, gentle Minna May—
'Twas then I gave my heart to thee,
My darling Minna May.

'Twas in a quiet shady place,
Near by the river's spray,
Where first I saw the sweet young face
Of happy Minna May:
Her fairy form, her step so light,
Her eyes of azure ray,
Methought I gaz'd on vision bright,
So lovely Minna May.
Oh dearest Minna May,
Sweet, gentle Minna May—
'Twas there I gave my heart to thee,
My darling Minna May.

And oft we met, in that lone dell,
At close of summer's day,
And I my tale of love did tell,
To win fair Minna May:
And oft, as on some mossy seat
We sat 'till twilight gray,
I bade her still the words repeat,
"Thine own," dear Minna May.
Oh dearest Minna May,
Sweet, gentle Minna May—
'Twas there I won the love of thee,
My darling Minna May.

But ah, the scenes of youthful life,
How soon they pass away—
Beside me sits my own dear wife,
The gentle Minna May:
Beneath her cap the once fair tress
Is silver'd o'er with gray,
But never have I lov'd her less
Than when sweet Minna May.
Oh dearest Minna May,
Sweet, gentle Minna May—
I bless the hour when first I won
My own dear Minna May.

Rochester, Oct. 5, 1853. Azile.

## WASTED FLOWERS.

A fair-haired child stood beside a streamlet, looking gladly upon its sparkling waters, and listening to the soft and soothing melody of its purling flow. She held in her hand sweet flowers, gathered from Nature's pasterre. It was an interesting sight—the symbol of pure, celestial innocence,—that simple-hearted child of light and airy form, of radiant countenance and beaming eye; that stream gurgling pure from some fountain head, and meandering its way almost unnoticed, to mingle with the ocean and form a part of it, as the little child with the great ocean of life; those flowers, fragrant with rich odors, on whose tender petals, just opening to the light, the soft dew-drop gently hung.

And as she gazed upon the crystal current dancing over its pebbly bed, now smooth and placid, now curling into tiny wavelets, as some mossy rock impeded its peaceful flow, she tossed, one by one, her favorite flowers on the glassy crest, and they were soon lost to her view. When the flowers were gone, child-like she wept, and in the simple and affecting tones of child-feeling, cried aloud for her flowers. But they were not gathered again in her embrace. She had dropped them in the stream, and on its limpid bosom they were borne far away.

Methought as I saw the child casting away her favorite gems, and then in sorrow mourning their loss, that it was no unfit emblem of the actions of maturer minds. In that infant act was mirrored forth human character, and there was but need of referring to the living world to see that the outline was truly drawn. It was so pure and artless, reflecting in itself the great world of thought and action, that it impressed a deep lesson on the mind, and traced on the soul in living characters a sacred recollection.

How many there are, standing beside the stream of time, idly contemplating the dark waters rolling on in their ceaseless flow, and watching wave after wave surging against the rocks of eternity,—who cast thoughtlessly away the fairest flowers, the brightest gems of earth's treasures! But there come moments of keenest anguish—moments of regret for hours misspent, for important advantages trifled away. Then may be heard, as of the little child, the earnest cry for "wasted flowers." But they cannot be regathered. They are as if they had never been, save a sad remembrance lingering behind.

A. J. E.

University of Rochester, Oct. 1, 1853.

Empty Compliments.—A formal, fashionable visitor, thus addressed a little girl:—"How are you, my dear?" "Very well, I thank you," she replied. The visitor then added:—"Now, my dear, you should ask me how I am." The child simply and honestly replied, "I don't want to know."

The Proud.—The proud have no friends: not in prosperity, for then they know nobody; and not in adversity, for then no one knows them.

MOORE'S RURAL NEW-YORKER.

ROCHESTER, OCTOBER 15, 1853.

### To Agents and Subscribers.

PREMIUMS — *Past and Future.*—During the past nine months we have paid to the earnest, influential friends of the RURAL, nearly *Fifteen Hundred Dollars* in Premiums for obtaining subscribers. These prizes have been principally paid in Cash, Books and extra copies of our Journals — and, so far as we have ascertained, to the entire satisfaction of those entitled. We believe all premiums have been forwarded as requested,—and in many instances where none were asked or expected. If any have been overlooked, we will cheerfully and promptly make amends on notification.

This is a heavy item of expenditure, yet, concidering the generons exertions of agents and others in behalf of the paper, and the consequent large increase of its circulation, we have no reason to complain. On the contrary, we are so well satisfied with the result, that we shall offer like, if not larger, premiums for subscribers obtained between the 1st of November ensuing and May next. We are aware that our friends and agents generally do not work for the premiums, but we wish to remunerate, as far as we can consistently, every one who may be disposed to devote a little time and attention to obtaining and forwarding subscriptions. As the period for opening the new campaign is at hand, we hope former and presents agents will give the matter attention, or see that others do so, in season. We desire to have at least one good local agent at or in the vicinity of every post-office, where the RURAL is or should be circulated. Reader, if there is no agent in your locality, we hereby request yon, or the next best man (to whom you will please communicate the request,) to act in that capacity. To any and all such we shall be glad to furnish specimen numbers, prospectuses, &c.

— If the numerous friends of the RURAL throughout the country, will stir themselves a little in its behalf, our present list may be doubled in three monts — enabling us to make a much better paper, in all respects, than heretofore. To make it all its most ardent friends desire, we shall labor diligently and faithfully, not doubting our efforts will be properly rewarded.

### Whig State Nominations.

THE Whig State Convention, held at Syracuse last week, made the following nominations:

*Judge of Appeals* — 8 years — GEORGE WOOD, Kings.
*Judge of Appeals*—vacancy—JOSEPH MULLEN, Jefferson.
*Secretary of State* — ELIAS W. LEVANWORTH, Onondaga.
*Controller*—JAMES M. COOK, Saratoga.
*Treasurer*—ELBRIDGE G. SPAULDING, Erie.
*Attorney General*—OGDEN HOFFMAN, New York.
*Canal Commissioner* — CORNELIUS GARDINIER, Montgomery.
*State Engineer*—JOHN T. CLARK, Monroe.
*State Prison Inspector*—THOMAS KIRKPATRICK, Albany.
*Clerk of Appeals* — BENJAMIN F. HARWOOD, Livingston.

This is a pretty fair ticket, though not altogether unobjectionable to those who, like us, prefer men of integrity and ability to representatives of *party* or *professed* political principles. Ex-Gov. HUNT presided on the occasion, and the proceedings of the Convention were quite harmonious, the nominations being made with much unanimity — a rare occurrence of late years.— Whether the two wings of the party will cordially unite in support of the ticket remains to be seen. Most of the nominees belong to the SEWARD section. Indeed our neighbor of the *American*, ("Silver Gray,") announces that "all the nominees of the Convention are 'Silver Grays,' *except eight!*" This is taking the matter coolly, and if other journals of the same color exhibit like frigidity, the ticket is as good as elected—for the Democratic army is completely divided, and hence comparatively powerless. While the "Hards" and "Softs" are cutting each others' jugulars, the amiable factions of the Whig party quietly unite and secure the administration of the affairs of State — including the handling of some ten millions of the current coin of the Republic!

THE PENNSYLVANIA STATE FAIR — Was held at Pittsburgh, Sept. 27 to 29. It is said to have been "altogether the best and most successful Fair ever held in the Union." The attendance on the third day was very large, "far exceeding any assemblage which ever before took place in Western Pennsylvania." As might be expected from the location, the exhibition was particularly good in implements and manufactured articles of all kinds. The display of agricultural and horticultural products was very good; while the show of cattle, horses, sheep, swine and poultry, is said to have been excellent. The farmers of the Keystone State are "coming — coming right along." The result of the Fair shows what our friends in Western Pennsylvania are about and can accomplish.

HON. T. C. PETERS, of Genesee County — well known as an Agricultural editor and farmer, and for his ability and independence as a man and legislator—has been nominated for re-election to the Assembly. This is a deserved compliment, for Mr. P. was one of the most hard-working and attentive members of the last Legislature. If such men — irrespective of political or party considerations — were oftener selected as our lawmakers, the interests of the People and State would receive greater attention.

## Correspondence.

### Our Albany Correspondence.

ALBANY, Oct. 10, 1853.

"THE irons are all in the fire," and "bosses" and "jours," together with "prentices" and "extra help," are making in their best efforts to forge out the different parts of the political machine. It may turn out with some of them as it did with the smith of old who attempted to make an ax. By an unlucky hit he spoiled it, and then resolved to make a hatchet. Failing in this, he tried to shape it into a chisel. In this he also failed, and in his rage, he threw it into the water, exclaiming —"There, I'll make a siss of yon." Some of the political irons may finally have to be served in the same way.

But, jesting aside, the canvass is fully opened The result of the Whig Convention is precisely what was predicted. The Silver Grays are virtually out of the party. The ticket is "Wooly" throughout, and will poll a strong vote. In fact, the party may be said to be restored to its primary condition, and high hopes are entertained by them of brilliant success this fall.

The Hunkers and Barnburners are a fair illustration of the poet's definition of man—"a pendulum 'twixt a smile and tear." One day the dispatches from Washington will cause an oscillation in one direction, and the next will send it as far the other way. All are now on tiptoe to know whether Collector BRONSON will be turned out of office. Secretary GUNTHRIE has sent him a circular which is approved by the whole Cabinet, pohtely hinting at his resignation. Knowing ones assert that he will *not* resign. It then remains for the President to give him his walking papers, which will be the signal for a most desperate warfare on the Administration. It is said that effigies of Secretary GUNTHRIE are in preparation, to be burned if such a course should be pursued. We may see great things yet before election.

The Democratic County Convention was held last week, and two tickets were put in nomination, on the same principle as the State Convention. The war will be intense here, probably more so than anything in our history.

The County Fair came off last week, and for the first show in the County, it was superior. EMERY says that, under the circumstances, he never attended a better one, and *he* is a good judge of such matters. The last afternoon was given to the ladies, who put themselves up as riders on horseback. Several valuable premiums were offered, and the affair went off with great *eclat*.

HENDRICKSON, who is under sentence of death, made a bold attempt to break jail a few days since, but was detected. He will receive more care and attention in future. The application for a new trial in his case, was to have been decided last week, but the pressure of business prevented the Court from giving it attention. It will be brought up in December.

Two of the ablest sermons ever preached in this city, were delivered yesterday by Rev. Dr. HAGUE, in the Pearl street Baptist Church. It is expected that he will be called by the Church as successor to Rev. Dr. BEECHER, who has resigned on account of ill health. *OWE.*

## Literary Notices.

ELEMENTS OF AGRICULTURAL CHEMISTRY AND GEOLOGY. By J. F. W. JOHNSTON. With a complete Index and Preface, by SIMON BROWN, Editor of the New England Farmer. New York: C. M. SAXTON.

THE name of Prof. JOHNSTON is well known to our readers. His valuable work, "Lectures on Agricultural Chemistry and Geology," together with his "Catechism" on the same subject, and the lectures delivered before the N. Y. State Agricultural Society, have all had a large circulation in this country. This new work takes the intermediate ground between the Catechism and the Lectures. The Professor recommends that a student should read the Catechism first, then this new work, and afterwards his Lectures. We would heartily endorse his recommendation.— Such works should be in the hands of every farmer's son. A careful study of them cannot fail to make any man a more intelligent and better agriculturist. But while we thus urge every farmer to get and read this book, we cannot conceal our disappointment in the work itself. We expected a better book from J. F. W. JOHNSTON. We expected at least an investigation of the more recent developments of chemico-agricultural science,—an examination of the results of field experiments made during the last ten years, which shake much that was previously considered solid ground in agricultural science. All this is passed over without the slightest allusion, and old advice, founded on old, and as we think, exploded theories, is offered with as much confidence as ever.

LANDSCAPE GARDENING; or Parks and Pleasure Grounds. With Practical Notes on Country Residences, Villas, Public Parks and Gardens. By CHARLES H. SMITH. With notes and additions by L. F. ALLEN. New York: C. M. SAXTON,—1853.

THE object of this work is sufficiently indicated in its title. Its republication in this country is opportune, as there is an increasing demand for information on the subjects of which it treats.— The American Editor has performed his task thoroughly and judiciously, exhibiting an intimate knowledge of the subject, and sound sense and good taste in discriminating between what is, and what is not, applicable to this country. On the whole, from a slight examination, we judge this to be one of the best *practical* treatises on Landscape Gardening that we have ever read.

For sale by DARROW and FISHER.

### Late Counterfeits.

THOMPSON'S Reporter for Oct. 1st, contains the following list of "counterfeits for the month."

3s, on the City Bank, New Haven, Conn.— Vignette cattle, train of cars, &c.—Franklin on the lower left corner—female feeding an eagle, on the right end—not like the gennine.

2s, on the Bank of West Troy, N. Y.—Vignette man, horses and plow—female on right end—not like the gennine.

5s, on the Tranders' Bank, Cape May C. H., N. J., altered from 1s. This Bank has no 5s.

5s, on the Nassau Bank, N. Y. city, altered from genuine 1s—vig. three persons and printing apparatus—genuine 5 has a cut of Crystal Palace.

5s, on the Commercial Bank, Salem, Mass.— vig. cattle and railroad cars — medallion head on the right—female figure on the left.

20s, on the Bank of Augusta, Geo.— Counterfeit—on left hand is a portrait of Washington— genuine has portrait of Jackson—on lower corners figures 20; genuine has XX.

5s, on the Farmers' Bank of Lancaster, Pa.— Vignette man and woman, team, dog, &c.—5 each side—well done.

20s, on the Farmers' Bank of Bucks county, Pa. —Vignette female, agricultural implements, &c.; 20 on each corner— eagle between the signatures —not like the genuine.

100s, on the Bank of the State of North Carolina, N. C.,—Vignette train of cars, men, &c.,— letter C each side vig.— head of Franklin on the right end.

5s, on the Western Bank, Suffolk Co., N. Y., altered from 1s—vig. two females, with 5 each side —the word FIVE on each corner.

5s, on the Bank of the Union, N. Y. city, altered from 1s—vig. female reclining; railroad cars in the distance.

20s, on the Marine Bank of Chicago, Ill. The bank never issued any 20s.

2s, on the Mechanics' Bank, Brooklyn, N. Y. Vig. ship under sail—shipping in the distance.

5s, on the Citizens' Bank, Baltimore, Md.—Vig. large eagle, shield and Olivo branch—the word Citizens' in large dark capitals; in the genuine they are only shaded.

5s, on the Central Bank of New Jersey, altered from 1s —Vig. locomotive, cars, &c.—portrait of Frelinghuysen on the right end.

10s, on the State Stock Bank of Indiana, altered from 1s—Vig. female in a sitting posture; falls in the distance—Indian on the left end, female on the right end.

1s, on the State Bank, Providence, R. I.—Vig. a machine of some kind; supposed to be a loom; not like genuine.

10s, on the Bank of Fishkill, N. Y., altered from 1s—Vig. train of cars, &c.

5s, on the Citizens' Bank, Worcester, Mass., altered from Citizens' Bank, Angusta.—Vig. eagle —child on left end—well done.

2s, on the Commercial Bank, Troy, N. Y.— Counterfeit—Vig. female, with sickle, sheaf of grain, &c.—female in sitting posture, on the left —badly done.

SURE ENOUGH!—The Woodbury Bank, Connecticut, collapsed about a year ago, by forcordination, and its bills have since been quietly bought up at 25 to 50 cents on the dollar. That accomplished, the Bank is ready to resume payment; the Receiver advertises that he is ready to pay all claims upon it; and the Courant (Hartford) coolly observes:

"Holders of bills need not, therefore, make any sacrifice on them."

No, they needn't!—in fact, we guess they have nearly all made the reverse of a sacrifice.

We respectfully request our patrons, present and future, not to send us any bills of the Woodbury Bank, no matter how swaggering may be its resumption. We don't feel at all sure of our ability to tell which thimble the little joker is under. "Now you see it, and now you don't."

Seriously — is it not time that all these old Bank charters, granted on a vicious, exploded principle, should be repealed? Good sound Banks, which have been doing an honorable business since they were chartered, might be exempted; but all others should be expressly abolished, and Banking henceforth prosecuted under well-guarded general laws, with ample security in the public chest.—*N. Y. Tribune.*

THE AMERICAN BIBLE UNION held its annual meeting in New York last week. The Treasurer's Report shows upwards of $19,000 expended during the year for translating, revising and circulating the Scriptures, and a balance of $4,800 in the Treasury. Dr. Achille was among the speakers. Resolutions were passed avowing their intention to go on "until every English family on earth shall be possessed with a copy of the English Scriptures," revised and corrected to correspond with the original inspired text.

LONGEVITY OF QUAKERS.—The late census returns in England reveal the singular fact that the average age attained by this peaceful sect is fifty-one years two months and twenty-one days, while half of the population of this country die before reaching the age of twenty-one, and the average duration of life, the world over, is but thirty-three years. The Quakers, therefore, live a third longer than the rest of us. Their temperance, prudence, plenty, want of passion, and general repose of character, are, undoubtedly, favorable to longevity.

HOPS.—The tightness of the money market, in New York and elsewhere, has kept down speculation, and prices have not ruled as high as might have been realized under less stringent times.— However, we understand that 35 cents can now be obtained freely for a prime article. Those who hold on, *may* get more—those who sell, certainly obtain a very high price. We look for no material change very soon, unless money becomes more plenty — of which there is no immediate prospect.—*Freeman's Journal.*

WRECK, AND LOSS OF LIFE.—A dispatch from St. John, N. B., dated Oct. 8, says:—The steamer Fairy Queen was lost last night, between Pictou Island and the main. Two passengers, eight of the crew, and all the officers saved themselves, but left eleven passengers to their fate. Eight of the passengers afterwards floated ashore on the wreck. Mr. Ely Cameron, one of the passengers saved, saw three ladies sink. The captain and crew have been arrested, to await the result of an investigation.

DECLINE OF STOCKS.—Crystal Palace stock sold in New York on Friday at 60, a fall of 5 per cent from the previous day, and of 115 per cent from the highest point it has attained. New York Central Railroad, Stock sold at 107¾, a decline of 3¼ in twenty-four hours! Erie railroad closed at 78.

☞ The Bombay Gazette says it is a fact that the entire population of India do not on the average spend a sixpence (twelve cents) a head, for clothing, annually.

## News Paragraphs.

☞ A party on the summit of Mount Washington, on a very fine morning, a short time since, counted one hundred and sixty sail vessels on the blue Atlantic; the spires of churches in the city of Portland, eighty or ninety miles distant, were distinctly visible; over forty lakes, including Winnipiseogee and Moose Head, lay like so many gems of molten silver set in emerald.

☞ Prof. Kendrick, of the Rochester University, returned from Europe in the Arabia last week. He has made an extensive tour, and for several months past, has been a student at the University of Athens. We understand that his health is much improved. He will be warmly welcomed back to Rochester, by his numerous friends.

☞ A movement has been set on foot among the dissenters, by the Rev. John Angell James, of Birmingham, England, and Thomas Thompson, Esq., of Poundsford Park, and some others, with the view of procuring a million copies of the New Testament scriptures in the Chinese language, for distribution amongst the Chinese insurgents.

☞ The Detroit Advertiser says, for ten days in September, previous to the 22d, there were on the aggregate *fifteen thousand one hundred and fifty persons* carried over the Mich. Central Railroad on the regular passenger trains, making an average of 1,514 persons per day. The largest number carried in one day was 1,670, the lowest 1,335.

☞ Some 1600 acres of land have recently been purchased in Iowa, on which a colony of monks have settled. Among their peculiar habits may be mentioned that they never mingle with the world, and when they put on a new suit of clothes, that suit is kept on, waking and sleeping, till it falls off or becomes unfit for wear.

☞ The Tribune of Saturday says that the prevailing feeling among moneyed men is one of extreme caution, which has been increased since the last European news. There is, however, no panic, and it is generally believed that a few weeks later advices from the other side will be more favorable in all respects.

☞ It is announced that the Rev. Edward Beecher, D. D., son of Rev. Lyman Beecher, will soon issue a treaties on Theology, entitled "The Conflict of Ages, or the Great Debate on the Moral Relations of God and Man." It maintains the pre-existence of man ere he became a denizen of this cloudy planet.

☞ A bridge across the Potomac at the Point of Roches, Md., has just been opened to public travel. It is 1400 feet in length, and is said to be the only one, except that at Harper's Ferry, that has been thrown across the river from the city of Washington to Cumberland, a distance of two hundred miles.

☞ A young man named Norcross, residing in Cadysville, Clinton county, got drunk the other day, went home, built a fire, laid down on the hearth and went to sleep. The fire communicated to the wood work of the house, and the building was consumed with the body of the drunkard.

☞ It appears from a recent return, that the Universities in Germany and Switzerland had, in 1853, 18,181 students, of whom 1,880 were educating for the Catholic priesthood, 1,756 for the Protestant clergy, 6,761 in law and political economy, 4,183 for medicine and surgery, and 2,744 in philosophy.

☞ Single women, who were freeholders, voted in New Jersey as late as the year 1800. In a newspaper of that date is a complimentary editorial to the female voters for unanimously supporting John Adams for President, in opposition to Mr. Jefferson, who was denounced as wanting in religion.

☞ At Carnstead, says the Manchester, N. H., Mirror, a child recently born is spotted. One half the forehead is black, while the other half is white. The face, below the eyebrows, assumes an ash yellow; the shoulders are also marked with spots, but all other portions of the skin are white.

☞ The Toronto Colonist learns that a dreadful accident occurred in the Township of East Oxford, C. W., a few days ago. It seems that the boilers of Messrs. Vansittart & Cottle's Steam Saw Mill, killing instantly four men who were in the mill at the time.

☞ A young woman named Young, was arrested one day last week, at Ogdensburgh, on a charge of attempting to starve a little neice. The evidence sustained the charge and the woman was held to bail in the sum of one hundred dollars, and the child rescued from the fiend.

☞ The entire sum of money raised by the churches of Great Britain for missionary purposes is about $1,750,000; by those of America, $750,000 — making $2,500,000; and yet this sum scarcely equals the annual gifts of the Kallee's Temple, Calcutta.

☞ The Evangical Lutheran Church has 20 Synods connected with the General Synod in this country—over 1,200 congregations, 113,000 communicants, 8 theological seminaries, and 9 religions journals—four of them in English and five in German.

☞ Mrs. Ann Keyes, wife of Patric Keyes, Janitor of West College, Schenectady, was run over by the cars of the Central Railroad on Tuesday afternoon, at that place, and so severely injured that she died in a few hours. She leaves a large family.

☞ Kostza was arrested for the purpose of being made to disclose where the Hungarian crown jewels were hid. They have since been discovered, and it now appears that he was released immediately after this discovery, and is now on his way to America.

☞ The N. Y. Times has seen letters from friends of John Mitchell and John Martin, who disappeared from Van Dieman's Land, confirming the reports of their escape, and giving the details. They are now on their way to this country.

☞ The Salem Register says:—"Abbott Lawrence has announced his intention of bestowing $50,000 on the Lawrence Scientific School at Cambridge, in addition to the same amount given by him to that institution some eight years ago."

☞ Benjamin F. Greene, of Buffalo, has been nominated by the Whig Judicial Convention for Justice of the Supreme Court, long term; and Levi F. Bowen, of Niagara county, for the short term. The latter is one of the present judges.

☞ Miss Dix, whose philanthropy in the cause of the insane has made her celebrated, is now at Nantucket, for the purpose of examining the life boats there, and devising means of aiding ships wrecked upon those shores.

☞ Mr. Lyman Gould, of Le Roy a native of Vermont, and aged 65, was killed last week, by being buried under a slide of sand from the banks of a pit, in which he was working.

## News Brevities.

— France has a debt of over one thousand millions of dollars.

— Elections in Pennsylvania and Ohio took place on Tuesday.

—A. H. Walker, of Fredonia, has been nominated by the Whig Senatorial Convention of the 32d District, as their candidate for the Senate.

— The comet has got ahead of the sun, and an exchange paper says that it may be seen by getting up before sunrise, and looking eastward.

— At Boston on Monday week, Mrs. D. H. Page, while riding in an omnibus had her pocket picked of a purse containing $700 in bank bills.

— A flagman on the Hudson River Railroad, named McGovan, committed suicide opposite Coxsackie, by throwing himself before the train.

— Near Cincinnati a gentleman has a six acre lot of grape vines, which will yield 1,000 gallons of grape juice to the acre, worth one dollar a gallon.

— At Buffalo, on Tuesday week, over 100 buildings on the Five Points were burnt, including many valuable blocks. The wind was blowing a hurricane.

— On the 8th of January next, a National Convention of soldiers of the war of 1812 is to be held at Philadelphia. The object is to "revive the recollections of the war."

— The Crystal Palace, in New York, closes the last of December. It is proposed to keep the building standing, and to continue to use it as a permanent exhibition of manufactures.

— The Watertown and Rome Road has all the flour crowding upon it which it has the means to move. A few days ago, it had 20,000 barrels in its warehouse waiting transportation.

# Foreign Intelligence.

## Arrival of the Arabia.

### FURTHER RISE IN BREADSTUFFS.

### More Prospect of War.

THE steamship Arabia arrived at New York on Thursday morning last, 6th, bringing 130 passengers. The most vital news is a still further advance in Breadstuffs, and a greater prospect of war.

THE FLOUR AND WHEAT MARKET.—The Breadstuff market continued active and buoyant. The week's advance on flour was 1s 6d, on wheat 5d, on Indian corn 4s. per qr. Western canal flour 32s. 6d@34s.; Philadelphia, Baltimore and Ohio 33s@34; white wheat 9s. 5d@9s. 8d.; red and mixed 8s. 9d@9s. 3d. Indian corn, yellow and white, 39s@40s.

Provisions quict at late rates.

Ashes in steady demand at previous rates.

London money market tighter, but no change in rates of discount.

Consols very much depressed—closing at 94¼—money nominally unchanged.

The cholera is raging in many towns in England, Ireland, and the north of Europe. The deaths in New Castle are reported at 100 per day. There were 130 deaths at Stockholm on the 13th ult. At Carlscroon there had been 932 deaths out of a populatien of 12,000.

The aspect of the Turkish difficulty is more threatening than ever. The Turks are aroused to the highest pitch of fanaticism, and even threaten Sultan if he does not declare war or abdicate. Meanwhile, the Great Powers endeavor to induce the Sultan to accept the original Vienna note.

In Constantinople incendiary placards continue to be posted.

A bitter feeling against England has been engendered among the Musselmen, and caricatures of that country are freely circulated.

The general feeling at Constantinople was, that the Sultan would make no further concessions either to Russia or the Powers. It was also rumored that the dispute between the English and French Ministers had been revived. The French Minister insisted that the fleets should come up to Constantinople, and Lord Radcliff objected.

A despatch from Vienna of the 20th, confirmed the report that Austria had broken out of the coalition. It declines to sanction the guarantee of non-interference on the part of Austria between the Porte and its subjects.

Another despatch from Vienna states that instructions had been sent to the English and French Ministers.

ENGLAND.—A public meeting has been held at Sheffield for the purpose of considering the unsettled and unsatisfactory state of the eastern question and the propriety of memoralizing the British government, urging it to take prompt and and decisive measures to cause the evacuation of the Danubean Principalities and to prevent Russia from again outraging justice and international law, by the forcible and warlike occupation of Turkey.

FRANCE.—Whatever may be the issue of the present Turkish difficulty it is generally believed the Emperor will not go to War. He is said to have expressed himself to that effect very recently. The reasons assigned for this determination is the inefficiency and the large amount of paper now in market.

Letters from French Guina of the 13th Aug. state that the Gavernor had found it necessary to declare the Island in a state of seige in consequence of disturbances, and accounts of rebellion committed on the Island of Lamere, one of the convict Islands.

AUSTRIA.—Mr. Jacobson, the U. S. Minister, had arrived at Vienna with Mr. Davenport, his Secretary.

A letter from Vienna of the 16th says Mr. J. will settle the Koszta affair.

# California News,

## Arrival of the Star of the west.

NEW YORK, Oct. 9—7 P. M.

The Star of the West arrived at 3 o'clock, having made the passage from San Juan in less than eight days. She brings the passengers by the Cortes, which left San Francisco at 12 o'clock on the 16th September. The steamship John L. Stephens, with the mails via. Panama, left on the same day at 9 o'clock A. M.

The Star of the West brings upward of 500 passengers, and $381,670 on freight, and over half a million in the hands of passengers.

John Bigler, dem., has been re-elected Governor by about 1,000 majority, and the rest of the State ticket by from five to ten thousand. Purdy, dem., for Lieut. Gov., leads the ticket.

In San Francisco, Capt. C. B. Garrison, agent of the Nicaraugua Steamship Co., dem., was elected Mayor by a large majority. The whole democratic ticket for city and county officers is elected, and both branches of the Legislature will be strongly democratic. It is thought the democrats will proceed to elect, this year, a U. S. Senator as successor to Mr. Gwin, although his term does not expire for upwards of two years.

The Rogue River Indian war has ended.

Gov. Lane, of Oregon, and Capt. Alden, of the U. S. N., were both wounded in an action with the Indians.

Lieut. Beale and his party had arrived safely at Los Angelos.

The people of San Francisco have adopted the revised charter, and also an ordinance authorizing the issne of bonds to the amount of $600,000, for building school houses, engine houses, &c.

The Nicaragua steamer Sierra Nevada arrived at San Francisco Sept. 15, with New York dates to Aug. 20.

Our latest dates from Honolulu are to the 18th of Aug. The small pox was still raging fearfully.

NEW YORK, Oct. 10.—The Illinois, from Aspinwall, with the California mails, arrived at 10 o'clock this morning. She brings 534 passengers, and nearly $1,520,000 on freight.

Dates from Rio Janeiro to August 26th, were received here, yesterday. Coffee was quiet, and but little doing. The bill approving of a contract made for the navigation of the Amazon, was adopted by the legislature on the 25th August.

☞ On Saturday evening the Hendrick Hudson, while on her way from Albany to New York, was run into near Poughkeepsie by a sloop and both vessels were so badly injured that they were run on shore to save themselves. No lives lost.

☞ The Railroad contractors are greatly in want of laborers to prosecute the numerous works now in course of construction in the vicinity of Chicago. They are offering as high as $1,35 and even $1,50 a day for road hands.

## European Grain Markets.

THE following remarks from the Mark-Lane (London) Express show that we may rely on a continued heavy demand for our breadstuffs all through the season:

The weather has for some days past been of the most unfavorable character; heavy rain has fallen in all parts of the kingdom, and a complete stop has been put to the harvest operations. Under these circumstances, it is not surprising that the depression which was caused by the large arrival of foreign wheat last week should have proved but transitory, more especially as the demand for wheat for shipment to France—which was checked by the steps taken by the government of that country about a fortnight ago in regard to the prices of bread in Paris—has again revived.

We are not in the habit of taking extreme views, indeed we have been frequently accused of an excess of caution; but in the present instance our readers will acknowledge that we have for months past pointed out the probability of a high range of prices for wheat. This we were indueed to do solely on account of the knowledge of the smallness of the breadth under culture, and the generally inauspicious nature of the seasons. What has since occurred could not be foreseen. That a large portion of the crop should be injured by rain, and remain in the fields in the middle of September, has greatly added to our difficulties; and it is now almost impossible to fix a limit to the upward movement in prices. If Great Britain had alone been visited by a bad harvest, the effect on prices would probably not have been important; but unfortunately the seasons have been much the same over the greater part of Europe.

The countries which in ordinary years would have been enabled to have afforded us supplies, are themselves in want of assistance; and so apprehensive have many of the foreign governments become of dearth, that the laws regulating the importation and exportation have been altered; restrictions on imports have been relaxed or wholly withdrawn, and exports, &c., all require supplies. In the countries bordered by the Baltic, stocks of old wheat are either exhausted or reduced into a very narrow compass, and supplies of the new crop cannot be available in quantity before the spring of next year. The rye harvest has turned out badly all over the north of Europe, and the potato disease is very prevalent; the consumption of wheat will therefore be greater than usual, and there will be less to spare for export.

It appears, therefore, that we shall have to depend mainly for our supply of Breadstuffs on the United States and Canada. Previous experience has proved that America cannot, as a general rule, export largely, unless prices in Europe are sufficiently high to cover the expenses of conveying the grain from a great distance in the interior to the seaboard. Fine weather for securing the remainder of the outstanding crops, and an amicable arrangement of the eastern question, might give a somewhat better complexion to affairs; but looking at matters as they now stand, there is reason to apprehend that a large portion of the population will, during the ensuing winter, have to suffer from a scarcity and consequent high prices of food.

THE SHOE TRADE.—The Boston Shipping List, of Saturday, says that the prospects of the trade was never more encouraging. The goods eannot be manufactured fast enough to supply the demand, and the season will close with no stock on the manufacturecs' hands. The shipments since January have been 190,000 cases.

☞ A collision occurred on the Hudson River Railroad near Tivoli, between the New York and Troy evening Express train and a cattle train.—The engine and tender of the former was smashed. The fireman, A. Tolan, was killed and the engineer, Pierson, was slightly injured. Several passengers were slightly wounded. Several cattle were killed.

☞ The steamer, Empire State, from Fall river, was run into on Saturday night, when off Plum Island by an unknown schooner, and so badly injured that she had to come to anchor. In the morning, the steamer Knickerbocker took her in tow, and brought her to this city. There were 300 pasengers on board, but none injured.

☞ It is stated that the blacks in Indiana begin to feel the pressure of the new constitution of that State. Those in Decatur and Franklin counties are selling out and going to Canada and Michigan.

☞ The Sunday law violators in Boston are being followed by a sharp stick. A determination is very properly manifested to close places unlawfully and unnecessarily kept open on the Sabbath.

☞ Seventy-five tons of Bibles and Testaments, or 150,000 copies have been circulated in Wisconsin, Minnesota and Northern Illinois, during the past six years.

☞ The corner stone of the new monument to Gen. Brock, at Queenston, will be laid on the 13th of October, at which time a grand military celebration will take place.

☞ At Quebec, on the 14th ult., a boy having left a candle burning in his bed-room when he went to sleep, a fire broke out, destroying between fifteen and twenty houses.

☞ S. S. Randall, Esq., late Deputy Superintendent of the Common Schools in this State, has been unanimously elected Superintendent of Public Schools in the city of New York.

☞ Senator Douglas, of Illinois, the embodiment of "Young America," owns a plantation and about one hundred slaves, in Mississippi.

## To Advertisers.

BREEDERS of Improved Stock, and all who have Domestic Animals for sale, will find the WOOL GROWER & STOCK REGISTER the best medium of communication with those most interested in Sheep, Cattle, Horses, Swine, Poultry, &c. It is also an excellent medium for general advertisers—all who wish to give their advertisements circulation throughout the country. Its wide and rapidly increasing circulation—coupled with the fact that it is the only stock journal in this country—renders it a most desirable and advantageous channel through which to reach those engaged in wool and stock husbandry, and kindred branches.

TERMS:—One Dollar per square (10 lines, or 100 words,) for each insertion.

# Marriages.

In this city, on the evening of Mouday, the 10th inst., in the Brick Church, by Rev. J. B. Shaw, D. D., Mr. GEO. A. HOFFMAN and HELEN M., only daughter of D. O. Crane, M. D., all of Rochester.

At the residence of Gen. Gould, on the 6th inst., by the Rev. Mr. McIlvaine, Mr. E. H. HOLLISTER and Miss SARAH E. GRANGER.

On Tuesday morning, the 4th inst, at the residence of the brides father, by Rev. J. Starkey, Mr. B. F. WALKER and Miss URSULA C., daughter of J. B. Smith, of Hermon, St. Lawrence co. Also, at the same time and place, Mr. N. E. BARNEY, of South Rutland, and Miss MATILADA A. SMITH.

# Market Intelligence.

RURAL NEW-YORKER OFFICE,
Rochester, Oct. 12, 1853.

FLOUR remains firm at our former quotations, though we hear of few transactions.

WHEAT has declined during the week, though we have had no foreign advices which would have a tendeucy to depreciate prices. High freights restrict transactions. The street price is $1,37½ to $1,40; we hear of sales of several large lots, at the latter figure within a day or two. Another steamer is hourly expected, and some lots are held awaiting the arrival.

Other articles as quoted below.

## NEW YORK MARKET.

NEW YORK, October 11.

Ashes—Pots firm at $5,87½; Pearls $5,50.

Flour, &c.—Better feeling in our market for Western and State flour, and prices are 6¼c. better. Eastern demand now quite active. The better grades are saleable. Canadian in fair demand and rather firmer at the close.—Sales at $6,87; $6,68@6,81 for common to good Ohio. Included in the sales are 2,000 bls. for delivery early in November, at $6,87½.

Grain—Wheat is a shade better. Prime Western is scarce and wanted for export. Sales good Michigan $1,55 @1,56; Southern white $1,49; good mixed Ohio $1,40; common to fair Ohio $1,41@1,49; good to prime white Canadian $1,50@1,52; choice white Genesee $1,60, part in store.

Oats—Better and in demand at 49@51 cts. for State and Western.

Corn—More plenty and easier. Sales at 83@81c for unsound; 84@85c for Western mixed; 86@87c for Southern white and yellow.

Provisions—Market for Pork firm. Sales mess $17@17,12; prime $13,50@13,75.

Beef—In good request at $7,50@11 country mess; $12 @13 city do.; $4,75@6,25 prime.

Cut meats, Lard, Butter and Cheese remain unchanged.

## ALBANY MARKET.

ALBANY, Oct. 11.—A good degree of activity prevailed along the Dock and Pier in the receiving and shipping of property. The up freights are so large that it is impossible to forward the railroad iron as fast it is received. The docks are now lined with it from Hamilton to Columbia street bruges, and it is even being plied on the Pier, much to the inconvenience of those doing business upon it

Flour and Meal—There is only a moderate business doing in the extra brands of Western and State Flour at previous rates. The low grades are heavy, and to effect sales coucessions are demanded. The eastern inquiry is confined to the better descriptions. The home trade are buying only to meet present wants. Sales ordinary to straight State $6,75@6.87; mixed Indiana and Mich. $6,75 @7; straight Indiana and Michigan $6,87@7; favorite State $7@7,12; common to good Ohio $6,87@7; fancy Indiana and Michigan $7@7,12½; fancy Ohio $7@7,12; fancy Genesee $7@7,12; extra Indiana and Michigan $7@7,25; extra Ohio $7,12@7,37½; extra Genesee $7,25@7,50. Corn meal and Buckwheat Flour are unchanged in value, and in good request.

Grain.—There is a fair milling demand for prime wheat, for which the market is steady. Sales inferior Genesee at $1,56; prime do. at $1,57½. Corn is rather easier, and is quiet at 84@85c for Western mixed. Barley opened dull and closed heavy, with only a moderate supply offering—For good two-rowed 78c was bid and refused; 80c was asked. Sales inferior four-rowed at 82c; prime do. at 87½. Oats are in good request at steady rates. Sales good to prime State at 48½@48¾c. Rye is quiet.

Feed—Nothing doing.—[Albany Journal.

## BUFFALO MARKET.

BUFFALO, Oct. 10.—The market for flour is quiet this morning with only a limited inquiry and below holders views. Sales fancy southern Ohio at $5,87½; good Michigan, in lots, at $5.75.

Wheat quiet and dull. The only sale we note is Milwaukie winter at $1,18.

Corn easier and market quiet. Sales at 66c. and two lots, at 67c.

Sales of barley at 60c. Market easy and dull.

Sales 2,800 bush. rye at 67c.

Canal freights dull. The river freights go up to-day to 18¾c. on flour, 5c. on wheat and 4c. on all other grain.—This causes an advance in through freights. Flour to N. York shipped at 95c. this morning, but $1 is the asking rate and has also been paid. Wheat 28@29c.; Corn 24c. Flour to Albany and Troy 83c.; wheat 25c.; corn 21@22c, and barley 20c.

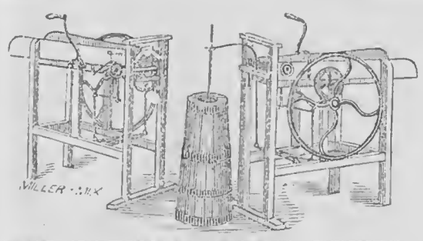
FARM FOR SALE.—The subscriber offers for sale his farm, in the town of Ledyard, Cayuga Co., N. Y., containing 100 acres of land, with good buildings and orchard thereon. Said farm is 3 miles from Cayuga Lake and 1 from the Ridge road at Talcot's Corners. Price $45 per acre. For particulars inquire of CHAS. W. SEARING, at Sherwood's, town of Scipio, Cayuga Co., N. Y.
197-3t*

SUFFOLK PIGS FOR SALE.

TWENTY PAIRS of pure bred SUFFOLK PIGS for sale by the subscriber. Also Breeding Sows. They can be safely forwarded by Railroad, Express, &c., to almost any part of the country. C. J. HOLDEN,
June, 1853. [186m3] Walepole, N. H.



THE PREMIUM STRAW CUTTER,
WITH CHURN ATTACHMENT.

THIS admirable machine is so constructed that it can be used for cutting hay, straw or corn stalks. The *adjustable mouth-piece*, peculiar to this machine, is so constructed that simply on the turning of a *nut* with the thumb and finger so adjusts as to keep the *cutting* part at all times in perfect order.

The CHURN ATTACHMENT, as will be seen in the above cut, is applied to the common dash churn—and is simple, perfect and labor-saving.

Wherever this machine has been on exhibition it has invariably received the *first premium*. It is now on sale by
JOHN RAPALJE & CO., Rochester.
JOHN PROUTY & Co., Geneva.
C. M. WIDRIG, Horse Heads.
Messrs. MESSEROLE & Co., Penn Yan.

Penn Yan, Yates Co., N. Y.

DUTCH BULBOUS FLOWERING ROOTS

THE subscribers have just received from Holland—imported to their own especial order—several cases of the above fine Flowering Roots, among which will be found the following kinds, viz:

| | |
|---|---|
| Hyacinths, | Crocus, |
| Polyanthus, | Jonquilles, |
| Double Narcisses, | Double Ranunculus, |
| Iris, | Colchicums, |
| Snow Drops, | Amarylis, |
| Anemones, | Gardeu Lilies, |
| Crown Imperials, | Scillas, |
| Tulips, | Gladiolus, &c., &c. |

Most of the above will flower either in pots or glasses, in doors, during the winter, with the least possible attention as to culture. The flowers are highly scented, and make the most beautiful parlor ornaments. They are also very desirable for planting out of doors, in borders or small beds. Being quite hardy, they never fail in producing their beautiful flowers early in the spring.

A great variety of Hyacinth Glasses, Fancy Flower Pots, Crocus Pots and Baskets, Vases, &c. Bird Cages and Glasses, Canary Seed, &c. For sale by
H. C. WHITE & CO.,
Sucessors to MASON & LOVERING, Buffalo Agl. Warehouse and Seed Store, Nos. 11 & 13 West Seneca Street, Buffalo, N. Y. 198-3t.

WALWORTH NURSERY.

THE subscriber has for sale
20,000 choice Apple trees, some quite large.
20,000 Dwarf Pear trees.
10,000 choicest varieties Peach trees.
1,000 large Mountain Ash.
2,000 Horse Chestnut.
3,000 very fine Balsam Fir.
All trees sold at the LOWEST rates, and Catalogues furnished to applicants. No charge for carrying packages to Railroad.

POLAND OATS.—MEXICAN POTATOES.

I can supply orders for the celebrated Oats which weigh 42 lbs. to the bushel at one dollars. Aud also, the Mexican Potatoes at the same price.

Orders will be supplied in the order of their date.
T. G. YEOMANS.
Walworth, N. Y., Oct. 10, 1853. 3t198

MORGAN STALLION FOR SALE.

THE subscriber wishes to make a change in his business, and for that reason offers for sale his thorough-bred Morgan Stock Horse, MOUNTAIN EAGLE. Sired by old "Sherman Morgan," dam "Lady Empress." He is well known in Jefferson, St. Lawrence and Lewis, as the best stock horse ever in those counties. Mountain Eagle was awarded the first premium at the Jeff. Co. Fair in 1852, and at the last Fair (1853,) "a Certificate as being the best stud horse shown on the ground."

For further information call upon or address
198-1t* M. L. HUNGERFORD, Watertown, N. Y.

PURE BRED SUFFOLK PIGS.—The subscriber has a few pairs of pure bred Suffolk pigs for sale. Also an imported Selisian buck.
198-1tw2tw* REED BURRITT.
Burdett, Tompkins Co., N. Y., Oct. 10, 1853.

MT. MORRIS DRAIN TILE WORKS.—The subscriber is extensively engaged in manufacturing the various kinds of Draining Tile. Horse Shoe and Sole Tile at from $12 to $16 per 1000 pieces. These tile are superior—more than a foot in length—and fully equal to any of either Foreign or American manufacture. Large Tile, for drains about dwellings, yards, &c., at $6 per 100.

For sale at the Factory in Mt. Morris, and by E. D. HALLOCK, Exchange st., Rochester.

☞ PEOPLE'S COLLEGE OF THE STATE OF NEW YORK, INCORPORATED APRIL 12, 1853.—This Institution has been chartered by the Legislature of this State, for the purpose of reducing the expenses of Academic and Collegiate Education, and thereby open the Halls of Science to all classes of society by reducing the cost of tuition, board and clothing, and enabling the student to defray the greater part of the expense in labor.

Provision will be made to educate young men corporeally and mentally for specific purposes, by pursuing full and definite courses of study for each of the pursuits represented in the College—either Agricultural, Mechanical or Professional—and thus graduates will be qualified for entering at once upon the business of their choice.

At a regular meeting of the Trustees named in the Charter, held at Owego, on the 25th day of May, the following appointments were made:

D. C. MCCALLUM, of Owego, President of the Board of Trustees.

A. I. VYNKOOP, of Chemung, Vice President.

TRACY MORGAN, of Binghamton, Treasurer.

HARRISON HOWARD, of Lockport, Secretary and General Agent.

Agents are being commissioned in each county of the State, that the people may have an opportunity to contribute to the capital stock, which is distributed in shares so small that every individual may become interested in an institution which commends itself to the favorable consideration of every intelligent person.

For further information upon the subject, application may be made, post-paid, to the Secretary, who will send a pamphlet containing the act of incorporation and objects of the Institution, and other needful information.
188-tf H. HOWARD, Secretary.

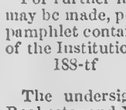
The undersigned, having been appointed Agent for Rochester and Monroe county, will be most happy to furnish any new information desired, in reference to the College, to receive stock subscriptions, (the shares are one dollar each,) or to address audiences, on invitation, explaining at length the plans and objects of the People's College, and also as he views the idea of a true education.
Respectfully, G. F. NEEDHAM.

NEW YORK STATE AGRICULTURAL COLLEGE.

AT a meeting of the Trustees of the State Agricultural College, on the 21st Sept., 1853, it was resolved, to arrange and prepare the Veterinary department of the College, simultaneously with the carliest courses of instruction; and that every subscriber to the funds of the College be and hereby is declared to be entitled to the use of the Hospitals of the said department, for all Medical or Surgical treatment, necessary and proper for such diseases or accidents as may atllict any animal belonging to the said subscriber: to be subject to such rules and regulations as the Trustees may from time to time appoint and direct.

No cost or charge shall be made for Medical or Surgical advice or treatment. The necessary expense for the sustenance of animals received into the Hospitals under this resolution, shall be paid by the proprietors of the animals respectively. By Order.
197-4t J. W. BACON, Sec'y.

MARSHALL'S BOOK BINDERY,



BURNS' BLOCK corner of State and Buffalo street, over Sage & Brother's Bookstore, Rochester, N. Y.

Music Books, Pamphlets, Periodicals, &c., bound in plain and fancy bindings; old books rebound; Blank Books ruled to any pattern, and bound to order; Public and Private Libraries repaired at short notice. Packages containing directions for binding, punctually attended to.

N. B.—All work warranted, and done at low prices.
April, 1852. [122tf] F. H. MARSHALL.

Mexican Wild Potatoes, Poland Oats and English Potato Onions.

THE articles above named are undoubtedly the best varieties now known and cultivated in this country. Mr. A. HALE, of Alloway, N. Y., has the honor of introducing the Mexican Potato. He planted 4 small potatoes not exceeding 3 inches in length and one inch in diameter, obtained from a returned soldier; each successive product has shown an increase in size and beauty, until it is no uncommon thing to find tubers 8 to 9 inches long and about 2 inches thick, as white as the whitest aud as good as the best.

The Poland oats are universally approved where known, I have had several reports of the produet from the half ounces sent out last Spring to 21 of the States and Territories of this Union; all express themselves in high terms of the quality and productiveness.—Product ranging from 1 quart to 6 quarts from the half onece by mail, and many have ordered them by the bushel this fall.

The Potato Onion is also in request, and I am receiving inquiries almost daily in regard to these and the articles above named. The crop as far as I have been able to ascertain, will be a good deal short of the demand for seed, for each of these articles. What I have to spare is offered in the advertisements below. I. W. BRIGGS.

A Rare Opportunity to Procure Rare Seeds.

THE subscriber will, for a pre-paid order containing One Dollar, send by mail, free of postage, 20 papers of seeds from the following catalogue:

Japan Pea, Butter Bean, Buena Vista Bean, Apple Squash, Sweet Potato Squash, Mammoth do., and 2 other varieties, California Pumpkin, California Melon, Adams's Early Corn, Stowell's Evergreen do., a large Sweet Corn, three varieties of Pop Corn, (small,) Spanish and Connecticut River Tobacco, Mountain Sprout Watermelon, Mountain Sweet do, Spanish do, Long Island do, and several varieties mixed, Citron Nutmeg, Round Green do, and the Long Golden Muskmelons, Carnation, Clover and Bockhara do, Perrennial Rye Grass, Potato Seed, Mammoth Red Tomato, White Vegetable Egg, and Double Sunflower. I. W. BRIGGS,
West Macedon, Wayne Co., N. Y.

Potatoes, Oats and Onions.

THE subscriber offers the following products delivered on board cars or canal boats:

Poland Oats at $2 per bushel, or $6 per barrel, containing about 4 bushels.

Mexican Wild Potatoes at $2 per bushel, or $5 per bbl. containing about 3 bushels.

English Potato Onions at $2 per bushel, or $5 per bbl.

No charge for packages. Money promptly returned by mail if I am unable to fill your order.
Address I. W. BRIGGS,
West Macedon, Wayne Co., N. Y.

SAMUEL MOULSON,
AT THE OLD ROCHESTER NURSERY.
Office, No. 36 Front St., Rochester, N. Y.

IS prepared to furnish inventories, to post-paid applicants, of the present very extensive stock of Nursery items, consisting in part of
120,000 Dwarf and standard Pear Trees.
90,000 Apple Trees.
50,000 Peach Trees.
30,000 Plum, Cherry and Apricot Trees.
Over 100,000 Hardy Evergreens.

Also, extra large Northern Spy Apple Trees, Dwarf and Standard Pear, Cherry, &c., &c.

Also, for immediate effect, a large quantity of extra sized Ornamental Trees, among which are fine specimens of Norway Spruce, Silver Maple, Pawlonias, Catalpas, Mountain Ash, Horse Chestnut, &c.

And a fine selection of Weeping Deciduous Trees, Ornamental Shrubs, Hybrid Perpetual Roses, together with such novelties as may be classed strictly hardy. Also a very limited assortment of half hardy plants of small size, such as Cryptomeria Japonica, Cedrus Deodara, &c., &c.

The amateur wishing prime fruits of well established repute, or the agriculturist needing fine cropping, thoroughly tested varieties, may rely upon the most careful execution of their orders.

The Ornamental items are entirely grown in the Nursery, consequently none of the heavy losses are sustained that usually occur to recent imported subjects.

The Evergreens are very robust and admirably furnished to the surface of the ground, none presenting the naked stems usual to imported plants.

Dealers are invited to give a call before making their purchases.

☞ Peach and Plum pits wanted.
September 1, 1853. 196-tf.

Ornamental and Domestic Poultry.

THE subscriber having invested a large amount in this business, is now prepared to fill auy orders which he may receive. The celebrated Brahma, Sumata, Game, Palmer, Marsh and White Shanghais, with many other popular varieties, are from the yard of C. C. Plaisted, Esq., Great Falls, N. H., and of course cannot be surpassed in the world. My Imperial Cochin China Fowls are from Col. B. P. Johnson, his stock imported last year, '52, from the best breeders in England. All who well know Col. J., will understand that he has the best or none. My black Spanish are quite late, and will not be ready for market before next spring. They are from Mr. John Giles, late imported, the best blood in the country. These birds are so fast coming into repute that the price will doubtless run high for some years to come, as will also be the case with the Brahma, Sumatra, Game, &c. All persons purchasing fowls from me, can enjoy the benefit of my advertising, in case they wish to sell Chickens next year.

I am quite sure that our southern and western fanciers can be better suited here than farther east, as the long distance on railroad much injures the health and growth of the fowls.

As there are many fowls in market which have no claim upon the public favor, I will give my patrons something more tangible than my own words, for

"If self the wavering balance shake,
It's rarely right adjusted."

I am therefore permitted to refer all who entertain any scepticism, to the following gentlemen:—Col. B. P. Johnson, Secretary N. Y. State Agricultural Society, Albany, N. Y.; Hon. Ambrose Stevens, N. Y. City; Hon. Lewis F. Allen, Black Rock, N. Y.

Address O. B. EVANS, 214 Main street,
194-3m Buffalo, N. Y., Box 1662.

THE JUVENILE INSTRUCTOR,
BY UNCLE LUCIUS, Syracuse.

A SEMI-MONTHLY PAPER, expressly for children. It aims to attract their attention by simplicity and beauty of style, and to infuse into the young mind appropriate sentiments of piety and love for parents—sympathy for human suffering, and an abiding hatred of oppression in all its forms. It ought to be circulated over the entire Union, for this last reason. There is much at stake in the question of freedom, and but little said or done to effect favorably the youthful mind. Within the State of N. York, the postage is 6 cents per year, paid at the office where it is received. In all other States, 12 cents yearly. In packages of 24 or more the postage, if pre-paid at the office of publication, is about 4 cts on each paper.

Price per year—single copies, 25c.; Five to one address $1; Ten do, $1,70; Twenty do, $3; Thirty do, $4,20; Fifty do, $6,50; One huudred do, $12.

Address LUCIUS C. MATLACK,
183m3. Syracuse, N. Y.

Buffalo Agricultural Warehouse and Seed Store.

# Poetical.

Written for the Rural New-Yorker.

### THE HEART'S CHOICE.

I ask not for a store of gold,
For gems to deck my brow,
Where worldings pay their hollow vows
My spirit will not bow.
O, when the heart is throbbing wild,
And earth is dark and lone,
Can wealth restore the vanished light,
And wake dead music's tone?

I ask not for the laurel wreath,
The poet's living crown,
For lightly though it seem to press
'Twill weigh the spirit down.
When o'er the loved one's early grave
The bitter tear drops start,
To know the lips are touched with fire
Will never heal the heart.

Let love be mine, and love alone,
'Tis all of earth I ask,
I will not hide a trusting heart
Beneath deceptions mask.
I will not waste in empty forms
The wealth which God has given;
Let me be loved by friends on earth
And loved by Him in Heaven. JENNY.

# Rural Sketch Book.

[Contributed for Moore's Rural New-Yorker.]

## NIAGARA MEMENTOES,

### FOR THE LOVED ONES AT HOME.

CLIFTON HOUSE, August 26, 1853.

My heart to-night is overflowing with affection and good will. I feel an irresistible desire to do something for the pleasure of those I love,—to somehow make them share with me my present happiness.—Supremely above all others my heart goes out to you, friend of my youth, companion of my womanhood, and sharer of my every joy and sorrow. I think of you in our far-away western home, in our woodside cottage. Week after week pass away unblest by the presence of her you have ever called the "light of your life." And all this long deprivation you cheerfully bear, that she may gain that best boon of life—health. May future years of life and health reward us for this trial!

To that youthful sister, too, my heart goes out. She who left her delightful home in the gay metropolis, with all the appliances of ease and refinement around, and summer journeys and pleasures in prospective—all, to take the place of her invalid sister. I long to see how your household and farm-ward, and child-ward cares become you! I'll venture that you have talked more baby talk than French, and have skimmed more pans of milk than you have read pages of German, and have read more "Rollo books" and "Swiss Robinsons" to the little people, than Rollin or Macauley to yourself. But never mind, sister, if the business of your present life is not perfectly charming to one of your years—believe me, you'll never regret it. The experience of this summer will go with you through life. It will make you more of a woman than any school or training you could have. For some time past you have been a recipient of thoughts and ideas from books and instructors. In this school your intellect and heart will expand, will develop to a maturity that will surprise you, when you come to look back upon this present as a part.

As to your physique, I hope you will grow so robust that you will hardly dare show yourself in city society. If fullness of form and the rosiness of health will render you so agrestical as to exclude you from the charmed circle of fashion, I trust you will not, to avert so dire a calamity, stint yourself of pure fresh air and active exercise.—Then, too, you will have through life the boundless gratitude of your sister, who could never have left in any other hands all she holds most dear;—no, she would have died at her post of duty, ere she would have left her all in the charge of hirelings. When restored to my home, and able to perform my household, wifely and motherly duties with the energy and discretion of former days, how much we shall all thank her who has thus made a whole family happy! You say your cares are sometimes perplexing and fatiguing, but that you forget them in the pleasant evening hours with your good brother-in-law. Now, now, take care, sister, or I shall be *so* jealous!—oh no! not jealous, but envious. I admire your good taste—and long to know those pleasures by sweet experience once more.

My heart goes out to you, my troop of little ones! You are a part of my life, my very being, and the love I bear you is too deep for words. How it will glad you to hear mama talk about Niagara—about New York and Boston, and all the places of interest that, mayhap, I shall see before my return. You, my first born, my June boy, you can't boast that you and papa have been on the "Maid of the Mist," and the Suspension Bridge, and that mama hasn't.

How impatient your little hearts are at mama's long absence, and you wonder why she must stay so long at the Water-Cure. But when the absence is past, and we are all happily together again, how glad you will be for this absence. You will hardly think it the same mama that used to lie upon the lounge, so pale and so tired after every exertion. My thoughtful IDA will have no need to ask every morning, "How do you feel mama?"—and "is your head any better?" Nor will she be so pained when she sees me stepping about the house, and entreat so earnestly—"Mama, please lie down a little while; you know you always get sick when you do so much at once."

Oh! won't you be delighted when you find mama can walk down to the "prairie," or to the "marsh," or to the "openings," with you, or run a race down the hill to the "spring?" Does FLORENCE'S pussy follow you in all your long rambles yet? Won't she mew with astonishment when she finds mama going too! And the little Badger boys, can they walk so far?—will they cry if we leave them behind? Couldn't we draw them in the little wagon till we came to the woods, and then let them learn to scramble through the bushes?

How strange! that here, amid so much beauty and grandeur, and exciting pleasure my heart should wander away to Badger land! What an aberrance! when I meant to write you about Niagara, and not so much about myself and yourselves. Somehow all my packs and plunges and douches haven't cured me of such erratic wanderings. But what mementoes of Niagara can I bring you, or send you thence? Here we have all sorts of Indian curiosities formed of beads, skin, bark, fur, wood and sinew.—We have little sculptured images from the fallen table rock, &c., &c.

Will you have pressed and dried flowers from the different points of interest for your *hortus siccus*, or specimens of the geological curiosities here abounding for your cabinet? Shall I catch you the spray that rushes over one as they explore the cave of Eolus?—or the foam that rises on the bosom of the rage-spent waters?—or bottle you some of the sea-green fluid?—or twine you a wreath from the rainbow, or transfer its changing hues as it brilliantly and gracefully arches from the edge of the cascade fall till it rests upon the rocks below? Ah I fear I am in too egotistical a mood for any of these things to-night. Let me bring you the thoughts of my heart, the emotions of my soul—let me mingle them with my talk of Niagara: to you my best friends I know nothing could be dearer.

Here I enjoy the surroundings of art, wealth and luxury, in this well-ordered house. Here is perfect management and quiet performance. No noise and confusion to disturb one's quiet thoughts—to wake one from bright dreams, sweet worshippings of that which they came hither to enjoy. Near me are the parks and gardens of this establishment, with their well kept lawns, neat walks and handsomely arranged flower beds—well lighted by gas in every part.—In the adjoining parlor one may feast their eyes on natural and artificial beauties to their hearts content. But from these all I turn with a careless eye. Let me walk upon the broad verandah, or leaning against the balustrade, let my eyes wander from the rapid far above to the deep dark waters far below. Here, at one view, I take in the the whole of this most sublimely beautiful of Nature's works. The terrible voice of the tremendous torrent falls upon my ear, agreeably modulated and softened by the intervening distance. Dark deep woods, frowning gray rocks, and fearful precipices, stand out in the clear star-light. Oh, I could dwell forever 'mid scenes like this! I should never tire. It seems to me my heart would be better,—noble aspirations would always swell my soul,—no groveling tho'ts or angry passions would mar the character's symmetry which held unbroken communion with sublimity, beauty and grandeur.

The spray from Niagara still damps my brow and hair. The vibrations from the Cataract jar even this immense edifice. Yet my thoughts are straying—my heart is wandering. Ten years back I wander, when, close by thy side, friend of my youth, we traversed every spot in this vicinage. Here, when life was opening with all its bright anticipations, we paused as upon a stand point, and looked backward and forward, yet failed not in enjoying the then present. What a happy week that was at Niagara!—we shall never forget it, shall we? Its pleasant incidents will remain with us, and sweeten many an after hour, while memory and reason own their sway. Such pleasures, to us, are "joys forever." We will not gloomily or morosely contrast them with *any* present—but, rejoicing that they have been, live them over again.

How I tried, in my rambles to-day, to tread the same paths we trod together—to press my feet upon the self-same rocks—to look upward to the same heights. Ten thousand other foot-falls may have worn off the impression of our steps, but there was a pleasure in thus arousing old associations. Oh! how happy I was, after years of feebleness and confinement, to ramble about at my own will! Do you remember how we spent a whole day on Goat Island, wandering through its woods—gathering flowers, and enjoying its different points of interest? Remember you the tower on Prospect Island, and how we walked out on the timbers projecting over the falls, and stood hand in hand with the waters rushing around and downward below us? Those timbers are gone now. How many happy hours we spent in climbing banks and scrambling over rocks; no spot was too rough or unsafe for my feet and strength; I was well then,—shall I ever be so again? I *feel* as young now, and just as impulsive, but enfeebled strength binds my feet away from all daring exploits. There was the little Iris Island—how freshly every little nook and crevice rose up before me, where we gathered ferns and maiden tresses!

Do you remember that large rock a little way out in the stream, near the foot of the horse-shoe fall? We gained a seat there, and with the waters dashing around us, set a long time looking upward at the liquid wall above. The wild waters seemed to have spent their fury in the mad leap, and were weary of rage and effort, and here they heaved up in heavy, sullen swells, like liquid marble; and not for some distance does this dead-white break and become diversified by the spots of deep green, which hue peculiarly marks Niagara's waters. How different were my emotions now from those I then experienced! Then I was all shut up in myself—I could not speak, and hardly wished to hear even your voice. Now it seemed like a familiar scene, and one on which I was accustomed to look. Do you remember how you declared yourself jealous, as I sat wrapped in intense delight? I told you if you began to be jealous so soon, I pitied you; for I was quite determined to admire the sublime and beautiful wherever they crossed my path, quite independent of the lordly specimen who was henceforth to walk by my side. But I reckon you have bravely got the better of your jealousy—for I have heard you express no such feeling toward the Green Mountains, or Lake George, or the Palisades—or the beautiful lakes that gem our own adopted State, or the many other beauties I have since gazed upon with admiration. You have doubtless found ere this, that on the deepest, largest, richest, holiest altar of my heart devoted to human love, is shrined your love irretrievably, immovably, and that nothing earthly can shake its foundations!

We rode down to the Suspension Bridge on the American side, and crossed on those wonderful wires of Ellet. From the raging waters, some two hundred feet below, how like threads of gossamer must they look! I longed to go down to the whirlpool, and visit the woods and banks where we rambled so long ago.

Do you remember one evening we had been reading "Ten years ago," or lines of a husband to his wife on the tenth anniversary of their marriage? The first stanza so saddened my young, joyous heart, that I could scarcely see the deep happiness and bliss the last stanza portrayed. A sort of feeling that our present perfect happiness would not remain unbroken for ten years to come, seemed to haunt me in my dreams, and you said I waked you with a somnambulistic proposition that we should "go and jump off," and then we would have no "ten years to sing about." Had we taken any such Sam Patch leap, either accidentally or intentionally, we should have deprived ourselves of ten years happiness that will go with us through life, and into the future as long as eternal ages roll on. Then, too, in that event there would have been five less immortal beings to enjoy the beauties of this world, and share the joys of another and better.

Very thankful am I to Dr. and Mrs. GLEASON, who accompanied me, and rendered me so much assistance in climbing and walking. I have thriven well under their kind care, and right glad I know would they be to send me from their "Cure" with a rejuvenated physique, to that home where a well, strong mother is so much needed. We had a pleasant ride on the Railway. A lively company of young people went from Elmira. Though all utter strangers to me, this did not hinder me from enjoying their mirth, which in the first part of the ride kept bursting forth—bubbling up from the unsaddened spring of youthful joyance—now in witty sallies—now in silvery laughter. I love the gay, light-hearted, care-free laugh of youth. But by and by, inasmuch as they had risen before the dawn, they began to grow quiet, and sundry shawls for pillows were in requisition—and soon every head was quiet as a drooping lily. Then the smooth, shining bands and glossy ringlets began to look like a bed of flowers that the rude winds had roughly passed over—and mirth, and wit, and repartee were all hushed.

For me, I enjoyed our excursion with the enthusiasm of former days—though feeble strength did not permit me to give tangible evidence of *all* the exuberant joyance that was swelling in my heart.

——"I'm proud to think
That each pure joy fount loved *of yore*,
I *yet* delight to drink."

ELSIE.

### DEFINING AND EXPLAINING WORDS.

LYMAN COBB, in his Lexicon of the English Language, has a most excellent tact in defining and explaining words—which are differently *spelt*, but alike in *pronunciation* by the introduction of anecdotes. For instance, the word.

"MADE, *v. a.* make.

MAID, *s.* an unmarried woman.

"Counselor Green, during his cross examination of a prevaricating *old female* witness, by which it was essential to prove that a *tender* of money had been *made*, had a scrap of paper thrown him by the opposite counsel, on which was written,

"'Garrow, submit. That tough old jade
Can never prove a *tender made!*'"

Another:

"To, *prep.* noting motion toward; as far as.
Too, *ad.* likewise, also.
Two, *a.* one and one; twice one; a couple.

"*Three* gentlemen meeting to sup at a hotel, one of them wished for partridges—A brace was accordingly brought, which he was requested to carve. On this, he took one to himself, and left the other for his friends. 'Hold,' cried one of them; 'that is not fair.' 'Perfectly fair, I think,' said the gentleman; 'there is one for *you two*, and here is one for *me too*.'"

A third.

"COUSIN, *s.* an uncle's child, or aunt's child.

COZEN, *v. a.* to cheat, to defraud.

"Call me *cousin*, but [illegible]."

DEFERENCE TO THE WELL DRESSED.—The medium between a fop and a sloven is what a man of sense would endeavor to keep; yet I remember Mr. Osborn advises his son to appear in his habit rather above than below his fortune; and tells him that he will find a handsome suit of clothes always procures some additional respect. I have, indeed, myself observed that my banker ever bows lowest to me when I wear my full-bottomed wig; and writes me "Mr." or "Esq." according as he sees me dressed.

A FRENCHMAN, stopping at a tavern, asked for Jacob. "There is no such person here," said the landlord. "'Tis not a person I want, saro, but ze beer warmed with de poker." "Well," answered mine host, "that is flip." "Ah, yes, sare, you are in de right; I mean *Philip*."

IRISH WIT.—An Irish cab-driver made a very happy and characteristic reply, the other day. A gentleman had replied to Pat's "Want a carriage, sir?" by saying "No I am able to walk;" when pat rejoined, "May your honor long be able, but seldom willing.

A PREACHER once said, that ladies were very timid; they were afraid to sing when they were asked; afraid of taking cold: afraid of snails or spiders—but he never knew one afraid to get married.

IF you put two persons to sleep in the same bedroom, one of whom has the toothache, and the other is in love, you will find that the person who has the toothache will go to sleep first.

# Youth's Corner.

"Attempt the end, and never stand to doubt;
Nothing's so hard, but search will find it out."

### MISCELLANEOUS ENIGMA.

I am composed of 18 letters.
My 1, 14, 3, 3, 18, 8 gentlemen sometimes get.
My 12, 2, 13, 15, 18 some people have plenty of.
My 12, 7, 4, 11, 9 we sometimes feel.
My 4, 13, 6 is a curse to community.
My 3, 5, 1, 18 flies swiftly.
My 17, 16, 8, 8, 18, 11 we are sometimes in a hurry for.
My 1, 10, 8, 18, 9 is frequently wasted.
My 15, 7, 13, 12, 5, 8 is a relative.
My whole is frequently the result of love.

Farmer, Sen. Co. DOLLY.

### A POETICAL SUM.

On the fourth of July a pole was erected,
Composed of six pieces, and nicely connected:
Two feet and six inches it measured around,
On the place where it stood at the top of the ground;
Its form was a cone, in surface complete,
The height of the same was twice sixty feet.
What length of inch ribbon, procured at a shop,
Will bind round the same from bottom to top,
And have it lie smooth and plain to be seen,
By leaving a space of five inches between?

Lysander, N. Y., 1853. S. EATON.

AGENTS WANTED!

THE CASKET is now fairly established, and the success of the enterprise beyond doubt, which enables the publishers to enter with renewed vigor into measures for extending its circulation. We feel very thankful for the many flattering compliments which we are daily receiving from private letters and the press, all of which agree in pronouncing the Casket the

Cheapest Juvenile Magazine in the World.

And that all our little friends, that every boy and girl may have the pleasure of perusing our magazine, we want *Ten Thousand Agents* to canvass for, and circulate the Casket, in every school-district, town and county, in the United States and Canadas, to whom a liberal percentage will be given. Specimen numbers furnished *gratis* on application. Send for one number and circulate it among the *little folks*, and you will confer a greater blessing than distributing gold and silver. Try it.

Address, *post-paid*, BEADLE & BROTHER,
*Buffalo, N. Y.*

AGRICULTURAL MACHINES, &c.

Railroad or Endless Chain Horse-Powers, Threshers and Separators,

WARRANTED equal to the best. A large number has been sold, giving the most perfect satisfaction.

PORTABLE CIDER MILLS

for hand or horse-power, the best article for the purpose yet made.

IRON AND WOODEN CORN SHELLERS

from $7 to $12, the best in use.

IRON AND WOODEN SAUSAGE MEAT CUTTERS, AND SAUSAGE STUFFERS,

great labor-saving machines, and such as every family or neighborhood should have.

STRAW AND HAY CUTTERS.

A fresh and large arrival of the best styles and manufacture.

The above for sale by the subscribers and on terms that will make it an object for all who want, to purchase of them. It will cost no thing to call and see if this statement is not correct. Then do so. We can do business on small profits. BRIGGS & BROTHER.

MOORE'S RURAL NEW-YORKER:

A WEEKLY HOME JOURNAL,

For both Country and Town Residents.

PUBLICATION OFFICE,

BURNS' BLOCK, CORNER STATE AND BUFFALO STS.,

ROCHESTER, N. Y.

TERMS, IN ADVANCE:

TWO DOLLARS A YEAR—$1 for six months. To Clubs and Agents as follows:—Three Copies one year, for $5; Six Copies (and one to Agent or getter up of club,) for $10; Ten Copies (and one to Agent,) for $15; Twenty Copies for $25, and any additional number, directed to individuals at the same rate. Six months subscriptions in proportion.

☞ Subscription money, properly enclosed, may be sent by mail at the risk of the Publisher.

Terms of Advertising

ONE DOLLAR per square (ten lines—100 words, or less,) for each insertion—*in advance*. ☞ The circulation of the NEW-YORKER is much larger than that of any other newspaper published in the State, out of New York city. Only a limited space, however, is devoted to advertisements, and hence preference is given to those most appropriate—such as the cards and notices of dealers in Agricultural Implements and Machinery,—Horticulturists and Seedsmen,—Booksellers and Publishers,—Inventors, etc. All orders by mail should be accompanied with the cash.

To enable us to accommodate as many as possible, brief advertisements are preferred. Patent medicines, &c., will not be advertised in this paper on any terms.

☞ All communications, and business letters, should be addressed to D. D. T. MOORE, Rochester, N. Y.

THE WOOL GROWER AND STOCK REGISTER.

THIS is the only American Journal primarily devoted to the interest of Wool and Stock Growers, and should be in the hands of *every owner of Domestic Animals*. It is ably conducted, published in the best style, and finely illustrated. Each number contains a careful Review of the Wool and CATTLE MARKETS, and much other *useful* and *reliable* information which can be obtained from no other source. The Fifth Volume commences with July, 1853.

TERMS:—FIFTY CENTS A YEAR; Five Copies for $2; Eight for $3; Eleven for $4. Back volumes, bound in paper, at 40 cts. each,—unbound at 35 cts., or three for $1.

Published monthly, in octavo form. Specimen numbers sent free. Money, properly enclosed, at our risk.

Progress and Improvement.

### COOKING FEED FOR HOGS.

AT the U. S. Ag. Soicicty's Annual Meeting, J. J. MAPES of the *Working Farmer*, stated that "there was the great fact that 18½ lbs. of cooked corn-meal would produce as much meat and muscle as 50 lbs. of uncooked. But farmers would not believe this without endorsement from a respectable source."

Every one must admire the fractional accuracy of this important statement. Some few, however, would be disposed to doubt the fact, although so confidently stated by the Professor, and "endorsed" by the U. S. Ag. Society. It is generally admitted that cooked food is more nutritious than uncooked. We were on a farm a few days since, near this city, where wind-fall apples, pumpkins, &c., are regularly cooked and mixed with barley, pea, or rye meal, schreenings of wheat, &c., for feeding hogs. The farmer had no doubt, from long experience, that his hogs fattened much faster on this food than when fed on uncooked food. But will it pay? That depends, to a great extent, on the price of food. If corn is worth but 25 cents per bushel, it is plain that it will not pay to expend much money either for cooking or crushing it; but where food is high a small quantity saved pays for considerable labor, &c.

The object of cooking is to render the food more soluble, more readily assimilable, or, in other words, easier of digestion. The advantage of cooking potatoes, beets, turnips, corn, or any other food containing a large amount of starch, sugar or other *available* organic substances, is we think, less than when straw, chaff, clover and timothy hay, oats, barley, or any food containing much of woody fibre or other insoluble substances, is employed. We are not aware of any experiments that show that this opinion is correct, yet there are some that point that way. When conducting some experiments on sheep feeding at Rothamsted we found that crushed barley, soaked for thirty-six hours in cold water before using, gave more increase of animal than when not soaked. On the other hand, crushed malt, soaked in the same way, did not increase the weight of the sheep so much as that not soaked. The figures are: four sheep, in ten weeks, eat 280 pounds of crushed barley *not steeped*, and 3,867 lbs. of mangel wurzel, and increased in live weight 81 lbs.; while four sheep with barley crushed and *steeped*, eat 280 lbs., and 5,321 lbs. mangel wurzel, increasing 101½ lbs. Four sheep with crushed malt *not steeped*, eat in ten weeks, 227½ lbs., and 3,755 lbs. mangel wurzel, and increased 84 lbs.; while four sheep with malt crushed but *steeped*, eat 226½ lbs. malt, and 4,458 lbs. mangel wurzel, and gained only 78 lbs. In the process of malting the starch of the barley is converted into sugar, which is much more soluble than starch, hence the soaking of barley is attended with much benefit, while malt is better dry.

We have been led to these remarks by seeing some experiments in the *Irish Farmers' Gazette*, on fattening hogs on cooked and uncooked ruta bagas. Eight hogs were selected and divided into two lots, as evenly as could be, and put in to fatten on the 27th Nov., 1852. Each lot was fed regularly three times a day, having each 12 lbs. of bran and barley meal, the only difference being that one lot had steamed ruta bagas, and the other pulped ruta bagas. The experiment was continued 39 days; the lot having *cooked* food, eat 468 lbs. bran, &c., and 10,920 lbs. ruta bagas, and increased 103 lbs.—while the lot having *uncooked* food eat 468 lbs. bran, &c., and only 5,460 lbs. of ruta bagas, and gained 110 lbs. It will be seen that the lot with cooked food eat more than as much again ruta bagas as the lot having uncooked, and at the same time did not gain so much in weight by 7 lbs.

We are afraid to trust those figures in regard to the amount of ruta bagas eaten, yet we see no reason to doubt the fact that the hogs on uncooked food increased more than those fed with cooked food. Ruta bagas contain at least 88 per cent. of water, and when animals are fed exclusively on them, or have a *limited* amount of other food as was the case in the above experiments, they are *necessarily obliged* to take into their systems more water than is conducive to health or the accumulation of fat. It is probable that the steamed ruta bagas contained the most water, and hence a larger quantity of water was taken into the system, rendering a larger amount of carbonaceous matter necessary to keep up the animal heat, and hence the hogs on cooked, eat so much more than those on uncooked food. In fattening hogs with roots of any kind it is advisable to give them nearly as much meal, or whatever dry food is used, as they will eat, letting them obtain the water they require from the roots. If this had been done we believe the above experiments would not have resulted so much in favor of uncooked food.

### BRITISH AND AMERICAN REAPERS.

AT an evening meeting during the late Canadian Fair at Hamilton, Prof. WILSON indulged in some remarks on Reaping Machines, claiming the whole credit for British inventors, much to the amusement of his audience. He asserted, what we believe is true, that a machine invented by the Rev. P. BELL of Scotland, had been successfully and quietly cutting the grain on Mr. B.'s farm for the last 18 years. That MCCORMICK'S machine was a fac-simile of this one in everything, except that BELL'S was pushed into the grain while MCCORMICK'S was drawn with a side traction, which he considered an injury rather than an improvement; that the reason the American Reapers made so much noise in England was, that they came at a time when farmers had had their crutch, protection, taken from them—and it was a perfect God-send to landlords who endeavored to quiet the grumblings of their tenant farmers by telling them that now, with this American Reaper they could harvest their wheat for almost nothing, and that therefore they could get along without a reduction of rents; "then the Reapers were introduced with that flourish of trumpets and modesty for which our worthy cousins are so remarkable, till the English really thought they had something *new* and valuable."

The learned Professor then went on to show that it was proved the American Reapers were not new, and he thought none of them were valuable,—that cradling by hand was cheaper than cutting by horse power, &c., &c. The latter assertion was most ably and handsomely answered on the spot, by Mr. CHRISTIE, M. P. P., who testified from experience on a large farm, that cutting with the Reaper was much cheaper than by hand; besides it was in this country often impossible to get hired help, and hence the grain must be cut with a Reaper or not at all.

The question of priority and imitation we will not argue with the Professor. If Mr. BELL invented a good Reaper, as we have no doubt he did, he should have due praise for so doing, and all we ask is, that HUSSEY, MCCORMICK and others, should receive the like praise for their inventions. That they borrowed the idea from BELL cannot be proved, and it is a fact that the two machines have little in common; BELL'S cut with a *clipping shear* motion, while MCCORMICK'S has a *sawing* action; BELL'S carries the cut grain away by means of an endless apron, while MCCORMICK'S deposits it on one side in bundles ready for binding. Again, BELL'S machine is pushed into the grain, while the other is drawn from the side.

Prof. WILSON was particularly anxious that American papers should announce the fact that at a late trial of Reapers before the Royal Agricultural Society of England, the judges had declared in favor of BELL'S in competition with HUSSEY'S and MCCORMICK'S. We cheerfully do so. Our readers will please make a note of it. We will add, that at the Highland Ag. Society's meeting in Scotland, on the 6th of last month, BELL'S was awarded the first premium, and MCCORMICK'S the second, in competition with many other machines which have sprung up since the exhibition in 1851. They will also please note that there was but a single machine of MCCORMICK'S, while there were three of BELL'S, two of which were declared inferior to MCCORMICK'S. We understand that MCCORMICK has since arrived in Scotland and has challenged BELL to another trial. If Mr. MCC.'s machine does not prove superior in the trial, we have reapers in this country that will effectually silence the *bell*—Prof. WILSON'S logic to the contrary notwithstanding.

### CEMENT WATER PIPES.

GOOD water is everywhere desirable, and it adds much to the convenience and comfort of the farmer and his family, when it is of easy access to the barn and dwelling house. These are sometimes so situated that the water of springs or pure streams can be brought to any desired locality, by the use of suitable pipes for its conveyence. Lead has frequently been employed for this purpose, and also wood, but each are liable to serious objections. The first poisons the water for drinking, and wears out in from five to ten years, while the second imparts a woody taste unless the stream is rapid, and soon decays so as to need repair or renewal. Pipes of water lime cement have been successfully employed, and recent inquiries on the subject have induced us to collect and condense for the RURAL the following information on their use and construction. Mr. GEDDES is our principal authority—his letter is given in the Cultivator for 1846. Other writers have also been consulted.

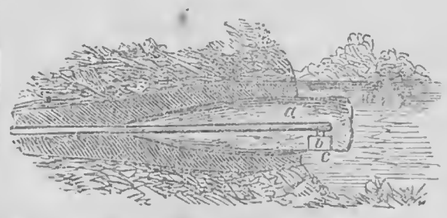
*Ditches for Cement Pipes.*—These should be sunk between two and three feet deep—certainly beyond the reach of frost,—the bottom made level and even, and about eighteen inches wide. Abrupt turns should be avoided.

*Preparation of the Cement.*—The first quality of lime and clean, sharp sand should be procured. Fresh ground lime is to be preferred, and the proper proportion is one bushel of lime to two of sand. These should be thoroughly mixed before any water is put to them, and the water added to only a small quantity, (what can be used before it sets,) at a time. It should be well worked and tempered like mortar used for plastering.

*Construction of the Pipe.—Implements Used.*—When the ditch is ready and a quantity of mortar prepared, a kind of mold or box (a) is brought into use for carrying the same to the ditch. It is made of smooth inch boards, about five feet long, six inches wide and three inches deep, the sides a little flaring so that the mortar may be empted with ease. This mold is filled

(Fig. 1.) *Mold and Rod for Cement Pipes.*

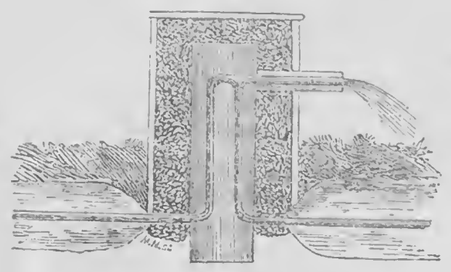
evenly full, (a small board being held against the ends, and the mortar pressed into the corners with a trowel,) and carried to the ditch, in which two men are standing to receive it and empty it on the middle of the bottom of the same. A rod (b) five and a half feet long, perfectly smooth and of the diameter of the desired pipe—generally an inch and a half or quarter—a piece of the same size a foot long, connected to it by a flexible leather pipe, is laid on the cement and pressed one half of its diameter into it. And the mold full of cement is placed on the top of the first, and pressed down, making a body of mortar about six inches square with the rod in the centre. The mold is taken off, and then each man with a trowel points the sides and perfects the joints, one half of the five feet. Fine earth is then thrown in and trampled down on each side of the cement, and then about six inches of dirt thrown loosely over the top. The end of the rod projects far enough for one man to draw it, while the other places himself so as to hold the sides of the cement to prevent a piece breaking off the end as the rod starts. First roll the rod a little, then draw it to the leather, which being flexible, allows the rod to be turned back over the finished part, while another mold of cement is placed on the bottom of the ditch. This new cement must be carefully joined to the old—quite hard by this time—with the point of the trowel, and the rod then turned down, proceeding as before; put on the mortar, and the dirt, and then draw the rod,—performing all with care and neatness.



(Fig. 2.) *Introduction of the Water.*

*Introduction of the Water.*—A pump-log (a) affords the best means of introducing the water to the pipe. It is tapered down and cemented to the pipe at one end—the other extends into the spring—the hole at the end stopped, and a chamber (b) some four inches square, made in the lower side of the log, with a seive (c) to keep out leaves and dirt. This arrangement prevents the clogging of the pipe until the water is some inches above the entrance. The wood is covered with cement as far as possible so as to prevent its decay.

*Connection of Penstock with Pipe.*—A lead pipe is connected with the cement pipe, by plastering around it, and then the latter is joined to the penstock by which the water is brought up and delivered. The water may be carried down the penstock, and by a similar lead pipe jointed to the cement pipe which is to carry in on. (See the annexed figure.)



(Fig. 3.) *Penstock and Connection.*

This is perhaps the best plan, as the lead will bend and a jar or wrench of the penstock will not break it, as it will the cement. To prevent the action of the frost on the penstock, put a plank frame or box around it and fill it with old tan-bark above the discharge pipe. This, kept dry, will not freeze.

*Letting in the Water, Remedying Defects, &c.*—Water should not be admitted into the pipe under six or eight weeks, the ditch remaining half-filled as when first laid down. When it is let in, a careful examination should be made for leaks, but none will be found when proper care has been used.—Should any be found, a little cement will stop them, and if any part of the pipe should be crushed in, the top should be cut from it, and a piece of tin the right size fitted in for the upper part of the tube, and then filled in with cement to the size it was originally. The cement will soon set and that part of the pipe be as good as any other.

*Strength and Cost of Cement Pipes.*—Probably no accurate test of the strength of these pipes has been made. Mr. GEDDES speaks of a pipe an inch and a quarter in diameter, some four or five inches square, which bore a head of twenty feet of water without injury. No common lead pipe will do this. As to cost, the price varies from $1, to $1,50 per rod, including labor, materials and fixtures. Their durability must be very great, and where a diameter of two inches will convey the necessary amount of water, perhaps no better material can be used. After the first few weeks they impart no taste to the water; it is as pure as if brought in a pitcher from the spring.—B.

### GUANO vs. NITRATE OF SODA.

H. SHUBART, of Bethel, Penn., states in the *Farm Journal*, that he has found more benefit from Nitrate of Soda than from Guano, as a manure for Maize. Fifty pounds Guano, mixed with three-fourths of a bushel of plaster, was applied per acre, when the corn was up previous to being cultivated. Thirty lbs. of Nitrate, ground in a plaster mill with three-fourths bushel of plaster, were used per acre, sown in the same manner as the Guano. He thinks the increase of corn paid for the Guano, but that the benefit derived from the Nitrate would pay for it over and over again.

We regret that the experiment is not strictly comparative. The Guano was sown in 1851, and the Nitrate in 1853. We have seen Nitrate of Soda applied to barley without the slightest benefit. How far it will be efficacious to maize is a matter of much importance, scientifically and practically.—We have no theoretical rules for determining before hand the relative value of these manures, but must rely on practical experience or scientifically conducted field experiment. How long shall we have to wait for the latter?

### ONONDAGA SOLAR SALT.

SOME two years since, it may be remembered, the United States Government ordered a comparative test to be made between Onondaga Solar, and Turks Island salt, by packing in each, 150 barrels of pork. The hogs were halved, one portion being packed in each kind of salt, and the pork was then distributed among various military stations in all parts of the country with instructions that each lot be carefully tested, and the result returned to the War Department at Washington. The reports are now nearly all received at the Comissary's office, and are mostly unanimous in sustaining the superiority of the home manufactured salt.

There is not a shadow of doubt that the Onondaga solar salt has no superior in the world for packing and dairy purposes; and our farmers need look no farther than our own salt springs for a supply of that indispensable article.

CHEESE MAKING.—I was much pleased with the article on Cheese Making in the RURAL, of July 23d. I have practised cheese making in Vermont as therein described, but I have found from experiment, that there is a great saving in reducing the night's milk to curd, without leaving it to cool. I put the rennet into the milk as soon as it is brought to the right temporaturo, and in 40 or 50 minutes have the curd draining until morning. I found this method advanced the products of 40 cows, about 33 lbs. per day in quantity and all as much in quality.—A. BALDWIN, *Belvidere, Ill.*

CHLOROFORMING BEES.—A statement has recently been very extensively circulated that chloroform had been found by a Mr. SMITH of Edinburgh, to be a most admirable means of putting bees to sleep for a short time, during which as much honey could be removed as was desired. A writer in the Boston Cultivator has tried chloroform according to Mr. Smith's plan, and found not only that the bees were soon put to sleep, *but that they have been soundly sleeping ever since!*

## INQUIRIES AND ANSWERS.

Middlesex Pigs.—(To A. Purdy, Jr., Macedon.) There are but few Middlesex pigs in the country. L. F. Allen, Black Rock, Erie Co., N. Y., had some a short time since, and it is probable he could supply you with the desired information.

Red Top Grass Seed.—Will you please inform me in your paper whether there is Red Top grass seed in the city, and how they sell it, whether by the pound or bushel? and how much and what quantity is enough per acre for moist lands?—P. Dill, *Wiscoy, N. Y.*

Mr. Jas. P. Fogg, seedman, in this city, sells the true eastern Red Top at $2 per bushel. The quantity usually sown is 8 or more quarts per acre. It should be sown on low land and unmixed with other grasses, as it ripens late and may be cut in good heart the first of September.

## HILLING AND SUCKERING INDIAN CORN.

Will corn be more likely to "break down" when "hilled up," than left without it? Will it increase the crop of corn, by taking off the shoots or suckers?"—J. W. B., *Kendall Mills, N. Y.*

Our experience in the cultivation of corn, is in opposition to the *hilling* system for any purpose. The simple addition of an inch or two of loose earth about the foot of an article, with as much leverage and carrying as many suils as the corn plant does, can have little or no effect in sustaining it against heavy winds; but when in rich soils and in favorable seasons it makes a luxuriant growth. The application of a coating of earth about the stalk, often induces it to put out braces, or a new sett of strong roots, which undoubtedly have a tendency to stiffen and sustain the plant. The Dent and Gourd seed corn, grown at the south and west, possess the ability to support themselves in this manner, which they do in all situations.

It has been well settled by nice and reliable experiments, that the suckering of corn is a certain and decided injury to the crop. The sucker is one of the wise designs for the corn plant, and its maximum production cannot be perfected without its agency. This vegetable is *monœcious*, that is, the sexal organs are located in separate positions, the stamen containing the pollen is the tassel, and the pistils are the silk on the ear, or cob, and so absolute is the law of impregnation that if any one individual silk is injured, or fails of receiving a portion of the dust of the tassel, that that portion never produces a kernel.

In all well tilled and good crops of corn, there are setts for ears put forth after the original tassel is dry and has lost its ability to shed its creating properties, and the sucker comes out at the very period when it is needed to impregnate and perfect this last setting of corn. The growth of the sucker is one of the natural wise provisions and should not be interfered with, and cannot be with impunity in relation to its productability.

## "WOODMAN SPARE THAT TREE."

I am sorry, friend Rural, your correspondent at Skanatales, (whose signature I forget, and have mislaid the paper,) should be so bent on the extermination of the noble aborigines of our forests. I more readily coincide with the writer who has taken up his pen in their defence.

That the general rule of leaving a portion of every farm uncleared, for fuel, woods-pasture, &c., should not be of universal application, (the case of small farms, for instance,) by no means proves it to be a bad rule. "There are exceptions to all general rules," and I much mistake if our grandchildren will not hold in highest esteem, the forethought of their sires who limited the march of the "chopper."

There is a very serious consideration connected with this subject, and thus far overlooked by your correspondent. Coal beds may supply us with fuel, dirty and offensive though it be—taste and utility, in the course of time, may re-clothe our denuded hills and vallies with orchards and luxuirant groves,—but *who* or *what* can compensate for our dried-up springs and rivulets, and our shrunken rivers? No thought seems as yet to be given to the startling fact, that the destruction of our forests invariably causes the entire failure of many springs; in all cases the flow of water is greatly lessened.

Yet, behold the recklessness with which every wooded ravine, swamp and precipice is laid bare to the summer sun! Why not leave such spots untouched? They are of small value, generally, for cultivation. Observation and reflection on such matters, would prevent much irreparable mischief—for no artesian wells can supply the place of the best, cool spring, and running brook of former days.

Humbolt attributes the failure of water, in some provinces of France, to the destruction of the forests. The Connecticut river is said to have diminished one-half since the white man came to its banks. The Indians say it is the curse of the Great Spirit; but if so, then all our waters are cursed alike—for they are all alike lessening in volume. I know of mill seats, once abounding in "water-power," now nearly worthless. I do *not* know a single stream, in a cleared up region, that is not shrinking year by year, if not already dry.

That this result is, to a certain extent, unavoidable, I admit; but a wiser discretion in our land-clearers would lessen the evil by one-half. For instance, have you a rough, dense-wooded ravine on your land, with the usual spring run through it?—leave the thick trees to shelter it from the scorching sun. Let the trees stand around that "*cold spring*," the delight of the neighborhood, where the traveler always pauses to refresh both man and beast. Your children will thank you for the glorious play-ground; the birds for their share of the cool retreat, and pay you richly too. Is there a swamp on your land, whence issues a tiny stream?—leave the shadowing trees; the water is worth more than the land, as you will believe when your springs forsake their wonted channels—"as summer-dried fountains, when our need is the sorest."

If your sons think differently, and find themselves cramped for room, leave to them the pleasure of reclaiming the swampy acres—or let them go West. And meantime, you know the proverb—"A little farm well tilled." Therefore lay out all your energies on the rest of your land. Solve the problem of the maximum crop of all the cereals, and let us hear from you as to the result. Only, once more let me entreat you, "Woodman, spare that tree!"

Wellsboro', Pa., Sept., 1853. S. *. *.

## UNDERDRAINING.

The *N. Y. Agriculter* recently published a series of articles on the subject of draining which evince much study and investigation. The following extract sums up the principal advantages accruing from the judicious use of underdraining, which we commend to the earnest consideration of our readers:

1. Removing the water from the pores admits the air, which is essential to the growth of the roots.

2. The roots extend farther and deeper into the soil, get a firmer hold upon it, and draw nourishment from a larger area.

3. The air decompeses vegetable matter, and thus furnishes organic food for the growing plant.

4. The air and other gases decompose the earthy parts of the soil, and thus provide new inorganic food.

5. The free circulation of air in the soil carries in ammonia, and other fertilizing substances to the roots of plants.

6. The presence of water causes soils to bake, so as to render them hard to work, and also to prevent the free growth and expansion of roots.

7. When all excess of water is removed, compact and clay soils become light and pulverized by working them.

8. The free access of air renders poisonous compounds of iron, maganeso, &c., *inert*, and clover and other deep rooted crops will not be killed, but they will continue to grow and flourish from year to year.

9. The depth to which the roots penetrate in soils, freed from poisons and filled with air, secures to the plants sufficient moisture to withstand the surface effects of dreuth.

10. In hot weather, the circulation of warm, moist air through the open mouth drains and the soil, condenses moisture in the cooler soil, and furnishes additional security against dreuth.

11. The air circulating in the soil, decomposes vegetable acids and removes "sourness."

12. The removal of the standing water allows warmth, which cannot descend thro a body of water, to penetrate farther into the soil.

13. By causing the water to descend into drains, instead of evaporating from the surface, another chief source of coldness is removed.

14. Rains in descending through the ground, carry the heat of the atmosphere with them, and thus warm the soil and roots of plants.

15. Draining by rapidly removing the water in the spring, and after heavy rains, and by warming the soil, is equivalent to lengthening the season, and gives a wider range of cultivated plants, a longer time for plowing and working the ground.

16. Land freed from excess of moisture, expands much less in freezing, and the roots of wheat, clover and other crops remaining in the ground over winter, are not destroyed by winter kill.

17. Water by sinking through the soil into drains, is prevented from washing the surface into gullies, and from carrying away into streams the richer soluble portions of soils and manures.

These reasons we believe are sufficient to induce farmers to inquire into the condition of their soils, and to try the experiment of draining upon at least a small portion of their wettest lands. The experiment need not be on a large scale. A single acre well drained will suffice to show whether this means of improvement may be profitably extended.

## JEFFERSON COUNTY AG. SOCIETY.

We are indebted to Moses Eames, Esq., for a pamphlet containing the Proceedings of the Jefferson Co. Ag. Society, including the address by the Hon. Timothy Jefkins, of Oneida, at the recent Fair, and the Report of the Viewing Committee, &c. It is an interesting document and contains much good, sound, practical information. We understand that the receipts of the Society for the past year were over one thousand dollars, and future prospects very encouraging. The following extracts from the Report of the Viewing Committee will be read with interest:

The severe and long continued drouth, and the general prevalence of the grasshopper scourge, have produced such disastrous effects in most parts of our county as to cause but comparatively little competition.

According to our observation, the Dairying portions of the county have suffered the least from these evils, and we have reason to hope the high prices of butter and cheese will enable most of the owners of Dairies to realize their usual nett profits.

The grain producing farms, however, suffer the infliction in its most aggavating form, in many cases not producing sufficient grain and fodder to support the stock until another year.

During the last six years we have experienced three seasons of drouth. Grain, roots and grasses have suffered from the want of moisture, and, in many localities, cattle have suffered, and families been subjected to great inconvenience from a deficiency in the supply of pure and wholesome water.

These deprivations have been submitted to, year after year without any serious efforts having been made to avert their effects. In all probability, our county will continue to be visited hereafter frequently by drouths quite as intense as that through which we have just passed.

We believe that on all our clay or marly soils, and in fact on most of the soils in the county, such a system of farming can be adopted as will avoid the deleterious effects not only of long-continued dry weather, but also of too much moisture, and at the same time add greatly to the productiveness of the land; and, also, that on every farm an abundance of good, wholesome water can be cheaply provided for the use of the family and of the stock.

Without entering into any argument to prove those assertions, we will satisfy ourselves by earnestly entreating our Farmers to turn their attention to the subjects of sub-soil plowing and under-draining, as herein we feel confident rests the secret of success in cultivating our soil during the great vicissitudes of wet and dry, to which it is subject.

And, in connection with the subject of introducing a higher grade of farming than that now practiced, we would take this occasion to express our regret that so few Agricultural papers are taken by the cultivators of the soil. Even among those who presented their farms or dairies for premiums, very few were able to respond affirmatively to our inquiries upon that point.—But we can say that where papers were taken, we found the most intelligent men, and the best managed establishements.

To understand thoroughly the system of deep plowing and drainage, to which we have alluded it is necessary to read and reflect upon much of what has been written upon the subject. Some Agricultural books give full treatises, while the current periodicals of the day present to the inquirer the individual experience of those who are experimenting upon and practicing the system.

In viewing the Farms entered for competition your Committee endeavored to keep in view as standard requisites and evidences of good farming, the following points:

1st. A good soil, well tilled, and kept free of noxious weeds, both on the fields and in the roads.

2d. Lots well fenced, and suitable in number to the size of the Farm.

3d. Substantial and convenient barns and stables of sufficient dimensions to contain the produce of the Farm, and comfortably house the cattle kept on it.

4th. A judiciously arranged dwelling in neat condition, with a well and filtering cistern.

5th. Convenient buildings to facilitate the economical management of the Farm; among which may be enumerated a wood house, a waggon and tool house, a work shop, a granary and corn house, a convenient piggery, an ice-house, ash and smoke house, all secured against decay by being well raised from the ground and neatly painted or white-washed.

6th. Convenient yards attached to the barns and stables, so arranged as to prevent the wastage of the liquid manure, well sheltered from the blasts of winter, and provided with water for the cattle.

7th. Door yards laid with grass, and rose and flower-beds, and shaded by ornamental trees, indicating to the passer-by the dwelling of taste, health and comfort.

8th. A kitchen garden highly cultivated, and containing every species of vegetable that can be raised in our climate, with strawberry and asparagus beds.

7th. A fruit garden or orchard, where choice apples, cherries and plums are carefully cultivated, and where can be found neat rows of raspberry, gooseberry, blackberry and currant bushes.

There are more horses led into shambling gaits, and awkward overreaching and stumbling habits, by bad shoeing, than by all other causes combined.

## ENGLISH FARM LABORERS.

During the past three years "the Times Commissioners" have visited nearly every county of England, and exposed to the astonished gaze of the world the unheard of poverty, misery, ignorance and wretchedness of the working classes in many of the rural districts. The deeds of the landlords were made manifest that they might be reproved, and we believe much good has been the result. We are glad to see the *Times* (whatever may be its motive,) lending its powerful aid to the down trodden farm laborers, as follows:

The anniversary of the Royal Buckinghamshire Agricultural Association has been celebrated in primitive style. Notwithstanding the presence of Mr. Disraeli, there were no marvels of finance. Remission of taxes, liquidation of debts, and readjustment of burdens were left to fitter occasions, and the entertainments were a plowing match, a dinner, prizes to laborers, and a defence of the practice. Buckinghamshire has this year produced twenty citizens deserving well of their country. Mr. Disraeli appears to have taken the domestic virtues under his special patronage. With his own hands, out of his own pocket he presented £2 10s. to a veteran laborer for having brought up, without parochial relief, nine children out of eleven, all born to him in lawful wedlock: £1 10s. to the bringer-up of seven; £1 to the successful parent of three, under the same unexceptionable circumstances. Prizes for length of service to laborers and dairymaids, and the "Society's coat and buttons," a sort of green uniform, completed the list of honors. The eloquent representative for the county took a highly poetical view of the complimentary shillings which he assisted to distribute.

When Socrates was put on his trial, he said that, so far from deserving punishment, he ought to be maintained at public expense, and provided with good cheer and good company every day. So, also, we say, that any English laborer who has brought up nine children without parochial assistance, simply on the wages of daily labor, deserves at the age of 60 to be secured against want, anxiety, or degradation. If misfortune befalls him, and he becomes incapable of labor, he deserves to be repaid the long arrears that have been mounting up in his favor from the gross inadequacy of his wages.

Just conceive an elderly man in the United States, or any of our own colonies, in the middle of a public room, and on his name being called from a list, coming forward, hat in hand, bowing and blushing, to receive a green coat and brass buttons for having served one master for thirty years, or 30s. for having brought up seven children without parish relief! A fault certainly is somewhere, that long and faithful servitude gives no better inheritance, and that a life of heroism leaves a man still at the foot of the social scale. We all see how cleverness, roguery, and sheer impudence will get a man on in the world; and it certainly is lamentable to find how little sterling excellence can do for its owners. Unquestionably, there is a race of village worthies who demand the recognition of their superiors; but what we regret is, that this recognition should be so transitory and worthless. In this country poverty is still degradation and discomfort; and, in the ordinary course of things, the recipient of the green coat and buttons at the age of sixty would have to go through a long period of labor, privation, solitude, and even contempt, which his handsome livery would do little to avert or to mitigate. We regret that something cannot be done of a more lasting character. Should it be answered that these laborers would be totally unfit for anything but service, and that the size of a farm and the state of English agriculture afford no opportunity for setting up such a man in an independent way, or otherwise raising his condition, we can only recognize in the distribution of these really paltry gifts a confession of social weakness. It seems to admit that a laborer has very little temporal inducement to do his duty in this country.

There are plenty of good speakers at these meetings, and generally a want of topics; so we beg to suggest a topic. Let some one tell the British laborer what his opportunities really are; what amount of justice he really receives from society, and what comparison there is between the fruits of half-a-century at the plow in this country and in the United States.

Steuben Co. Ag. Fair.—Our correspondent, W. B. Pratt, Esq., of Prattsburgh, writes that the first Fair of the Steuben Co. Ag. Society, which took place the 13th and 14th inst., exceeded the utmost expectations of the most sanguine. Besides the cash premiums, sixty copies of the last Patent Office Report (a donation by Hon. R. Rohie,) were distributed. The future prospects of the society are most flattering.

Valuable Application.—For wounds received from old nails, or cuts occasioned by broken glass, peach tree leaves, well steeped and applied to the wound, will give immediate relief. By thickening the liquid from which the leaves have been taken with meal or bran, a good poultice is obtained, which will keep moist for hours. In case the leaves cannot be obtained, a tea made of young twigs of the peach-tree, and thickened, will do as well.

A workshop, where the tools can be kept is an indispensable appendage to a good farm.

There is nothing like a fixed, steady aim, with an honorable purpose. It dignifies your nature, and insures you success.

## PROSPECTS OF THE AMERICAN FARMER.

In the pursuit of a given object—in the prosecution of any important enterprise—a crisis often arises when a broad, yet minute survey of the field, indicates wisdom, prudence and intelligent forethought. Every one of the 5,000,000 who are engaged in agricultural pursuits in the United States, however efficient as a business man, will occasionally be at a loss for some item of information, some facts or figures quite necessary to the most successful direction and prosecution of his affairs. No matter how extensive his general knowledge, valuable facts, in harmony with his continued progress are constantly arising, some of which escape the most careful observation, while others elude the most retentive memory. Laws are being enacted which may affect his interest, discoveries are being made, and ingenious men strive unceasingly to lighten labor, or at least to increase its results.

The present is a crisis fraught with the richest hopes to the industrious and enterprising farmer. The bow of promise gilds the horizon of the future, and invites to a repast worthy of the gods. The maddening crisis of '36 and '37, with its dark and gloomy outlines written upon the past, stands far in the background, and a bright and holier morn dawns upon the present. In the elucidation of this golden sentiment, it is proper to mark the progressive changes for improvement, which are rapidly taking place in our country—changes that he who, before the invention of steamers, railways and the telegraph, or indeed much later, had ventured to predict, would have been subjected to rather a dangerous censure, and a most contemptuous incredulity.

The vast increase of the precious metals, resulting from the late discovery of the California and Australian gold mines, tends directly to enhance the price of real estate, and all farm products. In 1852, $200,000,000 were taken from these mines; a sum greater than all the gold mines of the world had yielded for a century previous. That this augmentation of the basis of the circulating medium, is already very sensibly affecting prices in the market value of lands and its products, few will deny. History informs us that a similar result followed the discovery of the Mexican mines, and that property in England rose in value full 300 per cent. The prices of farms there to-day varies from $250 to $300 per acre.

The increased facilities for getting to tide-water the surplus products of the farm, is another cause why prices range high, and must continue to do so. The canals and railroads which are springing into existence as by magic, and already form a net-work over the length and breadth of the land, so diminish the cost of transportation,—so effectually annihilate distance, and place the broad, alluvial west, the sunny plains of the south, and the hilly regions of the north, in juxta-position with the metropolis of New York, and other cities of the east,—that the producer realizes good and remunerative prices, and real estate must and does have an upward tendency.

The large drain of young men from the agricultural corps, occasioned by the bold and fearless rush to the El Dorado of America, forms another powerful reason why farm products command a higher market value. Every one who leaves the farm for the gold regions, ceases to be a producer, and at once becomes a consumer, and consequently makes a difference of two in his relative position to the two great classes. Competition in the departments of beef making, wool growing, grain raising, pork, butter and cheese making, &c., is lessened, and hence as there is a less number to produce, and a greater number to consume, prices rule higher and promise rich returns for capital and labor invested.

American enterprise calls loudly for increased outlays upon our internal improvements. This forms an additional argument in favor of an advancing market for farm products. Our country is now checkered with 13,000 miles of railroad, costing $237,000,000. It has under contract or in contemplation 20,000 miles more, to be built as soon as possible. The vast requisition for labor, iron, coal, wood, paint, and other raw materials, to consummate this Herculean achievement—giving employment to thousands, all of whom must be clothed and fed—pours a tide of evidence in favor of the brightening prospect before the American farmer.

The elevated and commanding position which our country, with its free institutions, just and equitable laws, liberal policy, and its abundance of cheap and fertile lands, holds in the estimation of the inhabitants of Great Britain and the Continent—causing a ceaseless and uninterrupted flood of immigration to our shores—forms another powerful reason why the market value of farm products is constantly tending upwards. It is estimated that not less than 400,000 persons will land upon our shores the present season from Germany alone. Ireland and other oppressed countries will send more than their usual complement. These numerous thousands, on their arrival here make a direct demand upon the productions of the farm, in the shape of pork, beef, flour, butter, cheese, wool and cloth. In short, they must eat, drink and wear. Again: every laborer leaving the shores of Europe, lessens the competition there and raises wages, and consequently the products of labor. This rise in British, German and French manufactures lessens the competition of their fabrics in our markets, and consequently better prices are obtained for American manufactures.

In the United States $550,00,000 are now invested in manufactures, giving direct employment to 1,075,000 persons. In proportion to the prosperity attending this great branch of home industry, so may we count that attending the Agricultural interests of our country. Strike down the Manufacturing interest, and you with the same stroke, level a blow at Agriculture which is greatly ruinous; build up the former and you directly

sustain the latter. The overwhelming immigration to this country does both, and forms an additional reason in the catalogue of causes, for the present and future prosperity awaiting the American farmer.

In the enumeration of causes, the influence of Agricultural Societies, the aid of the press, and especially the contributions of science, come in to sustain the cheering position. During the last half century, the press in the hands of enterprising men, has wrought changes no less wonderful than important. Science has presented her offerings at the altar, and thrown a halo of light around the sphere of the husbandman. The aid which is now brought to Agriculture, from the deductions of LIEBIG and other agricultural chemists in Europe and America—the vast benefits that accrue from the invention and spread of labor saving machines—the calling of attention to the great importance of a judicious selection of seeds, as to the fact that of two kinds of oats or wheat, the one kind has an inherent vitality or power of self-propagation over the other, varying from 25 to 50 per cent—the fast-growing sentiment that farming is healthful, profitable and popular, and infinitely more independent than the precarious and hazardous calling of trade and commerce;—these all, are sources rich and fruitful in matters of encouragement to the American farmer.

One other cause shall suffice, viz., the spirit of the Anglo-Saxon, to search out hidden sources of wealth, and turn them into the channels of National prosperity. Discoveries, inventions and improvements are constantly made, and the ever active spirit of the race, existing in the masses, seizes and appropriates the benefits. A Spanish proverb runs thus, "Wherever the Merino touches his feet to the soil, the land is turned to gold." By analogy we would remark, that wherever the unconquerable energy of the Anglo-Saxon settles down in person, upon a quarter or half section of Uncle Sam's domain, it silently but surely converts it to gold.

The definition of oratory, ascribed to the great Athenian, is literally applicable to the art of making money—"action, action, action." In the struggle for wealth and position—in the active competition which engiges all—he who lingers is lost. This prevalent feeling urges to vigilant and manly enterprise, and all are sharers in the general result—each is benefited by the others.

> "Some men are shut
> From wealth, by love of ease; as he who snores
> Night-capped, and wrapped in blanket to the nose,
> Is shut out from the night, which like a sea,
> Breaketh forever on a strand of stars."

To the bold, the fearless, the enterprising and the strong,

> "The past is but an emptied flask,
> The rich future, a bottle yet uncorked."

S. BIRD ROCKWELL.

*Cornwall, Vt.*, 1853.

### MORE IMPORTED STOCK.

MR. S. P. CHAPMAN, Clockville, Madison Co., N. Y., has recently imported four thorough-bred Short-horn heifers. They are of the BATES stock, and deeply bred in the blood of Mr. B.'s celebrated Duchess bulls. The 4th Duke of York, the sire of two of these heifers, was purchased at the recent sale of Earl DUCIE'S stock, (some particulars of which sale will be found elsewhere in this number,) by Mr. BELL for parties in this country, for 500 guineas. The heifers were all bred to BATES' bulls previous to their being sent out from England.

Mr. CHAPMAN is one of our most enterprising and skillful breeders, and will make good use of this valuable addition to his herd. We annex the Pedigrees of the heifers:

*Agate*—Roan; calved Dec. 6, 1850: got by Mr. Bates' Duchess bull, 3d Duke of York (10,166)—dam [Annie] by Mr. Bates' Duchess bull, 2d Cleveland Lad (3108)—g. d. [Annabella] by Mr. Bates' Duchess bull, Duke of Cleveland (1937)—gr. g. d. [Acomb] by Mr. Bates' Belvidere (1706.)

*Frantic*—Roan; calved Sept. 3d, 1850: got by Mr. Bates' Duchess bull, 4th Duke of York (10,607.) (purchased at the sale of Mr. Bates' herd in 1850, by Earl Ducie,)—dam [Faith] by Mr. Bates' Duchess bull, 4th Duke of Northumberland (3619)—g. d. [Fidget] by Mr. Bates' 2d Earl of Darlington (1945)—gr. g. d. [Fletcher] by a son of Young Wynyard (2859.)

*Bonkie*—Roan; calved April 25, 1849: got by Mr. Bates' Duchess bull Duke of York (10,167) as above—dam [Cicely] by Mr. Bates' Duchess bull Duke of Northumberland (1,940)—g. d. [Craggs] by a son of 2d Hubback (2682)—gr. g. d. [Craggs] bought of Mr. Bates and descended from the stock of the late Mr. Maynard.

*Bright Eyes, 3d*—Red; calved June 23, 1850: got by Earl Derby (10,177)—dam [Bright Eyes 2d] by Lord George Bentwick (9317)—g. d. [Bright Eyes] by Conqueror (6885)—gr. g. d. by a son of Beard (65)—gr. g. g. d. by Masons son of Comet (155)—gr. g. g. g. d. by Wellington (683.)

IN the same ship with the above, GEO. VAIL, of Troy, imported two pure bred Devon heifers and one bull—and Dr. H. WENDELL, of Albany, two Durham heifers. These, and the heifers for Mr. CHAPMAN, were purchased by Mr. VAIL.

### SALE OF IMPORTED CATTLE.

THE stock imported last summer by the Madison County (Ohio) Importing Company was sold at auction at London, Ohio, on the 27th of Sept. Fifteen Short-horn bulls sold for $17,400, averaging $1,160 each. JAMES FULLINGTON, Madison Co., paid $3,000 for "Marquis," a red roan two year old. "Starlight," a two year old red roan sold to CHARLES PHILIPS, Madison Co., for $3,000. Three Short-horn cows sold for $3,225. Four heifers sold for $2,775; a Yorkshire dairy cow, (a great milker,) for $125; a heifer of the same breed, $295.

COTSWOLD SHEEP.—13 Rams, all yearlings, sold for $45 to $110 each, in all $725—averaging $55 each. 7 Ewes, from $75 to $115 each, $655; average $93 50 each. 20 Sheep, averaging $69 each. $1,380. The sheep speculation only paid cost, hardly that. They were a fair lot, nothing extra.

SUFFOLK PIGS.—One Boar, 6 months old $200. 1 Sow in pig, 9 months old, $120; 1 Sow do. do., $200. 9 others, younger, from $16 to $80. The 12 pigs brought $918—average, $76 50 each.

Now is the time to repair, and prepare, your barns, sheds, &c., for winter occupancy.

# Orchard and Garden.

### WILL IT PAY TO RAISE FRUIT?

"WILL it pay?" Whatever subject may be named to the American people, this question rises at once to the lip. Gain, gain—the "Almighty dollar"—seems to be the ruling idea connected with almost all transactions. It creeps in, even among the benevolent operations of the day. It takes shape too in the objects that have a tendency to elevate and refine the better feelings of man. Whatever the subject, the object, or proposition, the croaking is still heard, "Will it Pay?"

But we do not intend writing a homily on the subject, however fruitful it is of ideas.—We took up our pen to urge the extension of fruit growing among our farming population, believing, if judiciously entered into and carried forward, it may be made a very prominent item on the side of profits in the farm account. And that it will *pay* we have no sort of hesitancy in saying.

When one lives in the immediate vicinity of a city, fruit growing is exceedingly profitable, especially of the more transient sorts, as strawberries, &c. We find mention made of a gentleman near Boston who raised at the rate of $1,600 to the acre of strawberries at two shillings a box; so of currants, gooseberries, raspberries, &c., great yields may be obtained, and where the varieties are of the choicest kinds the receipts swell up to what seem almost enormous sums. We note another instance where a gentleman raised $125 for the produce of an eighth of an acre of currants.

Other fruits are profitable too. A Dix pear tree in Cambridge, Mass., produced $46 worth of fruit in one season—DOWNING stated that the Original DUBOIS' Early Golden Apricot produced $45 worth of fruit in 1844, $50 in 1845, and $90 in 1846. A gentleman in Darby, Pa., had a grape vine which produced annually 75 bushels, that sold at $1 per bush.; another near Philadelphia, sold $60 worth of fruit in one year from a Washington plum tree. These may be somewhat extreme cases, yet we think they can be easily surpassed in favorable years with a favorable market, where proper attention is given to the cultivation of the trees. But even with half of such results, they still remunerate the grower most handsomely.

It is quite as profitable raising apples.—Mr. HENRY F. FRENCH, of New Hampshire, in an article on the "Cultivation of Apples in the Northern States," furnished the Patent Office Report for 1850, mentions the orchard of JOSEPH ROBINSON, one of his neighbors, that consisted of Baldwins and Russets and occupied two acres of ground. The trees were planted but 20 and 25 feet apart, and were so much grown as to interlace with one another. From this orchard, in 1849, he sold 260 barrels of fruit at $2,62 a barrel, which might be reckoned clear profit, as the fruit of inferior quality would pay all expense of care and gathering. In 1847 he refused $600 for his apples, to be gathered by the purchaser. Mr. FRENCH says that upon careful inquiry, he is satisfied that the net income of Mr. ROBINSON'S two acres has realized him $300 a year for ten years past, and he sees no reason why they may not continue to do so for twenty years yet.—Mr. F. adds that he has care of an orchard of but a half acre. From this small orchard he realized over $100 clear profit a year.—J. J. Thomas mentions in an essay on Fruit Culture in the Patent Office Report of 1851, that R. J. HAND of this Co., (Monroe.) sold in 1845 $440 worth of Northern Spy and Russet apples from one acre, and adds that numerous cases are known to him where over $100 an acre have been realized from the sale of good winter apples.

That these statements are not extravagant let us look at the matter a little closer. It is not very uncommon, especially for the Rhode Island Greening of good size, to produce 40 bushels at a single crop per tree.—This, even at the very ordinary price of two shillings per bushel, gives a return of $10 a tree. An orchard planted with trees twenty feet apart, gives 50 trees to the acre, or $500 for the yield at that rate. But with half that yield, or even with one fourth of it, the result is decidedly profitable. We believe it is safe to calculate that the average yield, one year with another, of trees that have attained a good size, will be eight bushels a tree or 400 to the acre, which gives a value of $100, nine-tenths of which can be considered clear profit, and this at ordinary prices.

Why, then, is it not sufficiently profitable to induce farmers to plant more liberally of the best sorts of fruit, especially of the late keeping sorts? With too many the drawback is immediate profit. In their haste for gains they cannot wait for the trees to grow. They are too much like the farmer that COLE told of, who would not plant an orchard because he should not live to enjoy its fruit; his son thought likewise and planted none; but the grandson, more spirited, planted for posterity, yet the grandfather lived to eat the fruit and drink hogsheads of the cider. It takes but a few years for trees to come into bearing. With good care they may yield profitable returns in ten years from the seed. In the mean time the land will more than pay all expense of cultivation and manure in the hoed crops it may yield; and even after the trees have attained good size such crops may still pay the expenses and leave the fruit as clear gain. But some fear the market may become glutted. That has been the cry of the indolent for years, yet fruit of the best sorts still command most remunerating prices, and it will continue to do so, we venture to say, all time to come. But we propose to consider the subject further in another number, as to how it may pay. T. E. W.

### FIRE-BLIGHT.

MR. SUMMERS, of Ohio, gives his experience with fire-blight on apple and quince trees as follows:

"About fifteen years ago it made its appearance, in this vicinity. It attacked a corner tree in my orchard, and gradually spread from branch to branch, till, in six or seven years, the whole tree was nearly dead. It spread to the adjoining trees, till it had overspread an acre or two, more or less. Having learned that cutting off the infected branches and burning them was the only reliable way of getting rid of it, I commenced doing so, although it seemed a great task. I cut down the corner tree and lopped off most of the tops of others, and followed the scourge close for two or three years, cutting off every little twig I could find infected, and committing them to the flames, twice or thrice during each season. The result has been most satisfactory; and for two years past I have not seen a blighted limb in my orchard. The labor was less than I expected, also; and I would urge it upon all to apply the knife and fire to their blighted trees, for their own and neighbors sakes. I conclude, from the manner of its progress, that the insect which causes the blight does not itinerate far in one season, and may be successfully combatted as above described. The curculios, on the contrary, seem to circulate extensively; they have wings and know how to use them, as any person may satisfy himself, if he will place one in an uncomfortably warm place for a short time, though they are not fond of displaying their aerial capabilities on common occasions.

A CURIOSITY.—There is in this town, an apple tree (a Siberian Crab) that blossomed at the usual time last spring and has ever since continued to put forth flowers.—There are now, (Sept. 1st,) apples upon it of almost every dimension, from those of nearly the ordinary size and quite ripe, down to others that have but just formed. There are also flower buds fresh and perfect within an inch of ripe apples.—S. H. *Edmeston, Otsego Co., N. Y.*

PRESERVING FRUIT.—Take Buckwheat chaff, and place alternately a layer of fruit and of chaff. The chaff is light. In case you wish to transport your fruit a great distance, it not only preserves from bruising, but is proof against frost, if used liberally. So says C. HUNT, of Somerset, Mich., in Patent Office Report.

THE ENDICOTT PEAR TREE.—Sanford Howard has recently visited this ancient tree in South Danvers, Mass. It was in full bearing, and had on it not less than two thousand pears. It is enclosed with a fence and cannot be less than two hundred and ten years old.

TO PRESERVE APPLES.—Select the very best and fairest fruit, picking it from the boughs by hand. Into a barrel, say a common flour barrel, pour two quarts of kiln-dried, *hard-wood* saw-dust; spread it evenly over the bottom of the barrel, and by hand, place in your apples, one at a time, but not so near as to touch each other.—Fill in the spaces with dust, and cover the whole layer one inch deep with the same. Proceed in this till the barrel is filled, and head up air-tight. Pulverized charcoal mixed with saw-dust, in the proportion of one bushel to one bushel of the latter, is preferable for this purpose to clean dust.—Apples may be kept two years in this way, if placed in a cellar of mild and even temperture.

THERE are, it is estimated, about two thousand three hundred acres in Ohio, Indiana, and Kentucky, in cultivation and bearing grape vines. The average crop is 200 gallons of wine per acre. A half a million of gallons is therefore about the annual wine crop of these States, or about one twelfth of that imported into the country. It probably will not be many years before the native wine will exceed the imported, perhaps become an article of export.

A PROLIFIC PEAR TREE.—The Portsmouth Chronicle states that in a garden in that city is a St. Andrew's pear tree which has borne *three* crops of pears the present season, and is now in bud for the *fourth* crop.

# Mechanic Arts, &c.

### LIST OF PATENT CLAIMS

ISSUED FROM THE UNITED STATES PATENT OFFICE

For the week ending October 11, 1853.

Cornelius R. Brinckerhoff, of Batavia, N. Y., for improvement in plows.

Henry P. Byram, of Louisville, Ky., for improvement in hullers of grass seed.

John B. Collan, of Reading, Pa., for detachable lining for the fire boxes of steam boilers.

Gilman Davis, of Roxbury, Mass., for improvement in ash pans for locomotive engines.

Samuel G. Dugdale, of Richmond, Ind., for apparatus for opening and closing gates.

Chas. Goodyear, of New Haven, Conn., for improvement in covering iron with gutta percha.

Nathan Harrison and John W. H. Metcalf, of Ridgeville, Va., for improvement in hill side plows.

Joseph Harris, Jr., of Boston, Mass., for improvement in driving circular saws.

Daniel Hill, of Bartonia, Ind., for improvement in the attachment of a harrow to a land roller.

Thomas B. Jones, of Carloville, Ala., for improvement in cob and stalk cutters.

Henry M. Keeler, of Newark, Ohio, for improvement in winnowers of grain.

J. J. Parker, of Marietta, Ohio, for improvement in straw cutters.

Samuel Snow, of Fayetteville, N. Y., and Alex. Hine, of La Fayette, N. Y., for improvement in rotary root-digging cultivators.

Jacob L. Van Valkenburgh, of Ogdensburgh, N. Y., for improvement in shaking-shoes for winnowers.

Horace W. Woodruff, of Watertown, N. Y., for improvement in treating metals while in the molten states.

D. Henshaw Whittemore, of Chicopee Falls, Mass., for improvement in vegetable cutters.

H. G. Robertson, of Greenville, Tenn., for improvement in washing machines.

Banford Gilbert, of Pittsburgh, Pa., for improvement in griddles.

Alexander B. Latta, of Cincinnati, Ohio, for improvements in oscillating engines.

Yelland Foreman, of New York, N. Y., for improvement in life-boats.

Wm. Stephens, of Pittston, Pa., for improved valve motion in oscillating engines.

John A. Elder, of Westbrook, Maine, assignor to John E. Coffin, of Portland, Maine, for machines for cutting binders' boards.

L. M. Whitman, of Weedsport, N. Y., assignor to Samuel G. Wise, of same place, for improvement in cultivating plows.

DESIGN.

Theodore J. Gillies, of Williamsburgh, N. Y., for designs for metalic coffins.

### MAN THE BEST MACHINE.

IT has been proved by experiment that a good Cornish steam engine by the consumption of one and a half pounds of coal will perform as much labor as an able bodied man, working eight hours; five tons of coal, therefore, would evolve as much power as that of a man at work eight hours every day for twenty years. This is certainly a great triumph for science and mechanism, rendering five tons of coal equal in effective force to that obtained, on an average, from a man during his whole life-time.

There is one point however, in which the human engine is far superior to the best manufactured engine in the world. The man in twenty-four hours, consumes only nine ounces of coal, (carbon,) and in eight hours does as much as the steam engine can perform by the consumption of twenty-four ounces of coal. There is probably more *force* evolved from the consumption of matter in the human system than in any other—i. e., the human body works with less friction, and is altogether the best piece of mechanism.

### INFLUENCE OF INVENTIONS.

WE extract the following judicious remarks on this subject from the Mechanical portion of the Patent Office Report for 1852-3:

The progress of invention has not been without its influence upon the destiny of man. In the great work of elevating the masses, of giving to the entire body of mankind something like an equal opportunity in the race for happiness, and even power, it has co-operated with mighty effect. It has so reduced the cost of the comforts of life, and of the means of knowledge as to bring them within the reach of every one. An immense amount of work, which could be performed by the hand alone a few years since, is now accomplished by machinery.—Intelligent labor has come into demand, and receives an increased emolument; so that men can at once earn more than formerly, and their wages command subsistence, luxuries, and means of cultivation to an extent that previously had never been realized.—Where these advantages are shared, experience tells us the entire mass of society is elevated in the tone of its morality, as well as the character of its enjoyments. It is true, as it never was before, that men are the architects of their own fortunes; that it depends upon themselves what they shall be. To render this complete, demands other aids, it is true. Religion and education must co-operate. Political institutions of the right stamp are also needed, as England may well teach us by the multitudes she possesses destitute of the thousand comforts produced in their midst, at the lowest cost, by her wonder-working machinery.—But inventive skill must bear a part, and contribute to the final result. To the people as individuals, and to our State governments, it belongs to sustain the institutions of religion and of education, and to provide salutary municipal regulations. It is the province of Congress, meanwhile, to foster the genius of discovery, and, by its wise legislation in this behalf, lend its aid to advance the interests of humanity.

### TRANSMUTATION OF METALS.

MANY of the fundamental and leading ideas of the present time, appear to him who knows not what science has already achieved, as extravagant as the notions of the alchemist. Not, indeed, the transmutation of metals which seemed so probable to the ancients, but far stranger things are held by us to be attainable. We have become so accustomed to wonders, that nothing any longer excites our wonder. We fix the solar system on paper, and send our thoughts literally with the velocity of lightning to the greatest distance. We can, as it were, melt copper in cold water, and cast it into statues. We can freeze water into ice, or mercury into a solid mallable mass, in white heat crucibles; and we consider it quite practicable to illuminate most brightly entire cities with lamps devoid of flame and fire, and to which the air has no access. We produce artificially ultramarine, one of the most precious minerals; and we believe that to-morrow or next day some one may discover a method of producing from a piece of charcoal a splendid diamond, from a bit of alum sapphires or rubies, or from coal-tar the beautiful coloring principle of madder, or the valuable remedies known as quinine and morphine. All these things are more valuable than gold. Every one is occupied in the attempt to discover them, and yet this is the occupation of an individual inquirer. All are occupied with these things, inasmuch as they study the laws of changes and transformations to which the matter is subject; and yet no individual is especially engaged in these researches, inasmuch as no one for example devotes his life and energies to the solution of the problem of making diamonds or quinine. Did such a man exist, furnished with the necessary knowledge, and with the courage and perseverance of the old gold makers, he would have a good prospect of being enabled to solve such problem.—*Leibig's Letters on Chemistry.*

### NEW MACHINE FOR SETTING TYPE.

THE New York *Tribune* has examined a new machine, invented by Mr. Wm. Mitchell, of that city, for the purpose of setting type. It has keys like a piano, with a number of endless tapes, kept in motion by machinery, to carry the types to the spot where they are set up. The types are laid with the nicked side up, in little brass cases or galleys, some fifteen or eighteen inches long, and just wide enough to admit a type crosswise. Of these cases there are as many as there are small letters and punctuation marks, and they are fixed at an inclination of about 45 deg. over the types, so that when a key is touched a type drops flat upon its tape, and is instantly conveyed to another larger tape, to which all the types are carried, and which conveys them to a little metallic throat, down which they drop upon a table all set up, but requiring to be divided into lines, or justified by hand. Capitals and Italics have to be laid on the tapes by hand, there being in the machine no keys or galleys for them. Two persons are required to attend the machine—one to work the keys, and one to justify and remove the matter composed. It is a very ingenious invention. All its parts are simple, and it would not easily get out of order. It occupies rather more space, perhaps, than a piano. Exactly how much work it is capable of performing, the *Tribune* has no means of judging, as the arrangements are not yet complete enough to subject it to a regular test.

# Domestic Economy.

W. ROOT, of Marietta, Geo., writes the *Scientific American*, that a few cloves added to a bottle of gum tragacanth solution, (paste,) will keep it sweet. He believes they will also keep ink from being muddy.

TO MAKE VINEGAR FROM BEETS.—Grate the washed beets, express the juice in a cheese press, and put the liquor in an empty barrel, cover the bung-hole with gauze, and place it in the sun. In a few weeks the vinegar will be good. It is said that one bushel of sugar beets will make five or six gallons of vinegar, which is probably nearly correct, as nine-tenths of the substance of the beet is liquid, and each bushel of roots contains about equal to six gallons in the measure, omitting the interstices.

CEMENT FOR CROCKERY WARE.—The best cement we have ever found for mending broken crockery ware is made of pure white lead ground fine, moistened with copal varnish to the thickness of honey. Put a small quantity upon the broken edges and press them together firmly and secure them. Let the dish remain three or four weeks to become thoroughly dry.—*Far. and Artizan.*

BIRD'S NEST PUDDING.—Pare six apples, core them, filling them with sugar; place them around a dish, and pour over them a batter, composed of six ounces of flour, salt and three eggs, with a small quantity of milk, added by degrees. Bake moderately for one hour.

# Educational.

Written for the Rural New-Yorker.

## ACQUIREMENT OF KNOWLEDGE.—No. II.

In casting our eyes over this vast continent, we behold flourishing villages and enterprising cities scattered over the rich surface. The literary institutions of our country are of a character to challenge the admiration of the Old World; and every year adds new accessions to the former, from among the ornaments of the latter. The general intelligence of the people has contributed to these gratifying results. Our habitations and institutions have not been reared by oppression, as objects of ostentatious display rather than of utility and taste—as monuments to gild the reign of a tyrant, rather than establishments to comfort the body and exalt the mind of the people at large; nor have the spoils of conquest, rather than the acquirements of industry, contributed to their creation.

Very few are aware of the influence which the example of one individual exerts over another in the acquisition of knowledge, and of the apparently trivial causes from which it may arise. When we simply exercise our own thoughts their influence is confined to ourselves; but no sooner do we speak or act, than the subject matter of these cogitations passes to other minds, suggests in them new trains of thought, leading to incidents and events new and sometimes extraordinary. This position is illustrated in the founding of that magnificent ornament to New York city, the Mercantile Library—where it can be seen what obstacles a thirst for the acquisition of knowledge will overcome. That institution was first established through the instrumentality of a very few apprentices and clerks of humble condition, who associated themselves together for the purpose of debating and reading. They purchased books as fast as their limited means would allow,—and from this small beginning the society increased rapidly in numbers, till it excited the attention of a few public spirited and influential citizens, who, being impressed with the utility of such an institution, encouraged it by donations of money or useful and curious works. Its respectability was increased, and its privileges were extended; and now the society numbers thousands of the most eminent inhabitants of the city, and its library contains over 36,000 volumes! What a magnificent result from so puny an undertaking!

—But, the utility of such societies, (debating and reading,) is every where apparent. Wherever they exist, education flourishes, and intelligence and politeness supersede ignorance and vulgarity. We there find poverty rising from its unnatural position, and no longer cringing at the footstool of aristocratic power; but, aided by the (until now undeveloped) talents which a just Providence has distributed among all ranks of society, aspiring to stations, and obtaining honors, that before had been obedient only to the dictatos of wealth.

Thus it appears that a liberal education may be obtained, and a fund of knowledge impressed upon the memory, without the aid or patronage of wealth or nobility; an education, fitting us for all the occupations necessary to existence, usefulness, and enjoyment. But he who sets his mark above mediocrity—who would rise to be the teacher rather than the taught—who, having acquired a thirst for knowledge, while engaged in limited duties and humble occupations, will meet with obstacles to be overcome almost sufficient to dishearten enterprise itself:

> "This mournful truth is every where confess'd,
> Slow rises worth by Poverty depress'd."

Yet, though the prospect may look gloomy, he must not allow his fears to triumph over his desires and hopes,—but, with persevering energy, steadily press onward towards the goal of his ambition. To succeed in his career, though never so hard pressed by iron-handed want, the allurements of wealth must not seduce him from an honorable course, and from pursuing an independent policy,—

> "For he who poverty with horror views,
> Who sells his freedsm in exchange for gold,
> (Freedom for mine of wealth too cheaply sold!)
> Shall make eternal servitude his fate,
> And feel a haughty master's galling weight."

To those who receive the taunts and raillery of idleness and folly, for choosing to employ a little leisure from necessary business engagements, in the perusal and study of useful works, it may be well to tender some advice:—Pass them by; show, by an improved demeanor, that the change, in every respect, redounds to your advantage—that it adds to your respectability—that it contributes to your enjoyment—that it secures a mental gratification, far more desirable than sensual indulgence.—L.

### PUBLIC SCHOOLS IN NEW ENGLAND.

The following paragraph, although specially applied to the public schools of New England, is equally appropriate to those institutions everywhere; and we would commend its consideration to all men who have at heart the prosperity of the country, the stability of free institutions, and the true interests of humanity:

We regard them as, under God, the affluent source of New England's enterprise and skill, her quiet and thrift, her safety at home, and her honor abroad. They are the check and the balance of power; the poor man's treasure and the rich man's bond. They are the eyes of liberty, and the hands of law, as they are both the root and the offspring of religion. They were devised by a foresight that reaches every interest of man; they were established by a sacrifice that proves the depth of principle which decreed their being; and they have been guarded, from age to age, by the sleepless vigils of wisdom and goodness. Be it ours, then, to cherish, to improve, and to transmit them as a holy trust bearing in its hand the record of the past, and the pledge of future good.

### "A LITTLE LEARNING."

Everybody is familiar with the hackneyed saying of Pope, "A little learning is a dangerous thing." Though it is sometimes misinterpreted by persons whom it frightens from small acquisitions of knowledge, (for it is only the economist of pennies and small items of knowledge, and not he who despises petty gains, that will be rich either in wisdom or worldly goods,) yet, properly understood, there is sterling sense in the aphorism. One of the happiest illustrations we have seen of the truth it contains, is given in "Guesses at Truth," a charming English book which has never, we believe, been republished in this country. "If you pull up your windows a little," says the author, "it is far likelier to give you cold, or rheumatism, or stiff-neck, than if you throw them wide open; and the chance of any ill consequence becomes still less if you go out into the open air, and let it act upon you equally from every side. Is it not just the same with knowledge? Do not those who are exposed to a draught of it, blowing on them through a crevice, usually grow stiff-necked? When you open the windows of your mind, therefore, open them as widely as you can; open them, and let the soul send forth its messengers to explore the state of the earth."

Here we have the secret of all one-sidedness, bigotry, and over-attachment to *isms*, in a nutshell. The best, the only way to escape the mischiefs which ensue from teaching men a little, is to teach them more. As Macauly says of liberty, the only remedy for the evils of knowledge, is—*knowledge*. Knowledge is, in short, the true spear of Achilles; only itself can heal the wounds it has made.—*Yankee Blade.*

### LITERARY BLUNDERS.

When Danto published his "Inferno," the simplicity of the age accepted it as a true narrative of his descent into hell.

When the Utopia of Sir Thomas Moore was first published, the learned Budaeus and others took it for a genuine history, and considered it as highly expedient that missionaries should be sent thither in order to convert so wise a nation to Christianity.

It was a long while after publication, that many readers were convinced that Gulliver's travels were ficticious.

In the Hermippus Redivivus of Dr. Campbell, a curious banter on the Hermetic philosophy and the universal medicine, deceived, for a length of time, the most learned of that day. His notion of the art of prolonging life, by inhaling the breath of young women, was eagerly credited. A physician, who himself had composed a treatise on health, was so influenced by it, that he actually took lodgings at a female boarding-school, that he might never be without a constant supply of the breath of young ladies.

In a catalogue, compiled by a French writer, of Works on Natural History, he has inserted the well-known essay on Irish Bulls, by the Edgeworths.

Death of Noted Geniuses.—Herder closed his career writing an ode to the Deity, his pen on the last line. Walter died repeating some lines of Virgil. Tasso's last request of Cardinal Cynthia was indicative of the gloom which haunted him through life. He had one favor, he said, to request of him, which was, that he would collect his works and commit them to the flames, especially his Jerusalem Delivered. Liebnitz was found dead in his chamber with a book in his hand. Clarendon's pen dropped from his fingers when he was seized with the palsy, which terminated his life. Wicherley, when dying, had his young wife brought to his bedside, and having taken her hand, in a very solemn manner said he had but one request to make of her, and that was, that she would never marry an old man again.

Discoveries at Pompeii.—The Courier Mercantile, of Genoa, quotes a letter of the 15th, mentioning the discovery at Pompeii of three human skeletons, evidently forming one family, together with that of a dog. The postures in which they were found lead to the presumption that they were engaged in flight at the time of the eruption, but were overtaken by the lava, the dog refusing to leave his master. They had bags of gold and silver coin with them; one of the skeletons, displaying rings and ornaments, was that of a young girl, probably the daughter of the fugitives.

# Natural History.

THE WHITE PELICAN.

The White Pelican (*Pelicanus Onocrotalus,*) is sometimes seen on various parts of the California coast. This bird is as large as a swan, measuring, when fully grown, from five to six feet from the point of its bill to the tip of its tail. Its bill, which stretches to sixteen or eighteen inches, and two or three in breadth, forms the distinguishing singularity of this bird. The upper mandible is quite flat, with a small hook at the point; the under consists of two pieces united at the tip, between which is placed a large dilatable pouch of a light straw color, that extends down the fore part of the neck, and is capable of containing, when extended, fifteen quarts liquid measure, and serving the double purpose of a reservoir and provision bag, for in this the parent fetches both food and water to its young. The neck has somewhat of the curvature of the swan, but without its majestic bearing, and is covered with a short, close down; the head is bare in front, and flesh-colored, but on the back part has a tuft of feathers falling down on the neck. The body is large; the wings of a moderate size, extremely light in their bony structure, and capable of receiving a large quantity of air, which enables it to soar high and continue long on the wing; the legs are short, and bare above the knee. In an adult bird, the plumage is almost entirely white, excepting the quill feathers which are black.

The White Pelican is found on the seashore, and on the banks of lakes or great rivers, in almost every part of the Old World, with the exception of the arctic regions. In the year 1663, a straggler was shot in England at Horsey Fen. It feeds on fish; and when a single bird is in search of prey, it wheels round and round at the height of fifteen or twenty feet, and as soon as it perceives a fish, darts upon it with inconceivable rapidity: should it miss, it rises and again repeats the manœuvre, till it succeeds; and, as soon as caught, it is consigned to its bag, till it accumulates a sufficient store to satisfy its voracity, with which it retires to some neighboring rock or tree to eat and digest at leisure, and to sleep till the call of hunger stimulates it to fresh exertion. Sometimes, according to Buffon, they assemble in large flocks, and exhibit no small ingenuity in collecting and securing an abundant meal. This they accomplish by forming a circular line, and gradually narrowing the inclosure till the fishes are driven within a limited space; then, upon a given signal, they all plunge into the water at once, fill their wallets, and return loaded to land to satiate their gluttony. It builds in rocks, or in marshy and unfrequented places in low islands and lakes and lays two or three white eggs. It is affectionate and attentive to its young, and from feeding it out of its pouch originated the fable of its piercing its breast and feeding them with its blood.—*Frost's History of California.*

### THE WATER BUFFALO.—THE MALAY BOY.

The water buffalo is an animal much in use in Singapore, for purposes of draught. it is a dull, heavy-looking animal, slow at work, and, I think, disgusting in appearance, but remarkable for its sagacity and attachment to its native keepers. It has however, a particular antipathy to a European, and will immediately detect him in a crowd.—Its dislike to, and its courage in attacking the tiger, are well known all over India.—Not long ago, as a Malayan boy, who was employed by his parents in herding some water buffaloes, was driving his charge home by the borders of the jungle, a tiger made a sudden spring, and, seizing the lad by the thigh, was dragging him off, when two old bull baffaloes, hearing the shriek of distress from the well-known voice of their little attendant, turned around and charged with their usual rapidity.

The tiger thus closely prossed, was obliged to drop his prey to defend himself. While one buffalo fought and successfully drove the tiger away, the other kept guard over the wounded boy. Later in the evening, when the anxious father, alarmed, came out with attendants to seek his child, he found the whole herd, with the exception of the two old buffaloes, had dispersed them to feed, but *they* were still there, one standing over the bleeding body of their little friend, while the other kept watch on the edge of the jungle for the return of the tiger.—*Keppel's Indian Archipelago.*

Deal gently with those who stray. Draw back by love and persuasion. A kiss is worth a thousand kicks. A kind word is better to the lost, than a mine of gold.

# For Young Men.

### OUR YOUNG MEN.

There are subjects which, to touch upon with point and candor, would give pain and offence, and which need touching upon in the exact proportion that such pain and offence would be given. Our only wish, in speaking of "our young people," is to excite a profitable course of thought, and to do good. So far as our information extends, the young men of our acquaintance do not at all appreciate the spirit of the age in which they live, or the duties which are soon to devolve upon them. We meet them in the street, we see them at church, we talk with them across the counter, we come in contact with them in occasional conversation, and the principal impression left upon us is a nicely fitting coat, a clean pair of boots, easy manners and a contented frame of mind. We go into their rooms, and find a novel which they declare to be very good or very stupid. The Bible is out of sight, and the history and book of travels are not upon the table. If we speak of politics, they "don't care anything about politics, and are not posted up;" if of religion, they think "it is pretty much as a man thinks;" if of any great question agitating the world abroad, they "don't pretend to keep track of foreign affairs." As for thoroughly digested and well informed views of the literature of their own language, they have none. Notions they have in plenty—opinions with them are scarce.

This condition of things grows out of a mistaken idea of life and its true ends.—Business is the one subject and pursuit that rates above everything else. On this they are well informed. Here, they are perfectly at home, and it is this establishment in their minds of what was intended to be secondary and subsidiary, as the grand end of life, which prostitutes their energies, and dwarfs their whole being. God never made mankind with the intention that selling dry goods, and counting money, and digging potatoes, should be the great ends of its pursuit. These are simply the means of sustaining animal life, and securing personal and social necessities and comforts. A true manhood is the grand object of life,—that development of the intellect and the heart, that symmetrical and sturdy growth of character, which makes a man a *man*,—which lifts him above the accidents of fortune, and gives him power, influence, self-reliance, intelligence, energy, and above all, a feeling of equality and self-respect, worth more than all the wealth of the Indies.

Tried by the standard suggested by this view, how many of our young men are *men*, or are growing to be men? We leave it for them to answer. And we leave it also for them to answer how, in the time to come, when they take the places of their employers, they are fitted to meet the responsibilities of society. What kind of tone do they propose to impart to their own circle? What beneficent movements are they to lead in, and be the supporters of?—These are serious questions, and questions which they are now deciding in their every day life and pursuits. Society is to be in the future what you, young men and young women, make it. Shall it be frivolous, shallow-mannered and shallow-hearted; or shall it be intelligent, high-toned, pure and ennobling, as becomes true manhood and true womanhood?

We are aware that there are discouragements in the way. We are met with the statement that there is no use trying to get into good society, unless you have money. We answer that society that measures its members by money is not good society, and is not worth getting into, and would be a curse to you if you were to get into it.—Make your own society good, and then you will have good society. What to you are those poor specimens of humanity who estimate your importance by the corpulency of your purse? They do not call for a thought,—and if you have true self-respect you will not give them one. Tom Carlyle maintains the opinion that every man, by a law of nature, will find his own level, and he is right. You cannot miss it. We can select young men in our community, who imagine that no one thinks of them, and who, in pursuing their schemes for self improvement, think they are unobserved. Public opinion knows and measures them all, and their good name is abroad. When they come to make an independent movement for themselves, they will meet it. The world is coming more and more, every day, to estimate men for what they are, and what they do and can do.

We are led to these remarks by the advent of that time of year when self improvement is more easily pursued than any other, and when schemes for this object are usually devised and consummated. What are you going to do the coming Fall and Winter?—Are you going to form circles for cultivation in composition? Are you going to lay out for yourselves, or under the advice of friends, a course of private reading? Or are you only calculating on some private whist parties, or a few public cotillion parties? These are questions in which we feel a greater interest than we can express, for we know, and can but profoundly feel, that upon their decision depend the future usefulness, respectability and happiness of many a young man and woman.—*Springfield Republican.*

He who by his conduct makes good friends on the one hand, and bitter haters on the other, gives evidence that there is something of the bold, independent, upright man in his composition; while the chicken-hearted, imbecile character, is capable of making neither friends nor foes.

### A THOUGHT FOR FRIENDS.

O what a priceless, precious boon are friends,
To the confiding, loving, longing heart,
A joy beyond expression seemeth this—
A gladness yet untold.—a blessed thought
Which ever should remind our hearts of Him—
The Best of Friends—who has done more for us
Than all else can. And we shall love Him more
That on all kindly feelings He doth smile
Beneficently—that He doth commend
The friendly thought and act, and all that tends
To make earth seem a peaceful realm of Heaven,
Where Faith and Joy and Love alone hold sway.

Alabama, N. Y., Sept. 29, 1853. J. H. B.

For the Rural New-Yorker.

### LEAVING HOME AND FRIENDS.

There was no fire in the car, and as we rolled along the valley, the Autumn clouds overhead gave a coldness to the landscape that made me feel more deeply my loneliness, and long for the presence of some one of the warm hearts I had so lately left.—All looked cloudy and cold, especially thro' which we were passing; but how my heart leaped, as at the sight of a friend, when rounding a curve, I saw another stretching away to the south, bordered by gently swelling hills on which the soft sunlight of Autumn, our own American Autumn, streamed like a heavenly radiance.

O! it was good to look up; for there was sunlight on the hills. And thus it is ever.

We may part from one friend after another, till the last, perhaps the most loved of all on earth, has bidden us "Good bye," and we are alone. We may feel the cold gloom of the clouds above us, shutting from us the light of heaven, till all around is dark. Storms may beat upon us, and then the sense of our utter lonliness may rush upon us with a force sufficient to stop the heart's pulsations. It is hard to feel that we are alone, that there is not one near to share our joys. Is it strange that even the strong should shrink from the path no friend may tread, and that at times the world seems all dark and cold?

But cheer thee for thy task, Oh, brother! Thou art not alone while He who said, "When thou passest through the waters I will be with thee," walks at thy side, bearing the heavier part of thy burthen. Thou art not forsaken while loving hearts at home bound at thoughts of thee. And all around are others waiting only for some token that the offering will not be rejected, to lavish upon thee their richest treasures.—Yet be not proud of this, for it is not from any great worthiness in thee, but rather from thy loneliness, thy need of friends, and their necessity of loving some one,—from the feeling that they have a treasure they cannot keep, but must bestow on another,—that thou art dear to them. So fear not when thou hast turned thy back on home. Go on, and if thy path lie in deep valleys, where all seems dark and cold and altogether lonely, remember God is with thee. Brother, sister, look up,—*there is sunlight on the hills.* Sussac.

### FORGET ME NOT.

When the heavens and earth had been summoned into being, and man had been called to taste the joys and glories of the celestial Eden, every living thing was bro't unto Adam, that it might inherit from him its befitting name. And flowers of every varied hue were among the lovely objects that his eye did rest upon; and as he named each of them, according to its own peculiar form or fragrance, or color, he said, "Be ye mindful of the name, by which the image of your Maker hath called you!"—And it was yet but a short time afterwards, that a floweret arrayed in the meek azure of the firmament, spake unto Adam, saying, "Lord! by what name didst thou call me? Of a truth it shameth me that I did not heed it." And the first man answered, saying, "Forget Me Not." Then the floweret drooped its head, and went and hid itself in the lonely shade, beneath the bough that waveth over the brook; and there it abideth, mourning. And when the gentle hand of friendship, or the eager finger of love, stoopeth to pick it in its loveliness, it still doth softly whisper, "*Forget Me Not.*"

### A POINTED SERMON.

Many a discourse of an hour's length is not half so impressive as the following from an eccentric English divine:

> "Be sober, grave, temperate."—Titus ii. ix.

There are three companions with whom you should always keep on good terms:

1. Your wife.
2. Your stomach.
3. Your conscience.

If you wish to enjoy peace, long life, and happiness, preserve them by temperance. Intemperance produces—

1. Domestic misery.
2. Premature death.
3. Infidelity.

To make these points clear, I refer you:

1. To the Newgate Calendar.
2. To the hospitals, lunatic asylums, and work-houses.
3. To the past experience of what you have seen, read and suffered, in mind, body and estate.

# Miscellaneous.

### SONNET.

*Suggested on reading "Niagra's Mementoes" in last week's New-Yorker.*

Below'd, the hour arrives when we must part;—
I need not say how sad the change will be,
How lone and drear the time away from thee,
Nor yet how deep the gloom that fills my heart:
Thou knowest all its bitterness to me!
Our pathway has been one for many years,
Together shared our sorrows, smiles and tears,
And now to part awhile is fate's decree.
I go, and leave thee in thy woodland home
And to thy tender care my cherish'd band,
To seek for health, unto a stranger land,
Or else from those dear ones I ne'er would roam.
But in lone absence my bright hours shall be,
In thinking of that home, the lov'd, and thee.

Rochester, Oct. 17, 1853. AZILE.

### THE WANING YEAR.

The year eighteen hundred and fifty-three is falling into the sere and yellow leaf, preparatory to its final exit—bearing upon its bosom, like forest foliage upon the waters of a swift flowing stream, the hopes and fears, the successes and disappointments, the dreams and realities, the joys and sorrows, the evil deeds and the good deeds, of a thousand million of the children of men through the brief period of another annual revolution. Within the short space of a single year, what changes have taken place. How many of the young and promising who witnessed the falling of the last year's leaves have themselves been nipped by an untimely frost! How many, who had reached the full period of maturity, have in the natural course of events been gathered in by the great reaper, Death! How many who looked forward to the then coming year, with full confidence that it would leave them as it found them, only a little older, a little wiser, and perchance a little better, have had the record of their lives brought to a final c'ose! How many lights have been extinguished, how many luminaries have sunk below the horizen, how many meteors have blazed portentuously and gone out! Fortunes have been made and lost. Speculations, successful and unsuccessful, have made a few men wealthy, and bankrupt thousands. Epidemics, intemperance, casualty, and crime, have found a rich harvest in the field of human life and entered up a brave account in the record of mortality.

But the picture has much of sunshine as well as of shade. Peace has thus far been maintained among most of the nations.—Benevolent enterprises have been unusually successful. Men engaged in legitimate pursuits have mot with ample rewards.—The business of the merchant has been active, the mechanic and artisan have found abundant employment at remunerating prices, and the farmer has obtained fair returns for all the produce of his fields.

The time has now arrived for gathering in the later crops of the season, preparatory to the coming on of winter, and the enjoyment of a little more leisure. The glorious old winter fireside of a farmer's home! The very idea of it conjures up a train of half-buried memories, that makes us give utterance to the exclamation—

"Ah, would I were a boy again!"

*Rural* readers of the Rural New-Yorker, some of you need not be taken by surprise if a delegate from the corps editorial, now and then laying aside for a brief interval the quill and scissors, takes a chair of a long evening of the coming winter beside your ample and blazing hearth, eats one or two of your big apples, takes a pull at your mug of cider, and cracks a few nuts and a few jokes with you, as in days of yore. What say you—shall we come?

---

Plain People.—Plain men—nay, even ugly little fellows—have met with tolerable success among the fair. Wilke's challenge to Lord Townshend is well known:—Your lordship is one of the handsomest men in the kingdom, and I am one of the ugliest; yet, give me but half an hour's start, and I will enter the lists against you with any woman you choose to name; because you will omit attentions, on account of your fine exterior, which I shall double on account of my plain one!" He used to say that it took him half an hour just to talk away his face. He was so exceedingly ugly, that a lottery-office keeper once offered him ten guineas not to pass his window whilst the tickets were drawing, for fear of his bringing ill-luck upon the house.

---

Abolish the Grog-Shops.—In speaking of the crimes and miseries which make portions of the city of New York a very hell on earth, the New York Times says:—"Abolish the corner grog-shops. Out of them nearly all this ruffianism, cowardice, and cruelty issues, and homes as well as human beings are poisoned. There men learn to forsake their natures, and become blind and howling demons of vice. It is there that the husband sucks in the savage fury that makes his house a hell; it is at the threshold of these infamous dens that the wives of New York must lay the blood that pours from their broken hearts."

For Moore's Rural New-Yorker.

### "HE ASPIRES NO HIGHER."

"Good morning, Mr. G."

"Good morning, good morning, sir; happy to see you. When did you arrive in town?"

"Arrived last evening."

"Well, I am happy to bid you welcome to your native place; it is a long time since we have seen you here."

"Yes, it is ten years since I was last here, and I find great changes have taken place, not only in the appearance of the town, but I see many *new* faces, and but few *familiar* ones."

"Old things and persons have passed away, and behold 'all things are become new,' applies emphatically to our town.—Ten years work great changes."

"I see, judging from appearances, that enterprise holds dominion here. Your stores and public buildings would do honor to a larger and more assuming town; and I saw during my walk about town this morning, some private mansions which, with their surroundings, were *beautiful*, surpassingly so. Instance one across there, on —— street; who is the owner of that?"

"Richard B., second son of Judge B.—You were acquainted with Judge B.'s family?"

"Richard B., indeed! I had supposed him dead—had heard nothing of the family for several years, though formerly well acquainted with them."

"The *Judge is* dead, and has left his property among his children. Richard is a merchant here, and doing a heavy business—is prospering, as his place indicates.—James, next younger, is a lawyer in the city of ——, and an ornament to the profession—following in the footsteps of his father, who, you remember, was an able lawyer, and had *few* superiors either at the bar or the bench, or in private life as a citizen. Isaac, the youngest, is preaching in one the Southern cities, and is very popular, both as an orator and writer."

"But what of Emerson?—you have forgotten him. He was a fine fellow, though he had a great many eccentric notions. I thought the most of him of any of the boys—so honest, kind, companionable, and he *knew* something too; yet he had not one aristocratic notion about him, which could not be said of his brothers. Where is he?"

"You remember Judge B. owned a farm down the river. When the property was divided, Emerson *chose* that for his portion, married Sarah F., who worked so long for Squire A. in his dairy, took possession of his property, and removed on to it immediately, and is there now, a farmer!—aspires no higher!"

"What! Emerson B. a farmer! aspires no higher than *that*, and married Squire A.'s dairy maid? Why, sir, he had talents of the highest order, a mind well disciplined, and *I* thought *higher* aspirations than that! A *farmer* indeed!"

"And yet, sir, I assure you he is to be envied. Has a most charming home, charming wife and charming family—one of the happiest families within my acquaintance—accomplished and refined, intelligent and sensible. They are not *afraid*, *any* of them, to do *any* kind of farm work, and *do* do it. And yet you could not visit them without leaving with a desire to visit again."

"You surprise me, Mr. G., and *really*, I have a curiosity to visit my old friend, if he *is nothing but a farmer*."

"Very well; then I will call for you with my carriage early in the morning, and we will take them by surprise."

---

"Good morning, friend B. I fancy I would like some of these strawberries and Mrs. B.'s *'fixins'* for breakfast; but I have the pleasure of introducing an old school and playmate, and mutual friend, Arthur C."

"Why, my old friend Arthur! How do you do?" said a noble looking man with a spade, as he extended his hand. "Walk in; I have been manufacturing an appetite this morning, and have been successful. Mrs. B., my old friend, Mr. C., and Mr. G., who has spoken for some strawberries, &c., for breakfast."

The gentlemen were so greeted by the lady, that their most fatidious notions of politeness were met. Breakfast, such as only a farmer can offer, was soon over, family worship performed, and the gentlemen were roaming over the farm, (the farmer's parlor,) enjoying the morning air, &c., and in earnest and interesting conversation. Common topics of the day were discussed, in which politics and religion bore a prominent place.

"My friend Emerson, I was talking with our friend G. yesterday, and he told me you was a farmer, and aspired no higher! Why this choice? I was surprised that this should be the summit of your ambition."

"Ah! Well, friend G. knows as much about my aspirations as any of my friends, perhaps," said Mr. B., glancing archly at Mr. G. "He knows I *do not aspire* to measure tape behind the counter, without a thought beyond the relation of *cost* and *profit*. He knows I *do not aspire* to become a pettifogging, quibbling lawyer, to try to aid in the crimination or clearance of arraigned men, whether guilty or not—to try to treasure up and enforce the wise and unwise laws which our wise (?) rules see fit to enact. He knows I *do not aspire* to become a political hero—to have my name raised by one party, (if I should become popular, or they thought there was anything to be made *for themselves* by *my* promotion to office,) and 'cast out as evil' by the other. I *do not aspire* to spend my time cultivating my *mental* powers at the expense of *health*, and consequently *happiness*, in *this life*. I believe *physical* education is of as much importance as mental, if the equilibrium is preserved—that mentally, physically and morally, man is to progress—a perfect combination is necessary to make a perfect man—that *all* were given man for cultivation, and he who cultivates one and neglects the other, is acting contrary to God's design."

"But he knows I *do* aspire to be a Farmer—to breathe pure, God-given air—enjoying the sunshine, listening to Nature's thousand music notes, and drink in the warbled melody of her myriad feathered dependents—study her book, always open, treasure up and *think* upon the lessons she teaches. He knows I *do* aspire to secure a *Home* in *Heaven*—to 'keep my mind pure and unspotted from the world'—to rear my family uncontaminated with the selfishness, the within-yourself feeling which is so perceptible in our large towns—to teach them the *highest* duty of man, to honor and adore their Maker. This is why I choose to be a Farmer—why I aspire to no higher earthly vocation." Charlie Chestnut.

---

### THE SEVEN ANCIENT WONDERS.

These were, 1st. The brass Colossus of Rhodes, 121 feet high, built by Ceres, A. D., 288, occupying 20 years in making. It stood across the harbor of Rhodes 66 years, and was then thrown down by an earthquake. It was bought by a Jew from the Saracens, who loaded 900 camels with the brass. 2d. The Pyramids of Egypt.—The largest one engaged 360,000 workmen 30 years in building, and has now stood at least 3,000 years. 3d. The Aqueducts of Rome, invented by Appius Cladius, the censor. 4th. The Labyrinth of Psalmetichus, on the banks of the Nile, containing within one continued wall, 1,000 houses and 12 royal palaces, all covered with marble, and having only one entrance. The building was said to contain 3,000 chambers, and a hall built of marble, adorned with statues of the gods. 5th. The Pharos of Alexandria, a tower built by order of Ptolemy Philadelphus, in the year 282 B. C. It was erected as a light-house, and contained magnificent galleries of marble—a large lantern at the top, the light of which was seen near a hundred miles off; mirrors of enormous sizes were fixed round the galleries, reflecting everything on the sea. A common tower is now erected in its place. 6th. The Walls of Babylon, built by order of Semiramis, or Nebuchadnezzar, and finished in one year, by 200,000 men. They were of immense thickness. 7th. The Temple of Diana, at Ephesus, completed in the reign of Sorvius, the 6th King of Rome. It was 450 feet long, 200 broad, and supported by 126 marble pillars.

---

### LONG-TAILED CHARITIES.

As we were listening, a few evenings ago, to the conversation of one of the most wise and learned men of these times—a man of wit and humor, withal—we heard these remarks:—"On the whole, I don't like long-tailed charities—it is but right that each generation should take care of its own poor, and sick and infirm. Great foundations seldom have a proportionate superstructure. The greater the remove from the life or death of the donor, the greater the probability of abuse or perversion of the gift.—What a pity, by the by, that rich men do not see the economy of being their own executors and trustees!—as they are beginning to do, a little, in Boston and elsewhere. When a man of affluence says 'I am rich enough—I will acquire no more—I will give my income to charity after this date,' he has taken a great step, and soon finds giving—wise and judicious giving—almost as easy as gathering! And then it makes him so happy to see the effects of his benevolence. The frequent wastefulness and mismanagement of corporations is astonishing. Sir, liberality with other men's money is one of the virtues which survived the effects of the fall of Adam! I think that in charity, as in everything else, as little should be done by proxy as may be."—*Boston Post.*

---

Intellect can't bear fashionable refinement, and dies under it in one or two generations. If you would select a youth who is likely to make his mark in the world, take one who is carting mud in a clam-shell wagon, or building houses in the sand; and not the delicate baby who is fondling a China lap-dog on the parlor carpet. Daniel Webster's father made his cradle out of a pine log with an axe and augur; Lewis Cass was rocked by his staid New Hampshire mother, in a second-hand sugar trough. The greatest architects for the manufacture of genius are Poverty and Republicanism.

# For the Ladies.

Written for the Rural New-Yorker.

### AUTUMN GLORIES.

BY IDA FAIRFIELD.

A hush upon the softened air,
Upon the breeze a sighing—
A whisper, stealing every where,
"The beautiful is dying."

A glory on the changing sky,
The soft clouds fleetly hieing,
To the vast chambers of the west,
And there in glory dying.

A rainbow on each forest bough,
The wild birds southward flying—
Tread softly through the forest paths,
Those gorgeous leaves are dying.

Great piles of golden, luscious fruit,
The rose leaves, scattered lying,
A faintness in each floweret's cup,
Each flower in perfume dying.

A shadow in the sick one's room,
A check in beauty vieing,
With the last flush of glory light,
On summer's sunset dying.

And in the large and languid eye,
A lambent brightness lying—
Draw softly the white curtains round,
Is not the lovely dying?

But hark! the pale lips part: "I go,
With joy my spirit flying,
To that sweet land of fadeless light,
Where beauty is undying."

Walton, N. Y., Oct. 1853.

### THE LADIES AT AG.'L FAIRS.

FEMALE EQUESTRIANISM.

[Mrs. M. W. H. furnishes us an interesting account of the first exhibition of the Albany Co. Ag. Society. As we cannot consistently devote much space to local matters, we give only such portions of the article as are of general interest to our readers.—Eds.]

Aside from other articles, there was a very creditable display of those strictly pertaining to household productions—especially creditable when we consider that the Society has been only a few months in existence, and competition restricted to "articles manufactured in the family within the last year." Belonging to this class, I noticed a very beautiful specimen of woollen yarn, of various and brilliant colors, and superior evenness and fineness of thread, designed for shawls.

There were good samples of needle and ornamental work, in their various departments. There was quite a display of bed-quilts; some might be called beautiful, but none pleased me better than one of an unpretending character, which was made by a little girl of seven years of age. Seeing a little girl near it, who was particularly interested, I said to her,—"My dear, do you know the little girl who pieced this quilt?" "Yes ma'am, I did it," was the reply, while her eyes glistened with a pleasant expression. Had I been one of the committee to examine that work, I certainly should have recommended a gratuity of a gold thimble. I do not know whether the child received any thing or not, but I hope she did, for it was such an important matter to her, as was evident in the anxiety of her manner, that the result would exercise an important bearing on her future life.

This brings to mind a question, which I wish to ask. Would it not be well for Agricultural Societies, offering premiums for female handiwork, to offer them in such things as are easily kept as memorials, rather than in money? I am satisfied that any lady receiving a premium of one, five, or ten dollars, would prefer some nice article for the table, or the workstand, that might be kept, when *money* would have faded from the remembrance. For men, who have animals, machines, &c., in many cases perhaps money is the most acceptable form in which a premium can be given, not for the love of the "*lucre*," as some have alleged, but to pay expenses that always attend the exhibition. There is no doubt many meritorious articles are withheld from inability to incur this expense.

The closing and the *crowning* feature of the exhibition, was the equestrian performances of the five young ladies, competitors for the prizes offered by the Society. Of course there was no leaping of five-barred gates, or ditches, nor yet any of the feats of circus riders attempted; yet the young ladies acquitted themselves to the admiration of thousands, who pressed around the circle to witness their proficiency in one of the most graceful, exhilerating and healthful exercises that can be enjoyed by male or female.

It was to encourage a taste for equestrianism, viewed in this light, that the Society offered its liberal premiums, the first prize being a Silver Pitcher, and the second a Silver Goblet. I am glad to see a taste for riding on horseback encouraged among females. I wish every institution of learning throughout the country, where girls are educated, could be provided with horses for their use. They need not refuse to ride, because they have no riding dress ample enough to envelope horse and rider, which would only embarrass them. Almost every farmer's daughter in Ohio has a skirt made of some cheap, strong wool or worsted material, to put on when she rides, to protect her dress and feet. The exercise would contribute just as much to the development of muscular strength, and mental vigor, if taken in a sun-bonnet and school-dress, as if taken in the most fashionable *riding costume*. To acquire an easy, graceful management of a horse, it is not necessary to attend a riding school; for all young ladies have male friends who are skilled enough to give general directions,—courage and experience will do the rest. Parents in cities, who can afford the expense, would do well to send their daughters to a riding school; money spent in this way would yield good returns in improved physical and mental energies, cheerfulness and happiness.

I am not one of those squeamish mamas who object to having *their* "daughters making such an exhibition of themselves." For my own part, I can see nothing unfeminine or immodest in a contest of the kind lately witnessed, conducted as it was, and as such contests always should be, by *gentlemen*. It is true some *nerve* is required to bear the excitement of appearing on the course, to pass in review before the judges, but no more than is required to sing alone in church or at a concert, which is done by thousands. I believe the subject has received an impetus in this County that will, another year, bring forward many competitors for the prizes that may be offered. I am sure no one thing could have rendered the first exhibition of our Society so attractive as the introduction of this novel feature.

Albany, N. Y., Oct. 6, 1853. M. W. H.

---

### THE MOTHER.

Of all the impressions made upon the youthful mind, none are so lasting as those received from a mother. While the rough finger of time may eradicate almost all others, these become as it were a part of our nature, controlling motives, exerting a powerful influence over us in all the affairs of life. And this fact is sustained by the evidence of many of the greatest men that have ever lived. Perhaps of all whom the world has honored with the appellation of great, more than one half might, with the strictest propriety, inscribe on their escutcheons, as the motto of their success, the simple word "Mother." Truly weighty, then, are the obligations devolving on woman in the discharge of her duties in this relation. The formation of character is hers. And may she not be in a great measure responsible for the future welfare or misery of her child, just in proportion as she discharges faithfully, or neglects to discharge her obligations to it? The child is father of the man, and the seed sown in the moulding of youthful character must bring forth good or evil fruit in the harvest of mature age. Aye, its influence will be felt by future generations, and it remains with the mother whether those who in future time may be affected by the act of her child, shall have reason to bless or curse her who gave him being. So far does the influence exerted by the mother affect the character of the child, that we may, with a considerable degree of confidence, make the assertion, "Show us a good mother, and we will show you a good son." Many a young man has been obliged to attribute his want of success in the business of life, to false impressions received from a mother, whose errors (to her sorrow be it said) were errors of the head, not of the heart.

---

### VIRGINIA GIRLS

The Richmond Enquirer of a recent date, contains the following notice of a Virginia girl—or in its own language—a meritorious lady of our acquaintance in Hanover county:

"At the age of twenty she was a hearty, rosy-cheeked lass, full of life and industry. Seeing a chance for making a disconsolate bachelor as happy as herself, she acquired a piece of land, with the view of having a "local habitation." A house was the next thing indispensable to her laudable ambition. She shouldered her axe, went to the woods, felled trees with her own hands, chopped the logs for the building, made shingles to cover it, nailed them on, and finished the house by lathing and plastering it herself. In a short time thereafter, she met, saw and conquered a deserving and industrious young man, residing in her neighborhood. They were married and the young couple commenced their married life in the neat cottage, the fruit of the wife's industry, and the work of her own hands.—All this occurred about the year 1836.—Time has advanced, and she is now the happy mother of thirteen children, (the youngest five months old,) and be the happy and prospereus husband of a most industrious and estimable lady. What is it woman cannot accomplish, when with earnestness she undertakes the task?"

---

Female Character.—Dr. Spring says that neatness and taste are peculiarly ornamental to female character. In a female, particularly, they well deserve the name of virtues; for without them, whatever may be her excellence, she has none that will be honored and acknowledged. A woman may be industrious and economical; she may possess a well-cultivated and richly-furnished mind, but, destitute of neatness and taste, depresses rather than elevates the character of her sex—and poisons instead of purifying the fountain of domestic and public happiness.

MOORE'S RURAL NEW-YORKER.

ROCHESTER, OCTOBER 22, 1853.

### News of the Week.—War.

The all-absorbing subject for a few days past, setting out of the account State politics, is the war news brought by the recent steamers from Europe. The matter having been so long in agitation, and the successive arrivals having continued to report no actual collision as yet between the hostile parties, people began to regard the whole thing as a farce. In the meantime, however, the cloud of war has been gathering thicker and darker on the Turkish frontier, and the chances of a peacable adjustment of difficulties have continued to grow less and less.

The Emperor of Russia, with a deep laid scheme for ultimate success, has been procrastinating the negotiations with just enough of hostile demonstration to prevent Turkey from disbanding or reducing her forces, and not sufficient to warrant her bringing the dispute at once to the arbitrament of the sword. In this way he hoped to wear out the patience of his adversary, to exhaust the resources and deplete the treasury of the Turks, to carry the final decision so late into the season as to render it impossible for the Turkish allies in the west of Europe to furnish her any essential aid until spring, and finally to throw upon his adversary the odium of commencing hostilities. There is not the least doubt but that Russia has for a long time looked with a longing eye upon the Turkish territory; and she would years ago have absorbed it into her own dominions if the jealousy of the other European powers had not prevented. The rapid increase of Russia in strength and resources for many years past, has rendered her Emperor more bold, and he now seems determined to bring the matter to an issue, whether his neighbors of the Holy Alliance are willing or not.

The firy fanaticism of the Turks furnishes him ample pretexts, and their zeal in the cause of the religion of Mahomet pushes them forward to the combat, regardless of any question of prudence or policy. It is enough for them to know that their oponents are Christians at least in name; that they are of that religion whose professed followers have been at enmity with the Mussulman for twelve hundred years; that their ancestors and allies have met them in many a bloody and well fought field on the plains of Palestine, and in the valleys of old Spain; and with an implicit faith in the predestined course of human events, let the actors in them do what they may, they will push on the quarrel to a bloody issue.

England and France, and in all probability other European powers, will become involved in the contest. They have nothing in common with the Turks in religion or politics; but their jealousy of Russian power, which threatens to overshadow them in its greatness, induces them to favor the weaker party. Nothing but the fear of dishoner, or impending peril, would prompt England to engage in a war, for it would be a direful calamity to her. Her commerce would be destroyed, her manufactures ruined, her resources cut off, her already large debt enormously increased, But England is not the nation to quail before difficulties. She has stood single handed in many a combat, with fearful odds against her, and came off victorious. She will, in this instance, occupy a novel position having her old and inveterate enemy, France, shoulder to shoulder as an ally, fighting in the cause of the ancient enemy of the Crusaders. What would Richard of the Lion heart and Saladin think, if they could see the Cross and the Crescent ranged on the same side of a hostile field?

The revolutionists of Continental Europe are waiting anxiously for a war, in the hope of retrieving their own fallen fortunes, and if there is a general declaration of hostilities, we may look for a "bloody record in the book of Time."

Let the United States stand neutral if they know their own interests, and frown down those enemies to our prosperity, who would involve us in the struggle!

---

M. Arago died at Paris on Sunday, the 2d inst. He was a man of pre-eminent learning, and celebrated for many important discoveries in physical science, among which may be reckoned the method of determining the diameters of planets, afterwards adopted by La Place, the discovery of colored polarization and of magnetism by rotation, His contributions to the various scientific "Transactions" and "Memories" of Paris are numerous and important. With Gay-Lussac, he was the founder of the "Annals of Chemistry and Physics." His writings are remarkable for the clearness and beauty of their expositions, in the most difficult branches of science. He acted a conspicuous part in the revolutions of 1830 and 1848, and has always been a warm friend to republicanism, taking for his model our institutions.

---

Indiana State Fair.—The second annual Fair of the Indiana State Board of Agriculture was held at Lafayette last week. It is represented as having been quite successful—among the best exhibitions ever held in the West. A telegram states that forty thousand persons were in attendance, and that thirty thousand of them were present on Thursday. The number of cattle and horses exhibited was 500, and other departments of the show are represented as highly creditable to the farmers and artisans of the State. The total receipts amount to $7,000. Our Hoosier friends are entitled to the banner, this year.—Horace Greeley delivered the address, which is spoken of as an able and suggestive production.

### Buffalo Agricultural Warehouse.

It will be observed by reference to a card in our advertising department, that Mr. H. C. White, for many years Agent of the North Wayne Scythe Manufacturing Co., and for some two years a member of the corps editorial of the Rural, has become an associate proprietor and manager of the Buffalo Agricultural Warehouse and Seed Store. Mr. W. is eminently qualified for the position assumed, and cannot fail of achieving success therein. Possessing as he does, the right business tact and habits, and an intimate acquaintance with the wants of the agricultural community, we can cheerfully commend the establishment with which he is connected to all interested. Our friends in the western portion of this State, and in the Western States and Canada will find the Buffalo Ag. Warehouse every way worthy their attention and patronage. The establishment is already well and favorably known, but its reputation and business will undoubtedly be materially enhanced under the management of the new firm. The proprietors possess abundant means and superior facilities, and we believe their enterprise will be properly rewarded.

---

A Shameful Pugilistic Fight, for a prize of $2,000, took place last week at Boston Corners, near the Harlem railroad above New York. Five thousand spectators witnessed the combat. The combatants were Yankee Sullivan and Morrissey, who fought thirty-seven rounds and presented a shocking spectacle after the fight. Morrissey was declared the victor by the referee, on the plea of foul blows on the part of Sullivan, although the latter came off best in the encounter. The spectators got into a fight among themselves before the affair was over, and it is only to be regretted that the whole crowd were not pummelled into a jelly.

---

The Weather.—As something remarkable "for the season," and therefore particularly noteworthy, we itemize the fact that the weather has at last become pacific, and all whose avocations permit are, or should be, enjoying a most delightful Indian-summerish atmosphere, with its peculiarly beautiful accompaniments. With a bright sky and pure air, and most charming and seasonable surroundings—including clear consciences and encouraging prospects—our friends in the country are to be envied. They have little to desire, and may well be content with such blessings as are daily vouchsafed.

---

Monroe Co. Ag. Society.—The Treasurer of this Society, Mr. Hayward, will be in attendance at the Genesee Seed Store, 65 Buffalo st., Rochester, on Saturday, the 22d inst., for the purpose of paying premiums awarded at the late Fair. All interested are requested to act accordingly.

---

Barnabus Bates, the able and active friend of cheap postage, died at Boston, on Tuesday the 11th inst. His efforts were greatly instrumental in reducing inland postage to the present cheap rates, and at the time of his death he was laboring for a similar reform in ocean postage.

---

Erratum.—In our account of the Canada Fair, in last week's Rural, read Ralph Wade Sr., instead of R. Wade Jr., as the exhibitior of the best yearling Short-horn bull, and also as the exhibitor of the six months old Durham bull calves.

## Literary Notices.

Lecture on Flax—Its Treatment, Agricultural and Technical—delivered before the N. Y. State Ag. Society at Saratoga, 1853. By John Wilson. New York: C. M. Saxton.

Prof. Wilson is on a visit to this country as one of the Royal Commissioners sent by the British Government to the Crystal Palace Exhibition at New York. He is one of England's greatest scientific men, and possesses considerable knowledge of the practical workings of Agriculture. A lecture from such a man, on an important practical subject, will be read with interest.

---

Patent Office Reports.—We are indebted to Hon. Chas. Mason, Commissioner of Patents, for the Agricultural and Mechanical parts of the Patent Office Report for 1852-3. They are works of general interest, and our friends should apply to their Representatives in Congress for copies.—The Agricultural part contains much valuable and practical information, thrown together, apparently without any effort at arrangement. On the whole, however, the work is superior to the previous volumes, though there is still great room for improvement.

---

The National Speaker.—This is the title of a new school publication compiled by Henry B. Maglathlin, A. M., and designed to furnish rules for declamation and selections for exercise. The book contains a great variety of extracts in prose and verse from the works of American and English orators and authors. For sale by Sage & Brother, Rochester.

---

A catalogue of the officers and students of Smethport, Pa., Academy for the year 1852-3 is received, by which it appears that the institution is in a flourishing condition. The whole number of male students for the year is 107, females 123—making a total of 230.

---

The Apostolic Ministry.—This is the title of a discourse preached in Rochester, last July, by the Rev. Dr. Wayland, President of Brown University. It is published in a very neat pamphlet, and is for sale by Sage & Brother.

---

D. M. Dewey has received for sale the October number of Blackwood's Magazine, which, among other things, contains an elaborate review of *Uncle Tom's Cabin.*

### Webb and the London Times.

James Watson Webb, editor of the New York *Courier and Enquirer*, who is now in Europe, has written a long and cutting letter to the *Times*, in which he administers a severe and merited rebuke to the English press for their proneness to sneer at and censure everything American—charging them (the English press) with an ignorance of the matters which they comment upon inexcusable in enlightend journalists. He accuses them of selecting isolated instances of brutality, lawlessness, and crime in this country, and blazoning them abroad as types of American morals and civilization.

"As well," remarks Mr. Webb in retaliation, "might the American press argue that because the *Times* newspaper is daily filled with the details of brutal Englishmen beating their wives, therefore it is evident the whole English people are a set of brutes, who habitually indulge in this English sport; or because *Bell's Life in London* gives graphic accounts of the favorite English sport of "the ring," that therefore all Englishmen delighted in that offspring of a "higher civilization;" or because the late investigation into the administration of prison discipline at Birmingham exhibits a state of things which would revolt the feelings of the most brutal of the slave-dealers of our extreme South, that, therefore there is no such thing as humanity or philanthropy in all England! Or if we deemed it expedient to call attention to your manufacturing districts, and invade the dark alleys and cheerless garrets of London, and drag to the light of Heaven the horrible starvation and misery which exists there, and annually consigns hundreds of thousands of victims to an untimely grave, without even the consolations of religion to smooth their path; or if we should attempt to sum up the tens of thousands of human beings who, in this Christian land, annually perish without ever having received the benefits of education, or learnt that there is a God over all, a future state of reward and punishment, and a Savior who died for Sinners;—if the American press were daily and habitually to present those isolated facts to the American people, and say to them—"Such is England, and such the people who hate you with so cordial a hatred that its press can only exist by abuse of you and your institutions, and by holding up your wives and daughters to the ridicule of such a people"—if, I say, such were the course of the American press towards the land of our fathers, it would be quite as just as is the practice of the English press towards the United States; and, we too, might create and foster a spirit of hatred and hostility towards England, quite as sincere, and far more potent than is, or can be the hatred and contempt which the English press foolishly, recklessly, and most unadvisedly is creating against their Transatlantic brethren."

The *Times* in its reply avoids the issues made by Mr. Webb, charging him with writing in a spirit of ridiculous vanity and self conceit, and winds up by saying:

No one but a despot, or a man in training for despotism, ever demanded immunity from discussion; but, in spite of Emperors, in spite of the Spanish Government, whatever it is, and in spite of General J. Watson Webb, we shall certainly continue our strictures on Russian, Austrian, Spanish and American as freely as upon English affairs. It is the birthright of the Englishman; and till he finds himself worshipping the "God of the Russians," or a fellow slave with niggers under the stripes and stars, he will continue to exercise it.

---

Michigan vs. New York.—The Detroit Advertiser under this head says:

"The receipts at the New York Fair, with a population in the State of 3,500,000, were about $6,000. The receipts of the Michigan State Fair, with a population of 450,000, or *one eighth* of that of New York, were about $5,000. If New York had equalled Michigan, the receipts there would have been $40,000!"

Although the receipts of the New York Fair were not what they ought to have been, considering the amount of her population, yet the difference in number of agriculturists is by no means so great as appears by the above comparison; for New York is pre-eminently a commercial State. Half a million of her inhabitants in a single locality are engaged in other than agricultural pursuits, to say nothing of a dozen other great cities within her borders.

---

Singular Railroad Accident.—The following accident on the Paris and Bordeaux Railroad is reported in the French papers by the arrival of the late steamer:

"The Conductor whose place was in the luggage van, on hearing the noise of the approaching train, opened the sliding door and put his head out to see what was the matter. At that moment the trains came in collision, the sliding door was violently slammed to and decapitated him as neatly as a guillotine. His head rolled down the embankment, while his body remained in the car van."

---

Departure of the America.—The Cunard steamer America, sailed from her wharf in East Boston, on the 10th, for Liverpool, via Halifax.—She took out 60 passengers for Liverpool, and 40 for Halifax. Among the passengers for Liverpool were T. F. Meagher, M. P., Mrs. T. F. Meagher, and H. H. Hale of Boston, bearer of despatches. The America also takes out $500,000 in specie, one-half American coin.

---

The Yellow Fever.—The accounts from the south-western part of Louisiana, are very distressing. In the little town of Washington, on the west side of the Mississippi, a little back from the river, about in the latitude of Bayou Sara, 59 had been buried in the course of three weeks; 270 were sick on the 25th ult.—leaving only *eleven* well men in the whole township!

---

A Valuable Brick.—An ingot of gold, weighing 793 ounces, and valued at $16,256 75, was yesterday drawn from the U. S. Mint by the agent of Harnden's Express, for the firm of Wells, Fargo & Co. It is the most valuable ingot of gold ever cast at our Mint. In shape and dimensions it resembles a brick, but the weight was enough to tire the strongest man.—*Phila. paper.*

---

☞ The Chicago people are moving for a tunnel under the river to connect the two portions of the city. The Massachusetts people also held a Convention at Fitchburg on the 11th inst, on the subject of a tunnel three miles long, through the base of the Hoosick mountain on an air line road from Boston to Troy.

## News Paragraphs.

☞ A gentleman in Ohio recently brought an action against the proprietors of a steamboat, to recover the value of a trunk containing, in addition to wearing apparel, &c., two thousand dollars in cash. The Court instructed the jury that it was a fraud upon the steamboat proprietors for a traveler to carry as luggage articles of such unusual value, without notifying the carriers, and paying extra for safe keeping; and that common carriers are liable for ordinary luggage only, without special contract. The jury therefore rendered a verdict for the plaintiff of $300, the value of his luggage excluding the $2,000, for which the defendants could not be held responsible.

☞ Hon. Henry Welles, one of the Justices of the Supreme Court for this District, the 7th, whose term of office expires the present year, has been re-nominated by the Whigs. The Free Soil wing of the Democratic party has nominated Warren S. Worden of Auburn, and the Adamantines, Jas. Taylor of Yates, for the same office. If there is any office, the tenure of which should be held above mere partizan and political considerations, it is that of Judge; and when it ceases to be so held, the elective judiciary will have proved a curse instead of a blessing.

☞ A correspondent of the New York Courier and Enquirer, writing from New Orleans in reference to a report that a great number of young men from all parts of the country, are about to emigrate to that city to fill vacancies which they believe to have been occasioned by the late epidemic, says:—"Very few clerks have died, and where a vacancy may have occurred, there has been, and always is in the city, one hundred standing ready to fill it." The fever has nearly subsided in the city.

☞ The native population has been decreasing in the Sandwich Islands since the period of their discovery. In 1847-8 ten thousand of the natives fell victims to the measles and the whooping cough. The small pox has lately been introduced into the islands from California, and is very fatal, although strenuous efforts are making to counteract its ravages by means of vaccination. The Polynesian, a paper printed at Honolulu, hopes the disease will have run its career and become extinct by December.

☞ The Pittsburgh American, alluding to the recent State Fair held in that city, says:—"Notwithstanding the immense number of persons daily attending—from 50,000 to 100,000 each day for a whole week—there was not noticed one single drunken man on or around the grounds; nor did a single fight or quarrel occur; nor was there an instance of an act of incivility occurring that has come to the notice of any one, so far as we can discover."

☞ The Grand Trunk Railway Co. of Canada, offer British laborers and mechanics £2 10s. and £1 for every member of their family to bring them to Canada—on condition that they find security to repay the amount at the rate of 1s. per week, on arriving on the line of the road. There is also a great demand about Windsor for laborers on the Great Western Railroad. They are paying common laborers $1,12½c per day for grading on the Detroit river bank.

☞ A railroad bridge is about to be constructed over the Mississippi river at Rock Island, Ill. Three arches of 150 feet span each, will form the bridge from the Illinois shore to the island, and five of 250 each, from the island to the west bank. A draw is to be inserted for the passage of vessels and when completed, the structure will be a monument of strength and beauty, and engineering skill. The Father of Waters will chafe in vain against its rock-ribbed and iron-bound arches.

☞ The cholera in its westward march among the nations, says the Medical and Surgical Journal, has again reached England, and is carrying off the victims of filth and intemperance in the seaport towns. At Newcastle, where its virulence is greatest, the deaths averaged, at the last dates, about one hundred and ten a day. In other places, the returns show from one or two deaths to thirty daily.

☞ As a train from Harlem was recently approaching New York city, a ball from a musket, which had been discharged by some reckless young man, entered the forward car, passed thro' the hat of a gentleman, and then through the opposite side of the car. It is a pity the reckless shooter's head had not been in the place of the gentleman's hat.

☞ The Court of Appeals in the recent decision of a question involving the constitutionality of the general Railroad law of this State, sustains its constitutionality. One of the New York dailies first announcing the fact, by some mistake stated the decision to be adverse to the law, and created quite a flutter among the Brokers and Railroad men of Wall street.

☞ J. W. Mason, of Boston, has committed forgeries to the amount of $50,000. The paper is to be redeemed, it is stated, the matter to be hushed up, and the *operator* to go scott-free. If a ragged wretch passes a bogus fifty cent piece *he* is not permitted to redeem it but goes to State prison for a couple of years or so.

☞ Mr. Barrett, conductor on the Lowell and Boston railroad, is reported to have stopped an Express train, to allow one of his lady passengers to be kissed by a female friend whom she saw standing on the platform at one of the stations.—Why could not he have done it just as well, as proxy for the aforesaid friend?

☞ Simeon Draper, an extensive stock and money operator in New York, failed last week for a large amount. Hopes are entertained that he will be able to arrange his matters and go on again. Several other monied men have also suspended, and speculation is at a discount just now in Wall street.

☞ The steamer "Alleghany" has returned to Norfolk, from her trial trip, and is pronounced by the engineers as unfit for service. She made only 5½ knots per hour, with the aid of sails. Her engine frame split open, by the expansion of the vessel, which is of iron, causing a general smash of her machinery.

☞ Mrs. Webster, widow of the late Professor John W. Webster, who in 1850 expiated the crime of murder upon the gallows, died at Boston on the 8th inst. She was half-sister of the mother of Prescott the historian, and is represented to have been a most estimable woman.

☞ A keg of yeast, for transportation, exploded a few nights since in the office of the American Express Company, Cincinnati, scattering the contents throughout the room, and completely besmearing two snoozing attaches of the concern, who were sleeping on the floor.

☞ Simon Greenleaf, Dane professor of Law in Harvard University, died of apoplexy on the 6th inst. He was an acute lawyer and an excellent man; and was the author of several important legal works, among which may be reckoned the "Rules of Evidence."

## News Brevities.

—— Money is worth 2 per cent. a month in Cincinnati.

—— Over 23,000 persons visited the Crystal Palace last Saturday.

—— The steamship Vulcan landed at Halifax, on the 12th, 350 British troops.

—— Forty-eight rowdies were arrested at one time by the police of Baltimore.

—— The contracts for hogs in Kentucky are generally at three cents a pound.

—— Three vessels, on Friday and Saturday last, landed at New York 1,044 emigrants.

—— John B. Gough has been lecturing lately on temperance at Exter Hall, London.

—— The swell of a steamer sunk a mud scow at Philadelphia, drowning eight men.

—— The clipper ship Great Republic, recently launched at Boston, registers 4,000 tons.

—— There was redeemed at the Treasury Department last week $549,700 U. S. stocks.

—— Beet-root growers in the North of France anticipate a good crop of sugar this season.

—— The Gobelin tapestries have been ordered home by France from the N. Y. Crystal Palace.

—— All sorts of grains are imported into the two Cicilies duty free. Short crops is the cause.

—— A beautiful "Victoria Regia" flower was in bloom at Sayer's garden, Cincinnati, recently.

—— Barker, convicted at Worcester, Mass., for the murder of his wife, has been sentenced to be hung.

—— The Washington Star says the Congressional burying ground is in a shameful state of neglect.

—— It is stated that Madame Jenny Goldschmidt will next season visit England to give concerts.

—— The first State Fair in Missouri took place at Boonville, beginning the 3d and continuing four days.

—— Gavazzi has been invited to Louisiana.—He is about starting a paper in New York entitled *The Crusader.*

—— Mike Walsh is slowly recovering from the injuries received at the Adamantine ratification meeting recently.

—— Queen Victoria has given for distribution among the public charities the sum of five thousand pounds sterling.

——A fight occurred in Broadway New York, between two pugilists, in which one of them bit off part of the others ear.

—— The house in which Benedict Arnold, the traitor, was born, in Norwich, Conn., has been pulled down within a few days.

—— Leahey, who was recently convicted of murder, in Wisconsin, has been refused a new trial by the Supreme Court of that State.

—— The Circuit Court and Court of Oyer and Terminer, Judge Wells presiding, commenced its session in this city on Monday last.

—— James H. Young of New York, has been announced as Consul at Curacoa, and James H. Williams of Maine, to Sidney, Australia.

—— Tristam Burgess of Providence, R. I., a venerable citizen, and for many years a member of Congress, died on Thursday, aged 84.

—— C. Edwards Lester has written a letter to Secretary Marcy, charging the latter with connivance at the publication of a libel against him.

—— Ohio and Pennsylvania have both gone Democratic by large majorities. The new constitution of Delaware has been rejected by the people.

—— The Canal Board have removed several Adamantine incumbents from office, and appointed Democrats from the other wing of the party.

—— Elizabeth Clay, who shot her seducer at Cincinati, a few days ago, has been discharged, the grand jury having found no bill against her.

—— The Missouri Legislature has under consideration a bill providing that no man shall be allowed to endorse a note without the consent of his wife.

—— Guns were fired in the New York Park in honor of the release of John S. Austin, from the penitentiary, whither he was sent for riot at a political caucus.

—— The next Congress will contain more new members than any previous one. Nearly two-thirds of the whole number have never been in Congress before.

—— The application of one James Thomas, for an inn-keeper's license, at Liverpool, was urged on the ground that he had 34 children, 5 of which were born in two years.

—— The Vermont legislature have had difficulty in the election of a Speaker. A majority of ballots over all is necessary for a choice and there are three parties in the field.

——Madame Sontag fell into the dock at the Brooklyn Ferry, injuring herself considerably.—She slipped while attempting to step on the boat before it reached the landing.

—— The grain crops to the westward of Galway, Ireland, have been this season nearly all cut down and saved by women. Scarcity of laborers occasioned by emigration was the cause.

——A negro in Red River Co., Texas, committed murder on Monday, Sept. 20, was indicted on Tuesday, tried on Wednesday, and hung Thursday. Shame on the men who are so swift for vengance!

—— The Washington Sentinel says that 256 bags, containg 858 bushels of letters, were recently burnt, near the Monument, by order of the proper authorities of the Post Office Department

——A firman will shortly be issued, in Turkey, authorizing the admission of Christian evidence in courts of law. Hitherto no Christian's word has been admissible as evidence against a Mussulman.

——Hon. Azariah Boody, member elect from this (29th Congressional) district, has resigned his seat in Congress, and the Sheriff of the County, pursuant to law, has issued an election notice to fill the vacancy.

—— The Whig Convention for the nomination of County officers, is called at the Court House in this city on the 22d inst. Each town and ward sends five delegates. The Democrats held theirs at the same place last Saturday.

—— The corner stone of the new monument in honor of Gen. Brock, near Queenston, is to be laid on Saturday. The former one was shattered some years since by an explosion of gun powder, placed within it by the convict Lett.

—— Rochester Fire Company No. 6, accompanied by Scott's Cornet Band, have this week been on an excursion to New York city. Our eastern contemporaries speak in terms highly complimentary to them and their *machine.*

—— The elections in Maine have resulted adverse to the friends of temperance. The rural districts went strongly for the law, but they are defeated by the overpowering majorities of the cities, *where drunkards most do congregate.*

# Foreign Intelligence.

## Arrival of the Canada.

The Royal Mail Steamship Canada, from Liverpool, arrived at Halifax Oct. 13th, bringing 138 through passengers.

The Europa arrived out on Sunday, 25th ult.

The Collins steamship Atlantic, from New York, Sept. 17, arrived at Liverpool Tuesday, 27th ult.

On the 25th and 26th of September, a violent storm prevailed along the British and Dutch coasts, occasioning much loss of life and property. Rotterdam and other Dutch cities were inundated, and a screw steamer of Amsterdam was lost in the Zuyder Zee, with 100 lives. The iron steamer Cammeston, bound from Hull to Hamburg, was also lost with several lives. The American packet ship Neva put back to Liverpool, and went ashore in the Mersey. Several passengers in attempting to reach the pier were drowned. The ship Joseph Walker, from New York, sustained considerable damage in the Mersey. The American, for San Francisco, went ashore near Southport. The Shooting Star lost her topmast.

The ship Rhein, from Hamburg for New York, with two hundred passengers, had put into Portsmouth with cholera on board.

The Eastern Question.—The Daily News of the 29th ult., states that Admiral Dundas has received orders from the British Admiralty to move with the whole English fleet from Besika to Constantinope.

Great Britain.—The Bank of England has raised its rate of discount to five per cent.

The Court continued in Scotland, and home politics presented a complete blank. Meetings had been called in some of the larger cities to sympathize with the Greek Christains, but they were regarded as Russian demonstrations, and but few attended.

Sir James Graham, at a dinner given to the Lords of the Admiralty, who were with the fleet at Cork, stated that although arming was going on in the naval department, these preparations were made in the spirit of peace.

France.—All sorts of alarming rumors were circulated on the Paris Bourse. The Russian Minister was said to have demanded his passports.

Austria.—The Emperor Nicholas and the Prince of Prussia arrived on the 24th at Olmutz, to meet the Emperor of Austria. Since then, there had been a great military display, and a long private conference between the two Emperors.

India and China.—The Overland Mail had been telegraphed. The dates were, Calcutta, Aug. 20; Bombay, Aug. 30.

The famine continued at Rangoon, with the prevalence of cholera among the natives, and fever among the British troops.

Burmah was quiet, and Hindostan also.

In China, the insurgents continued their advances on Pekin. The Imperial Government was in great want of money, and provisions were becoming scarce at Pekin. The hired fleet blockading Chin Kiang consisted of eight English and American vessels. Nothing later is received concerning Commodore Perry's movements.

The steamer Powhatten arrivedat Hong Kong on the 26th, and the Vandalia at Macao on the 23d of July, and both had gone north to join the Japan Expedition. Canton was quiet.

Australia.—Advices from Port Phillip to the 4th of July are received. The market was torpid, and forced sales at auction were taking place.—Prices had fallen 50 per cent. Flour was being re-shipped to England, and there was a stock of 50,000 bbls. on hand. Three hundred ships with good cargoes on board, were in the harbor.

The escape of John Mitchell from Australia is confirmed. He called at the police office with a formal resignation of his parole, and while the officers were reading it, he stepped out, mounted a horse in waiting, and rode off.

Liverpool Market.—Breadstuffs continued in active demand for consumption, with prices still on the advance. Flour in good request, with a partial advance as per conflicting circulars of 1@2s. per barrel. The most reliable circulars quote Western Canal at 34s@34s 6d; Baltimore and Philadelphia, 35s 6d; Ohio, 35s; Choice do., 36; Canadian. 34s. Wheat has advanced 3d.

Provisions.—Very little doing in Beef, but prices remained firm. U. S. prime mess quoted at 97@105s; Canadian Beef, 80@90s. Pork in fair request at full prices—holders do not press sales. Prime Eastern mess, 80@85s: Western, 72s 6d@75s; Canadian, 75@80s. Nothing doing in Bacon. Considerable transactions in Shoulders at 30s. Lard remained steady, with small sales at 59@60s on the spot, and 52s for spring delivery. Cheese moved readily at former rates. Butter—Canadian quoted at 70@85s.

At Manchester on Friday, the 30th, the market for Goods and Yarns closed with depression, and a very limited business.

## Arrival of the Humboldt.

The above steamer arrived at New York on the night of the 14th. She left Havre on the 30th and Cowes on the 1st., and brings 216 passengers and 400 tons of merchandize. On the 3d inst., when two days out from Cowes, the Humboldt reports having passed seven large ships, men-of-war, standing west. What nation they belonged to is not stated. The Humboldt's news was anticipated by the previous arrival of the Canada at Halifax.

## Arrival of the Atlantic.

The U. S. Mail steamship Atlantic, from Liverpool Wednesday, Oct. 5, at 1 o'clock P. M., with 210 passengers, &c., reached New York on Sunday, the 16th, at 12 M.

The Asia arrived at Liverpool at 10 o'clock forenoon of Sunday, 2d. On the 28th ult., lat. 50° 46', long. 28° 26' passed the Arabia from New York.

The Turks are reported to have declared war against Russia.

Cotton irregular, but can hardly be quoted lower. Breadstuffs closed at about former quotations, but had shown some symptoms of dullness the previous three days.

Advices from Smyrna of Sept. 21, state that on that evening Martin Koszta, the Hungarian refugee, would sail for the United States on board the American bark Mimosa. This was to be done with the consent of all the parties concerned, and thus the matter, as far as Koszta himself is concerned, was settled. Mr. Brown, the U. S. Consul, was at Smyrna, to see the business duly finished.

The Turkish Question.—The news concerning a declaration of war and the commencement of hostilities, was received in London on the evening of Oct. 3d by sub-marine telegraph from Vienna. The following is the form of the despatch:

Vienna, Monday Evening, Oct. 3, 1853.

The Divan, at the Grand Council held this day, resolved on a Declaration of War against Russia.

Against the advice of the Four Powers, the Sultan has signed the Declaration of War.

Report says that hostilities have already begun.

The report is not fully confirmed by the English press, although facts previously known render it probable. The London Globe in relation to the matter says:—"In publishing the foregoing important intelligence, we would merely state that, although our own information does not authorize us to corroborate the main fact of a declaration of war, it is of a nature to warrant us in placing every credit in the statement. That the Sultan had, on the 27th, convoked a Grand Council, consisting of 120 of the principal Ministers, Councillors, Pachas and others — that the question of peace and war was submitted to them by him, and that they had decided in favor of the latter alternative. All this is beyond a doubt. Such being the case, our readers will see that all the probabilities are in favor of the main feature of the intelligence."

British funds had materially declined, owing to the news from the East. Consols closed Tuesday, the 4th, at 90⅞.

## Review of the Wool Market for Sept.

Prices have remained stationary during this month, principally by reason of the uncertainty which has hung over the question of war or peace in Europe, and from the operation of a rather stringent money market. There has however sprung up quite an active demand near the close of the month, and advanced prices are obtained as compared with the lowest point reached in August, and the early part of this month. The reaction has taken place, and prices must now rule high until the next clip. 55@65c. is now a fair quotation for good to prime full blood Merino, and 65 to 85c for Saxon. Common and grades range from 40 to 55c.

Manufacturers have not yet become fully aware of the great falling off in the wool growing business of the Union. In this State alone the decrease of sheep since 1845 has been about four millions, and in all the New England States the decrease has been equally marked. There has been an increase West, but not in any proportion to the decrease East. It is true, that by the use of old woolen rags, which have become a very important staple of commerce, and the increased adulteration of woolen cloths by substituting cotton and flax-cotton, the manufacturers have not been so observant as they might otherwise have been. The fact exists, nevertheless, and they will become aware of it in due time. Wool must rule high.—*Wool Grower.*

Singular Casualty.—A daughter of Michael Youngs, aged four and one-fifth years, of Sussex, New Jersey, fell upon the floor with a needle two and a quarter inches long sticking in its apron, and which was partly driven into its chest and broken off. The doctors could not find the piece of the needle, and the child lingered in great agony for four weeks, when it died, and a post mortem examination revealed a piece of the needle, one inch and a quarter long, lying loose in a large collection of matter entirely within the heart's substance.

☞A break occurred in the Genesee Valley Canal, about three miles south of this city, by which about twenty feet of the tow path was carried away, to the depth of about thirty feet, on Sunday morning last. A gang of men were immediately set at work and the breach repaired.

☞The Albany Northern railroad company have made an assignment of their property.—There is, it is stated, a mortgage on the road of $600,000, and the floating debts amount to $500,000 more; in addition to which $250,000 must be expended to put the road in complete order.

### PUBLISHER'S NOTICES.

☞ Agents.—Any person so disposed can act as agent for the Rural New-Yorker,—and all who remit according to terms will be entitled to premiums, &c.

☞ The Rural is published strictly upon the cash system—sent no longer than paid for—and all orders should be in accordance with terms.

☞ Advertisements must be brief, appropriate to the objects of the paper, and accompanied with the cash.

☞ For Terms, &c., see last page.

# Commercial.

## BUSINESS AND FINANCE.

The money market in our commercial cities has been very stringent for the past week, and speculators are having a blue time. Several large operators in Wall street have failed, and others are reported to stand in a critical position. Prime paper is negotiated at a discount of 12 per cent. and second class at from 15 to 18 per cent. New York Central Railroad stock, which a few weeks ago was selling at $127 per share, sold down at the close of the week at $106½; Erie 70 to 72; Hudson River 63, and other stocks in proportion.

There is in the New York Sub-Treasury about nine million of coin and eleven million in the banks. The steamer for Liverpool on Saturday, took out $900,000 in gold. Breadstuffs advanced on receipt of the foreign news by the Canada, but receded slightly on the receipt of later dates by the Atlantic. The markets are unsettled just now, but the prospects of an increased demand for export are favorable; and the farmer has ample reason to expect good prices for anything he may have to sell. The panic and hard times among speculators, will not extend to him so long as he continues in the legitimate line of business; at the same time, in view of the unsettled state of affairs in Europe and the possible contingency of a money crisis in this country, it is the part of prudence for the farmer to keep as far as possible from the necessity of money loans.

The commercial relations of our own country with Europe are so intimate, and we are so largely in debt to England and some of the continental countries at this time, that any disturbing causes in the money market there affects our own very materially. The latest news by the Atlantic is, that war has commenced between Russia and Turkey, which, if true, will increase financial difficulties at least for a time. American stocks held in Europe will be returned for specie to meet the expenses of a war, and consequently increase the stringency of the money market here. But at the same time, the demand for American agricultural products will increase also, and the farmer be benefited thereby. The readers of the Rural, by exercising the prudence characteristic of intelligent agriculturists, have nothing to apprehend from the present clouded aspect of the financial horizon.

# Marriages.

On the 12th inst., by the Rev. G. W. Montgomery, Mr. S. H. Willcox, of Michigan, and Maria L. Day, of Brighton, N. Y.

# Deaths.

At his residence in Greece, on the 17th inst., Rev. H. W. Spawn, former Pastor of the Baptist Church in Greece.

# Market Intelligence, &c.

Rural New-Yorker Office,
Rochester, Oct. 19, 1853.

The markets remain generally unchanged, although the expectation of many is for an upward tendency in prices. Millers in the city are paying $1,40 for wheat, which is all or more than they can afford at the present price of flour and freights. Country dealers are paying for wheat for shipment $1,37½.

Millers have experienced much difficulty in getting their flour early to market, and have addressed a remonstrance to the Directors of the Central Railroad in consequence of preferences being given by them to Western over State freights. There has also been a scarcity of boats lately in consequence of a break in the canal. These things tend to prevent a rise in our market. Flour is quoted at $6,38@6,50.

The pleasant weather of the week has lessened the demand for fuel and the good state of the roads keeps up a fair supply of wood in the market.

Hay has declined somewhat from previous rates, selling at $9@14.

### Rochester Wholesale Prices.

### NEW YORK MARKET.

NEW YORK, October 18.

Ashes—Market firm but quiet—$5,87 for Pots; $5,80 for Pearls.

Flour—A fair demand for Western and State flour for the east and home trade. Little doing for export. Prices are 12½c. lower, closing dull—vessels being scarce. Canadian quiet and nominal at $7; $6,68@6,81 for common to straight State; $6,68@6,81 for mixed to fancy Michigan and common to good Ohio.

Grain—Wheat market 2 to 5c lower, the supply being mostly of common kinds. Sales white Michigan $1,53@1,55; Genesee $1,53@1,57; white Ohio $1,45½@1,48¾; white Canadian $1,42½@1,52; prime white Southern $1,49; 20,000 bu. red Ohio on private terms.

Barley—Scarce. Sales 2,900 bu. prime 4 rowed on p. t.

Oats—In good demand, 49@52c for State and Western.

Corn—2c lower, and in limited request for export—78½@80c for unsound, in store and delivered; 83@84c. for Jersey yellow.

Provisions—Pork quiet, and prices unchanged. Mess $17; prime $13,50@13,62.

Beef—Demand good. Sales at $7,25@10,50 for country mess.

Lard—very firm—demand fair at 11¾@12c.

Butter—In good demand at 14@18c for Ohio—18@21c for State. Cheese unchanged.

### ALBANY MARKET.

Albany, Oct. 17.—Flour and Meal.—There is a good business doing in Western and State Flour at steady prices. Good brands are in lively request for the east and the home trade are buying freely. The sales for the morning are at the following rates:—Ordinary to straight State $6,75@6,87; mixed Indiana and Mich. $6.81@7; straight Indiana and Michigan $7@7,12; favorite State $7@7.12; common to good Ohio $6,87@7; fancy Indiana and Mich. $6,88@7; fancy Ohio $7@7,12; fancy Genesee $7@7,12; extra Indiana and Michigan $7@7,25; extra Ohio $7,12@7,25; extra Genesee $7,12@7.37.

Buckwheat Flour is steady and saleable at $2,25@2,37. Corn meal is selling slowly at $1,62@1,69.

Grain—Wheat is in steady, but rather moderate request at former rates. Sales prime Genesee at $1,57. Corn is more abundant and cheaper. The demand is limited.—Sales Western mixed at 80c., a decline of 3c. ₱ bush. on previous sales. Barley is in large supply, and the market is less firm. Good to prime two-rowed at 80@81c., mixed at 84c., four-rowed, part at 87½c., and the remainder at a price to be made during the day. Oats are scarcely so firm and in better supply; good Western at 49½@50c.

Feed—A quiet market, with a better supply. Sales 2,000 bu. 20 lb. feed at 20c.

### BUFFALO MARKET.

Buffalo, Oct. 17.—The market for flour and grain is quiet this morning, holders remaining firm under the steamer's advices, and buyers standing out of market in anticipation of a decline. The sales of flour are only about 700 bbls. at $6 for good brands of Ohio and Indiana, including a small lot at $5,94 afloat.

In wheat the only sales we note are 3,000 bu. Milwaukee winter at $1,18, and 2,600 bu. do. on private terms.

Corn quiet and without sales.

Sales 2,800 bush. Rye at 76c.

### NEW YORK CATTLE MARKET.

NEW YORK, Oct. 10.—At Washington Drove Yard—offered this day 2,527 Beef Cattle; offered during the week, 2,685. The market has been quite active during the week and prices for Beeves are a shade better. The qualities of stock are also better. Prices ranged at from $7@9.50 per 100 lbs. Veal Calves at from 4½@5c.; Cows from $30@60; Shoats 6@6½c.

At Browning's—Offered 8,440 Sheep and Lambs, and 65 Cows and Calves.

Prices of Sheep, from $2,4,50, 7@8,50; Lambs from $1-50, 3,50@5,50; 1,200 unsold.

Cows and Calves brought from $25, 45@50; all sold; market brisk and firm.

At Chamberlain's—350 Beeves, 40 Cows and Calves, and 3,500 Sheep and Lambs.

Beeves are firm, at from 7@9½c per lb.

Cows $25, 40@65. Calves 6@7c. per lb.

Sheep $2,75, 4,50@6,50. Lambs $2, 3@4. All sold.

### CAMBRIDGE CATTLE MARKET

CAMBRIDGE, Oct. 12.—At market, 2,875 Cattle, about 1,875 Beeves, and 1,000 Stores, consisting of Working Oxen, Cows and Calves, yearlings, 2 and 3 years old.

Prices—Market Beef—Extra sold at $8.00@8,50 pr ewt.; 1st. quality, $7,50@7,75; 2d do, $7,00@7,25.

Hides—$6½ per ewt.

Tallow—$7@7,50 per ewt.

Pelts—$1@1,25.

Calf Skins 11c per lb.

Veal Calves—$7, 9@12.

Stores — Working Oxen—$102, 105, 112, 121, 132, 144, 175@210.

Cows and Calves—$22, 25, 30, 34, 37, 41@52.

Yearlings—$9, 10@12.

Two years old—$15, 18, 21, 24@28.

Three years old—$24, 28, 32, 34, 37, 44@51.

Sheep and Lambs--6,997 at market.

Prices—Extra, $5, 5,50, 6@10.

By lot—$2,75, 3, 3,25@4,50.

Swine—Wholesale—Still fat hogs at 5½c, and hard corn-fed 6c. per lb. All large fat hogs this week.

Remarks—The market opened well yesterday, as soon as the first cattle trains arrived, and continued so through to-day. Good fat Oxen are scarce, and have sold well at good prices, and in consequence, holders of all first qualities are very firm; we quote a slight advance, whether permanent or not remains to be seen. Sheep and Lambs have sold well. Hogs remain at quotations, and slow of sale at that. The attendance of buyers is large, but some take hold sparingly at present prices.

### BRIGHTON CATTLE MARKET.

BRIGHTON, Oct. 13.—At market 3,400 Cattle (say 2,200 Beef and 1,200 Stores,) 7,500 Sheep and 2,200 Swine, including 1,400 Still Hogs.

Prices—Beef Cattle—About the same prices were obtained as last week, for a like quality, viz:—Extra, 7,50@8; First quality $6,75@7,25; 2d do, $6@6,50; 3d do. $5@5.75.

Working Oxen—Sales $78, 82, 92, 100, 108, 120, 130, and $162.

Cows and Calves—Sales $22, 27, 31, 33, 35, 38@52.

Stores—Yearlings $9@12.

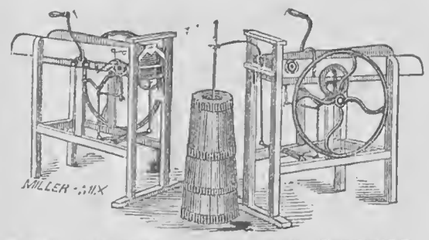
Two years old $15@22.

Three years old—$24@34.

Sheep and Lambs—$2,50, 2,75, 3@3,75; extra $5, 5,75, 6, 7@9.

Swine—Still hogs 5¾@5¾. Large store hogs, 5½, 6@6¼c. Shoats to peddle 6¼@7¼. At retail 7@8.

PURE BRED SPANISH AND FRENCH MERINO SHEEP.—The subscriber has pure bred Spanish Merino Sheep, both bucks and ewes, for sale, that are bred from the Atwood flock; and French Merinos that are bred pure from imported stock. Also pure Suffolk Pigs, bred from the herd of H. & I. Stickney, of Boston, Mass. REED BURRITT.
Burdett, Tompkins Co., N. Y. 199-1t*



THE PREMIUM STRAW CUTTER,
WITH CHURN ATTACHMENT.

THIS admirable machine is so constructed that it can be used for cutting hay, straw or corn stalks. The *adjustable mouth-piece*, peculiar to this machine, is so constructed that simply on the turning of a *nut* with the thumb and finger so adjusts as to keep the *cutting* part at all times in perfect order.

The Churn Attachment, as will be seen in the above cut, is applied to the common dash churn—and is simple, perfect and labor-saving.

Wherever this machine has been on exhibition it has invariably received the *first premium*. It is now on sale by
JOHN RAPALJE & CO., Rochester.
John Prouty & Co., Geneva.
C. M. Widrig, Horse Heads.
Messrs. Messerole & Co., Penn Yan.

4t-198 CHARLES LEE,
Penn Yan, Yates Co., N. Y.

DUTCH BULBOUS FLOWERING ROOTS

THE subscribers have just received from Holland—imported to their own especial order—several cases of the above fine Flowering Roots, among which will be found the following kinds, viz:

| | |
|---|---|
| Hyacinths, | Crocus, |
| Polyanthus, | Jonquilles, |
| Double Narcisses, | Double Ranuueulus, |
| Iris, | Colchicums, |
| Snow Drops, | Amaryllis, |
| Anemones, | Garden Lilies, |
| Crown Imperials, | Scillas, |
| Tulips, | Gladiolus, &c., &c. |

Most of the above will flower either in pots or glasses, in doors, during the winter, with the least possible attention as to culture. The flowers are highly scented, and make the most beautiful parlor ornaments. They are also very desirable for planting out of doors, in borders or small beds. Being quite hardy, they never fail in producing their beautiful flowers early in the spring.

A great variety of Hyacinth Glasses, Fancy Flower Pots, Crocus Pots and Baskets, Vases, &c. Bird Cages and Glasses, Canary Seed, &c. For sale by
H. C. WHITE & CO.,
Successors to Mason & Lovering, Buffalo Ag'l. Warehouse and Seed Store, Nos. 11 & 13 West Seneca Street, Buffalo, N. Y. 198-3t.

WALWORTH NURSERY.

THE subscriber has for sale
20,000 choice Apple trees, some quite large.
20,000 Dwarf Pear trees.
10,000 choicest varieties Peach trees.
1,000 large Mountain Ash.
2,000 Horse Chestnut.
3,000 very fine Balsam Fir.
All trees sold at the lowest rates, and Catalogues furnished to applicants. No charge for carrying packages to Railroad.

POLAND OATS.—MEXICAN POTATOES.

I can supply orders for the celebrated Oats which weigh 42 lbs. to the bushel at one dollars. And also, the Mexican Potatoes at the same price.
Orders will be supplied in the order of their date.
T. G. YEOMANS.

198-1tw2w* REED BURRITT.
Burdett, Tompkins Co., N. Y., Oct. 10, 1853.

☞ PEOPLE'S COLLEGE OF THE STATE OF NEW YORK, Incorporated April 12, 1853.—This Institution has been chartered by the Legislature of this State, for the purpose of reducing the expenses of Academic and Collegiate Education, and thereby open the Halls of Science to all classes of society by reducing the cost of tuition, board and clothing, and enabling the student to defray the greater part of the expense in labor.

Provision will be made to educate young men corporeally and mentally for specific purposes, by pursuing full and definite courses of study for each of the pursuits represented in the College—either Agricultural, Mechanical or Professional—and thus graduates will be qualified for entering at once upon the business of their choice.

At a regular meeting of the Trustees named in the Charter, held at Owego, on the 25th day of May, the following appointments were made:

D. C. McCallum, of Owego, President of the Board of Trustees.
A. I. Wynkoop, of Chemung, Vice President.
Tracy Morgan, of Binghamton, Treasurer.
Harrison Howard, of Lockport, Secretary and General Agent.

Agents are being commissioned in each county of the State, that the people may have an opportunity to contribute to the capital stock, which is distributed in shares so small that every individual may become interested in an institution which commends itself to the favorable consideration of every intelligent person.

For further information upon the subject, application may be made, post-paid, to the Secretary, who will send a pamphlet containing the act of incorporation and objects of the Institution, and other needful information.
188-tf H. HOWARD, Secretary.

The undersigned, having been appointed Agent for Rochester and Monroe county, will be most happy to furnish any new information desired, in reference to the College, to receive stock subscriptions, (the shares are one dollar each,) or to address audiences, on invitation, explaining at length the plans and objects of the People's College, and also as he views the idea of a true education.
Respectfully, G. F. NEEDHAM.

NEW YORK STATE AGRICULTURAL COLLEGE.

AT a meeting of the Trustees of the State Agricultural College, on the 21st Sept., 1853, it was resolved, to arrange and prepare the Veterinary department of the College, simultaneously with the earliest courses of instruction; and that every subscriber to the funds of the College be and hereby is declared to be entitled to the use of the Hospitals of the said department, for all Medical or Surgical treatment, necessary and proper for such diseases or accidents as may afflict any animal belonging to the said subscriber: to be subject to such rules and regulations as the Trustees may from time to time appoint and direct.

No cost or charge shall be made for Medical or Surgical advice or treatment. The necessary expense for the sustenance of animals received into the Hospitals under this resolution, shall be paid by the proprietors of the animals respectively. By Order.
197-4t J. W. BACON, Sec'y.

N. B.—All work warranted, and done at low prices.
April, 1852. [122tf] F. H. MARSHALL.

Mexican Wild Potatoes, Poland Oats and English Potato Onions.

The articles above named are undoubtedly the best varieties now known and cultivated in this country. Mr. A. Hale, of Alloway, N. Y., has the honor of introducing the Mexican Potato. He planted 4 small potatoes not exceeding 3 inches in length and one inch in diameter, obtained from a returned soldier; each successive product has shown an increase in size and beauty, until it is no uncommon thing to find tubers 8 to 9 inches long and about 2 inches thick, as white as the whitest and as good as the best.

The Poland oats are universally approved where known, I have had several reports of the product from the half ounces sent out last Spring to 21 of the States and Territories of this Union; all express themselves in high terms of the quality and productiveness.—Product ranging from 1 quart to 6 quarts from the half ounce by mail, and many have ordered them by the bushel this fall.

The Potato Onion is also in request, and I am receiving inquiries almost daily in regard to these and the articles above named. The crop as far as I have been able to ascertain, will be a good deal short of the demand for seed, for each of these articles. What I have to spare is offered in the advertisements below. I. W. BRIGGS.

A Rare Opportunity to Procure Rare Seeds.

THE subscriber will, for a pre-paid order containing One Dollar, send by mail, free of postage, 20 papers of seeds from the following catalogue:

Japan Pea, Butter Bean, Buena Vista Bean, Apple Squash, Sweet Potato Squash, Mammoth do., and 2 other varieties, California Pumpkin, California Melon, Adams's Early Corn, Stowell's Evergreen do., a large Sweet Corn, three varieties of Pop Corn, (small,) Spanish and Connecticut River Tobacco, Mountain Sprout Watermelon, Mountain Sweet do, Spanish do, Long Island do. and several varieties mixed, Citron Nutmeg, Round Green do, and the Long Golden Muskmelons, Carnation, Clover and Bockhara do, Perrennial Rye Grass, Potato Seed, Mammoth Red Tomato, White Vegetable Egg, and Double Sunflower. I. W. BRIGGS,
West Macedon, Wayne Co., N. Y.

Potatoes, Oats and Onions.

THE subscriber offers the following products delivered on board cars or canal boats:

Poland Oats at $2 per bushel, or $6 per barrel, containing about 4 bushels.

Mexican Wild Potatoes at $2 per bushel, or $5 per bbl. containing about 3 bushels.

English Potato Onions at $2 per bushel, or $5 per bbl.

No charge for packages. Money promptly returned by mail if I am unable to fill your order.
Address I. W. BRIGGS,
West Macedon, Wayne Co., N. Y.

SAMUEL MOULSON,
AT THE OLD ROCHESTER NURSERY.
Office, No. 36 Front St., Rochester, N. Y.

IS prepared to furnish inventories, to post-paid applicants, of the present very extensive stock of Nursery items, consisting in part of
120,000 Dwarf and standard Pear Trees.
90,000 Apple Trees.
50,000 Peach Trees.
30,000 Plum, Cherry and Apricot Trees.
Over 100,000 Hardy Evergreens.
Also, extra large Northern Spy Apple Trees, Dwarf and Standard Pear, Cherry, &c., &c.
Also, for immediate effect, a large quantity of extra sized Ornamental Trees, among which are fine specimens of Norway Spruce, Silver Maple, Pawlonias, Catalpas, Mountain Ash, Horse Chestnut, &c.
And a fine selection of Weeping Deciduous Trees, Ornamental Shrubs, Hybrid Perpetual Roses, together with such novelties as may be classed strictly hardy. Also a very limited assortment of half hardy plants of small size, such as Cryptomeria Japonica, Cedrus Deodara, &c., &c.
The amateur wishing prime fruits of well established repute, or the agriculturist needing fine cropping, thoroughly tested varieties, may rely upon the most careful execution of their orders.
The Ornamental items are entirely grown in the Nursery, consequently none of the heavy losses are sustained that usually occur to recent imported subjects.
The Evergreens are very robust and admirably furnished to the surface of the ground, none presenting the naked stems usual to imported plants.
Dealers are invited to give a call before making their purchases.
☞ Peach and Plum pits wanted.
September 1, 1853. 196-tf.

CARTHAGE NURSERY,
North St. Paul Street, Rochester, N. Y.

THE subscribers offer for sale the present season,
75,000 Apple trees 3 and 4 years old.
10,000 Pear trees in free stock and Quince.
600 Dwarf Pear trees with fruit buds.
10,000 Cherry trees. 10,000 Peach trees.
25,000 Osage Orange plants.
The above trees are very finely grown and of the best varieties. HOOKER & CO.

Ornamental and Domestic Poultry.

THE subscriber having invested a large amount in this business, is now prepared to fill any orders which he may receive. The celebrated Brahma, Sumatra, Game, Palmer, Marsh and White Shanghais, with many other popular varieties, are from the yard of C. C. Plaisted, Esq., Great Falls, N. H., and of course cannot be surpassed in the world. My Imperial Cochin China Fowls are from Col. B. P. Johnson, his stock imported last year, '52, from the best breeders in England. All who well know Col. J., will understand that he has the best or none. My black Spanish are quite late, and will not be ready for market before next spring. They are from Mr. John Giles, late imported, the best blood in the country. These birds are so fast coming into repute that the price will doubtless run high for some years to come, as will also be the case with the Brahma, Sumatra, Game, &c. All persons purchasing fowls from me, can enjoy the benefit of my advertising, in case they wish to sell Chickens next year.

I am quite sure that our southern and western fanciers can be better suited here than farther east, as the long distance on railroad much injures the health and growth of the fowls.

As there are many fowls in market which have no claim upon the public favor, I will give my patrons something more tangible than my own words, for

"If self the wavering balance shake,
It's rarely right adjusted."

I am therefore permitted to refer all who entertain any scepticism, to the following gentlemen:—Col. B. P. Johnson, Secretary N. Y. State Agricultural Society, Albany, N. Y.; Hon. Ambrose Stevens, N. Y. City; Hon. Lewis F. Allen, Black Rock, N. Y.
Address O. B. EVANS, 214 Main street,
194-3m Buffalo, N. Y., Box 1662.

THE JUVENILE INSTRUCTOR,
BY UNCLE LUCIUS, Syracuse.

A SEMI-MONTHLY PAPER, expressly for children. It aims to attract their attention by simplicity and beauty of style, and to infuse into the young mind appropriate sentiments of piety and love for parents—sympathy for human suffering, and an abiding hatred of oppression in all its forms. It ought to be circulated over the entire Union, for this last reason. There is much at stake in the question of freedom, and but little said or done to effect favorably the youthful mind. Within the State of N. York, the postage is 6 cents per year, paid at the office where it is received. In all other States, 12 cents yearly. In packages of 24 or more the postage, if pre-paid at the office of publication, is about 4 cts on each paper.

Price per year—single copies, 25c.: Five to one address $1; Ten do, $1,70; Twenty do, $3; Thirty do, $4,20; Fifty do, $6,50; One hundred do, $12.
Address LUCIUS C. MATLACK,
183m3. Syracuse, N. Y.

Buffalo Agricultural Warehouse and Seed Store.

*Nos. 11 & 13 West Seneca Street, Buffalo.*

HIRAM C. WHITE & CO., successors to Mason & Lovering, wholesale and retail dealers in all kinds of Agricultural Implements and Machines, Field, Garden and Flower Seeds; Fruit and Ornamental Trees, Shrubs and Flowers; Oriental Poultry, &c. Also, Agents for the Boston Belting Company's Vulcanized India Rubber goods, Belting, Hose Packing, &c.

Orders solicited, all of which shall receive prompt attention at lowest market rates, and all articles warranted as represented. HIRAM C. WHITE & CO.

# Poetical.

For the Rural New-Yorker.

## IT SURELY IS MY BUSINESS.

THE following is submitted by a member of the "Universal Brotherhood," with a wish that it may lead to just reflection, and consistent conduct on the part of the "Mind your own business Society."

It surely is my business
To know what others mean,
In all the varied action
That passes on life's scene.
I'm placed here as an actor
To play the social part,
In all the varied drama,
With hand, with head and heart.

The Lord, who made me social,
Has bound me with my kind,
To look not on my own things—
His bidding I must mind.
I *must* regard the int'rest
Of each man as my own;
I *may* not be indifferent,
Nor heed the "let alone."

Who, then, may claim exemption
From my inspecting eye?
Who, if I ask a question,
May sneeringly reply,
"Is it any body's business?"
I answer, quickly, friend,
It surely is *my* business
That *you*, "your ways should mend."

The slanderer—how vicious!
The tattler—O! how vile!
Is he of ways suspicious,
An "innocent" the while?
The purpose being honest,
There's nothing, sure, to fear—
He who would "net the teacher"
Should play the part sincere.

'Twere "better in the future"
To give out precepts wise,
Enforced by good example,
"There all the honor lies."
He is a cruel meddler,
Who bids me let alone
The int'rest of my neighbor—
*His* int'rest is—*my own*.

# Rural Sketch Book.

## THE TWO BROTHERS:
### OR, MATRIMONIAL SPECULATIONS.

BY SYLVANUS COBB, JR.

"NED, you're a fool."

"Perhaps I am, Tim."

"But I *know* you are."

"Well, then, I hope you'll draw benefit from your knowledge."

"Pshaw! *don't* be a fool, Ned."

"How can I help it, Tim, if I am one already."

"But there is a chance yet for redemption."

"Then I am afraid I am in the same fix as those unfortunates spoken of in the catechism."

"Explain, Ned."

"*Past Redemption.*"

"Now you *are* a fool."

This conversation was between two brothers, Messrs. Timothy and Edward Barbour, and was carried on in the store of the former, early one morning before customers began to flock in. Timothy was a dry goods merchant, just commencing business on a doubtful capital, while Edward, the younger brother, was still a clerk with a fair salary, in a heavy jobbing house "up town." The circumstances which had given rise to this colloquy, were simply these:—Mr. Aaron Simpson, a retired sea captain, had received a visit from his niece, a young, fair and wealthy heiress, whose father had died a year previous, and left her the whole of his immense fortune. There was stopping with Captain Sampson, a young girl, who was sewing for the family, who, though her occupation seemed so humble, was possessed of all the graces that adorn the true woman. The father of the young gentlemen, when living, had been an intimate friend of Capt. Simpson, and consequently both Timothy and Edward were frequent and welcome visitors at the mansion of the old sea Captain. Timothy had seen the magnificent Arabella Forbush, Captain Simpson's niece, and he believed himself to be deeply in love with her, while Edward, the younger and less presuming brother, did not hesitate to avow that he loved the fair Lizzie Florence, who only made shirts and pillow cases.

"You may think me a fool," said Edward, in reply to his brother's last remark, "but will you tell me wherein?"

"*Wherein!*" uttered Timothy, brandishing a yard stick by way of emphasis. "Why did you not tell me that you thought of proposing to that *servant* of Captain Simpson's?"

"I told you, Tim, that I would make Lizzie Florence my wife, if I thought she would accept me."

"Yes, so I understood you; Lizzie Florence — servant, sewing girl, drudging for a living, a pretty wife truly!"

"Serves those who pay her, I suppose, the same as you and I do," coolly remarked Ned.

"Serves a fiddlestick!" petulantly retorted Tim. "If you think of marrying at your age——"

"Only a year and a half younger than yourself," interrupted Ned, with a smile.

"Then you had better wait until you have gained that year and a half's experience, Ned, and perhaps then you would not be so anxious to throw yourself away."

"I don't think I should even then be willing to *sell* myself to an heiress."

"Bah! Trash!" exclaimed Tim, finding that there was weight at both ends of the beam. "Just look at the girl I shall have—with a cool half million, egad! I know she loves me. What a magnificent creature! Did you notice her small white hands, Ned?

"I noticed the big rings she piled on to them," equivocally returned Ned.

"*Five hundred thousand dollars!*" shouted Tim, as he swung his yard stick more furiously.

"And are you knocked down to Arabella Forbush at that price, body and soul?" said Ned, as he buttoned up his coat.

"You're a fool, Ned, a consummate fool, and you show it in every word you utter.—Here you are twenty-four years old, a clerk with only a salary of a thousand dollars, and talk of marrying a poor seamstress.—How will you ever get into business with such a weight on your hands?"

"If I wished to hurry into business, I could do as you have done—go in on credit," replied Ned.

"But I shall have a wealthy wife to help me on, while *you* will be forever drudging," uttered Tim, with a spice of tartness in his tone. Then changing his manner to one of earnest meaning, he continued, "I am in earnest, Ned; I do not wish to see you degrade yourself by such a marriage. Miss Florence is pretty enough to look at, but she is not fit for your wife."

"Look ye, brother," said Edward, while a flush of indignation mantled his handsome features, "if it is degrading to be honest, upright, kind, virtuous and lovely, then Lizzie Florence is so, but in my own heart I have a monitor that guides my actions, and I assure you that no words of yours can turn me from its monition. I love Lizzie Florence for the truth and loveliness of her soul, and if she will but say yes to my suit, then she becomes my wife. As long as I have two hands with which to earn an honest livelihood, I will not sell myself for an independence."

"Then go your own way," said Timothy, with a show of offended pride, "but mark me, Ned, if you marry that girl, you may not expect to visit me in her company, for I will not subject Arabella to the mortification of descending to the association of one who has been a servant in her uncle's family."

"Just as you please," calmly answered the younger brother, as he put on his gloves and turned to go. "With such a wife as I desire, I shall not be under the necessity of seeking enjoyment abroad. I want a wife for my own fireside, not for yours."

As Edward spoke he left his brother's store to seek his own place of labor; and Timothy, with a half uttered oath upon his lips, went to work arranging his unpaid for stock of goods.

---

It was a cold evening, and a searching wind bore upon its bosom vast clouds of falling snow-flakes, as they went sweeping through the streets; but within the spacious parlors of Captain Simpson, this outward show of stern old winter served only to add a charm to the well filled grates, and make the inmates more happy and contented in their comfortable quarters. Upon the stool at the piano sat a young lady, who might have seen twenty summers, or perhaps twenty-five. The jewelry that flashed and sparkled upon her wrist, fingers, neck, ears, bosom and hair, bore to the world an index of wealth. She was rather tall, but she bore herself with a graceful ease, and her form was rather symmetrically fair.—Such was Arabella Forbush, a niece of Captain Aaron Simpson, a belle and a beauty.

Nearer the fireplace and by the side of a work table, sat another female whose age was more palpable than the former, and who if not so dazzling in her appearance, was by far more lovely. She could not have seen more than eighteen summers, and the years that had rolled over her head seemed to have left all the warmth and sunshine of their season upon her brow, with none of its chilly frost. Such was Lizzie Florence, a young orphan girl, who had been for a month in the family of Captain Simpson, and was doing some sewing for the family. At the present time however she was engaged in looking over the pages of a magazine.

Around on the other side of the grate from where sat Lizzie, reposed within the depths of a capacious stuffed chair, the form of old Capt. Aaron Simpson, a merry old fellow, who had spent the meridian of his days in the ups and downs of ocean life, and who had settled down with a competent fortune to enjoy himself as best he could.—He loved life for the joys it gave him, and was never more happy than when he felt that he was imparting happiness to others.

"Lizzie," said the old man, who had been regarding the fair girl for full ten minutes, "what are you doing with that book?"

"Book!" repeated Lizzie, looking up from a page of advertisements; "O, I am just looking it over."

"*Over*, is it,?" returned the old man, with a merry sort of twinkle in his eyes; you've been looking at the same page for the last ten minutes. Ah! I'm afraid Lizzie, that there is something else on your mind besides books."

"Yes, your kindness in giving me a home," responded the fair girl with a bright smile upon her face—"that rests upon my mind."

"My fiddlestick!" uttered the old man, "I believe that you are thinking of that young—"

Captain Simpson said no more, for at that moment Lizzie sprang from her chair and clapped her hand over his mouth, saying as she did so—

"Stop, sir, I shan't allow you to take liberties with my private affairs, even though I am for the present dependent upon your bounty."

A servant at that very moment announced Messrs. Timothy and Edward Barbour, who entered the room and were received by the old man with that kindness which marked the reception of all his friends; while the young ladies expressed an equal pleasure in the visit, though they showed it somewhat differently. Arabella paraded herself magnificently, smiled bewitchingly, and did not fear to speak her pleasure in words, while Lizzie, with feelings too deep for outward show, only blushed as she resumed her seat at the work table.

The evening had passed half away. Mr. Timothy Barbour and Miss Arabella had been saying all sorts of fine things about music, poetry, &c., while Edward had spent most of his time in a conversation with Capt. Simpson. The old man talked of ships, storms, rocks and foreign ports, and anon he would listen to some of his young friend's conversation about business matters, &c.—Lizzie, all this time remaining an almost silent member of the social company.

New Captain Simpson's parlors were very long. Timothy and Arabella were by the street windows, situated in deep tapestried alcoves. At length Lizzie Florence arose from her seat at the table, and went to one of those back windows, where she seated herself on an ottoman. Why she should have done that, it is impossible to tell, for the ottoman in that recess was not half so comfortable a seat as had been the easy chair by the fire which she had left. The next movement was made by old Simpson—who without a word of farewell, put up helm and sailed out of the room.

Edward gazed about him for a moment after he was thus left alone; then with a sudden impulse he started from his chair and went to the recess, where sat Lizzie Florence. Trembling, he seated himself by her side, and seeming to follow up the plan he had in view, he took one of her hands unresistingly within his own.

"Miss Florence," he said, his heart fluttering the while as though it would, if possible, prevent his utterance, "pardon me, if I put to you a question, upon the answer of which may depend much of the happiness of my life."

Lizzie made no reply; she let her hand remain a prisoner, and she trembled violently. Edward gained courage and continued:

"Something tells me that the dearest wish of my heart will not be crushed. I love you Lizzie, with a firm and ardent love that springs from an honest heart. Can you return that love? Will you be mine?"

"Not now, Edward," murmured the fair girl; "one as poor as myself would, I fear, prove a hard weight upon your rising fortune. There are more wealthy, who might"

Lizzie hesitated as she spoke, and Edward felt a tear drop upon his hand. He answered eagerly.

"Oh, lay not upon my heart such a sin as that. My soul knows not how to *barter* its love! I have not rushed blindly into this fond hope. I have studied my prospects, and I know I can support a happy home.—I cannot make it magnificent, but it shall be above want, and with your happy, joyful presence to make glad my heart and lead me to the altar of Christian perseverance, my hearthstone shall glow with a blissful happiness. May I hope?"

Lizzie Florence's eyes sparkled in their happy light, and in tones frank and fearless, she answered:

"As I am, you have loved me! As I am, I am yours."

---

"Ned," said Timothy, as on the next morning the younger brother entered the store, "I am the happiest man alive, I have pressed my suit and the beautiful Arabella has promised to be mine."

"Then I wish you joy of your conquest," quietly remarked Edward, "and if you look for your only joy in gold you will have plenty of it."

"To be sure I will," exclaimed Timothy, as he rubbed his hands in the exuberance of his satisfaction. "And now, Ned, I advise you to drop that foolish whim about your love for Capt. Simpson's girl, and pick up a wife that is worth something. There is Margaret Mortimer, with thirty thousand at least—then there is either of Mrs. Fitzeross' daughters, both rich and they are both for you. But you won't make a hit like mine. Only think! *Half a Million?*"

"Mortimer!—Fitzeross," uttered Edward in contempt, "I am as fortunate as yourself; Lizzie Florence has promised to be my wife."

"Edward Barbour are you in earnest?"

"I am!"

"Then go and marry her. As you have thrown yourself away, you may take care of yourself, as best you can."

"Timothy," said the younger brother, in a tone of heartfelt pain, "this is unkind.—When you first entered business, I took my four thousand dollars—my little all—from the bank, and lent it to you. I have asked you neither bonus nor interest; and now, though I never will ask of you pecuniary aid, yet I would ask your kindness and good will."

"You need not twit me because you lent me money," returned Timothy in an angry tone. "As soon as I am married, you shall be paid with interest in full, but I never will—"

Edward Barbour did not stop to hear the remainder of his brother's remarks, but with a sorrowful countenance he left the store.

One month had passed away, and Arabella Forbush had become the wife of Timothy Barbour, merchant. It was evening, and within the sumptuous parlor of Captain Simpson the well filled grate sent forth its welcome warmth. The old Captain was there in his big easy chair. Within the hangings of one of the alcove windows was ensconced Edward Barbour and Lizzie Florence. The old man was just turning over the paper, when one of the servants announced Mr. Timothy Barbour, who in a moment more entered the room. Edward and Lizzie would have left their place of concealment, but an instinctive dislike to being seen by the visitor, prevented.

"Mr. Simpson," said Timothy, in a somewhat tremulous manner, after the civilities of the evening had been exchanged, "I have called upon you on rather peculiar, and I may say, delicate business."

"Ah," uttered the old man, raising his spectacles and his eyebrows at the same time, making no further remark.

"Yes, sir," resumed Timothy. "The fact is our marriage relation has been so short that I feel a little delicacy in breaching the matter to my wife at present; but now I am sadly in want of a small sum of money to help me over a business pinch."

"D'ye want to borrow some of me?" bluntly asked Simpson.

"Oh no, I—I—ahem—merely wished you to break the ice for me."

"Break the ice?"

"I mean that you should broach the matter to my wife," Said Timothy, breathing more freely, now the "cat was out."

"Why, really, my dear sir," returned the old man, "I have nothing to do with your wife's property."

"But you might hint the subject to her my dear captain. A few thousand would answer me—say six thousand. I think that will be sufficient."

"Six thousand what?"

"Why, sir, six thousand dollars to be sure!"

"What, from your wife?"

"Why not!"

"Why not! Why, simply because I don't believe she owns six thousand dollars."

"Captain Simpson, I beg you will not trifle with me, sir," uttered Timothy, trembling and turning pale at the fearful suspicion flashed upon him.

"By no means, sir," resumed the old man, in a tone that carried conviction with it, "I mean what I say when I tell you your wife is not worth, of her own estate, over $4,000."

"Death and fury!" exclaimed the astonished bridegroom, leaping from his chair and clenching his hands. "Then I have been most basely deceived!"

"Deceived? Mr. Barbour. How, who has deceived you?"

"You, sir. Everybody sir! I was led to believe that my wife was worth half a million of dollars."

"Really, sir, I don't see how you could have entertained such an idea," said Captain Simpson, without betraying anger at his visitor's manner.

"I will tell you how, sir. The world was given to understand that your niece was wealthy, and you have suffered them to think so. You knew that that was the impression, and yet you did not contradict it."

"Whew!" came from the old man's lips in a prolonged whistle. "Now, I believe I begin to see through it. O ho, that's it!—Ha! ha! ha! Why, Timothy, *you have caught the wrong fish!* It's my other niece that is salted down with half a million of dollars!"

"Your other niece?" gasped Timothy, catching at a chair for support and gradually sinking into it.

"Yes sir, my other niece. That little witch of a Lizzie Florence is the golden niece!"

"Your sewing girl," faintly articulated Timothy.

"Sewing flum-a-diddle!" responded the old man with an energetic expression.—"She tried to sew herself out of the company of those who wanted nothing but her money, and I think she has succeeded.—Timothy, had you asked me, or had you even asked Arabella concerning her fortune, you would have learned the truth, but it seems that you have been steering the wrong course. Arabella and Lizzie are both my nieces, and though I must admit that, for her own benefit, Miss Florence has practiced a little deception yet your wife has not. If you have been deceived it was by your own cupidity!"

With a trembling step and bowed head, Timothy Barbour left the house.

"Oh, Lizzie," uttered Edward as soon as his brother had gone, "it was not right to deceive me thus!"

"And you will love me less now that you find yourself deprived of the pleasure of incessant toil in my behalf?" archly asked the fair girl, as she cast a look of melting tenderness in the face of her companion.

One of the first acts of the gentle Lizzie, after her marriage with Edward, was to bestow upon Arabella a magnificent gift, meant of course, as a delicate token from the younger to the elder brother. Timothy received its benefit—he knew from whence it came, and he lived to be a better man.

---

THIS is evidently an age of refinement.—The old adage, that "you should not count your chickens before they are hatched," has thus been rendered by a professor of etiquette:—"The producers of poultry should postpone the census of their juvenile fowls, till the period of incubation is fully accomplished."

---

THERE is an old lady in Virginia, who believes it to be a Bible doctrine, that for seven years before the end of the world no children are to be born—and that gives her comfort, for at every fresh birth she hears of she says to herself, "Well, the seven years at least have not begun."

---

A TAVERN keeper out West advertises a young lawyer who left his house without paying his bill, under the following expressive caption:—"Absquatulum damnum et Swarteutandibus in transitu non ost inventus additum scape goatum, non combatibus in Swampo."

---

"AH, doctaw, does the cholcraw awfect the higher awdaw?" asked an equisito of a celebrated physician in New Orleans.—"No," replied the M. D.; but its death on fools, and you'd better leave the city immediately." The fellow sloped.

# Youth's Corner.

"Attempt the end, and never stand to doubt;
Nothing's so hard, but search will find it out."

## FIRESIDE AMUSEMENTS.

HOW TO TAKE THREE BALLS OFF TWO STRINGS.—You show two pieces of strong tape to the company, of an exact size, and then you show the balls, which have a hole through the middle of them. Having put on one ball yourself, you let the person who holds one end put on the second ball, and the person who is to hold the other end the third ball. Each person has two ends, which are of the same length. Suddenly you jerk the balls, which slip off, while the two strings when examined, remain as before.

*Explanation.*—While the balls are examined, you double each string, and each appears to have two ends. You twist the double end of each other together, and putting on one of the balls, which has a hole smaller than the others, over the place that is joined, the strings remain firm, and can bear to be pulled. Each person that holds it, thinks he has the extremities of two strings, while in fact he has only the end of one. By a jerk the middle ball comes off, followed by the rest; you then slip them into the hands of the person who holds the strings. He of course lets go his hold, and you then take care to put the strings lengthways. This is a good trick when well managed, but it requires dexterity to conceal the deception. Formerly this trick was done with three button moulds on two whipcords of about two feet each, and with three rings on two ribbons; but the balls and tapes are preferable.

## POETICAL ENIGMA.

With the fairest and vainest I fearlessly vie,
Nor find any rival the figure decry,
To their critical notice presented by me;
For though they may very satirical be,
Your coquettes all regard me with manifest grace,
Nor envy the charms they behold in my face;
While the glance of each gallant distinctly reveals
How fully my bright fascination he feels.
Thus with all the well-favored to whom I attend,
I may boast I'm esteemed as a well-favored friend.
The crabbed and sullen I'm apt to repel,
Because I retort their grimaces full well,
Yet although in my character polished forsooth,
You'll admit, on reflection, I'm strict to the truth.

## Progress and Improvement.

### COMPARATIVE VALUE OF LARGE AND SMALL ROOTS.

FROM an interesting paper by W. K. SULLIVAN and ALPHONSE GAGES, Chemists to the Museum of Irish Industry, we condense the following results of an investigation of the relative amount of dry matter contained in large and small roots. Continental chemists have long since shown that small roots of sugar beet contain more sugar than large roots, and this fact was confirmed by recent experiments by our authors.

In the present investigation, 450 roots, of every kind, including Swedish turnips, carrots, different varieties of beets, &c., have been examined. With a very few exceptions, it was found that *small* roots contain a larger per centage of solid matter than *large* roots,—in some cases even to the extent of 50 per cent. Thus the mean per centage of solid matter in three roots of sugar beet, varying from 3 lbs. 11 ozs. to 4 lbs. 2 ozs., was found to be only 10.4, whilst in three small roots varying from 1 lb 3 ozs. to 1 lb. 11 ozs., it was 17.4—or, in other words, 100 tons of the small roots would be equal to 167 tons of the large.—To take another example:—Three roots of large red Mangel Wurzel varying from 6 lbs. 14 ozs. to 9 lbs. 3 ozs., contained only 11 per cent. dry matter, whilst three small roots, varying from 6¼ ozs. to 7¾ ozs., contained 15.6 per cent.—that is, 100 tons of the small contained as much solid matter as 142 tons of the large. The rule applies equally to ruta baga. Thus, three turnips varying from 6 lbs. 5 ozs. to 6 lbs. 12 ozs., yielded 13.7 per cent. of solid matter, while three small roots, varying from 1 lb. 2 ozs. to 1 lb. 5 ozs., gave 16.2 per cent. or 100 tons of the small would be equal to 118 tons of the large.

In 17 roots of sugar beet there were

4 roots of from 6 to 8 lbs. in weight, which yielded as a mean per cent. of solid matter, . . . . . 12.541
5 roots, between 3 and 5 lbs. . . . . 14 197
7 roots under 3 lbs., . . . . . 15.756

These results clearly indicate, that with increase of weight the solidity of roots diminishes.

On tabulating the results it was found that, taken as a whole, small roots, no matter how or where grown, were superior to large roots in the amount of solid matter. The following table contains a summary of the mean results, as far as they have been able as yet to reduce them:

| SIZE OF ROOTS. | White Silesian or Sugar Beet | Long Red Mangel Wurzel. | Orange Globe Mangel. | Red Globe Mangel. | Swede Turnips. |
|---|---|---|---|---|---|
| Average of roots. | | | | | |
| Above 7 lbs. | 10.204 | 10.017 | 10.785 | 8.704 | 10.755 |
| 5 lbs. | 11 653 | 11.475 | 11.028 | 10.115 | 11.257 |
| From 3 to 5 lbs | 15.708 | 14 924 | 13.974 | 12.950 | 12.810 |
| Average of all roots. | 14.522 | 13.635 | 12.645 | 11.188 | 12.041 |

Dry matter, Red Carrots, 13.370; in average.
Do. White Belgian Carrots, 12.990.

From this table it is seen that sugar beets contain more solid matter than any other roots cultivated, and that red and white carrots are little better than Swedes (ruta baga.)

As a general rule it was found that those roots of a particular variety of the beets which had white flesh were superior to those exhibiting a colored flesh. That part of the root which grows out of the soil contained less solid matter than that grown fully in the soil.

These results are interesting, and, if confirmed, will lead to an entire change of the present system of root culture.

When assistant in the Rothamsted Laboratory, we found the following per centage of dry matter in various root crops grown under ordinary cultivation on the farm:

Long red Mangel Wurzel, . . . . . 12.7
Yellow Globe do. . . . . 11.34
Common Swede (name unknown,) . . . . . 12.20
Skirvings Swede, purple top, . . . . . 9.40
Do. do. green top, . . . . . 9 40
Green common turnip, . . . . . 7 9
Norfolk white, . . . . . 7.83
Early common turnip, (a very large crop,) . . . . . 7.03

It will be seen that we found more water in the roots than did Messrs. SULLIVAN and GAGES, which is easily accounted for from the fact that the roots they examined were sent from a distance while our determinations were made in a laboratory on the farm and the roots were weighed a few minutes after they were taken from the soil.

The Skirvings Swedes were a good crop—20 tons 10 cwt. per acre—the *average* weight was only 2 lbs. 3 ozs., yet 10 of the largest weighed 112 lbs. The "common Swede" was a small, hardy variety, and we should estimate the crop and average weight to be one-third less than the Skirvings.—Hence the higher per centage of dry matter in this common Swede, is in accordance with these more recent results. How far small and large roots of the same variety differ in the per centage of dry matter we have never determined. We have always attributed the difference in dry matter in roots rather to the nature of the variety and *the degree of maturity*, than to the effects of soil and manuring.

### THE STATE FAIR.—REFORMS NEEDED.

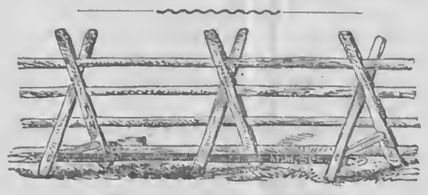
UNDER this head, the Ohio Cultivator points out several deficiencies in the management of the Ohio State Agricultural Society. First. It thinks the premium list is made up to suit the exhibitors of stock while the manufacturing interests are not consulted. Secondly. Too little care and discrimination is exercised in the selection of judges. Thirdly. An inadequate diffusion of information respecting the premiums and regulations of the Fairs. Fourthly. Enough care is not taken to create and preserve good feeling on the part of the crowd at the Fairs.

That there is grievous mismanagement in relation to our agricultural exhibitions we well know, yet we do not think the *Cultivator* has been particularly happy in pointing them out. The first objection is the only one worthy of much consideration. It is one we have repeatedly heard made in reference to our own State Fair. Abstractly considered, we think it right that higher premiums should be offered for the best Durham bull, than for the best plow or cultivator; not that one is of so much more importance than the other, but because a good implement, when known, soon brings ample remuneration to the inventor. Not so the breeder. To produce a superior animal, great care, judicious selection and skillful breeding are required, not for a week or a month, but for long, weary years. *You have to wait*, to exercise patience and this is what, in the present go-ahead age, few American farmers can do. The importance of good stock all admit. We must have it. Encourage the breeders, then, by offering large premiums. Practically, however, the matter exhibits another phase, and another set of objectors rise up. All our blood stock say they, "is in the hands of some half a dozen amateurs. Gentlemen who have great and undue influence on the officers of the Society; in fact, many of them are officers themselves, and by working into each others hands, appointing judges, &c. &c., they manage to secure all the premiums." There is, perhaps, more truth than poetry in these objections, yet we trust that, with the more general diffusion of improved stock the difficulty will be removed. Judges we believe to be, generally, honorable and much abused men. In the stock departments it is almost impossible to get competent judges that are not stock men, for the very reason that none but stock men are good judges.

### PAINT YOUR IMPLEMENTS.

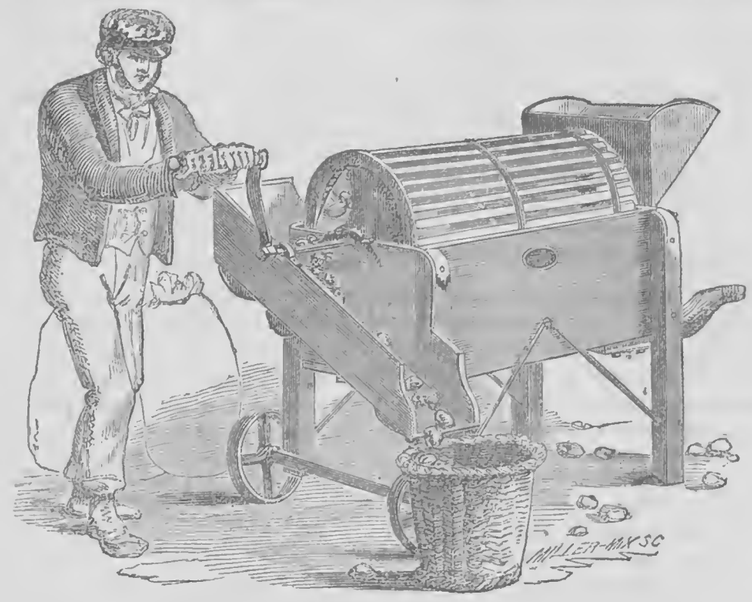
THE primary agent in all decomposition of organic matter is oxygen. Without its presence under normal circumstances, no change takes place. But this oxygen, in atmospheric air, is everywhere present, and decay under its destructive influence is always going on. To exclude the air, then, from all bodies we wish to preserve is the first requisite. In nothing is this rule of more practical importance than in the preservation of wood. Filling the exterior cells of wood with paint is perhaps the cheapest means of retarding its decay. This is well understood and generally acted upon in the construction of all new implements. There is, however, one point which appears to be forgotten, or at least to be generally disregarded. Paint by the action of air and rain is washed out of the pores, and when this is the case, the work of destruction proceeds, we believe, more rapidly than though the wood had never been painted. English implements are much more costly than American, and this may be the reason why they take better care of them. Though paint is more expensive than with us, they are in the habit of thoroughly washing and cleaning wagons, carts, harrows, cultivators, and in fact every wooden implement on the farm, every other year, and giving them a good coat of red-lead paint. It is astonishing how long their implements last. Many of them look as though they had been handed down from father to son for several generations. In no matter of economy do farmers miss it more than in allowing their implements to go with a deficiency of paint. We venture to say, that a wagon frequently washed and cleaned, and receiving a coat of paint every fall, will last twice as long as one never washed, except by being allowed to remain out in the rain, and never repainted except with dirt.

Reader you have a paint can and brushes; at least, it is to be presumed you have, for no intelligent farmer would be without them, and an unintelligent farmer would not be found reading the RURAL. If you have not done so already, get your paint and brushes, wash your implements, scrape off all the blisters, stop up every hole with putty, and then give your wagons, drags, cultivators, plows, wheel-barrow, (for of course you have one,) roller, seed-drill, neck-yokes, and whiffletrees a coat of paint. The expense will not be much. The implements would look as good as new, your hired men will take more care of them, and you will save by this single operation, from the increased durability of your implements, more in the course of a dozen years than would make you a life subscriber to half a score of the best Agricultural papers published.



THE SAW-BUCK FENCE.

MESSRS. EDITORS:—Among the various plans for fence which I have seen in your paper, I have never observed the "Saw Buck" fence, as I call it, though I think it worthy your notice. It is constructed as follows:—Posts, 2 by 6 in., 5 feet long, and of any timber are set on top of the ground, spread at the foot to suit the taste—put a 1½ in. pin through where they cross—mortice for 1½ inch bars or rails, as near together as you please, suiting the length to the description of timber used for rails—nail a strip across the foot of each pair of posts, then put in your rails on alternate sides of the posts and your fence is complete. Its advantages are: Posts do not rot—saves digging post holes—gives you a portable fence—will not blow down—can be made so as to stand on side hills by lengthening posts on the lower side—can be made of any kind of timber you chance to have—of rail or plank—tight or open, and takes only one half the timber required for a worm fence. Where the posts can be bored and morticed by machinery, it can be built very cheaply. J.



ARCHIMEDEAN ROOT WASHER.

WE recently saw one of these machines on exhibition in the N. Y. Crystal Palace. It is manufactured by CROSKILL, the celebrated English agricultural implement maker, and is admirably well calculated to wash roots with great facility. The washing apparatus is a drum-shaped cylinder, having its circular surface composed of iron bars placed about an inch apart; this cylinder is half immersed in water. Internally it is divided into two apartments—one in which the roots, by turning the handle in one direction, are confined and washed, while by turning the handle in the opposite direction, the roots, by means of an Archimedean screw, are cleanly washed for use. Where potatoes are extensively used for fattening hogs, or where ruta bagas are fed to horses, as in England, this machine is of great value. We think there is no necessity for washing turnips or other roots, except potatoes, when fed to cattle or sheep; they can be cleaned sufficiently and much more readily with a root knife. When fed to horses or to hogs, however, they should be washed, as dirt is much more injurious to these animals than to cattle and sheep, such at least is the opinion of practical English farmers. The cost in England is about $17.

### RYE vs. CLOVER AS A FERTILIZER.

THE *Farmer's Companion*, under the heading "Fall manuring to pay for itself," discusses, in a clear and practical style, the relative value of clover and rye as food for sheep and as a fertilizer. It lays down the following proposition:

"So far as Michigan is concerned, we lay down the following as truths that are now distinctly ascertained:—1. That our best wheat lands will not stand many successive crops without deteriorating in value; 2. That under very few circumstances is the yield of grain as large as it should be; nor is it, one year with another, truly profitable; 3. But clover, by affording pasturage to sheep, and, when plowed in, a certain quantity of organic and inorganic manures, keeps the land up to its original fertility, and in some instances temporarily improves it; 4. Therefore, to grow grain profitably without immediately injuring our farm, it is quite necessary to combine sheep farming and clover growing with wheat raising; 5. Sheep farming is, in itself, extremely lucrative, and is likely to continue so for a long course of years; 6. But to the *present system* of wool and clover growing there are serious practical objections, which deduct from the farmers profit; and which objections, we believe, may to a great extent be obviated by the following plan. These objections are that clover seed is expensive, and apt to fail in giving a good crop. That it requires plaster, itself expensive, to be added to it. That it must be some time in the ground to produce its effect. That it is impossible, under ordinary circumstances to keep sheep or other stock in robust health, on *dry food* during our long winters; that we have generally to turn them to pasture before the grasses are fit to afford nourishment; and thereby not only are our pastures injured, but our wool is altered in its character, smaller in quantity, and the lambs less apt to be healthy and vigorous."

To avoid these evils, and to supply green food without the expense of growing roots, the following plan is proposed:

"The plan we propose—*a plan to be habitually carried out year after year*—is to plow, as early in fall as convenient, the land intended for spring crops the next season, and to sow rye heavily, twice as heavily as if intended to seed. By frost there will be a fine growth of rich fodder, and the sheep may then be turned upon it whenever there is no snow; or, what is preferable, for three or four hours in the middle of each day, being fed at the barn with dry food morning and evening. Or this rye may be kept for early spring food when the stock begin to tire of hay. In most seasons, as in the last, there are two or three weeks in the spring when sheep will *not* eat hay, and there is no grass for them; and the ewe, large with lamb, wanting the richest nourishment, is seriously injured by this forced abstinence; the vessels that should secrete the milk, shrink up; and the young lamb either dies of starvation, or is stunted and unhealthy throughout life. Thousands of lambs are annually lost in the North Western States from this cause. Then, when time to plow for spring crops comes, *plow in the rye*, with all the manure the sheep have left on the field; and you cannot fail to have a large spring crop.

An analysis of red clover, and of rye is given with these remarks:

There is more *mineral* matter in Clover and more *organic* or vegetable matter in Rye. The former acts best as an *immediate* manure, but for many reasons exhausts the soil more rapidly; while rye contains sufficient of both to render it as rich in its per centage, and more effective than most of our barnyard manures as at present saved and applied.

We cannot see what the analyses have to do with the question, for in the case supposed, both the clover and the rye, or their elements after passing through the bodies of animals, are retained on the farm. It is said that rye straw contains more organic matter than clover. What if it does? Pine saw-dust contains much more than either. Is *it*, therefore, more valuable? The organic matter of the rye-straw is nearly all woody fibre, and consequently of little value either as food or as manure. The organic matter of clover contains about 18 per cent. nitrogenous matter, or "the flesh forming principle," while rye-straw contains only 3 per cent. We will not say that the relative nutritious quality is in accordance with these figures; but we will affirm, without the slightest hesitation, that the manure made from one ton of clover hay will be worth as much as that made from *three tons of rye-straw*.

Clover "acts best as an immediate manure, but for many reasons exhausts the soil more rapidly." That a crop of clover will produce a larger yield of wheat than a crop of rye, when plowed in or eaten on the soil by sheep, and thus more readily exhaust the soil, we admit; but the same objection, in proportion to the increase obtained, holds good in respect to rye. If rye exhausts the farm less than clover, it is because rye produces a less increase of wheat. We can see no other reason, and feel confident there is none.

The article closes by comparing clover growing to whiskey drinking, and thinks the one is as injurious to the soil, as the other is destructive to the body. The remedy is substituting rye for clover. We

believe the advice to grow rye instead of clover as food for stock, if acted upon, would be most injurious to the interests of the farmer. The system recommended has been fully tried in England, and we know from personal observation that it is now abandoned there by the greater part of all intelligent agriculturists. Rye, during its growth, exhausts the soil of that substance most required by the wheat plant, and so far from the soil being made richer in the elements needed by the wheat plant, by the growth and consumption on the soil of a crop of rye, we have not the slightest doubt, from experiments and practical experience, that the soil would be far richer if allowed to remain fallow. Would you, then, recommend fallow? Not at all. We would say, grow clover, the more the better, so that it is all retained on the farm; grow peas, beans, lentils, lupins, turnips, and keep a large stock on the farm to eat them; but grow as little rye, barley, oats, timothy, or other cereal crops as possible, inasmuch as they exhaust the soil precisely of the same elements as does a crop of wheat—the substance, in fact, of which our wheat soils are most deficient.

## THE NATIONAL HORSE EXHIBITION.

As we anticipated the National Horse Show—or *Convention* as some term it—held at Springfield last week, proved, in most respects, eminently successful. Such at least is our impression from the reports already published, the only means we have of judging—for we were unexpectedly deprived the pleasure of attending.

The exhibition opened on Wednesday and continued until Saturday—closing with a sale of celebrated horses at auction. From the comparatively indefinite character of the accounts so far published, we will not attempt to give even the prominent features of the exhibition. Though perhaps some accounts are exaggerated, all agree that the show was highly creditable, the attendance large, and the arrangements and order observed admirable. The show was attended by a large number of distinguished *men*, as well as *horses*, from various sections of the Union—and the exercises embraced a display of some of the good points of the former. At the Agricultural Banquet, on Friday, tables were laid for eighteen hundred people. The President of the U. S. Ag. Society, Hon. M. P. WILDER, presided and speeches were made by GOV. HORATIO SEYMOUR, of this State, Hon. ABBOTT LAWRENCE, of Mass., J. M. BOTTS and Gov. FLOYD, of Va., Mr. HOLCOMB, of Del., and Gov. COLBY, of N. H. Several other distinguished men were *trotted out*, and responded. At the conclusion of the banquet, the list of Premiums was read, and a national salute fired at sunset. As the banquet closed the exhibition proper, most of the horses and visitors left Springfield on Friday evening. We annex the list of

PREMIUMS AWARDED.

STALLIONS SEVEN YEARS OLD AND OVER.—1st premium of $200 to "Cassius M. Clay," owned by Mr. Goodwin, of New York; 2d, $100, to horse owned by F. Morgan, Danville, Conn.; 3d, $50, to horse owned by Hiram Breed, of Maine; 4th, $25, to horse owned by F. Twitchem, of Mass.

STALLIONS OF 4 TO 7 YEARS.—1st premium of $100 to Paul Clifford, owned by Hudson & Willcox, Vermont; 2d, $50, to Flying Morgan, owned by John Chamberlain and Hiram Gibbs, of Mass.; 3d, $25, to Young Black Hawk, owned by S. Hooper, Mass. A gratuity of $15 to Flying Cloud, owned by Timothy T. Jackson, Flushing, L. I.; do of $10 to Canadian Leopard, owned by Ira Griffin, Mass.; do of $10 to Raven, owned by Robbins Battell, Norwalk, Conn. Diplomas to North Star, Flying Cloud, Raven, Cub, Black Hawk and Young Eclipse.

THOROUGH-BREDS.—"Bob Logic," entered by J. R. Hutchins, of Montreal, Canada, took the first prize of $100. The others we did not learn.

FANCY MATCHED HORSES.—1st premium of $100 to D. Sanderson, Somerville, N. J.; 2d, $50, to Doty & Hubbard, Montpelier, Vt.; 3d, $25, to Francis T. Cordis, Longmeadow, Mass.; 4th, $25, to Jas. Reed, Palmer, Mass.; 5th, $20, to Josiah Crosby, of North Andover, Mass. Diploma to J. Wilcox, 2d, of Meriden, Ct.

MATCHED HORSES.—1st premium of $100 to Lewis Gale, of Barre, Vt; 2d, $50, to L. B. Chapman, of Windsor Locks, Ct.; 3d, $25, to M. H. Griffin, Middletown, Ct., for his New Jersey bred horses; 4th, $20, to S. C. Hall, Manchester, N. H.; 5th, (extra) $20, to T. J. Shepard, Springfield, Mass., for his Genesee Co. horses. Diplomas to L. A. Phillips, Providence, R. I.; N. Basset, Columbia Co., N. Y.; J. H. Tuttle, Ct.; Lathrop & Shepard, of Mass.; David P. Foot, Conn.; G. Twitchell, Boston.

FARM OR DRAUGHT HORSES.—Pairs of Horses—1st premium of $5, to C. Fonda, of Clifton Park, N. Y.; 2d, $25, to H. J. Chapin, Springfield; 3d, $20, to E. Trask, Springfield.

Single Horses—1st premium of $25 not awarded; 2d, $20, to E. & E. A. Rice, West Meriden, Ct., the only entry.

BREEDING MARES.—1st premium $100 to C. W. Sherman, of Vergennes, Vt.; 2d, $50, to J. T. De Wolf, Bristol, R. I.; 3d, $25, to Geo. A. Kibbie, of Springfield; 4th, $20, to A. Felch, of Limerick, Me. Diplomas were awarded to Otis Learned, of Oxford, Mass.; Francis Wilson, Hinchburgh; Wm. Beardsley Albany: Orrin Howe, Hardwick, Mass.; S French, Keene, N. H.; H. Alexander, Jr., Springfield; P. Bacon, Simsbury, Ct.; Geo. M. Atwater, Springfield; Benj. Pease, Warehouse Point, Ct.; F. Stiles, Jr., Clapville, Mass.

BREEDING MARES WITH FOAL BY THEIR SIDE.—1st premium of $100 to E. P. Walton, of Montpelier, Vt.; 2d, $50, to Judson Nichols, Flushing, N. Y.; 3d, $20, to R. Pomeroy, Pittsfield, Mass. Diplomas were awarded to G. Swetland, Springfield, Mass.; B. W. Hamilton, West Hartford, Ct., R. Tucker, of Ware.

It is said that the entire receipts will exceed $10,000, while the expenses of the exhibition will not reach over $8,000. The N. Y. Times thus concludes its account of the show:—"Thus ended the First National Horse Exhibition, which for more reasons than one, may be regarded with pride. Never have we known so many people collected on any occasion, where there was such an absence of rowdyism and vice. Much of this was doubtless due to the presence of that conservative element—the ladies;—more to the prohibition of liquor traffic."

—We shall probably be able to give some interesting details of the show, in our next number.

## SENECA COUNTY FAIR.

OUR three days Fair, 12th, 13th and 14th of October, was the cap sheaf of all the Fairs heretofore held in this little all arable Seneca. On the second day there were not less than 5,000 persons present;* such a rush has not been seen in our village since the day that the man was hung; and it was observed that the proportion of women and children, and nursing babes were in an increased ratio,—a living proof of the flourishing condition of the animated nature of this nature's choicest domain!

Thanks to our very efficient Committee, the Fair ground was well fenced, dry and spacious, the arrangements all complete, from the great mammoth tent, with its neat laid dancing floor, to the other large tents, and the smaller Bungalow; and the side offices at the entrance gates! And that which gave the appearance of quiet security to the whole, was the number of the police force distributed here and there, each wearing the broad hat ribbon, on which his title was printed in large capitals.

Outside of the Fair grounds was also that by-exhibition, which gives variety to the show, the Scotch giant, wild horse, &c., together with restaurants, shanties, and pedlars carts *ad libitum*.

The entries of horses were 137; cattle of all kinds, 101; sheep, 44; swine, 29; poultry, 72; fruit, flowers, and vegetables, 166; household products, butter, cheese, &c., 63; for articles of discretionary premiums, 233. The entire number of entries exceeded those of last year by one-third, reaching nearly 1,000. The show of horses was good, beyond any former occasion, embracing some fine animals. The cattle were more numerous than last year, but not as fat,—*prima facia* evidence that the other stock of the farm were not cheated of their rations, for the benefit of the prize animals. In swine there was a marked improvement over last year's show, both in number and quality.

The expose of feathered bipeds was in full keeping with the spirit of this *fowl* age; here was the meretricious peacock, the noisy parrot, the big Shanghai, Bramah Pootra, and the tiny Bantam, with ducks of all sorts, and geese, tame and wild.

The entries for fruits, flowers and vegetables, nearly trebled last year; but for the lateness of the season, the display would have been much greater and more varied. But there was a paucity of farm tools, and the committee, in their report, regret that amid the rare display of agricultural products, there should be such a poor display of the implements of husbandry; yet there were domestic oil paintings of much merit, pictures and pencilings, and embroideries; specimens of nice leather, well made clothing, &c., &c.

But the young ones say that the dance in the big tent on the second night of the Fair, crowned all; nearly 600 tickets were sold at the low price of $1 each. COBLEIGH'S band was there in full tune, the floor at one time was shaken by 200 animated couples, and the side galleries were well filled with the staid "lookers on in Vienna."

The receipts of the Fair, including the profits on the ball tickets, was $1,516—this, added to the Waterloo village subscription and the amount from the State, made the entire receipts $2,200. Methinks few of the larger counties can beat this. Mr. JOHNSON, Secretary of the State Ag. Society, was expected here to address the multitude, but much to their disappointment he failed to appear. The spirit of this unflagging man was undoubtedly willing, but the flesh cannot always endure.

If great credit is due to our efficient and truly enterprising Committee, and to the liberal spirit of our villagers, in their pecuniary contribution to this fair, more than germane to it was the outside interest, and inside presence and exertions of such magnates of the plow as President DELAFIELD, J. JOHNSTON, J. W. BACON, Judges SACKETT and COE, and others,—men in whose minds the spirit of rural reform has grown out of the crying necessity there is of lifting up the traditionary farmer to a level of the improvements of this progressive age; to arouse him alike from his egotism, his prejudices, and his unintellectual repose, that he may begin to "read, learn, mark, and inwardly digest," the great truths which nature teaches in all her combinations for the increase of her vegetable and animal kingdoms.

S. W.

Waterloo, N. Y., Oct. 19, 1853.

*It is the general opinion that nearly 20,000 persons visited the Fair grounds during the three days; the 5,000 referred to, came in wagons and carriages from the surrounding country and the south towns. Hundreds came and departed in Railroad trains every day.

MILK is the most natural food. It is identical in composition with blood. The three great classes of nutritious matter—oleagenous, albuminous and saccharine—are in milk blended in the most perfect proportions.

## CHENANGO CO. AGRICULTURAL FAIR.

OUR Fair, which came off in Norwich on the 12th and 13th inst., was—as Gerrit Smith said of the late Jerry Rescue celebration—"an elegant occasion, *elegant!*" The lateness of the time assigned seemed rather a temptation to Dame Nature to frown upon the festival, and we feared that the enthusiasm which we all feel when this, our rural holiday, approaches, might evaporate in a snow storm; but the freaky matron smiled propitiously,—indeed her tinted brown cheek was dimpled by real sunshiny *laughs*.

The show of horses, cattle and sheep was very fine, and our dairies were not wanting in representatives. The display of vegetables far exceeded that of previous years; and the variety and excellence of the fruits, though perhaps not equalling those of your more favored county, were by no means despicable. The pears, peaches, apples and grapes caused many longing glances and watering mouths for the *coming-up* farmers and dairy-women of Chenango. The natural fruit was rivalled in beauty and naturalness by some exquisite imitations in wax, which elicited great admiration.

The nicely finished pianos, cabinet work, hammers, &c., were just claimants of much attention.

The ladies hardly did themselves justice in the line of needlework—we mean in quantity and variety. Much that was shown was beautifully done, but I think that scarcely half the towns in the county had specimens in this department. Perhaps the deficit was thought to be supplied by the fine butter and cheese.

The address, by A. JOHNSON, Esq., of Greene, was brief, humorous and practical—and the music was in the best style of Sutherland's Brass Band. "In short," as Mr. MICAWBER would say, our Agricultural Fair was a delightful one—and you, Mr. Editor, by the influence you exert through the columns of your excellent paper contributed not a little to its pleasure and utility.

L.

Sherburne, Oct. 18, 1853.

## GOOD AND BAD ROADS.

THE *Country Gentleman* has an admirable article on this important subject, in which the advantages of good reads, and the paralyzing effect of bad ones, are lucidly set forth. It asks why it is that the great mass of our farming community bestow so little *thought* on the construction of roads? and then mentions some of the mistakes too frequently made by men of undoubted intelligence in other matters. The first mistake is laying out the road over high hills and through low swamps, simply to avoid cutting a few of Squire Bumpkin's lots diagonally. But we will let the *Country Gentleman* speak for himself; his remarks are worthy of careful attention:

"Another very common evil in road-making, is the use of bad materials. Nothing is more common than to scrape a fine, rich, mucky top-soil, into a high ridge called a "turnpike," and on which wagons are expected to travel. The material thus scraped into a deep and mellow bed, would be very fine for the growth of corn, potatoes, or white turnips, but it makes the most intolerable roads. When the rains soften it, the wheels cut into it to a depth of one or two feet, according to circumstances; and if the horses are able to get through it safely with an empty wagon at the rate of one mile an hour, it is not unfrequently quite as much as they can perform.

"Sometimes an improvement is made by scraping over the top of this soft bed a layer of the harder sub-soil from the bottom of the ditches. This does much better, until heavy wheels cut through, when the whole process of traveling becomes similar to that of passing through a deep snow, with a crust just insufficient to bear.

"Infinitely better than all these ingenious contrivances for creating mud, is to scrape off at once the whole of the soft top-soil, and cart it on the adjacent fields, or into the farmer's barn-yard for the manufacture of compost, leaving the firm, sub-soil foundation, for the carriage track.—Ditches may then be cut on each side, with the road rising towards the centre. As a proof of the advantage of this method, we may cite a case we once witnessed, where the surface-muck across a rich river-flat, had been heaped up into a "turnpike," leaving the bottom of the broad ditch at the side, a denuded sub-soil. When the rainy season came, the high ridge of muck was nearly impassable, and every teamster carefully sought the bottom of the ditch, where he found a hard bottom and comparatively good road.

"Where the sub-soil is not of such a character as to form hard roads, it frequently happens that harder materials may be had within a reasonable distance. Where rounded stones are abundant, the plan of Telford may be adopted. The stones being usually somewhat oblong in shape, are placed on end, with the smaller points upwards. The intervals are then filled with broken stones or with gravel, and then the whole surface with three or four inches of gravel, the weight of the wheels driving it firmly between the stones, and forming a hard and solid bed. The larger stones are placed at the centre of the road and the smaller at the sides, so as to give the track a convex form. Such a road as this, with moderate repairs, will last for ages.

"In many parts of the country, the road-makers would be unwilling to incur the expense of such a one as this, however excellent it may be; and where the ordinary material would remain in good condition, if it could be only kept free from surplus water. Hence the various attempts at side-ditching, turnpiking, &c. A greatly superior, and quite as cheap a road is made by placing a large *tile-drain* lengthwise with the road, and directly under the wagon track; or if the soil does not drain readily, or the road is much traveled, *two* such drains. They may be filled with small stones till within a few inches of the top, especially if the soil is clayey or retentive. *Such a road as this can scarcely ever become muddy*, and in perhaps the majority of instances, is the best and cheapest way to secure comfortable traveling, superadded, of course, where practicable, to the other modes we have recommended.

"The form of the ridge should be such, that the water which falls upon the surface may run off each way from the centre by a gradual slope to the ditch. This slope should not exceed one foot in twenty. The form, as usually made, is very defective, being quite steep near the ditches, and almost level towards the centre. The steepness near the ditches, where the road is best drained, exposes carriages to the danger of upsetting, or to the strain and friction of side-pressure. They are consequently compelled to take the centre, where the water cannot escape, and where it becomes thoroughly worked up into mortar by passing wheels. The centre cone of a well formed ridge has a tendency to work down flat—a tendency which must be corrected whenever repairs are made. On a steep hill-side, the whole slope should be towards the bank, where a ditch should be formed.

"All these requisites, it is true, cost thought and labor; but one of the very best things for the country at large, would be the expenditure of four times the present amount of labor, and four hundred times the present amount of thought; an expenditure which would return a heavier profit on the outlay, than the present meagre and paltry amount. For, throwing aside the countless conveniences merely, that are afforded by good and easy traveling, and the saving of time, team, harness, and wagons; throwing all these out of the estimate, the difference in the value of real estate in a single township, between the best and the worst public roads, would often amount to *a quarter of a million of dollars*. For who would not rather give fifty dollars an acre where the roads are all fine, than forty, where sloughs were only connected by ruts, and ruts by puddles, the one a thriving, the other a slip-shod population? Now, a township of six miles square would be twenty-three thousand acres; ten dollars of increased value on each of these would be two hundred and thirty thousand*—a sum that would pay for a large amount of road-making, and the thought of which ought to stimulate every mortar-bed builder to a wiser consideration of the subject, and in every sense of the word to "*mend his ways*."

*Amounting, in a State like New-York, to some two hundred millions.

## THE THRIFTLESS FARMER.

THE thriftless farmer provides no shelter for his cattle, during the inclemency of the winter, but permits them to stand shivering by the fence, or to lie in the low snow as best suits them.

He throws their fodder on the ground or in the mud, and not unfrequently in the highways, by which a large portion of it, and all the manure, is wasted.

He grazes his meadows in the fall and spring by which they are gradually exhausted, and finally ruined.

His fences are old and poor—just such as to let his neighbor's cattle break into his fields, and teach his own to be unruly.

He neglects to keep the manure from around the sills of his barn—if he has one—by which they are prematurely rotted and destroyed.

He tills, or skims over the surface of the land, until it is exhausted; but never thinks it worth while to manure or clover it. For the first he has no time; for the last, "he is not able."

He has more stock than he has means to keep well.

He has a place for nothing, and nothing in its place. He, consequently, wants a hoe or a rake, a hammer or an auger, but knows not where to find it. He and his whole household are in search of it, and much time is lost.

He loiters away stormy days and evenings when he should be repairing utensils or improving his mind by reading the newspapers.

He spends much time in town, at the corner of the street, or in the "snake-holes," and goes home in the evening, "pretty well tore."

He plants a few fruit trees, and his cattle forthwith destroy them. He has "no luck in raising fruit."

One half of the little he raises, is destroyed by his own or his neighbors cattle.

He has no shed for his fire-wood—consequently his wife is out of humor and his meals out of season.

His plow, drag, and other implements, he leaves all winter where last used, and just as he is getting in a hurry the next season, his plow breaks because it was not properly housed and cared for.

Somebody's hogs break in and destroy his garden, because he had not stopped a little hole in the fence that he had intended to stop for a week.

He is often in a great hurry, but will stop and talk as long as he can find any one to talk with.

He has, of course, little money and when he must raise some to pay his taxes, &c., he raises it at a great sacrifice, in some way or other, either paying a great shave, or by selling his scanty crops when prices are low.

He is a year behind, instead of being a year ahead of his business, and always will be.

When he pays a debt, it is at the end of an execution; consequently his credit is at low ebb.

He buys entirely upon credit, and merchants or others with whom he deals, charge him twice or thrice the profit they charge prompt payers, and unwilling to sell him goods at that. He has to beg and promise, and promise and beg, to get them on any terms. The merchant dreads to see his wife come into his store, and the woman feels depressed and degraded.

The smoke begins to come out of his chimney late of a winter's morning, while his poor cattle are suffering for their morning's food.

Manure lies in heaps in his stable; his horses are rough and uncurried, and their harness trod under their feet.

His bars and gates are broken, his buildings unpainted, and the boards and shingles falling off—he has no time to replace them—the glass is out of the windows, and the holes stopped with rags and old hats.

He is a great borrower of his thrifty neighbor's implements, but never returns the borrowed articles; and when they are sent for, cannot be found.

His children are late at school—this is, if they go to school—their faces unwashed, their clothes ragged, their hair uncombed, and their books torn and dirty.

He is, in person, a great sloven, and never attends public worship—or if he occasionally does so, he comes sneaking in, when service is half over.

We know not to whom the above excellent article belongs, or we would give the proper credit.

## FLAX CULTURE.

PROF. WILSON, in his late lecture delivered before the New York State Agricultural Society, adopted the following conclusions in relation to flax culture:

Firstly. That flax is not an exhausting crop; that its peculiar suitability to different soils and climates, the short period it occupies in the soil and the market returns of an average crop, render it a valuable addition to the ordinary rotations.

Secondly. That the recent improvements in the process of treating flax, whereby the fibre is prepared at an *immense saving both in time and labor, all nuisance avoided, and the waste products beneficially utilized*, offer great inducements for the establishment of small factories in suitable districts; thus directly encouraging an increased cultivation by insuring to the grower a ready and constant market for the produce.

Thirdly. That a large breadth of flax is annually sown in the United States of which the seed only is rendered available as a market produce, the straw being only used to a very limited extent for the preparation of fibre, the rest remaining on the field or being carted home for rough litter.

Fourthly. That a very large sum, about $14,000,000 to $15,000,000 is annually expended by the United States in the purchase of linen goods from Great Britain, which country is obliged to procure the raw material for their manufacture from other countries with which the United States has no commercial relations.

Fifthly. That it would appear expedient that the United States should utilize the large quantity of flax straw already grown, and increase her production sufficiently at all events, to supply the quantity in a manufactured state which she requires for the consumption of her own population.

## SCIENCE AND AGRICULTURE.

THE different branches of science we believe will yet furnish much aid to the practical farmer. Chemistry treats of the elements out of which bodies are formed, their sources, and the laws which govern them in their change from one body to another, and we think this *branch* of science has already done much, and promises vastly more in the future, to advance agriculture, by pointing out the true relation between the cultivated plant, the soil, and the atmosphere; and by showing what operations will produce the most rapid and profitable transformation of one into the other. But of positive, certain practical knowledge yet derived from chemistry, we are less sanguine than many who have, perhaps, spent much less time in the careful study of this subject.

We have of late been less amused than pained, at the positive conclusions and dicta of men of high scientific *pretensions*, who have set themselves up as teachers of agricultural chemistry, and by their plausible statements are inculcating wide-spread errors in the community; errors calculated by their future detection, to lead the unskillful to doubt the utility of all science.—We have more than once called to mind Pope's saying, that "a little learning is a dangerous thing," as we have seen such men apparently dazzled by a few illuminated peaks that have shot up above the surrounding darkness, and supposing themselves all-wise, have at once offered themselves as guides to others through the wide, dark, hidden valleys that yet lie between these few and widely-separated hill-tops.—Their superficiality and scientific blunderings too plainly indicate that they will prove "blind leaders to the blind." We highly appriciate the *suggestions* of chemistry to agriculture, and our advice is, seize and act upon these suggestions; but first, prove all things, then hold fast that what is good.—*American Agriculturist.*

### AGRICULTURE IN EGYPT.

It is as true now as in the days of Zechariah, that in the land of Egypt there is no rain—Zech. xiv. 17—and the country is watered wholly from the Nile. A trench is dug from the river leading to a reservoir below its level, into which the water continually flows; from this the water is dipped up in buckets, by a contrivance like the rudest well-pole—the Shadoof—which is worked by hand, or by a wheel with buckets—the Sakia—which is turned by a rude cog-wheel apparatus, moved by a buffalo or a camel. Sometimes, where the banks are high, there is a succession of platforms with Shadoofs of Sakias to raise the water from one to another. At the surface it is poured into a trench, from which—as from an artery—smaller trenches branch off at intervals, and usually at right angles, intersecting and irrigating all the adjacent land.

As the whole of Upper Egypt is but a fertile strip—four or five miles wide by as many hundred miles in length, lying upon both sides of the Nile, between two deserts and their mountain boundaries—it is possible in this way to keep the whole country well watered. In the border parts of the Nile Valley, canals are cut, into which the water flows when the river rises by the effect of rain in the mountains of Nubia and Abyssinia, and from these canals it is dipped up by the Shadoof and the Sakia, and poured into smaller trenches. In the Delta, or Lower Egypt, below Cairo, the different branches of the Nile, with aid of artificial canals, suffice to flood the whole country during the season of high water; and in the time of low water, the Shadoof and the Sakia perform here, also, their customary office. It has been computed that there are in Egypt about 40,000 Sakias, or about four to every square mile of cultivation; but this seems to be an over-estimate. The large sugar plantations of the Pasha along the bank of the Nile, as well as the royal and public gardens at Cairo, are now watered by means of steam forcing-pumps. In Nubia each water wheel is taxed about fifteen dollars per annum; but there is no tax upon the land. In Egypt the land is taxed about three dollars per acre—which is from ten to fifteen per cent. of its cost—but there is no tax upon the water-wheel.

In this state of things, it was natural that the Seekh, on hearing of the great American Nile, should wish to know the cost of irrigating the country from the river, as a first item in his comparison of the two countries. He was surprised to hear that there were no Shadoofs or Sakias on the Mississippi, but that sufficient rain fell to irrigate the land, and seemed to regard this as a great advantage. And so it is; for in Egypt the land-owner must erect his own water-wheels, and as the land is held or rented in very small lots, the expense of watering it by the toilsome process of the Shadoof is a main item in the cultivation. Frequently three or four neighbors combine and work the Shadoofs in company, for their common benefit. But, on the other hand, a land of rains requires better building materials than are found in Egypt, and especially shingles, for which this country furnishes no wood, unless the bark and leaves of the palm could be made a substitute.—The statement that land could be bought for one dollar twenty-five per acre, and held in perpetuity by the purchaser, sounded strangely in a land where the greater part of the soil is held in fee by the Pasha, and can be bought only at from twenty to thirty dollars the acre, subject to a government tax of three dollars.—*Rev. J. Thompson.*

### BEES AT WAR.

Mr. Ezra Dibble, has communicated to the Cincinnati Reporter an interesting account of a bee fight. He has seventy swarms of bees, about equally divided on the east and west sides of his house. On Sunday Aug 14, about 3 o'clock, the weather being warm, and the windows open, his house was suddenly filled with bees, which forced the family to flee at once to the neighbors. Mr. D., after getting well protected against his assailants, proceeded to take a survey, and, if possible, learn the cause which had disturbed them. The seventy swarms appeared to be out, and those on one side of the house were arrayed in battle against those on the other side; and such a battle was, perhaps, never before witnessed. They filled the air, covering a space of more than one acre of ground, and fought desperately for some three hours—not for "spoils," but for conquest; and while at war no living thing could exist in the vicinity. They stung a large flock of Shanghai chickens, nearly all of which died, and persons passing along the roadside were obliged to make haste to avoid their sting. A little after six o'clock quiet was restored and the living bees returned to their hives, leaving the slain almost literally covering the ground, since which but few have appeared around the hives, and those apparently stationed as sentinels to watch the enemy. Only two young swarms were entirely destroyed, and aside from the terrible slaughter of bees, no other injury was done. Neither party was victorious, and they only ceased on the approach, of night, and from utter prostration. The occasion of this strange warring among the bees is not easily accounted for; and those most conversant with their mangement never before witnessed or heard of such a spectacle as is here narrated.

To Destroy Vermin in Fowls.—With a feather dipped in spirits of turpentine, touch those parts of the fowl most infested, as top of the head and under the wings, and they will soon disappear. If there are nits, the application will need to be repeated. It can easily be done by going among them after they have roosted, and a small quantity only is necessary.—*English paper.*

# Orchard and Garden.

### HOW WILL IT PAY TO RAISE FRUIT?

It certainly will not pay to thrust your young trees into holes, and leave them to take care of themselves. They need fostering care, and will repay it, too, most bountifully. When the orchard is well planted, it should be kept free from weeds, grass and all broadcast crops. To this end hoed crops may be used with profit, giving the trees good space, and keeping the earth well stirred. By this means the trees make a rapid and thrifty growth, and soon come into bearing. When the orchard is so much grown as to nearly shade the ground, the plow and harrow should be moved,—the earth kept loose and friable, and weeds, &c., destroyed. Then, with proper care in the training, &c., your fruit is the very best and fairest, and will always command the best prices.

Nor will it pay in raising fruit to be content with ordinary varieties. The very best should be sought, especially those sorts of the apple that are hardy, generous bearers, and the longest keepers. It costs no more to cultivate the very best, nor do they take more room nor draw more heavily on the soil, while their produce is every way superior, for whatever use you may desire to put them to. The market is very easily glutted with ordinary varieties, and especially so while better sorts can be obtained.

In our former article we adverted somewhat to the pecuniary profits of orcharding for market purposes. There are other ways in which it will pay. As an article of food, fruit is of great value in several ways. By the free use of good ripe fruit some have saved a hundred dollars a year. In this respect the saving is first in the aliment afforded. By using the highest flavored and best sorts, a saving is effected in sugar and spices. Here again the profit of the best over poor sorts, shows very prominently.—A large saving is made in the use of the sweet kinds, for baking and puddings. J. J. Thomas thinks that the aggregate saving to the American people, by the free and universal use of fruit, would exceed the expenditure of the general government; and to those who have given thought to the subject, this statement will not seem at all improbable.

As to the curative properties of good ripe fruit, the saving is beyond calculation. It is the abuse, the swallowing of unripe or poor fruit, that has induced some to think fruits at the best questionable, except in small quantities. Where fruit is provided in its proper season and that of full maturity, and is freely partaken of as a daily food, there is no danger whatever. It tends to aid digestion, directly or indirectly. On this point Dr. Kennicott, of Illinois, (reliable authority,) says, in speaking of the use of fruit,—"Some act indirectly by restraining the appetite, for more gross and stimulating food and condiments, by keeping the bowels soluble; in other words, acting as mild laxatives, &c., &c. The juicy ones act as 'dilutents,' and as 'diuretics,' the free acids neutralizing or rendering soluble the earthy matters in the blood and carrying them off rapidly through the natural channels." The free use of fruit also lessens the desire for alcoholic drinks, and is therefore a cheap and unexceptionable cure, so far as it goes, for intemperance.

As food for keeping and fattening stock, apples come in for a share of the profits.—There is no doubt but the use of them for animals in all points, nearly, is quite as good as for the humans. Some who have made pretty fair experiments, think them equal to potatoes,—some experiments even show them decidedly superior. This is more especially the case with the richer sweet varieties. Thomas mentions a neighbor who sold $40 worth of pork, fattened with the "droppings" of half an acre of good grafted fruit. "In one experiment 500 lbs. pork were made from 120 bushels." For milch cows and horses, apples are particularly acceptable, and profitable as an article of food.

The cost of an orchard is something, to be sure, in the start, but then it is not so great but that any one owning land may have his own fruit. Let us see what the whole cost will be, land and all included:

| | |
|---|---|
| One acre of land, say at | $60,00 |
| 50 trees at 25 cents each, | 12,50 |
| Cost of setting, in best manner, say | 6,50 |
| | $79,00 |

The crops will pay the interest of this and all cost of cultivation till the trees come into full bearing; and then if one chooses to suspend cropping, $12 will pay the annual interest on the cost and keep the ground in the highest tilth. And we may safely estimate the product at eight bushels per tree, or 400 per acre, which at 25 cts, gives $100, which is better than 100 per cent. on the whole cost. Where land is cheaper and the trees can be obtained at lower figures, the profit is still greater.

There is another consideration: land that is uneven, or so situated that it is impracticably cultivated for general crops, can be put into orcharding with good profit, provided the soil is suitable, or not too wet.—Thus, where one's domain is small, all the odds and ends of corners, &c., may be most profitably economized with the various fruit trees and vines.

So in the general orchard, space may be economized by putting in between the apples while young, peach trees and other shorter lived fruits, which will be through their prime and ready to yield their places when the apples have attained a growth requiring the whole, while in the mean time these early fruits will have paid very liberally.—But we must cut our article short, though the subject is by no means exhausted. We trust we have shown enough to induce some to devote more attention to the orchard, believing as we do, that it is one of the best investments a farmer can make—better than gold in the bank. T. E. W.

A Curiosity.—Enclosed I send you what I call a vegetable curiosity. It is a genuine stem picked from an apple tree, in a fruit garden in this place, laden with blossoms, fresh as spring. There are two trees side by side, in full bloom—an anamoly, truly, at this season of the year. The trees were transplanted a year ago last spring—are in a healthy state—and why they should mistake the season and put on their tinted robes just on the eve of winter, is a problem for botanists, and not for me.

Rathboneville, N. Y., 1853. S. Furman.

### INSTRUCTIONS FOR SAVING GARDEN SEEDS.

When the seeds are ripe gather them without unnecessary delay; otherwise, the pods will split open and their contents be scattered upon the ground. Do not gather indiscriminately, but take only the finest looking heads. By this selection of the best plants and the best seed, good varieties may be even improved, and they certainly will not deteriorate. In this way many of our choice vegetables have been obtained. The practical stock-breeder's motto is, that "Like produces like," and breeds from those animals only which possess the points he wishes perpetuated. Thus, if you select the earliest peas from the earliest vines, for a number of seasons, you can obtain a variety ripening several days earlier than that with which you commenced. It has been done once and may be done again.

Place the seed vessels, as soon as gathered, upon a cloth in the shade, so that they may become perfectly dry, at which time thresh out the seed, by means of a small stick. Winnow out the chaff and small or defective seed, and put the remainder in drawers or small paper bags. Every kind should be labeled with its name and the year when raised,—in this manner, "*Early Salmon Radish*, 1853." This will prevent all possibility of the inexperienced cultivator mistaking beet for cabbage seed, or sowing that which by the lapse of time has lost its power of germination. Keep these drawers or bags in a cool, dry apartment where no injury may be apprehended from moisture or the attacks of mice. With care seeds may be preserved for several years, according to the annexed table.

The vitality of seeds, under favorable circumstances may be depended upon for the follwing periods:

Parsnips, Rhubarb, and other thin scaly seeds, for one year.

Balm, Basil, Beans, Cardoon, Carrot, Cress, Indian Cress, Lavender, Leek, Okra, Onion, Peas, Pepper, Rampion, Sago, Salsify, Savory, Scorzonera, Thyme, Tomato, Wormwood, and small herbs generally, for two years.

Artichoke, Asparagus, Corn Salad, Egg Plant, Endive, Indian Corn, Lettuce, Marigold, Marjoram, Mustard, Parsley, Rosemary, Rue, Skeritt, Spinach, and Tansy, for three years.

Borago, Borecole, Broccoli, Brussels Sprouts, Cabbage, Cauliflower, Radish, Sea Kale, Tarragon, and Turnip, for four years.

Beet, Burnot, Colery, Chervil, Cucumber, Dill, Fennel, Hyssop, Melon, Pumpkin, Sorrel, and Squash, from five to eight or ten years.—*Schenck's Gardener's Text-Book.*

Mammoth Grape Vine.—A grape vine was engrafted by Mr. John Choate, of Essex, some time in April or May last, but did not exhibit any very vigorous signs of life till July. *Between the 4th of July and the 20th of August it grew eleven feet in height!* One of the leaves measures seventeen inches across. The circumference of the stock is two inches, measuring a foot or two above the insertion of the graft. There are three grafts, and all are similar in size and height. One bunch of grapes formed but were removed for the purpose of promoting the growth of the vine. It will be seen that between the 4th of July and 20th August the vine averaged two and four-fifth inches a day! Does anything in the growth of corn stalks, of which so much has been said, begin to compare with this?—*Salem Gazette.*

Figs.—S. F. Chandler, of Monson, has ripened in his garden this season about 20 green figs. One is 6¼ inches in circumference. They are plump, soft, sweet and rich, and altogether a different matter from the dry fig. The tree must be housed in winter, and the fruit is two seasons in coming to maturity.—*N. E. Farmer.*

# Mechanic Arts, &c.

### KYANIZING TIMBER.

John Reynolds, of Vermont says in the *New England Farmer*:

"I can inform you, that our timber which has been saturated with copperas and exposed to all weather for forty years, is perfectly sound and hard, and has become something of the nature of stone. Timber that has been soaked in copperas water, say one pound copperas to one pail of water, will last more than twice as long as that which has not been thus prepared."

From certain theoretical reasons we are inclined to give credence to the above statement, and should like to hear from any of our readers who may have tried the plan. There are probably other chemical substances that would accomplish the object better, but copperas (sulphate of iron) is cheap (not more than a cent a pound by the quantity) and easily soluble in water, so that it is practically the best known substance for increasing the durability of wood.

### A NEW PATENT LOCK.

The key-bit of this lock is composed of a series of closely packed cylindrical disks of different sizes. The key-hole is a small cylindrical cavity closed at the bottom, and when open has no connection with the tumblers or any part of the interior of the lock. The key-bit is attached to the handle by a spring connection, and when the operator introduces them and commences to turn the key, the first operation of the lock is to separate the bit from the handle; as he turns, the former is carried in the cylindrical opening away from the handle; a solid metal block occupies the place of the cylinder; the key-hole is entirely closed; the bit moves on and lifts the tumblers, and, by a continuation of the turning motion, the bolt is finally retracted. A reverse motion of the handle shoots the bolt, drops the tumblers, carries the key-bit beneath the handle, reattaches it thereto, and, when the latter is withdrawn, the key aperture is again in its place and exposed.

Powder enough to fill the cylinder is all that can be introduced into the lock, and its explosion therein damages it no more than it would a pistol barrel of the same size.

This new lock has attracted much attention. It is simple in its details has no long trains of motions depending on each other, is not liable to get out of order, and has, when locked and unlocked by those unacquainted with its operation, been productive of no little mirth. It fairly steals the bit away from the handle, and leaves the latter only in the grasp of the astonished experimenter, who, as he turns, finds the lock unlocked, but the key proper gone, and every aperature into the lock completely closed. Until he is undeceived, he is apt to imagine that the whole affair is some jugglers apparatus, constructed for his mystification, and not for legitimate use as a door fastener.—*Pat. Office Report.*

### POTATO HARVESTERS.

Three patents for machines to dig potatoes have been granted. The first of these consists of an axle and a pair of wheels, drawn by a pair of horses, and around said axle, which moves with the wheels, a drum or cylinder is arranged, and armed with rows of radial teeth, while immediately behind and beneath, and in the same curve with the periphery of the said radial teeth on said drum, is arranged a fixed rake which has the ends of its curved teeth at the lowest part of the machine, while its rear part and head extend upward and backward in the curve of the said drum to the highest part of the machine.

*Operation.*—As the machine is drawn forward astride the row of potatoes to be dug, the rake teeth of the fixed rake run into, or under, the hills of potatoes, while the radial teeth on the drum sweep backward along the potatoes towards the curved teeth, and as the dirt falls out the potatoes are carried rearward and upward between the drum teeth and the curved rake head, and when at the top of the drum they roll off into the cart body.

A second machine of this character has also been patented, substituting for the radial teeth on the drum a series of stiff brushes, and for the upper portion of the curved rake head, in the rear of the drum, an endless belt of open work slats, or their equivalent, for the purpose of allowing the dirt to fall out, and to carry up the potatoes and deliver them into the cart body.—*Ib.*

Ox Yoke.—The device claimed is the use of a pair of rods, and a pair of chains working on pulleys and imbedded within the yoke. Said chains and rods are connected with the sliding sectional pieces that hold the bows. The operation of the devices is, that when either one of the bows is moved from or towards the central part of the yoke, the other bow is moved equally, and so enables the animals to work at different but always equal, distances from each other.—*Ib.*

Neck Yoke for Horses.—This yoke is made in the ordinary form of neck yokes for spans of horses, but has the rods at the ends (into each of which is fitted a ring of the ordinary kind) controlled by spiral springs, one at each end, allowing the rods to slide out and in, to a certain extent, and in the same manner as the red plays in the ordinary spring balance; so that any sudden movement of one horse would not jerk his mate, in consequence of the yielding action of the spring.

Improvement in Screw Presses.—An improvement for reducing the friction in screw presses, has been made by Duncan E. McMillan, of Jackson, Tenn., who has taken measures to secure a patent for the same. The nature of the improvement consists in the employment, between the end of the screw and the follower, of a series of rollers furnished with flanges, working in such a manner betwixt the edges of a revolving ring and the tramways between which the rollers run, so as to keep the rollers in place and prevent thrust in the bearings of their journals, thereby saving much wear and consequent expense.—*Sci. Am.*

New Self-Acting Press.—Measures have been taken to secure a patent for a self-acting press, by S. R. Holt, of Worthington, Ohio. The nature of the invention, consists in constructing the press in such a manner that the weight of the article to be pressed, and also that of a certain portion of the press, are rendered available as the motive power for facilitating operations and increasing the action of the press, whereby the pressing is performed gradually in a very efficient manner, and with an economy of labor.—*Sci. Am.*

Machine for Scouring Knives and Forks.—Two cylindrical brushes, touching and slightly entering or "mashing" into each other, revolve together in the same direction (as to the adjacent sides, viz: downward) with equal velocity. The knife is introduced between them, and the small extent of the surface of contact in this arrangement is favorable to a perfect action of the bristles upon every part of the surface of the article, while the brushes can be constantly replenished with the scouring material by taking it up from a trough beneath them.—*Ib.*

# Domestic Economy.

### APPLE DUMPLINGS.

Make a good paste; pare some large apples, cut them in quarters, take out the cores, and in place of them put in a clove and a piece of lemon peel cut very thin; take a piece of crust enough for one apple, roll it round, put the quarters together and roll the crust round it with a little flour in your hand. Have a pot of water boiling, take a clean cloth, dip it into the water, shake flour over it, and tie each dumpling by itself, put them in, and keep the water boiling all the time; if the apples be not large half an hour will boil them. When they are done enough, take them up, lay them on a dish, throw fine sugar over them, and send them to table with fresh melted butter in a boat, and fine beaten sugar in a saucer. Some persons boil apple dumplings without tying them in a cloth, but they are apt to break and spoil.

Poultry and Eggs.—Fowls like the warm southern aspect, where they can huddle together in the sun during the middle of the day. Provide them such a place and plenty of food, such as corn, barley, wheat, cob-meal, mixed with scalding water or hot potatoes, with occasional feeds of the flesh of young calves, plucks of sheep, and constant access to pure water gravel, old mortar, oyster or clam shells, and bones, all broken finely, and they will yield eggs in abundance through the cold weather.

Rich Baked Apple Pudding.—Pare twelve large apples, take out the cores, and put them into a saucepan with four or five spoonfuls of water; boil them till they are soft and thick; beat them well and stir in a pound of loaf sugar, the juice of three lemons, the peel of two lemons cut thin and beat fine in a mortar, two drops of oil of cinnamon, and the yolks of eight eggs beaten up; mix all together, put in a puff-paste to bake it; when it is nearly done, throw over it a little grated loaf sugar.

Best Method of Preparing Quinces for the Table.—We know from personal observation that few persons are acquainted with the best method of preparing quinces for the table; it is simply this:—Bake them remove the skin, slice and serve with cream and sugar. Prepared in this manner many prefer them to the peach. If you have never eaten them prepared in this way, try it by all means, and you will thank us for the suggestion.—*Farming Mirror.*

A Light Pie Crust.—A light pie crust may be made by rubbing into one pound of flour two ounces of butter worked into a cream, and one spoonful of carbonate of soda: dissolve with water half a tea-spoonful of tartaric acid, and pour it over the ingredients, quickly adding a sufficiency of water to make it the proper stiffness for the crust. This is still better when a well-beaten egg is added to the flour, &c., before the water is put in.

To Make Crackers.—One quart of flour with two ounces of butter rubbed in; one teaspoonful of Salæratus in a wine glass of warm water; half a teaspoonful of salt, and milk enough to rub it out. Beat it half an hour with a pestle, cut it into thin round cakes, prick them, and set them in the oven when other things are taken out. Let them bake till crisp.

Lavender Water.—If you would have speedily, without the trouble of distillation, a water impregnated with the flavor of lavender, put two or three drops of the oil of spike and a lump of sugar into a pint of clear water or spirits of wine, and shake them well together in a glass vial with a narrow neck. This water, though not distilled, is very fragrant.

Written for the Rural New-Yorker.

## ACQUIREMENT OF KNOWLEDGE.—No. III.

The debating society opens a school for the apprentice, in which the chains of his servitude (which are honorable to himself and just to his nature,) are not considered a clog upon his intellect; and do not debar him from that consideration to which he is entitled, and that courtesy which should be extended to all whom immorality has not placed without the pale of virtuous society.

Where was it that Demosthenes, whose oratory so often convulsed Greece to its centre, raised armies, subdued enemies, and conquered provinces, first inhaled the inspiration? It was in the forum, while listening to the eloquence of those men who mounted the rostrum for the purpose of haranguing the people upon their privileges, the oppression of their rulers, or the insults and injuries they had received from their enemies. He noted the commanding influence the orators had over the multitude; with what reverence the latter regarded their favorites among the former; and he was seized with a desire to become the object of the people's adoration. By perseverance he overcame the greatest defects in oratory, viz., an incorrect pronunciation, arising from a natural impediment of speech; and the exhaustion consequent upon pronouncing long and difficult periods, a deficiency which, by reason of a constitutional weakness, was more particularly his own. In his solitary study beneath the surface of the earth—(for he had an apartment excavated for the purpose)—far removed from the din of business and the turmoil of contest, he composed his orations and committed them to memory; and amidst the battling of the elements upon the sea-beach, he practiced and perfected his delivery. The thunders of his eloquence outspake the ocean's storm, and the tenderness of his appeals brought tears to the eyes of a despot. Thus it was that Demosthenes acquired knowledge and achieved greatness — he was great through perseverance. He was not born great — nature had denied him any special boons: he had not greatness thrust upon him — fortune had reserved for him her darkest frowns.

Let not those despair who aspire to public admiration; let their confidence triumph over their sensibility, and their desires will triumph over nature. So succeeded Demosthenes. It is not necessary that he who would study the belle-letters, or cultivate the fine arts, should adopt a profession—for occupations do not exclude privileges. The sentiment of the vulgar, that the education should only be adapted to the employment—that the merchant need merely be a good accountant; the mechanic, only acquainted with the uses of his tools; the farmer, simply know how to handle the implements of husbandry, and be able to prognosticate the changes of the weather—is becoming too stale, even to be the subject of ridicule; as though we were endowed by our Creator with intellectual faculties, only to enable us to clothe and feed the body! The study of oratory, of poetry, of philosophy, of literature in general, is not necessarily, properly, nor reasonably confined to the so called *learned professions*. It is free to all; and this freedom is necessary to make us ornaments to the social circle, and accomplished and efficient actors upon the stage of life.

In times of peril, when our rights are invaded either by a foreign or domestic foe; when those political demagogues who are far too frequently the repositories of our public trusts—who have grown fat and *honorable* upon the spoils of office—who are ready almost at any moment, at the dictation of self-interest, to bite the hand that first proffered them sustenance and raised them to their exalted stations, attempt to encroach upon our sacred prerogatives; it is then that those who possess the wisdom of knowledge, and the honesty of virtue, should stand forth, unembarrassed and unawed, to defend and vindicate the people's rights. We must not live supinely, and surrender our institutions wholly to the guidance of those whose interest it is to consolidate the government, establish monopolies, and create an aristocracy; but we must ourselves strive for the acquisition of knowledge, that we may be able to participate in the administration of national affairs, directly upon the legislative floor, or indirectly in those primary public meetings which are held for the purpose of remonstrance or recommendation.—L.

---

The avaricious man is like the barren, sandy ground of the desert, which sucks in all the rain and dews with greediness, but yields no fruitful herbs or plants for the benefit of others.—*Zero.*

## PRIMARY INSTRUCTION IN PRUSSIA.

Under a careful system of organization and adminstration, and especially with arrangements to secure the employment of only properly qualified teachers, the public schools of Prussia have been multiplied to an extent, and have attained within the last quarter of a century a degree of excellence, which attracted the attention of statesmen, and commanded the admiration of intelligent educators in every part of Christendom. In the provinces, where the improved system has gone into operation with the habits of the people in its favor, it has already reached every human being; and in even the outer provinces, it is, as fast as time sweeps along new generations, replacing the adult population with a race of men and women who have been subjected to a course of school instruction far more thorough and comprehensive than has ever been attempted in any other country. As an evidence of the universality of the system it may be mentioned, that out of 122,897 men of the standing army, in 1846, only two soldiers were found who could not both read and write. But the system aims at much higher results—with nothing short of developing every faculty both of mind and body, of converting creatures of impulse, predjudice, and passion, into thinking and reasoning beings, and of giving them objects of pursuit, and habits of conduct, favorable to their own happiness and that of the community in which they live. The result which may be reasonably anticipated from this system—when the entire adult population have been subjected to its operation, and when the influences of the home and street, of the business and the recreations of society, and unite with those of the school—have not as yet been realized in any section of the kingdom. Everywhere the lessons of the school room are weakened, and in a measure destroyed, by degrading national customs, and the inevitable results of a government which represses liberty of thought, speech, occupation, and political action. But the school, if left as good and thorough as it now is, must inevitably change the government, or the government change the school. And even if the school should be made less thorough than it now is, no governmental interference can turn back the intelligence which has already gone out among the people. It would be easier to return the rain to the clouds from which it has parted, and which has already mingled with the waters of every rising spring, or reached the roots of every growing plant.

In 1848, the population of Prussia was about 16,000,000. There were 20,030 elementary schools with 2,433,333 children between the ages of 6 and 14, in average daily attendance; 1,202 middle or burgher schools with 91,888 pupils, and 100 higher, or town schools, with 15,624 pupils making an aggregate of 25,332 public primary schools, and 2,540,775 pupils. To these schools should be added 117 gymnasia for classical education, with 29,474 pupils and 1,664 professors, and libraries with over 1,000,000 volumes; 382 institutions, in the nature of infant schools, with 15,000 children, and a large number of schools for special instruction, as for the blind, deaf mutes, commerce trades, arts, &c.; and Prussia can present an array of institutions, teachers, professors, and facilities, for all classes of her population, not surpassed by any other country.

If to the number of children at schools public or private, we add those who are receiving instruction at home, or who have left school after obtaining the certificate of school attendance up to the age of twelve years, and of their being able to read, write and cipher, and those who are detained from school temporarily by sickness, we can easily acquiesce in the claim of the director of the Statistical Bureau, by whom the annual school returns are collected, and published every three years, that every child under fourteen years of age has already attended school public or private, or has acquired that degree of instruction which makes self-education in almost any direction practicable. From an investigation made by the government in 1845, there were, in the whole of Prussia, only two young men in every one hundred between the ages of twenty and twenty-two who could not read, write and cipher, and had not a knowledge of scripture history.—*Common School Journal.*

## TEACH CHILDREN TO HELP THEMSELVES.

The thoughtless mother who hourly yields to the requests—"Mamma, tie my pinafore," "Mamma, button my shoe," and the like, cannot be persuaded that each of these concessions is detrimental; but the wiser spectator sees that if this policy be long pursued, and be extended to other things, it will end in hopeless dependency. The teacher of the old school who showed his pupil the way out of every difficulty, did not perceive that he was generating an attitude of mind greatly militating against success in life. Taught by Pestalozzi, however, the modern instructor induces his pupil to solve the difficulties himself; believing that in so doing, he is preparing him to meet the difficulties which, when he goes into the world, there will be no one to help him through; and finds confirmation for this belief, in the fact that a great portion of the most successful men are self made—*Herbert Spenser.*

---

"A CAKE cannot be eaten and kept too." This proverb is verified by the fact, that young men cannot abuse their health in the morning of life, and enjoy a happy evening of old age—cannot scatter their early dimes and have a good store of dollars—cannot pass their leisure hours in silly amusement, and grow up to usefulness and respect, or superior mental cultivation.

# The Essayist.

## SOCIAL TREACHERY: ITS BASENESS AND ITS FRUITS.

We can conceive of no vice more ineffably and miserably base than Social Treachery, or the disposition to become acquainted with family secrets with the object of betraying them, and thus working injury to the parties. In the olden time, anything that was told in household confidence, or within the limits of the family circle, was considered as inviolable, and not to be communicated under any circumstances. And so, too, with private information, heard even by accident. And this we regard as a doctrine and a policy entitled to the warmest commendation. There is scarcely a family in the land, that is not marked by some sensitive point of disposition or history. But to the honorable and the high-minded, this should be considered as forbidden ground, to be avoided on all occasions, whether in public or private, just as we would have others avoid our own peculiar idiosyncracies, peculiarities, foibles or infirmities.

A social traitor, one who is so, deliberately, wantonly and wickedly, is one of the basest of his species, and should be avoided and execrated by all who can appreciate generous and noble qualities, or who can adequately scorn their opposites. Alas for the misery which the indulgence of this vice has produced! How many hearts has it lacerated—how many gentle bonds of friendship, affection, and good will has it broken—how many families has it disturbed and embittered, and with what a fiend-like spirit has it gloated over all this wreck and ruin! And yet, strange as it may appear, there are individuals who seem to take delight in the indulgence of this infirmity. They are stealthy, watchful and serpent-like, steal into the confidence of the generous, the unsuspecting and confiding, and then coolly and vilely make use of the information thus obtained, for base and unworthy purposes.

We sometime since heard of an instance in which a villain of this class wound himself into the friendship of another, and then for a selfish motive, sought and availed himself of an opportunity to do the other an injury, the effect of which will linger with him to a certain extent through life. It amounted to an act of social treachery of the vilest and blackest character—an act, too, that was perpetrated at the moment the parties were, as they supposed, in the enjoyment of mutual confidence and reliable friendship. Nay, there is scarcely an individual who has not his unguarded moments—moments in which a remark or an expression may be taken advantage of to his injury, by one who is so disposed. Indeed, we could point out several most estimable persons, who are, nevertheless, thoughtless and impulsive, and who are constantly making strange speeches, which if tortured by the malignant, or misrepresented by the base, would constitute a source of difficulty, dispute, and serious personal misunderstanding. They talk freely, frankly, and sometimes rashly, but those who know them know that no harm is meant or intended.—Nevertheless, on more than one occasion, they have been caught, so to express it, by some social traitor of the hour, who has repeated and exaggerated their remarks, and thus made a serious offence of what was intended as a mere jest. Fortunately, these vile betrayers soon become known, and they are, therefore, watched and guarded against. The very presence indicates the necessity of restraint and caution, and they are and should be avoided as a moral pestilence.

The wretch who steals into the confidence of another, becomes possessed of the secrets of his business or of his heart, and then betrays the one or the other, either in a spirit of wanton mischief, or with the deliberate purpose of inflicting injury, is one of the meanest of human reptiles that crawls the earth. He would not, perhaps, take the life of a fellow being for a consideration, being apprehensive of the consequences—but he would rob that being of life's greatest charm, peace of mind and contentment of spirit.—There are, moreover, few who have attained the midway path on the journey of human existence, who have not at some time or other, been deceived and betrayed—taken to their bosoms and their confidence, some cherished friend or associate, and found at last that they had been nursing a viper.—The bitterness and agony of such a discovery cannot be described. It is calculated to darken life in all after time, to excite suspicion and distrust, and to induce hesitation with regard to the whole human race.—Hence the fearful iniquity of social treachery. It not only impairs confidence in the guilty party, but it provokes distrust with reference to mankind at large.

There is nothing in this world that is more delicious or capable of affording more genuine enjoyment, than the thought and belief that we possess the confidence, the friendship and affections of some fellow creature, towards whom we entertain like sentiments and feelings. Such an association and faith, are calculated to solace and sweeten life, to reconcile us to many disappointments and reverses, and to afford us a constant source of reliance and of pleasure. When, therefore, we find in some unexpected moment, that we have been deceived and deluded, and that we have been cherishing a social traitor in our heart of hearts, the disappointment, the mortification, and the anguish are keen and poignant. And what must we think of the baseness of the individual who would for months or years, deliberately pursue this policy? What must we think of the vile and criminal being who under any circumstances, would win the confidence of another, only to misuse, expose or betray it? What must we think—what should all good men think, of the plausible villain who calmly, quietly and stealthily, enters the family circle of a friend or a neighbor, or becomes acquainted with the private business of an associate or a companion, and then basely betrays the secret, social or pecuniary, thus obtained, to inflict pain, destroy credit, and perhaps produce disgrace and ruin? We can reply that, in our humble judgment, the retribution that will sooner or later be visited on all such, will be just, severe, condign, and inevitable.—*Pa. Inquirer.*

# Sketches of Travel.

## THE JAPAN EXPEDITION.

Bayard Taylor has written a private letter to the editors of the *New York Tribune*, from which however the following extract of general interest is given to the public.—He is connected at the present time with the Japan Expedition, and writes under date of June 26th, from the harbor of Napa Kiang in the island of Loo-Choo:

"Behold me here, in this remote and rarely-visited corner of the Pacific, sweating under a torrid sun, clothed in the lightest undress uniform allowed by the Navy Regulations, and living from hand to mouth, now on salt-horse and sea-biscuit, and now on turtle steaks and wild-boar cutlets. I have not yet been two months in the service, but its ordered, artificial life is so new and peculiar, so different from all my previous experiences, that, although I am now tolerably at home in it, the time seems greatly prolonged. I have, in fact, seen and done a great deal since leaving Shanghai. We sailed on the 17th of May, leaving the Plymouth there, and after a detention of three days at the mouth of the Yang-tse-Kiang, sailed direct for this place, at the southwestern corner of the Great Loo-Choo Island, where we arrived on the 26th. Probably not more than a dozen vessels had ever been here before, and the arrival of our two great steamers, with the Saratoga and Supply, created, as you may suppose, an immense sensation. Loo-Choo is tributary to the Japanese Prince of Satsuma, and the people are Japanese in dress, customs, and government, though not, as I think, in race. They approximate nearer to the Malay.—After the Regent had been received on board, and a good understanding established, the Commodore appointed a party of four—of whom I was one—to explore the interior of the island. No white man had ever been more than three miles from Napa before. We took four men and some Chinese coolies with us and started on a six day's tramp, during which we made 108 miles and thoroughly explored more than one-half the island. We were attended by Government officers, who acted as spies, but did not attempt to control our movements. We led them such a dance as they never had before, but it was impossible to escape their espionage. Scouts were sent in advance wherever we went, and the natives driven away from the road. The inhabitants either shut up their houses or hid themselves—not thro' fear of us, as many little incidents proved, but of their own rulers. The island is one of the most beautiful in the world; very fertile, admirably cultivated, and combining in its scenery the characteristics both of the tropic and temperate zones. We discovered a ruined castle, 550 feet long, on the summit of a mountain, besides many ancient tombs, hewn in the rocks. The northern part of the island is mountainous, and covered with dense forests, in which wild boars are found. The trip was altogether the most fantastic and peculiar I ever made. We took a tent, but lodged mostly in the *cung-qua's* or Government houses, which are very neat and comfortable. Our native escort furnished us with provisions, and bearers for our baggage. On Monday, the 6th inst., the Commodore returned the Regent's visit at Sheudi, the royal residence, three miles from here. He went in state with a procession of more than 200 officers, seamen and marines, with two field-pieces and two bands. Great numbers of the natives came to witness our array. We entered the royal castle at Sheudi, but did not see either the young Prince or the Queen Dowager. After the reception we had a grand native dinner at the Regent's house. I partook of 31 nondescript dishes, and was then obliged to stop. Everything passed off remarkably well. We left here on the 9th for the Bonin Archipelago, 800 miles to the eastward of this, taking the Saratoga in tow and leaving the Mississippi and Supply behind. After a delightful voyage of five days we reached Port Lloyd, the harbor of Peel Island, where we remained four days. I was appointed to the command of an exploring party.—The island is only six miles long, but very rugged, and covered with the densest tropical vegetation. I never had such a hard day's work in my life, although we only traveled twelve miles. I had seven men—officers and seamen—with me. Two of them broke down completely, a third barely dragged himself along, and the others were wofully fatigued. We climbed down a mile of precipices by holding on to the corners of rocks and the roots of trees, shot a wild boar, kindled a fire and roasted his flesh, and had a grand time generally. The Bonin Islands are of volcanic formation, and, though in lat. 27° N., the vegetation is that which is elsewhere found near the Equator. The inhabitants—30 in all—are English, American and Kanak—mostly runaway sailors, who raise a few vegetables which they sell to sailors. Port Lloyd is a splendid and secure harbor, and the only one in all this part of the Pacific which will answer as a stopping place and calling station for our new Pacific steamers, when they get under way. We can even afford to lose the chance of a station in Japan, if we get Port Lloyd."

# Sunday Reading.

## "TRUST IN GOD AND PERSEVERE."

Brother, is life's morning clouded?
Has the sunlight ceased to shine?
Is the earth in darkness shrouded?
Would'st thou at thy lot repine?
Cheer up, brother!—let thy vision
Look above—see! light is near:
Soon will come the next transition—
"Trust in God and persevere!"

Brother, has life's hope receded?
Hast thou sought its joys in vain?
Friends proved false when mostly needed,
Foes rejoicing at thy pain?
Cheer up, brother!—there's a blessing
Waiting for thee—never fear,
Foes forgiving, sins confessing,
"Trust in God and persevere!"

Brother, all things round are calling,
With united voice, "Be strong!"
Though the wrongs of earth be galling,
They must loose their strength ere long.
Yes, my brother, though life's troubles
Drive thee near to dark despair,
Soon 'twill vanish like a bubble—
"Trust in God and persevere!"

He, from his high throne in heaven,
Watches every step you take;
He will see each fetter riven
Which your foes in anger make,
Cheer up, brother—He has power
To dry up the bitter tear;
And, though darkest tempest lower,
"Trust in God and persevere!"

Brother, there's a quiet slumber
Waiting for thee in the grave;
Brother, there's a glorious number
Christ in mercy deigns to save.
Wait, then, till life's quiet even
Closes round thee calm and clear:
And, till called from earth to heaven,
"Trust in God and persevere!"

## THOUGHTS ON DEATH.

"To think of summers yet to come
Which I am not to see;
To think a weed is yet to bloom
From dust that I shall be!"

I love to read this simple verse—it always awakes a pleasant train of thought.—My mind is carried forward to the time when I shall look upon my friends for the last time—when the last farewell will be spoken and I be one among the countless dead.—That time does not seem one to be dreaded, as I have always accustomed myself to think of Death as a friend rather than an enemy. We are all apt to count others as mortal, but how seldom do we associate our own names with death? It is a pleasant tho't to think that my body will one day be laid away in the quiet grave yard, sleeping there beneath the grass and flowers. The tho't too, is pleasant, that I shall scarcely be missed in the world, that all things will move on as usual. And yet, one does not like the thought of being entirely forgotten, still if my memory is cherished by a few chosen friends, I care not if others who chance to know me, remember me no more.

The great matter is not where we die, whether we are among strangers or surrounded by friends, whether mourned or uncared for—but it is of endless importance that we are prepared for the exchange of worlds. Let us remember—

"To think when days and nights are fled
And times and seasons o'er;
When all that can die shall be dead
That I must die no more!
O where will then my portion be
Where shall I spend eternity?" Roselle.

Written for Moore's Rural New-Yorker.

## PERSONALLY PRACTICAL PREACHING.

Sometimes we go to church feeling the need of something personally practical, instructive and encouraging; something which shall strengthen us to bear the trials and perform the duties of daily life. And we sometimes hear sermons which seem to do all this; which shed a blessed influence upon us—making our lives purer and happier for days afterwards—our duty easier and our cares lighter, so that we seem to go on strengthened and renewed in the way of life.

But sometimes, it seems impossible to gain an interest in the subject presented; we cannot fix our minds upon it, and they "wander to the ends of the earth." In such instances, how often do we go away not hungering for "the Bread of Life," not yet fed therewith, but more worldly, more careless, more easily led astray than before.—This may be all our own fault, but it seems undeniably true, that we may go to church in the same mood at different times, and leave it far differently prepared for the coming week, according to the character of the sorrow, and the practical, every-day use which may be made of its teachings.—B.

---

He alone is truly great who is so by virtue of intrinsic qualities. The adroit employment of artifice and falsehood may for a time deceive; but that fine intuition which tests character and worth with infallible sagacity, will reverse the decision of mere opinion, and estimate the man as he is.

---

He who is conscious of superior powers, resolutely preserves the integrity of his nature, perseveres in the plans which he has adopted for beneficial purposes, and despises empiricism.

## AUTUMN.

BY HENRY W. LONGFELLOW.

O WITH what glory comes and goes the year!
The buds of Spring—those beautiful harbingers
Of sunny skies and cloudless times—enjoy
Life's newness and earth's garnature spread out;
And when the silver habit of the clouds
Comes down upon the Autumn sun, and with
A sober gladness, the old year takes up
His bright inheritance of golden fruits,
A pomp and pageant fill the splendid scene.
There is a beautiful spirit breathing now
Its mellow richness on the clustered trees,
And from a beaker full of the richest dyes,
Pouring new glory on the Autumn woods,
And dipping in warm light the pillar'd clouds,
Morn, on the mountain, like a Summer bird,
Lifts up her purple wing, and in the vales
The gentle wind—a sweet and passionate wooer—
Kisses the blushing leaf, and stirs up life
Within the solemn woods of ash deep crimsoned,
And silver beach, and maple yellow leaved—
Where Autumn, like a faint old man, sits down
By the way side aweary. Thro' the trees
The golden robin moves; the purple finch,
That on wild cherry and red cedar feeds—
A winter bird—comes with its plaintive whistle,
And pecks by the witch-hazel, whilst aloud
From cottage roofs, the warbling blue-bird sings;
And merrily, with oft-repeated stroke,
Sounds from the threshing floor the busy flail.
O, what a glory doth this world put on
For him who, with a fervent heart, goes forth
Under the bright and glorious sky, and looks
On duties well performed and days well spent!
For him the wind, aye, and the yellow leaves,
Shall have a voice and give him eloquent teachings.
He shall so hear the solemn hymn that Death
Has lifted up for all, that he shall go
To his long resting place without fear.

For Moore's Rural New-Yorker.

## GLIMPSES FROM THE BAY STATE.

BY MRS. M. W. H.

PASSING by many institutions of note, in and around Boston, that are more frequently described and commented upon, I will invite the reader to spend an hour with me in the

PUBLIC LIBRARY AT CAMBRIDGE.

*Gore Hall*, which contains the main part of the College Library, is 120 feet long and 50 wide, finished in a beautiful and elaborate style of architecture. The hall thro' the centre is about twenty feet in width, with compartments on each side, and a gallery running around the whole building, which contains a number of busts of exquisite workmanship, likenesses of some of the most eminent men who have at various times been connected with the College. One of these compartments contains 5,000 vols. relating to the history of America, including Indians, South America, West Indies, British and Russian Provinces.—Gore Hall contains about 62,000 vols. This constitutes the Public Library, which is under the care of Dr. THADDEUS M. HARRIS, to whose civility I am indebted for a sight of some rare and interesting curiosities. Belonging to the College is a Medical Library of 16,000 vols., which is kept at the Medical College in Boston, for the better convenience of those who are attending the Medical Lectures. A Theological Library of 3,500 vols. at Divinity Hall, and a Law Library in Dane Hall of 14,000 vols. To these has been recently added by purchase, the Library of Prof. AGASSIZ, making over 100,000 volumes to which the students can have access.

I believe this Library contains some of the most ancient literary productions in the United States. We were shown an illuminated Latin Vulgate in manuscript, that dates back a thousand years. While examining this wonder of patient application, I was lost in astonishment at the amount of labor necessary to produce a single copy of the Scriptures in those times. This was the work of one of the old Monks, of whom this single copy is probably all that remains to tell that he ever lived. Many of the illustrations would vie with modern engravings in the regularity and beauty of their execution, while the coloring is fresh and bright as if applied but yesterday. The writing is almost as uniform as if done by a printing press. But what is even more remarkable, I noticed that some of the implements in the illustrations are identical with those used at the present day. I there saw a Greek copy of the Lord's Prayer, about 800, and an illuminated Missal or Prayer Book, about 500 years old. There is a manuscript vol. by THOMAS AQUINAS, who lived in the twelfth century. "He was descended from the kings of Anagor and Sicily, and was called the angelical doctor. He lived in Italy, and became Divinity Professor to several Universities." This book is literally "bound in boards," the parchment being placed between oak boards of a quarter of an inch in thickness, and tied through the backs with stout strings.

Well may "old Harvard" be held in veneration by every American. Since its commencement in 1640, it has sent out from its walls about 64,000 graduates. When we consider the influence exerted by that number of educated men, on the past, present and future of our country, we are lost in the magnitude of the thought. Within the last twenty years this University has furnished to the world about four hundred Doctors, about the same number of Lawyers, and about three hundred Divines; some to make their mark on the age for good, others to squander their intellect and talents in pursuits unworthy of enlightened humanity—let us hope a majority of them belong to the former class. It is to be hoped that before the next twenty years shall have expired, a Collegiate education will be of as much consequence to the farmer's profession as to any other; when law, medicine, and divinity shall cease to be *the learned professions*. With the yearly increasing facilities that all our literary institutions, including the common schools, possess, we may be justified in expecting great results.

Leaving the "Academic Groves of Old Cambridge," a few moments ride brings us to the less figurative *groves* of the amateur Agriculturist and Horticulturist, JOHN B. CUSHING, Esq. Were I to undertake a particular description of this princely establishment, I should utterly fail of doing justice to it. I will, therefore, only mention a few things of most general interest. The house and garden are approached by a labyrinthine carriage way, planted on each side with evergreens, and covered a part of the distance with asphaltum, which renders it perfectly smooth; no weeds can penetrate this coating or water remain on it, being a little rounded in the centre, the water readily runs off. The grounds allotted to fruits and flowers, are completely sheltered from the chilling blasts of our climate, by a growth of evergreens, impervious to everything but birds and very small animals. I have never seen grounds cultivated with such peculiar neatness and taste; not a weed was visible on the premises. I have no means of ascertaining the precise extent of the green-houses, but it seemed to me the glass might be measured by the acre. On one side of the enclosure, in the centre, is a half-circular "rose-house," rising in a dome-like form, covered with glass, and filled with roses. I noticed two rose *trees* either one of which was six or eight inches thro' where it came out of the ground; the branches of these are trained so as to completely cover the inner side of the dome, and at the time I saw them (the last of June) were literally "Rose-trees in full bearing," loading the air with their delicious perfume. On one side of the "rose-house" is a succession of grape-houses, exhibiting that delicious fruit in every stage of growth, from the blossom to the luscious ripe clusters, the least of which would grace a Horticultural Exhibition. One entire green-house is devoted to nectarines, which at that early season, were two-thirds grown; another to pears, &c., &c. I noticed a plantation of dwarf pears in the open air; the trees looked finely, and were bearing plentifully of fruit in an advanced stage of growth. I believe nearly every climate in the world has there a representative. The proprietor of all these objects so rife with pleasure and delight to the beholder, has left his grounds free to the inspection of all visitors, till some unprincipled vandals have obliged him in self-defense, to institute some restrictions; thus, those who can enjoy and appreciate the beauties of such a place, are unavoidably embarrassed by the crimes of others—a consequence quite too common in all the departments of life.

Being still a "farmer's wife," I could not leave the premises without visiting the stable, which is in keeping with the magnificent mansion, and highly cultivated grounds. Of all the fine animals belonging to the place, but few were at that time in the stable. I noticed two Hungarian cows, which, to my taste, possess as little beauty as any animal of their species. Unless they can lay claim to some excellence not indicated by their exterior, I presume they will never be bred to any extent. In the adjoining stalls were three Jersey cows, that exhibited quite a contrast to the Hungarian. They exhibited in their general forms, but particularly in their beautiful heads, necks, gazelle-like eyes and soft, yellow skins, unmistakable signs of good milkers. This character was fully confirmed by the herdsman, who produced a pail of milk, drawn from one of the cows a short time before; the cream, which had already began to form, was richly suggestive of golden butter.—One of the cows, the mother of a beautiful calf five weeks old, had not ceased to yield a good supply of milk since the birth of a former calf—this, the herdsman said, was a charactoristic trait. There were a male and female Zebra, I presume kept as curiosities merely, as their unamiable dispositions seem to forbid their ever becoming pets.

It is always gratifying to see men of wealth devoting their means to the advancement of an improved taste, and creating objects for the innocent enjoyment and gratification of those less fortunate in worldly position; and the individual who would abuse the privilege accorded to him of enjoying all these beauties, without being subjected to any of its attendant labors, is unworthy the name of a man.

## CHINESE DINNER AND BILL OF FARE.

WE were yesterday invited, with three other gentlemen, to partake of a dinner *a la* Chinese. At three o'clock we were waited upon by our hosts, Keychong and his partner, in Sacramento street, Peter Anderson, now a naturalized citizen of the United States, and Acou, and escorted to the crack Chinese restaurant, on Dupont street, called Hong-fo-la, where a circular table was set out in fine style.

Course No. 1—Tea, Hung Yes, burnt almonds—Tong Kons—dry ginger—Sung Was,—preserved orange.

Course No. 2—Wou-Fo—a dish oblivious to us, and not mentioned in the cook book.

No. 3—Tong-Song—ditto likewise.

No. 4—Tap-Fau—another *quien sabe*.

No. 5—Ko-Yo—a conglomerato of fish, flesh and fowl.

No. 6—Suei-Chon—species of fish ball.

Here a kind of liquor was introduced, served up in small cups, holding about a thimble full, which politeness required we should empty between every course, first touching cups and salaaming.

No. 7—Beche-le-mer,—a dried fish, resembling India rubber, worth one dollar per pound.

No. 8—Moisum—have some?

No. 9—Su-Yum—small balls, as bills of lading remarks, "contents unknown."

No. 10—Hoisuige—a kind of ried oysters.

No. 11—Songhai—China lobster.

No. 12—Chung-so—small ducks in oil.

No. 13—Tong-Chou—mushrooms, worth $3 per pound.

No. 14—Sum-Yoi—birds' nests, worth $60 per pound.

And some ten or twelve more courses, consisting of stewed acorns, chestnuts, sausages, dried ducks, stuffed oysters, shrimps, periwinkles, and ending with tea—each course being served up with small China bowls and plates, in the handiest and neatest manner; and we have dined in many a crack restaurant, where it would be a decided improvement to copy from our Chinese friends. The most difficult feat for us was the handling of the chop sticks, which mode of carrying to the mouth is a practical illustration of the old proverb, "Many a slip 'twixt the cup and the lip."

We came away, after three hours' sitting, fully convinced that a China dinner is a very costly and elaborate affair, worthy the attention of epicures. From this time henceforth we are in the field for China against any insinuations on the question of diot *a la* rat, which we pronounce a tale of untruth.

We beg leave to return our thanks to our host, Keychong, for his elegant entertainment, which one conversant with a Chinese bill of fare informs us, must have cost over $100. Vive la China!—*San Francisco Whig.*

## WELL TURNED.

A YOUNG LADY, over the signature of "Kate," sends the following spirited article to the New Orleans True Delta. She gives fashionable young men a well merited rebuke. She entitles her article—"How to educate Young America."

I read in a paper, she says, the other day, that some new ornamental branches in young ladies' education were coming out soon—*Cook*-ology, *Spin*-ology and *Weave*-ology." All honor to the projector of so happy an improvement; but, allow me to ask, when our young Misses become such pattern housewives, in what "circles" they will look for suitable companions? Not in upper-tendom could they be found. Just fancy one of the bo-whiskered, bo-scented, moustachioed exquisites, in companionship with one of Solomon's maidens, who layeth her hands to the spindle, or plyeth the flying shuttle, or compoundeth rare cookery. What affinity would there be between them? The same that exists between a butterfly and a honey bee—one all glare and glitter, and frisking movements, the other all patient industry and sobriety.

I cannot think of a more useless article, or one more out of place, in a room where work is progressing, than a fashionable young man. He knows so little about matters and things, I feel in pain until he is safely lodged in the parlor among other things "more for ornament than use," annuals and bijouterie.

It will never do to commence the work of reform entirely on one side. I propose three branches more to be added to the list of studies for *finishing* young gentlemen fashionably:—*Saw*-ology, *Chop*-ology, and *Split*-ology, and that, in addition to the requisite number of "sheets, towels, spoons, and napkin rings," each promising pupil be furnished with a new wood-saw and axe, well sharpened, and daily exercise with them be practiced. It will supersede the necessity for gymnasiums.

In our onward march to perfection, and in taking up the accomplishments of our grandmothers, we earnestly beg that some provision be made against being cut off from "the best society," and such would be the result, unless the lords of creation are willing to keep pace with us. Their lily hands would scarcely, with present views, be willingly united with those which bear marks of labor; and what a dreadful state of affairs would occur in upper snobdom, if one of the *first families* were to marry beneath their dignity.

Haston, then, the glorious era, when walking sticks shall be converted into hoe-handles, crotchet hooks into knitting needles, and quizzing-glasses and flirtation be known no more.

# For the Ladies.

Written for Moore's Rural New-Yorker.

## THE VENETIAN'S SERENADE.

BY HORACE PHELPS, M. D.

"And tuned the softest serenade
That e'er on Adria's waters played,
At midnight to Italian maid."
[*Byron's "Siege of Corinth."*

Lo! night hath settled far and wide
O'er gay Venetia's streets of pride,
But there is one delightful star,
Which throws its radiance from afar,
And seems the best and brightest gem
That sparkles on night's diadem;
The star of love—the star of love,
Whose native ray is from above:
Look out Italian maid and see
Its mild and mellow brilliancy—
Milder than morning's early beam,
That sports on Adria's azure stream,
Ere the bright sun with orient ray,
Has ushered in the welcome day.
Milder than evening's farewell glow,
When vernal zephyrs softly blow,
And the tired sun has gained a rest
In the sweet bowers of the west.
Milder than the rainbows dress,
Of gay and youthful loveliness,
When forth she walks with step of pride,
O'er the fair heaven, a blooming bride;
But not so mild its varied dye,
As the bright glance of that dark eye,
When wakes thy lover's serenade,
My own, my loved Italian maid.

O! wake thee now, in midnight hour,
The zephyrs kiss the moonlit flower,
And fondly brush with frolic wings,
Thy minstrel lover's sounding strings,
And bear upon the ear afar,
The music of his blithe guitar,
Its lay will hush the broken sigh
And chase the tear from sorrow's eye;
Not Petrarch's lyre could wildly wake
A softer strain on Vaucluse lake—
When, like the am'rous nightingale,
He gave to love his gayest tale,
And each proud rock reflected long
The echo of his magic song.

Oh! wake then, now! the fountain spray
Is wreathing in the moonlight ray,
So light, so clear, its chastened dew,
The eye may mark the moon shine through,
Time turns to spray: awake! awake!
Ere morning's dawning splendors break,
And list thy lover's serenade,
My own, my loved Italian maid.

Middletown, Ky., Oct., 1853.

## THE RAG.

"WHAT did you throw that in the fire for, Kate?" inquired uncle Ned of his little niece, who was sweeping the kitchen and putting things to rights about the house.

"It was nothing but a rag," she answered, turning her rosy face with its big, round blue eyes upon the old man, "a dirty, worthless rag, which Sue washed the windows with yesterday. It is so worn out as to be of no further possible use."

"It is a worn out rag, I admit, and dirty too, but not worthless," responded uncle Ned. "Rags are as absolutely necessary to civilization, as they are themselves the results of it. Without civilization there would be no rags; and without rags there would be no civilization."

"I would like to have you prove that, uncle Ned," observed the little girl, opening her eyes very wide, and looking up into his face with wondering curiosity.

"Do savages manufacture cloth?" he inquired.

"No."

"Civilized men do," he continued, "and without cloth there would be no rags; so the first part of the proposition is proved. Now for the second. Books and papers, manufactured out of rags, are the principal medium through which one man's thoughts are transmitted to another. The pen and the type are, by the aid of paper, made swifter and more potent servants than the wing-footed messenger of the gods. An individual, an editor for instance, writes out his thoughts on paper, which the compositor (as they call the type setter) puts in type; and then the steam press forthwith transfers the words to sheet after sheet, as fast as you can count, and to an indefinite extent. In this way one man, instead of speaking to a few hundred persons who may be able to stand within hearing of his voice, is able to address a hundred thousand, scattered all over the world; and his words will be preserved long years after his own lips are silent in the dust of the grave. Sages, Philosophers and Poets; men of Science and Teachers of Religion; the good and the great of past ages, are as familiar to us at this day, and their thoughts, inventions and discoveries, are as well known now, as if the men themselves were at this moment walking in our streets. Men's works, if they are worthy, remain for the benefit of future generations; and rags, dirty and worthless as the one you have just destroyed, are the materials out of which they build their most enduring monuments; monuments to elevate and enlighten, and not like the pyramids of Egypt, simply to excite the speculation and wonder of mankind.

"Paper is made of rags, and without paper in some form, no books or newspapers could be printed, letters written, or telegraph messages transmitted. The world would then speedily relapse into barbarism, and oven rags, the exponent of civilization, would disappear from the face of the earth. You said that rag was a dirty one, which is true; but the paper-maker is not very particular about that. The dirtiest and worst looking heap of rubbish anywhere to be seen is that in a paper-maker's rag room; but pure water, and the chemicals in his cleansing department, speedily change the color of the dingy mass to the whiteness of driven snow. I would not, however, recommend you to throw such a dirty rag as that was into the bag, for it would not be an evidence of neat housewifery. Give it a pounding in some of your waste suds after washing, which would cleanse it of all offensiveness, but never in any instance burn or destroy it. The increasing demand for paper renders it highly important that every rag should be preserved; for ship load after ship load of the cast off garments of European paupers is imported into Boston and New York in order to supply the paper-makers of this country. Even the infected clothing of the dead, who perished by the yellow fever this summer at the South, was sent to Northern sea-ports on similar consignments. The more a rag is worn the better, for the mill must cut it up completely before it is fit for paper.

"There are now manufactured in France seventy thousand tons of paper annually, and sixty-six thousand tons in Great Britain. In our own country there is probably annually manufactured the enormous amount of one hundred and fifty thousand tons.—Not all of it is made of rags, but they enter very largely into its composition. The ragged linen shirt bosom, which some frilled dandy, without a cent in his pocket and in debt to the tailor for his coat, has worn until he can keep it on no longer, may come out of a Bank next year in the shape of a clean, new fifty dollar bill, good at sight at the counter of the Bank for five golden eagles. The next number of the RURAL NEW-YORKER, which you say will be in to-morrow's mail, will be printed on clean white paper, manufactured out of just such a rag as that you throw into the fire.

"In a single ward of the city of New York are now living some two or three thousand persons called *Chiffoniers*, who get their living and lay up money too, by picking up rags, bits of paper, pieces of bone and other odds and ends. They are a ragged, dirty and wretched looking set of people, to all appearance fit only to be stuffed into their own sacks. They go around the streets with bags on their backs, and a hook in one hand, with which they rake over the heaps of refuse in the streets. They hover in the vicinity of places where scavengers dump their carts, like a flock of carrion crows. Now and then they find articles of value, as a lost watch, or a diamond ring; but rags, paper, broken glass, pieces of rope, and bones are the chief items. Many a swell in Broadway, whom you might possibly mistake for a millionaire, has less money in his pockets than some of these rag pickers."

"Ah, uncle Ned!" exclaimed the little girl, "what a story you are making out of a rag!"

"It is true though," responded the old man, "notwithstanding, for I have seen it all and more; and what I say to you I would say to all of my countrywomen and girls,—be sure and preserve all the rags. They are good any day in exchange for the indispensable articles of needles, pins and tape, or even for cash; and besides, they are working missionaries in the cause of civilization and Christianity."

## A STREET SWEEPER.

NOT long since a gentleman was crossing one of our streets, where a little girl was sweeping off the mud. Her little hand was opened as he passed, and he placed, as he supposed, in haste, a penny therein. She immediately followed him, calling.—"Gentleman, gentleman, see what you have given me." The gentleman stopped and she handed him an eagle, saying she did not think he meant to give her more than a penny. He asked her why she did not keep it. She replied, "That would not have been right." He looked at her with astonishment, and inquired of whom she learned that. "In the Sunday school," was her reply. He then inquired her name, age and residence. Her mother, she said was very poor, and lived in an obscure street. While he was talking with her, some fifteen or twenty persons were gathered around them and a contribution was proposed, which resulted in the sum of about fifteen dollars. The gentleman called to see the little girl and her mother, and finding the statement he received verified, placed the mother in a tenement of his own, free of rent, and has taken the little girl to educate.

ADDISON has left on record the following important sentence:—Two persons who have chosen each other out of all the species, with the design to be each other's mutual comfort and entertainment, have in that very action bound themselves to be good humored, affable, joyful, forgiving and patient, with respect to each other's frailties and imperfections, to the end of their lives.

MOORE'S RURAL NEW-YORKER.

ROCHESTER, OCTOBER 29, 1853.

## SPECIAL NOTICES.—TO AGENTS, &c.

☞ In answer to recent inquiries, we beg to state that the next (fifth) volume of the RURAL NEW-YORKER will be furnished to Agents and Clubs at the same rates, and on like conditions, as heretofore—that the Premium List for the year 1854 will be more liberal than any preceding one—and that the paper will be essentially improved, for the accomplishment of which latter object, we have resolved upon a largely increased expenditure. As soon as our arrangements are completed, a Prospectus, Premium List, &c., will be issued. Meantime we trust that former agents, and all other friends disposed to aid in furthering the circulation of the paper, will prepare for the canvass, and see what may be done in their respective localities.—Now is the time to survey the field and prepare for action,—thus "making ready" for opening the campaign early in November.

☞ Specimen numbers, Premium List, &c., furnished free to all applicants. Any of our readers wishing the RURAL sent to distant friends who would be likely to introduce it to notice and support, have only to give us the names, &c., and numbers will be promptly forwarded.—We hope the zealous friends of the paper—and their name is legion—will bear this offer in mind, and furnish us the address of such persons as they think would like the paper, or lend a portion of influence in its behalf.

## DEATH OF JOHN DELAFIELD.

ANOTHER ardent, zealous and most untiring and influential laborer in the cause of Agricultural Improvement is no more! Hon. JOHN DELAFIELD, President of the N. Y. State Agricultural College, departed this life, at his late residence—Rose Hill, Seneca county—on Saturday morning last. This melancholy event was as startling and unexpected to the family of the deceased, as it will be to distant friends—for he expired very suddenly, after only a few minutes illness, of disease of the heart. Mr. D. was about sixty years of age. Few particulars have reached us, as the painful intelligence was received by telegraph. A private letter which we received from Mr. DELAFIELD only two days before his death, indicated vigorous health and enthusiastic zeal in the cause he had so zealously espoused and ably promoted. Truly, "in the midst of life, we are in death!"

—In the death of Mr. DELAFIELD, the Agricultural interests of Western New York, the State, and indeed the whole country, sustain an irreparable loss,—while the event will be sincerely deplored by thousands of warm and admiring friends and acquaintances. As we have before said in these pages—"Such men as Mr. DELAFIELD are rare—would that each county in the State possessed one who could and *would* do as much as he has for Seneca—and wherever and whenever found, should receive the distinguished honor to which they are entitled."

A Biography of Mr. D., and perhaps some interesting particulars concerning his last moments, will be given in our next number.

## Waters of Helicon.

STREAMS from the ever-flowing fountain of the muses, pour into the office of the RURAL NEW-YORKER, as into all other publication offices.—Accompanying are frequently acknowledgements of defects in composition, as if an editor could not himself detect false rhymes, halting measure, indiscriminate mixing up of all kinds of feet, rhyme without reason and reason without rhyme, and a thousand other errors and faults, that would condemn the so-called *poetry*, irremediably to the funereal pyre. Some people seem to think an editor's sanctum is a sort of receiving reservoir, in which, like that belonging to a public fountain, all crudities, impurities, and foreign matter, will subside, leaving the sparkling element clear and pure, for the abundant supply of thirsty people. No possible mistake can be greater than this, for it is far easier, at any time, to write an article entire, than to correct and re-write one which is crude in thought, grammatically incorrect, and badly written. Good articles, in verse or prose, are always acceptable; but bad ones in either, are an editor's abomination. Below are samples in illustration:

"At four o'clock one fine afternoon,
This young man happened to come round."
* * * * * * *
"He says he has not seen her, and I do not think he has,
If he had, he would have owned it, for he is an honest man."
* * * * * * *
"The Bible! 'tis a blessed book,
For man's good it was written;
It will not do much hurt to look,
Within that book of heaven."

Of course the inference is conclusive, that it will do *some hurt, not much!*

—These remarks are intended for the exclusive benefit of certain persons who we trust will understand them,—and have no application to those who write on *practical* and *useful* subjects. As heretofore, we shall ever be glad to hear, in any shape, from men of observation and experience.

A GRAVE FARCE.—Last week one of our daily papers announced an indepenoent State "People's Ticket," the candidates being selected from the tickets of the three prominent parties. The proceedings of the *People's* meeting—which appears to have been held privately, or without public notice—contains the names of a few of our prominent citizens, and some not so prominent.—An early completion of the canals, and an efficient and economical administration of the State finances by balancing party interests, are the *ostensible* objects of the movement. We do not give the names of the over-facetious *people* engaged in this remarkable and powerful demonstration, lest BARNUM shoul deprive the city of such a treasure!

## The Weather,—and a Reminiscence.

ON Sunday night last (the 23d) it froze quite hard in our streets, which was the first ice of the season, although a member of the Frigid family has visited us several times before, and left behind him unmistakable signs of his blasting presence. Jack Frost, his + mark, is written on leaf, and vine, and flower, and the rustling of falling foliage, the sighing of the wind through half denuded branches, the bosom of mother earth covered with the ripened fruits of the season, all remind us that the passing year will ere many months expire.

On Monday afternoon it snowed thick and fast, covering tree and roof with a shining mantle, although most of it melted as fast as it fell in the streets, and the whole speedily disappeared before the morning sun of Tuesday. While the snow was falling fastest, a certain individual, (we are not permitted to say who,) looking out of the window, remarked that it put him in mind of old times; and on being interrogated as to the cause, added,—"I was married on the last day of October." What analogy there could be between a snow storm and getting married, was beyond the ability of the corps editorial to determine. One member (a bachelor) suggested it was because it made him shiver to think of it; another (a Benedict) said it must be because it was in the melting mood, &c.

"No," said he, "I had written to my lady love that I would be with her at 9 o'clock on the last day of October. I was a hundred miles away, seventy of which must be traveled by stage coach, and the balance in the cars. The mud was half hub deep, and on Sunday, the 27th, it snowed all day without cessation, falling to the depth of a foot; and when the storm held up at last, it froze all night like mid winter. I started, amid the jokes of mischievous friends, on Monday morning in the stage, and when we had ridden, or rather dragged along, for half a day, we came to the end of that stage route, and were to take an intersecting line. But that stage and its passengers, tired of waiting, had gone on two hours before. What was to be done? I was the only passenger to go through, and they would not send on an extra for me alone. Lie over a day I could not, for I was going to be married, you know. I scolded and stormed, and I was going to say swore, but I did not swear—I never allow myself to do that. I had unfortunately not paid my passage through, so there was no redress. In the midst of my perplexity, a lumber wagon came along with a man in it, sitting on a board and whistling, as happy as a clam: while his two old horses dragged the vehicle along through mud and snow.

"Hallo! says I."

"'Hollo! back,' says he."

"Going to ——?"

"'Yes.'"

"Got a load?"

"'No, except an empty wagon; that's a load though.'"

"Want a passenger through?"

"'Don't care.'"

"Come on then, old fellow, said I, I'm your man!—drive up here and take in my trunk. We have fifty miles to go before we get to the Railroad, and I'll pay you stage fare for a passage.—'All right,' says he, as I tumbled in and took my seat beside him on the board. The sun was by this time shining gloriously, and the snow was melting fast. We were two days going the fifty miles, for the horses were obliged to walk every step of the way; but my John was a genius, and I enjoyed the ride greatly, the pleasure being no ways decreased by the oddity of the idea that I was going in a lumber wagon to get married, and was riding on a board. But I got through the journey safe and in time; the last thirty miles, as I said before, being done in the cars. We had a pleasant wedding excursion to Niagara, the snow storm having given place to a glorious Indian Summer. The sunshine, and not the storm, was the prototype of my subsequent life, for in the married relation I have been, and am now, one of the happiest of men."

THE BAPTIST STATE CONVENTION, held its annual meeting for 1853 at Watertown, 11th inst.—Sermon by Rev. J. G. Warren, Troy. The Rev. D. G. Corey was chosen Moderator, and the Rev. C. P. Sheldon and Rev. Silas Illsley, clerks. It was unanimously determined that the executive committee be continued at Albany. The receipts during the year were $12,770, an increase of about one-third over previous year, but not adequate to the numerous calls for relief. The Ex. Committee has afforded relief to sixty churches and missionary stations. Rev. C. P. Sheldon, of Buffalo, was appointed Corresponding Secretary, to devote all his time to the work of the Convention. The Executive Committee for the ensuing year is thus constituted;—Hon. Friend Humphrey, Rev. J. O. Mason, Rev. J. G. Warren, Rev. G. C. Baldwin, Rev. M. G. Hodge, Rev. R. Jeffrey, Rev. D. G. Corey, Rev. W. Arthur, Rev. C. W. Hewes, Rev. E. E. Taylor, Rev. L. F. Beecher, S. Sheldon, A. Hubbell, J. F. Rathbone, Edward James.—Meet next year at Syracuse.

MR. GALLEGOS, one of the candidates for Congress from the Territory of New Mexico, it is stated, cannot speak a word of English. What possible use he can be in Congress is more than we can tell, since a Territorial Congressman is not allowed to vote on any question. Being unable to speak, and forbidden to vote, a log of wood might do as well for New Mexico, and save to the country the Congressional pay and stealings of one member.

BISHOP IVES, was formally deposed by the house of bishops in New York on the 14th. He was late Episcopal bishop of South Carolina, but seceded from that denomination and joined the Romish church.

## Our Albany Correspondence.

ALBANY, Oct. 24, 1853.

ALBANY has long been dubbed with that euphonious epithet, *Sturgeonopolis*. But the "t" might now be omitted with propriety, rendering it *Surgeonopolis*. Dr. MARCH has been known to repair the nasal and labial organs in the most perfect manner, but *Surgeon* MATHER has put such efforts entirely in the shade by actually *re-heading* a man who had lost that important appendage. The circumstances are as follows:—The Canal Board, seizing a favorable opportunity, *decapitated* several of their "hard" brethren who occupied prominent positions on the Canals, and appointed "softs" in their stead. Before the edict could go into effect, it was necessary for the Canal Commissioner to give seven days notice of the same to the individuals concerned. It is said that the pressure of official engagements will be likely to prevent said functionary from giving the notice during the present season! In the mean time, the newly appointed officers have also commenced their duties, so that there are two sets of men filling the same office at the same time, to the great loss of the public.

The guillotine has also been brought into use at Washington. GREENE C. BRONSON has been removed from the office of Collector of the Port of New York, for sympathizing with the "Adamantines." This act, though, as I intimated before, it was daily expected, has created a great excitement here. The President must now expect the most extreme treatment from the old line Democrats. It is supposed that his sympathy with the Barnburners will cause the South to withdraw all support from him. Indeed, it is the general impression here that President PIERCE's Administration will be one of unexampled contention and dissatisfaction. However that may prove, he could not allow BRONSON and O'CONOR to write saucy letters to his Secretary, without disgracing himself in the eyes of the people. Thanks to our glorious Constitution, these quarrels have no great effect on the yeomanry of the nation. Hence there need be no fear as to the results. The instincts of the people are true and reliable.

BRADFORD R. WOOD is the Maine Law candidate for the office of Senator in this district, and has some chance of election. The friends of Temperance are very active in their canvass, and will accomplish much. The city nominations have not yet been made. In this there will be another deadly strife. The Democrats *may* unite on PERRY for Mayor, but there is very little hope of it. The Whigs are quietly at work, and full of hope as to the result on the State ticket. One great point at issue is the election of U. S. Senator in place of WM. H. SEWARD. This election occurs next winter, and is made by joint ballot of the two houses of the Legislature. JOHN VAN BUREN is said to be setting his cap for that honorable post, and should the "softs" succeed in securing a majority in the Legislature, he will git it. Should the Whigs obtain the majority, Gov. SEWARD will probably be returned, though his friends say he does not desire it. Still he is believed by many to be the most talented man now in the U. S. Senate, and as such cannot yet be spared. He *must* be kept for the coming six years, say those who know best about it.

We have had a severe snow storm during the day. From six to ten inches have fallen. Pretty well that, for October. *OWE.*

## Death of President Delafield.

WATERLOO, Oct. 24, 1853.

THE announcement on Saturday, of the sudden death of President DELAFIELD, so lately the life and delight of our Agricultural Fair, was received as a sad personal calamity by all. Few men of like ability had his untiring action,—still fewer possessed his faculty to conciliate others, to put them in good humor with themselves, while he disabused them of their long-cherished, absolute prejudices by the force of his own generous, enlightened enthusiasm in a cause which he made them feel was their own. No farmer ever spoke of him but with admiration, respect and esteem.

When Mr. D. came from Wall street to the farm at Seneca Lake, where he died,—his large fortune lost in the great financial revulsion that followed '36—his mind depressed by the harrowing dispensation he had passed through,—he sought that solace from mercantile disaster, which CINCINNATUS did from the horrors of war. In elaborating rural comfort on his farm, he soon changed it, as if by magic, from an almost fenceless sheep-walk, to a splendid, well-fenced, well-appointed farm. As his spirits rose, all the wonted energy of his enterprising nature was applied to the study and advancement of Agriculture. His table was now covered with books and papers; he embraced all the improved theories of LIEBIG, JOHNSTON, and others, but with the discrimination and allowance of a practical master, rather than that of a neophyte enthusiast.—He was elected President of the State Agricultural Society, and all know how nobly and efficiently he acquitted himself of the duties of that exacting office. His efforts of late were devoted to organizing and forwarding our Agricultural College; he sold his own farm to be appropriated for that institution, at a price much less per acre than farms were sold at on the shore of Cayuga Lake twenty years ago. The Agricultural interests of New York have met with a great loss. It may be long before we shall look upon his like again.

S. W.

BINGHAMTON STANDARD.—This is the title of a handsome weekly just commenced by J. VAN VALKINBURGH. It is independent on all questions, and principally devoted to Temperance and General Reform. The initial number is in all respects creditable, and we trust the enterprise will meet with abundant success. The *Standard* will prove a valuable auxiliary to the already respectable number of able and influential journals in Southern New York.

## News Paragraphs.

☞ The new State Capitol of Tennessee, at Nashville, now nearly completed, at a cost of a million of dollars, will be one of the most splendid structures in the country. It is built of solid limestone quarried near the hill on which it stands, and covers exactly an acre of ground. The architecture is of the Ionic order, and the ornamental part exceedingly rich. Its roof is of Tennessee copper, and the platform for the Speaker of Tennessee marble.

☞ A fire occurred last week in the woods of Michigan near Detroit, which in its progress destroyed thousands of dollars worth of property. It is estimated that a strip of country at least 30 miles in length, has been burnt over, and the crops and wood on at least one hundred farms has been entirely destroyed. The fire did not confine itself to the woods, but spread in the soil, which it burnt off entirely to the depth of a foot or more.

☞ The Washington Sentinel says there is only one stone in the Washington Monument contributed by the fair sex for insertion in the column, and this bears the inscription,

"From the Ladies of Lowell, Massachusetts.

'Here industry her grateful tribute pays,
To him whose valor won us prosperous days.'"

The slab is of white marble, and letters are sunk (and gilded) in the raised oval surface.

☞ An extensive fire at Louisville Ky., on Friday of last week destroyed the Journal printing office, the Louisville rolling mill ware-house containing a large quantity of iron, Holbrook's tobacco warehouse, an extensive wholesale drug store, two stove warehouses, three dry-good stores, a trunk factory and other buildings. The loss by the fire is about $200,000, on which the insurance amounts to $160,000.

☞ The Rochester American says,—"Grace Greenwood" was married last Monday evening (the 17th) at the residence of her father, in New Brighton, Pa., to Mr. Leander K. Lippencott, of Philadelphia. The happy pair will reside in Philadelphia, where Mrs. Lippencott (what a fall from Grace!) will edit the Little Pilgrim, a sheet for juveniles. We wish her success in the issue of little pilgrims.

☞ About 11 o'clock, Friday forenoon last, three floors in the New York Mills, in this city, fell through with a tremendous crash, carrying down 7,000 bushels of wheat, 2,500 feed, a quantity of flour, &c. The mill flume was also carried away. The most of the feed and much of the wheat went into the river. Cause, the overloading of the upper floors with grain.

☞ The New York Times learns from good authority, that George Law has effected a sale of a very considerable portion of his muskets to the Turkish government, to be used in the war with Russia. They have not yet been sent, but are to be shipped in the course of a few days. These muskets were old flint lock guns, sold at auction by the U. S. Government.

☞ The Evansville (Ind.) Journal, states that the first boat through from the Lakes, via. the Wabash and Erie canal, arrived at that place on the 29th ult. This stupendous public improvement, began over twenty-one years ago, is at length completed, uniting the waters of Lake Erie and the Ohio through a ditch four hundred and fifty-nine miles long.

☞ Yankee Sullivan marched down Chatham street, N. Y., a few days since, in open day, with a body guard of six men, three in front and three in the rear, with muskets over their shoulders!—In the evening he was serenaded by the First Ward Magnetizers on horseback in fantastic costumes. A great crowd in Chatham street attended the ovation.

☞ The N. Y. Herald publishes, and several contemporaries copy, a lugubrious article with "Melancholy suicide of a young man, caused by falling in love with his brother's wife," as a title. There would have been no particular harm in his falling in love with his *brothers wife's sister*, if the latter was young and pretty, and had no other lover.

☞ A collision occurred on the railroad bridge, at Coatsville, Pa., on Friday 21st, between a freight train going down, and a passenger train coming up. Both engines were disabled, and two men named Williams and Davis, on the freight train, were killed, and another, name unknown, severely injured.

☞ Commander Inglefield had returned without news of Sir John Franklin. Commodore McClure has accomplished the North West passage in the investigation, and entered Behring's Straits, and come out through Davis' Straits. He reports great discoveries of Copper in the Arctic regions.

☞ Medill's majority in Ohio will reach 60,000. The democracy in Ohio says the Providence Journal is something like Jack Downing's cold weather down East, where it was a great many degrees below zero, and would have been colder yet, if the thermometer had been long enough.

☞ Returns from 40 counties in Pennsylvania, show a Democratic majority of 16,000 on the State ticket, which is expected to be increased to 24,000 by the remaining counties. The State Senate will stand, 17 Democrats, 14 Whigs, 1 Independent Democrat, and 1 Native.

☞ Less than one third of the population of Massachusetts will elect a majority of the House of Representatives, under the new constitution, if the same is adopted at the next election. The inequality is occasioned by retaining the system of representation by towns.

☞ The Statute provides that the General Election shall be held "on the Tuesday succeeding the first Monday in November." As November this year comes in on Tuesday, the election will be held on the Second Tuesday—the 8th day of the month.

☞ There are twenty-one hundred miles of railroad in operation in the state of New York, and two thousand more under contract. These roads have cost over one hundred millions of dollars, which is about as much as the whole cost of the Revolutionary War.

☞ It is stated that there is soon to be established at Norfolk, Va., on an extended scale, a house for the reception of emigrants from Europe, for the purpose of supplying the demand for this description of labor in the interior of Virginia and North Carolina.

☞ In consequence of the defalcation of the cashier of the Sisters of Charity in Mexico—a Padre Armengol—they have been reduced to bankruptcy, leaving debts of many hundreds of thousands of dollars.

☞ The Superior Court for Fairfield county, Ct., last week granted a divorce to a Mrs. Baldwin, now 17 years of age—only 15 when she was married! The ground of her petition was "intolerable cruelty."

## News Brevities.

—— Foreigners cannot now obtain patents in the Canadas.

—— W. S. Bailey, is elected to Congress from Georgia by two majority.

—— John J. Sisco is appointed Sub-Treasurer, vice John A. Dix resigned.

—— The New Orleans Board of Health have declared the epidemic at an end.

—— Hon. John Bell, it is said, will be re-elected U. S. Senator from Tennessee.

—— The surplus of wheat in Ohio this year is is estimated at 13,000,000 bushels.

—— In Boston the rate of taxation is $7 60 upon the valuation of a thousand dollars.

—— Mr. E. Ordway, at Freeport, Illinois, has 150 varieties of apple trees in his orchard.

—— Yale College has existed one hundred years, and educated six thousand students.

—— General Childs, of the U. S. Army, died of yellow fever at Tampa Bay, on the 8th inst.

—— J. B. Broadhead is appointed Naval officer in the place of Redfield appointed Collecter.

—— Hon. Archibald Dixon, it is stated, will be a candidate for U. S. Senator from Kentucky.

—— The New York Times entitles the schism in the Democratic party a "War of the Shells."

—— A tavern keeper in Canada was fined ten dollars for refusing to lodge a couple of travelers.

—— Ten boats with cargoes of 100 tons and upwards each, passed east through this city last week.

—— The Whig County convention met in this city on Saturday last and nominated county officers.

—— The Syracuse Star has changed hands having been purchased by the Adamantine Democracy.

—— A woman in Liverpool, wife of a baker, gave birth recently to five children—two boys and three girls.

—— The Buffalo Synod, Old School, met at the Third Presbyterian Church, in that city, on Wednesday last.

—— A Parisian has bought a span of horses at Cincinnati for $800, and shipped for Paris via. New Orleans.

—— Gov. Seymour has determined to bring the actors in the late disgraceful and brutal prize fight to justice.

—— It is said a New York firm has offered $200,000 for Donald McKay's mammoth ship, the Great Republic.

—— A little boy 8 years of age accidentally killed his sister three years younger, in Victor, with a pistol, last week.

—— Doctor David C. Higgins has been appointed Postmaster at Pultneyville, Wayne Co., in place of G. D. Phelps.

—— Hon. Tristram Burgess, a distinguished citizen of Rhode Island, died on the 13th inst., in the 84th year of his age.

—— Daniel Stuart, of Detroit, died on Tuesday morning, aged 86. Mr. S. was one of John Jacob Astor's Fur Company.

—— Myron H. Clark, of Canandaigua, has been re-nominated for Senator by the Whigs of Ontario and Livingston District.

—— Col. Porter, the inventor of Porter's rifle, has sold one half of his patent to Governor Jones of Tennessee, for $170,000.

—— Greene C. Brenson, Collector of the Port of New York has been removed from office and Herman J. Redfield appointed.

—— The Arabia sailed from New York for Liverpool on Wednesday, the 19th, with 83 passengers and $1,094,253 in gold.

—— Boston is the destination of the bark Mimosa, on which Koszta embarked for this country. A public reception is talked of.

—— Forty-seven thousand persons, it is stated, have crossed the bridge leading to Goat Island from Niagara, during the present season.

—— The steamboat McDaniel exploded her boiler, at the mouth of the Mississippi, on the 12th inst., killing three persons and scalding others.

—— In the case of Gilmore vs. Hudson River Railroad for damages for injuries sustained by collision, the jury have given the plaintiff $5,000 damages.

—— The Virginia papers speak of severe frosts along James River. All the outstanding tobacco is bitten black, and the crop will be shortened one half.

—— A Mr. McAdam of Canandaigua, lost his life while hunting on the lake near that village on Tuesday week, by the accidental discharge of his own gun.

—— The so-called patent medicines of the day are not patented, except a few patented several years ago. Patents for medicines have not been issued for some years.

—— The Common Council of New York have increased the pay of the police an average of seventeen per cent. adding to the city expenses about $110,000 per annum.

—— Dr. Young, the newly-appointed Catholic Bishop of Pittsburg, declines the appointment.—Dr. Coskery, appointed to the new See of Portland, Me., likewise declines.

—— The Cambridge (Md.) Chronicle says an unusually large number of wild geese and ducks are daily passing over that town and vicinity, which betokens a severe winter.

—— We learn from the Cleveland Plaindealer that Mrs. Emma R. Coe is pursuing a course of legal studies in that city, with the view of qualifying herself for the practice of law!

—— Mr. Strickland, an English geologist, while taking a sketch, lately, on the Sheffield, Manchester and Lincolnshire Railroad, was run down and killed by the express train.

—— The Democrats and Free Soilers have coalesced in the Vermont House of Representatives. On the 17th, the Hon. Horatio Needham, Free Democrat, was elected Speaker.

—— The canal tolls for the second week in October were $128,254, and the total for the season to October 15th were $2,470,162, being an increase of $34,217 over the same time of 1852.

—— The receipts at the State Fair in Dayton, Ohio, exceeded $17,000—including the preliminary subscription required by the Board. This is about $1,000 more than the receipts at Cleveland last year.

—— Three steamers were burnt at St. Louis on the 13th, and considerable of an amount of property and freight destroyed. The hulls of the burning boats were towed on to a bar in the river and sunk.

—— The Washington correspondent of the Baltimore Patriot, says that a strong and systematic effort will be made to place Col. Benton in the Speaker's Chair of the next House of Representatives.

# Foreign Intelligence.

## Arrival of the Asia.

THE steamship Asia, from Liverpool, Saturday, Oct. 8th, arrived at New York on the 19th inst.

The Franklin arrived at Cowes, at 9 o'clock, on Thursday evening, 6th inst.

A letter from Smyrna, dated Sept. 23, advises that Martin Koszta had that day sailed for the United States.

The markets continued to follow the varying accounts from the East. Cotton, at Liverpool, was dull. Corn was likewise quiet, and, the past day or two, favoring buyers. Money was rather dearer, but not scarcer.

RUSSIA AND TURKEY.—There is nothing more definite from Constantinople. Letters of the 25th ult., report the prevalence of a very warlike feeling.

The Paris Patrie semi-officially contradicts the statement that the Sultan signed a declaration of war on the 27th ult. The Council merely resolved that no more concessions could be made, and that the preparations for war must be carried on with increased energy.

Cholera was committing greater ravages than ever among the Russians on the Danube.

Before the Czar left Olmutz, he sent off a courier to St. Petersburg with an order for the raising of a new levy of troops.

The Vienna semi-official *Correspondenz*, publishes intelligence from Constantinople, received *via*. Trieste. The probabilities pointed to an immediate declaration of war, but the ambassadors had not abandoned the hope that reciprocal concessions might yet be made. The *Lloyd's* advices say that the Divan's resolve was an "eventual" declaration of war. There were six British and four French war steamers at Constantinople, including those stationed there for the special service of the ambassadors.

ENGLAND.—A Cabinet Council was to be held on Friday, the 7th, to take into consideration the alarming condition of Turkish affairs. There was also a rumor that Parliament would be summoned immediately, but this was doubtful.

Cholera had broken out with great virulence on board the packet ship Isaac Wright, which struck on a rock, on the 28th ult., off Cape Clear, and had to put back to Liverpool. Before the ship reached the Mersey, 47 passengers were thrown overboard, and several others died in harbor, and were carried ashore. The remainder of the sick were carried in carts to the hospitals, where a large number—it was impossible to ascertain the exact number—had died.

Robert Whitworth & Co.'s woolen manufactory at Lee Bridge, near Halifax, was accidentally burned 4th; damage £60,000.

A public meeting has been held at Leicester, in favor of the Turks.

There were 20,143 prisoners in the jails and houses of correction of England, on April 18, last.

LIVERPOOL MARKETS.—Liverpool, Friday, Oct. 7, 1853.— Provisions— Beef and Pork are very dull. Cheese is less brisk, and dealers look for a decline of 2s. to 4s. Lard steady. Tallow has fluctuated considerably during the week, but closes at the extreme rates last advised. In Clover seed there have been no transactions.—Linseed cakes have advanced £10 for thin American.

Breadstuffs—Continue quiet; a good retail demand is found for all articles; there is no alteration in the quotations of last week, though the outside are nominal.

FRANCE.—The Bank of France has increased its rate of discount to 5 per cent.

The *Moniteur* states that the rumor of an impending modification of the Cabinet is altogether unfounded.

The *Bulletin de Paris* says that dispatches were sent out, per steamer Solon, for the French and English Admirals in Besika Bay, instructing them to enter the Dardanelles, and that the two fleets will be in the Bosphorus on the 7th inst.

The *Moniteur* publishes a decree granting permission to foreign vessels to import corn, breadstuffs, rice, potatoes, and dried vegetable, from Algiers into France. The license thus granted expires on the 31st of December.

The funeral of M. Arago took place on the 5th.

SPAIN.—Mr. Soule arrived at Madrid on the 29th ult. The Government, it was said, had resolved to receive him as the Envoy of a friendly Power, and to await his acts.

---

DEATH OF THE SLEEPING MAN.—Cornelius Vrooman died at his brother's residence, in Clarkson, on Monday, the 17th inst. While on exhibition in New York, he was taken sick, which seemed to induce a wakeful state for a short period, and then a stupid condition, with intervals of wakefulness, until he was brought home on the 14th. He talked but very little, inquiring after his mother, who had been dead two years, his father and brothers, whom he seemed partially to recognize. He complained of great internal heat, and soreness of his throat and stomach. On the morning of the day of his death, he called for food, and ate a hearty meal, and from that time seemed to be in pain until about 2 o'clock P. M., when he died without a struggle. His age was some 34 years.—*Dem.*

---

CRIME OF THE UNITED STATES.—The latest national statistics of crime are found in the abstracts of the seventh census. From that it appears that the number of persons convicted of crime in the United States for the year ending June, 1850, was about 27,000; of these 13,000 were natives, (including colored persons,) and 14,000 foreign born. By the same authority, and to the same date, we are informed that our population was composed of 17,737,505 natives of the soil, 2,216,828 born in foreign countries, and 30,014 whose nativity could not be determined. While we have, therefore, but about one foreign resident to nine native whites, there is a fraction over one foreign born criminal to every native, including black and white. Such was the ratio of the crime in 1850.

---

DEATH OF THE SLAVE JERRY.—The *Syracuse Standard* of the 17th inst. says:—"A letter from Mr. Edward Wheeler, formerly a resident of this city, but at present residing in Kingston, C. W., informs us that Jerry died in Kingston on Saturday, the 10th inst. The disease which terminated his earthly career is not stated. Jerry, although a very humble individual, has filled a considerable space in the history of our city and the United States Court for the Northern District of New York."

---

A REMARKABLE BURGLARY CASE is on trial at Worcester. One of a gang of burglars has turned State's evidence, and his testimony implicates Pliny H. Babbitt, a deputy sheriff. He says that Babbitt gave them information of the proper times and places for their operations, and secreted the stolen property.

---

☞ A load of hops at Sheboygan, the product of 3 acres of ground, brought $1,400.

☞ The Report of the Directors of the Vermont State Prison for the year ending Sept., 1853, states that the number of prisoners is 75; last year 78; received by sentence during the year 32. The earnings of the prisoners during the year have fallen short of those of the year preceding by the sum of $1,462 56,—owing to the diminished number of prisoners and the greater amount of sickness. The ordinary expenses over income have been $488 49; but repairs, change in the condition of debts and of appraisal, &c., have amounted to $1,861 56; making a balance of $2,350 03 against the prison. Vermont has the smallest number of convicts of any state in the Union.

☞ A dreadful accident occurred recently, on the Great Southern and Western Railway at Straffan, near Dublin. A cattle train ran full force into a passenger train, and literally dashed it to pieces. All the cars were broken to fragments, excepting one, which, attached to the engine, was propelled by the shock of the collision to the distance of nearly three-quarters of a mile! Ten or twelve persons were killed, or smashed, so that their bodies could scarce be collected. Fifty persons were wounded, some of whom cannot recover. The cause of the accident was sheer stupidity in the drivers of the cattle train, who, by the bye, escaped unhurt.

☞ James McGarty, a man in charge of the blasting near the tunnel of the Short Line Railroad, in Ohio, a few days since saved from a dreadful death a lady and a little boy who were seen approaching the blast at the moment an explosion was expected. He rushed to the spot, and snatched the match, when a second later would have been fatal to himself and the persons for whom he exposed his life. Mr. McGarty received a present of a fine Durham cow, and was appointed foreman, with an increase of wages, for his heroic act.

☞ A case involving the rights of naturalized American citizens, is now under the attention of the Legation at Berlin. Henry Von Pensche, a Prussian, was condemned in 1849 to four years imprisonment, for an offence against the press. In 1850 he fled to the United States and took the requisite steps to naturalize as a citizen. About a year since he returned on private business, to Hamburg, where he was arrested and given up to the Prussian authorities. Since then he has remained in the jail of Leignitz, and claims the interference of the United States in his behalf.

☞ The last "fast press," of Col. Hoe's, prints 20,000 copies per hour, but requires eight feeders. It is stated by the New York Tribune, that a press combining the principles of the Napier and Hoe presses, has been invented in New York, which will print *thirty thousand sheets per hour, on both sides.* The press is the invention of Mr. Victor Beaumont, a French citizen of New York, who, it is stated, has sold the patent to Mr. Hoe, who will manufacture presses on the new plan.

☞ The Washington Star says that all the census will be complete, as early as the 15th proximo, and that Professor De Bow, the superintendent of the work, will have his synoptical report ready for distribution as early as January next. The latter will embrace an elaborate act of tables comparing the results of the census last taken with those of former ones; and also comparing them with similar European statistics, for which Mr. De Bow has procured ample data from Paris.

☞ The Albany Knickerbocker tells a story of a young woman who found her husband seated on a dry-goods box, in that city, drunk. She took a whip from under her mantilla and applied it to his back very severely, and then ordered him home. The only regret is that wives like her are not more plenty in the land, and then the order of things would be changed, and instead of the "Maine" lick-her law we should have a "Maine" lick-him law.

---

☞ The last census showed that Uncle Sam is a thrifty farmer. The value of the crops of the United States for 1850 were as follows:—Wheat, $143,000,000; Indian Corn, 391,200,000; Hay, $190,275,000; Oats, $70,840,000; Potatoes, $73,125,000; Cotton, $129,000,000: the whole crop being $1,752,583,042. The animals slaughtered are worth $183,000,000 per annum.

☞ A vast amount of freight is now passing up and down the Hudson river. The Albany Argus says the steamer Oswego took down to New York on Monday last, forty two vessels, which is the largest number ever towed down by one steamer.

☞ By the new Stamp Act, which went into operation in Great Britain on the 10th of this month, no receipt for any payment for a sum of £2, and upward, is valid, except upon stamped paper. The amount of the stamp is one penny.

# Commercial.

## BUSINESS AND FINANCE.

THE past week has presented in commercial circles a tighter and more stringent money market than has yet been experienced. The stringency, always felt in the first instance at the great commercial centres, and thence extends its sphere of influence, is beginning to press on the outer verge of the circle and act upon those secondary centres around which revolve the lesser financial lights; hence the customers of the country banks and money lenders find an increased difficulty of accommodation. The high price and the ready sales of all kinds of produce, however, although at a slight decline since last quotations, save, the farmer from all difficulties on the score of cash. It is the speculator, the operator, who lives and flourishes on an inflated credit system, ready to expand his business and debts with increased facilities for borrowing, and equally ready to collapse at any moment an external pressure is applied, that suffers at such a time as this.

The New York stock market is at a lower ebb than at any period during the year. Over 3,000 shares of Erie Railroad sold in one day, at 68½@69 (par val. 100.) Hudson river 61@62; New York Central keeps at last quotations, (106@107,) although it is decided that the semi-annual dividend will be deferred. The undoubted value of the stock renders it a favorite for permanent investment.

The import of dry goods into New York last week was $1,318,368, about double the amount of the corresponding week of last year. Exports $1,814,420.

The Arabia, which sailed on the 19th, took out $1,194,000 in gold, and the Havre steamer on the 22d near a million more.

The Asia brought out fresh orders for grain and flour, both from England and France, and the demand for export is active, but at lower than previous rates.

Several failures of brokers and dry goods dealers have taken place in New York during the past week, and Messrs. DIAMOND & Co., sugar refiners, in Rhode Island, stopped payment under liabilities of half a million.

Money is obtained on prime paper in Wall street, at from 12 to 15 per cent. The readers of the RURAL do not get their shaving done with any such razor as that; it may do for the fast men of the metropolis, but not for those who dig their dollars out of the soil; and the rule for them should be to call upon a note shaver, as upon a lawyer, only in the event of an unavoidable necessity.

# Market Intelligence, &c.

RURAL NEW-YORKER OFFICE,
Rochester, Oct. 26, 1853.

THE Rochester markets as a whole, remain in *statu quo*, except in the items of flour and wheat, which are on the decline, being quoted, the former at $6,25@6,38, and the latter at $1,31@1,34.

No great activity is manifested either in the city or outside, and both buyers and sellers seem to show a disposition to await further foreign advices.

### Rochester Wholesale Prices.

| Lamb skins, | 50@75 | Flour barrels, | 36@37 |

## NEW YORK MARKET.

NEW YORK, October 25.

Flour—The demand for Western and State flour is fair for Havre and the local trade. Owing to the storm prices are easier. Canadian inactive at $6,85@7. Sales Western canal at $6.41@6.50 for common to straight State; $6.50@6.62 for mixed to fancy Michigan and common to good Ohio.

Grain—The inclemency of the weather restricts transactions in wheat. Prime scarce and wanted. Sales inferior Canadian at $1,30@1,35.

Rye firm and in good demand. Sales at 93c.

Barley quiet. Prime four-rowed scarce and wanted at 86@87½c. Oats easier at 46@50c for State.

Corn in fair demand; sales at 79@80c for Western mixed; 80c for round yellow; 77c for unsound; other kinds nominal.

## ALBANY MARKET.

ALBANY, Oct. 24.—Flour—The market is again easier for the common descriptions of Western and State Flour but steady for the better grades. There is only a moderate business doing. For the home and river trade but little has been done. The sales for the morning range from $6,37 to $7,37 according to brand and quality.

Grain—There is a fair local milling demand for prime wheat, and the market is firm with a moderate supply.—Sales prime Genesee at $1,50@1,50½. Corn is quiet, and Western mixed is held at 75@76c. Barley was in good request at the opening, and a better feeling was apparent in the market, but owing to the storm it closed dull.—Sales good two-rowed at 71½@75c; four-rowed at 84@85c for good to prime, and 86c. for choice; and Wisconsin at 76c. Oats are in moderate request with a fair supply.—Sales at 47½c for State, and 48@49 for Western.

## BUFFALO MARKET.

BUFFALO, Oct. 21.—The flour market is quiet this morning, and the intelligence of a canal break at Brockport, somewhat restricts operations. Sales good Michigan at $5.75, and small lots to retail trade at $5,87½; Black Rock sold at $5,62½.

Wheat quiet and only moderate inquiry. Sales prime white Michigan at $1,25; red Ohio at $1,16, and red Indiana on private terms.

Corn quiet and dull—sales at 62½@63c.

Canal Freights quiet and a shade firmer. Flour shipped to Albany and Troy at 72c.; wheat at 20c, and corn at 16c. The through rates would be on flour 87c; wheat 25c, and corn 20c.

## NEW YORK CATTLE MARKET.

NEW YORK, Oct. 17.—At Washington Drove Yard—offered this day 2,679 Beef Cattle; offered during the week, 2,775. A fair business has been done. The supplies were liberal, and the demand correspondingly liberal.—Prices are steady at from $7@9,50 per 100 lbs. These are about the rates of last week.

Cows and Calves sold at from $30@60.

Sheep and Lambs at from $3,50@7.50.

150 hogs received by the Erie railroad, sold at 5½c cash.

At Browning's—(Lower Bull's Head)—Offered 7,000 Sheep and Lambs, and 75 Cows and Calves.

Prices of Sheep, from $2, to 4,50@7; Lambs from $1,50, 3,50@5,50; $00 unsold.

Cows and Calves brought from $25, 45@50; all sold.

At Chamberlain's—(Hudson River Bull's Head)—350 Beeves, 40 Cows and Calves, and 4,300 Sheep and Lambs.

Beeves are firm, at from 7@9½c per lb.

Cows $25, 40@50. Calves 5@7c. per lb.

Sheep $2,75, 4,50@6,00. Lambs $2,25, 3@4. All sold.

At O'Brien's—(No. 9 Sixth street)—Offered, 100 Beef Cattle; sales at from $6@8. 60 Cows—All sold at from $30 to $45.

## CAMBRIDGE CATTLE MARKET

Sheep—Prices reduced; sales of lots at $2,50, 2,88, 3, 3,-50, 4.25, 5@5,25.

Swine—Shoats to peddle 5¾@7¼. Old hogs 5½c, 5¾@6¼. Still hogs 5¼, 5½, 5¾. At retail 6@8.

## RECEIPTS OF FLOUR, GRAIN, &c.,

AT TIDE WATER.—The quantity of Flour, Wheat, Corn and Barley left at tide water during the 3d week in Oct., in the years 1852 and 1853, is as follows:

| | Flour, bls. | Wheat, bu. | Corn, bu. | Barley, bu. |
|---|---|---|---|---|
| 1852 | 167,702 | 319,961 | 190,932 | 260,558 |
| 1853 | 217,881 | 661,153 | 181,586 | 425,294 |
| Inc. | 50,179 | Inc. 341,192 | Dec. | 9,346 Inc. 164,736 |

The aggregate quantity of the same articles left at tide water from the commencement of navigation to the 22d of October, inclusive, during the years 1852 and 1853, is as follows:

| | Flour, bls. | Wheat, bu. | Corn, bu. | Barley, bu. |
|---|---|---|---|---|
| 1852 | 2,558,765 | 4,791,212 | 4,867,700 | 921,270 |
| 1853 | 2,183,524 | 6,034,436 | 2,653,640 | 1,547,603 |
| Dec. | 375,241 | Inc. 1,243,224 | Dec. 2,214,060 | Inc. 626,333 |

The aggregate quantity of the same articles left at tide water from the commencement of navigation to the 22d of October, inclusive, during the years 1851 and 1853, is as follows:

| | Flour, bls. | Wheat, bu. | Corn, bu. | Barley, bu. |
|---|---|---|---|---|
| 1851 | 2,546,287 | 2,254,306 | 6,854,763 | 823,594 |
| 1853 | 2,183,524 | 6,034,436 | 2,653,640 | 1,547,603 |
| Dec. | 362,763 | Inc. 3,780,130 | Dec. 4,201,123 | Inc. 724,009 |

By reducing the Wheat to Flour, the quantity of the latter left at tide water this year compared with the corresponding of last year, shows a decrease of 126,596 bbls. of Flour.

The following table shows the quantity of some of the principal articles of produce left at tide water from the commencement of navigation to the 22d of October, inclusive, during the years 1851, 210 days; 1852, 205 days; 1853, 205 days:

| | 1851. | 1852. | 1853. |
|---|---|---|---|
| Flour, bbls. | 2,546,287 | 2,558,765 | 2,183,524 |
| Wheat, bu. | 2,254,306 | 4,791,212 | 6,034,436 |
| Corn, do. | 6,854,763 | 4,867,700 | 2,653,640 |
| Barley, do. | 823,594 | 921,270 | 1,547,603 |
| Rye, do. | 200,242 | 184,250 | 84,160 |
| Other grains, do. | 2,707,499 | 3,568,517 | 2,812,059 |
| Beef, bbls. | 32,019 | 23,017 | 30,033 |
| Pork, do. | 44,862 | 68,835 | 104,481 |
| Ashes, do. | 24,213 | 32,827 | 27,251 |
| Butter, lbs. | 3,889,810 | 2,374,151 | 2,256,412 |
| Lard, do. | 10,319,830 | 9,319,425 | 10,969,322 |
| Cheese, do. | 12,411,571 | 6,606,969 | 5,052,500 |
| Wool, do. | 1,221,286 | 7,112,688 | 5,916,987 |
| Bacon, do. | 10,457,243 | 9,928,788 | 19,824,705 |

## SPLENDID FOWLS.

THE attention of poultry breeders and fanciers of poultry generally, is invited to the unrivalled varieties now offered to the public by the subscriber, embracing every species of value in the United States. Especial care has been bestowed to render them all that can be desired by the POULTRY DEALER, FARMER OR AMATEUR.

Having devoted several years to the rearing of Choice Fowls, the subscriber flatters himself that by his unremitting care and attention those now offered by him have attained a degree of excellence, as regards Size, Symmetry, Plumage, &c., which cannot be surpassed. The several breeds are warranted ENTIRELY PURE, especial vigilance having been exercised to prevent any admixture of blood. Among these may be enumerated the following:

| | |
|---|---|
| Bramah Pootra, | Game Fowls, |
| Chittagongs, | Silver Pheasants, |
| Grey Shanghaes, | Scabright Bantams, |
| Buff do. | English do. |
| Black do. | White do. |
| White do. | Nankeen do. |
| Red do. | Royal Cochin China. |
| White Cochin China. | Hong Kongs, |
| Malays, | Great Javas. |
| Bucks County, | Black Spanish, |
| White Surrey Dorkings, | Speckled Dorkings, |
| Black Polands, | Creoles, |
| White do. | Frizzled Fowls, |

Golden Spangled Hamburgs.

☞ Purchasers may buy with the fullest confidence that their orders will receive prompt attention, and that the fowls furnished are pure blooded and in healthy condition.

☞ All fowls purchased will be carefully caged, and delivered in New York or Albany, or placed on shipboard or railway free of charge, after which the responsibility of the subscriber in reference to their safe arrival at their destination ceases.

☞ Orders and letters of inquiry should be addressed to J. W. PLATT, Box 128 P. O.,
200-2tw1tm. Rhinebeck, N. Y.

## A GOOD INVESTMENT FOR LABOR OR CAPITAL.

WITHIN twenty minutes drive of a great market.—The subscriber, being desirous of attending to his interests in the mineral region at the West, will sell his Farm on the Ridge Road, one mile north of Rochester city line, consisting of 130 acres, 30 of which are heavily wooded, worth as it stands, one-third of the purchase money; with over 600 fruit trees of all the varieties worth cultivating, the produce of which when in full bearing, will pay the interest of the entire price of the farm.

The land is in good heart, mostly in grass, and the stumps all out and well fenced.

There are three Houses and Barns on the premises.

Having a great traveled road through its centre, and the River road on the East, it would cut up to great advantage, or might be used for a great Nursery establishment, for which it is well adapted.

If not sold by the first of April, it will be rented for a term of years. L. B. LANGWORTHY.
Rochester, Oct. 25, 1853. 200-tf

## FARM FOR SALE.

THE subscriber offers to sell his farm, in the town of Phelps, Ontario Co., N. Y.—three miles south of Vienna, east of Melvin Hill, lying on the thorough-fare leading from Canandaigua to Free Bridge. It consists of 162½ acres, 15 of it heavily timbered. Upon it 1,500 bushels of grain and 20 tons of hay, may be produced annually, beside the keeping of considereable stock. Is conveniently watered by a never-failing spring. Nearly 30 old bearing Apple Trees, and a young orchard of 130 trees now coming into bearing, consisting of the most approved varieties. Fine Peach orchard of over 50 trees, all of the most delicious fruit. Buildings worth $3,000. Good well and cistern. Location pleasant and healthy. Part of purchase money can remain on bond and mortgage a length of time. Price $65 per acre. For further particulars apply to the proprietor on the premises or by mail, post-paid.
G. W. PEARCE.
Phelps, N. Y., Oct. 20, 1853. 200

## AUCTION SALE

OF IMPORTED DURHAM CATTLE AND LEICESTERSHIRE SHEEP.—On Thursday, Nov. 3, at 1 o'clock, P. M., near J. A. Hamilton's (late McLean's) Hotel, in the city of Rochester, I will sell

1 three year old thorough bred Bull, the get of the celebrated imported Bull, Prince Albert.

One two-year old do, the get of the Duke of Richmond, and three superior Durham Heifers.

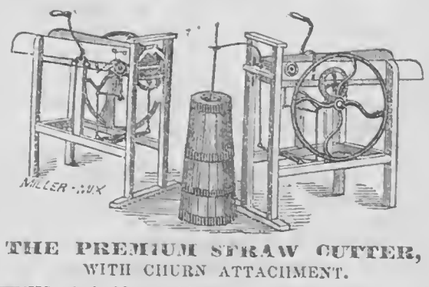
Also, eight or ten Leicester Rams, from 6 months to 3 years old; and a choice lot of Leicester Ewes.

A portion of the above stock was raised by the subscriber, in the township of Cavan, and the balance selected from some of the best flocks and herds in Canada West.

Pedigrees of the above named stock will be furnished on the day of sale. Terms liberal. PAUL HELM.
Rochester, Oct. 20, 1853. 200-1t*

**SUFFOLK PIGS.**—10 pairs of purely bred SUFFOLK PIGS, four months of age. Also breeding Sows for sale by GEORGE HUNTINGTON.
Walpole, N. H., Oct. 15, 1853. 200-4t.

**50,000 CHERRY SEEDLINGS** for sale, one Summer's growth, large and fine.
200-4t JAS. C. CAMPBELL, Rochester, N. Y.



## THE PREMIUM STRAW CUTTER, WITH CHURN ATTACHMENT.

THIS admirable machine is so constructed that it can be used for cutting hay, straw or corn stalks. The *adjustable mouth-piece*, peculiar to this machine, is so constructed that simply on the turning of a *nut* with the thumb and finger so adjusts as to keep the *cutting* part at all times in perfect order.

The CHURN ATTACHMENT, as will be seen in the above cut, is applied to the common dash churn—and is simple, perfect and labor-saving.

Wherever this machine has been on exhibition it has invariably received the *first premium*. It is now on sale by
JOHN RAPALJE & CO., Rochester.
JOHN PROUTY & Co., Geneva.
C. M. WIDRIG, Horse Heads.
Messrs. MESSEROLE & Co., Penn Yan.
For further information address
4t-198 CHARLES LEE,
Penn Yan, Yates Co., N. Y.

## SUFFOLK PIGS.

THE subscribers are prepared to receive orders for pure Suffolk Pigs, bred from stock imported by the late William Stickney in 1848,—also by the subscriber in January last. Address
JOSIAH STICKNEY, Boston or Watertown,
or ISAAC STICKNEY, Boston, Mass.
Boston, August, 1853. 190-13w-1m

## CARTHAGE NURSERY,

NORTH ST. PAUL STREET, ROCHESTER, N. Y.

THE subscribers offer for sale the present season,
75,000 Apple trees 3 and 4 years old.
10,000 Pear trees in free stock and Quince.
600 Dwarf Pear trees with fruit buds.
10,000 Cherry trees. 10,000 Peach trees.
25,000 Osage Orange plants.
The above trees are very finely grown and of the best varieties. HOOKER & CO.
Octoher 1, 1853. 197-5t*

FARM FOR SALE.—The subscriber offers for sale his farm, in the town of Ledyard, Cayuga Co., N. Y., containing 100 acres of land, with good buildings and orchard thereon. Said farm is 3 miles from Cayuga Lake and 1 from the Ridge road at Talcot's Corners. Price $45 per acre. For particulars inquire of CHAS. W. SEARING, at Sherwood's, town of Scipio, Cayuga Co., N. Y.

## Mexican Wild Potatoes, Poland Oats and English Potato Onions.

THE articles above named are undoubtedly the best varieties now known and cultivated in this country. Mr. A. HALE, of Alloway, N. Y., has the honor of introducing the Mexican Potato. He planted 4 small potatoes not exceeding 3 inches in length and one inch in diameter, obtained from a returned soldier; each successive product has shown an increase in size and beauty, until it is no uncommon thing to find tubers 8 to 9 inches long and about 2 inches thick, as white as the whitest and as good as the best.

The Poland oats are universally approved where known, I have had several reports of the product from the half ounces sent out last Spring to 21 of the States and Territories of this Union; all express themselves in high terms of the quality and productiveness.—Product ranging from 1 quart to 6 quarts from the half once by mail, and many have ordered them by the bushel this fall.

The Potato Onion is also in request, and I am receiving inquiries almost daily in regard to these and the articles above named. The crop as far as I have been able to ascertain, will be a good deal short of the demand for seed, for each of these articles. What I have to spare is offered in the advertisements below. I. W. BRIGGS.

## A Rare Opportunity to Procure Rare Seeds.

THE subscriber will, for a pre-paid order containing One Dollar, send by mail, free of postage, 20 papers of seeds from the following catalogue:

Japan Pea, Butter Bean, Buena Vista Bean, Apple Squash, Sweet Potato Squash, Mammoth do., and 2 other varieties, California Pumpkin, California Melon, Adams's Early Corn, Stowell's Evergreen do., a large Sweet Corn, three varieties of Pop Corn, (small,) Spanish and Connecticut River Tobacco, Mountain Sprout Watermelon, Mountain Sweet do, Spanish do, Long Island do, and several varieties mixed, Citron Nutmeg, Round Green do, and the Long Golden Muskmelons, Carnation, Clover and Bockhara do, Perrennial Rye Grass, Potato Seed, Mammoth Red Tomato, White Vegetable Egg, and Double Sunflower.
I. W. BRIGGS,
West Macedon, Wayne Co., N. Y.

## Potatoes, Oats and Onions.

THE subscriber offers the following products delivered on board cars or canal boats:

Poland Oats at $2 per bushel, or $6 per barrel, containing about 4 bushels.

Mexican Wild Potatoes at $2 per bushel, or $5 per bbl. containing about 3 bushels.

English Potato Onions at $2 per bushel, or $5 per bbl.

No charge for packages. Money promptly returned by mail if I am unable to fill your order.
Address I. W. BRIGGS,
West Macedon, Wayne Co., N. Y.

## DUTCH BULBOUS FLOWERING ROOTS

THE subscribers have just received from Holland—imported to their own especial order—several cases of the above fine Flowering Roots, among which will be found the following kinds, viz:

| | |
|---|---|
| Hyacinths, | Crocus, |
| Polyanthus, | Johnquilles, |
| Double Narcisses, | Double Ranunculus, |
| Iris, | Colchicums, |
| Snow Drops, | Amaryllis, |
| Anemones, | Garden Lilies, |
| Crown Imperials, | Scillas, |
| Tulips, | Gladiolus, &c., &c. |

Most of the above will flower either in pots or glasses, in doors, during the winter, with the least possible attention as to culture. The flowers are highly scented, and make the most beautiful parlor ornaments. They are also very desirable for planting out of doors, in borders or small beds. Being quite hardy, they never fail in producing their beautiful flowers early in the spring.

A great variety of Hyacinth Glasses, Fancy Flower Pots, Crocus Pots and Baskets, Vases, &c. Bird Cages and Glasses, Canary Seed, &c. For sale by
H. C. WHITE & CO.,
Successors to MASON & LOVERING, Buffalo Ag'l. Warehouse and Seed Store, Nos. 11 & 13 West Seneca Street, Buffalo, N. Y. 198-3t.

## Ornamental and Domestic Poultry.

THE subscriber having invested a large amount in this business, is now prepared to fill any orders which he may receive. The celebrated Brahma, Sumatra, Game, Palmer, Marsh and White Shanghais, with many other popular varieties, are from the yard of C. C. Plaisted, Esq., Great Falls, N. H., and of course cannot be surpassed in the world. My Imperial Cochin China Fowls are from Col. B. P. Johnson, his stock imported last year, '52, from the best breeders in England. All who well know Col. J., will understand that he has the best or none. My black Spanish are quite late, and will not be ready for market before next spring. They are from Mr. John Giles, late imported, the best blood in the country. These birds are so fast coming into repute that the price will doubtless run high for some years to come, as will also be the case with the Brahma, Sumatra, Game, &c. All persons purchasing fowls from me, can enjoy the benefit of my advertising, in case they wish to sell Chickens next year.

I am quite sure that our southern and western fanciers can be better suited here than farther east, as the long distance on railroad much injures the health and growth of the fowls.

As there are many fowls in market which have no claim upon the public favor, I will give my patrons something more tangible than my own words, for

"If self the wavering balance shake,
It's rarely right adjusted."

I am therefore permitted to refer all who entertain any scepticism, to the following gentlemen:—Col. B. P. Johnson, Secretary N. Y. State Agricultural Society, Albany, N. Y.; Hon. Ambrose Stevens, N. Y. City; Hon. Lewis F. Allen, Black Rock, N. Y.
Address O. B. EVANS, 214 Main street,
194-3m Buffalo, N. Y., Box 1662.

## THE JUVENILE INSTRUCTOR,

BY UNCLE LUCIUS, Syracuse.

A SEMI-MONTHLY PAPER, expressly for children. It aims to attract their attention by simplicity and beauty of style, and to infuse into the young mind appropriate sentiments of piety and love for parents—sympathy for human suffering, and an abiding hatred of oppression in all its forms. It ought to be circulated over the entire Union, for this last reason. There is much at stake in the question of freedom, and but little said or done to effect favorably the youthful mind. Within the State of N. York, the postage is 6 cents per year, paid at the office where it is received. In all other States, 12 cents yearly. In packages of 24 or more the postage, if pre-paid at the office of publication, is about 4 cts on each paper.

Price per year—single copies, 25c.: Five to one address $1; Ten do, $1,70; Twenty do, $3; Thirty do, $4,20; Fifty do, $6,50; One hundred do, $12.
Address LUCIUS C. MATLACK,
183m3. Syracuse, N. Y.

## WALWORTH NURSERY.

THE subscriber has for sale
20,000 choice Apple trees, some quite large.
20,000 Dwarf Pear trees.
10,000 choicest varieties Peach trees.
1,000 large Mountain Ash.
2,000 Horse Chestnut.
3,000 very fine Balsam Fir.
All trees sold at the LOWEST rates, and Catalogues furnished to applicants. No charge for carrying packages to Railroad.

## POLAND OATS.—MEXICAN POTATOES.

I can supply orders for the celebrated Oats which weigh 42 lbs. to the bushel at one dollars. And also, the Mexican Potatoes at the same price.

Orders will be supplied in the order of their date.
T. G. YEOMANS.
Walworth, N. Y., Oct. 10, 1853. 3t198

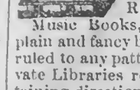
## Buffalo Agricultural Warehouse and Seed Store.

*Nos. 11 & 13 West Seneca Street, Buffalo.*

HIRAM C. WHITE & CO., successors to Mason & Lovering, wholesale and retail dealers in all kinds of Agricultural Implements and Machines, Field, Garden and Flower Seeds; Fruit and Ornamental Trees, Shrubs and Flowers; Oriental Poultry, &c. Also, Agents for the Boston Belting Company's Vulcanized India Rubber goods, Belting, Hose Packing, &c.

Orders solicited, all of which shall receive prompt attention at lowest market rates, and all articles warranted as represented. HIRAM C. WHITE & CO.
HIRAM C. WHITE. [195tf] AMASA MASON.

## MARSHALL'S BOOK BINDERY,



BURNS' BLOCK corner of State and Buffalo street, over Sage & Brother's Bookstore, Rochester, N. Y.

Music Books, Pamphlets, Periodicals, &c., bound in plain and fancy bindings; old books rebound; Blank Books ruled to any pattern, and bound to order; Public and Private Libraries repaired at short notice. Packages containing directions for binding, punctually attended to.

N. B.—All work warranted, and done at low prices.
April, 1852. [122tf] F. H. MARSHALL.

PLUM AND PEACH PITS wanted at 36 Front st., Rochester. SAMUEL MOULSON.
October 4, 1853. 197tf

# Poetical.

## THE THREE PREACHERS.

BY CHARLES MACKAY.

THERE are three preachers, ever preaching,
Fill'd with eloquence and power,
One is old, with locks of white,
Skinny as an anchorite;
And he preaches every hour
With a shrill fanatic voice,
And a bigot's fiery scorn:
"BACKWARD! ye presumptuous nations;
Man to misery is born!
Born to drudge, and sweat, and suffer—
Born to labor and to pray;
BACKWARD! ye presumptuous nations,
Back!—be humble and obey!"

The second is a milder preacher;
Soft he talks, as if he sung,
Sleek and slothful is his look,
And his words, as from a book,
Issue glibly from his tongue.
With an air of self-content,
High he lifts his fair white hands:
"STAND YE STILL! ye restless nations;
And be happy, all ye lands!
Fate is law, and law is perfect;
If ye meddle, ye will mar;
Change is rash, and ever was so
We are happier as we are."

Mightier is the younger preacher,
Genius flashes from his eye:
And the crowds who hear his voice,
Give him, while their souls rejoice,
Throbbing bosoms for replies.
Awed they listen, yet elated
While his stirring accents fall;—
"FORWARD! ye deluded nations,
Progress is the rule of all:
Man was made for healthful effort;
Tyranny has crush'd him long;
He shall march from good to better,
And do battle with the wrong.

"Standing still is childish folly,
Going backward is a crime;
None should patiently endure
Any ill that he can cure:
ONWARD! keep the march of Time
Onward! while a wrong remains
To be conquer'd by the right;
While oppression lifts a finger
To affront us by his might:
While an error clouds the reason
Of the universal heart,
Or a slave awaits his freedom,
Action is the wise man's part.

"Lo! the world is rich in blessings—
Earth and Ocean, Flame and Wind
Have unnumber'd secrets still,
To be ransack'd when you will,
For the service of mankind;
Science is a child as yet,
And her power and scope shall grow,
And her triumphs in the future
Shall diminish toil and woe:
Shall extend the bounds of pleasure
With an ever-widening ken,
And of woods and wilderness
Make the homes of happy men.

"ONWARD!—there are ills to conquer,
Daily wickedness is wrought,
Tyranny is swoll'n with Pride,
Bigotry is deified,
Error intertwined with Thought,
Vice and Misery ramp and crawl.
Root them out, their day has pass'd;
Goodness is alone immortal:
Evil was not made to last:—
ONWARD! and all earth shall aid us
Ere our peaceful flag be furl'd."
And the preaching of this preacher
Stirs the pulses of the world.

# Rural Sketch Book.

## UNCLE BERNARD'S STORY.

"Oh! Uncle Bernard," cried all together a group of little people, "tell us a story."

Uncle Bernard, a white-haired old man, whose easy-chair had been drawn to a warm corner—for the winter was howling against the windows—looked up from his large-print Bilbe and smiled fondly on their rosy faces: "A story! let me read you one out of this good book."

"Oh! no," says bold little Bob, as he caught the old man round the neck, "we know all the Bible stories; tell us a fairy tale!"

"Yes! yes! Uncle Bernard," chirrupped the rest, "a fairy tale, a fairy tale, a fairy tale; you have never told us a fairy tale."

"No, deary, I have never told you a fairy tale. Fairy tales are lies, and young folks like you should not love to hear lies, nor old folks like me should not tell lies."

"Oh! but Uncle Bernard, we know that fairy tales aint true, but it is such fun to hear them."

"Well, my pets, I'll try to tell you a story that sounds like a fairy tale, and yet is all true. Sit down and listen.

"Once upon a time, and a great while ago, there lived in a wide wood a wild man, whose name was *Sthenos*. His father and mother had been keepers of a lovely garden, where they dwelt in peace with our good God; but he, very early in his childhood, had wandered far off and lost himself among the shadows of the forest, where he soon forgot all the little that he knew. Not only his head and face, but also his whole body, was covered with long shaggy hair; his nails were like claws, and he could climb the trees or swim in the water as easily as walk on the ground. Gigantic in height, his shoulders were broad and his limbs sturdy. He could outrun the swiftest deer, hit with a stone the flying bird, and kill with his knotty club the fiercest beasts. He ate only what he won in the chase, with some pleasant herbs or fruits, or honey which he found in the hollow trunks and among the rocks; and he drank only water from springs, or the deep river which flowed through the valley. He slept in caves, or in the crotches of trees, lest the prowling beasts should catch him unawares. Yet, savage as he was, he had a certain nobleness and rough grace of mien which distinguished him as superior to the brutes around him, and made them acknowledge him as their lord. Thus he lived, lonely and unhappy, and, notwithstanding his strength, full of fears.

"One day, as he was pushing through the thicket to reach the river, he heard singing sweeter than any he had ever heard. He thought at first that it was a bird, but he knew the songs of all birds, and that this was not like any one of them. He dashed on, and saw reclining on the bank of the river a creature so lovely that he stood still in wonder, trembling with a new feeling that shot like fire through his heart and joints. Her form (his woodman's eye saw at once that the delicate proportions were those of a female) was something like his own, but fair and elegant, while his was brown and shaggy. Around her was cast a loose white robe, and about her shoulders floated a scarf, blue as the sky. While she sung, she looked upward as if some one was hearing her, whom Sthenos could not see, and then she listened as if to a voice he could not hear. Soon turning her eyes upon him, she smiled with ravishing sweetness, and beckoned him nearer. Awe-struck, but drawn irresistibly on, he fell at her feet, gazing on her beautiful face. She spoke in accents of his early speech, which now came back to his understanding, and said:—'Sthenos, our good God, whom you have so long forgotten, has not forgotten you; but, pitying your loneliness and misery, has sent me to live with you and be your friend. Already I love you, and you must take me to your heart and give me your love.'

"As she spoke, she bent down and wiped his forehead, from which she had parted his matted locks, looking with her clear blue eyes into his, until his whole being seemed drawn out to her, and he laid her head with its bright golden curls on his broad breast, and felt an ecstacy of inexpressible happiness.

"'And now that I am to dwell with you, dear Sthenos, lead me to your home.'

"'Home!' replied he, 'I know not what you mean!'

"'Where do you rest after the chase, or amid the darkness? Where do you eat your food, and where do you most delight to be? That is home.'

"'I have no home. All places in the forest are alike to me. Where weariness or night comes upon me, there I lie down; when I have killed the deer, then I eat. I have never thought of a home.'

"'Come, then,' said she, sweetly, 'let us seek a spot where we will make a home for ourselves;' and putting her slender hand in his, she led him on until they came to a fountain gushing out from under a high rock, before which a sunny meadow spread itself towards the southwest, blooming with harebells, and daisy-cups, and pansies, and many more wild flowers. 'Is it not charming?' said she; 'the spring shall give us water, and the rock guard us from the fierce north wind, and we can look out upon the sunlight and the shadows as they float mingled together over the green grass and the flowers that spring up through the verdure.'

"Sthenos smiled, and, though he could not understand all her meaning, he felt a charm of nature he had never before known.

"'Now,' she said, 'the sun, though its light be pleasant, looks down too hotly upon us; and when the night comes, the dews will fall and the winds chill us. Go, break off boughs from the trees, and strip the broad bark from the decayed birches.'—This was an easy task for the vigorous man: and in the mean time she had gathered heaps of dry hemlocks, and spread them deeply over the leaf-covered ground. Then leaning the thick boughs against each other, and laying, by her directions, the curved bark, overlapping in successive and continuous layers, upon them, Sthenos saw as his work a rude but safe hut, and said:—'This shall be our home. I go for our evening meal;' and dashing into the forest, he soon returned with wood-pigeons and a young fawn which he had killed, casting them at the feet of his gentle wife, who had already arranged in leafy cups the berries which she had gathered from the meadow; and Sthenos beheld wild flowers, mingled with long, trailing, delicate vines, adorning the entrance of their home.

"The simple meal, soon prepared by her skilful hands, he thought more savory than he had ever had; but before she suffered him to partake, she pointed upward, and with clasped hands sang praise to our good God, the Giver. An hour of delicious friendship stole away, as hand in hand they looked into each other's eyes—thoughts he knew not how to speak, and she needed no words to utter. Then another hymn to our good God, the sleepless Preserver, she warbled from her lips of gurgling melody, and the pair sank to rest.

"Thus sped on day after day, and night after night. Gradually Sthenos lost his fierceness, save in the struggles of the chase. She had fashioned for him soft garments out of fawn-skins and feathers, which now he wore less for need than pride, and to please his skilful friend. His shaggy hair was smoothed into curling grace; the hut constantly received new conveniences and ornaments from his strong or her cunning hand; and happy was he after his toil in the forest to return bearing a rich honeycomb, or leading a goat with full udders to his home, dear because hers.

"On waking, one dewy morning, he looked fondly in her loving face, beaming with tender, holy thoughts, and said:—'You call me Sthenos, but have never told me the name by which I am to call you, my dearest.'

"'You have just pronounced the name I love best, except when you call me your wife and your friend. I have had several names in the land whence I came to be near you; but that by which our God wished you to know me is Enthymia. And, dear Sthenos, whenever you are in trouble, in need, or in doubt, call Enthymia to your side, and whatever love can do I will gladly perform. With your strength and my affectionate zeal, and the blessing of our good God, we shall be happy as we may in this wild wood; but the good God has promised me that when you shall have learned to sing and pray with me, that our two beings shall be blended into one, and we shall leave the forest to go and dwell in a garden with our good God, far more beautiful than the one from which you strayed a long while ago.'

"'Oh, happy hope!' replied Sthenos; 'I can think of no higher bliss than that your loveliness should be mingled with my strength, except that my strength shall be for ever united to your dear thoughts.'

"'Say not so, Sthenos,' answered she, looking up with a holy smile, like morning light sparkling in the dew; 'our highest joy will be to dwell with our God.'

"From that moment Sthenos earnestly endeavored to learn the hymns and prayers of Enthymia. They lived long in the forest, and children were born to them, three sons like their father, vigorous; three daughters like their mother, graceful. But one fair morning the father and the mother came not from their chamber (for the little hut had given place to a wide dwelling): their children went anxiously in to seek them, but they found them not. Sthenos and Enthymia were gone to the garden of our good God.

"The children were mute in wonder and sadness, when suddenly the chamber was filled with ravishing light and delicious odors, and three radiant angels hovered over the bed; and the roof opened, and the children could see far up into the sky, and saw a glorious being standing under the Tree of Life, before the throne of God; and in the smiling countenance of the glorious being they recognized, strangely but sweetly mingled, the love of both father and mother.—And one of the angels said (he was the tallest of the three:) 'I pointed out the way to them, and encouraged them to strive to reach the garden.'

"'And I,' said the second, on whose bosom shone a gem like a golden anchor, "bore them up on my wings.'

"'And I,' joyfully exclaimed the third, who had eyes like the first spring violets washed with rain, 'have made them both one for ever."

"Then turning to her sister angels, she said: 'Your tasks for them are over; but I go to fill their united being with immortal happiness.'"

"Ah! Uncle Bernard," cried Gertrude, "that is better than a fairy tale; but what queer names, Sthenos and Enthymia; what do they mean?"

"I made them out of the Greek," answered the old man; "and by Sthenos, I mean man left to himself, when he would be a mere savage; and by Enthymia, I mean wisdom sent to him by our good God, to teach him how to live on earth and prepare for heaven. When man is transformed to holy wisdom, and uses his strength for wise ends, he becomes all good, and God takes him up to the second Paradise."

"Yes," says little Charley, "and the angel with the anchor is Hope."

"And the tallest angel is Faith," adds Robert, "for faith gives pious people courage."

"And the gentle blue-eyed one must be Love, for love lives for ever," whispered Gertrude in Uncle Bernard's ear.

"Bless you, dear child! you look like her," whispers back Uncle Bernard.—*Putnam's Monthly.*

## TWO ARMIES.—MUSKETS AND SPADES.

THE New York *Economist* in an article upon the army of the United States, makes a startling contrast between the use of muskets and of spades; one used by government, and the other by a great railroad company:

The United States army numbers about 10,000 men, and they cost the country last year, $8,225,246 for pay, subsistence, clothing, etc. That is to say, $820 per man, or if we deduct the militia expenses, $800 per man. It would puzzle any one to tell of what service were those men, living uselessly in barracks and old forts, eating three meals per day, and turning out occasionally to touch their caps to their officers.

The Illinois Central Railroad army numbers 10,000 men also, and they receive from the company $3,700,000 per annum, in return for which they labor twelve hours per day upon a work which gradually stretches itself through the most fertile plains, connecting the great lakes with the Ohio and Mississippi rivers, and ultimately with the Gulf of Mexico.

The relative advantages of these two armies to society present an interesting matter for study, and are graphically sketched by the New York Post. The prospective building of the great Central Railroad of Illinois alone, has added to the wealth of that State, in the appropriation of wild lands, the sum of forty millions, within a strip of but twelve miles in width, and the actual construction of the road will bring to a ready market millions of acres of land now owned by the General Government, which, were the road not constructed, would lay waste for years to come. The Federal government employs ten thousand men at an expense of eight millions of dollars, to carry muskets. The Central Railroad Company, employing ten thousand men at less than four millions, confers a vast property on the State, upon the Federal Government, and upon thousands of farmers. Year after year the government spends millions of dollars, effecting nothing, producing nothing and resulting in nothing but the turning loose of superannuated soldiers, made paupers by a life of idleness, to prey upon the industrious the remainder of their existence.

# Wit and Humor.

## "NAKED TRUTH."

THE late eccentric JOHN HOLMES used frequently, in his addresses to different juries, to explain the meaning of the phrase "naked truth" by relating the following fable:

Truth and Falsehood traveling one warm day met at a river, and both went in to bathe at the same place. Falsehood coming first out of the water took his companion's clothes and left his own vile raiment, and then went on his way. Truth coming out of the water sought in vain for his own proper dress—disdaining to wear the garb of Falsehood. Truth started, all naked, in pursuit of the thief, but not being so swift of foot, has never overtaken the fugitive.—Ever since he has been known as "naked Truth."

FISHER AMES once said in a speech at Washington, that a lie would travel from Maine to Georgia while truth was getting up and pulling on its boots.

"THAT is a sad affair in these days of calamity," observed Peter to his wife, looking up mournfully from the paper he was reading.

"What is it Peter dear," inquired the better half, suspending operations with the broom.

"The poor man who was overwhelmed with consternation has not been dug out yet, although two steam shovels have been kept at work night and day removing the superincumbent mass," Peter answered, at the same time avoiding the broomstick by a dextrous and timely retreat.

"Col. W. is a fine looking man, ain't he?" observed an individual to his companion, as a certain consequential person with a military air strode by.

"Yes," replied the other, "I was taken for him once."

"You! why you're as ugly as sin!"

"I don't care for that, I was taken for him; I endorsed his note and was taken for him—*by the sheriff.*

A SHARP HIT.—The water from the Congress Spring, at Saratoga, has been imported into France. The question has been raised why it was called Congress water? The obvious answer, of course, did not escape the wits: because it contained so much *gas!*

THE PIMPLES on a toper's face, are an old fashioned sort of "spiritual manifestations." They cannot be said to come exactly from beyond the grave, but they show clearly that the "medium" is hurrying himself toward the grave.

THE Cleveland Herald addresses this to old bachelors:—"If our Maker thought it wrong for Adam to live single when there was not a woman on earth, how criminally guilty are old bachelors, with the world full of pretty girls!"

AN eminent psychologist of London has decided that spirit rappings are produced by phantom postmen engaged in the delivery of dead letters.

THE MAN who "couldn't contain himself," was found, upon inquiry, to contain about a quart of the fluid extract of corn!

A TOAST.—WOMAN,—The last and best of the series; if we may have her for a *toast*, we won't ask for any *but-her.*

A YOUNG lawyer in Chambers street, yesterday put his spinal column out of joint, trying to "draw a conclusion."

# Youth's Corner.

"Attempt the end, and never stand to doubt;
Nothing's so hard, but search will find it out."

For the Rural New-Yorker.

## CHEMICAL ENIGMA.

I am composed of 26 letters.

My 1, 14, 25, 15 is a metal which occurs in boundless profusion in this country.

My 2, 23, 18, 2, 21, 20 is an important coloring substance.

My 3, 1, 10, 13, 22, 23 is a sticky and tenacious substance.

My 4, 17, 15, 8, 20, 3, 12, 23 is an inflammable gas.

My 6, 16, 25, 11, 6, 20, 7, 1 has the property of absorbing gases.

My 6, 25, 8, 9, 20, 23 is a solid usually of a black color.

My 24, 20, 1, 15 is a valuable metal found only in the metalic state.

My 26, 5, 7, 19, 6, 4 is a substance which exists in a great variety of vegetables.

My whole is a gas which occurs abundantly in nature. S. D.

Ovid, Seneca Co., N. Y.

## ANSWER TO ENIGMA, &c., IN NO. 43.

Answer to Poetical Enigma—*Herbs, Mint, Rue, Balm, Sage, Thyme.*

**SAMUEL MOULSON,**
AT THE OLD ROCHESTER NURSERY.
**Office, No. 36 Front St., Rochester, N. Y.**

IS prepared to furnish inventories, to post-paid applicants, of the present very extensive stock of Nursery items, consisting in part of
120,000 Dwarf and standard Pear Trees.
90,000 Apple Trees.
50,000 Peach Trees.
30,000 Plum, Cherry and Apricot Trees.
Over 100,000 Hardy Evergreens.
Also, extra large Northern Spy Apple Trees, Dwarf and Standard Pear, Cherry, &c., &c.
Also, for immediate effect, a large quantity of extra sized Ornamental Trees, among which are fine specimens of Norway Spruce, Silver Maple, Pawlonias, Catalpas, Mountain Ash, Horse Chestnut, &c.
And a fine selection of Weeping Deciduous Trees, Ornamental Shrubs, Hybrid Perpetual Roses together with such novelties as may be classed strictly hardy. Also a very limited assortment of half hardy plants of small size, such as Cryptomeria Japonica, Cedrus Deodara, &c., &c.
The amateur wishing prime fruits of well established repute, or the agriculturist needing fine cropping, thoroughly tested varieties, may rely upon the most careful execution of their orders.
The Ornamental items are entirely grown in the Nursery, consequently none of the heavy losses are sustained that usually occur to recent imported subjects.
The Evergreens are very robust and admirably furnished to the surface of the ground, none presenting the naked stems usual to imported plants.
Dealers are invited to give a call before making their purchases.
☞ Peach and Plum pits wanted.
September 1, 1853. 196-tf.

☞ **PEOPLE'S COLLEGE OF THE STATE** OF NEW YORK, INCORPORATED APRIL 12, 1855.—This Institution has been chartered by the Legislature of this State, for the purpose of reducing the expenses of Academic and Collegiate Education, and thereby open the Halls of Science to all classes of society by reducing the cost of tuition, board and clothing, and enabling the student to defray the greater part of the expense in labor.
Provision will be made to educate young men corporeally and mentally for specific purposes, by pursuing full and definite courses of study for each of the pursuits represented in the College—either Agricultural, Mechanical or Professional—and thus graduates will be qualified for entering at once upon the business of their choice.
At a regular meeting of the Trustees named in the Charter, held at Owego, on the 25th day of May, the following appointments were made:
D. C. MCCALLUM, of Owego, President of the Board of Trustees.
A. I. WYNKOOP, of Chemung, Vice President.
TRACY MORGAN, of Binghamton, Treasurer.
HARRISON HOWARD, of Lockport, Secretary and General Agent.
Agents are being commissioned in each county of the State, that the people may have an opportunity to contribute to the capital stock, which is distributed in shares so small that every individual may become interested in an institution which commends itself to the favorable consideration of every intelligent person.
For further information upon the subject, application may be made, post-paid, to the Secretary, who will send a pamphlet containing the act of incorporation and objects of the Institution, and other needful information.
188-tf H HOWARD, Secretary.

The undersigned, having been appointed Agent for Rochester and Monroe county, will be most happy to furnish any new information desired, in reference to the College, to receive stock subscriptions, (the shares are one dollar each,) or to address audiences, on invitation, explaining at length the plans and objects of the People's College, and also as he views the idea of a true education.
Respectfully, G. F. NEEDHAM.

**NEW YORK STATE AGRICULTURAL COLLEGE.**

AT a meeting of the Trustees of the State Agricultural College, on the 21st Sept., 1853, it was resolved, to arrange and prepare the Veterinary department of the College, simultaneously with the earliest courses of instruction; and that every subscriber to the funds of the College be and hereby is declared to be entitled to the use of the Hospitals of the said department, for all Medical or Surgical treatment, necessary and proper for such diseases or accidents as may afflict any animal belonging to the said subscriber: to be subject to such rules and regulations as the Trustees may from time to time appoint and direct.
No cost or charge shall be made for Medical or Surgical advice or treatment. The necessary expense for the sustenance of animals received into the Hospitals under this resolution, shall be paid by the proprietors of the animals respectively. By Order.
197-tf J. W. BACON, Sec'y.

**FINE FOWLS.**

HAVING raised from select stock, a few broods of buff Cochins and Shanghais, in order to obtain for private use, a small flock known to be pure and genuine, I have for sale about twenty pairs, and at prices that any one can pay, who is able to own half a dozen common fowls. They are broods of April, May, and June—genuine as imported;—being of stock received from the importer, bred immediately from fowls brought from China.
193tf D. ELY, 69 So. Fitzhugh St.,
Sept. 1, 1853. Rochester, N. Y.

**TO BOOKBINDERS.**—FOR SALE—The Tools, Stock and Fixtures in a well established BINDERY, now doing a good business. The owner has been in it for the last twelve years, and only wishes to leave to do other business that will be better for his health.
For particulars concerning the business, address Democrat Office, Rochester, N. Y., or to the subscriber,
F. H. MARSHALL.
Rochester, July 21, 1853. 187-tf

**SUFFOLK PIGS FOR SALE.**

TWENTY PAIRS of pure bred SUFFOLK PIGS for sale by the subscriber. Also Breeding Sows. They can be safely forwarded by Railroad, Express, &c., to almost any part of the country. C. J. HOLDEN,
June, 1853. [186m3] Walpole, N. H.

**MOORE'S RURAL NEW-YORKER:**
A WEEKLY HOME JOURNAL,
For both Country and Town Residents.

PUBLICATION OFFICE,
BURNS' BLOCK, CORNER STATE AND BUFFALO STS.,
ROCHESTER, N. Y.

**TERMS, IN ADVANCE:**

TWO DOLLARS A YEAR—$1 for six months. To Clubs and Agents as follows:—Three Copies one year, for $5; Six Copies (and one to Agent or getter up of club,) for $10; Ten Copies (and one to Agent,) for $15; Twenty Copies for $25, and any additional number, directed to individuals at the same rate. Six months subscriptions in proportion.
☞ Subscription money, properly enclosed, may be sent by mail at the risk of the Publisher.

**Terms of Advertising**

ONE DOLLAR per square (ten lines—100 words, or less,) for each insertion,—*in advance.* ☞ The circulation of the NEW-YORKER is much larger than that of any other newspaper published in the State, out of New York city. Only a limited space, however, is devoted to advertisements, and hence preference is given to those most appropriate—such as the cards and notices of dealers in Agricultural Implements and Machinery,—Horticulturists and Seedsmen,—Booksellers and Publishers,—Inventors, etc. All orders by mail should be accompanied with the cash.
To enable us to accommodate as many as possible, brief advertisements are preferred. Patent medicines, &c., will not be advertised in this paper on any terms.
☞ All communications, and business letters, should be addressed to D. D. T. MOORE, Rochester, N. Y.

**THE WOOL GROWER AND STOCK REGISTER.**

THIS is the only American Journal primarily devoted to the interest of Wool and Stock Growers, and should be in the hands of *every owner of Domestic Animals.* It is ably conducted, published in the best style, and finely illustrated. Each number contains a careful Review of the WOOL and CATTLE MARKETS, and much other *useful* and *reliable* information which can be obtained from no other source. The Fifth Volume commences with July, 1853.
TERMS:—FIFTY CENTS A YEAR; Five Copies for $2: Eight for $3; Eleven for $4. Back volumes, bound in paper, at 40 cts. each,—unbound at 35 cts., or three for $1.
Published monthly, in octavo form. Specimen numbers sent free. Money, properly enclosed, at our risk.
Address D. D. T. MOORE, Rochester, N. Y.

# MOORE'S RURAL NEW-YORKER.

VOLUME IV. NO. 45. } ROCHESTER, N. Y.—SATURDAY, NOVEMBER 5, 1853. { WHOLE NO. 201.

MOORE'S RURAL NEW-YORKER:
A QUARTO WEEKLY
Agricultural, Literary and Family Newspaper.
CONDUCTED BY D. D. T. MOORE,
WITH AN ABLE CORPS OF ASSISTANT EDITORS.

THE RURAL NEW-YORKER is designed to be unique and beautiful in appearance, and unsurpassed in Value, Purity and Variety of Contents. Its conductors earnestly labor to make it a Reliable Guide on the important Practical Subjects connected with the business of those whose interests it advocates. It embraces more Agricultural, Horticultural, Scientific, Mechanical, Literary and News Matter—interspersed with many appropriate and handsome engravings—than any other paper published in this Country.

☞ FOR TERMS, &c., see last page. ☜

## Rural New-Yorker.

### Progress and Improvement.

### STORING POTATOES.

We are informed from all parts of the country, that potatoes are rotting this year worse than ever before. A gentleman from Genesee county has this moment told us that his potatoes are so badly diseased, that out of a bushel he does not obtain a peck of edible tubers. We have some ourselves, in a good cellar, that are rotting so fast that half of them have to be cut away. Can the progress of the disease be arrested? We fear not. There are several theoretical plans suggested to the mind, such as artificial drying, burying the potatoes in antiseptics, charcoal for instance; but we can think of nothing that is *practical* to any great extent, nothing that will *pay*.

The germs of decomposition appear to be inherent in the tuber, and hence assorting out all those that are affected, will not stop the further progress of the disease. Nevertheless, frequent assortment will save a great many, for there can be no doubt that much of the disease is caused by contact with decaying potatoes.

In the good old times, when the "potato disease" was unknown, we always thought that potatoes retained their flavor and kept altogether better for table use, when buried in heaps, in a dry, light soil, well covered with clean, dry straw and earth, than in any other way; but now as so many, apparently sound, are diseased, it is necessary to assort them very frequently, and hence burying them will not answer. They must be put in a dry cool cellar or barn, where they can be looked over with facility. Care must be taken not to have too many together, at least not to have them too thick on the floor. Much may be done to lessen the evil by constantly examining the potatoes and throwing out for immediate use, all those which are in any way diseased.

Those who have no cellars and are obliged to bury their potatoes, should put but few in a heap and manage in some way to give it ventilation without admitting the frost.—We have used with great advantage for this purpose a common draining pipe, placed through the straw and earth on the top of the heap. Loose straw should be thrown on the outside of the heap and then the pipe does not admit the frost, but affords a chimney through which the water and gas arising from the decomposition of the potatoes may escape.

We once tried mixing dry wheat chaff with the potatoes, but the water arising from the decaying tubers soon saturated it, and instead of retarding it served rather to facilitate decomposition. Dry charcoal dust would be a far better substance to scatter amongst the potatoes. We have not tried it, but think it would be found beneficial.—Potatoes that have been buried for some time might be advantageously examined, assorted, and clean straw put round them during the few remaining fine days, with which we may possibly be favored ere winter sets in. We do not like to *pit* the potatoes, as is common in New England, but prefer to make the heap on the level ground, digging a trench round it, in order to obtain earth with which to cover the heap. The water drains off into the trench and the heap is kept dry.

We threw out these hasty remarks in the hope that some of our readers will take up the subject and give us their experiments.

### AGRICULTURAL IMPROVEMENT.

IN his Address at the Indiana State Fair, HORACE GREELEY said:—"Agriculture is a pursuit so vast in its scope, so various in its processes and objects, that it is difficult to lay down a general rule with regard to it that will admit of no exceptions; yet I will venture to propound one, which is as follows:—The cultivator whose farm is not more valuable and more productive as one result of each year's tillage, does not understand his vocation, and ought to learn it or quit it."

There are many farmers in every State in the Union, who have demonstrated the possibility of rendering their farms annually more productive by cultivation. In Western New York there are many farms where this has been done simply by tillage and plowing in green crops, without the aid of manure. But are we to say, because this has been done on some soils, that it can be done on all, and that the farmer who does not do it, "ought to learn his vocation or quit it?" There are thousands of farms in the United States whose acreage production cannot possibly be increased without the aid of manure, and on which, from the low price of land and produce, manure cannot be employed without loss. If barn-yard manure could be had for nothing, there are many farms where the increase of crops from its application would not begin to pay the cost of hauling it on to the land. Thus, a given amount of manure will increase a corn crop to a definite extent, but if that corn, when produced, is not worth more than twenty-five cents per bushel, the extra corn will not pay the extra expenses. So it is with wheat and all other crops. There appears to be a necessity for impoverishing the soil in a new country during the first few years of its settlement, while agriculture is the only employment of the inhabitants, and the only means of getting direct profit is by extracting as much out of the soil as possible, without taking any thing back. It is an humbling conclusion, but we believe, nevertheless, a true one, that a system of culture which impoverishes a fertile soil will, for the time being, enable the farmer to sell his produce at a lower rate, than a skillful agriculturist can afford to sell his crops, raised by good tillage and scientific culture. Happily the quantity of land which permits such an impoverishing system of tillage is yearly growing less and more remote, and we are gradually experiencing that stimulant to agricultural improvement—increasing prices. We believe the price of all agricultural productions, especially of meat, will continue to rise till we can afford to keep more cattle on our farms, make more manure, and return to the soil those elements of crops without which, instead of annually increasing in fertility, our farms must gradually though surely become less and less productive.

BELL'S AND MCCORMICK'S REAPERS.—There has been another trial between Bell's and McCormick's Reapers in Scotland, McCormick superintending his own machine in person. An Edinburgh paper, the *Caledonia Mercury*, speaks in no meagre laudatory terms of McCormick's machine, asserting that it is easier of draught, not so liable to get out of order, simpler and more efficacious than Bell's. We have not yet seen the decision of the judges.

ICE HOUSE.—Will some of one of your numerous readers give me, through the RURAL, the best method of constructing an ice house,—also, the probable cost of the same? Information in regard to the proper manner of filling in or packing the ice would also be desirable. Would the side of a high and nearly perpendicular bank be a good location, and one that would reduce the expense of construction? A SUBSCRIBER.

East Varick, N. Y., 1353.

### RAISING WATER BY WIND POWER.

No subjects connected with the cultivation of the soil, are of more importance than underdraining and irrigation. The former, to some extent, has occupied the attention of a few of our most intelligent farmers, and the great success attending the practice has induced many more to follow their example, till we can now see clearly that underdraining, in the next half century, will revolutionize our present system of agriculture. Few if any farmers, however, have tried irrigation, a system which has done so much for the agriculture of Belgium, Holland, France and the East Indies.

The advantage of underdraining is principally *negative* in its character, simply removing that which is injurious to the soil; irrigation, on the other hand, is a *positive* benefit, causing the soil to yield far more than the normal produce. We do not, however, expect so much general benefit from irrigation as from underdraining.—There are, nevertheless, many farms where a wise system of irigation would be attended with great profit, especially on *underdrained* low-land meadows. We knew of many meadows within ten miles of this city, that now produce a ton of hay per acre, and some years not that, which by a judicious expenditure of $40 or $50 per acre in underdraining and laying down fixtures for irrigation, might be made to yield annually immense crops. A meadow of such a character is beyond all value, enabling the farmer to keep a large stock, and so to enrich the upland portions of his farm. There are many situations where such meadows may be formed without much labor, simply by draining the water, and cutting an artificial drain from which the water could be let off or on the meadow at pleasure. On many farms, however, this is impossible, and some power must be applied to raise the water. In Holland and in Lincolnshire, England, wind mills have been applied for this purpose with great success, and we are inclined to think they may be applied here with equal if not greater advantage.

This matter, just now, is beginning to engross the attention of market gardeners and many small cultivators in the vicinity of our large cities; and we may therefore hope for great improvement in the construction of wind mills, pumps, &c., for the purpose of irrigation. As a step in the right direction, we copy the following contribution to the *Horticulturist*, by Prof. J. P. KIRTLAND. The structural and ornamental parts may be considered rather too fancy for ordinary farm buildings, but every one can change these to suit his taste:

"A garden engine, manufactured by Downs & Co., Seneca Falls, N. Y., enabled me to preserve many valuable plants, shrubs, and trees, during the severe drouth of last season. It was equally important as an implement of warfare in a contest I waged with the cherry and pear slugs, and some other depredating insects. The force with which it throws tobacco water, and other medicated washes, is sure to reach those enemies, however securely they may be concealed. Its principles are simple, and the workmanship excellent. No gardner can well dispense with its use.

To pump from a well the requisite supplies of water, was a work of no small labor. It led to the investigation of a method of working a pump by means of the wind. The practicability of the plan I am about to suggest, does not remain to be tested by experiment. During former years, a small wind-mill was in successful operation upon the farm of Mr. ANDERSON, five miles west of Ashland, Ohio, on the road leading to Mansfield. It worked a pump that amply furnished a large stock of cattle, which otherwise could obtain no water. Two days only did it cease to perform its duties during more than two years, and that interruption was occasioned by the meddling of mischievious boys. It is still in operation for aught I know. The cost of this simple machine, including pump, did not exceed $15.

By reference to Fig. 2, the principles on which it was constructed will be at once comprehended. The direct application of the power, without the intervention of any gearing or machinery, obviates much friction, hence a small amount only of power is required. The diameter of the wheel

FIGURE 1.

should not exceed four feet, a few inches less is preferable. It is firmly fixed by its hub on an iron axle formed of a square inch bar. The sails or buckets are secured, at their outward ends, to a wooden rim, like that of a large spinning wheel. An inch and a half crank is raised on the axle at B, which, at that point, is cylindrical, and upon which is adjusted the upper ends of the piston-rod of the pump C. This, when in motion, of course commands a play of three inches.

*The body of the Mill.*—A piece of pine plank, D, is suspended from the cross-girt of a frame, E, by an iron bolt, F, furnished at its lower end with a large head, G, and a washer, and secured by a key, H, at the upper end, admitting of an easy circular motion of D around the bolt. This motion is coincident with that of a swivel on the piston-rod, I. The rudder, or vane, will necessarily throw the wheel, at all times, into the wind. The axle, A, is suspended from the body by two straps of iron, through which it passes at L, L, where it is cylindrical without regard to perspective and proportion, but will perhaps illustrate the subject sufficiently.

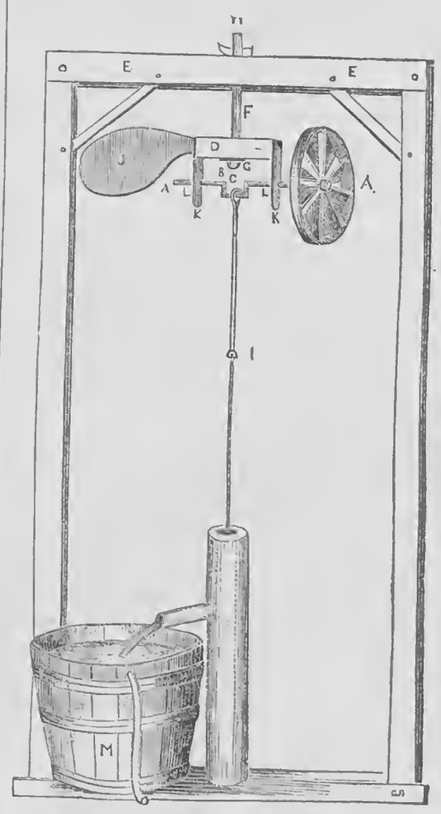

FIGURE 2.

A breeze which merely agitates the leaves of the trees will set the machinery in operation. A reservoir of some six or eight hogsheads was kept nearly filled, and when, in windy weather, a surplus of water was raised, it was returned to the well by a waste pipe, M. In the hands of an ingenious mechanic it might, no doubt, be greatly improved. Iron, in some of its parts might be substituted for wood.

A well, suitably located, will furnish water enough for an ordinary garden, and without labor, by aid of this mill. How much it would improve our flowers, fruits and esculent vegetables, cannot be estimated, but would surely effect a revolution in our present modes of gardening here in the West, where we suffer much every season from drouth. Public tanks, inns, tanneries, and thousands of prairie farms, require its aid. Downs & Co., or some other active firm, would render the community essential service if they would manufacture a supply of these mills and adapt them to some of their improved pumps.

In all this, gentle reader, there is no Quixotism. Its feasibility has been amply tested. We may, however, trespass on the peculiar province of the Don, and, like him, get our heads bruised when we give play to our imaginations on this subject. We will venture on the movement.

Attempts are every where making to ornament and improve country and suburban residences.—Few localities are naturally furnished with the mean of supplying a *jet d' eau*, yet it is one of the most important ornamental additions art can supply to such places. One of moderate size can be constructed at any point where a well with permanent and abundant springs can be obtained within 28 feet of the surface of the ground.—Practically, beyond that depth, this mill will not raise water with much success. It is obvious that the same wind operating on one mill, and raising a given quantity of water 28 feet, would, by acting on a second mill, raise the same water an additional 28 feet.

Suppose an architect should sketch a barn, or other out-building, with two spires or towers of suitable height and dimensions, giving them an air of taste and beauty. The outline I have attempted to supply above, but not the finish.

A, represents a well, either under or contiguous to one of the spires. B, first wind-mill, working pump, C, placed on the centre of a wooden cistern, D, of thirty or forty hogsheads capacity, whose bottom is perforated with pump stem, E, E, extending down into the water in the well. F, second wind-mill, working pump, G, and filling reservoir, H, of similar capacity, from reservoir, D, through a tube I, I. J, J, conducting tube.—, O, the hydropathic mermaid, cascading dolphin, or any other monster fancy may create. I, stop-cock to let the water on the jet. N, stop-cock to let the water directly into the basin, and not thro' the jet. The waste water is finally discharged into the well, A, by tube, M. The pressure on the tube, J, J, might be too heavy while the water was not discharging at the basin; stop-cock P would relieve it. The waste water from cistern H, when full, may be discharged through tube R, into the conducting tube, J, J.

By these arrangements, sixty or eighty hogsheads of water would always be at command, and at an elevation at which it might be conducted over the dwelling house, lawn, garden, trees, &c. During calm weather it would keep a jet of moderate dimensions in play for several hours, and in windy weather the supply would be constant.—On the shores of Lake Erie no day passes without furnishing wind enough to keep the reservoirs replenished. In case of fire they would be equal to an ordinary fire engine.

Is this Quixotism?"

A GOOD COW.—During a recent visit to Massachusetts, we called on Mr. HENRY SABIN, of Lee, to whom, in 1852, the Berkshire County Ag. Society awarded the highest premium for the best milch cow. She is a cross between Native and Devon, and in June, 1852, gave in one week 307 lbs. of milk. 66¾ lbs. of this milk was set and churned, and produced 3 lbs. 11 oz. of butter,—equal to 17 lbs. of butter per week. In June, 1853, she gave, on several different evening milkings, 31 lbs. of milk. One day's milk was churned separately, and produced 2 lbs. 7 oz. of butter. During this time her pasture was not very good, and she was allowed a bucket of bran swill per day. What does Western New York say to this?

## NOTES FOR THE MONTH.

NOVEMBER, the melancholy month of the year with Europeans, and even with us, when not enlivened by our glorious Indian Summer, is again on our borders, with his wailing dirge of winds and fiendish howl; sweeping along with its trophies of conquest the leaves of summer—the funeral hearse of the year. The trees shudder and creak and bend to the blast. The rain beats and the windows rattle, and the driving mists render gloom and sadness palpable. The gorgeous beauty of Summer is gone, the *rouge* of her cheeks faded to the sombre brown of the falling leaf. The drowsy beetle and the chirping cricket are in their graves. The music of the winged songsters now enliven the sunny groves of tropical climes, far away. All is dreary, saith the preacher.

But, child of mortality, be not cast down; the gloomy period is a lesson for thy good, a type of thy decay and mortality; improve it and blessings will follow. Never despair, never say die, for there is much yet to be done, and duties to be performed to meet the lot in which thy destiny is cast. Let us see what is most pressing.

Dig and secure that *staff of life, junior* the potato,—for, from present prospects, Paddy's "roast beef without bone," will be a scarce article before another crop. If they show any tendency to rot, dry and put them in the cellar; those sound and well riponed may be put in small pits.

Corn should be immediately finished husking, and the stalks which are more valuable than hay, if well cured, may be put in bulk under cover. Stalks are better, generally, well stooked in the field, than in large, out-door stacks.

Carrots may now be dug and housed, or buried. A furrow turned on the rows protects them well, in locations where frost does not penetrate deep. White turnips and cabbage may be allowed to stand, as they will improve in all this month.

Fattening hogs should now be pushed with ground, cooked or soured feed, and an occasional feed of charcoal. Rotten wood and sulphur keep them in good heart, and assist the digestive and assimilating processes. Warm and dry beds are as important almost as food, in assisting nature to put on fat and muscle. Fattening beeves should be stabled, and with their dry food have a feed of roots and Indian meal. That makes the luscious sirloin and juicy steaks.

Fall plowing is better performed now than at an earlier period; as vegetation has ceased to progress, and consequently lies dormant and losing vitality.

Repair house and barn and out-houses; look to leaking roofs and exposed cellars.—Stop the holes, cracks and fissures that Jack Frost enters by, for he is an ugly customer in cellar or kitchen.

Feed stalks and roots to milch cows, more or less, as the pasture fails. Better to keep up to the *chalk* than pull behind it; it is an uphill business to catch up.

Pick up all odds and ends,—house all implements at all times and particularly against fall rains.

The best way to keep lumber, trash and empty barrels out of the wood-shed is to fill it with good, dry wood, prepared for the stove—when on some snowy, slooty, rainy day, you don't take a pew in the Prompter's church, and believe his doctrine, you are incorrigible.

Have a place for everything and everything in its place.

Drive your work and not let your work drive you.

Work first and then play.

Be honest, charitable and just, and burn the *bars* and put up *gates*, and you will be in a position (if you have got a good fat turkey,) to be thankful and keep Thanksgiving like a rational human being, and be able to defy the foul fiend, November, and all his concomitants. PROMPTER.

## SUCKERING CORN.

EDS. RURAL.—With your opposition to the hilling system, I perfectly coincide. Suckering is practiced by some good farmers, but as it adds much to the labor of cultivating large fields, it is not extensively practiced. Let me give you an experiment in suckering, on a small scale. In 1852 I planted corn between hills of melons, seven feet apart each way, and 3 grains in a hill. The crop was doing finely, and I took out all but one corn plant in a hill, and subsequently, (for the benefit of the melons,) I took away *all* the suckers; here, then, was a single stalk in every 7 feet square.—These stalks produced, without the suckers, from 3 to 7 perfect ears of corn.

According to my observation, the flower and silks are simultaneous on each individual stalk, and before that tassel is dry, it has accomplished all the designs of nature. When the sucker tassels and flowers at a later period, the design is no doubt to impregnate the silks *on the sucker*,—and in "well tilled" fields, where the soil is not over taxed, these suckers will produce good and sound ears of corn. That the sucker has anything to do with impregnating the silks of the main or centre stalk, cannot be admitted. If the suckers are needed to make out the crop, I say retain them; on the other hand if there are centre stalks enough, say 3 to a hill, use the suckers for soiling your cows if pasture is scarce, for in the end they go for "corn fodder."

This is a subject worthy the attention of farmers, and each for himself should make an experiment—probably many have done so; the result of their experience would be interesting and profitable. Let us have it.

I. W. BRIGGS.

West Macedon, N. Y., Oct. 1853.

## INQUIRIES AND ANSWERS.

CRANBERRY PLANTS.—Can you or some of your readers inform me where cranberry plants can be procured and how many are required to plant an acre, and whether it is best to plant them now or in the spring?—W. A., *Ulysses, N. Y.*

CHICKORY.—I wish to inquire of you, or whoever can tell, the use of chickoree, (seed from France, last spring.) I have some magnificent roots as large as parsnips, but do not know how to use them.—I. W. B., *West Macedon, N. Y.*

Chickory root is extensively grown in Europe for the purpose of adultorating coffee. It is just beginning to be extensively cultivated in some parts of this country and Canada, for the same knavish purpose. We believe the cultivation is highly remunorative, and profit "covers a multitude of sins."

WILL you give us in the RURAL your opinion of stabling or yarding stock, and feeding green fodder thro' the summer?

Where, and of whom, and at what price, can I obtain implements with which I can subsoil twenty-six inches deep?—A. L., *Spring Arbor, Mich.*

The subsoil plow of Ruggles Nourse & Mason is the best we are acquainted with. You could probably obtain it at some of the seed stores in Detroit, or from H. C. WHITE & Co. Buffalo. The price ranges from $7 to $14, according to size and fixings.

We gave an article on soiling recently in the RURAL, but will resume the subject in a few weeks. In the meantime we should like to hear from any who have practiced it.

THE BEE MILLER.—I would like to know if you, or any of your subscribers know of a remedy for the worm, or miller, that infests bee hives. They are from one-half to three-fourths of an inch in length, and are getting to be very troublesome in this section. Some of my neighbors have lost all their hives. Shall not our agricultural journals, and especially the RURAL, say a word in behalf of these industrious creatures? If there is a remedy within your reach, keep us no longer ignorant of it. Let not the bee suffer through the ignorance of their keepers.—ASA C. BENNET, *Victor, N. Y.*

There are innumerable remedies published for the destruction of the miller. Will some of our correspondents give us an account of such as they have found successful?—EDS.

NITRATE OF SODA.—In the RURAL of Aug. 7th, I noticed an artele from Mr. REDPATH, of Mich., recommending the use of Nitrate of Soda, mixed with common salt, as a powerful fertilizer. Will you, or your correspondent, give the information as to the best time to apply it to the wheat crop, whether in the fall or spring?—H. G. BAKER, *Scottsburgh, N. Y.*

ON loamy soil, we prefer to apply Guano, sulphate of ammonia, nitrate of soda, or any other manure in the fall. The alumina of the soil prevents leaching, and the plants get the benefit of the manure from the commencement, and stand the winter better.—We have many experiments that show that fall manuring is best on heavy soils. On sandy land, perhaps,—for we do not know that such is the case,—spring manuring would be best. There are many experiments which, apparently, show that nitrate of soda is a powerful fertilizer for wheat.—We have, however, seen it used without the slightest benefit.

EXTRAORDINARY CROP OF WHEAT.—Capt. J. C. Bagland, of Salude township, in this county, raised during the last season, on 12 acres of land, 296 bushels of wheat weighing over 63 pounds per bushel. What is still more remarkable, the ground was not sown last fall, but the grain sprang from the crop on the ground the previous year. The ground the previous year having been prepared with a sub-soil plow, was of course far more mellow and moist than if it had been skinned over in the manner too common among many of our farmers.—*Madison (Ind) Banner.*

If 24¾ bushels of wheat per acre is an "extraordinary crop" in Indiana, what must the ordinary yield by the skinning process be? Will the Banner please enlighten us on the subject?

## EXTRACTS FROM PATENT OFFICE REPORT.

MULES.—I have been in the business of rearing and marketing mules for many years; which I have marketed principally in New Haven, Connecticut, and in the States of New Jersey and Pennsylvania; which animal, in the latter two States, is much in use. I sold mules there twenty-eight years ago last fall, which were two years old; and I saw some of them two years ago, which were fat; and the owners said they were as good as ever.

I have conversed with many aged gentlemen, who have used mules for fifty years, and with some who then had mules in their possession which they represented to be forty-two years of age. I have been also told of one owned in Pennsylvania that was sixty-three years old. I am fully satisfied, from my own observation, that mules live to double the age of horses; that it costs but about one-half as much to keep them, and they are not one-half so subject to disease; consequently, the saving would be great; and I think they ought to be used for draught in all countries, instead of horses.

Such complaints as heaves, spavin, &c., I have never yet seen or heard of about a mule; and I have raised hundreds and seen thousands; which complaints are very prevalent among horses.

I give it as my opinion, that the average age of mules is thirty-five or forty years.—They are much easier broken than horses, if treated with kindness.

It is true, there seems to be a general prejudice existing with people against this animal; and it is expected that they will kick or kill everybody who has much to do with them; and when people undertake to break them, it is thought to be the first requisite to tie them up and give them a sound drubbing, not for anything the innocent creatures have done, but for something they are expected to do; and being animals that are intelligent, they rightly become dissatisfied with such treatment, and, of course, will show resentment. While engaged in selling, I have helped harness up a great many taken from the drove, without any previous training, and have driven them in a wagon containing several persons besides myself, and I never saw one contrary or refuse to go off immediately. They are much more intelligent and tractable than horses, and their attachment is much stronger, if well treated. The foal is carried easier by the mare, and reduces her less, both before and after birth.

They can always be sold for ready cash at the South; and, taking them on an average, and at any age, will bring more money here at the North than horses.

Therefore, I invite my fellow farmers to examine this subject, and take a greater interest in rearing mules. They are a cash article, and a very useful and profitable animal; and it would save the North millions of dollars were they in as common use here as at the South.

The mule is adapted to labor at a younger age than the horse; and experience is all that is wanting to convince the people of the North of the great advantages that would accrue from bringing these animals into general use at home, and from rearing them more abundantly for the Southern Markets.—S. SMITH, *Wilton, Maine.*

ROTATION OF CROPS.—Mr. John Young, of Richland county, Ohio, thus describes his system of rotation of crops:—"My system of rotation of crops is to plow down as heavy a crop of clover and sow wheat; then plant corn; then sow oats, and with them four quarts of clover seed, mixed with two of Timothy. The field is in pasture or meadow till the third year, when a crop of clover is again turned in by the plow, to be followed by wheat. By this practice my land now produces much better than it did 20 years ago. The best preventive of the Hessian fly and yellow midge is, to sow early; late seeding makes the plants feeble and increases the injury of insects."

Mr. Young sows turnip seed among corn at the last plowing, and obtains a remunerating crop. The white flat turnip is the variety preferred for culture with corn.—He properly remarks that the best fertilizer for meadows is to flood them where it is practicable. Irrigation by small streams and catches is worthy of far more attention than it receives. The meadows of Mr. Y. yield from two to three tons of hay per acre. Well-rotted barn-yard manure and plaster are used as a top-dressing for meadows, and timothy makes the most saleable hay. Clover properly cured is regarded as more nutritious for farm stock. By crossing a French Merino ram with large native ewes, Mr. Young has obtained half bloods of good size, and valuable for mutton; while the fleeces are greatly improved in quality and increased in weight and value. He rears pigs in a way that gives a pound of meat for every day they live—killing them when from 300 to 400 days old.

WHEAT.—Much more attention is being paid to the production of this staple crop than formerly, and farmers are beginning to find out that it can be raised successfully on something else besides "new land," and that, by proper tillage, the soil is actually growing *better*, instead of *poorer*, in its culture. The usual course pursued here, is to "summer fallow" in June, turning under a good coat of clover; plow about 7 inches deep; harrow thoroughly, and cross-plow just before sowing. We usually sow in the last days of August or first of September, at the rate of two bushels per acre. The seed should be previously soaked for 12 hours in strong brine, and then coated with unslacked lime. We use the "Soule" wheat, thinking it will yield five bushels per acre more than any other variety known with us. The average product is about 25 bushels per acre. The quantity of land sown, and the average product per acre, are steadily *increasing*. The average price for the year 1852, has been about 94 cents per bushel. We are not troubled with the "Hessian fly" or "weevil." In seeding down, red clover usually follows wheat. Sow the last of March or first of April, at the rate of ten quarts per acre. And I would here remark, that we invariably have the best success when we sow the seed in the chaff. The covering of the seed seems to afford protection during the late frosts of the spring months. It must be sown *early* to do well. Sow on the snow if possible, as you can then distribute the seed more evenly. "Guano" is not used with us for anything.—JOHN HURLBUT, *Arkport, Steuben co., N. Y.*

## TRAINING STEERS.

A WRITER over the signature of L. M. in the January number of the Cultivator, requests information as to the mode of breaking steers. Having had some experience in that thing I am induced to throw in my mite, but if the views should prove of no use, let them pass as worthless. I will speak of steers that have not been gentled by handling. Take a strong rope, such as is used for digging wells, to one end of which make a noose and knot to go over the horns; the knot is to prevent the noose from closing too tight, thereby causing pain unnecessarily to the animals, as they are very sensitive about the root of the horn; bore a two inch auger hole in the side of a planked house, through which draw the rope, until there is enough to give the animal room to lie down; the second one in like manner, just so close that they cannot poke each other. Let them stand in that position for four or five days, or until they are satisfied by handling that they can not pull away; then put a Napoleon halter on them separately and lead them about in company of each other, say round a field, and they will soon lead like dogs; then tie them to the original ropes, put the yoke on, tie their tails together with a leather strap in the long hair at end of tails, to prevent them sidling off and turning the yoke. If it should possibly occur that they get into difficulty the strap can be cut. Walk them about till they got a *little* jaded, without hitching to any thing the first time. When you want to take the yoke off, tie up to the original ropes, and a few times repeated, they will want nothing but to be shown how to work, which I prefer doing by cutting a small sapling or pole about 15 feet long; put one end in the ring of the yoke and the other resting on the ground. When they are put to *work*, I prefer, as the best place, between the *harrow* and a gentle pair of oxen, the driver holding the young ones by a rope or Napoleon halter and guiding the leaders by the whip. They follow their kind better than horses, and on plowed ground they soon tire and get gentle; and further, there is no necessity of being as particular where the harrow goes, as if it was a plow, and a wheel vehicle might sometimes move too fast. In the fore part I allude to a planked house, because there would be no place for a fractious steer to get his horns fast. I have been in the habit of tying them by ropes, to the yoke until they became sufficiently gentle to dispense with it.—*Cultivator.*

## FORMING COMPOSTS.

INDEPENDENT of the rough materials used on the cattle-yards, it should be the object of every notable farmer to form similar substances into compost heaps. Such heaps should be formed in the proportion of 1 load of barn-yard or stable manure, 2 loads of rough materials, 1 bushel of ashes and half a gallon of plaster, layer and layer about. The compost heap should be formed into a conical shape, the sides and top compressed with a shovel. With regard to the materials to be used, it matters but little whether it be *peat, marsh-mud, creek-mud, river-mud*, woods' mould and *leaves, pine shatters, ditch-scrapings, road-scrapings*, or earth from *head-lands and fence corners;* they are all possessed of large portions of vegetable remains, and will, on being decomposed, form excellent fertilizing manure by next spring, and as a consequence vastly increase your corn crop next year—for they all contain those elements of food in which that plant delights—besides which, they all possess the power of drawing food from the air, as carbonic acid, ammonia, &c.

In the spring previous to hauling out such compost manure, have your heaps shoveled over, so as to mix the various substances thoroughly together and produce an equality of strength. While thus engaged in shoveling over your compost, if you were to add to every twenty loads 2 bushels of salt and 1 bushel of plaster, you would much enhance its value, both as regards its present, and lasting properties.—*American Farmer*

The ashes would materially assist decomposition, but they would at the same time facilitate the escape of ammonia, and for this reason we should prefer not to use them in compost heaps.

LARGEST CABBAGE IN THE WORLD.—We received recently says the *Alta*, a San Francisco paper, from the garden of Mr. John Aldersey, on the mission road, the largest cabbage that, probably, the earth ever produced—certainly the largest of which there is any account. This remarkable plant, standing in its natural position, measures three feet and one inch in diameter, including the loose leaves surrouning the head.—The head itself, which is very solid and perfectly white, measures thirteen inches in diameter, and the whole weighs thirty-four pounds.

WINTER is coming. Prepare to give Old Boreas a *warm* reception.

## NATIONAL AGRICULTURE.

THE total value of the annual products of the soil of the United States is now about one thousand millions of dollars; and no one who knows what science has done for agriculture will doubt that the same amount of labor which is now employed in producing this aggregate might be so applied as to secure a total product thirty per cent. greater, or one thousand three hundred millions. But scientific, skillful, thorough agriculture always employs more than the shiftless, slouching sort too generally prevalent; and it is certainly within bounds to estimate that our agriculture might be so improved as, by the help of additional labor now unemployed and unproductive, to give an additional product of fifty per cent. or five hundred millions per annum—an achievement which would double the wealth of the country every eight or ten years. Whosoever will carefully review the agriculture of a single State, or even an average county, in any part of the Union, and estimate how much its product might be enhanced by irrigation, manuring, deep plowing, draining, &c., will perceive that our calculation is far within the truth.

But to suppose that only half of it or an addition of two hundred and fifty millions per annum to our annual agricultural product, is attainable, what an immense addition to our national wealth would thereby be insured! Four-fifths of this would probably be permanently added to the wealth of the country—that is, the farmer whose annual product should be swelled from $1,000 to $1,250, or from $2,000 to $2,500, would not eat or drink up the surplus, but would invest the greater part of it in new buildings, fences barns, implements, furniture &c., &c., giving profitable employment to mechanics and laborers and largely increasing the business of merchants and the incomes of professional men. Such an addition to the annual product of our agriculture would increase the consumption of manufactures, domestic and imported, in far greater ratio, since from the annual product of every farm the food of those making a living on it must first be taken for home use, affording no business or profit to any one else, leaving only the surplus to form the staple of trade; and an addition of twenty-five per cent. to the annual product of each farm would probably double the annual exchanges and general trade of the country.—*N. Y. Tribune.*

## CURE FOR THE POTATO ROT.

IN a recent conversation with Mr. John Barrett, Jr., of Cayuga Bridge, on the subject of the potato disease, he informed us that he had not been troubled with the rot for some years, and there was an easy remedy for it, which all might apply with very little trouble or expense. On inquiring for this simple remedy, we expected to have been told that it was a *secret*, to be revealed only to those who were willing to contribute a handsome reward to the discoverer. But Mr. B. freely gave us his experience, which we as freely impart to our readers, leaving it to them to make the experiment, if they think proper.

Mr. Barrett stated that a few years since, he, as well as most of his neighbors, lost their entire crop of potatoes by the rot—that the next spring he was compelled to go to another town for seed, where he procured a supply for himself and an adjoining neighbor, and where he was told how to prevent the disease. He said he and his neighbor planted the seed he procured on adjoining fields—the soil and treatment similar—only that Mr. B. applied the remedy recommended to him—which consisted in *sowing ashes* over the field once a week for 6 weeks, commencing shortly after the second hooing of the crop. He used from two to three bushels of ashes per acre, which is sufficient to give the potato top a good dusting. The result was that his field was entirely free from the disease, while the potatoes on the adjoining field, without this application of ashes, rotted badly. Since then, Mr. B., as well as most of his neighbors, had applied ashes, and had been entirely free from the disease.—*Country Gentleman.*

HAVE any of our readers tried ashes on potatoes in the manner of the above experiment? We should be glad to hear from those who have. So simple a remedy, for so great and universal an evil, should be generally known, if reliable.—EDS.

THE RICHEST MINE.—The manure applied to the soil of England amounts to three hundred millions of dollars; being more than the value of its whole foreign commerce, and yet the grateful soil yields back with interest all that is thus lavished upon it. And so it would be here, if we would only trust the soil with any portion of our capital. But this we rarely do. A farmer who has made any money spends it not in his business but in some other occupation. He buys more land when he ought to buy more manure, or he puts out his money in some joint stock company to convert sunshine into moonshine. Rely upon it, our richest mine is the barn-yard, and whatever temptation stock or shares may offer, the best investment, for a farmer is *live stock* and *plow shares*.—*Ex.*

AT the recent Ohio State Fair, a rare genius took upon the show ground a hand cider-mill of the improved kind, together with a quantity of cider-apples, and essentially hit *three* birds with one stone. He made his cider; sold it as fast as made at five cents a glass; and at the same time showed his machine to the best advantage.

WARTS.—It is said that the oil from the outside shell of walnuts or butternuts will cure warts by a few applications.

# Orchard and Garden.

## THE APPLE CROP, AND MARKET.

The Apple Crop is short, this year, in many sections of the country. Hereabouts, and in our market, it is difficult to obtain the choice varieties, even at extra prices.—Indeed we have seen but few good apples this fall. One reason of the scarcity is the short crop—and another, probably, the fact that large quantities are annually purchased, early in the season, for shipment to eastern markets. A late New York paper says there is an immense quantity of this fruit in or near Washington market, and that the quantity is increasing. Greenings and Spitzenbergs retail at $2 to $2,50 per barrel, which is above last year's rates. Those of our readers who have a surplus of good apples should secure them carefully, as they will ere long be in demand at paying prices.

Speaking of the Apple crop, the Syracuse Chronicle says :—"Throughout New England there is a general scarcity of this fruit;—indeed an almost entire dearth of it;—the foliage of the trees having been destroyed in the early part of the season by the canker worm. Agents are now employed in this State in buying up our crop for exportation to New England. Ten shillings a barrel (fifty cents per bushel) has been readily paid for good apples, in some parts of Onondaga and Oneida counties. We recommend those of our friends who have a stock of fine apples, to take good care of them, for they will be eagerly sought after, and will bring good prices."

The Utica Gazette says :—"Immense quantities of apples have passed through Albany the past week, for the New York market. They are quoted at present there from $1, to $1,75 per barrel for the best kind of grafted fruit. This price will not pay producers for shipping them, and if they will take a warning in time, they will cease their shipments."

## VALUE OF LEAVES.

Payen and Boussingault give analyses of leaves from several different trees. Taking the average of all their analyses, leaves contain 1.13 per cent. of nitrogen, while farm yard dung contains only 0.41 per cent. In all vegetable or animal substances that will decompose readily, their true manurial value is in direct proportion to the amount of nitrogen they contain. Hence, *leaves are worth three times as much as common barn-yard manure.*

But we need not dwell on the theoretical value of leaves. Every gardiner knows, from observation and experience, that nothing makes such a valuable compost as the leaves and other rubbish of the orchard and garden. This is owing partly to their chemical composition and partly to their absorbent properties. Their porosity is so great that they will condense and retain large quantities of ammoniacal gas and thus prevent its escape from the decomposing compost.

Every fruit grower and gardener, not to say every farmer, should rake up all the leaves on his premises and make them into a compost with seedless weeds and manure, covering the heap with a coat of loamy soil, and saturating it, during winter, with soap suds &c. from the house. In the spring he will have spit manure of great value for garden crops.

## THE CURCULIO AND ITS HABITS.

The Country Gentleman publishes a long and valuable article on the curculio, from E. P. Williams, Esq., of Albany. This gentleman has tried most, if not all, the various nostrums, recommended for destroying this worst of fruit depredaters, without success. He is of opinion that no remedy is effectual short of extermination, and recommends jarring the trees and catching the insects as they fall in sheets prepared for the purpose, executing the death penalty upon the captives by the most summary process. From present experience Mr. W. draws the following conclusions :

1. All remedies or preventives short of actual *slaughter*, will prove ineffectual to check its depredations. I have tried pretty thoroughly, for years, nearly all the nostrums recommended by various horticultural writers in the hope of being able to find some *patent medicine* remedy, but so far entirely in vain; and what prospect the future offers of success in this direction, may be judged of by the experience herein narrated.

2. Such applications as white-wash (with or without sulphur,) powdered lime, ashes, plaster, cotton about the trunks of trees, tar, nauseous smells of fermenting manures, &c., *ad infinitum*, may give hopes of success, from the fact that most of these applications impede the facility of the insects operation, and it will pass over trees to which these applications are made, provided there is in the immediate neighborhood sufficient fruit for it to extend its incubating energy upon, which has not been treated to any of these applications. But if the insect is very abundant; or, if all your fruit and that of your neighbors be treated to those applications, my own experience inclines me to the belief that they will not, any or all of them, sensibly check its destructive work. I was among the first to try and recommend the use of white wash, and with apparent success at first—syringing a few trees and leaving the others to the insect's mercy. But subsequent experiments impress me with the belief that no confidence whatever can be placed upon it. Indeed I have found the curculio in trees so treated, himself covered with white wash, at work on fruit coated in the same manner, with all the composure and equanimity imaginable. In fact he is a connoissour of tender and thin skinned fruits. He takes *first* those that best suit his purpose, leaving those less desirable till after — in the same manner as peaches on account of their rough skin, and the coarser plums are neglected until all punctured; but these are sure to be taken in their due order, provided there are not enough of the fruits he most delights in to serve his purpose. In my judgment they are left simply because the coating of white wash and other applications and the downy surface of the peach, render the puncturing process less easy to the insect, and not from any quality which repels him.

## HEAVY PRUNING.

In the treatment of trees, suffering from long neglect, storms or other sources of injury, it not unfrequently becomes necessary to have recourse to the amputation of large branches or what is termed heavy pruning.

*The Season*—except in severest climates—when this sort of pruning will be the least detrimental to the trees, is late autumn or winter, while vegetation is in a dormant state. In sections of this country colder than the southern or central portions of New England, however, most cultivators deem it preferable to postpone this work till quite early in the Spring, or just after the severest weather of the winter has mostly passed away. For autumnal pruning, November is a very favorable month; for Spring pruning, the period from the first of February to the middle of March, but not later. In all climates, there can be no more unsuitable season for heavy pruning than the time when the buds are beginning to expand in the Spring; for at this time, trees *bleed*—as the flowing of the sap from the wound is termed—more profusely than at any other period of the year.

*The Implements*, employed in heavy pruning are saws, axes, and knives. When a very large number of trees are to be operated upon, it is well to be provided with framed pruning saws, pruning chisels attached to poles, axes of different sizes, pruning knives, and self-supporting ladders; but for ordinary pruning, a common ladder, a cross-cut saw, a small axe, and a pruning knife are all that is necessary. For the proper and expeditious performance of this work, all these edge tools should be kept in the best order: indeed no skilful cultivator will ever apply any other than sharp tools to his trees.

*The Wounds* occasioned by pruning, ought to be—in some way—protected from the weather. For this purpose nothing is better than Downing's gum-shellac composition, which is most conveniently prepared for use in this way :

Procure a wide-mouthed quart porter-bottle;—fit a good cork into it, with a wire running through the cork down nearly to the bottom of the bottle. To the end of this wire attach a bit of sponge or anything that will make a small swab. Put a quantity of gum-shellac into the bottle and fill up with a sufficient quantity of alcohol, so that the mixture, when fully dissolved, shall be about of the consistency of oil paint or molasses. Keep the cork tightly in the bottle, and the preparation may always be ready for use for years. When applying it, take hold of the cork, draw out the swab and rub it upon the wound, repeating the operation until a good coating is spread all over the parts which we wish to protect from the weather.

Old dead wounds may be coated over with grafting wax, or painted with any coarse oil paint, and sanded. Cavities may be filled up—in old trees—with grafting-clay, or the cement which is now so commonly employed in constructing under-water masonry, cellars, cisterns, &c. A much cheaper composition than the shellac, a mixture of tar and brick dust, often answers a good purpose. Large limbs, beginning to be split off from a tree, may be successfully retained for years, by boring entirely through the limb, and trunk just above the split, and putting in an iron bolt with a head upon one end, and a nut and washer upon the other. Sometimes—for smallish trees—a very large screw will answer the purpose.

*The chief object* of heavy pruning, is to shape or fashion a tree approximately to the form which we should have given it, had it been in training from the nursery. To this end, we remove all dead wood, all limbs which crowd, cross or rub other limbs, and most limbs which are awkwardly or unsymetrically situated. We must, nevertheless, be cautious not to attempt too much, and therefore before commencing operations at all, we ought—like a skillful physician—to examine into the case of our patient, walking several times around it, and carefully studying the effect which any contemplated amputation will produce upon its health and appearance. We should be cautious about performing and operation, upon a large tree, for which we cannot at the time assign a satisfactory reason. Good judgment is not the less requisite to the successful performance of the mechanical operation of pruning. Hence it is obviously very unwise to entrust this labor to any but skillful hands, as is often done, where some descendant of the Goths and Vandals is permitted to prune trees, for the fire-wood which he can obtain therefrom. Of all pests that were ever suffered to invade an orchard, these bipeds are the most formidable and destructive in their ravages.

The skillful orchardist aiming to admit air and light to every part of the tree, always prefers cutting too little rather than too much; and he always regrets to see his wood-pile increase in size at the expense of his orchard.

*The manual operation of pruning*, also, is often very badly executed. Some people cut off a large branch too far from its parent trunk or limb, so that a portion or stump of the amputated branch remains to emit unsightly shoots or suckers, thus defeating the object of the pruning. Others cut so close into the main trunk or limb, that it requires years for the wound to heal. We must shun both these errors, carefully, cutting at the precise place, or as near it as may be, where the wound which we make shall be no larger than the base of the amputated branch. We should always cut, in part, and first, and if convenient, wholly from the lower to the upper side of a branch. After a branch has been removed, we carefully pare the edges of the cut with a sharp knife, and then apply the gum-shellac coating to protect the wound from the weather. —Geo. Jaques, *in Journal of Agriculture.*

## SHELDON PEAR—EFFECTS OF THINNING.

We have often alluded to the necessity of thinning a heavy crop of fruit in order to secure fair and finely grown specimens as well as to save the tree from injury; but with all that has been said, the matter receives very little attention, and everywhere—both in gardens and orchards—we see trees overloaded and breaking down with small, indifferent fruit, scarcely worth gathering. We saw lately a very striking instance of the effects of a light crop on the size of fruits. At the late show of the Genesee Valley Horticultural Society, a dish of *Sheldon* pears were exhibited by the Hon. L. A. Ward, all measuring full three inches in diameter each way. We took the trouble to inquire into the circumstances of their growth, and we were informed that the crop was unusually light. The weather in the spring had performed the thinning process effectually, and has thus shown us what may be done with the *Sheldon*. We may add, too, that these *Sheldons* were of the finest quality, equal, at least, to the best pear we have ever tasted. We are not sorry, therefore, at the part we have taken in bringing it to notice.—*Horticulturist.*

Immense Melon.—The editor of the Stockton Journal has partaken of a watermelon raised in Napa Valley, which weighed 55 pounds. It measured two feet, two inches in length, and one foot eight inches through. Three of the same kind grow on the Rancho.

# Domestic Economy.

## CURING HAMS.

In the last Patent Office Report, Mr. Jas. Campbell, of Weston, N. J., gives the following as a superior process for curing hams :

"The best method I have found for curing hams is, after the hams have been cut, let them lie out on a shelf, where they can have plenty of cool air, so that the animal heat is entirely out of them before you attempt to put them down in salt; then corn them down for two or three days; after which drain off any bloody water which may come out; and then make the following pickle, sufficient to cover them :—Take 9 pounds of salt, 3 ounces of saltpetre, 1 oz. of saleratus, 4 pounds of brown sugar or molasses, and six gallons of water; let them lie in the above pickle from three to six weeks, according to the size of the hams; when you may take them out and smoke them with good hickory or apple wood until sufficient to suit your taste. They should be taken down and hung up in a dry, cool place, in bags to protect them from the flies.

I have hams cured after the above method, which were almost as fine when eighteen months old as when taken from the smoke house. And while upon the subject of hams, I would further say that, when you boil them, they should be boiled until done, in good, soft water; and, when nearly done, throw in a handful of clean Timothy hay; it absorbs all impurities which may be around the outside of the ham. As soon as done, take out the hay, but leave the ham in the water until nearly cold, when you may take it out.

## BOSTON BAKED BEANS.

Baked beans are a great dish with all Yankees, and the following recipe for "Boston Baked Beans," from Mrs. Webster's "Improved Housewife." we think will be acceptable to our housekeeping friends :

Take two quarts of middling sized white beans, three pounds of salt pork, and one spoonful of molasses. Pick the beans over carefully, wash and turn about a gallon of soft water to them in a pot; let them soak in it lukewarm over night; set them in the morning where they will boil till the skin is very tender and about to break, adding a teaspoonful of saleratus. Take them up dry, put them in your dish, stir in the molasses, gash the pork, and put it down in the dish so as to have the beans cover all but the upper surface; turn in cold water till the top is covered; bake and let the beans remain in the oven all night. Beans are good prepared as for baking, made a little thinner, and then boiled several hours with the pork.

# Mechanic Arts, &c.

## LIST OF PATENT CLAIMS

ISSUED FROM THE UNITED STATES PATENT OFFICE

For the week ending October 18, 1853.

Ebenezer Beard, of New Sharon, Maine, for improvement in propellers.

Edwin B. Bowditch, of New Haven, Conn., for improvement in sofa beds.

Wm. Crighton, of Fall River, Mass., for improvement in shuttle motions for power-looms.

Henry S. Crider and David Williams, of Lancaster, Ohio, for improvement in attaching artificial teeth to the metallic plate.

James J. Clark, of Philadelphia, Pa., for improvement in self-winding telegraph registers.

Chas. Flanders, of Boston, Mass., for improvement in steering apparatus.

Benj. Frazee, of Durhamville, N. Y., for improved mode of operating mill saws.

Robert Griffiths, of Newport, Ky., and George Shield, of Cincinnati, Ohio, for improvement in machines for making railroad chairs.

Geo. W. Griswold, of Carbondale, Pa., for improvement in implements for cutting cloth.

Thos. Hinkley, of Hallowell, Maine, for improvement in instruments of plotting.

Daniel Lynahon, of Buffalo, N. Y., for improvement in cutting boots.

Wm. Mason, of Taunton, Mass., for improvement in power looms.

Norman Millington and Dennis J. George, of Shaftsbury, Vt., for improvement in machines for figuring carpenters' squares.

John Pender, of Worcester, Mass., for improvement in power looms.

Benj. F. Rice, of Clinton, Mass., for improvement in looms for weaving fancy goods.

John Scott, of Philadelphia, Pa., for improvement in air beds.

Nathan Thompson, Jr., of Williamsburgh, N. Y., for improved life-preserving bucket.

Nathan Thompson, Jr., of Williamsburgh, N. Y. for improved life-preserving seat.

Thomas E. Warren, of Troy, N. Y., for improvement in iron car bodies.

J. W. Weatherby, of Kingsville, Ohio, for improvement in carpet stretchers.

Linus Yale, of Newport, N. Y., for improvement in door locks.

Harry Whittaker, of Buffalo, N. Y., for improvement in the application of high pressure engines to screw propellers.

## THE MENAI BRIDGE IN WALES.

Mr. Prime writes to the New York Observer the following interesting account of this great work :

"The Tubular Bridge over the Menai Straits I regard as the greatest mechanical wonder of the world, and if my admiration of it had been great when reading the many graphic descriptions we have heard of it, my wonder and pleasure were greatly increased when I came to see it. The cars swept through the bridge fifteen hundred and thirteen feet in length, and we had no other sensation than that of passing through any other covered bridge, but as soon as we reached Bangor, and the train paused, I left it, and let it go on without me, while I returned to study this stupendous work. The problem to be solved by the architect was this — to build a bridge 1,500 feet over an arm of the sea, so high in the air as to permit the loftiest mast to pass under it, and without piers to obstruct the navigation.—The point on the straits selected for the purpose was fortunately provided with a rock rising from the water, and nearly in the midst of the straits. This was the base of a pier, but then the bridge, without a draw, must stretch 472 feet to one shore, and 460 to the other, at the height of at least a hundred feet above the sea. Mr. Stephenson, the architect, devised, and under his superintendence was executed this work, which promises to stand an enduring monument of ingenuity, enterprise and perseverance, under difficulties the most disheartening, and to ordinary minds insurmountable. To the work he brought, as the first and chief element of success, his own genius and courage, and to these he added 1,800 men, for whom cottages were built along the shore, as the labor of years was before them. The bridge is to be of iron, nothing else; it is to hold itself without an arch, and without steel cables to bind it to the rocky shores. It is to be built on the shore, to be floated on the water, and then raised perpendicularly, and stretching horizontally from land to land. Can it be done? The world laughed, and wise men said no, it could not be done. The man of *Science* pushed on the mighty work. Plates of iron were riveted together, and a tube, not round as most people suppose, but square, or rather rectangular, being 30 feet high and 14 feet wide, was built; the labor of this army was extended through four and a half years. Two million rivets hold these plates in their tenacious grasp, and these tubes weigh no less than eleven thousand three hundred and sixty-six tons! During three years, the shores presented the busiest and most exciting of peaceful scenes. Schools and churches were built for the families gathered here. The arts of life were drawn around the settlement, and it was as if a new city had suddenly been planted on the straits of Menai. Sickness was rare, for the air was pure and healthful, but when it did come and death with it, the consolations of religion were not wanting to the dying or living. More were born than died. The work went on, and at last it was done. Hydraulic presses were made to raise the mighty weights, and inch by inch they rose, till in three weeks from the time they began to ascend, they were planted on the lofty pier, and stood sublime. They did not break of their own weight. They did not bend. But would they bear the pressure of a train loaded, thundering over this awful chasm, or would the mass of iron crush and fall in ruins like a rent world, when the first train of rail cars, with its living burden, should trust itself on the treacherous bridge? The train was ready, not with a burden of living men and fair women, to re-enact the Norwalk tragedy, (an event that dishonors our country in the eyes of Europe,) but loaded with iron and stone, to four times the weight of any train that would ever be required to pass over the trembling structure. Mr. S., the architect, mounts the locomotive, himself the engineer and solitary passenger. He moves on, and reaching the midway of the longest tube, he arrests the train, pauses there, that the heaviest pressure may at once be felt, and the grand experiment tested once for all. It was not a rash hair-brained feat.—It was the calm confidence of a man of calculation, who knew what he was doing, and that he was safe. The sinking of that long line, with the tremendous weight to which it was there subjected, was less than half an inch! The experiment was tested. It cost five million of dollars, and was cheap at that.

I walked through it, and then by a flight of narrow steps ascended to the top of it, and walked out on the flat roof on which the train comes, and when I saw the power of those concatenated plates it was impossible to have the sensation of fear, while I felt sure the structure will stand till some convulsion of nature shakes sea and earth."

We would state in connection with this subject, that Mr. Stephenson has lately been in Canada as consulting engineer on the Grand Trunk Railway, the most gigantic Railroad Company (except the Pacific) in the whole world; their line, when finished, stretching from below Quebec all the way to Lake Huron, and also terminating, by lease of the Atlantic road, at Portland in Maine. They are about to construct a huge tubular bridge across the St. Lawrence at Montreal. At Toronto, in a public speech, Mr. Stephenson said, in reference to the mutual dependence upon each other of the scientific man who designs and the laborer who executes :

"We ought not to forget that we have called to our aid that class of men called contractors, a number of scientific and mechanical men,— many of them positively engineers. These contractors now come to the aid of the engineer in all difficulties, so that the engineer has little more to do than conceive, and they realize. One circumstance connected with this fact might be mentioned. In connection with the Tubular Bridge there was nearly two millions of cubic feet of masonry required, yet without my concerning myself at all with the masonry, it was turned over to a thoroughly practical man, well acquainted with all the appliances which science had placed at his disposal, and so well were these appliances used, that in three years the two millions of cubic foot of masonry were brought from the quarry and put together, and raised into a magnificent edifice. The work amounted to this, that three cubic feet of masonry were set every minute for twelve hours in each day, for three hundred days in a year, and for a continuous period of three years. Nothing that I ever heard or read of equaled that, yet I will almost pledge myself that more than that will be done at Montreal.—I mention this circumstance in regard to the time in which so much work was performed by ingenuity, in the application and use of tackle."

## WHY LABORERS DO NOT GET AHEAD.

Nothing can be truer than Mrs. Swisshelm's assertion in the Pittsburg Saturday Visiter, that it is extravagance and improvidence, and nothing else, which keep the laboring classes in the power of capital.—"The way to become independent," cont'nues Mrs. Swisshelm, is "for every man to live on half his wages or less, if possible, until he buys and pays for an acre of ground, fences it, and builds on it a house large and close enough to shelter himself and family from a winter storm. This is his fort.—Then let him take all the time he now spends in taverns and other lounging p'aces, to lay in stores of amunition and provisions, in the shape of useful knowledge gleaned from books and papers, and have grape-vines, trees, potatoes and cabbages growing in his enclosure. If he plants every foot of it with something pleasing to the eye and good for food, no tyrannical employer can starve him into degrading submission."—Mrs. Swisshelm's article on this subject ought to be posted up on the walls of every workshop in the country.

Value of Patents.—Dr. Gales examiner's reports, gives the following statement :

A man who had made a slight improvement in Straw Cutters took a model of his machine through the Western States and after a tour of eight months, returned with $40,000. Another had a machine to thresh and clean grain, which in fifteen months he sold for $60,000. A third obtained a patent for printer's ink, refused fifty thousand dollars for it, and finally sold it for $50,000. These are ordinary cases; while such inventions as the Telegraph, the Planing Machine, and the India Rubber Patents, are worth millions each.

Ship-Building in Maine.—During the year ending June 30, 1853, there were built in Maine, 138 ships, 63 brigs, 148 schooners, and five sloops, making a total of 110,047 47-95 tons. The entire amount built in the United States in 1852, was, 255 ships, 73 brigs, 584 schooners, 267 sloops, and 269 steamers, making a total of 356,343 tons.

# Educational.

Written for the Rural New-Yorker.

## THE FEMALE TEACHER.—No. I.

One of the most sacred missions of the female, especially in early womanhood, is that of instructing the young in school; and the wide field open in this behalf for the display of all the gentle and generous traits of female character is occupied extensively by a large class of our most worthy and pure-minded young countrywomen. Intelligent, high principled, and presevering, they are not placed so high by fortune as to remove them from the necessity of labor, nor so low as to preclude them from the advantages of a substantial and useful, if not an ornamental and fashionable education.

There are perhaps no two years of a young lady's life, aside from those during which she receives her domestic training under the parental roof, so well calculated to develop her moral powers, teach her self-reliance, and call into activity all her capacities for usefulness in the sacred sphere of woman's duties, as the first two years which she spends as a teacher in school. It is there she first learns to put into practical use the education she has herself previously received; to render her own powers of mind really useful to the world by imparting to the young, those first lessons of instruction which tend to dignify and adorn humanity; to lead the wayward and uncertain steps of childhood into the portals of the temple of science, and to point out to him the upward road; to teach the unskillful hand of early youth how to grasp the key which unlocks the treasury of knowledge, and opens up to him a career of intellectual greatness and glory.

If any young lady had set apart specially for educational purposes, the five years of her life next previous to the time of entering upon the sphere of duty as a wife and mistress of a family, she would be much further advanced in intellectual development and strength of character, and far better fitted to adorn an exalted station by spending two or three years in a school as a teacher, rather than all of them as a pupil. But in this, as in all other pursuits where intellectual advantage is desired, the young novice has many trials and discouragements to encounter, many a sad hour to pass thro', many a cloud to dispel which gathers darkly and threateningly around her path. Dull, ignorant, and refractory pupils; prejudiced, fault-finding, and ungrateful parents; penurious, grudging, and exacting (so-called) patrons, try her patience, and call for the exercise of all her forbearance. The path of the young teacher is not all shadow however, for there is much on the other hand to cheer and encourage. The consciousness of performing to the best of her ability a sacred duty carries its own reward; and the earnest, loving, and childish confidence of the more numerous and better class of pupils; the approval of all intelligent parents who desire the advancement of their children; and the earnest co-operation of all the friends of education, will pay her for many a sad trial.

It is a matter of deep regret that the wages of female teachers are not commensurate with the benefits conferred; but in this respect it follows the inexorable law which deems female labor in all capacities and spheres to a lower scale of prices than that of man. In teaching, as in all other departments of business, female labor is regarded as merely temporary in its nature and auxiliary to that of the other sex.—Wherever employed, the young female (and to her honor be it spoken,) looks forward to the time when she will be called upon to exchange the duties of an employe for the duties of a wife. Neither she nor her employers regard her position as fixed for life, and the temporary nature of the engagement is a powerful element in fixing the low scale of compensation. The fair occupant of the school-room is no exception to the rule, for very few of them, unless, as too frequently happens, they are early removed by death, continue to teach to the end of their days; and many a man besides the writer has been blessed heretofore, and many others will be hereafter, by their willingness to change, when what they deem a fitting opportunity occurs. Fortunate as the results may be in all such cases, it cannot be denied that the tendency is to keep down the scale of wages, for no employment either for male or female, will command the highest rate of compensation, unless it is pursued as the business of a whole life.

It is a matter of rejoicing that so many of our young countrywomen engage, at least for a time, in the capacity of teachers, and the low rate of compensation is attended with at least one good consequence, in that it places the advantages of a common school education within the reach of all. Many of the brightest ornaments of society, as loving wives and exemplary mothers, as patrons of education and active auxiliaries to their successors, are the women transferred to the domestic circle from the school room; and many a *benedict* has reason to bless the hour when in his bachelor days he became acquainted with the mistress of the village school.

Let all men join in sustaining and encouraging the female teacher, for society owes her a debt that cannot easily be canceled, and he who would wantonly throw an obstacle in the way of the young female just entering upon its trying duties, or who would fail to encourage and cheer her on in the midst of difficulties and discouragements is deserving of unmitigated reproach and execration.

## GOOD MANNERS.

The good sound sense of the subjoined extract, should recommend it to the attention of all those who are in any way entrusted with the care of youth:

"It is a matter of sound policy to cultivate the manners of our children. For gentle manners and a kind and obliging address will do more to gather around us firm and enduring friends, than strength of mind and superiority of attainments. The manners to which we refer, are the fruit of the cultivation of a kind heart; the outpourings of benevolence, sincerity and inward purity. In all the departments and professions of life, we prefer, other things being equal, to avail ourselves of the services of persons of agreeable and obliging manners. They are coin of great intrinsic value, and everywhere current. We may be allowed to glance at some of the features of good manners, such as we desire to have taught and practiced in our schools, and such as all persons in well ordered society are bound to observe. The conventional rules for society are not arbitrary enactments, which any who choose have a right to set at defiance. They are essential to the maintenance and enjoyment of social intercourse, and the furtherance of its highest ends.—Every person who enjoys the privileges and benefits of society, is morally bound to observe its wholesome rules. Ill breeding is a sin against good morals, as well as a breach of social laws. No person has any right to act the clown in well ordered society, or to be unkind and offensive, setting at defiance the laws made for its convenience and comfort, by common consent. The leading feature of good manners is a scrupulous observance of all the rules that regulate social intercourse. Let the pupils of our schools be required to observe them in their intercourse with each other and their teachers, and upon all other occasions. Many of these rules abstractly considered, are little things; and yet in their influence upon the convenience and pleasure of social intercourse, they are great things. A particle of dust is a small thing, yet in the eye, which it irritates, it becomes great in its influence. So an infringement of the rules of good breeding may be of itself of small moment, but it often becomes important in the friction and irritation which it produces in social intercourse."

## TWO WAYS OF DOING A THING.

We were passing leisurely along one of our streets the other evening, watching the sport of a group of youngsters, when our ears were assailed by the sharp, angry tones of a woman:

"Here, you, John Smith! come into the house this moment!"

One of the boys just turned his head, giving, at the same time, a rather unfilial shrug, then resumed the play.

"Do you hear what I say, John Smith? March quick, or you'll catch it, I tell you!"

We rather think Johnny did "catch it," for we heard, after we had passed, a jerk and a slap, accompanied by a smothered yell, as the door was very violently slammed to.

We went on our way, doubting whether this course of treatment was exactly the best, under the circumstances, particularly as the countenance of the lad indicated the greatest good nature.

As we were cogitating on the matter, we turned the corner, and came upon another group of lads in front of a house, the door of which was at that moment opened.

"Willie," said a mild and pleasant voice.

"Did you call, mother?" asked one of the boys, coming on to the sidewalk.

"Yes, my son. It is getting late, have you not played sufficiently to-day?"

"I should like to stay out a little longer, if you please."

The mother patted the boy on the head, and smilingly said—

"I should not object, if it were not past your bed-time. Have you forgotten, Willie, the lines you repeated to me this morning"—

"Early to bed and early to rise,
Make one healthy, happy and wise,"

chimed the boy quickly. "Yes, mother, I remember them. Good night, Tommy, good night, Harry," and taking his mother's hand, he went very cheerfully into the house.

This set us again cogitating. Our tho'ts run on the laws of kindness and force.—What would be their effects on the two lads who had been subjected to them? Is it not the inevitable tendency of the one to beget kindness, amiability, obedience—and of the other obstinacy, ill-temper, disobedience? No one will dispute this, we think.

Good Advice.—If you would relish your food, labor for it; if you would sleep soundly, take a clear conscience to bed with you; if you would enjoy the raiment, pay for it before you wear it.

JOHN DELAFIELD.

In connection with the above excellent portrait, we present our readers with a brief biographical sketch of the original—whose recent and sudden decease was chronicled in our last number.

Mr. Delafield was born in the city of New York in 1786, but a portion of his early life was passed upon his father's farm on Long Island. Here, in the intervals of study and business, was given the first impulse to that taste for agricultural pursuits which so honorably distinguished him—an impulse which gathered strength by manly and healthful exercise as an occasional assistant in the active labors of the farm.—Here, and thus early, he became convinced that the life of the tiller of the soil was one of the most honorable and useful which could be chosen.

Mr. D. graduated at Columbia College, after which, as junior clerk, he was employed in the counting-house of a firm largely engaged in the East India trade. In the difficulties which preceded the war of 1812, Mr. D. was appointed to the command of a fleet of merchant vessels which visited various foreign ports to collect and send home the property of our merchants. They made their head-quarters at Havana, visiting Spain and Portugal in furtherance of their object—where he improved every opportunity to extend his acquaintance with the agriculture of those countries.

Soon after, on the commencement of the war, Mr. Delafield being wrecked on the coast of England, became a prisoner on parole, but, from his previous pursuits, being well known to prominent, influential British business men, he was kindly treated and allowed the range of a circle of thirty miles in diameter, including London and vicinity in its limits. He also obtained license to make excursions into the best agricultural districts, visiting freely among the most prominent and successful cultivators of the country, and becoming personally interested in the care of a small farm in Buckinghamshire.

On the return of peace, Mr. Delafield, from various inducements, concluded to remain in London, and for eight or nine years was well known on the London Exchange as the American Banker. Here he obtained that influence, and established those relations which enabled him on his return to his native city, to bring millions of foreign capital into circulation throughout the country, particularly in the Southern and Western States.

In 1839, he effected his last Illinois State Loan. The repudiation of this debt destroyed Mr. Delafield's private fortune, and, unfortunately as it may have seemed to him, but happily for the agricultural interests of Western New York, induced him to devote his attention to practical farming and matters therewith intimately connected. Though for twenty years one of the most active and successful Bankers of the city of New York, he never lost his interest in his favorite pursuit, and devoted his leisure time to the care of a small farm near the city. The agricultural publications of our own and foreign countries were ever found on his table, and often were seen side by side with State bonds for millions upon his official desk.

In 1842 Mr. D. removed to his late residence, known as "Oaklands," at Rose Hill, Seneca county. Here his efforts for Rural Improvement and the best interests of community, were worthy of all praise—and ere long he became known and valued as one of the most efficient and prominent agriculturists in the Empire State. This honorable course justly elevated him, in 1851, to the Presidency of the N. Y. State Ag'l Society. At the time of his death, Mr. D. was President elect of the N. Y. State Agricultural College, and most zealously engaged in efforts to establish that as a model institution for Agricultural Education. He was also President of the Seneca Co. Ag. Society. During his residence in Seneca, Mr. D. accomplished much in promotion of the agricultural interests of that County and Western New York, and his efforts in that behalf will long be remembered, and his memory cherished, by the right thinking and progressive portion of community.

## EDUCATION vs. WOMAN'S RIGHTS.

An old Grecian philosopher once said, "I had rather be the ram than the son of a Megarean." This two-edged sarcasm was occasioned by the care the Megareans took of their flocks, while they neglected the education of their children. It would not be too severe upon some men to call them by name, and to say something similar now.—Especially is this the case in respect to the education of their daughters. "It costs too much." Teachers of cheap qualifications must "keep" the public schools, and to send daughters from home is not to be thought of. If then, as in the dark ages, at the present day the poor allow their daughters to grow up having acquired only the simplest rudiments of knowledge, while the daughters of the rich, taught in addition little besides embroidery and music, complete their education at sixteen and thenceforth devote themselves to dress and society; what wonder if with such a preparation for life's duties, men should esteem them according to their station, rather as servants or playthings than as companions? What wonder if the daughters thus trained are vain, fickle, passionate, or lacking in sound judgment? What wonder if women are ignorant, and negligent of their social and political rights; or that their husbands and brothers should trespass upon them?

Such has been the case. But a change has come. As schools have improved and higher seminaries for females multiplied, it is discoverd that women are shut out by custom from a large share of the most lucrative and honorable employments. They may compete with the foreign domestic, or they may

"Stitch, stitch, stitch
In poverty, hunger and dirt,
Sewing at once with a double thread,
A shroud as well as a shirt."

Or they may teach at half the price their brothers would receive for the same labor, if they can find employment.

Is it singular that they should complain of this state of things? Is it to be supposed that educated women, able and willing to do anything not unbecoming their sex, will be silent on this subject? It is easy for the heartless or unthinking to sneer; it is easy to point to instances in which the advocate of "Woman's Rights" has erred, has manifested more zeal than discretion. But while such cases may retard, they cannot entirely prevent the progress of reform. To do that, one must go deeper—must close female seminaries, and blot out the religion which teaches that woman was born to be not the slave, but the companion of man, on earth and in heaven.—*Examiner.*

What does education mean but the regeneration of the mind?

## FRANKY'S SLUMBER.

BY MRS. S. WEBSTER LLOYD.

A little girl lay dying,
A child of scarce three years;
Above her bent the mother
In agony and tears.

And we who watched beside her,
Knew that her end was nigh;
Death's damp was no her forehead,
Death's film before her eye.

But as the daylight faded,
In a clear sweet voice she said,
"Come sister, it is growing dark,
And I must go to bed."*

Lower her mother bendeth,
But caught no coming breath;
The sweet voice never spoke again
Dear Franky slept in death.

Within the village church-yard,
Her last cold bed was made;
And there in all its loveliness
The cherub form was laid.

Often her sister stands beside
The little grave to weep,
But she never has a colder thought
Than "Franky is asleep."

Over one other heart at least,
The precious words that fell
From little Franky's dying lips,
Come with a holy spell:

For Death has ever since to me,
Seemed beautiful and blessed;
The quiet slumber of the tomb
More like a heavenly rest.

* The last words of little Frances Watson.

## "THE SABBATH A DELIGHT."

To the Christian as to the sacred Psalmist, the Sabbath is ever "a delight." To the toiler it comes as a blessed day of rest and quietness after the labors of the week. But it is this and more, to the disciple of Christ; and how delightful to hear the sound of the bell which calls to the sanctuaries of the Giver of the Sabbath—to worship in the courts of His earthly temples,—all preparatory to the rest and worship which is the inheritance of His saints in the Heavenly city. There the soul bows in the humble sincerity of a grateful heart, before Him to whom we owe every favor which we enjoy. There, from communion with God, and from the gracious teachings of His Word, we gain strength for the duties of the week and grace to bear the trials it brings us.—Bless God, for His day—"the pearl of days" to all on whom it shines! Well is it characterized as—

"The day which God hath blest,
The brightest of the seven,
Type of that everlasting rest
The saints enjoy in Heaven."

Maple Hill, N. Y., Oct. 1853.

## ASSIMILATION TO THE WORLD

It is said that a Scotch clergyman once undertook to convert some French prisoners confined in a castle. Returning from the castle one day, the Missionary met Dr. Henry, when the following dialogue, as we learn from a popular monthly, took place:

"What ha'e ye been doing in the castle, Mr. John?"

"I've been about my Master's work, Doctor, converting the poor deluded bodies, the French prisoners.

"A most orthodox employment; of course you understand the language."

"Na, ne'er a word of French can I speak."

"Astonishing! how did you get in?"

"To tell the truth, Doctor, it was no easy matter; for the first time when I tried to be serious with them, they jeered and made a fool o' me, but I fell on a better plan next day: I ordered a great bowl o' punch, and we sat around it and drank to ane anither; they leugh and I leugh, and ye ken, Doctor, the Lord works his ain work."

Too many at the present time pursue substantially the course adopted by the Scotchman with his bowl of punch. To gain an influence with those they aim to convert, ministers are seen taking the lead in the gay and fashionable circle, and at the party or the fair. Professedly for the same object, they crowd into every popular worldly institution that can be named seeming to think that if the good will of sinners can be obtained, even though it be around a bowl of punch, in the fashionable party, or at the fair, then the work of conversion is half done. Alas! if they knew the truth they would know that this conformity to the pleasures and follies of the unconverted, dishonors the sacred office, grieves the Holy Spirit, paralyzes their strength as Christ's ambassadors, and renders it certain that Heaven will seek other instrumentalitity for the conversion of sinners.—*Religious Telescope.*

Infants in Heaven.—Beautiful is an infant, whatever we may picture it to ourselves. Beautiful in the cradle. Beautiful upon a parent's knee. Beautiful, awake, asleep. Beautiful at play, in the corner of the room, or under the shade tree before the door. Beautiful as a lamb in the Saviour's arms. Beautiful at the font of baptism. Beautiful beneath the coffin lid. Yes beautiful even there, in the loveliness of death—with hands folded peacefully—with brow like moulded wax—with eyes closed in sleep—"perchance to dream!"—with lips so gracefully composed, as if to say,—"I murmur not,"—and with its whole face radiant with a smile, which is the imprint of its dying vision!

# Miscellaneous.

## LOVE IN DEATH.

A MOTHER sits by a lowly grave,
A hillock small and green,
With two gray stones at the head and feet,
And the daisied turf between.
Silent she sits in that place of graves,
As if tranced in a dream of prayer,
And her hand oft plays with the rustling grass,
As with the curls of an infant's hair.
Does she think of the time when she hushed it soft
With the cradle lullabies?
Or when it hung on her teeming breast,
With a smile on its lifted eyes?
Or when she touched with a reverent hand,
(When its sunny years were three,)
The lamb like fleece of its flaxen locks,
As it prayed beside her knee?
Or the hour when a sad and simple pall
Was borne from the cottage door,
And its dancing step was never heard
Again on the household floor?
Does she fondly image a cherub shape
'Mid a shining angel band,
With star-crowned looks and garments white,
With a lily in its hand?
Silent her thought; but at twilight hour
Ever she sitteth there:
And her hand oft plays with the rustling grass,
As with the curls of an infant's hair.

## A NOVEMBER DAY AT UNCLE JOHN'S.

THE rain ceased yesterday afternoon, and the sun rises unclouded this morning. This is hailed as a happy change from the cold storm of the last few days, especially by the farmers who have not yet finished their fall work and made all snug for winter. So it is with uncle JOHN, whose apples are not all gathered and whose corn is yet unhusked. And when "mother" got up at dawn and saw by the stars that twinkled here and there in the clear blue sky, the encouraging prospect of a pleasant day—and another supply to the apple-bins in the cellar and the barrels in the wood-house—she told "father" that "the girls might help pick apples, for it was a pity that any should be lost." So he calls his son NED, the youngest and only one at home, to "get up and do the chores in good season, so as to finish the apples to-day;" and goes out to feed the hogs—the great, sleek-looking porkers that promise to go over four hundred by Christmas, and bring him each twenty-five dollars or more, if the price keeps up.

The cows—Daisy, Joan, Beauty and Flora—are milked, and fed a pumpkin each; the horses watered and cared for, and then, after prayers, breakfast is eaten with that true relish which a good appetite alone can give. And now for the orchard lot, joining the door-yard on one side, again. The trees were partially stripped three weeks ago, but there are still remaining many bushels of Greenings, Russets, Spitzenbergs, and other apples. The girls, ANNIE and BESSIE, have finished their mornings work, and in their plaid flounce dresses—made at home—and their warm hoods, go out very willingly to assist in the picking. NED climbs the trees, and gathers the best and fairest, Uncle JOHN mounts the ladder for those on the outer limbs, and his daughters pick what they can reach from a stool, and those which are not bruised in their fall on the thick grass beneath. They are sorted for market, for immediate use, and for the winter store, and by noon the best of the apples are disposed of. The poorer fruit, which Uncle JOHN finds capital food for his stock, is left for another day; for the corn *stooks*—which stand in the little meadow where they were moved when the cornfield was sown to wheat, some six weeks ago,—are now dry and in capital order for getting into the barn. There it will furnish plenty of employment for the rainy days, and may-be Uncle BEN and his boys will help finish up some pleasant evening. Their corn was husked out last week.

But dinner is ready. "Mother" has baked potatoes, and a chicken frickasee, with baked squash, fried cabbage and other "fixins," such as country appetites know how to appreciate. All are in capital spirits to see the work go on so well, and when dinner is over Uncle JOHN and NED harness up, and with the farm-wagon commence drawing in the corn. The "single" and "double band," which hold the stooks together are removed, and the heavy bundles pitched one by one into the wagon, where NED arranges them in order. PRINCE is on the watch for "mice and such small deer," as the work goes on, and occasionally finds one when the last bundle falls over. The load is completed and they drive beside the barn-door. The corn is thrown in and set up over the whole surface of the floor, as load after load is drawn, till all is full, and the early setting sun admonishes them of "chores" again. These occupy them till the stars begin to twinkle in the blue sky, at early twilight.

Supper is again before them,—but we will not set it before the reader, for fear it will make him hungry,—and the conversation goes on very pleasantly. There are many things to talk of, interesting to both parents and children, and they are enlivened by an arrival from the Post Office of letters and newspapers. Absent brothers and sisters send home news of their welfare, and words of love for those dearer than ever, now they are left behind in the changing scenes and struggles of life. The newspapers.—all "old friends of the family"—do their share in promoting the pleasantness of the evening. So passes a November day at Uncle JOHN'S farm, in—the country.—B.

For the Rural New-Yorker.

## PASSAGES FROM COLERIDGE.

A HOPEFUL FRIEND.—In the dedication of "The Friend"—one of his most valuable works—COLERIDGE thus characterizes a mentor and companion, one who would be at once *strength* and *blessing*,—an encouragement and a joy:

I would select one who felt kindly, nay even partially, towards me; but one whose partiality had its foundation in *hope*, and more prospective than retrospective, would make him quick-sighted in the detection, and unreserved in the exposure, of the deficiencies and defects of each present work, in *the anticipation of a more developed future.*

NOVEL READING.—How reading for amusement alone, (and perhaps reading with inattention has the same effect,) weakens the mind and lessens the power of thought, is thus explained:

It cannot but be injurious to the human mind never to be called into effort: the habit of receiving pleasure without any exertion of thought, by the mere excitement of curiosity and sensibility, may be justly, ranked among the worst effects of habitual novel reading. * * Like idle morning visitors, the brisk and breathless periods hurry in and hurry off in quick and profitless succession; each indeed for the moments of its stay prevents the pain of vacancy, while it indulges the love of sloth; but all together they leave the mistress of the house (the good, I mean,) flat and exhausted, incapable of attending to her concerns, and unfitted for the conversation of more rational guests.

IMPRUDENCE OF "PIOUS FRIENDS."—Opposites so distinctly diametric as truth and falsehood can never unite for the furtherance of the same cause. How forcibly is this proved and illustrated in the following paragraph:

An honest man knows, that by sacrificing the law of his reason to the maxim of pretended prudence, he purchases the sword with the loss of the arm that is to wield it. The duties which we owe to our own moral being, are the ground and condition of all other duties; and to set our nature at strife with itself for a good purpose, implies the same sort of prudence, as a priest of Diana would have manifested, who should have proposed to dig up the celebrated charcoal foundations of the mighty temple of Ephesus, in order to furnish fuel for the burnt offerings on its altars. Truth, virtue, and happiness, may be distinguished from each other, but cannot be divided. They subsist by a mutual co-inherence, which gives a shadow of divinity even to our human nature. "Will you speak wickedly for God, and talk deceitfully for him?" is a searching question, which most affectingly represents the grief and impatience of a pious mind at perceiving a good cause defended by ill means; and assuredly if any temptation can provoke a well-regulated temper to intolerance, it is the shameless assertion that truth and falsehood are indifferent in their own natures.

## HOW TO PROSPER IN BUSINESS.

IN the first place make up your mind to accomplish whatever you undertake, decide upon some particular employment and persevere in it. All difficulties are overcome by diligence and assiduity.

Attend to your own business; never trust to another. "A pot that belongs to many is ill-stirred and worse boiled."

Be frugal. "That which will not make a pot will make a pot lid." "Save the pence and the pounds will take care of themselves."

Be abstemious. "Who dainties love shall beggars prove."

Treat every one with respect and civility. Everything is gained and nothing lost by courtesy. Good manners insure success.

Never anticipate wealth from any other source them labor; especially, never place dependence upon becoming the possessor of an inheritance. "He who waits for dead men's shoes may have to go for a long time barefoot." "He who runs after a shadow has a wearisome race."

Above all things never despair. God is where he was. "He helps those who truly trust in Him."

GEM FROM A PERSIAN POET.—The heavens are a point from the pen of God's perfection; the world is a bud from the bower of his beauty; the sun is a spark from the light of his wisdom; and the sky is a bubble on the sea of his power.

## SEA BATHING.

TAYLOR, the racy correspondent of the Chicago Journal, thus hits off the salt water bathing at Coney Island:

These grand concert bathing places, are like death. Beauty and ugliness are nothing. Everybody is in marvellous disguise. It is amusing to watch the metamorphoses, as one after another they occur. An elegantly dressed lady, beautiful and young, goes tripping along towards No. Nine, while a be-whiskered, be-chained, be-patent-leathered gentleman does "sesame," to No Twelve. Now numbers nine and twelve, as the uninitiated must be advised, are two apartments in what may properly be called Rockery Row, a series of watch box-affairs, used as boudoirs and toilet rooms, by all pilgrims "of high and low degree," to Coney Island. Well, they turn the key and in they go. By and by No. Nine opens and out steps a—squaw, and a sorry looking specimen at that, with a tattered, broad-brimmed hat, pretty much "run up to seed," a striped frock and leggins, and bare footed, and away she trots over the burning sand to the water, and in she goes, not with a whoop, as one might infer, but with a delicate little shriek—pretty much all there's left of the lady who entered No. Nine. The step has degenerated into a trot, the elegant bonnet into a "shocking bad hat," laces, ribbons and skirts, and all the fortifications to take hearts, into a straight rag, and hang apout the form like a becalmed flag round its staff. Her hair, that waved like the sea, is as tangled and dripping as the sea weed. She runs out a little way, and squats plump down in the water; she tumbles this way and that; she goes under the water for an instant; she puts a hat full of water on her head, and does queer things she never dreamed of; in comes the wave, and away she rolls over and over. Her white feet twinkle through the water like shells of pearl. Up she scrambles; her dress has fallen in love with her; she pulls this way and that, but it sticks, "closer than a brother;" she looks about half timidly, but *every body's so*, and what matters it? Down she goes again, and down they all go.

No. Twelve comes out with a bang, and out comes "a fellow in the coarsest kind of blue shirt, and pepper and salt pantaloons, torn off about three inches above the knees." There he stands, under no obligation to the hatter or boot maker; surveys the scene a moment, and makes a Bee—*that's* the orthography, and not B—a bee line for the water, and becomes amphibious in a twinkling. Where's your gentleman? You'll find all there is left of him, in a little heap in a corner of No. Twelve, inventoried thus: one pair patent leathers, $6 00; one pair pants, $10 00; one Marseilles vest, $8 00; and so on to the hat. *They* were what half the world knew him by, and what more than half the world know him for. A funny world this is, to be sure!

## LOVE OF NOTORIETY.

How some men will struggle to make them a name. The quality of the praise, however, is seldom regarded, or the from in which it comes, so *that* it comes. We have seen small men in caucuses thrust themselves into positions that bigger and better men might wait long to attain. In societes, likewise, this disposition to be notorious is very evident, and by hard striving the small men become giants and get place.—We see in the papers—those modiums ever aimed at by notoriety lovers—that Mr. Smith has been presented with a service of plate by admiring friends, or that Mr. Jones has been chosen fifth-sergeant in the Bungtown invincibles, or that the wife of Mr. Wiggins has had twins—all to be traced to Messrs. Smith, Jones and Wiggins' influence in making the public aware of the great facts. The grand Salvation Club hold a meeting, and a series of resolutions offered by Mr. Cheek, burst on a startled world through the Clarion of Liberty—Mr. Cheek himself having kindly offered the editor of the Clarion a copy. At the supper of the Engine Co., or at the cattle show dinner, or at the levee of the chairman of the board of select men, you will always find Tongue, with his mouth wide open, and ready to tell all he knows—no difficult task. We have known Tongue to take four different positions in a debating society in one evening for the sake of speaking—though the more he spoke the less he said.

A man of good sense courts no notoriety like this. If there is anything in a man, the world will want him sooner or later, without any anxious exertion on his part to thrust himself forward. And those who struggle to give themselves such prominence generally fare in the end like their brother in the fable, who climbed the ladder, and found to his shame that the higher he climbed the more ridiculous he looked. The evidentness of the aim of those who love to see themselves in print, or to hear themselves spoken of at the corners of the streets, generally renders the aim abortive, or only so far effective as to induce contempt, or the next thing to it, pity, for those who practice it.

ENERGY.—See! how that fellow works! No obstacle is too great for him to surmount, no ocean too wide for him to leap; no mountain too high for him to scale. He will make a stir in the world and no mistake. Such are the men who build our railroads, dig up the mountains in California and enrich the world. There is nothing gained by idleness and sloth. This is a world of action and to make money, gain a reputation and exert a happy influence, men must be active, persevering, and energetic. They must not quail at shadows—run from lions, or attempt to dodge the lightning. Go forward zealously in whatever you undertake, and we will risk you anywhere and through life.

# For the Ladies.

Written for the Rural New-Yorker.

## HON. MRS. CAROLINE E. S. NORTON.

BY MISS ELIZA WOODWORTH.

ENGLAND has produced many distinguished women. There are few names more widely and favorably known than those of Mrs. HEMANS, JOANNA BAILLIE, Miss LANDON, ELIZABETH B. BARRETT and Mrs. NORTON. And among a long and brilliant list, inscribed by the pen of Wisdom, high on the records of Fame, that of CAROLINE NORTON shines conspicuously. She was the grand-daughter of the celebrated RICHARD BRINSLEY SHERIDAN, and has given ample proof that the descendant of intellectual superiority, may be the possessor of the genius that made its ancestor great. Bereaved of her father in infancy, she, with another sister, (also distinguished in the "world of letters,") was left to the tender care of an amiable and accomplished mother, who devoted her energies to the cultivation of the minds and talents of her daughters. Seldom has a parent met with a richer reward. Mrs. NORTON'S poems contain many affectionate and touching allusions to her mother, showing that she not only educated their *understandings*, but their *hearts*.

The childhood of Miss SHERIDAN gave full promise of her future greatness. At seventeen she finished "The Sorrows of Rosalie," a beautifully written and well-conceived poem. In her twentieth year she was married to the Hon. GEORGE C. NORTON. The union was an unhappy one. Gifted with noble and generous feelings, she found herself united to a man "whose only nobility was in his blood." She had loved one more worthy of her, but *he*

"Had gone to the pale realms of shade."

Yet, *even now*, the loved are dying, and the cherished hope of the bereaved heart, as ever fading and perishing. The music of the spirit lyre may be hushed by the icy fingers of death, but its melody will never be forgotten—the voice of affection be lost in the dwellings of silence, yet ever and anon, amid the jar and confusion of earth, the tones of that voice, though departed forever, will tremble in remembered gladness through the still chambers of the soul. The spirit, bowed and broken beneath the heavy weight of its heart-crushing agony, must wander in vain through the darkness for the guiding hand of Love. The light is fled, and never will come again, to gladden and cheer—the star that shone on the calm bosom of heaven, is quenched in the black caverns of the midnight of sorrow. Alas! for the voice of the weeper! Alas! for the wail of the stricken!

The soul, bereft of its jewel, is lonely and despairing. In its hour of grief and agony, it often seals for itself a destiny, more fearful and terrible than even the anguish that has swept away its cherished hope, and is robbing it of its light and beauty. Thus it was with Mrs. NORTON. Her idol had fled—the shrine was forsaken, and the *heart* was *desolate*. In the season of bitterness and grief, she gave her hand to one whose coarse nature could never sympathize with the feelings of an elevated and refined mind. Oblivion may hide the blackness of *his* guilt in the grave, but can never bury the virtues of the pure and angel-hearted *wife*, whose soul has been pierced and riven by the wrongs of one who, instead of protecting, only drove her from him, with keen, cold words of reproach—whose love flickered with every breath of popular opinion, and who, often unbinding and severing every link of affection she would fain have thrown around him, compelled her to endure the scrutiny of an unpitying and envious public. But she passed through all with unsullied purity. Her heart was unstained and unpolluted. But an undoubted reputation, granted by the voice of the public, cannot atone for the bitterness of spirit she has suffered, and the blighted hopes of the heart. Every feeling wronged and outraged—the foundations of happiness shaken and crushed—the harp of bliss silenced by the hand of sorrow—yet, as she beautifully writes of another, may we say of her:

"—— Like a white swan, down a troubled stream,
Whose ruffling pinion hath the power to fling
Aside the turbid drops which darkly gleam,
And mar the freshness of her snowy wing—
*So thou*, with queenly grace and gentle pride,
Along the *world's dark waves in purity dost glide.*"

At present Mrs. NORTON lives in retirement, surrounded by a few choice friends, who have stood firmly by her side in the hour of her deepest trial, as well as when a nation sounded her name with pride and praise, and she now shines a bright jewel in England's crown of greatness.

Besides "Rosalie," she has published two other volumes—"The Undying One," and "The Dream, and other Poems." Mrs. NORTON'S poetry is the embodiment of passion itself, but expressed in the finest and most elevated style. Her wrongs are traced in the words she has written. The sufferings she has endured, and the stern ordeal through which she has passed, are visible on every page. She never descends to murmuring or weak complaint, but preserves a lofty dignity throughout. Her heart is like the king of the forest, when its greeness and beauty has faded; it shivers and moans in the blast, but it bends not beneath it. Her insight into human nature is deep; and the principles which govern society, and those that rule the heart, and those which *should* have authority in both cases, are well understood by her, as the following extract from her "Dream" will show:

"Warriors and statesmen have their meed of praise,
And what they do or suffer men record;
But the long sacrifice of woman's days,
Passes without a thought—without a word;
And many a holy struggle for the sake
Of duties sternly, faithfully fulfill'd—
For which the anxious mind must watch and wake,
And the strong feelings of the heart be still'd—
Goes by, unheeded as the summer wind,
And leaves no memory, and no trace behind:
Yet, it may be, more lofty courage dwells
In one meek heart which bares an adverse fate,
Than his, whose ardent soul indignant swells,
Warm'd by the fight, or cheer'd through high debate;
The soldier dies surrounded; could he *live*
*Alone to suffer, and alone to strive?*

* * * * * * *

In many a village churchyard's simple grave,
Where all unmark'd the cypress branches wave;
In many a vault where Death could only claim,
The brief inscription of a woman's name;
Of different ranks, and different degrees,
From daily labor, to a life of ease,
(From the rich wife, who, through the weary day
Wept in her jewels, grief's unceasing prey,
To the poor soul who trudged o'er marsh and moor,
And with her baby begg'd from door to door,—)
Lie hearts which, ere they found that last release,
Had lost all memory of the blessing "Peace;"
Hearts, whose long struggle through unpitied years,
None saw but Him who marks the mourner's tears;
The obscurely noble! who evaded not
The woe which He had will'd should be their lot,
But nerved themselves to bear!"

Albion, N. Y., 1853.

## SIGNIFICATION OF FEMALE NAMES.

EMMA,—tender, affectionate; literally, one who nurses, cares for, watches over another—is of German origin. Who could desire his mother, his sister, or his beloved to bear a sweeter or better name? Under the form of Imma, it was honored by Charlemagne's fair daughter, whose love history, in connection with Eginhard, her father's secretary, forms one of the prettiest episodes in the chronicles of the time. Emeline is simply a diminutive of Emma.

GERTRUDE is from the German, and according to the etymology usually given, signifies all truth; but Jung Stilling, in his Pneumatology, gives it a very different meaning. Speaking of the Druids he says: "Into this mysterious spiritual order old women were also received; who, by this means, attained to considerable rank, and became priestesses. Such individuals then received the title of Haxa—Druidess.—Both these names were at that time honorable appellations; they are now the most disgraceful terms of reproach. The name of Gertrude is probably also derived from this source, and ought reasonably to be discussed, for it has the same meaning as the word haxa, or hexe, a witch." Well, this may be true; for Gertrudes are generally very bewitching.

HELEN,—Latin, Helena; French, Helene—is of Greek origin. The true signification of it seems to be one of those vexed questions which abound in etymological discussions. According to one, it has the meaning of alluring; another makes it signify a taker, or one who seizes; while a third defines it one who pities. Many a poor unfortunate lover, has found Helen alluring; and has finally been taken, seized, conquered, by the prestige of her bright eyes and sweet voice. Happy is he who finds her one who pities, for pity is akin to love.—Ellen is only a different form of the same name. It is often contracted to Nellie and Nell, and is a fine name in all its forms.

ISABEL,—French, Isabelle; Spanish, Isabella—signifies olive complexioned, or brown. There is a silvery, bell like music in the name, which is exceedingly attractive, and which has made it a favorite with the poets.

MABEL is probably from *ma belle*, my fair, though somd think it a contraction of *amabilis*—lovely or amiable. The fair ones who bear it have no reason to complain of either derivation.

MARGARET,—a pearl—is from the Latin Margarita. Another, and if possible a more beautiful signification, has, curiously enough attached itself to this name. The German word magd, a maid, was anciently written Magete, and maghat, which words were easily confused with Madge, and Magie, and thus with Margaret. Daises were also called maghats, maids, or margarets, whence we have the French marguerites, daisies.—Margaret then, may be a pearl or daisy, as she chooseth; or she may, if she will, combine the beauty and purity of both in her life and character, and thus prove herself worthy of her doubly significant name.—But maidens are something more than pearls or daisies, and well may the poet ask:

"Where may the brightest flower be met,
That can match with Margaret?"

MARY.—This sweetest of all female names is from the Hebrew, and has the meaning of exalted, a truly appropriate signification. It is a famous name, both in sacred and profane history. In all ages it has literally been exalted—from Mary the mother of Jesus, to Mary the mother of Washington. The glory has not departed from the name. In French, Mary becomes Marie.—*Knickerbocker Magazine.*

MOORE'S RURAL NEW-YORKER

ROCHESTER, NOVEMBER 29, 1853.

### SPECIAL NOTICES.—TO AGENTS, &c.

☞ In answer to recent inquiries, we beg to state that the next (fifth) volume of the RURAL NEW-YORKER will be furnished to Agents and Clubs at the same rates, and on like conditions, as heretofore—that the Premium List for the year 1854 will be more liberal than any preceding one—and that the paper will be essentially improved, for the accomplishment of which latter object, we have resolved upon a largely increased expenditure. As soon as our arrangements are completed, a Prospectus, Premium List, &c., will be issued. Meantime we trust that former agents, and all other friends disposed to aid in furthering the circulation of the paper, will prepare for the canvass, and see what may be done in their respective localities.—Now is the time to survey the field and prepare for action,—thus "making ready" for opening the campaign early in November.

☞ Specimen numbers, Premium List, &c., furnished free to all applicants. Any of our readers wishing the RURAL sent to distant friends who would be likely to introduce it to notice and support, have only to give us the names, &c., and numbers will be promptly forwarded.—We hope the zealous friends of the paper—and their name is legion—will bear this offer in mind, and furnish us the address of such persons as they think would like the paper, or lend a portion of influence in its behalf.

### News of the Week.

Two European Steamers, the Niagara and the Aretic, and two Californiua, the Ohio and the Northern Light, have arrived since our previous issue; the last two laden with the fruits of peace, and the first bringing rumors of war. The most important items of news by these steamers, are given in the proper columns, and to them we would call the reader's attention.

There have reached us during the week, several accounts of terrible calamities, as well as narrow escapes both by flood and field. The Express train on the Hudson River Railroad run off the track on Saturday last, owing to the carelessness of a switch-tender. When the accident occurred the train was going at the rate of 35 or 40 miles per hour. The Engineer discovered the misplaced switch a short distance ahead, and immediately reversed the engine and leaped off, followed by the firemau. The train was thrown off in the midst of a lot of freight cars, which were standing on the side of the track. Two locomotives and four passenger cars were smashed. Loss estimated at $50,000. Many of the passengers were more or less injured. No lives lost. The switch-tender has absconded.

The steamer Ohio brings accounts of an accident on the Panama Railroad, by which a locomotive was thrown off a bridge into a ravine, and with it four cars crowded with passengers. Two were instantly killed, and ten or twelve more or less injured. Some of the wounded are seriously injured, of whom one will probably die. There were about six hundred passengers on this train, and it is a matter of congratulation aud thankfulness that no more were killed. There was au unusual proportiou of ladies and children, not one of whom was injured. This road has now been running near two years, and this is the first accident that has happened on it. The loss to the Company, in locomotive and cars, will probably be at least $10,000. The accident was occasioned by the locomotive running over an ox which was upon the track at a sharp curve in the road, preventing the engineer from seeing him until it was impossible to stop the train.

A destructive fire occurred on the 30th ult. in New York in Fowler's Block, corner of Nassau and Fulton streets, destroying several buildings and property to the amount of $250,000; and what is still more lamentable, at least two firemen lost their lives. The disaster was occasioned by the falling of the upper floors of the building, burying the firemen in the ruins.

One of the most heart-rendiug shipwrecks which it has been our lot to record, happened on the night of the 28th of September, on one of the Hebrides, a group of islands near the coast of Scotland. The Annie Jane, the vessel which was wrecked, sailed from Liverpool for Quebec and Montreal, on the 9th of Sept., with some 450 emigrants, most of them Irish families. It is presumed that she had made some progress across the Atlantic, when she encountered the late fearful south-western gales, which disabled her aud rendered her unmanageable, and in that hopeless condition she was driven back and dashed on the terrible coast of Barra, one of the Hebrides. No fewer than *three hundred and forty-eight* passengers—men, women, and children—met with a watery grave. A long account of the disaster is given in the English papers brought by the Niagara, but the details are too heart-rending to be dwelt upon. Husbands and wives, parents and children, the aged and the young, were overwhelmed in the common calamity, and perished in each others presence. Out of the 450 passengers, the wretched and heart-broken remnant left alive numbered one hundred and two, many of them being the sole survivors of whole families.

The aspect of the political sky is cloudy and threatening. The quarrel in the Democratic rauks in this State, is irreconcilable, and there are also local splits on some of the Whig tickets, although the hope and the expectation of carrying the State if they *hang* together, make them much more harmonious than their ancient political enemies. "We shall see what we shall see." The friends of the Canal Enlargement generally favor the Whig side of the house, and the impression among disinterested lookers on (if there are any such) is that they will carry the State this fall.—Most of the other States which have held their elections, have gone Democratic by large majorities. The Democrats in Vermont, by the aid of the Free Soilers, have elected their Governor; which is the first Democratic Chief Magistrate they have had in that State "since the time whereof the memory of man runneth not to the contrary."

### November.

NOVEMBER, fitful and uncertain as a spoiled sweet-heart, is upon us, aud we may expect, during the month, smiles and tears, freezing rebuffs and warm embraces, emblematic of the reception which a bashful lover frequently meets at the hands of the mistress of his affections—now all condescending and easy to be entreated, and anon teasing his life out with her follies and foibles. But November is the antipodes of the above in this respect, that while the former is followed, as an inevitable sequence, by a dreary and blightiug winter, the latter is usually succeeded by a long summer of connubial bliss.

The trees are now nearly stripped of their foliage, and the fields are clothed in a coat of russet brown. The industrious red squirrel is gleaning up the scattered nuts for his winter store, and the chipmuck, with distended cheeks, is hastening out of the corn lot with the results of the forced loan he has made upon the farmer's fields. Old Dobbin trudges round the creaking cider mill with a patient step, philosophising upon the problem of curvilinear motion, and wondering if whacks on the ribs from a thoughtless, but not iutentionally cruel boy, who rides on the pole, are the only results of his continuous circuit. The apple barrels in the orchard, filled and headed ready for the market, call up glowing visions of the winter fire-side, and the gurgliug stream from the cider press, sounds like the ghostly voice of departed days, ere total abstinence had banished the foaming mug from many a hearth.

The weather during the week has, for the most part, been very fine. The deep blue of the sky, the bright but waning glory of the autumnal sun, the chill, keen air of the nights, the transparency of the atmosphere from which the fleecy cloud of mist is precipitated in the shape of frost, covering the remnant of vegetation which yet remains undecayed, with a death-produciug mantle as fatal to organic life as the robe of Hercules steeped in the blood of the Centaur, all indicate the approach of winter. Ceres, and Flora, and Pomona are gathering up their robes to depart, and are about to abdicate in favor of a sterner tyrant, who sways the sceptre with an iron hand; but thanks to a rich and generous soil, a mild and free government, an intelligent and industrious people, peace and plenty withiu our borders, and the smile of a merciful and beneficent Providence, we can look with complacency upon approaching tempests, and pull old Winter by his hoary beard.

A LINE OF STEAMERS, consisting of the *Sarah Sands, Lady Eglinton* and *Cleopatra*, are to make monthly trips between Portlaud, Me., and Liverpool during the winter. The Cunard steamers will also call at Portland when any considerable quantity of freight is offered for that port. Boston must look to her Canadiau commerce or her Down East sister will steal the march on her unawares. The Grank Trunk railway having leased for the term of 999 years, the Atlantic and St. Lawrence road terminating at Portlaud, will strain every nerve to make that city the chief port of entry for Canadian trade.

READ the advertisements in this number. Mr. PETER'S sale of Spanish Merinos, and the cards of Mr. BRAINARD, should be noted by wool growers. The farm offered for sale by Mr. LANGWORTHY should not be overlooked by those desirous of purchasing. It a most valuable property. There are other advertisements worthy of notice.

SNOW, to the depth of a foot or more fell in the vicinity of Cooperstown, Otsego County, on Monday the 24th ult. Had the weather remained cold, sleighs would have been brought iuto general requisition.

THE JURIES to award premiums to the Exhibitors at the Crystal Palace, are about being organized. There are to be three classes of prizes, Silver medals, Bronze medals and "honorable mention."

## Literary Notices.

MYSTERIES OF BEE-KEEPING EXPLAINED. Being a complete analysis of the whole subject—consisting of the Natural History of Bees, directions for obtaining the greatest amount of surplus Honey, with the least possible expense; remedies for losses given, and the science of "luck," fully illustrated. The result of twenty years experience in extensive apiaries. By M. QUINBY, Practical Bee-keeper. New York: C. M. SAXTON—1853.

THE general design of this work is well indicated by the title. From a cursory glance through its pages, we think it a valuable addition to our Bee literature. It is written in a popular style and in the right progressive spirit. The author is evidently impressed with the conviction that great improvements are to be effected in the management of bees, and is determined to do what he can to bring about the good time coming, when bee-keeping shall be reduced to a science and honey be as plentiful as Canada thistles.

MAGAZINES FOR NOVEMBER.

*Graham's Magazine* for the month is received, and is for sale by DEWEY. It is a capital number.

*The Knickerbocker*, as usual excellent and original in its contents, is for sale by MCMAHON & Co.

*Putnam's Magazine* is received from the publishers. It contains 120 pages of matter, original and selected, among which are a review of DICKENS' Bleak House, and another of those spicy satires upon New York fashions and follies—entitled "A letter from Miss CAROLINE PETTITOES to MRS. SETTUM DOWNE," and dated at Paris.

## California News,

### Arrival of the Northern Light.

THE steamship Northern Light from San Juan, Nicaragua, for New York, put into Norfolk, Oct, 25th, for coal and provisions.

She brings San Francisco dates to the 1st inst., about 700 passengers aud one and a half million dollars in gold.

The general news presents no features of importance. The Sau Francisco markets are dull, and prices favorable to buyers.

### Arrival of the Steamer Texas.

The steamship Texas arrived at New Orleans Oct. 25th from Vera Cruz, bringiug California dates of Sept. 30. She reports the departure from San Francisco of the steamer for San Juan del Sud, with 460 passengers and $1,500,000 in gold, and the steamer Panama, for Panama, with $1,000,000 in gold.

The semi-monthly shipment of treasure from San Francisco, was nearly $3,000,000.

The general news by this arrival is of more than usual interest.

Great dissatisfaction was manifested on the receipt of the intelligence that the Cabinet at Washington was divided upon the question of the Pacific Railroad.

The Indians in North California and Southern Oregon had combined their forces, aud threatened a desperate war against the white population.

The weather in California was fair, and building was progressing in San Francisco with great activity. The crops throughout the State were in the most flourishing condition, and a large yield was confidently anticipated.

Large numbers of cattle have died in crossing the Plains. Emigrants via. the Plains have continued pouring into Sau Francisco in immense numbers. Their health was generally good, and but little sickness was experieuced along the route.

Capt. Vaidee, of the U. S. Coast Survey, had been murdered by the Mexicans.

Several violent deaths had occurred at San Francisco. Many robberies are also reported to have taken place.

The intelligence from the mining districts continued favorable, and the miners generally were doing well. The quartz mines in Grass Valley were paying better than at any previous period. Rich and valuable discoveries have been made on Lake Valley.

Trade at San Francisco and throughout California was very dull, owing, in part, to a continued tightness of the money market and large arrivals of goods from the Atlantic cities. The San Francisco markets were glutted with goods, and cargoes were selling below their value, in order to pay off the freight and iucidental charges. In provisions transactiors were exceedingly limited, and the tendency of prices downward.

### Arrival of the Ohio.

The steamer Ohio, from Aspinwall, arrived at New York Oct. 28th, with $928,000 as freight, and $200,000 in the hands of passeugers and the mails. She left Aspinwall on the 18th. An accident happened on the Panama Railroad on the 1st, while the trains which contained the passengers and mails by the Illinois was passing over it. The locomotive care in collision with a bull, while crossing the bridge near Tabernilia, and was thrown off the track, and pitched the cars into the ravine, fifteen feet. The locomotivs and five cars were smashed, and the bridge completely destroyed.

### Recent Counterfeits.

THOMPSON'S *Bank Note Reporter* for November, gives the following list of Counterfeits recently issued. Look out for them:

10s on the Rome Exchange Bank, N. Y., altered from 1s—vig. a train of cars—ten on the upper right corner, and a male and female, sheaf of gram, &c., under it—ten on the lower left corner, and an X on upper left corner.

3s on the Ogdensburgh Bank, N. Y.,—vig. a fig. 3—an eagle between the signatures—engraving very coarse.

3s on the National Bank, Providence, R. I.—An eagle on the upper left corner; rail cars in the distance—large figure 3, with the head of Washington near the centre of the note—a female on the lower right corner—unlike genuine.

3s on the Mystic Bauk, Conn., counterfeit—on the right upper corner is the figure of a white man and Indian, with sextant and globe, and a spread eagle on it—on the left end a female seated—at the bottom, between the signatures, is a female in a sitting posture—well calculated to deceive.

5s on the Bank of Watertown, N. Y., altered from 1s, are in circulation.

10s on the Bank of the Union, N. Y. city—vig. two females on the left—two stripes, "Atwater Patent," on the right.

10s and 50s on the Rock Island Bank, Ill., altered from smaller denominations—this bank has no larger notes than 5s.

10s on the Citizens' Bank, Worcester, Mass., altered from Citizens' Bank, D. C.—vig. a female resting one arm on an X—an Indian on the right end—ten on the left end—a steamship between the signatures.

20s on the Farmers' & Mechanics' Bank, Hartford, Conn., altered from 2s—vig. State arms—female on left end—eagle on right end.

5s on the Unadilla Bank, N. Y.—vig. female, sickle, grain, locomotive and cars, and a building in the distance—female head on the right—admirably executed—paper poor—general appearance very dark—the genuine is quite light.

5s on the Citizens' Bank, Fulton, N. Y., altered from Citizens' Bank, D. C.

10s on the Cumberland Bank, R. I.—vig. eagle, ship, &c.—ten on right end—medallion head on left end—not like genuine.

10s on the Deep River Bank, Conn.,—vig. head of a wild boar; X each side of vig. man, Indian, eagle, &c., on right end—a deer between the signatures—not like genuine.

5s on the Fall River Bauk, Mass.—vig. blacksmith at work; shop on left and rail cars on right of vig.—female portrait on each end.

10s on the Bank of Litchfield County, Conn., altered from 1s, signed A. McAlister, Cash.—the bank has none larger than 3s, signed by him.

3s on the City Bank, New Haven, Conn.,—vig. cattle, train of cars, &c.,—Franklin on lower left corner—female feeding an eagle on the right end—not like genuine.

BOLD ROBBERY.—On Thursday evening 27th ult., about 7 o'clock, Mr. Munson Mallett of this city, while on his way from Irondequoit to the residence of Mr. Rowell, on Stone st., was attacked by two men near the corner of Main and Stone sts., knocked down and robbed of about $60. He was found in this condition a short time afterwards, and was taken to Mr. Rowell's, where aid was rendered him. Mr. M. is nearly 60 years old.

## News Paragraphs.

☞ A London correspondent of the Philadelphia Gazette says that among the ladies striking or on the eve of striking, may be numbered the female cloak and mantle makers. They have held a meeting to express their opposition to the American sewing machine; and they call upon all sempstresses engaged in establishments to aid them in opposing it as it is likely to be introduced generally into wholesale houses, the ruin of thousands of females must necessarily ensue.

☞ Some of the farmers in Livingston have formed an "Association for the Improvement of Stock," with the following officers—Jas. S. Wadsworth, President; Daniel H. Fitzhugh, Secretary; Allen Ayrault, Treasurer. The stock of the Association is to be $8,000, with liberty to raise it to $12,000, and the fee for membership is $50. The funds of the Association will be expended in the importation of stock, which is required to be kept in the county for three years.

☞ The Abingdon Virginian announces the departure from that place, on the 12th inst., of about forty free persons of color, big and little, for Liberia. They were all well equipped for their long passage, and went off as cheerful and merry as a flock of black birds. They will sail from Norfolk on the 5th of November. There were several very old men in the company, who go for the sake of their children.

☞ The oldest inhabitant of Norwich, Ct.,—Erastus Perkins, Esq.,—died in that city on Tuesday, 18th ult., at the remarkably advanced age of one hundred and one years and eight months.—The memory of Mr. Perkins was very good, even in the last years of his life, and reached back in American history to the times of the French war, terminating with the conquest of Canada by the British and Colonial forces.

☞ Mr. Spencer, of New Bedford, Mr. and Mrs. Hutchinson, of Nashua, Mrs. Hussey, of Nantucket, Mr. E. Chamberlain, two Misses Chamberlain, Miss Clark, and Miss Knapp, have sailed from Boston, in the Waverly, for the Sandwich Islands. The Rev. Messrs. Tracy, Little and Scott, with their wives, also embarked at Boston in the Piscataqua, Capt. Wendell, for Madras.

☞ A bloody riot took place about dusk, on the evening of the 21th ult., near Pittsburgh between a party of railroad laborers—Corkonians and Connaught men. Two men had their skulls broken, and were otherwise severely injured.—One of them is not expected to live. The military and police were called out to-day, and fifty arrests were made, but numbers escaped.

☞ The Worcester Transcript states that Mr. Charles Weston, of that city, has such a heavy crop of potatoes from his farm, that two men and three boys dug seventy bushels in one-half day last week. The variety is said to be entirely free from indications of malady, and is called by the name of "Princeton Jenny Liud."

☞ Douglass & Jackson's extensive flouring mills at Lockport, were destroyed by fire on the night of the 27th ult., together with the stock of flour in the mill. The loss on stock is estimated at $30,000. The insurance on the mill is stated at $20,000, but it is not known what amount of insurance there is on the stock.

☞ Rev. W. G. T. Shedd, Professor of Sacred Rhetoric in the Theological Seminary at Auburn, N. Y., has been called to fill the department of Ecclesiastical History and Pastoral Theology, in the Seminary at Andover, Mass. He will enter upon his new sphere of labor during the next term.

☞ The U. S. ship Powhatan reached Borneo on the ninth of July last, and on the 10th Captain McCluney, her Commander, visited the Sultan in his Capitol, where, the following day, they exchanged the ratifications of a treaty made between the Sultan and the U. States a year or two ago.

☞ The Central Railroad Company are pressing forward their improvements with unceasing vigor. There will soon be a double track the entire distance to Buffalo. Proposals are to be received in a few days for preparing the line between Syracuse and Rochester for a second rail.

☞ A mechanic named Alonzo Fenn, attempted to shoot his wife and poison himself and an infant child, at Louisville, Ky. The ball missed the wife, the child would not swallow the poison, and the man was relieved of his potion by a stomach pump, and then lodged in jail.

☞ A private letter from London informs us that the well-known Temperance lecturer, John B. Gough, had been unable to fulfill his engagements in that city, because of indisposition. He had been excellently received by large audiences wherever he had been.

☞ A federal union of the British North American Colonies is contemplated; and measures for completing the Union are to be submitted to the several Colonies at no very distant day. Quebec will probably be proposed as the seat of the general government.

☞ The Canal Commissioners on the 20th ult. awarded the contracts for draining the Cayuga marshes. The prices which the work is contracted for will bring the whole cost of completing that part of the improvement below the Engineer's estimate.

☞ John Green, for forty-nine years a resident of Morrisville, Madison county, was found dead in the meadow of a neighbor last Monday week. A whiskey bottle, nearly empty, and uncorked, was found by his side. Rum did it!

☞ The act has gone into effect in London which requires that factories, mills and manufactories of all kinds shall burn their smoke. Coal smoke is declared a nuisance which ought to be abated, and smoke is condemned to be burnt.

☞ The Secretary of the Washington National Monument has issued a circular, calling on the electors of the Union to take up collections at the several polls of the fall elections, for the completion of the Monument.

☞ The Baltimore and Ohio railroad company has just closed a contract for the purchase of thirty more mammoth coal burning locomotives—making the whole power of the company nearly 200 efficient engines.

☞ Mr. Wait Lowery, an aged citizen of Troy, while seating himself in the study of the Rev. D. Halley, in that city, sank back in his chair and expired. His sudden death is attributed to a disease of the heart.

☞ Two bright-eyed little boys, one aged two and the other about five years, sons of a Mr. Horton of Boston, died a few days since from eating candy which had been colored with some poisonous substance.

☞ A letter from Valparaiso, says the Peruvian government had offered Capt. McCorren $20,000 as his compensation for the outrage committed on him at the Chincha Islauds, which he had refused.

## News Brevities.

—— Miss Cunninghame was liberated from prison at Florence.

—— The Dardanelles, though fifty miles long, are only two wide.

—— There is one suicide for every one hundred deaths in New York.

—— The net amount of money in the Sub-Treasury and mint is about $26,000,000.

—— Hon. John Bell, (Whig) has been elected U. S. Senator by the legislature of Tennessee.

—— There are in circulation counterfeit 3's on the Ogdensburg Bank. They are easily detected.

—— Hog packing will commence immediately in Cincinnati provided the weather proves favorable.

—— The Atlantic sailed for Liverpool from New York the 9th with 96 passengers and $490,000 in specie.

—— Cincinnati coal is very scarce, and a number of manufacturing establishments have stopped in consequence.

—— Lucretia Mott has been lecturing on Slavery in Maysville, Ky. She was treated with respectful attention.

—— The screw steamship City of Manchester from Liverpool, arrived at Philadelphia Oct. 31, with 176 cabin passengers.

—— Dr. W. C. Gault, the oldest physician in Kentucky, died at his residence near Louisville on Saturday night the 22d ult.

—— The track of the Great Western R. R. is laid from Detroit, for 20 miles in this direction, and the work goes on bravely.

—— A grey eagle, measuring six feet from tip to tip, was recently shot from the top of a telegraph pole in Portsmouth N. H.

—— John L. O'Sullivan, of Democratic Review and Fillibuster notoriety, has received the appointment of Charge to Portugal.

—— A firm of Mechanics in East Boston, have lately made a $500,000 contract with a firm in South America, for iron machinery.

—— During the week ending Oct. 18, 50 vessels destined to U. S. Ports, and 14 to British Ports passed through the Welland Canal.

—— The Charleston Mercury says the frost of Tuesday night (25th) extended throughout the South and had severely injured the crops.

—— Pens are now made of glass possessing all the requisite qualities to write with, and made so cheap, that they may soon supersede all others.

—— W. H. C. Hosmer, the "Bard of Avon," has an edition of poems in press, which will appear about Christmas, from the house of Redfield, N. Y.

—— A new petroleum, or oil spring, has been discovered in Western Virginia, near the forks of the Hughes river. It was found in sinking a well for salt.

—— The Albany Journal says it has not witnessed so much activity as now prevails in river and canal commerce since 1847, the year of the Irish famine.

—— The British cruisers have taken ninety barrels of mackerel from the fishing schooner Lookout, on account of alleged fishing within treaty limits.

—— A. T. Stewart, Esq., (of the Marble Building, corner of Chamber and Broadway, New York,) has bought the Metropolitan Hotel; the price paid was $550,000.

—— The Paris telegraph being entirely controlled by the French government, is, says the London Weekly News, to be regarded with considerable distrust.

—— Two highway robberies were perpetrated in Boston last week, one on the Common and the other on the Western Avenue. Yankeedom is declining in morality.

—— There are now surviving about fourteen hundred revolutionary pensioners, all of whom are regularly drawing their pay from the Treasury of the United States.

—— The residence of the late J. Fenimore Cooper, at Cooperstown, recently converted into a hotel, was fired by an incendiary, and consumed on the night of the 21st inst.

—— The Directors of the Crystal Palace have resolved to keep the Exhibition open through the winter, instead of closing it in December, as they had previously contemplated.

—— The Steam Fire Engine in Cincinnati has been so successful that it is proposed to increase their number, so as to suspend entirely the old mode of putting out fires.

—— A government gold escort was recently attacked by a band of robbers, in Australia and robbed of $50,000. Several lives were lost on both sides in the encounter.

—— The Boston, Concord and Montreal Railroad having declined to carry the mails at the present rate of compensation, the postmaster at Concord forwards them by horses.

—— Of 7701 emigrant passengers who arrived at New York from the 9th of September to the 21st inst., 359 have died. With few exceptions they were the victims of cholera.

—— The New Orleans Bulletin says that the exports of raw cotton from that port direct to Russia alone, has increased over one hundred and fifty per cent within the last year.

—— Mark W. Foye, driver of the mail stage between Newburyport and Lawrence, has been sentenced to 2½ years in the Newburyport jail for abstracting a letter from the mail.

—— A little girl of five years, the daughter of J. H. Webber of Cambridge, was burnt to death, in consequence of her clothes taking fire from matches with which she was amusing herself.

—— The Richmond Enquirer has an advertisement of a gentleman to sell his property, a portion of which was slaves, because he wants to spend the balance of his days as a missionary!

—— The steamship Canada, sailed from Boston Oct. 26th, with 57 passengers for Liverpool and 14 for Halifax. The Canada took out $280,000, mostly in American gold coin aud ingots.

—— A letter from Cuba announces the failure of the brothers Diego, for the sum of $1,700,000. They offer to pay their creditors at the rate of $150,000 per annum, with interest at six per cent.

—— A returned Californian is exhibiting a six pound lump of gold, worth $1,200, at Portland, Me. The finder of it was murdered by a man, who hoped by that means to obtain possession of it.

—— The United States Government is now engaged in building Custom Houses at New Orleans, Mobile, Charleston, Louisville, Cincinnati, Pittsburg, Richmond, Norfolk, Wilmington, Del., and Bath, Me.

—— Apples are very scarce throughout New England, the army worm having destroyed them in the early part of the season. They are bought up here for 50 cents a bushel for export to New England.

# Foreign Intelligence.

## Arrival of the Arctic.

The Collins steamship Arctic arrived at New York Oct. 30th, bringing dates from Liverpool up to the 19th.

THE EASTERN QUESTION.—The Turkish declaration of war had been received at Odessa. It is a temperate and high spirited document. It does not levy embargoes on Russian ships, and fully protects all rights of commerce.

Constantinople is tranquil. Part of the Russian army will go into winter quarters at Bucharist on the lower Danube. Russian subjects in Turkey are placed under Austrian protection from Oct. 1st. Austria and Prussia have re-called their subjects from Turkish service.

When the Czar heard that Turkey had declared war, he fell into a fury, and swore that he would wage a war of extermination against the Turks. Omar Pasha had notified the Russian Commander to clear out of the Principalities before the 25th inst., or he would commence hostilities. It is not supposed that the fighting will commence on the Danube, but in Georgia or the Black Sea. A battle was fought on the 27th ult., between Shamyl and the Russians, in which the Circassians retired to the mountains, with a heavy loss on both sides.

The mail steamer from Constantinople, Oct. 5, had arrived at Marseilles, and reported from Besika Bay that the fleets were preparing to enter the Dardanelles. Admiral Dundas had sent his wife home to England, out of the way of danger. On the 3 1 inst. the Russian fleet arrived at Odessa from Sebastopol, to embark troops, as was believed, for Redoutkale.

THE EAST INDIES.—Reports from Ava are very unsatisfactory to the British. More war is threatened by the Burmese. China advices continue to report the successful progress of the rebels northward, but do not offer any remarkable incident. Disasterous floods had occurred at Canton, doing much injury to the rice crops, and causing scarcity. The export of teas shows an increase of four million pounds over same period of last year, and all from Canton.

The Japan expedition returned from Jeddo Aug. 17th, having met with a friendly reception. Com. Perry had an interview with two Imperial Princes; also delivered the President's letter, and is to call next spring for a reply. The Americans and Japanese parted with expressions of good feelings.

LIVERPOOL MARKETS.—Breadstuffs were active, and had still further advanced. American flour sold freely. Philadelphia and Baltimore bringing 35s 6d and held for 36s; Western Canal, 34s 6d @35s. Wheat was in extensive demand for consumption and speculation, at 2d advance over rates of Friday preceding; fine white American was quoted at 10s 4d. Indian corn was quiet, with price unchanged, and supply moderate.

## Arrival of the Niagara.

The Royal mail steamship Niagara, from Liverpool on Saturday, the 15th ult., arrived at Halifax at 1 o'clock Thursday morning, Oct. 27th, with one week later dates from Europe.

The Collins steamship Arctic, from New York on the 1st ult., arrived out Wednesday morning, the 12th.

THE EASTERN QUESTION.—The Sultan has announced that if the Russians do not evacuate the Principalities within fifteen days, Turkey will consider it as a case of declared war, and will act accordingly, but will not at present cross the Danube.

The proclamation of war is posted on all the mosques. The Sultan has invited the combined fleets up to Constantinople. The Black Sea is free to neutral flags.

THE LATEST RECEIVED AT LIVERPOOL.—The Paris police have made a search for Kossuth in the house of M. Kif, a Hungarian. Kossuth, however, was not there.

Louis Napoleon is reported to have stated on the 12th ult., that unless Russia yields there must be war.

A letter from Turin says, the Piedmontese government had refused to admit M. Foresti, a naturalized American, as Consul for the United States, alleging that he is a disciple of Mazzini's.

Corn may be imported into the Papal States, duty free, until February next.

The Emperor of Russia has authorized the free importation into any part of Finland, of all the materials for equipping ships. This privilege to endure for five years.

A Paris correspondent writes, that in the private Constantinople letters the Eastern question is examined in every point of view, and the conclusion unanimously come to is, that there is no escape from war.

Russian agents are actively at work, stirring up insurrections in Turkey.

A number of English officers, most, if not all, belonging to the Indian service, are moving between the Turkish camps, and a number are also now on their way to Constantinople.

The Paris correspondent of the London Globe says:—"Notwithstanding all that we hear of preparations for war, the impression here that peace will be preserved is very general. The numbers of offers of aid to the Turkish government from Poles, Hungarians, &c., is almost incredible. The offers are not confined to the refugees in France—they have come from the United States, from Hungary, Poland and Italy."

In England breadstuffs had recovered from last week's decline, and closed firm with an upward tendency. Western Canal flour 33s 6d; Ohio 34s 6d@35. Yellow corn 40s 6d; White 41s. White wheat 9s 8d@10s 2d; Red 9s 7d.

Provisions—Beef good at 95@100s. Pork, small business, but firm at 72s 6d for mess. Lard steady at 58s@60s.

Ashes active—Pots 30s, Pearls 28s.

MRS. LAURA STARKWEATHER, of Alabama, N. Y. on the 24th of October took through mistake, a dose of oxalic acid, supposing it to be Epsom salts. She lingered until four o'clock in the afternoon, when death terminated her sufferings. It appears that a neighbor had used the acid in bleaching straw bonnets at the house of Mrs. S., and having a little left, had thrown it upon a shelf, (Mrs. S. knowing it at the time,) and that Mrs. S. saw it there not long since, and having forgotten the circumstance, supposed it to be Epsom salts, which it somewhat resembles, and again laid it aside.—Feeling somewhat indisposed, she concluded to take a portion of salts. The horrible result adds one more victim to the incautious use of poisonous drugs. She was a most estimable woman, in the prime of life, beloved and respected by the community at large, and almost idolized by her husband and friends.

☞ A private letter from Ireland states that Father Cahill, the celebrated Irish Roman Catholic priest, is shortly to visit this country with a view of checking the defection of the Irish from Romanism.

# Commercial.

## BUSINESS AND FINANCE.

THE money market is somewhat easier since the last report. The Nicaragua steamer Northern Light has arrived with $1,380,585 in California gold on board, and the Panama steamer Ohio, with $1,125,000 more. Exports by the Canada were $280,000, and by the steamer Atlantic $190,000; and it is also stated, that two millions of the newly arrived treasure is destined for immmediate transmission abroad, to pay our foreign indebtedness. During the months of September and October, the exports of cotton and breadstuffs, from the port of New York, was near seven million dollars, which is three and a half million over the same time of 1852. The Sub-Treasury balance in New York still decreases under the disbursing process for the redemption of the public stocks. The balance in the treasury of that city is about seven and a half million, being three and a half million below the highest point in September.

Breadstuffs under recent advices from abroad, have again gone up, and an active demand for shipment is anticipated. The undoubted short crops in many of the European countries, the anxiety of governments to lay in stores against the contingencies of an anticipated war, the prohibition against exporting and the admission of grain duty free, into many foreign ports, all conspire to enhance the price of American produce, and afford to the producer an ample reward for his industry. If the American farmer does not pay his debts, improve his farm, and lay up money under the present (to him auspicious) aspects of affairs, he never will. While the trader is complaining of tight times and going into the market for money at 12 per cent., the farmer can command cash for all he has to sell at a very high price.

Stocks have gone up also since last week. New York Central has risen to 110@112; Erie 72@71; Hudson River 66; Central 6 per cent. bonds 92, and other stocks and bonds in proportion. They seem to have touched the owest point and are slowly recovering from their depression. Banks limit their discounts as yet, and refuse good paper, both from inability to discount it and extreme caution against contingencies which may arise hereafter.

# Market Intelligence, &c.

RURAL NEW-YORKER OFFICE,
Rochester, Nov. 2, 1853.

FOREIGN advices by the recent steamers have had the same effect in Rochester markets as upon the markets elsewhere, and Wheat and Flour have both advanced. In addition to foreign news, there are also local influences tending to stimulate our market. The river, which has been very low for some weeks past, is now swollen by the recent rains, and all the mills are in active operation. A disposition is manifested among millers, however, to drop Genesee wheat at present prices, and run the mills on Western. The canal is in good navigable order, with water full bank, and there is great activity in freights. The price of wheat rules from $1,38@1,40. Flour $6,38@6,50. Other grains at last quotations.

WOOL—Wool is dull and lower, prices ranging from 35 @45c. Sheep pelts are gradually advancing in prices, in consequence of the increased value of the staple of wool produced; prices $1@1,25. Lambs do. $0,50@1,00.

LARD has advanced half a cent per pound. Other articles of produce nearly the same as last quotations.

Flour barrels are higher, ranging from 35 to 40c.

### Rochester Wholesale Prices.

| | | | |
|---|---|---|---|
| Flour, bbl. | $6,38@6.50 | Butter, lb | 17@18 |

## NEW YORK MARKET.

NEW YORK, November 1, 1853.

Ashes—Market more steady for Pots at $5,56@5,62—Pearls are firm at $5.50@5,56.

Flour—A fair demand for Western and State flour for the East and home trade, and for export. The absence of eastern vessels checks the buoyancy noticed yesterday.—Canadian is quiet at $6,85@7. Sales $6.75 for State; $6,-75@6,85 for mixed to fancy Michigan, and common to good Ohio.

Rye Flour—Scarce at $4,75 for fine.

Grain—Demand for wheat continues quite animated, and prices are 2@3c higher. Sales inferior to prime white Canadian $1,43@1,60, the latter price for a lot to arrive—fair to prime white Genesee $1,62@1,65; fair to prime white Michigan $1,63¾; white Ohio $1,5 I.

Barley—Quiet at 80@85c.

Rye—Quiet at 92@93c.

Oats—Better and in demand, at 47@51c for State and Western

Corn—Unchanged. Demand moderate and supply good. Sales 75@76c for Western mixed; 73@77c for round yellow; 77@79c for Southern white and yellow.

Provisions—A fair demand for pork and market steady. Sales mess at $15,87@16; prime $13.

Lard—Dull and heavy, at 11@11½c.

Butter in request at 17@21 State.

Cheese in moderate request at 9@10½c.

## ALBANY MARKET.

ALBANY, Oct 31.—The news by the steamer Arctic, at New York, which is four days later from Europe, is looked upon as favorable for Breadstuffs, and has tended to strengthen our market.

Flour and Meal.—The supply of Flour afloat this morning was quite large, but the bulk of it is consigned thro'. Holders of State, in view of the foreign news, put up prices at 12½c ₱ bbl. Western brands remain firm, but not active. The sales of the morning do not exceed 600 bbls. at prices within the annexed range:—Ordinary to straight State $6,37@6,50; mixed Indiana and Mich. $6.-62@6,75; straight Indiana and Michigan $6,75@6.87; favorite State $6,75@6.87; common to good Ohio $6,50@6,75; fancy Indiana and Mich. $6,75@6,87; fancy Ohio $6,87@7; fancy Genesee $6,87@7; extra Indiana and Michigan $7@7,25; extra Ohio $7,12@7,25; extra Genesee $7,12@7,37. Buckwheat Flour and Corn Meal are unchanged.

Grain.—The milling demand for prime Western and State wheat is quite active, and the market is very firm.—The only transaction we have to note is a sale of red Indiana for local milling at $1,38. Corn is quiet, but the market is rather firmer. There are buyers of Western mixed at 73c, and sellers at 75c. No sales. The Barley market opened rather firmer, with a good demand for prime. Sales good to prime two-rowed at 75@76c; mixed at 68½c for inferior, and 80@82c for prime, and prime four-rowed at 84½@85c. Oats are in large supply and in good request at steady rates. Sales at 46@47c for State and 48c for Western.

Hops—The market is rather firmer with some speculative inquiry. Sales 7 bales new at 37½, time.

Feed—The market is rather quiet. Sales 5 tons of middlings at $1,25 ₱ 100 lbs.

Fruit—Winter and fall Apples were in good request at prices varying from $1,50 to $2,25 ₱ bbl.—[Alb. Jour.

## BUFFALO MARKET.

BUFFALO, Oct 31.—Flour is in fair demand this morning and the market is steady and firm. The supply is light and sales, good Ohio, Michigan and Illinois at $5,75. Included in the sales is good Ohio, delivered at Tonawanda, at $5.75, and extra Southern Ohio at $6.

Wheat market firm with a good inquiry and a light supply of prime wheat. Sales white Michigan at $1,28; white Indiana at $1,27; prime white Michigan at $1,28½; white Ohio at $1,27; Sheboygan at $1,15; Illinois river, mixed, at $1,10.

Corn quiet and market dull. Sales at 62½c from store.

Oats quiet Sales at 35c delivered.

Canal freights a shade firmer. Flour to New York 82½c; wheat 23@24c; corn 19c. Flour to Albany 68c; wheat 19c; corn 16c.

## NEW YORK CATTLE MARKET.

NEW YORK, Oct. 24—At Washington Drove Yard—offered this day 2,488 Beef Cattle; offered during the week, 2,600. Inclement state of the weather has had the effect to check business somewhat to-day. Market since our last, however, pretty active. Prices of poorer qualities of Beeves taken a rather lower level. We quote the range at 6½@9c per lb. Calves at from 4@6c. Hogs 5½@6c.—Sheep and Lambs at from $2,50@7,00.

At Browning's—(Lower Bull's Head)—Offered, 398 Beef Cattle; 65 Cows and Calves, and 6,250 Sheep and Lambs.

Beef Cattle all sold at from $6,50@9 per hundred.

Cows and Calves sold at from $25@50—all sold.

Sheep, from $2@4; some extra brought as high as $8. Lambs from $1.50@1,75: 1,200 unsold.

At Chamberlain's—(Hudson River Bull's Head)—Offered, 300 Beeves, 45 Cows and Calves, and 4,000 Sheep and Lambs.

Beeves are firm, at from 6@9½c per lb.

Cows $25, 40@55. Calves 5@7c. per lb.

Sheep $2,62½, 4,50@6,75. Lambs $2,25, 3@4. All sold.

At O Brien's—(No. 9 Sixth street)—Offered, 295 Beef Cattle; sales at from $6@8. 50 Cows—All sold at from $20 to $40.

## ALBANY CATTLE MARKET.

ALBANY, Oct. 31.—W. W. Woolford's, Bulls' Head, Washington street.

Beef Cattle—600 at market. Prices—Extra, $7,00; 1st quality, $6,50; 2d do. 6,00; 3d do. $5,50.

Cows and Calves—10 in market. Prices from $25, 30, @35.

Sheep and Lambs—1,000 in market. Prices of from $3 to $4,50.

Hogs—315 in market. Prices ₱ cwt. $5, 5,25@5,75.

Remarks—The market was midling dull and sales well. The most of the cattle sold for New York market.

## CAMBRIDGE CATTLE MARKET

CAMBRIDGE, Oct. 26.—At market. 3,187 Cattle. about 2,187 Beeves, and 1.000 Stores, consisting of Working Oxen, Cows and Calves, yearlings, 2 and 3 years old.

Prices—Market Beef—Extra sold at $8,00 per cwt.; 1st. quality, $7,50; 2d do, $6,25@6,50; 3d do, $6; ordinary, $4,50@5.

Hides—$6½ per cwt.

Tallow—$7@7,50 per cwt.

Pelts—$1@1,25.

Calf Skins 11c per lb.

Barrelling Cattle—Little doing as yet.

Veal Calves—$5. 8@12.

Stores—Working Oxen—$72, 82, $100, 112, 131, 142, 175@216.

Cows and Calves—$24, 27, 31, 36, 41@72.

Yearlings—$9, 10@13.

Two years old—$15, 20, 24@32.

Three years old—$31, 36, 42, 51@64.

Sheep and Lambs--6,766 at market. Sales good quality superior.

Prices—Extra, $1.50, 5. 5,50, 6@6,75.

By lot—$1.75, 2, 2,50, 3@4.

Swine—Wholesale—Still fat hogs at 5¾c, and hard corn-fed 6c per lb. All large fat hogs.

Remarks—Market full and dull. Good Beef scarce.—The Cattle as a whole to-day are very ordinary. The Rutland and Brighton train was late, owing to an accident. The Montreal train, by way of Littleton, N. H., was impeded for some hours, in consequence of a large rock having been washed down upon the track. From 5 to 18 inches of snow fell in the interior, between Monday noon and Tuesday morning.—[Boston Cour.

## BRIGHTON CATTLE MARKET.

BRIGHTON, Oct. 27.—At market 3,700 Cattle, (say 2,400 Beef and 1,300 Stores.) 7,400 Sheep and 2,100 Swine, including 1,300 still fed Hogs.

Prices—Beef Cattle—Second and third quality Cattle plenty and prices not sustained. Extra 7,50@8; first quality $6.50@7,00; 2d do. $5.50@6; 3d do. $4.25@5.25.

Working Oxen—A large business has been done; sales at $75, 88, 100, 120, 135, 142@158.

Cows and Calves—Sales $23, 25, 30, 33, 38, 41@52.

Stores—Yearlings $7@11.

Two years old $12@19.

Three years old—$21@33.

Sheep—Sales at $2,25, 2.75, 3. 3,50, 4.@5,75.

Swine—Still hogs 5⅞, 5½, 5⅞. Shoats to peddle 5, 5½ @6½. Store Hogs 5, 5½@6¼.

# Marriages.

IN Greece, on the 26th ult., by the Rev. J. Woodward, Mr. WILLIAM THOMSON, late of California, and Miss MARIA A., daughter of Levi H. Parish, of Greece.

IN Parma, on the same day, by the same, Mr. WM. WILLSON, of Ovid, Seneca co., and Miss AGUSTA D., daughter of Dr. S. M. Cole, of Parma.

AT Fond du Lac, Wis., August 23, by the Rev. W. G. Miller, AUGUSTUS H. RAYMOND, of Oshkosh, formerly of Rochester, N. Y., and Miss HELEN E. CHANDLER of Fond du Lac.

# Deaths.

ON the evening of the 23d ult., at the residence of her son, Dr. F. F. Backus, Mrs. MELICENT BACKUS, aged nearly eighty-eight years.

IN Victor, Oct. 24th, Mrs. HANNAH RICHARDSON, aged 49 years. Her illness was of five weeks duration, and was one of great suffering. Yet it was borne with firmness and patience, and with an unwavering trust in the goodness of God. Beloved by a large circle of acquaintance for her virtues and her constant charities to the wanting, and wept for by an afflicted husband and children, she has gone home to wait for that union which shall be unbroken forever.—[COM.

**SOUTH DOWN SHEEP FOR SALE.**

THE Subscriber is breeding the South-Down Sheep, so celebrated for the superior quality of their mutton, and the quantity of tallow they produce. Would inform the public that I have from half to full bloods for sale, and am raising them expressly for that object. The full bloods from which I am breeding are from the flock of Z. B. Wakeman, of Herkimer Co., the man who has shared so largely in the premiums at our State Fairs. Several fine full blood bucks for sale.

Those wishing to procure the above kind of sheep, will do well to apply personally or otherwise. All letters respecting pedigree, price, &c., (addressed to me at East Hamilton, Madison Co., N. Y.,) will receive prompt attention. IRA BRAINARD.

East Hamilton, N. Y., Nov., 1853. 201-ttwltm.

**Spanish Merino Rams and Ewes,**

AT AUCTION.—I shall hold my annual sale of Rams and Ewes at my farm in Darien, on the 16th day of November next. 100 Rams 1 and 2 years old, will be put up singly and sold without reserve, to the highest bidder—100 Ewes will be put up at the same time in lots of 10. The sheep are pure blood, and warranted sound. A rare chance is now offered to get choice stock. Terms—$10, and under, eash; over $10 one year with interest, on approved notes.

T. C. PETERS.

Darien, N. Y., Oct. 25, 1853. 201-2t

**SEEDLING CHERRY TREES.**

40,000 SEEDLING CHERRY TREES for sale at the market price. Also a few hundred plants, 2 years old, of PAIGN'S Early Grape; price, $1 each. Its early ripening and delicious flavor makes it worthy of a place in every garden. It cannot be surpassed by any thing of the kind that ripens in the open air in this northern climate. Address H. PAIGN,

201-1t Lockport, N. Y.

**TRACY FEMALE INSTITUTE,**

NO. 33 ALEXANDER STREET, ROCHESTER, N. Y.

THE second quarter of the present Academic year in this Institution, will commence on Thursday, the 17th of November instant.

For information relative to Course of Study. Terms of Admission, Boarding Department, &c., address

LUCILIA TRACY, Principal.

Rochester, Oct. 29, 1853. 201-3t.

**SPLENDID FOWLS.**

THE attention of poultry breeders and fanciers of poultry generally, is invited to the unrivalled varieties now onered to the public by the subscriber, embracing every species of value in the United States. Especial care has been bestowed to render them all that can be desired by the POULTRY DEALER, FARMER OR AMATEUR.

Having devoted several years to the rearing of Choice Fowls, the subscriber flatters himself that by his unremitting care and attention those now offered by him have attained a degree of excellence, as regards Size, Symmetry, Plumage, &c., which cannot be surpassed. The several breeds are warranted ENTIRELY PURE, especial vigilance having been exercised to prevent any admixture of blood. Among these may be enumerated the following:

| | |
|---|---|
| Bramah Pootra, | Game Fowls, |
| Chittagongs, | Silver Pheasants, |
| Grey Shanghaes, | Scabright Bantams, |
| Buff do. | English do. |
| Black do. | White do. |
| White do. | Nankeen do. |
| Red do. | Royal Cochin China. |
| White Cochin China. | Hong Kongs, |
| Malays, | Great Javas, |
| Bucks County, | Black Spanish, |
| White Surrey Dorkings, | Speckled Dorkings, |
| Black Polands, | Creoles, |
| White do. | Frizzled Fowls, |

Golden Spangled Hamburgs.

☞ Purchasers may buy with the fullest confidence that their orders will receive prompt attention, and that the fowls furnished are pure blooded and in healthy condition.

☞ All fowls purchased will be carefully caged, and delivered in New York or Albany, or placed on shipboard or railway free of charge, after which the responsibility of the subscriber in reference to their safe arrival at their destination ceases.

☞ Orders and letters of inquiry should be addressed to J. W. PLATT, Box 128 P. O.,

200-2twltm. Rhinebeck, N. Y.

**A GOOD INVESTMENT FOR LABOR OR CAPITAL.**

WITHIN twenty minutes drive of a great market.—The subscriber, being desirous of attending to his interests in the mineral region at the West, will sell his Farm on the Ridge Road, one mile north of Rochester city line, consisting of 130 acres, 30 of which are heavily wooded, worth as it stands, one-third of the purchase money; with over 600 fruit trees of all the varieties worth cultivating, the produce of which when in full bearing, will pay the interest of the entire price of the farm.

The land is in good heart, mostly in grass, and the stumps all out and well fenced.

There are three Houses and Barns on the premises.

Having a great traveled road through its centre, and the River road on the East, it would cut up to great advantage, or might be used for a great Nursery establisbment, for which it is well adapted.

If not sold by the first of April, it will be rented for a term of years. L. B. LANGWORTHY.

Rochester, Oct. 25, 1853. 200-tf

**FARM FOR SALE.**

THE subscriber offers to sell his farm, in the town of Phelps, Ontario Co., N. Y.—three miles south of Vienna, east of Melvin Hill, lying on the thorough-fare leading from Canandaigua to Free Bridge. It consists of 102¾ acres, 15 of it heavily timbered. Upon it 1,500 bushels of grain and 20 tons of hay, may be produced annually, beside the keeping of considerable stock. Is conveniently watered by a never-failing spring. Nearly 30 old bearing Apple Trees, and a young orchard of 130 trees now coming into bearing, consisting of the most approved varieties. Fine Peach orchard of over 50 trees, all of the most delicious fruit. Buildings worth $3,000. Good well and cistern. Location pleasant and healthy. Part of purchase money can remain on bond and mortgage a length of time. Price $65 per acre. For further particulars apply to the proprietor au the premises or by mail, post-paid,

G. W. PEARCE.

Phelps, N. Y., Oct. 20, 1853. 200

**SUFFOLK PIGS.**—10 pairs of purely bred SUFFOLK PIGS, four months of age. Also breeding Sows for sale by GEORGE HUNTINGTON.

Walpole, N. H., Oct. 15, 1853. 200-4t.

50,000 CHERRY SEEDLINGS for sale, one Summer's growth, large and fine.

200-4t JAS. C. CAMPBELL, Rochester, N. Y.

**SUFFOLK PIGS.**

THE subscribers are prepared to receive orders for pure Suffolk Pigs, bred from stock imported by the late William Stickney in 1818,—also by the subscriber in January last. Address

JOSIAH STICKNEY, Boston or Watertown, or ISAAC STICKNEY, Boston, Mass.

Boston, August, 1853. 190-13w-1m

**CARTHAGE NURSERY,**

NORTH ST. PAUL STREET, ROCHESTER, N. Y.

THE subscribers offer for sale the present season,

75,000 Apple trees 3 and 4 years old.

10,000 Pear trees in free stock and Quince.

600 Dwarf Pear trees with fruit buds.

10,000 Cherry trees. 10,000 Peach trees.

25,000 Osage Orange plants.

The above trees are very finely grown and of the best varieties. HOOKER & CO.

October 1, 1853. 197 3t*

**WALWORTH NURSERY.**

THE subscriber has for sale

20,000 choice Apple trees, some quite large.

20,000 Dwarf Pear trees.

10,000 choicest varieties Peach trees.

1,000 large Mountain Ash.

2,000 Horse Chestnut.

3,000 very fine Balsam Fir.

All trees sold at the LOWEST rates, and Catalogues furnished to applicants. No charge for carrying packages to Railroad.

**POLAND OATS.—MEXICAN POTATOES.**

I can supply orders for the celebrated Oats which weigh 42 lbs. to the bushel at one dollars. And also, the Mexican Potatoes at the same price.

Orders will be supplied in the order of their date.

T. G. YEOMANS.

Walworth, N. Y., Oct. 10, 1853. 3t198

**ROCHESTER STEREOTYPE FOUNDRY.**

THE undersigned would respectfully inform the public—and especially book and periodical publishers, authors, &c.—that he has established a STEREOTYPE FOUNDRY in Rochester. His establishment is furnished with every facility for Stereotyping, in the best manner, Books, Pamphlets, Periodicals, Cuts of all kinds, (including figures of animals, implements, etc.) Patent Medicine Advertisements, &c., &c. Plates blocked in a superior style on mahogany. All work executed with promptness and on reasonable terms, and equal in style and finish to that done at any other Foundry in the country.

An establishment of this kind has long been a desideratum in this city, and now that one is in operation, it is hoped a liberal share of patronage will be awarded to the enterprise.

☞ Foundry in Talman Block, Buffalo street. All orders from a distance may be addressed to

J. W. BROWN,

April, 1852. [122-1am-tf] Rochester, N. Y.

N. B.—Old type taken in exchange for work.

**MARSHALL'S BOOK BINDERY,**

BURNS' BLOCK corner of State and Buffalo street, over Sage & Brother's Bookstore, Rochester, N. Y.

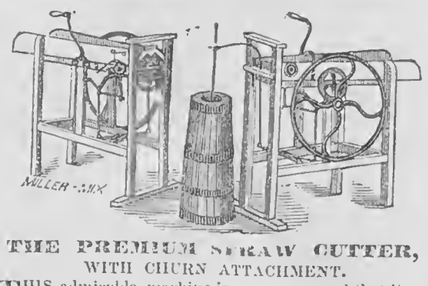
Music Books, Pamphlets, Periodicals, &c., bound in plain and fancy bindings; old books rebound; Blank Books ruled to any pattern, and bound to order; Public and Private Libraries repaired at short notice. Packages containing directions for binding, punctually attended to.

N. B.—All work warranted, and done at low prices.

April, 1852. [122tf] F. H. MARSHALL.

PLUM AND PEACH PITS wanted at 36 Front st., Rochester. SAMUEL MOULSON.

October 4, 1853. 197tf



**THE PREMIUM STRAW CUTTER,**

WITH CHURN ATTACHMENT.

THIS admirable machine is so constructed that it can be used for cutting hay, straw or corn stalks. The *adjustable mouth-piece*, peculiar to this machine, is so constructed that simply on the turning of a *nut* with the thumb and finger so adjusts as to keep the *cutting* part at all times in perfect order.

The CHURN ATTACHMENT, as will be seen in the above cut, is applied to the common dash churn—and is simple, perfect and labor-saving.

Wherever this machine has been on exhibition it has invariably received the *first premium*. It is now on sale by

JOHN RAPALJE & CO., Rochester.
JOHN PROCTY & Co., Geneva.
C. M. WIDRIG, Horse Heads.
Messrs. MESSEROLE & Co, Penn Yan.

For further information address

4t-198 CHARLES LEE,
Penn Yan, Yates Co., N. Y.

**SAMUEL MOULSON,**

AT THE OLD ROCHESTER NURSERY.

Office, No. 36 Front St., Rochester, N. Y.

IS prepared to furnish inventories, to post-paid applicants, of the present very extensive stock of Nursery items, consisting in part of

120,000 Dwarf and standard Pear Trees.
90,000 Apple Trees.
50,000 Peach Trees.
30,000 Plum, Cherry and Apricot Trees.
Over 100,000 Hardy Evergreens.

Also, extra large Northern Spy Apple Trees, Dwarf and Standard Pear, Cherry, &c., &c.

Also, for immediate effect, a large quantity of extra sized Ornamental Trees, among which are fine specimens of Norway Spruce, Silver Maple, Pawlonias, Catalpas, Mountain Ash, Horse Chestnut, &c.

And a fine selection of Weeping Deciduous Trees, Ornamental Shrubs, Hybrid Perpetual Roses, together with such novelties as may be classed strictly hardy. Also a very limited assortment of half hardy plants of small size, such as Cryptomeria Japonica, Cedrus Deodara, &c., &c.

The amateur wishing prime fruits of well established repute, or the agriculturist needing fine cropping, thoroughly tested varieties, may rely upon the most careful execution of their orders.

The Ornamental items are entirely grown in the Nursery, consequently none of the heavy losses are sustained that usually occur to recent imported subjects.

The Evergreens are very robust and admirably furnished to the surface of the ground, none presenting the naked stems usual to imported plants.

Dealers are invited to give a call before making their purchases.

☞ Peach and Plum pits wanted.

September 1, 1853. 196-tf.

☞ **PEOPLE'S COLLEGE OF THE STATE** OF NEW YORK, INCORPORATED APRIL 12, 1853.—This Institution has been chartered by the Legislature of this State, for the purpose of reducing the expenses of Academic and Collegiate Education, and thereby open the Halls of Science to all classes of society by reducing the cost of tuition, board and clothing, and enabling the student to defray the greater part of the expense in labor.

Provision will be made to educate young men corporeally and mentally for specific purposes, by pursuing full and definite courses of study for each of the pursuits represented in the College—either Agricultural, Mechanical or Professional—and thus gradnates will be qualified for entering at once upon the business of their choice.

At a regular meeting of the Trustees named in the Charter, held at Owego, on the 25th day of May, the following appointments were made:

D. C. MCCALLUM, of Owego, President of the Board of Trustees.

A. I. WYNKOOP, of Chemung, Vice President.

TRACY MORGAN, of Binghamton, Treasurer.

HARRISON HOWARD, of Lockport, Secretary and General Agent.

Agents are being commissioned in each county of the State, that the people may have an opportunity to contribute to the capital stock, which is distributed in shares so small that every individual may become interested in an institution which commends itself to the favorable consideration of every intelligent person.

For further information upon the subject, application may be made, post-paid, to the Secretary, who will send a pamphlet containing the act of incorporation and objects of the Institution, and other needful information.

188-tf H HOWARD, Secretary.

The undersigned, having been appointed Agent for Rochester and Monroe county, will be most happy to furnish any new information desired, in reference to the College, to receive stock subscriptions, (the shares are one dollar each,) or to address audiences, on invitation, explaining at length the plans and objects of the People's College, and also as he views the idea of a true education.

Respectfully, G. F. NEEDHAM.

**Ornamental and Domestic Poultry.**

THE subscriber having invested a large amount in this business, is now prepared to fill any orders which he may receive. The celebrated Brahma, Sumata, Game, Palmer, Marsh and White Shanghais, with many other popular varieties, are from the yard of C. C. Plaisted, Esq., Great Falls, N. H., and of course cannot be surpassed in the world. My Imperial Cochin China Fowls are from Col. B. P. Johnson, his stock imported last year, '52, from the best breeders in England. All who well know Col. J., will understand that he has the best or none. My black Spanish are quite late, and will not be ready for market before next spring. They are from Mr. John Giles, late imported, the best blood in the country. These birds are so fast coming into repute that the price will doubtless run high for some years to come, as will also be the case with the Brahma, Sumatra, Game, &c. All persons purchasing fowls from me, can enjoy the benefit of my advertising, in case they wish to sell Chickens next year.

I am quite sure that our southern and western fanciers can be better suited here than farther east, as the long distance on railroad much injures the health and growth of the fowls.

As there are many fowls in market which have no claim upon the public favor, I will give my patrons something more tangible than my own words, for

"If self the wavering balance shake,
It's rarely right adjusted."

I am therefore permitted to refer all who entertain any scepticism, to the following gentlemen:—Col. B. P. Johnson, Secretary N. Y. State Agricultural Society, Albany, N. Y.; Hon. Ambrose Stevens, N. Y. City; Hon. Lewis F. Allen, Black Rock, N. Y.

Address O. B. EVANS, 214 Main street,

194-3m Buffalo, N. Y., Box 1662.

**THE JUVENILE INSTRUCTOR,**

BY UNCLE LUCIUS, Syracuse.

A SEMI-MONTHLY PAPER, expressly for children. It aims to attract their attention by simplicity and beauty of style, and to infuse into the young mind appropriate sentiments of piety and love for parents—sympathy for human suffering, and an abiding hatred of oppression in all its forms. It ought to be circulated over the entire Union, for this last reason. There is much at stake in the question of freedom, and but little said or done to effect favorably the youthful mind. Within the State of N. York, the postage is 6 cents per year, paid at the office where it is received. In all other States, 12 cents yearly. In packages of 21 or more the postage, if pre-paid at the office of publication, is about 4 cts on each paper.

Price per year—single copies, 25c.: Five to one address $1; Ten do. $1,70; Twenty do. $3; Thirty do, $4,20; Fifty do, $6,50; One huudred do, $12.

Address LUCIUS C. MATLACK,

183m3. Syracuse, N. Y.

**Buffalo Agricultural Warehouse and Seed Store.**

*Nos. 11 & 13 West Seneca Street, Buffalo.*

HIRAM C. WHITE & CO., successors to Mason & Lovering, wholesale and retail dealers in all kinds of Agricultural Implements and Machines, Field, Garden and Flower Seeds; Fruit and Ornamental Trees, Shrubs and Flowers; Oriental Poultry, &c. Also, Agents for the Boston Belting Company's Vulcanized India Rubber goods, Belting, Hose Packing, &c.

Orders solicited, all of which shall receive prompt attention at lowest market rates, and all articles warranted as represented. HIRAM C. WHITE & CO.

HIRAM C. WHITE. [195tf] AMASA MASON.

**FINE FOWLS.**

HAVING raised from select stock, a few broods of buff Cochins and Shanghais, in order to obtain for private use, a small flock known to be pure and genuine, I have for sale about twenty pairs, and at prices that any one can pay, who is able to own half a dozen common fowls. They are broods of April, May, and June—genuine as imported;—being of stock received from the import

# Poetical.

## "GO FORTH INTO THE COUNTRY."

Go forth into the country,
From a world of care and guile,
Go forth to the untainted air,
And the sunshine's open smile.
It shall clear thy clouded brow—
It shall loose the worldly coil
That binds thy heart too closely up,
Thou man of care and toil!

Go forth into the country,
Where gladsome sights and sounds
Make the heart's pulses thrill and leap
With fresher, quicker bounds.
They shall wake fresh life within
The mind's enchanted bower;
Go, student of the midnight lamp,
And try their magic power.

Go forth into the country,
With its songs of happy birds,
Its fertile vales, its grassy hills,
Alive with flocks and herds.
Against the power of sadness
Is its magic all arrayed—
Go forth and dream no idle dreams,
Oh, visionary maid!

Go forth into the country,
Where the nut's rich clusters grow,
Where the strawberry nestles 'mid the furze
And the holly-berries glow.
Each season hath its treasures,
Like thee all free and wild—
Who would keep thee from the country,
Thou happy, artless child?

Go forth into the country,
It hath many a solemn grove,
And many an altar on its hills,
Sacred to peace and love.
And whilst with graceful fervor
Thine eyes its glories scan,
Worship the God who made it all,
Oh! holy Christian man.

# Rural Sketch Book.

## THE TREASURE.

### A CHOICE STORY,—FROM THE FRENCH.

BY ANNE T. WILBUR.

A YOUNG girl and an old man were seated in a little attic, the furniture of which, more than modest but carefully preserved, revealed the efforts of a poverty which had not lost its self-respect. Order, taste and neatness gave to the poor chamber a sort of elegance. Every article was in its place; the bricks of the hearth had been carefully washed, the tapestry was unspotted, and the window adorned with little curtains of coarse muslin, on which numerous darns had formed a species of embroidery. Some pots of common flowers ornamented the sill of the half-opened window and perfumed the room with their sweet odors.

It was nearly sunset; a purple ray illumined the humble dwelling, lighting up the charming countenance of the young girl, and playing among the white locks of the old man. The latter was half-reclining in an arm-chair of rushes which an industrious solicitude had adorned with cushions stuffed with tow, and covered with pitch.—An old tabouret sustained his mutilated feet, and his only remaining arm was resting on a little stand on which lay a pipe and a tobacco pouch embroidered with colored beads.

The old soldier had one of those bold and furrowed faces, in which frankness tempers rudeness. A gray moustache veiled the half smile which dwelt upon his lips, while his glance rested as if in abstraction on the young girl.

The latter might have been twenty years of age; she was a brunette with winning and changeable features, on which emotions were expressed by sudden and rapid transitions. Her clear countenance resembled those pure waters which reveal all that lies in their inmost depths. She was holding in her hand a newspaper, and reading to the old invalid; suddenly, she paused and listened.

"What is the matter?" said the old man.

"Nothing," replied the young girl, whose countenance expressed disappointment.

"You thought you heard Charles?" resumed the soldier.

"It is time," said the reader, blushing slightly; "his day's work must be ended, and it is the hour for his return."

"When he does return," finished Vincent, in a tone of vexation.

Susanna was about to defend her cousin; but her judgment doubtless protested against this intention, for she stopped embarrassed, then fell into a reverie.

The invalid passed his remaining hand over his moustache, and began to twist it impatiently; this was his habitual gesture in his fits of dissatisfaction.

"Our recruit plays a bad march," said he, at last; "he returns home sulky, he neglects his labor to frequent taverns and fetes—all this will end badly for him and for us."

"Do not say so, uncle," replied the young girl. "My cousin has lost his courage for labor, because, as he says, he has nothing to expect. He thinks he can never lay up anything, and that the most he can do is to live from day to day without anticipation and without hope."

"Ah, is that his plan?" returned the old man; "well, he has not the honor of inventing it. We had once a regiment of reasoners who excused themselves from starting, on the plea that the route was too long, and who were lingering about the barracks while their comrades were entering Madrid, Berlin and Vienna. Your cousin does not seem to know that by putting one foot before the other the smallest feet can travel to Rome."

"Ah, if you could make him comprehend that!" said Susanna, with solicitude. "I have tried to persuade him that a good binder like himself could economize; but when I reach the sum total, he shrugs his shoulders, and says that women do not understand calculating."

"And then you are in despair, poor girl," continued Vincent, with a smile of tenderness; "I see now why you so often have red eyes."

"Uncle, I assure you—"

"Why, you forget to water your pretty flowers, and no longer sing."

"Uncle—"

Susanna, confused, cast down her eyes and rolled the corner of the newspaper.—The invalid placed his hand on her head.

"Do not think me scolding," he resumed, with a friendly smile; "it is very natural that you should be interested in Charles, who is now your cousin, and who will one day be, I hope—"

The young girl made a movement of impatience.

"Well, we will not talk of that," said the invalid. "But to return to this cousin, for whom you have a friendship—that is the word—and who has also a friendship for you."

Susanna shook her head.

"That is to say he formerly had," said she; "but for some time past, if you know how cold he is—how uninterested in everything at home."

"Yes," replied Vincent, pensively; "when one has tasted exciting amusements, household pleasures appear insipid; many of us have experienced this."

"But they have been cured," observed Susanna; "so Charles may be cured. It will perhaps suffice for you to speak to him, uncle."

The old man made a gesture of incredulity.

"These infirmities are not to be treated with words," replied he, "but with acts.—Your cousin is wanting in will, because he has no object in view; we must show him one which will renew his courage; but this is no trifling affair. I will think of it."

"This time it is he!" interrupted the young girl, who had recognized the rapid step of her cousin on the stairs.

"Then silence in the ranks," said the invalid, "and resume your reading."

Susanna obeyed, but the trembling of her voice would easily have revealed her emotion to an attentive observer. While her eyes followed the printed lines, and her mouth mechanically pronounced the words, her ear and her thoughts were wholly with her cousin, who had just opened the door and deposited his cap on the table in the middle of the room.

Authorized to silence by the non-interruption of the reader, the young workman saluted neither his uncle nor his cousin, and, approaching the window, leaned upon it, with his arms folded.

Susanna continued without understanding what she was reading. After several announcements of thefts, fires, and accidents, she came to the following article:

"A poor pedler of Besancon, named Pierre Lefevre, determined at any risk to make a fortune, conceived the idea of setting out for India, which he had heard cited as the country of gold and diamonds. He therefore sold the little he possessed, reached Bordeaux, and embarked as an assistant cook in an American ship. Eighteen years rolled away without bringing any news of Pierre Lefevre; at last, his parents received a letter announcing his approaching return; it informed them that the ex-pedler, after inexpressible fatigues and unheard of reverses, had arrived in France, blind of one eye and with but one arm, but proprietor of a fortune valued at two millions."

Charles, who had listened to this article with increasing attention, could not suppress an exclamation.

"Two millions!" repeated he, in amazement.

"That might serve to buy him a glass eye and a wooden arm," observed the old soldier, ironically.

"Eighteen years of inexpressible fatigues!" repeated Susanna, emphasizing the expressions of the newspaper.

"What matters it, when there is a fortune at the end?' replied Charles with vivacity.

"So," resumed the young girl, raising her eyes timidly on her cousin, "you envy the fate of the pedler; you would give all your youth, one of your eyes, one of your hands—"

"For two millions," interrupted Charles; "very certainly. You have but to find me a purchaser at that price, Susannah, and I will insure you a dowry for pin-money."

The young girl turned away her head without replying; her heart was full, and a tear stood in her eye. Vincent too was silent; but he was twisting his moustache with a morose air.

There was a long silence; each of the three actors in this scene was pursuing a train of thought inwardly.

The sound of the clock striking eight roused Susanna from her pre-occupation. She hastily rose and preparad the table for the evening repast.

It was sad and short. Charles, who had passed the last third of the day at the tavern with his friends, would eat nothing, and Susanna had lost her appetite. Vincent alone did honor to the frugal supper; for the experience of war had accostomed him to eat amid all emotions; but he was soon satisfied, and regained his cushioned arm-chair near the window.

After having arranged everything, Susanna, who felt the need of being alone, took a light, embraced the invalid, and withdrew to the little room she occupied above.—Vincent and the young mechanic found themselves alone together. The latter was also about to bid his uncle good night, when the old soldier beckoned to him to draw the belt and approach.

"I have something to say to you," said he, seriously.

Charles, who expected reproaches, remained standing before the old man; but the latter beckoned him to sit down.

"Are you capable of making a long effort to secure a fortune?" said he, looking fixedly at his nephew.

"I! can you doubt it, uncle?" replied Charles, surprised at the question.

"So you would consent to be patient, to labor industriously, to change your habits?"

"If all this would profit me anything.—But why ask such questions?"

"You shall know," said the invalid, opening the drawer of a little commode, in which he kept the old papers lent him by one of the lodgers. He searched for some time, among the printed leaves, took one, opened it, and showed Charles an article marked with the nail.

The young mechanic read aloud:

"Application has just been made to the Spanish government, in reference to a deposit buried on the banks of the Duero, after the battle of Salamanca. It appears that during this celebrated retreat, a company belonging to the first division, which was commissioned to guard several chests, was separated from the body of the army and surrounded by a force so superior, that every attempt at resistance was impossible. The officer who commanded it, seeing that no hope remained of being able to escape the enemy, profited by the night to cause the chests to be buried by some soldiers in whom he had the most confidence; then, sure that no person could discover them, he ordered his little company to disperse, that each might attempt to escape singly through the enemy's ranks. Some did indeed succeed in regaining the division; but the officer and the men who knew the spot where the chests were buried, perished in their flight. Now we are assured that these chests contained the money of the army, that is to say, a sum of about three millions."

Charles stopped and looked at the invalid, his eyes sparkling.

"Were you one of this company?" exclaimed he.

"I was," replied Vincent.

"You knew of the existence of the deposit?"

"I was one of those commissioned by the captain to make it, and the only one among them that escaped the balls of enemy."

"Then you could give indications, aid to find it," resumed Charles with vivacity.

"The more readily, that the captain made us observe, that we might recognize the spot, the line formed by two hills and a nook; I could discover the place as certainly as that of the bed in your room."

Charles sprang from his seat.

"But then your fortune is made," exclaimed he enthusiastically; "why have you not spoken of it? The French government would have accepted all your propositions."

"Perhaps so," said Vincent, "but in any case they would have been useless."

"How so?"

"Spain refused the authority solicited; see."

He handed to the young mechanic a second newspaper, which announced that the demand relative to a search for a deposit buried by the French in 1812, on the banks of the Duero, had been rejected by the government of Madrid.

"But what need of permission?" objected Charles; "where is the necessity of attempting officially a search which might be made in secret and in silence? Once on the spot, and the land purchased, who could hinder the search? Who would suspect the discovery?"

"I have thought of it often for thirty years," replied the soldier; "but where should we get the sum necessary for the journey and the purchase?"

"Can we not apply to some rich persons, and let them into the secret."

"But how shall we induce them to believe it? and if chance should prevent success? If we should succeed, it might be like the fable you were reading the other day to your cousin, in which at the moment of division, the lion claimed the whole! It would then be necessary, besides the fatigue of the journey, and the uncertainty of success, to contend with the vexations of a lawsuit. I have a pension of two hundred francs; that suffices for my maintenance—I have no desire for more."

"Then you will allow this opportunity to escape you," resumed Charles with feverish animation; "you refuse riches."

"For myself I do," replied the old man; "but for you it is another thing. I have just seen how ambitious you are, and that nothing will satisfy you but to be a millionaire. Well, collect the sum necessary for our journey, and I will start with you.—Earn two thousand francs—at this price I will give you a treasure."

"Agreed, uncle!" exclaimed Charles.—"But how am I to get so much money? I can never earn it."

"Work courageously, and bring me your wages regularly each week. I promise that you shall have it."

"Remember, uncle, how small must be the savings of a mechanic!"

"That is my concern."

"How many years will be necessary?"

"You just now offered eighteen with an eye and an arm besides."

"Ah, if I was sure of it."

"Of acquiring a treasure? I swear it to you on the ashes of the little corporal."

This was the grand oath of the soldier; Charles was compelled to regard the thing as serious. Vincent encouraged him anew, repeating that he had his future fortune in his own hands, and the young man retired, resolute to make every effort to succeed.

But the confidence of his uncle had awoke in him hopes too magnificent to allow of his sleeping. He passed the night in a sort of fever, calculating the means of earning sooner the sum which was needed, regulating the employment of his future wealth, and recalling one after another as realities, all the chimeras which he had pleased himself heretofore with imagining.

When Susanna descended in the morning, he had already gone forth to his labors. Vincent, who saw the surprise of the young girl, shook his head smilingly, but said nothing; he had recommended secresy to the young mechanic, and intended to keep it himself. It was desirable to see whether Charles would persevere in his new resolutions.

[*Concluded next week.*]

## PUBLIC DINNERS.

PUBLIC dinners are public nuisances—flagrantly so. They are a relic of outgrown barbarism which esteems eating and drinking the chief ends of life, and would show affection as Joseph did to his brother Benjamin—by giving him three times as great a mess as was apportioned to his half-brothers. It is every way unworthy of our age to attempt to honor, reward or show admiration for a public benefactor by feasting him, even when (as at Boston) intoxicating liquors are excluded. But an ordinary public dinner, "with a stick in it," is essentially a bestial performance. Two or three hundred people are assembled to eat an inordinate meal, at an unusual and unseasonable hour, paying for it a sum that many of them cannot really afford, and washing it down with incessant libations of villainously drugged cider and cockroach Madeira, which gets steadily worse as the company get more and more enthusiastically and obviously drunk—then the speeches, beginning with the prosy and foggy, and ending, somewhere in the infancy of the small hours, with the tipsy and the nasty—then the leathery cloud of cigar smoke which, for the last hour or two, is battened down upon the whole concern, afflicting, torturing, demoralizing all well-bred, cleanly, uncorrupted senses—and ah! the sick headaches, the days of misery, and often the fatal illnesses that follow, as Death on the Pale Horse was followed—on the whole, we consider the public dinner the absurdest, stupidest bore of the nineteenth century.—*H. Greeley.*

# Wit and Humor.

NEW SPELLING.—A new juvenile paper, "The Youngster," has the following contributions to a proposed spelling-book on a new plan, never thought of either by Dilworth or Webster:

80 you be—A tub.
80 oh! pea—A top.
Be 80—Bat.
See 80—Cat.
Pea 80—Pat.
Are 80—Rat.
See O! double you—Cow.
See you bee—Cub.
See a Bee—Cab.
Be you double tea—Butt.
Be a double ell—Ball.

AN editor of a Western paper, while taking a snooze after dark, traveling in a railway carriage, had his pocket picked. The thief next day forwarded the pocket book, by express, to the editor's office, with the following note:

"You mizerabil skunk, bears yer peckit book. I don't keep sich. Fur a man dressed as well as yeu was to go round with a wallit with nuthing in it but a lot of neose paper scraps, an ivury tooth cumb, two neosepaper stamps, an' a pass from a raleroad diructur, is a contempterble impersition on the publick. As I heer your a editer, I return yer trash—I never robs any only gentlemun."

A MAN asked a servant, "is your master at home?"

"No, sir, he's out."

"Your mistress?"

"No, sir, she's out."

"Well, I'll just go in and take the air of the fire till they come."

"Faith, sir, that's out too," replied the servant.

"THAT is the *remarkableist* thing I ever heard of" said Aunt Hannah looking over her spectacles from the paper she was reading.

"What is it so remarkable Aunt Hannah?" inquired her niece.

"Why, the paper says they have indicted a man in Massachusetts for *manslaughter for killing his wife.*"

QUEER ADVICE.—They have a rich joke on Dr. Egan, of Chicago. He is a great land operator, as well as a most successful physician. The Doctor prescribed some pills for a lady. She asked "how they were to be taken?" "A quarter down," said the Doctor, "and the balance in one two and three years."

AN Irishman was brought before a justice on the charge of having six wives. The magistrate asked him how he could be so hardened a villian as to delude so many.—"Please yer worship," said Pat "I was only thrying to get a good one."

ONE of the best "hits" ever made at an impropriety in a lady's dress, was made by Talleyrand. During the revolution, when asked by a lady his opinion of her dress, he replied, "it begun too late and ended too soon."

IT is rumored that an experienced phrenologist has been invited to examine the "head of navigation."

## POETICAL ENIGMA.

Before creating Nature willed
That atoms into forms should jar,
By me the boundless space was filled;
On me was hung the first-made star.

For me the Saint will break his word,
By the proud Atheist I'm revered:
At me the coward draws his sword,
And by the hero I am feared.

Scorned by the meek and humble mind,
Yet often by the vain possessed,
Heard by the deaf, seen by the blind,
And to the troubled conscience rest.

Than wisdom's sacred self I'm wiser,
And yet by every blockhead known;
I'm freely given by the miser,
And kept by prodigals alone.

As vice deformed, as virtue fair;
The courtier's loss, the patriot's gain;
The poet's purse, the coxcomb's care;—
Read, and you'll have me for your pains.

ANON.

CORRECTION.—The correct answer to the Poetical Enigma in No. 43, is—*A Mirror.* Of course what was given as the answer in our last number, was wrong.

## NEW YORK STATE AGRICULTURAL COLLEGE.

AT a meeting of the Trustees of the State Agricultural College, on the 21st Sept., 1853, it was resolved, to arrange and prepare the Veterinary department of the College, simultaneously with the earliest courses of instruction; and that every subscriber to the funds of the College be and hereby is declared to be entitled to the use of the Hospitals of the said department, for all Medical or Surgical treatment, necessary and proper for such diseases or accidents as may afflict any animal belonging to the said subscriber: to be subject to such rules and regulations as the Trustees may from time to time appoint and direct.

No cost or charge shall be made for Medical or Surgical advice or treatment. The necessary expense for the sustenance of animals received into the Hospitals under this resolution, shall be paid by the proprietors of the animals respectively.

By Order.
197-4t J. W. BACON, Sec'y.

TO BOOKBINDERS.—FOR SALE—The Tools, Stock and Fixtures in a well established BINDERY, now doing a good business. The owner has been in it for the last twelve years, and only wishes to leave to do other business that will be better for his health.

For particulars concerning the business, address Democrat Office, Rochester, N. Y., or to the subscriber,

F. H. MARSHALL.

## MOORE'S RURAL NEW-YORKER:

A WEEKLY HOME JOURNAL,

For both Country and Town Residents.

PUBLICATION OFFICE,
BURNS' BLOCK, CORNER STATE AND BUFFALO STS.,
ROCHESTER, N. Y.

### TERMS, IN ADVANCE:

TWO DOLLARS A YEAR—$1 for six months. To Clubs and Agents as follows:—Three Copies one year, for $5; Six Copies (and one to Agent or getter up of club,) for $10; Ten Copies (and one to Agent,) for $15; Twenty Copies for $25, and any additional number, directed to individuals at the same rate. Six months subscriptions in proportion.

☞ Subscription money, properly enclosed, may be sent by mail at the risk of the Publisher.

### Terms of Advertising

ONE DOLLAR per square (ten lines—100 words, or less,) for each insertion,—*in advance.* ☞ The circulation of the NEW-YORKER is much larger than that of any other newspaper published in the State, out of New York city. Only a limited space, however, is devoted to advertisements, and hence preference is given to those most appropriate—such as the cards and notices of dealers in Agricultural Implements and Machinery,—Horticulturists and Seedsmen,—Booksellers and Publishers,—Inventors, etc. All orders by mail should be accompanied with the cash.

To enable us to accommodate as many as possible, brief advertisements are preferred. Patent medicines, &c., will not be advertised in this paper on any terms.

☞ All communications, and business letters, should be addressed to D. D. T. MOORE, Rochester, N. Y.

## THE WOOL GROWER AND STOCK REGISTER.

THIS is the only American Journal primarily devoted to the interest of Wool and Stock Growers, and should be in the hands of *every owner of Domestic Animals.* It is ably conducted, published in the best style, and finely illustrated. Each number contains a careful Review of the WOOL and CATTLE MARKETS, and much other *useful* and *reliable* information which can be obtained from no other source. The Fifth Volume commences with July, 1853.

TERMS:—FIFTY CENTS A YEAR; Five Copies for $2; Eight for $3; Eleven for $4. Back volumes, bound in paper, at 40 cts. each,—unbound at 35 cts., or three for $1.

Published monthly, in octavo form. Specimen numbers sent free. Money, properly enclosed, at our risk.

Address D. D. T. MOORE, Rochester, N. Y.

# MOORE'S RURAL NEW-YORKER.

VOLUME IV. NO. 46. } ROCHESTER, N. Y.—SATURDAY, NOVEMBER 12, 1853. { WHOLE NO. 202.

MOORE'S RURAL NEW-YORKER:
A QUARTO WEEKLY
Agricultural, Literary and Family Newspaper.
CONDUCTED BY D. D. T. MOORE,
WITH AN ABLE CORPS OF ASSISTANT EDITORS.

THE RURAL NEW-YORKER is designed to be unique and beautiful in appearance, and unsurpassed in Value, Purity and Variety of Contents. Its conductors earnestly labor to make it a Reliable Guide on the important Practical Subjects connected with the business of those whose interests it advocates. It embraces more Agricultural, Horticultural, Scientific, Mechanical, Literary and News Matter—interspersed with many appropriate and handsome engravings—than any other paper published in this Country.

☞ FOR TERMS, &c., see last page.

## Rural New-Yorker.

### Progress and Improvement.

### BARN-YARD MANURE.—No. 1.

WHEN a plant is burned, the four *organic* elements, oxygen, hydrogen, nitrogen, and carbon are driven off into the air, while the ten inorganic elements are left as ashes.—Consumption by an animal has been frequently compared to this burning process, and to a certain extent the analogy holds true. It has been supposed, by some at least, that the organic elements of the food passed into the atmosphere in the form of breath, perspiration, &c., while the inorganic, or ashes, were voided in the solid excrements. This, however, is true only in part, and gives but a faint idea of the actual process of nutrition. It is true, that one half the organic matter of the food is given off by respiration, &c., but it is not half the whole organic matter; there is none of the nitrogen of the food exhaled in the breath, or given off through the pores of the skin. It is only the digestible hydrogen and carbon which are burned in the lungs and thrown off from the body in the form of water and carbonic acid. The greater part of the nitrogen is voided in the urine, while the undigested carbon compounds (woody fibre, &c.,) are voided, in conjunction with the inorganic elements in the dung. If a ton of clover hay is fed to animals, the liquid and solid excrements will contain (excepting a small portion of phosphoric acid, lime, and potash) the same amount of elements as the ton of clover, minus one half its organic matter which has been given off into the air as carbonic acid and water, two substances of no manurial value on a wheat farm. There are no fertilizing properties gained by passing food through the body of an animal, and there need be nothing of material consequence lost.

The composition of the food, then, affords a true criterion of the composition and value of the manure. If clover, plowed in would be good manure, clover passed through the body of an animal, would be equally good; if straw plowed in is of little value, manure made by animals eating nothing but straw, will be of little benefit.

Hog and horse manures are known to be of more value than cow and sheep manures. They are so because hogs and horses live on richer food, and for no other reason. A cow or a sheep would give equally as good manure as hogs or horses if both were fed on the same food and other things were equal.

The next most important point is, what foods make the richest manure? There are many conflicting opinions on this matter. Some eminent theoretical chemists tell us that the more phosphoric acid and potash the manure contains the better it is. We believe, on the other hand, that the value of manure will be in exact proportion to the amount of nitrogen the food contains.—There cannot be a rational doubt on this point. It is well known that clover is of more value as manure than straw. This is because clover contains more nitrogen than straw. Practical farmers know that manure made by animals eating oil cake and peas is worth more than that made by animals eating nothing but turnips or hay, and this is because oil cake and peas contain such a large quantity of nitrogen. Blood, woolen rags, horn shavings, leather, hair and the carcasses of animals, are all known to be the best of fertilizers, and this simply because they contain such an immense amount of nitrogen. In fact, we know of no substance containing much nitrogen, but what practical farmers, without knowing why, consider of great value as manure. The value of Peruvian Guano is always estimated by the quantity of nitrogen it contains. The more intelligent dealers, before purchasing, always have the per centage of nitrogen determined in various cargoes, and buy that which contains the most. On this point the late Prof. Norton says, "that during his stay in Edinburgh, samples from more than 500 cargoes of guano were analyzed in the laboratory of Prof. Johnston, and were sold by his analyses, fluctuating in price as they indicated more or less nitrogen. Had there been any mistake in this method of estimating value, experience would soon have detected it." The practical value of this fact we will explain in future articles.

### ANALYSIS OF SOILS.

A FRIEND bought, one year ago, a small farm which had previously been under ordinary cultivation, but had been for many years mainly fertilized with Gypsum—an excellent thing in its place, and which had doubtless done the land good service. But the new farmer's brother is a thorough Chemist, and he was invited to analyse the soil. Careful analysis showed a signal deficiency of lime, but a superabundance of sulphur and other ingredients of plaster. Of course, at each successive application of plaster the plants took up the lime only, leaving all the residue to lie inert in the soil; and so the old farmer had for years been feeding his soil, at the rate of twenty to thirty cents per bushel, with the requisite lime brought from a distance in the form of plaster, while there was far better lime burned all around him, and for sale at six cents a bushel! The loss thus incurred may have averaged fifty dollars per annum—all for want of an analysis that might have cost ten to twenty dollars. And there are tens of thousands to-day farming just as blindly. —*Horace Greeley.*

THE above is a fair specimen of the line of argument at present used to prove the value of soil analysis. "Of course, at each successive application of plaster the plants took up the lime only, leaving all the residue to lie inert in the soil." This long contested point, then, is at length decided: *plants have the power of selection,*—they can decompose sulphate of lime, (no easy matter,) appropriate the lime, and let the sulphuric acid go free. Let all objectors keep silence, and you, who have held the opposite opinion, forever hold your peace. Mr. GREELEY says that plants have the power of selection; so "of course" they have.

We will not argue this point. There are some facts which indicate that plants have the power of selection, while there are many, equally well authenticated, which point to the opposite conclusion. Admitting, however, that they have the power of decomposing sulphate of lime, and that, in the case assumed, they had taken up all the lime and left the sulphur in the soil untouched, what amount of sulphur would the analyst discover? Supposing that, for the last hundred years, one hundred pounds of gypsum had been applied to the soil *every year*, what proportion of sulphur would be thus added to the soil? One hundred pounds of gypsum contain about 18½ lbs. of sulphur, so that in one hundred years there would be added to an acre of soil, 1,850 lbs. of sulphur. Now, one square acre, a foot deep, contains 3,920,000 lbs. of soil; therefore, the 1,850 lbs. of sulphur would form one part in 2,130. The brother of Mr. GREELEY'S friend is undoubtedly a "thorough chemist," if he can accurately determine this proportion of sulphur in the soil, or the quantity which has been added by an annual application of 100 lbs. for one hundred years.

We contend that no one can determine, with *any degree of certainty*, such a proportion. And that ten to twenty dollar soil analyses are utterly devoid of all practical value. If lime was of more value to this soil than sulphate of lime, a few applications of the two substances would indicate the fact far better than even a *thorough* analysis, to say nothing of a ten dollar one.

### UNDERDRAINING.

EDS. RURAL:—Though not much accustomed to writing for the public press, yet the favorable reception you gave my article on the subject of Draining, encourages me to write further upon that very interesting topic. But I am inclined in the outset to allude to a single typographical error, which occurs in the last paragraph, where for the word *sorrow* is substituted that of *sworn*.—It renders the sentence quite unintelligible; and if the fault is with the writer, he will endeavor hereafter, to scribble more legibly.

Your inquiries in regard to my experiments in draining, I will answer in the order in which they are made.

1st. *What is the width of your drains?*—This has been regulated by the amount of water to be discharged. Main drains, which in wet seasons have to convey a large amount of water, have been cut from 18 to 20 inches wide on the bottom. Such allow the admission of pretty large sized cobble stones for the side walls, and you consequently have a sluice-way which is not liable to choke. And here let me say, in reference to the use of tile, that no pattern which has ever fallen under my eye, is sufficiently large to discharge such an amount of water as I have buried under-ground, in at least three long main drains. For branch drains, my usual width has been from 12 to 15 inches. For these, of course, smaller cobbles are used, and a smaller sluice-way made. A sluice-way in the bottom of each ditch, is esteemed important. The opinion *has* prevailed, that to throw the stones in promiscuously, is a better way. This notion—a very erroneous one in my judgment—was held to by the former occupant of my farm—and the result has been that his drains, which were only two feet in depth, and were half filled with stone, choked up from moles and other causes, and entirely failed before ten years had passed. With a substantial sluice-way, resting upon hard-pan bottom, 2½ feet under ground, and abundantly capacious to allow the passage of all the water, I do not believe the drain will very soon fail. I see not why it ever should. Some ten years ago, the writer constructed one on this plan, which is apparently as good as when it was first made.

2d. *Cost of cutting and laying the stone.*—This is expensive, for my soil is underlaid with a hard subsoil, quite impenetrable by a spade, and diggers in these parts are not particularly plenty. Two of them the past season, who boarded themselves, dug 300 rods 2½ feet deep, placing the stone in the bottom from the bank adjoining, at 40 cents per rod. Estimating laying the stone at 6 cents per rod (the usual price here,) the sum of 34 cents is left for the digging. If this seems expensive, it must be borne in mind that much of my soil was wet, some of it very stony, and beneath the whole was a subsoil too hard for Yankee patience, and which made even the Irish diggers swear.

3d. *Filling up.*—The cost of this, I estimate at about 3 cts. per rod. A coat of wheat straw (worth but little,) is spread evenly upon the top of the stone and the dirt plowed in. Some let the off horse walk in the ditch and the nigh one on the bank, but there is danger of disturbing the stone, and I prefer that both horses should be on the bank. You cannot get along quite as rapidly, but even in this way, from one to two hundred rods may be covered by two men in a day.

4th. *Do you like to cut the drains up the natural slope or fall of the land, or across it?*—I answer, *across* it, by all means. In this way, where water makes out along a slope, it is much more effectually cut off.—Possibly there may be land where it would be as well to run the drains the other way, but the writer has never seen it, and on his land the practice would be quite senseless.

W. B. PRATT.

Prattsburgh, N. Y., 1853.

### POTASH IN INDIAN CORN.

EVERY one at all acquainted with the working of his own mind, knows how easy it is, after adopting any particular theory, to find facts to sustain it. He is no longer an impartial observer, but twists and perverts every phenomenon till it agrees with his preconceived opinions. It is this fact that explains how such a man as HENRY COLMAN could find innumerable evidences in New and Old England farming that supported the facinating mineral theory of Baron LIEBIG, while to an unbiassed observer the facts point to a very different rationale of agriculture. It is well known that LIEBIG thinks that potash is of more importance in a soil than any other ingredient, excepting perhaps phosphoric acid, and he mentions so many facts, which apparently sustain this view, that hundreds of good chemists without due investigation have adopted his theory.

We will mention one instance that shows how even a great man can make a great mistake in order to sustain a previously adopted theory. It is well known that Indian corn has been grown annually on the same soil for centuries. LIEBIG explains the fact as follows:—"There are certain plants which contain either no potash, or mere traces of it. Such are the poppey, Indian corn, &c. For such plants the potash in the soil is of no use, and farmers are well aware that they can be cultivated without rotation on the same soil, particularly when the herbs and straw or their ashes, are returned to the soil after the reaping of the crop."

If Indian corn contained no potash, or merely a trace of it, LIEBIG would have at least one fact on which to base his theory, but Dr. J. H. SALISBURY, Chemist to the New York State Agricultural Society, in his investigation of the maize plant, found in the ashes of the grain of Indian corn 20.73 per cent of potash and in the ash of corn stalks 7.23 per cent. This is but one of the many mistakes which subsequent experimenters have found in LIEBIG'S brilliant writings on Agricultural Chemistry.

### SOILS—THEIR COMPOSITION.—No. II.

MR. EDITOR:—I am not able to comprehend or to enter into, or explain one of the "thousand inscrutables" that all admit surrounds the subject of vegetable life. I am aware of the glassy covering of straw, the rush and other plants, but where or how it is procured, exceeds my comprehension.—What power the plant possesses to disintegrate solid flint, or what acid or other solvent there is in water, I am unable to comprehend. I also know, that after leaching ashes, which are made from a vegetable matter, there is as much bulk left as was used at the commencement, but not as much weight, having lost its potash, and this residuum is the result of burning wood, which previously did not contain a particle of either potash or silex, that can be discovered, as I am aware.

I can hardly think it is procured from the soil; as the experiment of planting a willow in a tub of earth weighing a hundred pounds, and by simply adding water until the tree and tub weighed two hundred pounds, on being taken up the earth was found intact and of its original weight, so that I am disposed to think that water and the gaseous elements are the great and primary causes of vegetation, and that the earth is a mere convenience—a foot hold—a sponge to retain moisture.

A stalk of corn has been perfectly grown, though of dwarfish proportion, in a glass vase filled with powdered glass, with no mineral or artificial manures except water. Water, nor none of the ordinary productions of water dissolve glass, and where did it get all the elements of silicate of potash, phosphates, lime and magnesia, that chemists discover on analysis?

Would the boiling down of a thousand gallons of sap produce a drachm of silex or potash—no, but the burning of the wood secreted from this sap produces both, so I cannot conceive where these abundant minerals are obtained, unless from the air. I am precisely in the predicament of the boy who know that millers had fat hogs, but did not know whose corn they were fatted on.

L. MANLY.

Chestnut Ridge, N. Y., 1853.

REMARKS.—Surely our correspondent is jesting. He cannot suppose that because potash, by a direct application of a chemical test, cannot be detected in wood, that therefore, wood does not contain any? The ash of wood contains potash; if, therefore, the wood contains any ash it must also contain potash.

The experiment with the willow, though often quoted, is altogether too indefinite to be satisfactory. If the soil increased in weight, it must have been from the formation of organic matter, from the carbonic acid and ammonia of the atmosphere. Such a supposition is quite consistent with science and observed facts.

That a perfect corn stalk has been grown in powdered glass and *pure* water, we cannot credit. The water probably contained lime, potash, &c., and would supply the plant with them. M. LASSAIGNE grew seeds in flowers of sulphur, moistened with *distilled water*, and the plants produced contained neither more nor less saline and earthy matter than was originally present in the seed.

In regard to the composition of sap, we would refer our correspondent to Boussingault's Rural Economy, page 66,—where he will find analyses of the sap of various trees, in all of which potash was found. The sap of elm, taken in April, contained in 1,000 lbs. of sap, 9 lbs. of acetate of potash and 1 lb. of carbonate of lime, besides other inorganic and organic matter.

### CORN, A PROFITABLE CROP.

WHETHER Indian corn will prove a profitable crop or not, depends much more on the preparation of the soil and its proper culture, than on the season or the variety which may be planted. The many fields throughout the country, from which little or no return is received, are but proofs of the slovenly farming of the owners.

To show what good management has to do with the profit of farming, let us repeat the statement of a farmer, who bought 20 acres of land—for how much he does not state, except that half of it cost him $300. It was a warm, loamy soil; he plowed it well, but the wet season prevented the planting until June. He hoed it thoroughly twice, and in the fall gathered nineteen hundred bushels of good sound ears—picking it from the stalks, which were left to be plowed in for another crop.

This is no extraordinary yield—though it amounts to some nine hundred bushels of shelled corn; yet, as it was sold, it paid for the land and the interest on its cost, the taxes, for the manure, and all the labor attending the crop, except hauling the manure. A profitable crop, surely.

But he failed to gain all the profit which might have resulted, by not curing the stalks for fodder, and then cutting and steaming them for his cattle, horses and sheep. By this method much hay and grain might have been saved, and the stalks, by increasing the value of the manure, would have returned the cost of the additional labor in the increase to the next crop, to which it should be applied.—B.

### TO DRIVE AWAY RATS.

A FRIEND has just informed us of a plan he adopted to get rid of rats. His premises swarmed with them. He took a small fish hook, attached to a fine wire, and suspended on it a piece of cheese, letting it hang about a foot from the ground. One of the rats leaped at it and was hooked, and sat up such a horrible squeal, noise and rattle that all the rest forsook him and fled. Not a rat remained on the premises. A few days afterwards his neighbor declared that he was visited with a plague worse than those of Egypt,—that the *rats* would surely eat him up, house and all. Our friend enjoyed the joke, but kept shady. This was not philanthropic of him, so, for the benefit of his neighbor, who we hope takes the RURAL, and the rest of mankind, we "disclose the disclosure" without enjoining secrecy or charging the dollar.

### ABOUT ROADS AND TAXATION.

Eds. Rural:—Is it nature, or second nature, for man to see other people's faults sooner than his own, and be ready and willing to assist with his advice, in adjusting burdens that rest entirely on other people's shoulders? And is it the first, or the second, that is the cause of the lucid articles from "*Country Gentlemen*," describing the miseries of bad roads, and lucidly devising and ludicrously advising improvements with the pen, instead of setting examples with the pick, shovel and purse,—when no doubt the satisfaction of witnessing the philosophical phenomenon of water finding its way into a tile, or cobble stone drain covered with clay, directly under the wagon wheel track, would richly compensate the cost of the experiment, if successful, after a six month's trial. The first effort should be to equalize the burden and expense of making and sustaining good roads, for the present system is far enough from it to satisfy the most selfish, on one side, and the most liberally public spirited on the other.

The advantages to the farmer of having good roads in his vicinity are indirect. A good public thoroughfare, gives his land an imaginary, fanciful value,—and the increased facilities of good, over bad roads, in transporting the surplus products of his soil to market,—using the public road, say once a week on an average, through the year, for that purpose; otherwise, ordinary roads suit his convenience—while to the "country gentleman," and the village teamster, who derive their chief pleasure in riding and teaming on the public roads, the benefits and advantages are direct.—And let me ask, are the burden and expense of good roads proportioned to the benefits received by the different parties. Where a man owning a teaming establishment worth $500 can earn a support for them, a family and himself by teaming for others, and the "gentleman" is able to exhibit the unrivaled speed of his 2-40 nag, jockey tactics and equipments, and the man who owns only his huge, naked hands, dependant on their daily use to support himself and family, are each taxed one day or five shillings to make and support roads, the farmer with 50 acres worth $3,000, is taxed 7 days,—when the relative advantage to the parties are about 00, and 50, and 100, as near as can be ascertained without patent-balances.

The professed intent of taxation laws, is to make property pay public expenses, while equity demands that the tax for an object should be proportioned to the intrinsic value of property, and the direct advantages derived to property holders by its application. Would not a correctly adjusted system of tolls be the most equitable method to effect that purpose in support of public roads? notwithstanding some may consider it more equitable to assess all taxes by a man's own valuation of himself, which would relieve many farmers of burdens now felt to be onerous, although it might deprive them of the unenvied honor of being the bone and sinew of society, as well as the present system does of representing the *head*. S. G.

Marcellus, N. Y., Nov. 1, 1853

### ONONDAGA CO. AG. SOCIETY.

We have received the "Transactions of the Onondaga Co. Agricultural Society," a small pamphlet of 24 pages. It contains a list of officers and members of the Society, list of premiums, and the awards and reports of Committees, together with an address delivered before the Society by the late John Delafield. We have read this address with peculiar interest, heightened by the thought, that the tongue which then spoke so eloquently, is now hushed in death. But Mr. Delafield, "though dead, yet speaketh."

The principal part of the address is occupied in stating that the Agricultural products of the State are decreasing instead of increasing, and in attributing this fact in a great measure to the indifference and opposition of practical farmers to the teachings of true science, concluding as follows:

Gentlemen, I have stated that your county is, in the aggregate, less productive than heretofore. Yet I must say, that you present farms and systems of farming, worthy of all praise, and equal to the best cultivation known in our State.

With this admission, permit me to add, that there is *need* for *an increase* of your herds and flocks; for an increase of such cereal grains as your soil and climate will warrant. It is important to your welfare now—*now*, when your agricultural condition may be readily be improved, and deterioration be arrested—now when the whole world, or the nations of the earth seem ready to ask from us bread, and I had almost said to seek from us succor and advice. This may sound presumptuous, from our yet young nation; it may be *premature*, but the day is at hand; the light of our sun is gilding the morning of the day, during which, we shall be called upon to aid our fellow creatures even to the ends of the earth. This is no dream—no vision; it was the destiny engraved upon our characters when our shackles were broken in 1776; when oppression ceased, and this continent presented a place of safety and refuge from the turmoils, exactions and thraldom of the older nations of the earth. The events which now agitate the powers of Europe and Asia; the happy condition of our own nation; the prosperity of our State; the onward and steady elevation of our agricultural population, which I deem to be the only *true basis* of our greatness; these conditions almost tempt me to wish that years might be added to an already long life, that the eye might witness the destiny now foreshadowed.

With these truths before you, men of Onondaga, what will you do? Let us expunge from our Lexicons, the word "can't;" ruin is in its path; it carries loss to every being who yields to its use.—Let us rather say "we will," and depend upon it, with science for our guide, success will crown every effort.

To stand first among the counties in this noble State, you need but say in sincerity, "WE WILL."

### IMPROVEMENT IN MAKING BUTTER.

M. Chamembel proposes to introduce a modification in the process of making butter, by which the latter will be improved in quality and rendered capable of being longer kept in a fresh state. If butter contained only the fat or oily part of milk, it would but slowly undergo changes from contact with the air; but it retains a certain quantity of caseine, which, transformed by fermentation, gives rise to butyric acid, to which rancid butter owes its disagreeable taste. Washing does not effectually remove this cause of alteration, for water cannot act upon butter, nor can it separate the caseine which becomes insoluble under the influence of acids developed in cream. A more complete purification may, however, be effected if we saturate or neutralize these acids; the caseine will then be rendered soluble, and consequently the butter will only retain it in very small quantities, in a state in which it may be almost entirely removed by washing. M. Chamembel proposes to operate as follows:—When the cream is put in the churn, pour in, little by little, and working the churn at the same time, a quantity of milk of lime, sufficient to destroy all acidity; churn till the butter separates, but not till it forms into lumps, as is usually done; strain off the buttermilk, and put cold water in its stead along with the butter in the churn; continue churning till the butter is sufficiently collected, then take it out and make it up in lumps or rolls in the usual way. The butter which has been made according to this method has always proved better and kept much longer fresh than that obtained by the usual mode of proceeding. The buttermilk was free from all acrid taste, and was much relished by those persons who used it, and by animals. It had also lost its laxative properties. Washing with lime water has also restored butter previously so tainted that it could not be used except for melting. Any other alkaline wash may be substituted for lime water.—*Comptes Rendus.*

We have not tried the above method of getting rid of the curd in butter, and therefore cannot speak experimentally of its value. It is well known that cream, however sweet it may be when put into the churn, always sours before the butter comes. This takes place in consequence of the conversion of sugar of milk into lactic acid, under the influence of caseine and the large quantity of air introduced by agitation.—We supposed that the formation and presence of this acid in a *free* state, was necessary to separate the butter from the milk. If it is not so, if the butter will come without the presence of free lactic acid, the plan recommended above might be very beneficial in many cases. We would, however, recommend the substitution of soda for lime water, as it is much the best solvent of caseine. Will some of our friends try the method and report the result? Don't try a large churning, as it is possible that the butter may not come at all,—which would not prove profitable.

### BURYING BEES.

I was reading in the Farmer sometime since, a statement of Mr. Pomroy of burying bees. He seemed to express fears that that he had buried the "little innocents," as he calls them, never to see the light again. I have buried bees for 20 years more or less, and have concluded that when buried right and nothing disturbs them, they eat no honey, but lie dormant; buried so that no air circulate among them. I once buried with my other hives of bees, one very late swarm, which had not comb enough to roost in when compact and close, and am sure, had not more than one-fourth enough honey to winter on, had they stood in a good beehouse. I cleaned off a spot smooth on the ground, laid down two sticks to set each hive on, took the board from under, and set the hives side by side, six inches apart; set boards around the hives, and put straw over them to keep the dirt from working through. I buried about the same as I do turnips.—In the spring I uncovered them, and raised the hive quickly and found the bees of this late swarm perfectly still all over the comb, for they could not all get in, but in a moment the air was filled with them. At other times I have buried bees, and had them mostly destroyed by mice digging holes in as into potato heaps, and eating the comb so that it would almost all drop down.—Geo. Seton, in *Prairie Farmer.*

### INFERENCES IN A POTATO PATCH.

Eds. Rural:—An inquiring mind can learn much even from common occurrences. The following valuable inferences were drawn with a small crop of potatoes, in a hand cart:

1. At an average of six potatoes to a hill, it takes a sight of digging to fill a bushel basket.

2. Round potatoes are better than long ones—they roll out of the hill the easiest.

3. White potatoes with blue spots on, grow better among pigeon-grass and pig-weeds than white potatoes without spots on them.

4. Small potatoes are not as liable to be cut as badly in digging as large ones.

5. Cut potatoes will not keep as long as whole potatoes but are better for eating; for you cannot eat *whole* potatoes, and cannot *eat* them and *keep* them when cut.

6. Hoeing potatoes is no use—four hills were hoed nicely—not a weed left—and they did not yield as well as some not hoed. N. B. One of them had a whopper of a potate in it, though.

7. The theory of "shade as a manure" does not hold good in the case of potatoes planted under peach or other trees. The yield was "small potatoes and few in a hill," and the weeds did not grow very well.

Roadside, Oct. 1853. R. N. Y.

### NATIVE DEVON OXEN.

C. P. Holcomb, Esq., Vice President of our State Society, for Delaware, is, as our readers are aware, now on a tour of Europe. The principal object of Mr. H's. visit is to examine the stock horses and cattle, and to introduce such breeds, particularly of the former, as may be deemed most suitable for the general purposes of our country. Of the latter, he is partial to the Devons, and has a most beautiful herd, second to none other in this country, save that of Geo. Patterson, Esq.'s herd, which the world cannot beat.

In a letter to Mr. Pedder, of Boston, Mr. Holcomb describes a yoke of native Devon Oxen, which he has had on his farm for many years. He says:

"They are sixteen years four months old, and have worked to the yoke fourteen years; have taken two prizes, one at three years old, and one at six. They plowed in the spring of 1842 three acres of ground in a day; in April, 1843, they pulled on a wager, or trial of strength, two tons weight over a bad road. They plowed in the following autumn at the first plowing match of the Newcastle County Society, beating five horse teams in point of time. They were turned off to fatten last autumn; their present live weight is 3,330 lbs. They have been a cheap, faithful and efficient team, and well deserve the record thus sought to be preserved of them."—*Maryland paper.*

We have for years been advocating a more general use of oxen on the farm. How would the account stand in the use of horses for the same period of time; say extra keep $500, wear and tear, loss of life, and depreciation in value, harness-smith's bills, $1,000 more in 14 years, with nothing but horse skins left, while the oxen were worth more than they ever were. Oxen for economy, and horses for luxury.

### KICKING HORSES.

It occurred to me that a recipe published in your paper for the cure of kicking horses, might be of much service to persons afflicted with such dangerous animals. The operation for cure to be commenced as follows, to wit:—Put on a headstall or bridle, with twisted W, or twisted straight bitts in the mouth of the horse to be cured; then put on a common back-saddle, with thill lugs, or any strap or girth, with loops on either side of the horse, is equally good; then buckle a pair of long reins, open in the middle, into the bitts, and pass them through the thill lugs or loops; one to each hind leg, above the fetlock joint, there make each rein fast to the leg, allowing sufficient length of rein for your horse to walk or trot, as the operator may think proper.—Everything complete, you will have the animal commence the operation of kicking; the first will be a smart kick, the second lighter, and so on till your horse cannot be made to kick any more. By the above method many now worthless horses may be made valuable.—*Maine Farmer.*

Guano.—We heard of several sugar planters who doubled their product last year by using guano. The success of the application of this compost in Louisiana has drawn attention to the importance of the trade.—*New Orleans Delta.*

Ammonia, the principal constituent of Peruvian Guano, is known to be of great benefit to wheat. The sugar cane belongs to the same botanical order, as the wheat plant, and this, with other similarities, would indicate that the cane would be equally benefitted by an application of ammonia. With wheat at a dollar per bushel, the profit from an application of guano is small, but from the comparatively high price of sugar the *increase* obtained would probably yield a handsome profit on the cost of the guano.

Although in draining land thoroughly, your purse may be drained, yet the full crops that follow, will soon fill it up again.

### ENORMOUS VEGETBALE PRODUCTIONS.

A correspondent writing from San Francisco notices some of the productions of the new State of remarkable dimensions. He says:—"A few days ago the editors of the Union were presented with a watermelon weighing 53 pounds. Last night I was told of two pumpkins weighing 165 and 173 lbs. These we call *some pumpkins* here.

A beet was exhibited last year at the agricultural Fair a Sacramento city, seven feet in length.

In the matter of trees, we have some noble specimens.

We used to hear stories of the big trees, 300 feet high in Oregon, and look upon the matter as rather fishy, or thought, at least, that the height of those big trees had rather been guessed at than measured. But there is certainly some "tall timber" in California. I send you the dimensions of a few well known trees in Calaveras county. The "big tree" mentioned is an Arbor Vitæ. It has been felled by a lawyer, a friend of mine, on speculation. The tree was bored down with pump augurs, and occupied a large number of men, 22 days. The bark was then carefully peeled off in sections, and it is now set up in this city for exhibition, in the same manner it was about the tree, so that we see about 40 feet of the trunk of the "big tree," as it stood. It is an enormous tree I assure you. There is a door on one side. Inside of the bark formerly occupied by the wood is a large room handsomely carpeted and furnished with sofas, chairs and a large chandelier to light the room in the night. The tree was perfectly sound from the heart to the bark. It is 294 feet long as it lies on the ground. The top has been broken off, and at the place where it was broken off the tree is, I am told, nearly three feet in diameter. It is supposed that it was originally about 360 feet high. At the ground it was 94 feet in circumference. From the ground it rises in one solid, smooth, straight handsome trunk, diminishing very gradually as it rises. There is no bulge, or irregular enlargement at the ground. The section set up for exhibition, commences ten feet from the ground. Below that the bark has been somewhat burned and was consequently imperfect. At this point, the tree was 80 odd feet in circumference.

The hollow in the next large tree mentioned, "the Father Pine" is *navigable* 250 feet. Only think of this monster of the vegetable world, a tree 400 feet long and 110 feet in circumference, and 13 feet in diameter at a distance of 250 feet from the ground, a point higher than you ever saw the top of a tree, and I suppose you have seen pines that you regarded as *some trees.*"

We add from the California Union, the following notice of the trees mentioned by our correspondent:

"During the past week, a party of ladies and gentlemen have visited the mammoth trees of Calaveras county, which are already, as objects of curiosity, attracting many visitors from various parts of the State. We are indebted to a member of the party for information respecting them, which will prove of interest to our readers.

The dimensions of the 'big tree,' a portion of which is now on exhibition in San Francisco, have already been published; although the bark, 18 inches thick, has been stripped off, the stump is still 24 feet in diameter. The body of the tree as it lies on the ground, measures 294 feet in length.

Another of the trees is named the Father Pine. This is dead and has fallen to the earth. Its dimensions are as follows:—Length, 400 feet; circumference, 110 feet. The trunk of this tree is hollow, which has been traced for a distance of 250 ft. There is a little pond of water in the centre of this cavity four feet in depth. This tree, 250 ft from the stump, is no less than 12 feet in diameter.

The cluster called the Trio Sisters, taken together, are 92 feet in circumference, and 300 feet in height. The centre one is bare of branches for 200 feet above the ground.

The Mother Tree, 91½ feet in circumference, and 325 feet high.

The Mother and Son are 92 feet in circumference, and 300 feet in height, united at the base.

The Twin Sisters, 100 feet in circumference, 300 feet high.

The Pioneer's Cabin is a remarkable curiosity. The tree has been partially burned; the result of the scorching is the dividing of the trunk into several compartments, which are known as the parlor, bed room, and kitchen. The hollow which is 200 feet in height, is called the chimney. This tree is 85 feet in circumference.

Siamese Twins, 100 feet in circumference, 325 feet in height.

Guardian of the Times, 85 feet in circumference, 325 feet in height.

Uncle Tom's Cabin, 94 feet in circumference, 300 feet in height.

Pride of the Forest, 87 feet in circumference, 309 feet in height.

Beauty of the Forest, 72 feet in circumference, 300 feet in height.

Two Friends, 85 feet in circumference, 300 feet in height.

One of the party 'axed' the Father Tree for some bark, and was rewarded by obtaining a handsome section thereof.

The above trees are all embraced in an area not exceeding one-half mile in extent.

The surrounding country is exceedingly picturesque and beautiful, and the scenery at many points along the road is said to be unsurpassed for sublimity and grandeur."—*Independent Register.*

Water in Peat.—The importance of placing peat and swamp muck in a position to drain and dry thoroughly after digging, and before drawing, may be well understood when it is stated that usually from 80 to 90 parts out of a hundred are water, as commonly seen in a moist state, fresh and black from the swamp.

### ASSOCIATIONS FOR IMPORTING AND IMPROVING STOCK.

Associations for the Importation and Improvement of Stock have of late been organized in various sections of the Union, and will undoubtedly prove advantageous to individuals and communities. As information in regard to the mode of organizing such Associations will prove interesting to many of our readers, we annex the Constitution of a Company recently formed in Livingston County, in this State—one of the best Stock Counties in New York—as follows:

Article 1. This Association shall be called "The Livingston County Association for the Importation and Improvement of Stock."

Art. 2. The Capital Stock of the Association shall not be less than eight thousand dollars, which may be increased to the sum of twelve thousand dollars.

Art. 3. Any person may become a member of this Association on subscribing and paying the sum of fifty dollars.

Art. 4. The Officers of the Association shall consist of a President, Secretary, Treasurer and six Directors, who shall constitute a Board of Managers, and shall have control of the affairs of the Association, and the following gentlemen shall constitute said Board of Managers:—James S. Wadsworth, President; Daniel S. Fitzhugh, Sec.; Allen Ayrault, Treasurer. Directors.—Charles H. Carroll, of Groveland; Aaron Barber, Avon; Wm. A. Mills, Mt. Morris; Robert Rome, Geneseo; Geo. W. Root, York; Richard Peck, Lima. Any five of them shall constitute a quorum for the transaction of business, and all vacancies may be filled by the Board.

Art. 5. Upon the capital stock being subscribed and paid in as aforesaid, the said Board of Managers shall proceed to carry out the object of this Association by the importation of stock, and for such purpose may employ necessary agents.

Art. 6. The interest of the individual members of this Association, shall be in proportion to the amount subscribed by them respectively—and in such proportion they shall share in the profits, benefits and losses of the Association.

Art. 7. That an early settlement may be made and a division had among the members of the Association, it shall be the duty of the Board of Managers, after the importation of such Stock, to render an account of the capital stock subscribed and paid in, and the stock imported by them, they shall cause to be sold at public auction, giving due notice of the time and place of sale, under the following regulations and restrictions:

1st. No animal so imported and sold shall be removed from the County of Livingston for three years next succeeding such sale.

2d. All members of the Association shall have preference in the use of such animals upon compliance with the terms of the purchaser.

Art. 8. The Board of Managers shall divide among and pay to members of the Association in proportion to their interest as aforesaid, the proceeds of such sale, together with all assets in their hands, belonging to such Association, deducting therefrom actual expenses and disbursments.

A committee of one from each town was appointed to obtain subscribers to the Association.

### N. Y. STATE POULTRY SOCIETY.

The following is a copy of the Constitution adopted at the late meeting of poultry-raisers at Saratoga:

Article 1. This Society shall be known as the "New York State Society for the Improvement of Domestic Poultry."

2. The officers of this Society shall consist of a President, two Vice-Presidents, a Corresponding Secretary, a Recording Secretary and Treasurer, and a Board of ten Managers, who, together, shall conduct the affairs of the Society.

3. This Society shall hold a public exhibition of Poultry annually, at such time and place as the Managers may designate, during which time the officers of the Society shall be chosen by ballot, and the reports of the Secretary, Treasurer and Managers be presented.

4. Any person may become an annual member of this Society upon the payment of one dollar, and any person paying ten dollars into the Treasury of the Society at any time, shall be considered a member for life. Honorary members may be appointed at any time, at the pleasure of the Society. All members and their families shall have free admission to the Society's Exhibitions.

5. Members of the Society only, shall be permitted to compete for premiums at any of its Exhibitions.

6. The receipts of the Society, after deducting the expenses, shall be wholly devoted to premiums.

7. The Board of Managers shall have power to make such additional rules and regulations, not conflicting with the provisions of this Constitution, as to them may seem necessary, and shall give at least six months notice of such regulations previous to each Exhibition of the Society, excepting the first.

8. This Constitution may be altered or amended at any regular meeting of the Society, by a vote of two-thirds of the members present.

The list of officers elected, was published on the cover of our last number.

### SHOEING HORSES.

The following are the regulations of the British army upon this subject. They were prepared by a mixed commission of officers and eminent experienced professional men, and have recently been issued:

1. The shoe is to be beveled off so as to leave a space and prevent pressure to the sole.

2. It is not to be grooved or fettered, but simply punched and the nails counter-sunk.

3. Calking is to be applied to the hind shoe only, and is to be confined to the outside heel.—The inside heel is to be thickened in proportion.

4. The weight of the shoe is to be from twelve to fifteen ounces according to the size of the horse.

5. Horses are to be shod with not less than six nails in the fore, and seven in the hind shoe; nor is the shoe to be attached with less than three nails in each side.

6. In preparing the foot for the shoe, as little as possible should be pared out; and the operation should be confined to the exfoliating parts of the foot only.

7. Both the fore and the hind shoes are to be made with a single clip at the toes.

It is said in the Ohio Cultivator that a bucket or two of water given a horse to drink just before riding him, takes from him all disposition for capering, and renders him perfectly sedate.

# Orchard and Garden.

### HEDGES.—INFORMATION WANTED.

We are continually receiving inquiries from correspondents in all parts of the country on the subject of hedges. What are the best plants to use? When, how and where should the seed be sown? When should the plants be transferred to the hedge-row? Or should the seed be sown at once when the hedge is required, and thus avoid the labor of translating? Would you plant on the flat or raise a bank with a ditch on one side? How long after planting before we should have a good fence? Is there much labor required to take care of them? Are they durable? What is the whole cost per rod of making a good hedge? Such are a few of the questions we are frequently asked. We will turn them over to our practical correspondents, from whom we should be happy to hear more frequently on this and other interesting subjects. One more question. A Michigan Friend who wishes to go into hedge growing, asks for information concerning the "Wick-wood thorn."—Will some of our readers give us their experience?

### FRAUD IN FRUIT TREES.

We learn that traveling agents have perambulated various parts of the state, during the last two seasons, and are again abroad, pretending to be agents of the Rochester, New York, and other large and well-known nurseries, and engaging fruit trees of various kinds. Those who have purchased of them, have almost uniformly been disappointed in their trees, on the receipt of them; some to such an extent as not to set them out; while others have set them, and, after letting them stand a year, have pulled them up and thrown them away. On application for recompense, to the nurseries for which the men pretended to be agents, it was found that the trees did not come from them, and that the proprietors were ignorant of the whole affair.

Those trees are said to be manufactured in an obscure part of New York state, by a short process, called root grafting. It is done by taking the roots of old trees, in the winter, and cutting them up into short pieces, into each of which is grafted a scion. They are then packed away in the cellar till spring, when they are set out, and in two years they answer to cheat the *greenies* with, who buy trees of irresponsible, strolling dealers. They will grow very well in the nursery, like trees raised from suckers, for three or four years, but like them, they soon come to a stand, assuming the appearance and decrepitude of old trees. Many kinds, grown in this way, that are naturally very good bearers, will hardly bear at all.—*Worcester (Mass.) Spy.*

Another trick of these sharpers, who travel the country with a printed catalogue, copied from the lists of some of our most extensive nursery-men, locating their establishments in some adjoining State, with which they travel and procure subscriptions and then start on a voyage of discovery to find trees to fill their orders, of the lowest quality and price, without the least care to adapt the tree to the climate for which they are intended. They attend the packing and labeling each order by itself, without any regard to the kind or period of ripening; their only care is to put in the same number and the same names, ordered to each bundle. Trees sent to the south have all popular southern names and those west have western names, and such as never were heard of by the growers of the trees: the consequence will be, that the purchasers will be totaly disappointed in quality and varieties.

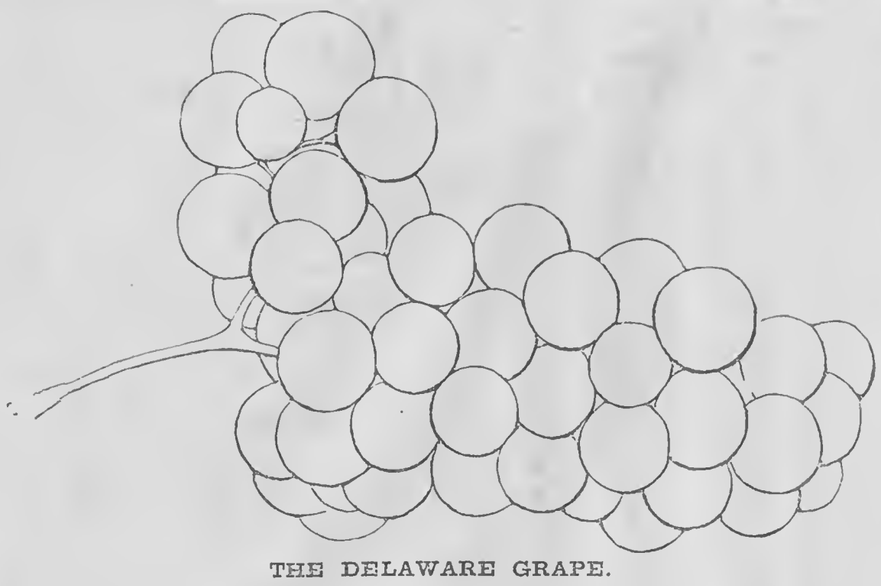
A great business has been done this fall in that line. Over 800,000 trees have already been sent off by the Rochester nurseries to various parts. It is in many cases a regular wooden-nutmeg operation, to gull the unsuspecting who are verdant enough to buy of pedlars, when there are so many nurseries conducted by men of good standing and reputation.

### CAMPHOR VS. PEA-BUGS.

Many remedies for the destruction of the pea-bug, have been published, such as dipping the peas for one minute into boiling water, dusting them with lime, &c. But we have seen none so simple as the following from a correspondent of the Horticulturist. We fear it is too good to be true, but it is worth a trial:

Four years ago last spring my seed peas were more than half destroyed by bugs, the largest and best varieties being most injured. The summer following I had boxes made, one for each variety, with a cover; and when the peas were gathered, I put into each box, with two quarts of peas, from six to eight bits of gum camphor, the size of a large pea, and mixed them together, and closed the box. The next spring there was not a pea injured. I have pursued the same course every year since, and have not had one pea affected by bugs.

North America has 50 species of the oak, while all Europe has only 30; the former 40 species of pines and firs, and the latter 14.



### THE DELAWARE GRAPE.

About three years ago, Mr. Batcham, of the *Ohio Cultivator*, was kind enough to send us some bunches of this grape from an Ohio Fruit Grower's Convention. We were much pleased with it, and took note of the discussions respecting its history and probable origin. At that time we determined to propagate it, but it slipped our memory, and we have heard or seen nothing of it since. Now we are favored by A. Thomson, Esq., of Delaware, Ohio, with a box containing several well ripened, beautiful bunches; and we think more highly of it than ever. After tasting it we should say it is an American grape; but there has been gathered up considerable evidence of its foreign origin, and an old, intelligent vine-dresser, fresh from Germany, says that he should at once pronounce it the *Traminer*, but that it has a more musky flavor than that variety has in Germany. Its exemption from mildew is a remarkable feature in a foreign grape. The grape itself, as well as its history, is worthy of more attention. The bunch is small, very compact, sometimes shouldered. Berries—small, round. Skin—thin, of a coppery-rose color. Pulp—very little. Flavor—sweet, but sprightly and pleasant. We subjoin the communication of Mr Thomson:

"I send you by express specimens of a grape that has attracted much attention in this region for a few years past, and increases in public favor as time more fully develops its superiority. To us it is a stranger; and my object in sending it to you is to get your opinion as to its quality, and ascertain if it is known to horticulturists in your section. You will perceive that it is quite early, being now ripe, while *Isabellas*, more favorably situated, are just beginning to turn, and *Catawbas* are quite green—and that it is remarkably free from pulp, thin skinned, and of sprightly and pleasant flavor—in short, that it possesses all the characteristics of a first rate table grape. It is a prodigious bearer; bunches compact though rather small; the berries of uniform size and quality, it being almost impossible to find one that is in any way defective. The vine is a vigorous grower—hardy, free from mildew, and ripens its wood (which is small and short-jointed) better than any with which I am acquainted. I regard it as a great acquisition, and certainly no fruit that has appeared has acquired greater popularity in the same length of time than this in the region where known.

Being offered for sale in our streets a few years ago by persons from the country, it immediately attracted attention, and investigations instituted by myself and others showed it to be of foreign origin—having been one of a lot of vines sent more than fifty years ago to a gentleman in New Jersey by a brother residing in Italy. It was procured in the garden of the gentleman referred to, and brought to this country some sixteen years ago. Though its origin is clearly traced to a foreign source, I am inclined to think that instead of being taken from the original stock, it is probably a chance seedling from one of the Italian vines, for I have never seen or heard of a foreign vine that would flourish and ripen its fruit in our climate as this does. If it does as well and produces as good fruit in New Jersey as in this State, it is surprising that it has not ere this attracted the attention of eastern horticulturists.

Mr. Longworth regards it as a foreign grape, and in a letter to me says:—'I have upward of one hundred bunches of the Delaware grape ripening. It compels me to back out and admit there is one foreign grape that suits our climate. I have failed with one hundred varieties. I wish to give it a fair trial for wine. It is a superior table grape.' And in a subsequent letter he says the German vine-dressers in that region who have examined it are divided in opinion—some pronouncing it the Red Riesling, while others think it is the Traminer, one of the most celebrated of the German wine grapes. The evidence preponderates in favor of the latter, and Mr. L., acting upon this evidence, has ordered a large number of the vines from Germany. He may be correct in supposing its identity clearly established; but if so, it is somewhat remarkable that in his former large importations (the object being to procure *wine* grapes) this, the most celebrated of any they cultivate, should not have been included; and it is no less remarkable that none of the Germans who have brought vines with them from the father-land, should have failed to include their favorite Traminer."—*Horticulturist.*

### THE MARROW SQUASH.

Much depends upon the manner of planting squash seeds, as well as other seeds, to ensure good crops. Every man's motto should be, "*work the soil deep*," and with the blessing of God, I shall have vegetables to sell and to keep. When I have planted my squash seeds after the following rule, I have never failed of being well paid for my labor, viz:—Dig the holes 16 or 18 inches deep, three feet broad and seven feet apart; throw the top soil on one side, and the bottom soil on the other side of the holes.—After digging as many holes as I wish to plant hills, I return the top soil to the bottom of the holes, and then take one bushel or more of well pulverized manure, one peck leached ashes, for each hill, and with a spade or shovel mix well together from top to bottom. Then plant the seeds, leaving the top of the hills level with the surface of the ground, and keep them so during the season. When they are up, and the bugs have done troubling them, thin them out, leaving two or three stocks in each hill, which will cover the ground before the summer is ended.—Ansel Holman, *in New England Farmer.*

Cucumbers on Straw.—About the first of June I planted a few hills of cucumbers in an old straw pile; the half rotted straw covered the ground about one foot deep.—I dug down through the straw to the ground, and planted the seeds in the earth. The straw kept the ground moist, and prevented the weeds from growing, consequently they needed no cultivation; but the vines grew unusually fast, and have become exceedingly large, and their fruitfulness is almost beyond credibility. One vine alone bore at one time 140 cucumbers, yet a large proportion of them were small.—S. A. Morton, *in Ohio Cultivator.*

An Old Pear Tree.—There is a pear tree on the corner of Thirteenth street and Third avenue which was planted there two hundred and six years ago, by Governor Stuyvesant, on his farm, then far out of town. It stands now inside of an iron railing on the side-walk, and still wears the green leaves of summer, still bears its rich fruit. It is venerated by the Knickerbockers, for the old time reminiscences it calls up in their minds, of days when Rip Van Winkle took his nap in Sleepy Hollow.—*N. Y. Tribune.*

# Domestic Economy.

### BOILING POTATOES.

The potato possesses, of all roots, the greatest amount of nutrition, and its palatableness is greatly assisted by a proper mode of cooking. On the whole, boiling is probably the best plan, and at this season they should be cooked with the skins on, if one would retain their richest flavor. Put them into boiling water, and keep them boiling until they can be easily pierced by a fork; then pour off the water, and replace the kettle on the fire for about five minutes to drive off all superfluous moisture.—Serve them up with or without peeling in a covered dish. Peeled and mashed, with cream and salt, they are very good, but care should be taken to refuse any inferior ones, or such as seem watery and waxy.

B.

### NOURISHMENT OF MEAT.

To preserve, in dressing, the full nourishment of meats, and their properties of digestiveness, forms a most important part of the art of cooking; for these ends, the object to be kept in mind is to retain, as much as possible, the juices of the meat, whether roast or boiled. This, in the case of boiling meat, is best done by placing it at once in briskly boiling water. The albumen on the surface, and to some depth, is immediately coagulated, and thus forms a kind of covering which neither allows the water to get into the meat, nor the meat juice into the water. The water should then be kept just under boiling until the meat be thoroughly done, which will be when every part has been heated at about 165 degrees, the temperature at which the coloring matter of the blood coagulates or fixes. At 132 degrees, the albumen sets, but the blood does not, and therefore the meat is red and raw. The same rules apply to roasting; the meat should first be brought near enough a bright fire to brown the outside, and then should be allowed to roast slowly. —*Exchange.*

# Mechanic Arts, &c.

### LIST OF PATENT CLAIMS

ISSUED FROM THE UNITED STATES PATENT OFFICE
For the week ending October 25, 1853.

Calvin Adams, of Pittsburgh, Pa., for improved window-shutter, fastener and holder.

G. T. Beauregard, of New Orleans, La., for improvement in self-acting bar-excavators.

Ezra H. Jones, of Litchfield, Me., for improvement in devices of a convertible dung-fork.

Frederic P. Dimpfel, of Philadelphia, Pa., for improvements in propelling vessels.

Augustus Eliaers, of Boston, Mass., for improvement in lounges.

Augustus Eliaers, of Boston, Mass., for improvement in library step-chairs.

Wooster A. Flanders, of Sharon, Vt., for improvement in bee-hives.

John D. Filkins and Wm. H. De Puy, of Lima, Ind., for improvement in attaching horses to plows.

Samuel Hutchinson, of Rockport, Ind., for improvement in cutting and planting potatoes.

David S. Mackey and Jarvis R. Smith, of Batavia, N. Y., for improvement in winnowers.

E. G. Matthews, of Troy, N. Y., for improvement in machines for dressing stone.

Chas. Perley, of New York, N. Y., improvement in ship's side-lights.

Alphonse Quantin, of Philadelphia, Pa., for improved valve-gauge for bottles.

Henry L. Russell, of Hudson, Mich., for improvements in metallic piston packing.

Wm. W. Richards, of Philadelphia, Pa., for improvement in making shovels, spades, &c.

Benj. P. Sargent, of Sutton, N. H., for improvement in expanding horse shoes.

Jacob T. Sargent, of Sutton, N. H., for improvement in garden and other hoes.

David M. Smith, of Springfield, Vt., for improvement in spring clamps for clothes-lines.

Jas. Trees, of Salem, Pa., for improvement in propellers.

Albert Vose, of Pittsfield, Vt., for improvement in ox-yokes. Ante-dated Aug. 10, 1853.

Wm. Wheeler, of West Poultney, Vt., assignor to Chas. H. Kellogg, of Troy, N. Y., for improvements, in cutting the bars and teeth of curry-combs.

Wm. Coughlan, of Baltimore, Md., for improvement in soda fountains.

Nelson Crocker, of Sandwich, Mass., for improvement in attaching the head cringle to the yards of vessels.

Nathan C. Davis, of West Jefferson, Ohio, for improvement in seed-planters.

Daniel Noyes, of Abington, Mass., for improvement in machine-hammers.

Samuel Pratt, of Boston, Mass., for improvement in screw-nails.

Samuel Sweet, of New York, N. Y., for improved spark-arrester.

Kasimer Vogel of Chelsea, Mass., for improvement in looms for making weavers' harness.

DESIGNS.

N. P. Richardson, of Portland, Maine, for design for cooking stoves.

Joseph A. Read, of Philadelphia, Pa., assignor to William W. & Charles M. Atkins, for design for register.

For the week ending November 1, 1853.

Wm. Bailard, of New York, N. Y., for improved protecting bulwarks for war vessels.

Calvin Carpenter, Jr., of Pawtucket, Mass., for improvement in magneto-electric machines. Patented in France, April 18, 1853.

A. P. Chatham, of Canoga, N. Y., for improvement in car-couplings.

Gilbert S. Clark, of New York, N. Y., for improved pen and pencil case.

Jno. W. Cormack, of Quincy, Ill., for improvement in cane and maze cutters.

Benj. Crawford, of Pittsburgh, Pa., for improvement in condensers for steam-engines.

Chauncey O. Crosby, of New Haven, Conn., for improvements in machines for sticking pins.

David Demarest, of New York, N. Y., for hose protector.

Jos. Farnsworth, Jr., of Madison, Ind., for improvement in car wheels.

Luther R. Faught, of Macon, Ga., for improvements in regulating the speed of steam engines.

Christ'r. P. Kelsey, of Livingstonville, N. Y., for improvement in grain cradles.

Edm'd Morewood and Geo. Rogers, of London, England, for improvement in coating sheets of metal.

Russell S. Morse, of Dixfield, Me., for improvement in adjustable springs for carriages.

Howard Perkins, of North Bridgewater, Mass., for carpenters' brace and bit fastener.

Henry M. Ritterband, of New York, N. Y., for improved gold washer.

John A. Taplin, of Fishkill, N. Y., for improvement in straw and grain separators.

Wm. H. Towers, of Philadelphia, Pa., for improvement in metallic pens.

Increase S. Waite, of Hubbardston, Mass., for improved machine for turning cylinders of wood.

Peter H. Watson, of Washington, D. C., for improvements in generating and condensing steam. Ante-dated May 2, 1853.

Jacob V. A. Wemple, of Chicago, Ill., for improvement in grain separators.

Geo. Calvert, of Upperville, Va., for improvement in bee-hives.

Seneca Lapham, of Salem, Ohio, for improvement in devices for steering cultivators.

Wm. B. Leonard, of New York, N. Y., for improvement in fluid metres.

Wm. T. Merritt, of Harts' Village, N. Y., for improved mode of opening and closing gates.

Geo. Williston, of Brunswick, Me., for improvement in machines for straightening and carving rails.

DESIGN.

Winslow Ames, of Nashua, N. H., assignor to Hartshorn, Ames & Co., of Boston, Mass., for design for parlor stove.

### YALE'S "MAGIC BANK LOCK."

Mr. Moore:—In the Rural of Oct. 29, is published an extract from the Patent Office Report, of 1852, descriptive of a "New Patent Lock." Said lock was invented, patented, and is now being manufactured by Linus Yale, Jr., of Newport, Herkimer Co., N. Y., and is known as Yale's "Magic Bank Lock." It is the same "Combination Lock" which your correspondent (*,) in the Rural of the 8th Oct., notices as "surrounded by crowds of lookers on," at the recent exhibition of the Massachusetts Mechanic's Charitable Association, and where it was awarded the highest premium on Locks—as was the case at the recent State Fair at Saratoga. Annexed find a description of said lock (from the American Artizan,) which may not be uninteresting to many of the readers of the Rural. W.

Newport, N. Y., Nov., 1853.

Something new for Hobbs.—We were recently shown a wonderful piece of mechanism, which certainly goes ahead of anything in the shape of a lock we have ever seen or heard of, in the essentials of security from depredation. It is called "Yale's Magic Lock," and is as absolutely unpickable as the kernel of a walnut without damaging the shell. The only opening is a circular orifice, half an inch in diameter for admitting the key, and through which there is no possible access to the tumblers by any instrument whatever—not even by the key itself, strange as that may seem. By a singular contrivance, a portion of the key is detached after insertion, and sent to a distant part of the lock, where it moves the tumblers, and where the tools of the burglar could never arrive except by first battering the lock to pieces. The key hole resembles the interior of a small pistol barrel, and having no opening in the interior basin of the lock, would not receive powder enough to blow it open. The lock is therefore absolutely gunpowder proof also.

Among other peculiarities, the key is susceptible of from forty thousand to one million of changes. A change of the key changes the lock also in the act of locking, so that one may have a new lock every day for hundreds of years. By a change of the key after locking, it is rendered impossible to unlock even with the same key, until altered back again. One may thus lose the key or have it stolen, and still entertain no fears of the lock's being opened with it.

Altogether, this lock seems to us as perfect as anything of the kind can be. It has decided advantages over the most celebrated lock of the day, which cannot fail to be discovered by any one upon inspection.—With all its advantages it is of exceedingly simple construction, and not liable to get out of order. The proprietors offer a reward of $500 to any one who will pick it through the key hole, using whatever instruments he pleases, and taking any length of time he desires.

### PUFFING NEW INVENTIONS.

The following paragraph from the Scientific American will apply to this meridian and we fully adopt its sentiments—changing only the title of the paper:

We frequently receive from inventors written descriptions of some real or fancied improvement, lauding their inventions to the skies, in terms which we never apply to any invention still less to those which are thus described; for it too frequently happens that the very inventions thus extolled are those possessing least merit. We do not believe there ever was an inventor who did not consider his as the greatest invention of the day, and hence, if they set about giving an opinion as to the merits of their machines, they almost invariably get into the sublime. Now we are always glad to receive from inventors full descriptions of their improvements, and we are willing they should state what they claim, as the advantages of them; but we want it should be distinctly understood that we cannot be induced, from any consideration whatever, to publish any such articles as those we refer to. Inventors wishing such puffs must go to the daily papers, where, for a few dollars, they can get almost any thing printed they may choose to write. The "Rural New-Yorker" will give an honest opinion respecting the merits of inventions, and we are satisfied that the very inventors who would condemn us for applying this rule to their own inventions, would applaud us for applying it to others.

### CORN HARVESTER.

The Herald in enumerating various articles on exhibition in the Crystal Palace, has the following:

Ream's patent corn harvester is another implement of agricultural life which will be interesting to farmers. This machine is very simple in its construction, and purports to cut, with the labor of one horse and a boy, from sixteen to twenty acres of corn per day, and lay it in bundles of from two to ten hills, as desired. An ingenious part of this machine, is an appliance called a dropper, by which the boy riding on the back of the horse can drop the bundles of corn at suitable distances in the furrow, all ready for shocking. The cost of this machine is reasonable, ranging from fifteen to twenty dollars. The speed of this machine is very desirable, as farmers consider it the best time to cut corn when the dew is on the stalks, or immediately after a rain. In dry times, the corn is brittle and difficult to cut. If this is able to accomplish that for which it is recommended, it must be a great advantage.

# Educational.

## WINTER SCHOOLS.

THE present is about the time for the commencement of winter schools in the country: and it becomes the duty of all trustees to see that the school houses are in order, the window lights all set, plenty of good fuel provided, a broom, a pail and a cup in the school house, and some attention paid to the comfort both of the teacher and his pupils. If colds, sore throats, and sickness occur to either the one or the other, as too frequently happens resulting in death, from neglect of duty on the part of trustees, every one of them ought to be indicted for manslaughter, and sent to the penitentiary. They are the holders of a sacred public trust, and if they betray it they deserve to be arraigned before a criminal tribunal, as they certainly will be before high heaven!

Let parents see to it that their children are provided with books and all the apparatus necessary for instruction. Let their clothing be neat, warm and comfortable. No matter if it be coarse in texture, provided it is strong, well made up, and well fitting. The humblest dressed boy in school, if he is only tasty and neat in his appearance, will be much more pleasing than the most costly clad if he is a slouch.

Above all things, sustain the teacher, and aid him in upholding his authority. Do not say when your neighbor's boy gets punished "it is all right," and then fall to abusing the teacher when the flagellation comes home to your own door. In ninety-nine cases out of every hundred, the man who habitually finds fault with school teachers has a rascally set of children; and those children have a rascally father, answering in the negative, by his own conduct, the inquiry in holy writ—"Do men gather figs of thorns or grapes of thistles?"

The most difficult, harassing, and patience-trying business in the whole range of human employments is that of teaching a public school; and it is as impossible for a teacher to go through a winter's school and do his duty, without having fault found with him in some quarter, as it is for a rich man to enter the kingdom of heaven. We have had some experience ourselves, and we have a great many friends, both male and female, who have had more. Teachers sometimes err as well as other men, for they are human: and the individual who would persecute a school-master having unintentionally done a wrong, would, if he had lived eighteen hundred years ago, have joined in the cry against the Savior, "Away with him! Crucify him! Crucify him!"

Written for the Rural New-Yorker.

## EDUCATION OF THE FARMER—AGAIN.

THE various relations of the farmer as a man, have been touched, and a few things said in regard to those various relations.—But there are many things yet unsaid, still more important. The farmer, in common with other men, sustains a very important relation to his business. This relation must be well understood, or his business will involve him in difficulty and debt.

Again, the farmer is a social being, endowed with faculties which form a very important item in the social compact. He lives—lives like other men, and loves like other men. The toil incident to a farmer's life, in no wise unfits him to fill his place in society. True, the physical powers have an intimate and mysterious connection with the mental. When the body is worn with toil there is less apparent vigor and energy to the mind. But an active mind—one trained to habits of thought, elevated, intelligent thought, can do much in beguiling the weariness of the body. How pleasant to the weary laborer is the draughts of knowledge, drank at an ever-flowing fountain. Such a mind has more than a "dozen thoughts." His enjoyment is not circumscribed by the narrow limits of sense. But to return. A proper, a thorough education fits the farmer, as well as other men, to fill well his place in social and domestic life.—For what are men to be educated? Is it not that they may be more useful in the various avocations of life. Are men to be educated only for "professional life?" How very little "comparatively" of the happiness of the heart depends upon superior qualifications for "professional life." And yet, there are those who seem to think that "professional men" only need a thorough education. Do we not need the advantages of a good education to fit us for higher and more important positions in this world:—Is it not important to have educated husbands and fathers, neighbors and citizens? Who will deny it? Is there not very much of the happiness of this life dependent on these various relations? Indeed is not this all?

Men are not only to be educated for ministers and doctors, lawyers and teachers, but the line of discrimination, if there must be one, should be carried much farther amid the dear and important relations of life.—Where we see an unfaithful and inconstant husband, making miserable and wretched the companion of his choice, we may charge it to a want of proper education.

How many hearts have been wrung with anguish; how many high hopes have been blasted in the domestic walks of life! Is all this to be endured, silently, without inquiring the cause? We are not to charge every evil in families or societies to the intoxicating bowl, or to the strong and lustful passions. There is much unhappiness in the world where these do not exist, although God knows they create enough of misery and woe! The husband with an educated and enlightened mind, is so much the better qualified to adorn that very important relation in life. And the ignorant, uncultivated being who possesses little else to recommend himself, but fair and characteristic physical proportions, is altogether unfit to make a good husband, and to fill other consequent relations.

Of course it would be deviating from my subject to speak here of the obligations of the opposite sex,—that will form a chapter under the "Education of Farmers' Wives." "Strange idea," says one, "to talk of education of husbands and wives," and yet there is no more important application to be made of the advantages of education. I know it is quite unpopular to talk in this manner. In the whole course of the young man's education, this is rarely ever named, that he will no doubt become a husband and parent, and that very much of his happiness will depend upon his ability to discharge well the duties of those relations. Many rush blindly into the responsible relations of life, and when it is quite too late, open their eyes upon their folly. Education adorns, with transcendant brightness, the family circle. Is there a more charming sight upon this blighted earth, than a family well and thoroughly educated? And is it not just as necessary in a farmer's family, as in any other? That man is fortunate indeed, who has the means, ample and ready, to pay others for educating his children; but he is far more so, who is qualified to teach them himself. A parent can do much more, and do it better, than "the school-master." If he has not time himself, to teach his boy, it is very important that he knows when others are teaching him right. A farmer may be economical in the distribution of his time, and in the application of his efforts upon his farm, but it is just as necessary that he understand something of economy in the education of his children. Here is a general failure among farmers. The most important duty of a parent's life, must be done by others, or the work remains undone.

The farmer, as well as the physician or minister, is a component part of human society. An educated and intelligent society of farmers, would indeed present a striking anomaly and a thing much to be desired.—Education is the only true refinement, and an educated society would be a refined society. Independence of thought, the power of weighing matters relative to human life, are indeed desirable among all classes of society. Again, the farmer is a citizen. He sustains an important relation to his country, and the question is, how this relation shall be well maintained? Shall he forever follow in the wake of some aspiring demagogue? Shall he be ignorant of the design and necessity of human government? Shall he vote money out of his own pocket and not know it? Let him have the advantages of a thorough education, and then will talent grace agricultural employment, and labor cease to be mere drudgery.

Kendall Mills, N. Y., 1853. J. W. BARKER.

THE COMMON SCHOOLS OF NEW ENGLAND.—By the last official returns of the Public Schools in the six New England States, the whole number of pupils in attendance during the year was $2,055,131 65. In Vermont, the average cost of each pupil was $3.22. In Maine, $1,34. In Connecticut, $1.35. In Rhode Island, $1,04. In Massachusetts, the law requires each town to raise by tax, at least $1,50 per child between five and fifteen years of age, as a condition of receiving a share of the income of the State School Fund. All the towns complied with this condition last year, and 180 towns raised double the sum thus specified. The amount expended in Massachusetts last year, for each child between the ages above named, was $4,54.

A MODEL TEACHER.—A correspondent of the *Summit Beacon* says:—"There is at the present time a person 'keeping school' in this county, who enters the school-room with her dress partially hooked up, shoes untied, holes in her stockings, hair about her ears, skirt three inches below her dress, and all excessively dirty, and drags her scholars through the exercises of reading and writing, and nothing more. Not a slate, grammar book or geography has been used during the term, and the figures upon the blackboard, which were made there last winter, are there now.

## THE BIRD OF PARADISE.

MANY marvelous things have been related of this splendid bird,—but the truth is strange enough for the purpose of our readers. It is a native of the Molucca Islands, where it is called by the natives God's bird, as superior to all others he has created.—They live in large flocks—at night perching on the same tree. They fly very rapidly, and are almost constantly on the wing in pursuit of their insect prey. The Library of Natural History gives the following description:

There are about eight different species of these birds; but that which is best known is the greater paradise bird, which appears to the eye of the size nearly of a pigeon, though in reality the body is not much larger than that of a thrush. The tail, which is about six inches, is as long as the body; the wings are large compared with the bird's other dimensions. The head, the throat, and the neck, are of a pale gold color. The base of the bill is surrounded by black feathers, as also the side of the head and throat, which are soft as velvet, and changeable like the neck of a mallard. The hinder part of the head is of a shining green mixed with gold. The body and wings are chiefly covered with beautiful brown, purple, and gold feathers. The uppermost part of the tail feathers is of a pale yellow, and those beneath are white and longer than the former; for which reason the hinder part of the tail appears to be all white. But what chiefly excites curiosity are two long, naked feathers, which spring from the upper part of the rump above the tail, and which are usually about two feet long, the whole shaft of a deep black and the feathered extremity of a changeable color.

## THE LAKE SUPERIOR REGION.

THE various kinds of business, and particularly that of mining, connected with Lake Superior, are increasing in extent and activity, beyond all former years. Some years ago a small steamboat could scarcely find employment in running from Detroit to the Sault, and half a dozen small sail vessels were sufficient for all the transportation business on Lake Superior. Now we have five large steamboats and four first class propellers running regularly to the Sault, besides several sail vessels and transient steamers, chartered to this place by the trip. On Lake Superior there are two steamboats, four propellers, and four or five sail vessels; and all of these vessels, both above and below the Falls, are running with full freights and crowds of passengers.

As usual at this season of the year, freight lodges and accumulates at this place, and the docks and warehouses are crowded to overflowing with winter supplies, destined for the mines. It is a glorious thing for Lake Superior that the Ship Canal is to be speedily opened. With the rapid strides that business of all kinds has made for several years past, it would be next to impossible, in three years more to do the necessary transportation over this one mile of portage; and this great increase is the natural healthy growth of the country, which nothing can intercept. The mineral wealth of Lake Superior is known, at length, to the country, and thousands and tens of thousands are waiting only for the completion of the canal to settle in the mining districts, where more money can be made in mining, farming and mechanical employments than in any other region of the United States.

In the meantime hundreds will not wait for the completion of the canal—they wish to be first in the field—and are finding their way into the country by every boat, and we think the population of the whole country, bordering on Lake Superior, has been doubled within a single year. There is no doubt as to the present being a favorable time for coming into the country, when the most desirable lands can be secured and the most desirable employment engaged in.—Mineral and agricultural lands are low compared with what they will bring in market after the completion of the canal. Property of all kinds will undoubtedly advance rapidly on the opening of this great channel of communication between Lake Superior and the rest of the country. Mining business, as well as every other kind, will then be carried on with greater facility and with a much less expense, and it will then be as easy to reach the copper, iron and silver mines of Lake Superior as it is now to come to the Sault. Lines of steamers will be run regularly to this lake from Oswego, Buffalo, Erie, Cleveland, Detroit, Milwaukee, Chicago and other points on the lakes, enabling settlers to come direct and at small expense. The future is all before us in the new "State" of "Superior." The wharves and warehouses are now filled to overflowing with freight for the mines upon Lake Superior, and every exertion is being made to forward it as fast as possible by both day and night. But from this time to the close of navigation every conveyance will be brought into requisition, and fears are entertained that, as usual, more or less will of necessity lay over at this place. When the Canal is finished this difficulty will be obviated. One serious obstacle in the way of freighting upon Lake Superior is the difficulty attending the landing of freight at most points. But through the enterprise of James Carson and others a fine and extensive pier has been built at Ontonagon, at which vessels can land and unload with every facility.—*Lake Superior Journal.*

## CALIFORNIA IN OLDEN TIMES.

THE following description of this country as it was a century and a half ago, is taken from the published transactions of the London Royal Society, from 1700 to 1720, and printed in 1731:

"California, the Peninsula, has been known nearly two centuries. Its coasts are famous for pearl fisheries. Nor do I doubt that there are mines to be found in several places if they were sought for, since the country is under the same degree as the provinces of Sinaloa and Sonora, where there are very rich ones. Heaven has been so bountiful to the Californians, that the earth brings forth, of itself, what it does not produce elsewhere without a great deal of labor and pains; yet they make no esteem of the plenty and of the riches of their country, contenting themselves with what is only necessary for life, and take no care for the rest. Parts of the country are very populous. They are a lively people. The climate is healthy. In the valleys excellent pasture, at all times, for great and small cattle, fine springs, wild grape vines; as it abounds in fruit, it does not less so in grain, of which there are fourteen sorts that the people feed on. They have plenty of red strawberries, of which they eat plentifully. Their citrons and watermelons are of an extraordinary size. Most plants bear fruit three times a year. We brought with us from New Spain, Indian corn, wheat, peas, lentils, &c. We sowed them and had a very plentiful increase, though we had no cattle or proper implements to till the ground.—We brought some cows and store of small cattle, as sheep and goats, but our necessity obliged us to kill the greatest part of them. We likewise brought with us horses and colts to stock the country, and we began to breed up hogs; but as these do a great deal of damage in the villages, and the women are afraid of them, we have resolved to extirpate them. The climate is so mild that the men go naked, and the women wear an apron covering from waist to knee."

THE SOAP PLANT.—The Vienna journals announce that a firm of California has sent home to that city some seeds of the soap plant. It grows wild in California, rising to the height of about a foot. The plant fades away in the month of May, and inside of each is a ball of natural soap, superior, it is asserted, to any that can be manufactured.

# Sunday Reading.

## THE LITTLE BOY THAT DIED.

DR. CHALMERS is said to be the author of the following beautiful poem, written on the occasion of the death of a young son whom he greatly loved:

I am all alone in my chamber now,
And the midnight hour is near;
And the faggot's crack and the clock's dul tick
Are the only sounds I hear,
And over my soul, in its solitude,
Sweet feelings of sadness glide,
For my heart and my eyes are full when I think
Of the little boy that died.

I went one night to my father's house—
Went home to the dear ones all—
And softly I opened the garden gate,
And softly the door of the hall.
My mother came out to meet her son—
She kissed me, and then she sighed,
And her head fell on my neck, and she wept
For the little boy that died.

I shall miss him when the flowers come,
In the garden where he played;
I shall miss him more by the fire-side,
When the flowers have all decayed.
I shall see his toys and his empty chair,
And the horse he used to ride;
And they will speak, with a silent speech,
Of the little boy that died.

We shall go home to our Father's house—
To our Father's house in the skies,
Where the hope of our souls shall have no blight,
Our love no broken ties;
We shall roam on the banks of the river of peace
And bathe in its blissful tide;
And one of the joys of our heaven shall be
The little boy that died.

Written for Moore's Rural New-Yorker.

## AUTUMNAL MEDITATIONS.

THE calm, beautiful moon-light evenings which we have enjoyed for two weeks past, are gone; and this evening is chilly, dark and rainy. How many and how varied were the changes which the four past weeks have presented to the observer of nature in the country. Four weeks since the groves were clothed in emerald robes, and enlivened by bird music. A few weeks since, while the leaves and birds were sleeping in the moon-light, the Frost King passed by. He kissed the slumbering flowers, and breathed on the unconscious leaves; and when Sol issued from the golden chambers of the Orient, and gazed on the beautiful things of earth, behold the flowers were pale and drooping, and the leaves were gold colored and crimson. The kiss of the Frost King was poisonous to the flowers, and his breath was like an iceberg to the tender leaves.

During a few days past our forests have been robed in those hues of beauty which travelers from the old world so much admire, and which are nowhere seen in such grandeur as in our American forests, in Autumn. But while we have gazed enraptured on the scene, there has been a sadness mingled with the rapture, for we too well knew that those beautiful hues were but the premonitions of decay, like the hectic flush on the cheek of beauty. Where are those brilliant leaves to-night? The rude blast has swept them from the parent bough, and hurled them to the earth, where, heaped in drifts, and deluged by the rain, they mingle with the dust.

The birds have fled from the leafless groves, and their mournful notes were heard as, high above our "ken," they were wending their southward flight to the orange groves of Alabama, where winter's rude blasts are never known. Are the leaves which so late were fair and beautiful, all dead and fallen to rise no more? No, they are not dead according to the common understanding of the word death! There is nothing that dies and becomes annihilated, nor ever will be, while time endures. We tread them under our feet; we see them rot, and change to dust, and the multitude who do not reflect, say they are nought but dust. But let us pause and observe the wonderful organization of nature. We then behold the fallen leaves decomposed and diffused through all the vegetable kingdom, and when Spring again returns, instead of being dust, we behold them again fluttering on the swaying boughs, and blushing in the blossoms, and waving in fields of golden grain. Thus has the Creator ordained that life and beauty shall be the fruits of dissolution and decay. "Except a corn of wheat fall into the ground and die, it abideth alone; but if it die it bringeth forth much fruit." Our bodies, like the fallen leaf, must soon turn to dust, but not like the leaf shall they be at the resurrection, diffused through space, for the Christian "knoweth that his Redeemer lives:" and also, "Though worms destroy his body, yet in his flesh he shall see God."

Barre, N. Y., Oct. 23, 1853. H. D. B

DECISION AND TRUTH.—Whatever you think proper to grant a child let it be granted at the first word, without entreaty or prayer; and above all, without making any conditions. Grant with pleasure, refuse with reluctance, but let your refusal be irrevocable; let not importunity shake your resolution, let the positive "no," when once pronounced, be a wall of brass, which a child, after he has tried his strength against it half-a-dozen times, shall never more endeavor to shake.

# Miscellaneous.

## A HOME PICTURE.

One autumn night, when the wind was high
And the rain fell in heavy plashes,
A little boy sat by the kitchen fire,
A-popping corn in the ashes:
And his sister, a curly-haired child of three,
Sat looking on just close to his knee.

The blast went howling round the house,
As if to get in 'twas trying;
It rattled the latch of the outer door,
Then it seemed a baby crying:
Now and then a drop down the chimney came,
And sputtered and hissed in the bright, red flame.

Pop! pop! and the kernels, one by one,
Came out of the embers flying;
The boy held a long pine stick in hand,
And kept it busily plying;
He stirred the corn and it snapped the more,
And faster jumped to the clean-swept floor.

Part of the kernels hopped out one way,
And a part hopped out the other;
Some flew plump into the sister's lap,
Some under the stool of the brother:
The little girl gathered them into a heap,
And called them "a flock of milk-white sheep."

All at once the boy sat as still as a mouse,
And into the fire kept gazing;
He quite forgot he was popping corn,
For he looked where the wood was blazing:
He looked, and he fancied that he could see
A house and a barn, a bird and a tree.

Still steadily gazed the boy at these,
And pussy's back kept stroking,
Till his sister cried out, "Why, George,
Only see how the corn is smoking!"
And, sure enough, when the boy looked back,
The corn in the ashes was burnt quite black.

"Never mind!" said he, "we shall have enough,
So now let's sit back and eat it;
I'll carry the stool, and you the corn—
It's good—nobody can beat it."
She took up the corn in her pinafore,
And they ate it all, nor wished for more.

[*Harper's Magazine.*

For the Rural New-Yorker.

## SYMPATHY WITH NATURE.

"We may not hope from outward forms to win
The passion and the life, whose fountains are within."
[*Coleridge.*

That we are "creatures of sympathy"—that the soul must unconsciously partake of the spirit of its surroundings—is not wholly true. There are seasons when the brightest sunshine cannot dispel the gloom which clouds our spirits, nor the sweetest melody enliven our thoughts of sadness. Our eyes are sealed to the influences of beauty—that "joy forever,"—and the softest zephys, tho' laden with sweet odors and full of the subtilest incitements of gladness, fail to reach our feelings or gladden our hearts.

—"We receive but what we give,
And in our life alone does Nature live:
Ours is her wedding-garment, ours her shroud!"

But, again, no storm, no darkness—no outward surroundings—can effect our peace or neutralize the feeling of calm serenity which seems to thrill, with untold joy, every fibre of our three-fold life. And all things around appear to partake in our rejoicing. The sky seems brighter, the air purer, our friends kinder; and we live in a different world from that presented to our eyes in sorrow and dejection. The tones of nature which fill the air, seem keyed on a different note from that in which they fell upon the sad hearts and dull ears of weariness and depression.

"This beautiful and beauty-making power,"

says Coleridge, in his poem—"Dejection"—is Joy;

"Joy that ne'er was given
Save to the pure, and in their purest hour,
Life, and Life's effluence, cloud at once and shower,
* * * * * * *
Which wedding Nature to us gives in dower
A new Earth and new Heaven,
Undreampt of by the sensual and the proud—
We in ourselves rejoice!
And thence flows all that charms or ear or sight,
All melodies the echoes of that voice
All colors a suffusion from that light."

We are proof against everything save the sorrows of those we love,—and the heart which is dead to such sympathies is dead also to the truest, purest, and noblest happiness.

B.

## AFFLICTIONS AND TRIALS.

Afflictions and trials are the common inheritance of humanity. They are necessary to our probation and a proper training for a higher and holier state of existence, when mortality shall have been swallowed up in life. Friends must be parted; the family circle broken up; the tenderest ties that ever bound together human hearts must be snapped asunder, and the lamentations of the surviver for the lost one, fall without avail upon the dull cold ear of Death; hopes must be destroyed, ambitious projects thwarted, and man be made to feel that this earth is a transient place, where he is only tarrying for a brief period, ere he is summoned away. The human being, who, in the possession of an unclouded intellect, has never felt the bitterness of sorrow, is in no fit state of spiritual preparation for an immortal crown.

Life.—If spring puts forth no blossoms, in summer there will be no beauty, and in autumn no fruit. So if youth be trifled away without improvement, riper years will be contemptible, and old age miserable.

## THE GIRL WITH A TIN PAIL.

Some twenty years ago I was an apprentice boy in the then "City of Mud," now the goodly city of Rochester. The business of which I was obtaining a knowledge, was conducted upon Exchange street, though I boarded in one of the streets in the western part of the city.

In going to my tea, I was in the habit of meeting, almost every evening, for many weeks in succession, a small, well-dressed, and good-looking girl, with a pail in her hand. At length my curiosity became excited, and I resolved to ascertain, if possible, the errand of the girl. Having met her the following evening, I accordingly turned on my heel, and followed her at a distance that would not excite suspicion in any one. I at length saw her enter a small shoemaker's shop on South St. Paul's street. I subsequently learned that shop was owned by an industrious young man, an excellent mechanic, and that he was the girl's husband. He had been married a few months, and possessing no other capital than a good name and robust constitution, had resolved to economize by hiring a house in the suburbs of the city.

His breakfast was always ready for him by daybreak, and taking his dinner with him, he saved the hour each day which most persons spend in going to and in coming from that meal. Many economists would have been satisfied with the saving of so much time as this between the rising and going down of the sun, but not so with the young shoemaker. He also wished to save the hour usually devoted to tea, and therefore had that daily meal taken to him by his pretty little wife. This arrangement enabled him to spend the whole day, and as much of the evening as he chose in his shop.

The industrious habits of the shoemaker were soon discovered, and met with their due reward. Customers flocked in upon him, and he was obliged not only to rent a larger shop, but to employ an additional number of workmen. But the increase of business did not wean him from the plan he had early adopted for the saving of time,—this third meal still having been taken to him by his wife, in the tin pail.

About that time I left the city, and did not return for about twelve years. I had not, however, forgotten the shoemaker, having, from my first knowledge of him, discovered the germ of success, in his manner of life. I visited the place where his old shop had stood; it had given place to a new brick block. In vain I looked about for the sign,—it was no where to be seen. I was at length informed by a friend that about two years previous he had removed to Ohio.

"Do you know anything of the circumstances?" I inquired.

"I do. In the first place he took to Ohio about five thousand dollars in cash, some three thousand of which he invested in real estate near Cincinnati; he has already realized three times the amount. The other two thousand he put into a pork establishment, and that sum yielded him a large profit. But if he had not resorted to speculation, he could not but have succeeded in life, so thorough were his business habits, and especially as those habits are seconded by an industrious little wife."

I have recently returned from a visit to Ohio, and have again seen the shoemaker and his wife. He is now in the prime of life, and possesses an ample fortune, and an unsullied reputation for honor and probity. Never having had any personal acquaintance with him, I introduced myself as a Rochesteronian. This was late in the afternoon. I very cheerfully accepted an invitation to take tea with him. Improving a moment of silence at the table, I remarked:

"I fear Mr. H., you are not so great an economist of time as you used to be?"

"Why not? he inquired.

"When first I became acquainted with Mrs. H., you could not afford to go home to tea, and she used to carry it to you."

"In a little tin pail," said she, bursting into a laugh.

"Exactly."

"Indeed, Mr. W., have you known us so long?"

I then made myself known as the former apprentice of Mr. R., and was immediately recognized by Mrs. H., as one of her earliest street acquaintances in Rochester.

"But that pail: what do you think has become of that?" asked Mr. H.

"That I suppose, has long since been numbered with the things that were," I answered.

"By no means," he said, at the same time tipping a wink to this wife.

She arose from the table, and left the room, and soon returned with the indentical pail, as they both assured me.

I need not say that it bore palpable marks of the ravages of time.

"But what is your object in preserving that pail?"

"Its associations. We look upon it as one of the earliest instruments which contributed to our success in life, and as such we shall ever cherish it."

I soon took my leave of Mr. and Mrs. H., and their interesting and happy family; and not a day since then has my mind been without its remembrance of the Girl and her Tin Pail.

Expectations.—Nothing in this world is so fatal to the development of the intellectual powers of the young as what are commonly called expectations. Take two boys of the same age, and, as nearly as may be, of the same capabilities. Inform one that he is the heir to a large fortune, which, one day or other, must come into his possession; tell the other that he has not a sixpence to depend on; but must thrive by his own exertion—and ten years afterwards there will be a mighty difference between them. You will find one has wrapped up his talent in a napkin, while the other has laid it out at interest.—*Blackwood's Mag.*

## OLD TIMES.

Do you remember that green lane in the country where you used to chase lightning bugs when a boy? When the still and warm summer evenings came on how thick the air was with their tiny lights? Like little stars that the fairies had sprinkled about, they went floating around doing their best to illuminate the world they lived in.

How you used to wonder what they could be when they first broke upon your astonished vision. Could it be fire that they bore with them? It was worth while to find out, and you set off in pursuit. Led on by nothing more than an instantaneous twinkle projected against the dark background of the lilac-bush, or the favorite apple-tree, and then with all lost again, you felt that the enterprise was a dubious one. Another twinkle a rod or two off, and away you dash in hopes to catch this winged taper before the light goes out. Long before you reach the spot it disappears, and you must look further on. Another twinkle right by your side, and your little straw hat was swinging back and forth in the air in hopes that by some chance stroke you might cage the mysterious stranger. Not quite yet, my boy! Yonder the light is again in the gooseberry bush. Away you dash thro' the briers, and hardly think of the scratches you have got as you see the slippery sprite a little beyond you. You don't mean to be balked in this way, the chase is growing exciting. There is the light away in the grass. Now you are sure of it. Not so sure yet, however, for while you are searching, it rises and skims away in the soft evening air, and when you next see it, it is under the rose-bush. Another rush, and a dive and a scramble. Ha! now you are caught, my shining little comrade. No! there is something of a mistake in this matter; the pretty glow-worm has got off again, and this in my hat is nothing but a dark-colored, unsightly bug.

What a disappointment it is to the boy's heart to find that the starlike fire fly that he has been chasing, loses all its brightness in the catching! Out of reach it glows like a diamond; in the hand it is a dull looking insect, fit only to be transfixed with a pin and fastened up in the cabinet of an etomologist.

We haven't given up chasing fire-flies yet. We have been in the business all our life.—True, they are not of the same character that attracted us when a boy. The fire-flies themselves change, and will probably change yet more as we grow older, but there is the same excitement and hurrying scramble, and scratched face and torn trowsers and final disappointment as at first. A good many that we have chased we never caught. Somehow or other those we have succeeded in catching have all turned out to be bugs. If they would only hold their colors all would go well. But, like poor calico, they fade sadly on trial.

Tell us, reader, is it so with you?—*Warsaw New Yorker.*

## A STRIKING SIMILE.

A recent Swiss traveler describes a village in the Grison country, situated on the slope of a great mountain, of which the strata shelve in the direction of the place.—Huge crags directly overhanging the village, and massy enough to sweep the whole of it into the torrent below, have become separated from the main body of the mountain in the course of ages, by great fissures, and now scarcely adhere to it. When they give way the village must perish; it is only a question of time, and the catastrophe may happen at any day. For years past, engineers have been sent from time to time, to measure the width of the fissures, who report them constantly increasing. The villagers for more than one generation have been fully aware of their danger; subscriptions have been once or twice opened in the cantons and in Germany, to enable them to remove; yet they live on in their doomed dwellings from year to year, fortified against the ultimate certainty and daily probability of destruction by the common sentiment—things may last their time and no longer. It is needless to say how much of this popular fatalism is exhibited in the habitual acquiesence of modern society in the political institutions under which it lives. The cracks and crevices in the mountain which overhangs our old privilege-founded European system, are constantly sounded by explorers, and their reports are never reassuring; we are more and more convinced of the insecurity of thrones and commonwealths; and political sagacity wholly fails to reveal to us the manner of their reconstruction. Yet we live on in a kind of provisional safety, reconciled to the constant neighborhood of dangers, against which, apparently, we can no better guard ourselves than the villagers, can prevent the fall of their rocks.—*Edinburgh Review.*

A Mastiff in Cairo.—Abbas Pasha lately obtained from England, by great exertions, a gigantic mastiff, of the celebrated Lyme breed, and the monster was the talk of the whole city of Cairo. As the Pacha's private secretary proceeded through the narrow streets, accompanied by his very docile but very formidable-looking acquisition, the Turks did not fly, nor did they seek shelter, nor put themselves in attitude of resistance. They stood still and trembled. Some muttered only 'Wonderful! wonderful!' others adopted literally the Hayden phrase, 'Our trust is in God.' One old man was heard to exclaim, 'Many of the creations of God are terrible!' and another gravely asked the dignified dog, 'Art thou sent to consume us utterly?' The general expression, however, was, 'God can protect us even from thee, oh terrible one!'

He that loses his conscience has nothing left worth keeping.

# For the Ladies.

For Moore's Rural New-Yorker.

## LINES,

Addressed to Mr. & Mrs. N. on the Eve of their Marriage.

Take her—thy own, thy chosen one;
No longer twain, you cannot part:
Thou, who her heart, her hand hast won,
Take thy young treasure to thy heart.

And cherish her, for she is thine:
Dear friends, sweet home she leaves for thee;
The spot where long has loved to twine
The heart's best feelings, glad and free.

Then keep thy charge; protect, sustain,
Each hope fulfill, each fear allay;
And may she ne'er reflect with pain
On this, her joyous bridal day.

And now, young bride, what is thy lot?
With cheerful toil to sweeten life;
With grateful love, to grace the spot;
Where thou art mistress, friend, and wife.

With woman's hand, life's path to smooth,
With woman's patience, ills to bear;
With woman's tenderness, to soothe,
With woman's love, each burden share.

Your friend's warm blessing on you now;
In mutual love we bid you live;
Our Father heard the solemn vow,
And strength to keep it, He can give.

Mount Morris, N. Y., Sept. 5, 1853. P. S. S.

Written for Moore's Rural New-Yorker.

## PHILOSOPHY OF HAPPINESS.

The conscious pursuit of happiness must ever end in disappointment and vexation. I know not whether a misconception of the nature of true enjoyment,—an idea that happiness is a state of extatic bliss,—of rapturous transport,—is the chief cause that the expectations of the professed pleasure-seeker fail so generally of being answered; but, doubtless, that feverish unrest, which, even after an apparently successful issue of his plans, holds possession of his soul, is designed to teach him that life has other employment for his time and energies than a selfish devotion of them to his own exclusive gratification; and, perhaps, in its active form, that of a longing after something not yet reached, may subserve one of the endless purposes of God, in bringing the race of man to the highest attainable point of perfection. Though it is quite commonly agreed, that the springs of happiness, as well as of misery, lie much more in the mind of the individual than in external circumstances, mankind present the appearance of a general struggle to fortify themselves by outward support, against the chances of evil fortune: evidence, that practically they understand the above proposition to mean only that, after the physical man is well provided for, does it depend on the disposition whether one will be content or not.

Foremost among the appliances eagerly sought as a security against disquiet, are wealth and station: and here a slight survey of the field of active life suffices to show that a vast deal of scheming and manœuvering is required for people to bring about all their plans of pecuniary or other wordly aggrandizement: and that, even if fortunate enough to accomplish their designs, it for the most part happens that the anticipated enjoyment is not nearly commensurate with the difficulty of attainment. For the most favored child of Fortune is not free from anxieties and solicitudes. Even if secure from the probabilities of experiencing physical want, there will yet be mental and spiritual longings unsatisfied; effort will not meet its expected reward, and, even if tolerable success crown well-directed endeavor, a consciousness of aims unfulfilled will operate as a detraction from the enjoyment of the highest honors. Again, the vain, foolish struggle for social consequence based on wealth, or the appearance of it, is most ridiculous, and costs far more to acquire and support it, than it can possibly be worth in enjoyment to its possessor—for it is rarely gained without humiliating compromises, nor maintained without truckling of the most debasing species. Add to this its almost invariable tendency to nourish a feeling of contempt for those occupying less exalted positions, and the disastrous effects of success in this seeking are abundantly apparent.

The experience of mankind affords evidence that entire freedom from care is equally impotent to ensure happiness; the so called *dolce far niente* having proved to many a one who has spent long years in preparation for coveted ease, the most wearisome condition of life: for, though an individual is rarely so circumstanced that he can find positively nothing to do, he loves to feel there is that will suffer by his neglect; and, doubtless, a wretched feeling of superfluousness has driven scores of people into occupations for which they had neither taste nor aptitude, as a refuge from the unpleasant reflection that they were unnecessary.

Another and most fruitful source of discontent is a habit of looking for happiness to some period other than the present. Youth lives in the future; old age loves to dwell on the past; middle age, scarcely better content with the present, betrays a restlessness, an uneasy looking about, as if it found no serene abiding place. Remarkable events too, something out of the usual course, are looked for with absorbing interest, in ignorance or disregard of the fact that, though a few moments of enjoyment have sometimes been felt as a recompense for years of toil and self-denial, it has been granted to so few (only those who have labored for it) to experience that concentration of happiness, as to warrant none in regarding with contempt the quiet joys of every-day life, in extravagant expectation of bliss to be derived from extraordinary occurrences.

Since, then, outward resources, a few of which have been considered, are found unavailing, let us propose a simple remedy for this universal ill, namely: that we unlearn, if we can, the habit of making comparisons—of contrasting our circumstances with those of our neighbors; it might not cover the whole ground, but if well applied would go far toward removing the evil.—Childhood, before it learns this lesson of human wisdom, is innocent and happy; and a few golden natures have apparently taken hold of life with a determination to keep their hearts unsullied by this lore, and been strong enough to keep their resolution. There is no danger of our losing all inducement to progress by this casting out; a purer stimulus will spring up in its place, and make known its presence by more beautiful results than rewarded our labors under the old process.

Self-questionings, too, on this subject, are to be carefully avoided. We are best content when we think least about our condition; no sooner do we begin to ask ourselves whether or not we are happy, than straightway we begin to grow miserable.

South Livonia, Oct., 1853. A.

## THE HALF HOUSEKEEPER.

She was only half housekeeper. Go where you would about her home there was neither taste nor neatness. She would begin things with great avidity, but lose all her zeal before she got through. Of her husband's half-dozen new shirts all were partially finished—one wanted sleeves, another collar and wristbands, another bosom and gussetts, and so on through the list.—Several skeletons of quilts lay unfolded in her drawers, and her tables and trunks were loaded with magnificent promises.

Her bread was always unpalatable because she forgot this or that—and though she had been married ten years in all that time the table was never rightly laid for a meal.—Either the salt was wanting, a knife, or spoon, or some important ingredient. This afforded good exercise for the family, and there was at all times a continued running to and fro.

She was a half housekeeper. Her meats were never properly cared for after dinner—and then it was "La! throw it away; it ain't much." Much or little, it made the butcher's bill enormous, and her husband half distracted. There always stood in her musty-smelling pantry, mouldy milk, mouldy cheese, mouldy meat and mouldy bread. There always laid about her room a dozen garments worn out by trampling rather than use. She was forever tripping over brooms; forever wondering why on earth work came so hard to her.

Her children's clothes came to pieces the second day, because they was only half made; her preserves soured the second month because they were only half done, and her temper soured quicker than anything else. She was continually lamenting that she ever married, and wondering where some folks got their knack of house-work. "Oh! dear me!" seemed some on days whole extent of her vocabulary, and it would make one sad to watch her listless movements, and hear her declare that no woman worked so hard as she, which was partly true, for she had no method.

She dragged through life, and worried through death, for which, I fear, like everything else, she was only half prepared, and left six daughters to follow her example, and curse the world with six more half housekeepers.—*N. Y. Organ.*

## HOME MANAGEMENT.

Though the art of managing a house may seem at first sight a very simple affair, there are very few people who do it well. Most women do either too much or too little; and we think husbands generally dislike the worry of over management almost as much neglect. The great art is to hit the happy medium quietly, and to keep the servants to their duty without scolding them. It is a great point to live always in the same manner as regards style, and to have the cloth laid just as carefully when alone as when there is company. When this is the case, no wife feels afraid of her husband bringing an unexpected guest; and it is gratifying to a husband to find a guest of this kind received quietly; whereas, nothing can be more disagreeable to a husband than to see his house thrown into confusion, his wife cross, and his servants scrambling to change the things laid on the table, and, in short, everything going wrong, simply because he has asked a friend to dine, without giving a day or two's notice to do so. It would be in better taste to allow the stranger to sit down to a meal served as roughly as a country laborer's in a hovel, than to receive him with extempore finery; for the awkwardness and blunders of the servants will soon show him the real state of the case.

MOORE'S RURAL NEW-YORKER.

ROCHESTER, NOVEMBER 12, 1853.

### SPECIAL NOTICES.—TO AGENTS, &c.

☞ In answer to recent inquiries, we beg to state that the next (fifth) volume of the RURAL NEW-YORKER will be furnished to Agents and Clubs at the same rates, and on like conditions, as heretofore—that the Premium List for the year 1854 will be more liberal than any preceding one—and that the paper will be essentially improved, for the accomplishment of which latter object, we have resolved upon a largely increased expenditure. As soon as our arrangements are completed, a Prospectus, Premium List, &c., will be issued. Meantime we trust that former agents, and all other friends disposed to aid in furthering the circulation of the paper, will prepare for the canvass, and see what may be done in their respective localities.—Now is the time to survey the field and prepare for action,—thus "making ready" for opening the campaign early.

☞ Specimen numbers, Premium List, &c., furnished free to all applicants. Any of our readers wishing the RURAL sent to distant friends who would be likely to introduce it to notice and support, have only to give us the names, &c., and numbers will be promptly forwarded.—We hope the zealous friends of the paper—and their name is legion—will bear this offer in mind, and furnish us the address of such persons as they think would like the paper, or lend a portion of influence in its behalf.

### News of the Week.

THERE is no very exciting news this week out of the sea of politics, and even in that the tide is now upon the ebb. The elections came off on Tuesday, a foul and tempestuous day with us, so far as the weather was concerned. Adamantines, Softs, Silver Grays, Woolly heads, and cold-water men, all had their favorite tickets in the field, and bands of music were tooting through our streets, and whiskey offered by the dram by some parties as arguments to *intelligent and virtuous* electors. Any citizen who would be influenced in voting by either, unless against the parties offering them, is unfit to exercise the elective franchise. As this paper goes to press on Wednesday morning we are unable to give any figures relative to the result of the Election,—though the reports received indicate the success of the Whig State Ticket. In this City and County the Whig candidates are elected.

The foreign question does not vary much from last accounts. Although war has been declared by Turkey, no overt acts of hostility had as yet occurred at the last accounts received by the steamer Africa. The belligerents, however, are still mustering their forces, and a peaceful adjustment is now almost beyond the chances of a possibility.

Voluminous despatches have been received at Washington from the Japan squadron, and the *Tribune* publishes, from BAYARD TAYLOR, who accompanies the expedition, a long and interesting account of the reception of the squadron by the Japanese authorities. They tried all their arts of treacherous diplomacy to get rid of their unwelcome visitors, but the prompt, fearless, and prudent conduct of Commodore PERRY and his officers and men, completely upset all their calculations. The President's letter to the Emperor was received on Japanese soil, with the promise of an answer on the return of the squadron in the spring. The harbor of Yedo was surveyed and sounded under the very muzzles of the Japanese guns. More has been accomplished by our squadron in these few days towards opening Japan to the rest of the world, than by the whole of civilized Europe for two hundred years.

Breadstuffs and produce have risen, and their course is still upward. There is no sort of probability that prices will go down again to a low figure, at least until after another harvest. *Excelsior* is the motto for all kinds of provisions in the market, as well as in the pan. Scarcity and yeast are both active agents in producing a rise.

---

POMPEII.—The papers, in giving an account of the recent discovery in Pompeii, of a group of skeletons apparently arrested in the act of flight accompanied by a dog, thus comment:

"But the firey flood was on their track; and vain their wealth, their flight, the age of one, the youth of the other. The burning lava rolled above them and beyond; and the faithful dog turned back to share the fortunes of its mistress—dying at her side."

In the first place, if a flood of burning lava had rolled over them, there would have been no organic remains left to tell the tale; and in the next place it is a violation of historical facts to speak of lava at Pompeii; that city having been overwhelmed by a shower of ashes, while her sister city, Herculaneum, was destroyed by the "firey flood."

---

THE FREEMAN'S (Catholic) JOURNAL says:—"The installation of Bishop BAYLEY, in Newark, took place with much pomp and to the great delight of the people, on All Saints Day." With much pomp and to the great delight of the people, was not the way in which the Savior commissioned his apostles; for he had not even himself a place where to lay his head. The Pope, however, being the *Vicegerent*, has found out a better way to do the thing than that institnted by the Divine Founder of the Christian church. Humbug is not exclusively limited to politics and patent medicines.

---

MR. BORLAND, our Minister to Central America, made a speech of about three hours in length, on his presentation to the President of that Republic! This is by far the longest diplomatic harangue on record. The New York *Tribune* suggests that *Bore-land* is a very appropriate name; and adds, "late accounts state that the minister is as well since making that speech as could be expected, under the circumstances."

## Correspondence.

### Our Albany Correspondence.

ALBANY, Nov. 7, 1853.

THE past two weeks have been, in Albany, in a political point of view, just what they have been in other portions of the Empire State, only a little more so. Every printing office has been occupied in preparing tickets for the sovereign people to deposite in the ballot boxes to-morrow. One would suppose that there were enough parties and divisions of parties, without splitiug any more. But it seems as if the work is to be carried out to the letter, and the election become a personal matter. One man will have a full set of ballots struck off with his name on all, hoping thereby to pass them off as "simon pure" Whig, Hard, or Soft, as the first name indicates. Another does the same, so that a Philadelphia lawyer would find it difficult to say which is genuine.

The Temperance men have been among the most active. Having only a few separate nominations, they have concentrated their strength on them, and will be quite likely to elect some of them if not all. Then tickets and pasters are almost beyond number. Having men of all parties in their ranks, and the ballots thus diffused among all sections, they must tell largely on the result. They have held a series of meetings throughout the Senatorial district, and to-night they assemble *en masse* at the City Hall. Many of the clergymen have taken a prominent stand on this question, and have preached on the subject to their congregations.

As the time is so near at hand, it is useless to indulge in speculations on the probable result.—But there is one feature that is very unpleasant to consider. I refer to the corrupt practices of politicians. During the last session of the Legislature, every paper in the city joined in denouncing the practice of purchasing votes. But now they are, at least *tacitly*, consenting to be parties in the transaction. The election to-morrow will be one of the most corrupt ones ever witnessed in our State, and that too just on the heel of an impeachment trial, in which the corrupt conduct of a public officer was at issue. Money and rum will flow like water, and hundreds in this Capital of the most prosperous and wealthy State, will barter away their elective franchise just as freely as they would sell a peck of potatoes or a yard of tape. Shame on such men! Men! did I say? No! I mean *beasts* in human shape! No one with a *spark* of manhood about him would thus degrade himself.

The lectures before the Young Men's Association have commenced. Dr. BETHUNE, of Brooklyn, opened the course last Wednesday evening. Some of the most able men in the country are to follow him. I may sketch some of general interest and instruction, for the readers of the RURAL.

*OWE.*

### New Bedford and Nantucket.

NEW BEDFORD is, in some respects, one of the most important towns in the United States; a brief account of it may not be uninteresting. It is situated upon the right bank of the Acushnet river, and is regularly laid out; while the ground upon which it stands, gradually rising to a considerable elevation, gives to it a very fine appearance from the water. On arriving in the town, I was struck with the remarkable stillness which seemed everywhere to prevail. Its population numbers over sixteen thousand, and yet there was so little bustle, that it seemed as if I were in some quiet country village. Yet no wonder that everything in its streets and along its wharves, is so quiet, for you know it is emphatically the *city of Oil*. Its great business is not done at home, but is carried on in distant seas. There are about twenty oil mills here, in which the crude oil is converted into the various kinds found in the markets, such as winter strained, summer strained, &c.: large quantities of sperm candles are also manufactured. About three hundred vessels, engaged in the whale fishery, sail from New Bedford. A stream of wealth has, for a long time, been pouring into her lap, around the cape, until she has become, in proportion to her population, one of the richest towns in the Union. You have only to walk or ride through the upper part of the city to behold the evidences of great wealth.—Splended mansions, sheltered with trees, and surrounded by grounds ornamented with choice shrubbery, meet our eye on every side.

The Island of Nantucket is situated sixty miles southeast of New Bedford, and one hundred miles south of Boston. It is about fourteen miles in length from east to west, while about three and a half miles constitute its average breadth. Capt. Bartholomew Goswold discovered the island, in 1602. Its historian relates that it is not known how its name originated, "but it is generally supposed that Nanticon, known to ancient voyagers, and Nantucket, are the same." In 1641, it was deeded to Thomas Mayhen by James Forrett who was sent over by Lord Sterling with a "Commission to dispose of all the land that lay between Cape Cod and Hudson's River." In 1659 the greater part of the island passed into the hands of nine other proprietors, upon the payment to Mr. Mayhen of thirty pounds, and two beaver hats. These proprietors purchased nearly all of the island of the Indians for twenty six pounds. The first settler was Thomas Macy who came over from England in 1640, and settled in Essex County, Mass. Here he lived for nearly twenty years, when, having one day transgressed one of the laws of the colony, by allowing four Quakers to shelter themselves in his house during a severe rain storm, he was cited to appear before the authorities. Such oppression as this drove him to seek a new home which he found on the island of Nantucket.

Nantucket has been, and still is, famous for its connection with the whale fisheries. Here it was that this business which has contributed so much to the wealth of New England, which has given employment to large numbers of her people, and added greatly to their reputation for enterprise, first grew into a permanent existence on this side of the Atlantic. Like almost every other occupation in which large numbers of the people are engaged, its beginning was small, and its progress, gradual. The whaling business was carried on to a very limited extent for several years previous to 1690, but in that year one Ichabod Padduck came from Cape Cod "to instruct the islanders in the best method of killing whales and extracting their oil."

But as New Bedford has arisen and explored the ocean from pole to pole for its living treasures, Nantucket has been declining. At present she has between fifty and sixty vessels engaged in whaling, while formerly she had nearly twice that number. In 1840 Nantucket contained a population of 9,012; in 1850 it had decreased to 8,452. The town is built mostly of wood and wears a somewhat ancient appearance. Its streets, with the exception of one or two main ones, are narrow and irregular. Huge windmills, in various parts of the town, extend their arms against the sky, reminding one of the olden times. The educational advantages of the place are, however, said to be good. Besides excellent schools, there are several reading rooms well furnished with the different publications of the day. The island was once covered with timber, but I have looked in vain to see a tree not planted by the hand of man. None are to be seen except some small shrubbery and fruit trees scattered about the dwellings. The greater part of the island is wholly destitute of dwelling houses, as well as fences, the ground remaining unsubdued, having never been disturbed by the plow. Formerly seven or eight thousand sheep roamed at large on this great common; but within a few years they have been removed from the island, so that now there are only two or three herds of cattle feeding upon it, attended by herdsmen. Whortleberries and blackberries abound. Much of the island is nearly level, some parts of it considerably rolling, and a small part of it hilly. The soil is sandy and with good farming can be rendered quite fertile. The land under cultivation, when manured by the wash of the sea, produces tolerably well. Peat is found in the swamps or marshy ground, and is used by many of the inhabitants for fuel.

The principal place of attraction, on the island, during the summer season, is Siasconset, a small village situated on the eastern shore. It stands upon ground elevated about sixty or seventy feet above the level of the sea, and commands an extensive view of the ocean on the south and on the east. Most of the houses here are occupied only as summer residences. The weather during the summer months is almost always sufficiently cool for comfort, the sea air making it delightful when clear from fog. It is an excellent place for sea-bathing, as good as there can well be on a sandy beach. I doubt whether there is another place in our northern Atlantic coast so much exposed to the influences of the sea, as Siasconset.

Yours truly, S. G. WILCOX.

### Sunday Amusements in California.

WE find the following advertisements in the Marysville (Cal.) Daily Express, of Sept. 16, 1853; and cannot help reflecting how such an announcement would look fifty, or even twenty-five years hence, when society shall have become settled, and law, order and religion prevail, as they inevitably must, in all free and republican countries. At present, the population is little more than mere nomadic tribes—"outside barbarians,"—without home, restraint, or moral principles:

SPORT! SPORT!

*Unprecedented Attraction at Gibsonville, on Sunday, September* 18, 1853.

GREAT Bull and Bear Fight—Fight between a Woman and Wild Bull—Foot Race between the celebrated Jno. Gildersleeve and Wm. Waters of Philadelphia

The entertainment will commence with a fight between Isadora Gonzales, the celebrated Matadores of Durango, who has had six horses killed under her in one fight, and a Wild California Bull of enormous size, lately captured on the Tulare Plains.

A splendid Andalusian Bull, imported by Don Pablo de la Guerra, will fight a three year old Grizzly Bear, (one of the most ferocious of the species,) lately caught at Whiskey Diggings.

A Foot Race will take place between the celebrated Jno Gildersleeve, the world renowned Pedestrian, and Billy Waters, of Spring Garden, Phila., also well known in the sporting circles, for a Purse of $1,000.

Chase's unrivalled Brass Band will be in attendance.—Admission $2. MILLS & KEITH, Proprietors.

NOTICE.

THE HEAD OF JOAQUIN MURIATTA, the famous Robber and Murderer, will be on Exhibition To-Day, in the HALL over the

WESTERN SALOON,

between the hours of 9 A. M. to 4 P. M. The head has been recognized by some of the most prominent citizens of Marysville. Also, the hand of THREE FINGERED JACK, his associate in crime. Admission $1.

---

HYDROPATHIC QUARTERLY REVIEW.—This is a new work, got up in the best style, illustrated with superior wood engravings, and devoted to medical reform. Though essentially a professional magazine, its articles are couched in popular language, and adapted to the general reader, while the facts stated, and the systems advocated cannot fail to arrest attention and induce thought.—The initial number is exceedingly well filled. One article, the "Dietetic Use of Alkalies," by G. H. TAYLOR, M. D., we have read with much pleasure. It condemns in the strongest language the common use of saleratus, carbonate of soda, and cream of tartar, as attended with the most direful consequences. This will startle some of our good housekeepers who have been using alkalies with the best intentions, *thinking* they would correct acidity of the stomach, and *knowing* that they saved time in bread-making. Published by FOWLER & WELLS, New York: $2 per annum.

---

WESTMINSTER QUARTERLY REVIEW, for October, republished by SCOTT & Co., New York, is received and for sale by D. M. DEWEY. It contains among other articles, one just now of special interest, on the "Progress of Russia."

## News Paragraphs.

☞ The Rev. Dr. Griswold, of New York, was severely burned by a gas explosion, a few days since. Chandeliers had been attached to the pipes, and the gas turned on. Towards night, it was evident that gas was escaping from some of the burners, and, accompanied by a child about twelve years of age, Dr. G. proceeded with a candle from room to room, to ascertain whether the gas was, in all cases, turned off. On opening the door of a small apartment in the third story, a tremendous explosion occurred instantly, destroying two or three windows, breaking a partition, and consuming curtains and other furniture in that part of the house. Dr. Griswold's face and neck were considerably injured, but his hands suffered most from his efforts to save the child, whose body was for a moment wrapped in fire.

☞ The Boston Mail of a late date says:—One day during the past week, a dry goods store in Washington street, kept by a "nice young man," doing a profitable business, was closed, and the door festooned with crape, as in cases of "death in the family." The store remained in this condition so long as to excite suspicion, when some of the creditors of its proprietor assembled to compare notes, and making forcible entry, they found the goods all minus. Active search being made, a portion of the goods were found in Blackstone street, which Sheriff Bailey attached. The proprietor is *non est inventus*.

☞ There is a deficiency in the wheat crop of Great Britain, amounting to nearly 4,000,000 quarters. It is calculated that she will have to import during the coming year, 9,600,000 quarters, and of these she relies on Canada and the United States for 5,000,000 quarters, or 40,000,000 bushels. The surplus wheat of Upper Canada this year, is estimated in late papers at 4,000 000 bushels. Suppose the Canadas to furnish 6,000,000 bushels; there is left to the United States as their share, 34,000,000.

☞ A letter from Rome of Oct. 2d, states that on the previous day the Reading Committee of the Holy Inquisition sat in judgment upon various works, and condemned "Uncle Tom's Cabin" as a damnable and pernicious work. The Italian version so condemned is designated in the sentence, "Il tugurio dello Zio Tom, Romanzo Americano di Miss Enrichetta Beecher-Stowe."

☞ The work on the Allegany Valley Railroad between Pittsburgh and Kittanning, is being prosecuted with great activity. The hopeful ones anticipate that the cars will be running between Pittsburgh and Kittanning in July, 1854. Forty-five miles more above the latter place was let recently, leaving but forty miles of the northern portion of the road to be put under contract.

☞ The Worcester Transcript, says a boy of 15, having been turned out of a mill at East Brookfield a few days since, procured a bottle of cherry rum, and in company with another boy, went into the woods and drank nearly the whole of it. One of the boys succeeded in getting home, but the other when found was insensible, and died at 10 o'clock the next day.

☞ Elliot, the æronaut, who made an ascension at Baltimore a few days since landed at Christiana, making a distance of 80 miles in an hour and ten minutes. The last 30 miles was done in the almost incredible time of twenty minutes. He says he reached an altitude of 4 miles and was hurried along by a heavy gale nearly the whole distance.

☞ The Toronto Patriot of a late date, says that the officers and crew of the steamer Fairy Queen, which was wrecked on the 8th ult., causing the loss of three lives, have been committed for murder. It will be recollected that at the time of the disaster they abandoned the vessel and came ashore, leaving a number of passengers on the wreck.

☞ Utah would make twenty States of the size of New Hampshire; Nebraska, fifteen; Indian Territory, twenty; Northwest, sixty-five; total, one hundred and twenty-six States. Should these Territories have an equal population to the square mile with New Hampshire, they would contain a population of about 380,000,000.

☞ Two young negro slaves killed their master, Wylie Kearney, of Caldwell County, Kentucky, a few days since. He was a hard master, and he was just about to punish one of them, when the other came up and threw a rope over his head, and then both pulled on the ends of the rope until he was choked to death.

☞ At Louisville, Ky., Matthew F. Ward, author of the recent work, "English Items," shot Prof. William Butler, on the 2d inst., in the left breast, causing his death a few days after. The cause of the affair was that Butler had chastised a small brother of Ward's. Both the brothers are in jail on the charge of murder.

☞ Deputy Sheriff Babbitt, of Barre, Mass., was convicted at Worcester, Nov. 1st, of being an accomplice of burglars, who robbed a house in that town. The defense moved to set aside the verdict, on the ground that one of the jurymen was drunk at divers times during the trial. The Court reserved its decision.

☞ Recently Mr. Van Buren, being in Belgium, sent word to the king that he desired to pay his respects to him, if he could be permitted to do so in plain citizen's dress; whereupon the king came in from the country, and spent several hours with Mr. Van Buren in his palace.

☞ A letter from the whaling ship South America, of New Bedford, Captain Walker, reports her in Ochotsk Sea, July 13. They had struck this season twenty-four whales, and lost ten of them in the ice. The fourteen saved made 1300 bbls. of oil.

☞ A new wheel barrow has been invented. Do not laugh, for it is a good invention. The wheel is placed under the centre, so that none of the weight of the load rests upon the hands. A man can wheel twice the usual weight.

☞ The wire of the Montreal Telegraph Line near Northfield, was by some means caught by the locomotive of a train of cars on the Vermont Central Railroad and stripped from the poles for a distance of fifteen miles.

☞ The Bank of the State of New York was robbed on the 1st of November of $37,000 in bills of its own issue. A reward of $6,000 is offered. Among the bills are seventeen of $1,000 each, and eight of $500.

☞ The Central Railroad has over twenty-six miles of freight cars, in constant use. Yet even this does not accommodate the vast business that offers itself, and new cars are constantly in process of construction.

☞ It is represented that the lower part of Ohio has given immense majorities against the Maine Law Candidates for the Legislature, while the Western Reserve has gone as far in the other direction.

## News Brevities.

—— Sheridan Knowles is lecturing in Scotland as a dissenting preacher.

—— A silver mine, it is said, has been discovered in Stanley Co., North Carolina.

—— Brazoria, Texas, exports annually nearly a million dollars worth of produce.

—— The rolling mills of Pittsburg have gone into operation with full sets of hands.

—— C. P. Salisbury, an old typo and latterly a play actor, has just fell heir to $8,000.

—— Ten miles of the Erie and New York City Railroad West of Jamestown, was let Oct. 22d

—— A company of Flying Artillery has been organized at Utica. F. A. Buttick commandant.

—— A large deposite of white ash coal has been reached near Pottsville, Pa., by a shaft 400 feet deep.

—— There is but one guide board in the whole State of Rhode Island, and that points the wrong way.

—— The Pacific Rail Road Co. have purchased four blocks in the city of St. Louis at a cost of $120,000.

—— Mrs. James Russell Lowell, wife of the poet, died at Cambridge on Thursday, Oct. 27, aged 32.

—— The catalogue of Oberlin presents a grand total of 1,305 students, viz: 717 males, and 588 females.

—— Mr. Choate announces his apprehension that he will not, hereafter, be able to address large audiences.

—— Judy, a slave, died in Bradley county, North, Carolina, on the 15th ult., aged one hundred and ten years.

—— Two thousand two hundred and three passengers left Cork last month for Liverpool, on their way to America.

—— Advices from Port au Prince to Oct. 17th state that the yellow fever is prevailing to a great extent at that place.

—— John Bell, of Tenn., received ten Democratic votes, which secured his election to the United States Senate.

—— The Albany Journal wishes to know whether taking off the heads of Canal officers will make them "Short Boys!"

—— The Great Western Railroad from Niagara to Detroit, through Canada, is to be completed and go into operation next month.

—— The vote in the city and county of St. Louis for a subscription to the Pacific Railway was—for it, 3,359; against it, 760.

—— Of the seven $100 premiums awarded at the Springfield Horse Exhibition, Vermont took five and "the rest of mankind" only two.

—— Austria has increased her indebtedness since 1845 something like $170,000,000, mainly in suppressing liberty in Hungary and Italy.

—— The American steamer Bay State is reported to be ashore near Ogdensburgh. We have no particulars, but presume she is not much damaged.

—— Counterfeit coppers are in circulation. A man who will manufacture bogus coppers in this age of the world, ought to be sent to the penny-tentiary.

—— Henry A. Wise of Va., was married on the 15th to Miss Mary Lyons, of Richmond. The Attorney General of the United States acted as groomsman.

—— More than 1000 bags of wheat were purchased a few days ago in Pittsburg, directly for France—the first transaction of the kind ever known there.

—— It is feared that the late insulting language employed by Jefferson Davis in his letter to Georgia, respecting Mr. Toombs, may lead to a hostile meeting.

—— Lamartine has sold a new work of his, "The History of the Medicis," in advance, for the round sum of 150,000 francs, ($28,150.) It is to consist of 4 volumes.

—— It has been decided by Judge Heredith of Quebec, that telegraph operators are not bound to answer questions in a court of law; involving a breach of secrecy.

—— The Circuit Court in Broome county has awarded $4,000 damages to Mrs. Primrose Johnson, whose husband was killed by an accident on the Erie Railway.

—— The protracted trial of the officers of the steamboat Henry Clay, closed Nov. 2d, and, after an hour's consultation, the Jury returned with a verdict of not guilty.

—— The Ohio coal-field comprises 11,900 square miles, a greater area than all the coal region of Great Britain, lying nearer the surface and much more easily mined.

—— A boy, about ten years of age, passed through Buffalo on the 3d in charge of the American Express Company, on his way to Columbus, Ohio, from some easterly place.

—— In Paris, a boy of 17 years of age, undertook, on a bet, to walk around the city in four hours. The distance is 24½ miles and he accomplished it in 3 hours 24 minutes.

—— The securities deposited with the Controller for redeeming notes of the Patchin Bank are Bonds and Mortgages, $50,989; N. Y. State Stocks, 27,010; Cash on Deposit, 28,900.

—— The colored people of Cincinnati have succeeded in establishing a reading-room, and are about to start a paper devoted to their interests, to be edited by a young colored man.

—— Oregon and Minnesota will soon be asking admission into the Union as States. Thirty thousand inhabitants have been deemed hitherto a sufficient number for that purpose.

—— The proprietor of a livery stable, writing from Sacramento, says he keeps five hostlers: three of the five were formerly "Broadway dry goods clerks," and the other two clergymen.

—— All the prisoners in the jail at Ellicottville, Cattaraugus county, five in number, made their escape on the 24th of October. This is a jail delivery without the Oyer and Terminer.

—— A plowing match has taken place at Richmond, Va., for a prize of one hundred dollars, given by Madame Sontag. An immense crowd attended, and Madame S. was loudly cheered.

—— The Eldorado from Aspinwall with California mails, arived the 7th. She reports that the George Law for New York left Aspinwall the 31st with 600 passengers and $1,000,000 in dust.

—— About fifty machinists left Boston a few weeks since for Cuba. They go in the fall to superintend the running of steam engines in sugar manufactories through the winter, at a high rate of wages.

—— The trial of Capt. Tallman and Mr. Collyer, Master and Owner of the steamboat Henry Clay, upon indictments for manslaughter, is now in progress in the United States Circuit Court in New York.

# Foreign Intelligence.

## Arrival of the Africa.

THE Cunard Mail Steamer Africa, left Liverpool, on Saturday, the 22d ult., and arrived at N. York, Nov. 4th.

The screw steamer Andes, arrived at Liverpool at noon of Friday, the 21st.

The Africa passed the screw steamship City of Glasgow, from Philadelphia, going into Liverpool.

Further difficulties (though not important) have arisen in respect to the release of Kosta. He was still in prison, though his liberation would doubtless soon take place.

THE EASTERN QUESTION.—The position of affairs remains unchanged as regards the prospect of hostilities.

The Declaration of War was to be read in all the Mosques, on the 7th Oct. It was not expected that hostilities would commence before the 25th.

Reschid Pasha's son was the bearer of the summons to Prince Gortschakoff.

OMAR PASHA'S LETTER TO PRINCE GORTSCHAKOFF.

"*Monsieur la General*:—It is by the order of my Government that I have the honor to address this letter to your Excellency.

"While the Sublime Porte has exhausted all means of conciliation to maintain at once peace and its own independence, the Court of Russia has not ceased to raise difficulties in the way of any such settlement, and has ended with the violation of treaties—invading the two Principalities of Moldavia and Wallachia, integral parts of the Ottoman Empire.

"True to its pacific system, the Porte, instead of exercising its right to make reprisals, confined itself even then to protesting, and did not deviate from the way that might lead to an arrangement.

"Russia, on the contrary, far from evincing corresponding sentiments, has ended by rejecting the proposals recommended by the august mediating Courts—proposals which were alike necessary to the honor and to the security of the Porte.

"There only remains for the latter the indispensable necessity of war. But, as the invasion of the Principalities and the violation of treaties which have attended it, are the veritable causes of war, the Sublime Porte, as a last expression of its pacific sentiments, proposes to your Excellency, by my intervention, the evacuation of the two provinces, and grants for your decision a term of 15 days, to date from the receipt of this letter.—If, within this interval, a negative answer shall reach me from your Excellency, the commencement of hostilities will be the natural consequence.

"While I have the honor to make this intimation to your Excellency, I embrace the opportunity to offer the assurances of my high esteem."

The *Journal des Debats* gives the following as the answer of Prince Gortschakoff to the demand made by the Ottoman Porte that he should evacuate the Danubian provinces:

"My master is not at war with Turkey, but I have orders not to leave the Principalities until the Porte shall have given to the Emperor the moral satisfaction he demands. When this point shall have been obtained, I will evacuate the Principalities immediately—whatever the time or the season. If I am attacked by the Turkish army, I will confine myself to the defensive."

ENGLAND.—A numerously attended meeting was held at Finsbury, London, 18th, to express sympathy with the Turks.

The Dublin Exhibition is to close finally, Oct. 30th.

The ship Dalhousie, from Gravesend, 13th ult., for Sydney, sunk on the 19th, off Beechy head.—Fifty-nine lives were lost. The only particulars that have reached us—indeed, all that is known, or that is likely to be known—of this melancholy loss, we have from the only survivor, Jos. Reed. He says that he was at the helm at the time, when he suddenly felt a tremendous motion in the ship, and at once perceived that she was sinking. He ran up to the mizentopmast-head, when she speedily went down, carrying with her, we regret to say, all on board, except this solitary survivor.

Capt. M'Clure, of the Investigator, in the Arctic Expedition, writing from Port Warren, on the 30th of August, says:—"I hope to round Cape Bathurst to-morrow. This will, therefore, be the last communication which it will, in all probability, be in my power to make to their Lordships. The temperature has hitherto been exceedingly mild, thermometer very seldom below 32; and from the present favorable appearance, both of the weather and state of the ice, I have very strong hopes of getting well to the northward ere the navigation ceases, which will be about the latter end of next month, according to Esquimaux report."

FRANCE.—The Russian Minister in Paris, has contradicted in the most absolute manner, the statement that the Emperor of Russia threatened a war of extermination against Turkey.

TRIESTE, Oct. 19.—The Sultan, on the 10th, demanded of Lord Stratford the entrance of the fleet into the Dardanelles, and is said to have received an affirmative reply.

CONSTANTINOPLE, Oct. 13.—The combined fleets have not yet entered the Dardanelles, but they are momentarily expected. The fleet in the harbor of Constantinople, which had been laid up for the winter, have been ordered to prepare for sea with all possible despatch.

The Turkish force now in arms is estimated, though somewhat loosely, at 300,000 men, namely: 120,000 between the Danube and the Balkan, 15,000 in Bosnia, 6,000 near Pristina on the Servian frontier, 50,000 who will be mustered within 20 days at Adrianople, and from 80,000 to 100,000 on the frontier of Asia.

The Russians, on their part, are actively increasing the forces on the Danube. Immense barracks are being built on its banks, the expense of which Gortschakoff makes the Hospodars pay; and to such a length has the Russian Prince carried his demands, that the Wallachian Government had been compelled to borrow six millions of piastres.

As regards the theatre of anticipated warfare, we learn that 30,000 Russians are immediately to be conveyed to Redout-kale (in the Russo-Circassian province of Imerith,) within three days.—Gen. Zewadowski, the hetman of the Chernomorski Cossacks, has reached Anapa, (Russian fortress on the coast of the Abasses,) with 24,000 men.

---

COLONEL MANYPENNY, Commissionar of Indian Affairs, who was at Columbus a few days since *en route* to Washington, states that he has held councils with seventeen different nations of Indians in Nebraska, and represents that country as overestimated in the public mind. Some of the Indian tribes are unwilling to sell any part of their lands; others would sell all, while more are ready to sell a portion. It is expected that treaties will be made early enough to enable Congress, at its next session, to organize a new territory.

## The Last Hope Gone.

THE London Times argues from Commander M'CLURE's despatch, that there is no hope whatever that Sir JOHN FRANKLIN will ever be heard from. That paper says:

"Commander M'Clure can send us no news of Sir John Franklin's expedition. The opinion among the most distinguished Polar worthies now is, that Sir John Franklin, after leaving the winter quarters where his traces were found, proceeded to carry out the Admiralty instructions, steering first westerly for Melville Island, and then shaping a course—as far as the configuration of the scene of action permitted—southerly and westerly for Behring's Straits. It is supposed that, in endeavoring to carry this purpose into effect, the Erebus and Terror were hopelessly frozen up or destroyed years ago in some of the multitudinous channels which are known or supposed to exist there.

This we find to be the opinion of the principal Arctic navigators, and it comes before us recommended by its extreme probability. Certainly, Sir John Franklin was not an officer to leave unattempted any duty which he had been ordered to perform, and therefore it is probable that he would not have deviated from the letter of his instructions without excellent cause; had he so deviated, it is all but certain that he would have left behind him at Reechy Island, or elsewhere, some record of his changed intention.

If, then, Commander M'Clure has been unable to find any trace of the lost expedition between Behring's Straits and the point from which he wrote his despatches, it would appear that our best chance has been exhausted. The public have a right to expect that we have now seen the last of Arctic expeditions. Even Sir John Barrow, had he yet been alive, would now have entreated the Admiralty to hold their hand."

---

TREASONABLE GRASS.—Anarchy in a new form has been discovered and uprooted in an Austrian district on the borders of Switzerland. A commissary of gendarmerie was passing his way along a garden wall, when he was surprised at seeing the name of Kossuth coming ont of the earth. He was quite overwhelmed at first. The commissary rushed for the mayor and examining judge. The garden was surrounded with gendarmes, and the proprietor sent for. The name of Kossuth was certainly there, having been sown in pepper-grass, and about a week above ground.—The proprietor said that he had never noticed that the pepper-grass spelt anything; indeed it was necessary to retire to a certain distance to adjust the eye to the size of the letters. He said that his gardener was a Swiss, and that he had sown Kossuth in cress, just as he would have whistled the "Ranz des Vaches," or sworn by the Rhone. It was thought in the neighborhood that all Swiss gardeners would be expelled from the Austrian territory.

---

THE OYSTER TRADE.—This is the season of harvest in the oyster business. The time intervening between the extremes of warmth and cold, either of which is fatal to the oyster, is very short, and every exertion is made to improve it. Consequently the oyster beds, in all directions, are being raked; and numerous vessels, mostly from Virginia, are seen discharging their cargoes of shell-fish near the markets. A large proportion of those thus landed, are at once put in barrels, in the shell, and sent off to Cincinnati, Louisville, and other distant parts of the country. They sell for 90 cents or $1 per hundred. Southern oysters, being short-lived, are generally taken out of the shell before they are sent away. Just at this time the beds of Southern oysters planted last Spring in the Northern waters, as they could not survive the cold of this climate. By December the oyster business will be more quiet.—*N. Y. Jour. Com.*

---

CANAL TOLLS.—The following is an official statement of the tolls collected on all the New York Canals during eight consecutive years, up to the 14th of October in each year;

| | 2d week in Oct. | Total to Oct. 14th. |
|---|---|---|
| 1846 | $102,659 | $2,098,175 |
| 1847 | 121,554 | 2,910,349 |
| 1848 | 150,714 | 2,455,601 |
| 1849 | 131,626 | 2,389,113 |
| 1850 | 107,339 | 2,391,934 |
| 1851 | 118,230 | 2,629,525 |
| 1852 | 121,078 | 2,435,944 |
| 1853 | 130,086 | 2,471,993 |

---

SEVERAL IRISH girls were induced, in July, last year, to leave Belfast for employment at a mill in Belgium, by the agent of a German house at Brussels, under promises of cheap living and high wages. They were to have ten shillings a week in a town where meat was represented at twopence a pound, and eggs two-pence a dozen, and they were to work eleven hours a day. A despatch to Lord Clarendon states that these promises were broken, and that the poor girls were overworked, half-starved, and beaten into the bargain. A meeting was held in Belfast, and measures taken to bring the girls back to Ireland.

---

CATALEPSY.—The Providence Post says, about three weeks ago, the wife of Mr. Henry Colvin, of Coventry, rose in the morning, complaining of a pain in her side. She soon fell asleep, or died, as supposed. When her friends came to attend the funeral, they were struck with the remarkable life-like appearance of the corpse, and the funeral was deferred. Since then she has laid in the same condition, and many have visited Mr. Colvin's house; none of whom can discover any signs of decay. There had been no alteration on Friday, 21st ult., a period of about three weeks.

---

SINGULAR CASUALTY.—A daughter of Michael Youngs, aged four and one-fifth years, of Essex, N. J., fell upon the floor with a needle, two and a quarter inches long, sticking in its apron, and which was partly driven into its chest and broken off. The doctors could not find the piece of the needle, and the child lingered in great agony for four weeks, when it died, and a post mortem examination revealed a piece of the needle one inch and quarter long, lying loose in a large collection of matter, entirely within the heart's substance.

---

A GREAT CONFLAGRATION occurred at Green Bay on Monday week, by which full half of the town was destroyed—embracing thirty buildings.—Among these were three large warehouses, the United States Hotel, the Advocate office, and a large quantity of produce, which was stored in the warehouses. The latter belonged chiefly to country merchants. The loss by this fire is stated at $100,000, only a small portion of which is insured.

---

☞ The Salt manufacturers of Syracuse have resolved to advance the price of fine Salt to ten shillings per barrel. They say the advance is necessary on account of the high price of wood and barrels.

# Commercial.

## BUSINESS AND FINANCE.

BUSINESS MEN in our commercial cities are still complaining of tight times. A broker in Boston well posted in financial matters, writes to us that unless a favorable turn begins ere long, there must be a collapse. Specie is still moving foreign-ward, the steamer Asia having taken out on her last trip $686,739, and £220 sterling in specie. The latter was in English silver; and of the former, $10,000 was in Mexican dollars, $81,500 in American coin, and the balance in bars and ingots. The export of specie from New York for October, was $4,758,000 against $2,152,000 for the same month last year. The net amount of money at all the Sub-Treasuries and Mints subject to draft,—on the last of October was about $26,000,000. This amount is growing less under the depleting process for the redemption of U. S. Stocks. The receipts from California are small since last reports, although one or two millions are said to be on the way. The steamer Daniel Webster arrived at New York, on the 5th, having on her manifest $50.000 in gold.

The Hermann took out on Saturday last, $536,000 in specie, and the steamer City of Manchester $130,000 more. Total export of specie thus far this year is $21,326,731.

Several failures are reported in New York. Messrs. DIMOND & Co., the extensive Sugar Refiners, in Bristol, R. I., who failed a few weeks since, are reported to have compromised with their creditors, paying to the amount of 75 per cent. on their liabilities. The *Tribune* of Nov. 5th, says:—"We understand that the President of one of the largest Wall-st. Banks, wishing, if possible, to extend some relief to the commercial community, made a proposition to ten Wall street Banks to make a simultaneous expansion of discounts to a moderate amount. Eight of the Banks assented to the proposition, but the Union and Bank of America objecting, the plan was abandoned. It is much to be regretted that such was the result, as not only would the relief, though limited, have been very useful, but this action on the part of the Banks would have tended to revive that confidence which is at present so much needed."

The Owego Bank, a Safety Fund Institution, failed a few days since, in consequence, it is said, of the suspension of HENRY DWIGHT, Jr. Its capital was $200,000. The Patchin Bank of Buffalo, has also stopped payment. The cause of its suspension was brought about by large loans to the Buffalo and New York City Railroad, whose affairs are embarrassed. Mr. PATCHIN, President of the Bank, is also President of the Road, and has assumed liabilities in its behalf. Let those who have none of these bills on hand reject them if offered, and let those who have, hold on to them until the assets of the banks are ascertained. Brokers and money shavers usually buy up such bills at a great discount, and make money by it in the end.

In the mean time, while the financial sky of the speculator and consumer is overcast, that of the farmer and producer brightens daily. The advices per Africa are very favorable in regard to breadstuffs, and the New York market has advanced consequently 25 to 31c. ℔ bbl. on Flour, and 7 to 10c. ℔ bu. on Wheat, with large demand.

# Market Intelligence, &c.

RURAL NEW-YORKER OFFICE,
Rochester, Nov. 9, 1853.

THE markets have again advanced, under the stimulating effect of the foreign news. The rising prices in England and on the Continent, as per last advices by the Africa had an immediate effect to enhance our own, although buyers have made efforts to moderate prices in consideration of previous high rates. Flour is selling from three to five shillings per bbl. above previous quotations. Wheat has risen 8 to 10 cents, and corn from 2 to 5 cents.

BUTTER is one or two cents higher; Cheese has advanced a cent, and Lard half a cent a pound. Poultry is quoted at a slight decline.

The bad state of the weather during a portion of the past week, has prevented the usual display of activity in our streets.

### Rochester Wholesale Prices.

## NEW YORK MARKET.

NEW YORK, November 8, 1853.

Flour—Little change to note in the value of Western and State flour. Demand quite active for export and the trade. Canadian in fair demand and steady. Sales at $7. Sales Western Canal at $6.87@6,91 for common to straight State; $6,94@7,06 for mixed to fancy Michigan and common to good Ohio.

Grain—There is less buoyancy in the wheat market and demand hardly so active. Sales common Genesee at $1,-75½; good do. $1,80, short time; Canadian at $1,55 for mixed—$1,69 for choice; white Michigan on p. t.; red Southern $1,50; red Western on p. t.; prime white Ohio to arrive at $1,67. Oats, 47@50c for State and Western. Corn hardly so firm. Sales at 79c for unsound; 80c for Western mixed; 81c for Jersey yellow; 81@82 for southern yellow.

Provisions.—Pork in good demand—$15,75@16 for mess; $12.91@13 for prime.

Beef in fair request—$11,50@12 for country mess—$13-50 for repacked Chicago—$6@6,25 for prime.

Lard steady at 11¼@11½c.

Butter good demand at 12@15c for Ohio.

Cheese in good demand at 8½@10c.

## ALBANY MARKET.

ALBANY, Nov 7.—The receipts of produce since our last have been quite moderate and only a limited amount was offered to-day on 'change. For most kinds the tendency is upward and at the close there was but little unsold.

Flour and Meal—There is a moderate home and a limited eastern inquiry for Western and State Flour at the closing rates of Saturday. Holders of the better kinds are firm and of the low grades there is only a small amount offering. The transactions sum up 800 bbls. We qoute: Ordinary to straight State $6,75@7,00; mixed Indiana and Mich. $6,87@7,00; straight Indiana and Michigan $6.87@7; favorite State $6,87@7.12; common to good Ohio $6,75@7; fancy Indiana and Mich. $6,87@7; fancy Ohio $7,00@7,25; fancy Genesee $7@7,25; extra Indiana and Mich. $7.12@7,37; extra Ohio $7,25@7,37; extra Genesee $7,25@7,75.

Grain—In Wheat nothing has transpired, buyers and sellers being apart in their views. The supply is rather better, but not large. Prime Genesee is held at $1,75.—Corn has improved in value and the market is more active Sales Western mixed at 78c. Barley is in better supply and more active at a slight improvement in prices. The sales of the morning—good two-rowed at 78½c; good mixed at 83½c: four-rowed at 84c, for ordinary and 86 for prime—the bulk of the sales were at the latter figure.—Oats are in good request at full previous rates. Sales at 47 for State and 48c for prime Western.

Feed—A quiet market. Sales 20 lb feed at 17c.

## BUFFALO MARKET.

BUFFALO, Nov. 7.—There is very little inquiry on the market this morning and the transactions in flour are limited to retail lots at about the rates realized on Saturday. The sales in all do not aggregate more than 800 bls. at $6,12½@6,25 for good to choice brands of Ohio and Michigan.

Wheat quiet and but little inquiry. The only sale we note is 5,000 bu. of white Ohio on private terms.

Corn firm and in fair demand. Sales 16,000 bush. at 64@64½c.

## NEW YORK CATTLE MARKET.

NEW YORK, Oct. 31—At Washington Drove Yard—offered this day 1,957 Beef Cattle; offered during the week, 2,199. Business quite active during the week, and prices generally well maintained. The fine weather of to-day was very favorable for out-door transactions. We quote the range at 6½@9c per lb.

Calves at from 4@6½c.

Sheep and Lambs at from $2,50@9; the latter for choice.

Hogs and Shoats 5½@6c.

At Browning's—(Lower Bull's Head)—Offered, 300 Beef Cattle; 70 Cows and Calves, and 7,200 Sheep and Lambs.

Beef Cattle all sold at from $7@9,50 per hundred.

Cows and Calves sold at from $25@46—all sold.

Sheep, from $2,50@5; some extra brought as high as $9. Lambs from $1,75@4,75; 800 unsold.

At Chamberlain's—(Hudson River Bull's Head)—Offered, 375 Beeves, 50 Cows and Calves, and 4,500 Sheep and Lambs.

Beeves are firm, at from 7@9½c per lb.

Cows $25, 40@65. Calves 5@7c. per lb.

Sheep $2,75, 4@6,50. Lambs $2, 3@4. All sold.

At O Brien's—(No. 9 Sixth street)—Offered, 150 Beef Cattle; 20 Cows and Calves. Sales of the former at from $5@8; and the latter at from $20 to $40.

## ALBANY CATTLE MARKET.

ALBANY, Nov. 7.—W. W. Woolford's, Bulls' Head, Washington street.

Beef Cattle—680 at market. Prices—Extra, $7,50; 1st quality, $6,75@7; 2d do. 6,25; 3d do, $5@5,50.

Cows and Calves—Few in market. Prices from $30, 35, @45.

Sheep and Lambs—1,750 in market. Prices at from $2,-25, $3@4.

Hogs—Not any in market.

Remarks—The greater portion of cattle bought for the New York market. Some few for Brighton market.

## CAMBRIDGE CATTLE MARKET

CAMBRIDGE, Nov. 1.—At market, 1,132 Cattle, about 3,000 Beeves, and 1,131 Stores, consisting of Working Oxen, Cows and Calves, yearlings, 2 and 3 years old.

Prices—Market Beef—Extra sold at $8.00 per cwt.; 1st. quality, $7,50; 2d do, $6,50@7,00; 3d do, $6; ordinary, $4,75@5.

Hides—$6@6¾ per cwt.

Tallow—$7,@7,50 per cwt.

Pelts—$1@1,25.

Calf Skins 11c per lb.

Stores—Working Oxen—$95, 121@175.

Cows and Calves—$25, 41@65—scarce and in demand.

Yearlings—$8, 9@10.

Two years old—$15, 21, 21@31.

Three years old—$27, 36@68.

Sheep and Lambs—5,427 at market. Sales quick—prices firm.

Prices—Extra, $4¼, 4½. 5, 6, 7@8.

By lot—$2½, 2¾. 3@4.

Swine—Wholesale—Still soft, 5¾@6, hard fat, 6¼@6⅝ per lb.

## BRIGHTON CATTLE MARKET.

BRIGHTON, Nov. 1.—At market 4,400 Cattle, (say 2,800 Beef and 1,600 Stores.) 6,800 Sheep and 1,800 Swine.

Prices—Beef Cattle—A full market; sales were made at prices which correspond with the two past weeks, viz: Extra 7,50@8; first quality $6.75@7,25; 2d do, $5,75@6,25; 3d do. $4.25@5,50.

Working Oxen—Sales at $70, 78, 80, 90, 110, 125, 130@112.

Cows and Calves—Sales $23, 28, 31, 38, 42@55.

Stores—Yearlings $7@11.

Two years old $12@19.

Three years old—$21@33.

Sheep—Small lots $2,33, 2.75. 3, 3,25, 4, 4.25@5,25.

Swine—Dull; Still hogs 5½@5¾, corn fed fat 6¼@6½. Shoats to peddle 4½, 5, 5½@6; for retail 6@7½.

## PHILADELPHIA CATTLE MARKET.

PHILADELPHIA, Nov. 3.—Beef Cattle—The offerings at the Yards this week comprise 1,800 head of Beef Cattle of which 550 were driven North. The remainder have been mostly sold at $7,50 to 8.75, according to quality.—Prices are not so fair as last week.

Cows and Calves—About 200 head were disposed of within the range of $10@32 each. Prime milch cows are wanted at $28@32, and but few are offering.

Swine—Hogs have been unusually abundant, not less than 3,000 head being offered—a portion of these were from Western Pennsylvania and Ohio. Prices have declined and now range from $6.50@7 ℔ 100 lbs.

Sheep and Lambs—Continue in demand at former rates. About 1,600 head sold at $2,75 to $6 each, according to quality.

**FURS! FURS! FURS!**

Hudson's Bay Sable do. do.
Mink, Opossum, and Fitch do. do.
Swans Down, Fur Trimmings, Fur Gloves, the greatest variety in the State, and will be sold by the single pair or dozen, 20 per cent. lower than any house in this city.

Our FURS are from the celebrated furriers. Ganther & Sons, Gault, Ballard & Co., Leopold, Lang, Backus, Osborn & Co.; Wm. Moser, and the Hudson's Bay Fur Manufactory—warranted superior in workmanship, color and stock, to any manufactured in this country.

We keep everything in the Fur line, and will retail or job as low as any New York house.

CLARK & GILMAN, 33 State street,
Wholesale and Retail Furriers and Hatters.
Rochester, Nov. 4, 1853. 202-3t

*The Wonderful and Thrilling Narrative of*
**SOLOMON NORTHUP,**
*The Kidnapped New-Yorker, who was 12 Years a Slave!*

IN the distant South,—and finally rescued, in a providential manner. The Book corroborates the adage, that "*Truth* is stranger than fiction." It has received the unbounded recommendations of the free press—

17,000 copies have been sold in 4 months!

1,000 agents wanted, to sell the above, in all parts of the United States and Canada,—to whom the most liberal terms are given. From $500 to $1,000 a year, can be realized by active and respectable agent.

The above makes one handsome 12mo. vol., of 336 pages. 7 engravings, and is sold for $1. Copies sent by mail, (post-paid,) on receipt of price.

☞ For further particulars apply to the publishers,
DERBY & MILLER, Auburn, N. Y.
202 1t DERBY, ORTON & MULLIGAN, Buffalo.

SHEPHERD WANTED.—Wanted, an experienced Shepherd, to take charge of a flock of Sheep near Boston. Address with terms and reference to HOVEY & CO., 7 Merchant's Row, Boston. 202-2tw-1tm.

WHEELER'S HORSE-POWER.—I have one of Wheeler's Double Horse-Powers, in prime order, which I will sell for sixty dollars. Terms, cash—or six, nine or twelve months credit. J. W. DICKINSON,
201tf. Caledonia, Livingston Co., N. Y.

**Ornamental and Domestic Poultry.**

THE subscriber having invested a large amount in this business, is now prepared to fill any orders which he may receive. The celebrated Brahma, Sumata, Game, Palmer, Marsh and White Shanghais, with many other popular varieties, are from the yard of C. C. Plaisted, Esq., Great Falls, N. H., and of course cannot be surpassed in the world. My Imperial Cochin China Fowls are from Col. B. P. Johnson, his stock imported last year, '52, from the best breeders in England. All who well know Col. J., will understand that he has the best or none. My black Spanish are quite late, and will not be ready for market before next spring. They are from Mr. John Giles, late imported, the best blood in the country. These birds are so fast coming into repute that the price will doubtless run high for some years to come, as will also be the case with the Brahma, Sumatra, Game, &c. All persons purchasing fowls from me, can enjoy the benefit of my advertising, in case they wish to sell Chickens next year.

I am quite sure that our southern and western fanciers can be better suited here than farther east, as the long distance on railroad much injures the health and growth of the fowls.

As there are many fowls in market which have no claim upon the public favor, I will give my patrons something more tangible than my own words, for

"If self the wavering balance shake,
It's rarely right adjusted."

I am therefore permitted to refer all who entertain any scepticism, to the following gentlemen:—Col. B. P. Johnson, Secretary N. Y. State Agricultural Society, Albany, N. Y.; Hon. Ambrose Stevens, N. Y. City; Hon. Lewis F. Allen, Black Rock, N. Y.

Address O. B. EVANS, 214 Main street,
194-3m Buffalo, N. Y., Box 1662.

PLUM AND PEACH PITS wanted at 36 Front st., Rochester. SAMUEL MOULSON.
October 4, 1853 197tf

50,000 CHERRY SEEDLINGS for sale, one Summer's growth, large and fine.
200-4t JAS. C. CAMPBELL, Rochester, N. Y.

**A GOOD INVESTMENT FOR LABOR OR CAPITAL.**

WITHIN twenty minutes drive of a great market.—The subscriber, being desirous of attending to his interests in the mineral region at the West, will sell his Farm on the Ridge Road, one mile north of Rochester city line, consisting of 120 acres, 30 of which are heavily wooded, worth as it stands, one-third of the purchase money; with over 600 fruit trees of all the varieties worth cultivating, the produce of which when in full bearing, will pay the interest of the entire price of the farm.

The land is in good heart, mostly in grass, and the stumps all out and well fenced.

There are three Houses and Barns on the premises.

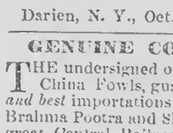
Having a great traveled road through its centre, and the River road on the East, it would cut up to great advantage, or might be used for a great Nursery establishment, for which it is well adapted.

If not sold by the first of April, it will be rented for a term of years. L. B. LANGWORTHY.
Rochester, Oct. 25, 1853. 200-tf

**MEXICAN WILD POTATOES.**

WE have about 300 bbls. of this variety of Potato, of our own growing, for sale. We know them to be genuine and warrant them as such Price, $4 per bbl. of 2½ bushels, or $2 per bushel, if ordered in time to ship this fall. No charge for package. Those ordering by mail, and enclosing pay, will have Potatoes forwarded promptly, according to directions.

Monroe Seed Store and Agricultural Warehouse, Rochester, N. Y. [201-2t] BRIGGS & BROTHER.



**SUFFOLK PIGS.**—10 pairs of purely bred SUFFOLK PIGS, four months of age. Also breeding Sows for sale by GEORGE HUNTINGTON.
Walpole, N. H., Oct. 15, 1853. 200-3t.

**SUFFOLK PIGS.**

THE subscribers are prepared to receive orders for pure Suffolk Pigs, bred from stock imported by the late William Stickney in 1848,—also by the subscriber in January last. Address

HIRAM C. WHITE. [195tf] AMASA MASON.

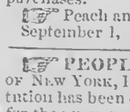
**TRACY FEMALE INSTITUTE,**
NO. 33 ALEXANDER STREET, ROCHESTER, N. Y.

THE second quarter of the present Academic year in this Institution, will commence on Thursday, the 17th of November instant.

For information relative to Course of Study, Terms of Admission, Boarding Department, &c., address

LUCILIA TRACY, Principal.
Rochester, Oct. 29, 1853. 201-3t.

**Spanish Merino Rams and Ewes,**



AT AUCTION—I shall hold my annual sale of Rams and Ewes at my farm in Darien, on the 16th day of November next. 100 Rams 1 and 2 years old, will be put up singly and sold without reserve, to the highest bidder—100 Ewes will be put up at the same time in lots of 10. The sheep are pure blood, and warranted sound. A rare chance is now offered to get choice stock. Terms—$10, and under, cash; over $10 one year with interest, on approved notes.

T. C. PETERS.
Darien, N. Y., Oct. 25, 1853. 201-2t

**GENUINE COCHIN CHINA FOWLS.**

THE undersigned offers for sale, by the pair, Cochin China Fowls, guaranteed to be of the *latest, largest and best* importations in the United States. For sale also Brahma Pootra and Shanghai fowls. Lyons being on the great Central Railroad, fowls can be forwarded at any time by Express.

Post-paid inquiries promptly answered. Address.
198-5teow RODNEY L. ADAMS, Lyons, N. Y.

**SAMUEL MOULSON,**
AT THE OLD ROCHESTER NURSERY.
Office, No. 36 Front St., Rochester, N. Y.

IS prepared to furnish inventories, to post-paid applicants, of the present very extensive stock of Nursery items, consisting in part of

120,000 Dwarf and standard Pear Trees.
90,000 Apple Trees.
50,000 Peach Trees.
30,000 Plum, Cherry and Apricot Trees.
Over 100,000 Hardy Evergreens.

Also, extra large Northern Spy Apple Trees, Dwarf and Standard Pear, Cherry, &c., &c.

Also, for immediate effect, a large quantity of extra sized Ornamental Trees, among which are fine specimens of Norway Spruce, Silver Maple, Pawlonias, Catalpas, Mountain Ash, Horse Chestnut, &c.

And a fine selection of Weeping Deciduous Trees, Ornamental Shrubs, Hybrid Perpetual Roses, together with such novelties as may be classed strictly hardy. Also a very limited assortment of half hardy plants of small size, such as Cryptomeria Japonica, Cedrus Deodara, &c., &c.

The amateur wishing prime fruits of well established repute, or the agriculturist needing fine cropping, thoroughly tested varieties, may rely upon the most careful execution of their orders.

The Ornamental items are entirely grown in the Nursery, consequently none of the heavy losses are sustained that usually occur to recent imported subjects.

The Evergreens are very robust and admirably furnished to the surface of the ground, none presenting the naked stems usual to imported plants.

Dealers are invited to give a call before making their purchases.

☞ Peach and Plum pits wanted.
September 1, 1853. 196-tf.

☞ **PEOPLE'S COLLEGE OF THE STATE** OF NEW YORK, INCORPORATED APRIL 12, 1853.—This Institution has been chartered by the Legislature of this State, for the purpose of reducing the expenses of Academic and Collegiate Education, and thereby open the Halls of Science to all classes of society by reducing the cost of tuition, board and clothing, and enabling the student to defray the greater part of the expense in labor.

Provision will be made to educate young men corporeally and mentally for specific purposes, by pursuing full and definite courses of study for each of the pursuits represented in the College—either Agricultural, Mechanical or Professional—and thus graduates will be qualified for entering at once upon the business of their choice.

At a regular meeting of the Trustees named in the Charter, held at Owego, on the 25th day of May, the following appointments were made:

D. C. MCCALLUM, of Owego, President of the Board of Trustees.

A. I. WYNKOOP, of Chemung, Vice President.

TRACY MORGAN, of Binghamton, Treasurer.

HARRISON HOWARD, of Lockport, Secretary and General Agent.

Agents are being commissioned in each county of the State, that the people may have an opportunity to contribute to the capital stock, which is distributed in shares so small that every individual may become interested in an institution which commends itself to the favorable consideration of every intelligent person.

For further information upon the subject, application may be made, post-paid, to the Secretary, who will send a pamphlet containing the act of incorporation and objects of the Institution, and other needful information.

188-tf H. HOWARD, Secretary.

The undersigned, having been appointed Agent for Rochester and Monroe county, will be most happy to furnish any new information desired, in reference to the College, to receive stock subscriptions, (the shares are one dollar each,) or to address audiences, on invitation, explaining at length the plans and objects of the People's College, and also as he views the idea of a true education.

Respectfully, G. F. NEEDHAM.

**NEW YORK STATE AGRICULTURAL COLLEGE.**

AT a meeting of the Trustees of the State Agricultural College, on the 21st Sept., 1853, it was resolved, to arrange and prepare the Veterinary department of the College, simultaneously with the earliest courses of instruction; and that every subscriber to the funds of the College be and hereby is declared to be entitled to the use of the Hospitals of the said department, for all Medical or Surgical treatment, necessary and proper for such diseases or accidents as may afflict any animal belonging to the said subscriber: to be subject to such rules and regulations as the Trustees may from time to time appoint and direct.

No cost or charge shall be made for Medical or Surgical advice or treatment. The necessary expense for the sustenance of animals received into the Hospitals under this resolution, shall be paid by the proprietors of the animals respectively. By Order.
197-4t J. W. BACON, Sec'y.

## THE OLD CLOCK.

BY MRS. M. W. H.

Thou dear old clock! I love to gaze
Upon thy venerated face;
Fain would I learn what thou hast seen,
In four score years, that thou hast been
The faithful monitor and friend,
To mark the moments, as they tend
To that broad Ocean, on whose shore,
Time's surges beat forever more.
As thou hast marked the rolling years,
O say, what joys, what griefs and fears,
Have passed before thy wakeful eyes?
When thus invoked, to my surprise,
The Clock, though silent many a day,
Thus said to me, or seemed to say:

"All I have seen, since first I took
My station, in this cozy nook,
Beside thy grandsire's desk to stand
And point, with an unerring hand,
The hours for sleep, for labor, rest,
I *could* not tell, if it were best.
I watched thy father's infant ways,
His manhood's prime, his closing days,
I saw thy mother when a bride,
He brought her here, the household's pride.
The hours I've told in accents clear,
That gave to love, those pledges dear—
I've kept my round when parents slept,
Or o'er the loved one's couch they wept—
I've seen them bend o'er coffined forms,
Been their companion through life's storms,
In their loved home have borne my part,
(Time's monitor, to every heart.)

"Now I am old, my worn-out case
Affords an emblem of thy race—
My wheels are still, my hands are weak,
My face of age, doth plainly speak;
Yet as a friend, I beg his grace,
Still in this home to hold my place
Beside the bride, the mother, wife,
Who loves me as a 'thing of life'—
Around her widowed heart be mine,
Fond memories of the past to twine.
To *all* these Truths I would convey,
Man's life at most is but a day—
His morn, though joyous, is but brief,
Noon, oft precedes a night of grief—
God's word the cheering hope assures,
'Grief but a waning night endures;'
The shadows flee, and morning brings
Eternal joy upon its wings."

# Rural Sketch Book.

## THE TREASURE.

A CHOICE STORY,—FROM THE FRENCH.

BY ANNE T. WILBUR.

[*Concluded from our last number.*]

THE first months were the most painful. The young binder had formed habits which he found it difficult to break; constant labor had become insupportable. It was necessary to renounce the capricious love of change which until then had alone guided his actions; overcome fatigue and repugnance, resist the solicitations of his former companions. This was at first a difficult task. His courage often failed; he was on the point of falling back into his former habits; but the importance of the object to be attained, reanimated him. As he brought the old soldier his wages, increasing from week to week, he experienced an impulse of hope which renewed his courage; it was but a little step towards the goal, but it was a step.

Every day the effort became easier. Man is like a vessel, whose sails are like the passions: deliver them up to the winds of the world, and man is hurried on through every current and against every reef; but let them be trimmed by good sense, the navigation becomes less dangerous; cast the anchor of habits in the spot chosen, and you have no longer anything to fear.

So it happened to the young mechanic. In proportion as his life became more regular, his tastes assumed a new direction.—The assiduity of labor during the day made the repose of the evening sweeter; the relinquishment of boisterous companions gave a new charm to the company of his uncle and cousin. The latter had resumed her friendly familiarity. Entirely occupied with Vincent and Charles, she succeeded in transforming every interview into a fete, of which her heart paid all the expenses. There was each day some new surprise, some charming attention which strengthened the ties of affection. Charles was surprised to find in his cousin qualities and graces which he had never before taken time to notice. She became insensibly more necessary to him.—Without his being aware of it, the object of his life became changed; the hopes of the treasure promised by Vincent was no longer his only motive; at each action he thought of Susanna; he wished to deserve her approbation, to become dearer to her. The human soul is a sort of moral daguerreotype; surround it with images of order, of devotion, of courage; illuminate it with the sun of tenderness, and every image will be transferred and remain forever imprinted there. The life which Charles led extinguished by degrees his ardent ambition; he saw happiness more simple, more near; his paradise was no longer a fancy dream of the Thousand Nights, but a little spot peopled with attachments which he could enclose in his arms.

All this took place without his knowledge. The young mechanic yielded to the current of his nature without seeking to study every wave which carried him hither and thither. His transformation, visible to those who lived with him, had remained a secret to himself; he did not know he was changed, he only felt himself more tranquil, happier. The only novelty which he perceived in his sentiments, was his love for Susanna; henceforth he mingled her in all his projects, and could not view life without her. This element of happiness, introduced into his future, had modified all the rest. The millions, instead of being the principal object, were now only the means; he looked at them as an important addition but accessary to his hopes; so he wished to know with certainty whether his love was returned.

He was one evening pacing the little attic, while Vincent and his cousin were conversing beside the stove. Both were speaking of the first master of Charles, who, after thirty years of an honest and laborious life, had just sold his bindery, in order to retire to the country with his aged wife.

"There is a couple who have made for each other an earthly paradise," said the old soldier; "always of one mind, always good-tempered, always industrious."

"Yes," replied Susanna, earnestly; "the wealthiest might envy their lot."

Charles, who was at that moment near the young girl, suddenly stopped.

"So you would wish your husband to love you, Susanna?" asked he, looking at her.

"Certainly—if I can—" replied the young girl, smiling and blushing a little.

"You can," replied Charles, with vivacity; "and for that you have but to say one word."

"What word, my cousin?" stammered Susanna, more disturbed.

"That you will consent to be my wife?" replied the young mechanic.

And as he saw the movement of surprise and confusion of his cousin, he continued with respectful tenderness:

"O, do not be disturbed by this, Susanna; I have longed to ask you this question. I have waited, for a reason known to my uncle; but you see that it has escaped me in spite of myself. And now be frank with me; conceal not your feelings; our uncle is here to listen to us, and he will reprove us if we speak amiss."

The young man had approached his cousin, and taken her hand in his own; his voice was tremulous, his eyes moist. Susanna, mute with joy, remained with downcast eyes, and the old soldier looked at both with a smile half tender, half ironical. At last he took the young girl and gently pushing her towards Charles, said gaily:

"Come, speak, sly one."

"Susanna, one single word!" resumed the young man, continuing to hold the hand of his cousin; "will you accept me for a husband?"

She concealed her face on his shoulder with an articulate "Yes."

"Come, then," exclaimed Vincent.—"Your hands, my children, and embrace me. I leave you this evening for confidences; to-morrow we will talk of business."

The next day he took his nephew aside and announced to him that the sum necessary for their journey was completed, and that they could set out for Spain whenever they pleased.

This intelligence, which should have delighted Charles, gave him sorrowful emotions. He must then quit Susanna at the very moment when they were beginning to exchange the confidences of affection; incur all the chances of a long, difficult, uncertain journey, when it would have been so sweet to have remained. The young man almost cursed the millions which he must go so far to seek. Since the interest of his life had changed, his desires for riches had singularly disappeared. Of what avail will gold be in the purchase of happiness? He has found it.

Nevertheless, he said nothing of this to his uncle, and declared that he was ready. The old soldier undertook the preparations; he went out for this purpose several days in succession, accompanied by Susanna; at last he announced to Charles that nothing remained but to secure their places in the diligence. The young girl was absent; he requested his nephew to accompany him for this purpose, and, as the fatigues experienced for some days past had rendered his wounds painful, he entered a coach with him.

In one of his expeditions, Vincent had taken care to procure the journals which had spoken of the famous deposit made on the banks of the Duero; when he found himself alone with Charles, he handed them to him, requesting him to ascertain whether they conveyed any information which might be useful to them.

The young man saw first the details which he already knew, then the announcement of the refusal of the Spanish government, finally, the narrative of some unsuccessful researches made by merchants of Barcelona. He thought he had read all the documents, when his glance fell on a letter signed by a certain Pierre Dafour.

"Pierre Dafour," repeated Vincent; "it was the name of the quarter-master of the company."

"Such is, in fact, the title he takes," replied Charles.

"I thought the brave man was in the other world. Let us see what he has to say, as he was the confidant of the captain."

Instead of replying, Charles uttered an exclamation. He had just glanced over the letter and changed countenance.

"Well, what is the matter?" asked Vincent tranquilly.

"What is the matter?" repeated the young mechanic; "if what this Dafour says is true, the journey is useless."

"Why?"

"Because the chests were not filled with money, but with powder."

Vincent looked at his nephew and burst into a laugh.

"Ah, it was powder," exclaimed he, "and for that reason before burying them we took some cartridges from them."

"You knew it!" interrupted Charles.

"Since I saw it," replied the old man good-naturedly.

"But then you have deceived me," exclaimed the young man; "you could not have believed in the existence of buried millions, and your promise was a jest."

"It was a reality," replied the soldier seriously; "I promised you a treasure, you shall have it, only we need not go to Spain in search of it."

"What do you mean?"

"You shall know."

The carriage had just stopped before a shop; the two travellers descended and entered it. Charles recognized the bindery of his former master, but repaired, repainted, and furnished with all the necessary tools. He was about to demand an explanation of what he saw, when his eyes fell on the name of the proprietor engraved in letters of gold over the counter; it was his own name. At the same instant, the door of the back shop opened; he perceived a bright fire, a table set, and Susanna, who smilingly invited him to enter.

Vincent bent towards him, and seizing his hand said:

"Here is the treasure which I promised you; a good occupation which will secure your subsistence, and a good wife who will render you happy. All you see here has been earned by you and belongs to you.—Do not regret that I deceived you; you would not drink of happiness; I have done like the nurses who rub with honey, the cup repulsed by the child. Now you know where the happy life is, and have tasted it, I hope you will refuse it no longer."

Charles did not refuse; he was too happy.

## THE RUINED FAMILY.

"THE depopulating pestilence that walketh in noonday, the carnage of cruel and dovastating war can scarcely exhibit their victims in a more terrible array than exterminating drunkenness. I have seen a promising family spring up from the parent trunk, and stretch abroad its populous limbs like a flowering tree covered with green and healthy foliage. I have seen the unnatural decay beginning upon the yet tender leaf, and gnawing like a worm in an unopened bud, while they dropped off, one by one, and the ruined shaft stood alone, until the winds and rains of many a sorrow laid that too in the dust. On one of these holy days, when the patriarch, rich in virtue and years, gathered about him the great and little ones of the flock, his sons and daughters, I too sat at the board. I pledged their health, and expatiated with delight upon the eventful future, while the good old man warmed in the genial glow of youthful enthusiasm, wiped a tear from his eyes. He was happy. I met them again when the rolling year brought the festive season around. But all were not there. The kind old man sighed as his suffused eye dwelt upon the then unoccupied seat, but joy yet came to his relief, and he was happy. A parent's love knows no diminution—time, distance, poverty, shame, give but intensity and strength to that passion, before which all others dissolve and melt away. The board was again spread, but the guests came not. The man cried 'where are my children?' and echo answered 'where?' His heart broke, for they were not. Could not heaven have spared his grey hairs this affliction? The demon of drunkenness had been there. They had fallen victims to his spell. And one short month sufficed to cast the veil of oblivion over the old man's sorrow and the young ones' shame. THEY ARE ALL DEAD."

"I too sat at the board, I pledged their health," says our talented author. Was it in water, or in intoxicating liquor? If in the latter, the cause of the ruin of this "ruined family" can be easily traced. I know an aged "patriarch" who pledged his sons at the festive board, and he had six; all of them became drunkards, and five now fill the drunkard's grave, and the aged patriarch had also passed away in sorrow for the fate of his sons, and most probably without a thought that it was his example and practice which brought ruin and desolation on his family. Parents that use or offer intoxicating liquors, have no right to expect that their children will escape the drunkard's doom. Parents who vote for the continued traffic in intoxicating poisons, can hardly expect to escape the effect of the traffic in some branch of their family. Can a man handle burning coals without being burned? Those that vote for the sale of intoxicating liquors, will vote for the ruin of families. Those that wish to prevent the ruin of their families, and the families of their friends, will aid in electing men who will pass such a law as will prevent, hereafter, that desolation in families which the past history of all circles has been obliged to chronicle.—*Washington Irving.*

## HOOD ON GRATUITOUS WRITING.

THE late Tom Hood, of "glorious memory," had something to say upon the subject of cheap literature, and here it is:

"A few months since, I was applied to myself to contribute to a new journal, not exactly gratuitously, but at a very small advance upon nothing,—and avowedly because the work had been planned according to that estimate. However, I accepted the terms conditionally, that is to say, provided the principle could be carried out. Accordingly, I wrote to my butcher, baker, and other tradesmen, informing them that it was necessary, for the sake of cheap literature and the interest of the reading public, that they should furnish me with several commodities at a very trifling per centage above the cost prices. It will be sufficient to quote the answer of the butcher:—'Sir,—Respectin' your note. Cheap literature be blowed. Butchers must live as well as other people; and if so be you or the reading public wants to have meat at prime cost, you must buy your own beastesses, and kill yourselves. I remain, &c.,

JOHN STOKES.'"

# Wit and Humor.

## THE FROG.

Of all the funny things that live
In woodland, marsh, or bog,
That creep the ground, or fly the air,
The funniest thing is the frog.
The frog—the scientificest
Of nature's handy work—
The frog that neither walks nor runs,
But goes it with a jerk.

With pants and coat of bottle green,
And yellow fancy vest,
He plunges into mud and mire—
All in his Sunday best;
When he sits down he's standing up,
As Paddy O'Kinn once said;
And for convenience sake he wears
His eyes on the top of his head.

You see him sitting on a log,
Above the "vasty deep,"
You feel inclined to say, old chap—
"Just look before you leap!"
You raise your cane to hit him on
His ugly looking mug;
But ere you get it half way up,
Adown he goes *kerchug.*

He keeps about his native pond,
And ne'er goes on a spree,
Nor gets "how-come-you so" for a
Cold water chap is he;
For earthly cares he ne'er gets drunk
He's not the silly fool;
But when they come he gives a jump,
And drowns 'em in the pool.

## AN INCIDENT.

A FEW days since a couple of ragged urchins were seen dragging a bull-terrier by the collar through Exchange Place. The dog seemed very unwilling to accompany the two specimens of juvenile humanity, and, sorry cur as he was, he really seemed the most intelligent animal of the three.

"Tell you what, Bill," says one of the boys to his companion "them kind o'dogs is death on rats. I've got a rat in an old sugar hogshead down here and we'll have some fun out of it any how. I've been watching on the corner of State street all day to catch a dog, and now we've got one of the right kind."

"Look out there!" chimed in the other as the dog made hostile demonstration apparently with the intention of taking a mouthful out of the first speaker's leg, "he'll have hold of your calf if you dont look wild!" and the two pulled the poor animal along into a by street where one of them taking him by the collar, and the other by the stump of what was once a tail, lifted him up and dropped him into the empty sugar hogshead.

"Now seek! seek! seek!" they exclaimed but the terrier would not seek. Both of them then jumped into the hogshead, and while one held the dog, the other caught the rat and brought it squealing close up to the dog's nose, much to the annoyance of both animals; which was manifested by the larger of them biting one boy's leg, and the smaller, the other other boy's hand. Both the urchins immediately commenced roaring, and in their haste to get out they overturned the hogshead; at which the two quadrupeds left their biped companions in all haste.

---

AT a literary dinner in London, where Thackeray and Angus B. Reach were *vis a vis* at the table, Thackeray—who had never before met Mr. Reach—addressed him as Mr. *Reach*—pronouncing the name as its orthography would naturally indicate.—"Re-ack, sir,—Re-ack, if you please," said Mr. Reach, who is punctilious upon having his name pronounced in two syllables, as if spelled Re-ak. Thackeray of course apologized, and corrected his pronunciation; but in the course of the *dessert*, he took occasion to hand a plate of fine peaches across the table, saying, in a tone which only he possessed, "Mr. Re-ak, will you take a po-ak?"

---

"WHY don't you put on a clean shirt?" said a well the other night to his companion; then the girls will smile upon you as they do on me." "Everybody can't afford to wear a clean shirt every day as well as you can," was the reply. "Why not?" said white collar. "Because," said soiled collar, "*every body's mother is not a wash-woman.*"

---

FRIGHTFUL DEPRAVITY.—One of the prisoners convicted lately, while being conveyed to Sing Sing, declared that his brother was an Alderman, and "that he was not ashamed to own it." This man is evidently lost to all sense of shame; he should be locked up for life.

---

ABOUT the coolest thing that has yet come to our notice, is an advertisement in a New York paper of "a young man, a member of an evangelical church," who asks for board "in a pious family, where his Christian example would be considered a compensation."

---

VISITORS at the Falls well remember a staircase on the west side of Goat Island called the "Biddle Staircase." Some one asked a friend of ours why it was called by that name? "Because it wound up the bank!" was the answer.—*Chicago Press.*

---

"JONATHAN, did you ever bet on a horse?"

"No, but I've seen my sister *Bet* on an old mare."

## BIOGRAPHICAL ENIGNA.

I am composed of 44 letters.

My 1, 16, 8, 31 was an English dramatical writer.
My 2, 28, 35, 19, 6, 24 is the name of fountain fairies.
My 3, 33, 9 was a naturalist of celebrity.
My 4, 34, 20, 13, 5, 42 was an eminent Italian artist.
My 5, 13, 5, 33, 25, 35 was an English antiquary.
My 6, 24, 9 was a hero of martial renown.
My 7, 5, 19, 42, 22 translated the Bible into the Indian language.
My 8, 17, 7, 25 was an English architect of great genius.
My 9, 16, 43, 34, 20 was a celebrated author and poet.
My 10, 22, 39 was an Austrian General.
My 11, 33, 5, 23, 19, 20, 26 was a talented Knight in the reign of Queen Elizabeth.
My 12, 28, 42, 2, 39 is an instrument of punishment used by the Russians.
My 13, 5, 40, 16, 22 was an eminent physician in the reign of Henry 8th.
My 14, 21, 40, 5, 5, 10, 28 was the residence of a distinguished poetess.
My 15, 44, 33, 28, 12, 5, 19, 25 made several scientific discoveries.
My 16, 22, 8, 4, 40 was a tragic poet.
My 17, 7, 37, 5, 5, 31 was an officer in the army of Lord Wellington.
My 18, 39, 44, 2, 14, 37, 33 is celebrated for its antiquarian relics and sepulchres.
My 19, 5, 37, 33, 28 is one of the oldest of Greek books.
My 20, 10, 35, 15, 44, 7, 40 was a brave and victorious crusader.
My 21, 10, 20, 33, 14, 39, 26 was an eminent painter.
My 22, 33, 40, 5, 13, 17 was a renowned reformer and martyr.
My 23, 29, 20, 31, 8, 42, 11, 39, 26 was an authoress of prose fictions.
My 24, 22, 26, 13, 5, 8, 43, 5, 38 was a Saxon King.
My 25, 33, 43, 6, 29, 10, 1, 15, 38 claimed to be the Bourbon Prince.
My 26, 33, 2, 40 was celebrated for his writings and discourses in crystallography.
My 27, 30, 4, 25, 37, 33 was one of the muses.
My 28, 13, 33, 5 was a historian of the Puritans.
My 29, 14, 40, 35, 23, 6 was a historiographer and poet laureate.
My 30, 42, 5, 33, 28, 32 was a Knight famous in romance.
My 31, 5, 5, 42, 17, 4 is remarkable for its caves of ancient temples, and statues of stupenduous size, hewn out of the solid rock.
My 32, 19, 29, 42 was a Queen of Tyre.
My 33, 30, 4, 20, 16 was a distinguished member of the French Academy of sciences.
My 34, 4, 44, 29, 17 is famed for his translation of Livy.
My 35, 42, 6, 4, 22, 16 was a Doge of Venice.
My 36, 10, 16, 38, 7 was an English comedian.
My 38, 19, 25, 37, 20, 43, 24, 30, 3, 33 was the inventor of copper plate engraving.
My 39, 16, 11, 30, 37, 20, 19, 4, 28, 42 was an eminent Florentine sculptor.
My 41, 13, 17, 11, 31, 19, 30, 4 was a Portuguese poet.
My 42, 44, 5, 10, 36, 41 was an accomplice employed by Catherine of Russia, in the assassination of Peter III.
My 43, 5, 5, 16, 33 was a Neapolitan officer in the Intalian revolution.
My 44, 26, 2, 35, 29, 5, 33, 25 is an old Welsh fortress, built in the eleventh century.

My whole should be secured by every reader.

MOORE'S RURAL NEW-YORKER:
A WEEKLY HOME JOURNAL,
For both Country and Town Residents.

PUBLICATION OFFICE,
BURNS' BLOCK, CORNER STATE AND BUFFALO STS.,
ROCHESTER, N. Y.

TERMS, IN ADVANCE:

TWO DOLLARS A YEAR—$1 for six months. To Clubs and Agents as follows:—Three Copies one year, for $5; Six Copies (and one to Agent or getter up of club,) for $10; Ten Copies (and one to Agent,) for $15; Twenty Copies for $25, and any additional number, directed to individuals at the same rate. Six months subscriptions in proportion.

☞Subscription money, properly enclosed, may be sent by mail at the risk of the Publisher.

Terms of Advertising

ONE DOLLAR per square (ten lines—100 words, or less,) for each insertion,—*in advance.* ☞The circulation of the NEW-YORKER is much larger than that of any other newspaper published in the State, out of New York city. Only a limited space, however, is devoted to advertisements, and hence preference is given to those most appropriate—such as the cards and notices of dealers in Agricultural Implements and Machinery,—Horticulturists and Seedsmen,—Booksellers and Publishers,—Inventors, etc. All orders by mail should be accompanied with the cash.

To enable us to accommodate as many as possible, brief advertisements are preferred. Patent medicines, &c., will not be advertised in this paper on any terms.

☞All communications, and business letters, should be addressed to D. D. T. MOORE, Rochester, N. Y.

# MOORE'S RURAL NEW-YORKER.

VOLUME IV. NO. 47. } ROCHESTER, N. Y.—SATURDAY, NOVEMBER 19, 1853. { WHOLE NO. 203.

MOORE'S RURAL NEW-YORKER:
A QUARTO WEEKLY
Agricultural, Literary and Family Newspaper.

CONDUCTED BY D. D. T. MOORE,
WITH AN ABLE CORPS OF ASSISTANT EDITORS.

THE RURAL NEW-YORKER is designed to be unique and beautiful in appearance, and unsurpassed in Value, Purity and Variety of Contents. Its conductors earnestly labor to make it a Reliable Guide on the important Practical Subjects connected with the business of those whose interests it advocates. It embraces more Agricultural, Horticultural, Scientific, Mechanical, Literary and News Matter—interspersed with many appropriate and handsome engravings—than any other paper published in this Country.

## Progress and Improvement.

### BARN-YARD MANURE.—No. II.

As nitrogen is such an important element of fertility, we may be justified in giving some account of its action and characteristics. In its elementary state, it is always a gas. It forms 78 per cent. of atmospheric air, acting simply as a dilutent to oxygen. It is inhaled and respired from the lungs without the least change, and is not taken up by plants in its elementary state. Nevertheless, it is an indispensable ingredient in all animal and vegetable life. Nothing that possesses organization or vitality, whether animal or vegetable, can be formed without it.

As plants or animals cannot take their nitrogen *as such*, from earth or air, it follows that it must undergo some chemical change previous to its entrance into organic life. This change is the conversion of unorganized nitrogen into ammonia. This takes place under certain well known circumstances, but the operation is so slow and so limited, that it must have taken indefinite ages to form all the ammonia and products resulting from it, at present existing on the earth—unless ammonia was *created as such*. But, whether this was or was not the case, is of little importance. We know that nitrogen is organized and that, by the decay of all organic bodies their nitrogen is converted into ammonia,—and that this ammonia is taken up by plants and again becomes organized nitrogen.

Ammonia is always formed by the ultimate decay or combustion of a nitrogenous substance, 14 lbs. of nitrogen uniting with 3 lbs. of hydrogen, to form 17 lbs. of ammonia. It is a gas much lighter than the air, and will consequently rapidly evaporate when exposed in a free state. It is an alkali, similar in many respects to potash and soda, forming fixed salts with all the mineral and with most of the organic acids, and has a very strong affinity for them. It is rapidly absorbed by water, for which it has a great affinity, though no combination takes place. As formed from decaying substances it always unites with carbonic acid, forming the *volatile* salt, carbonate of ammonia. It is this salt which all have observed on entering an ill-ventilated stable on a morning. It is what ladies sometimes endeavor to keep themselves awake with in church, stimulating the nostrils when there is little in the sermon to stimulate the brain. If you doubt that the nice clean hartshorn you have purchased of the druggest, is the same as that given off from all decaying animal and vegetable substances, get a little guano, urine, blood, or any animal matter and mix it with ashes or lime, allowing it to stand a short time in a covered vessel, and then see if you can detect the least difference in the smell of the two gases—the one purchased in the city and the one of domestic manufacture.

Carbonate of ammonia contains all the four organic elements which compose such a large proportion (generally from ninety to ninety-eight per cent.,) of all animal and vegetable substances; and it is in this shape that nitrogen is taken up by the plant and orgnized into food for animals. This is a strong argument, though we possess a still stronger one for making and saving as much ammonia on the farm as possible. We know of no modern agricultural improvement, which experience has confirmed as giving larger crops but what, directly or indirectly, brings more ammonia on to the farm or renders that already there more available as food for plants.

In making and preserving barn-yard manure then, the primary object should be to get as much ammonia as possible; and, as we have before stated, the composition of the food is the true index to the composition of the manure. The more nitrogen the food contains, the more ammonia or compounds which will ultimately form ammonia, will the manure contain; and therefore, other things being equal, the more profitable will it be for feeding purposes; for in all countries having easy access to the great markets of the world, no farmer can afford to feed cattle unless the manure be accounted of some value.

As an aid to the farmer who desires to improve his manure heap we have made up, from various reliable sources, the following table, showing the per centage of nitrogen, &c., in various substances used as food and as manure. It is worthy the most careful study and consideration:

| | Water. | Dry matter. | Nitrogen in natural state. | Nitrogen in dry matter. |
|---|---|---|---|---|
| Barley straw | 11.0 | 89.0 | 0.23 | 0.26 |
| Oat do. | 21.0 | 79.0 | 0.28 | 0.36 |
| Rye do. | 14.0 | 86.0 | 0.30 | 0.35 |
| Wheat do. | 18.0 | 82 0 | 0.33 | 0.40 |
| Buckwheat do. | 11.6 | 88.4 | 0.48 | 0.54 |
| Meadow hay | 11.0 | 89.0 | 1.15 | 1.28 |
| Red clover hay | 12.7 | 87.3 | 1.83 | 2.10 |
| Pea straw | 8.5 | 91.5 | 1.79 | 1.95 |
| Carrots | 87.6 | 12.4 | 0.30 | 2.40 |
| Potatoes | 71.0 | 29.0 | 0.69 | 1.49 |
| Mangel wurzel | 87.0 | 13.0 | 0 29 | 2.27 |
| Ruta baga | 88.6 | 11.4 | 0.21 | 1.87 |
| Barley | 16.0 | 84.0 | 1.60 | 1.80 |
| Malt | 7.0 | 93.0 | 1.60 | 1.72 |
| Wheat | 16.0 | 84.0 | 1.80 | 2.11 |
| Oats | 16.0 | 84.0 | 2.00 | 2.38 |
| Indian corn | 18.0 | 82.0 | 1.64 | 2.00 |
| Malt-dust | 7.0 | 93.0 | 4.00 | 4.08 |
| Malt-grains | 6.0 | 94.0 | 4.51 | 4.90 |
| Linseed | 12.0 | 88.0 | 3.75 | 4.26 |
| Beans, peas or tares | 16.0 | 84.0 | 4.10 | 4.76 |
| American oil cake | 11.6 | 88.4 | 5.04 | 5.71 |

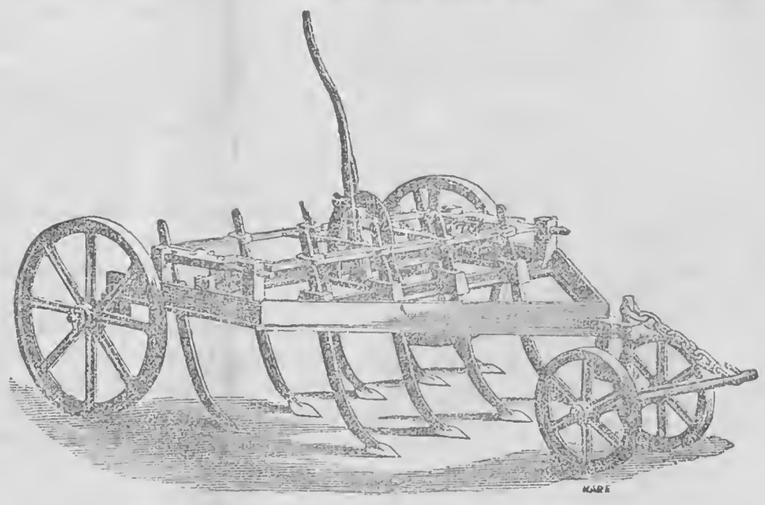
Hair, feathers, leather, woolen rags, horn-shavings, dry blood, dry flesh, and fish, from 15 to 17 per cent. of nitrogen.

It will be seen that barley straw is the poorest and wheat straw the richest of all the cereals. Pea straw is worth five times as much as wheat straw for manure. Clover hay is worth nearly as much again as English meadow hay. We have no analyses of corn stalks that are satisfactory, and therefore have not given them in the table. The analyses which we have, indicate that the dry stalk contains about 1.2 per cent of nitrogen and the dry leaves 2½ per cent., showing them to be of high comparative value. Of the cereal grains barley is the poorest in nitrogen, Indian corn a little better, and oats best. Flax seed contains a large per centage, peas still higher, and oil cake the highest of all vegetable substances used for food, approximating closely to flesh. Hair, feathers, &c., are most valuable fertilizers, equal in nitrogen to the very best Peruvian guano, and much better than what is often sold as such for $50 per ton.

### EXPORTATION OF CORN.

The Rochester American says, "With the best possible facilities for transportation, this country might profitably export one hundred million bushels of corn a year.—The corn crop of Monroe county is but a trifle below a million bushels, while its wheat crop is a million and half bushels."

Would it not be far better to convert this hundred million bushels of corn into twelve hundrod million pounds of pork or beef, as the freight on the one would be five times as much as on the other?—and freight is no small item in carrying grain from our Western State to the Atlantic cities, or to Europe. By so doing we should not only expend less in freight charges, but should make a large quantity of manure, and thus enrich instead of impoverish our farms. We trust the day will never come when we shall export a hundred million bushels of corn. If we can afford to export wheat, all very well, but do let us keep something at home to feed stock and make manure. Would the *American* have the farmers of Monroe county grow corn instead of wheat for exportation?



ENGLISH SCARIFIER.

### ENGLISH IMPLEMENTS.

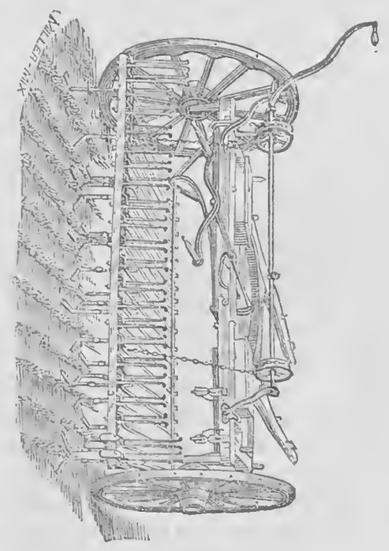
As a general thing, American agricultural implements are far more simple, efficacious and economical than the English, and certainly far better suited to the peculiarities of our soil, climate and system of tillage, than those of any other nation. At the same time, every intelligent agriculturist desires to be acquainted with every improvement in his noble art, whether originating in his own or foreign countries.—For this reason, we intend to give engravings of the most approved agricultural implements in Great Britain, France, &c.

Whether we shall ever dispense with the use of the plow or not, is yet an open question, though MECHI, in the *London Times*, has recently declared that its days are numbered, and that the American digging machine, drawn by eight horses, will, *with some slight improvements*, soon universally take its place. There can be no question of one thing, that both in this country, and the best farmed districts of England, the cultivator has, to a great extent, taken the place of the plow in cleaning and pulverizing land. In Western New York, a three times plowed summer fallow is uncommon. After breaking up, the cultivator is used instead of the plow, and is found (such we believe is the general experience,) to be quite as efficacious and much more expeditious, producing quite as good, and some assert better crops of wheat.

In Great Britain the cultivator has equally triumphed. It is as indispensable on a farm as a plow. But for it the vast quantity of turnips which are now sown, entirely doing away with summer fallow except on the heaviest clays, could not be got in in season. As soon as the wheat is harvested, the stubble is all torn up with a broad-tined cultivator, which causes all small seeds to germinate, when another cultivating completely destroys them. On *light soils* this course is much the best, as it does away with fall plowing and all attendant leaching, &c. There, as here, there are many different cultivators—the most approved is the one figured above. We saw an imported one at the late Provincial Show at Hamilton. It is made of iron and costs from $40, to $90. The manufacturer says of it:

"The principal novelty in this invention is the frame at the top, suspended about six inches above the lower frame, parallel with which, by means of a lever, it is moved backwards and forwards.—This simple and easy movement regulates the depth of the tines or prongs in the soil; and as the implement does not require lifting, (the frame of which is at all times the same height from the ground,) all that is necessary to alter the depth of penetration is, a slight movement of the lever above referred to, which changes the inclination of the tines. It will be found to answer all the purposes of harrowing weeds and rubbish from the most foul lands; most efficient for opening, raising, and pulverising the soil; and as blades of different widths are made to fit the tines, it may be used with great advantage as a skim to take off the couch, &c. There are some late improvements in its construction, which consist in substituting wrought iron instead of cast iron for the tines, without any extra cost, whereby the liability to breakage is entirely obviated; and in the application of a lever to each side of the scarifier, so that either traveling-wheel may be raised or depressed higher or lower than the other, to suit sloping grounds, and to cause the teeth to penetrate a uniform depth in the land; and this alteration may be effected while the implement is proceeding in its work."

WHEAT HOEING MACHINE.—Since the days of JETHRO TULL wheat drilling, dibbling, hand and horse hoeing have been more or less practiced in Great Britain. Drilling wheat, barley, oats, peas and tares in rows 7 to 12 inches apart, is nealy universal.—Dibbling,—dropping one seed on each square foot, and so using but a few quarts of seed per acre—is adopted only by such men as HEWITT DAVIS, MECHI, and HUXTABLE. They have found that while it sometimes gave large crops, yet they always had more or less that missed and had to be plowed under in the spring, and the loss from such cases more than counterbalanced the gain from sowing less seed. These enthusiasts, though they will not own it, have dropped the system. Hand-hoeing twice at a cost of $2 per acre is found very profitable, from increasing the yield of wheat, and still more from leaving the land clean for the following turnip crop. Nevertheless, not one acre of wheat in the thousand, is at present either hand or horse-hoed in England. The practice is a good one, and the reason it is not more common, is owing to the fact that there is no efficient means of diffusing information generally, among the mass of farmers. All the agricultural papers published in Great Britain combined, have not half the circulation of the RURAL.



GARRETT'S HORSE-HOE.

Wheat hoeing by machinery is a delicate operation. It requires a steady hand to steer straight and avoid cutting up the plants. With GARRETT'S Horse-hoe, here figured, wheat hoeing has been cheaply and effectively performed, and there appears to be good reason to expect that the practice will soon become more general. Professor WILSON, at the Hamilton Fair, spoke of this machine with high commendation, recommending its introduction into Canada.—Wheat can be hoed with it for twelve cents per acre.

The engraving gives such a correct idea of the machine, that little explanation is needed. The thills can be fastened on any part of the frame. The axletree is movable at both ends, so that it can be expanded or contracted to suit all lands and different widths of drills. Each hoe works on an independent lever, and thus adapts itself to all inequalities of surface. The hoes can be set to any desired angle by means of the crank on the left side of the machine; it is attached by chains to the jointed iron on which the levers are suspended. The swing steering apparatus is seen at the back of the machine. The cutting blades are made of steel, and of various sizes. Cost from $75 to $100.

### NOTES FOR THE MONTH.—BY S. W.

THE ECONOMY OF FARMERS.—How often do we hear a farmer say that if he lived at the same expense of a corporation-taxed, fast living villager, the products of his farm would not support him. 'Tis true a farmer lives more *au fait* to his income than the tax-ridden portion of a corporation; but on the other hand, how much more, and on a larger scale, the farmer loses by carelessness and neglect, by labor done too late, too slovenly, and too often misapplied for the want of intelligence in the great but complicated art rural. How many farmers now, in the long, cold and often stormy nights in November, let their cattle lay in the road or the field, wasting their manure, while they have to eat to keep up animal heat; *per contra*, a villager stables his cow because his hay costs $10 a ton, and he can afford food only for animal nutrition, not combustion; and then the manure his cow makes in the stable is indispensable to his garden. But the farmer, better schooled in self denial, can grow crops sufficient to feed his family, almost without manure, and if he has nothing to sell he buys the less; if his animals are, as the Virginians say, *on the left* in the spring, his family can well wait for milk till grass quickens the cow's lacteals. How often do we hear a *soi distant* farmer say that the drouth cut off his corn, when that same drouth was the salvation of a like crop in a well drained, earlier and better tilled field. I have not failed to grow a patch of corn every year for thirty years, and not in a single instance was the cereal product lessened by drouth. How erroneous is the trite saying that a farmer "works too much land," when the fact is the reverse; he manures and works much land too little.

SUCKERING CORN.—Your correspondent, I. W. BRIGGS, has the right of the matter in relation to cutting off the suckers from growing corn; to which I will add that cutting out suckers and barren stalks from sweet corn planted in drills will not only induce larger and fuller ears, but they will be ready for cooking ten days to two weeks earlier than the unsuckered rows.

SOILING COWS.—An oasis in a sandy desert two miles out of Providence, R. I., has been made by ADAM ANTHONY who keeps forty milch cows by soiling in summer, and cut stalks, cut millet and clover hay, roots, &c., in winter. His first cut for soiling in May and June, is fall sown rye, millet and clover next, and the Indian corn sown in drills for fodder once in two or three weeks from the 1st of May to the 1st of August. His cows are bedded in their stalls with dry swamp muck alone, which when saturated and mixed with the dung is kept under the lientos of the stable until it is wanted for the land. He considers swampy muck as the most certain, simple and economical fixer of the carbonate of ammonia. Salt, plaster, &c., would be necessary in too large quantities, to convert all the volatile carbonate into the more fixed muriate and sulphate of ammonia.

THE POTATO ROT.—In this section of Seneca county we had no potato rot until after the heavy rain on the 15th October, all the potatoes ripe, and dug previous to that time, were sound. Last year there was no rot; the crop was short from short planting and continued dry weather, the rains in August and September being too light to wet through the potato hills. Mysterious as the cause of the rot undoubtedly is, there can be no doubt but that extra moisture after the tubers are large is an exciting cause of the disease.

The value of strongly azotised manure to a sandy soil.—To a heavy clay loam, coarse manure deficient in ammonia, from its mechanical action alone, may be better than

finer and better azotised manure, the more especially as alumina is a fixor of azote (ammonia,) while sand is not. JOSEPH WRIGHT, of this village has grown a very large crop of corn from seven acres of very poor sandy land; the stooks of husked corn as large as hay stacks, now cover the field to the wonderment of every passer by. The fresh manure from still fed cattle was applied to this lot, while under the plow at the rate of only ten ex-cart loads to the acre. For the benefit of his tobacco crop, Mr. W. has his stable floor descending with a trough outside to catch the urine, which is conducted together with the rain-water from the roof, by pump logs to a large tank, or cistern, from whence it is pumped into a cask on wheels and distributed to the growing tobacco crop in warm, dry weather.—He says that tobacco is his only paying crop. He has now a long range of tobacco sheds hung full of bright seed leaf tobacco, the exclusive product of five well drained and manured acres. He last year sold the products of four acres for $2,200, Mr. W. has also two acres of sweet corn sown in drills, for soiling and fodder; after soiling his stock through the dry days of summer, he has many bushels of small ears and a large stack of fine stalks for winter feeding. He is of opinion that if high farming will bankrupt a poor farmer, low farming will starve him and put all his cattle "*in the lift.*"

RAISING WATER BY WIND POWER — As noticed in the RURAL, is practised very successfully here. The whole cost of wind-mill, gearing, pump and frame does not exceed $20; it will pump a small stream of water from a deep well, sufficient for any stock of cattle in summer. Every farmer prince who lives *wide*, as the Dutch say, from running water, pond, or lake, should not dispense with so cheap and simple an apparatus.

Waterloo, N. Y., Nov., 1853.

## MICHIGAN REMINISCENCES.

NEXT to our own "Empire State," we have for the last decade felt a deep and abiding interest in the progress and prosperity of Michigan. Having commenced our editorial career, and passed several years of early manhood within its borders, we have abundant reason to regard with pleasure and interest, the people and history of what we were wont to call, truthfully, the "beautiful and fertile Peninsular State."—And though it is many years since we bade farewell to our Western home—in quest of better health, rather than more ardent friends or greater happiness—our recollection of the past is so vivid and pleasant, that we often find ourselves rejoicing over some new indication of the advancement of a commonwealth with whose history and people we are somewhat familiar.

These remarks are suggested by reading the Address delivered at the late Fair of the Jackson Co. (Mich.) Ag. Society, by Rev. CHAS. FOX, Lecturer on Agricultural Chemistry in the University of Michigan, and senior editor of the Farmer's Companion. This address recounts so happily the history and progress of Agricultural Improvement in a familiar section, and among a people with whom we were intimately acquainted, that we have perused it with absorbing interest—and marked several paragraphs on Agricultural Education, &c., for publication in a future number of the RURAL. Though the address is generally sound and accurate, Mr. Fox commits a slight error in the following paragraph—which we quote, and correct, at the risk of being charged with egotism:

"The agricultural newspapers are most valuable aids to self-improvement, and much of our present progress may justly be ascribed to them. To this village and county belongs the honor of establishing the first paper of the sort in Michigan. You cannot have forgotten your old fellow citizen, Mr. MOORE—then a very young man—who with an enterprise which has since raised him to high distinction as a publisher, commenced in this village the first farming paper we had. I have lately examined the early numbers, and I assure you that for ability and justness of views, it were difficult to surpass them, even now. It affords me great pleasure to be able to pay this tribute of respect to a very worthy and talented man, and though he has long left us we shall not forgot how much we are indebted to him. It does not become me, as the editor of one of those papers to say more on this subject; but allow me to press upon you the importance of taking and reading one or more of these journals."

Instead of our being the pioneer in the field, that honor belongs to another. If we are correctly advised, the first agricultural journal published in Michigan, was commenced at Detroit, by JOSIAH SNOW, Esq., in 1841. It was soon after transferred to other hands, and lingered nearly two years, when we purchased the "good will" and very limited subscription list, and commenced a new paper at Jackson, entitled *Michigan Farmer*. This we published some two years, during which period its patronage continued to augment, and we received the warm encouragement and support of many of the most enterprising friends of Improvement throughout that and adjacent States. Though we were subsequently far more successful while conducting the *Genesee Farmer*, and of late the RURAL NEW-YORKER, we have not labored more zealously (but perhaps more wisely,) nor received more gratifying tokens of approval, than during our management of the journal first named. And if, as we believe, our efforts for the past eight years have redounded to the benefit of the agricultural community, our friends in Michigan are entitled to much of the credit therefor—inasmuch as they most generously seconded our first attempt, and thereby induced us to embark subsequently in similar enterprises.

## INTERESTING EXPERIMENTS WITH MANURES.

AN experiment on raising Indian Corn, by the use of various manures, in the year 1853, by H. H. EASTMAN, of Marshall, Oneida county, N. Y.

| *Manures used and how applied.* | *Weight of ears in lbs.* | *Bushels pr acre.* |
|---|---|---|
| 1. No manure, | 12.8 | 5½ |
| 2. Half shovel full of compost* in hill, | 25.12 | 110¾ |
| 3. do. on top of hill | 21.8 | 92½ |
| 4. Table spoonful lime in hill† | 11.12 | 50½ |
| 5. do. do. on top of hill | 16.8 | 71 |
| 6. do. gypsum in hill | 18.00 | 77¼ |
| 7. do. do. on top of hill | 18.8 | 79½ |
| 8. do. ashes in hill | 18.00 | 77¼ |
| 9. do. do. on top of hill. | 17.8 | 75¼ |
| 10. do. equal p'ts lime, gypsum, ashes, in hill. | 19.00 | 81¾ |
| 11. do. do. on top of hill | 17.00 | 73 |
| 12. do. guano in hill‡ | 19.8 | 84 |
| 13. do. do. on top of hill. | 23.4 | 100 |
| 14. Two-thirds of a tablespoonful super-phosphate of lime in hill. | 21.4 | 91¼ |
| 15. do. do. on top of hill. | 17.8 | 75¼ |
| 16. Large tablesp'nful poudrette in hill | 18.12 | 80½ |
| 17. do. do. on top of hill. | 17.00 | 73 |
| *Experiment in another part of the field—soil about the same.* | | |
| 18. No manure | 34.00 | 79½ |
| 19. Tablespoonful of guano in hill. | 27.00 | 63 |
| 20. No manure | 34.00 | 79½ |
| 22. Tablespoonful super-phosphate of lime in hill | 46 00 | 107½ |
| 23. Large tablesp'nful poudrette in hill | 40.00 | 93½ |

REMARKS.—* The "compost" used was composed of muck and barn-yard manure in equal parts, well rotted, and mixed with half a bushel of gypsum to each load.

† The row on which the lime was applied in the hill presented a sickly growth for the first few weeks.

‡ In the rows where the guano was applied in the hill, about one-third of the seed was killed by it. The ears on the row were large and heavy. Where the guano was applied on the hill, the seed all came up.

THE rows in the first experiment, consisted of 25 hills each; in the second, 46 hills each. Planted 12th of May, on greensward, plowed eight inches deep. Soil of a calcareous nature. Cultivation as nearly alike as possible. Harvested from the hill, 15th October, and weighed when harvested. The result shows:

1. That barn-yard manure, composted with muck and gypsum, and applied in the hill, is the most valuable manure.

2. That lime, on a calcareous soil, produces no good effect.

3. That guano, in its unadulterated state, is too powerful to be used in the hill in contact with the seed; but on the top of the hill is a valuable manure. I applied guano in the hill on beans and potatoes, and the effect was the same—to kill the seed.

4. That super-phosphate of lime, applied in the hill, is a powerful fertilizer, and abundantly remunerating to the cultivator of Indian corn.—H. H. EASTMAN, *in the Country Gentleman.*

REMARKS.—Indian corn is pre-eminently an American crop; of more national importance than that of wheat, and yet, what do we know of its chemical requirements? We have a pretty correct knowledge of its composition, but we are yet in midnight darkness as to what particular chemical substances are most required in the soil for the production of large crops. Under such circumstances, accurately conducted field experiments, with manurial substances of definite and known composition, would be of profound interest; and he who makes them will deserve the unending praise of all American agriculturists. Mr. EASTMAN deserves much credit for what he has done to throw light on this subject. We are sorry to say, however, that the experiments are anything but satisfactory and conclusive, to our mind. The land occupied by each experiment is much too small. It should never be less, in any experiments of this kind, than an eighth of an acre. In the present instance, reckoning the hills at 3 feet apart each way, the first lot of experiments on twenty-five hills each, would occupy the one hundred and ninety-third part of an acre; those with 46 hills, the one hundred and fifth part. We are not ignorant of the difficulties to be met in conducting accurate field experiments, and *know* that results obtained from such a small plot of land are not to be trusted. When there are any means of checking the results, such as having several lots similarly treated, the inaccuracy of the method is always manifest. Take, as an instance, Mr. Eastman's experiments, which have doubtless been conducted with great care, and here we find, on calculating the acreage yield, estimating the ears at 45 lbs. per bushel, that the difference between the two unmanured plots, Nos. 1 and 18, is *twenty-seven bushels per acre*, and the difference between Nos. 12 and 19, treated with the same quantity each of guano in the hill, is *twenty-one bushels per acre*,—not to mention the difference between Nos. 16 and 19, and other evident discrepancies.

Could we trust such experiments we might base upon them the most brilliant theories, and consistently advocate an entire change in our present system of agriculture. We might say that "superphosphate of lime is a powerful fertilizer and abundantly remunerating to the cultivator of Indian corn," and so urge every farmer to purchase it.—While, from the demonstrated fact that, in ordinary cultivation, pure superphosphate of lime has no beneficial effect on the wheat plant, it is highly probable that it will be attended with little benefit on the corn crop. We would say no benefit, were it not that superphosphate contains a large quantity of gypsum, which under certain circumstances experience shows to be of much value as a manure for corn. Gypsum in Rochester sells for $2,50 per ton, while superphosphate sells for $50 per ton. Mr. EASTMAN recommends the latter as abundantly remunerative, while in his experiments, No. 7, with gypsum gives 79½ bushels, while No. 15 with superphosphate of lime gives but 75¼ bushels, or 4¼ bushels per acre less. We cannot trust such experiments, or we might say that the value of superphosphate for corn depends on the gypsum which it contains, and that the reason it did less good in this instance, was because each hill got a less quantity of gypsum with the superphosphate than it did where gypsum was directly applied.

We make these remarks from a fear that the results might mislead, and not from any unkind feelings towards Mr. Eastman, who, we think, is entitled to much praise for showing the inaccuracy of such a system of experimenting.

## ICE-HOUSE MANAGEMENT.

THE following article from the Scientific American, is both sensible and seasonable. It will answer the inquiry of a correspondent, and prove valuable to others interested in the subject. In former volumes of the RURAL we have given full directions for the construction of Ice-Houses, and used at greater length, some of the arguments briefly stated by the American.

This is a matter of no small importance, yet, how often do we see it treated, not only with indifference, but upon the very worst principles possible to insure its preservation; not one ice-house in fifty is constructed upon the correct principles—not one in the same number is managed correctly.—When we consider that damp and heat are the two great agents of thawing, it should be our endeavor to counteract these by every means in our power. To effect this, ventilation must be had recourse to, and non-conducting materials employed in the erection. Of materials, we may observe that stone is of all others the worst—timber and brick are the best. The usual practice of sinking ice-houses to a great depth under the surface is bad; indeed it has only one redeeming property, which is, the convenience of filling from the top. Its disadvantages are, the difficulty of admitting sufficient ventilation to correct the dampness, which, build them as we may, is sure to exist in underground houses, the conduction of heat from the surrounding soil, and the difficulty of effecting sufficient drainage; these very far overbalance the advantages offered.

Why are the majority of ice-houses and most cellars during winter so much warmer than the surrounding atmosphere? Is it not from the heat conducted through their walls from the surrrounding soil? Earth is a much better conductor of heat than air; or, in other words, it communicates its heat to other bodies coming in contact with it much quicker than that element. Hence the necessity of placing between the earth and the ice some slower conductor of heat, and the slowest conductors we have, applicable to the case, are timber, charcoal or air; both also resist damp, while stone does not, and besides, it is a rapid conductor of heat. Water is also a rapid conductor of heat, and instances have been known, where rain-water has percolated the roof of an ice-house, that the temperature has been raised to sixty degrees. Hence the necessity of keeping such houses perfectly dry, not only at the top, but also throughout, by efficient drainage of the melted ice, and by ventilation to correct the dampness in the atmosphere and walls. Indeed, the walls of an ice-house, to be in proper condition, should be as dry as those of a dwelling.

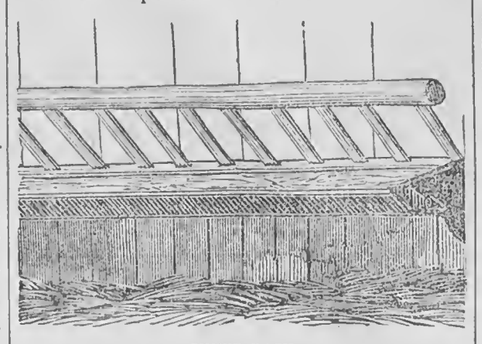
The cheapest and best way of constructing an ice-house, is to make its walls double with a space between them, which should be filled with that excellent non-conductor, charcoal dust. Where timber is cheapest, the house should be boarded inside, and with the charcoal dust between the walls: where bricks are the cheapest, they should be used. Stone may be safely used with such a good non-conductor between a double wall. Dry saw-dust is also a good non-conductor, and it can be easily obtained everywhere in our country, but it should not be used unless it is perfectly dry.

ANIMALS kept quiet, dry and warm, will require much less food and will do more work, keep in better condition, and yield much more profit than those exposed to the inclemency of the weather. Do, kind reader, remember this fact. It is unkind to starve your stock, and, what is a far more potent argument, *it is unprofitable.*

MAINE has *eighteen* Agricultural Societies and a State Board of Agriculture, which holds a meeting at Augusta annually.

## SHEEP RACKS AND FEEDING TROUGHS.

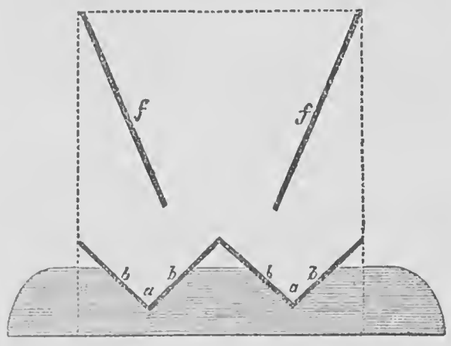
IN answer to recent inquiries from new subscribers, we republish from our last volume the following illustrations and descriptions. If any of our readers can furnish new and better plans, we shall be happy to receive and publish the same:



SHEEP-RACK.

This sheep-rack is the same as used in France, under cover, and is fastened to the building. I use them altogether now, and consider them superior to all others which I have seen. They are built similar to the common horse-rack and manger. The trough in front of the rack is to catch the hay that may drop from the rack, and for feeding them their grain. It stands two feet high, and is seven inches wide on the bottom. The slats, or uprights, are of good oak timber two inches wide, three-fourths of an inch thick, and twenty-six inches long. They stand three inches apart in the rack. No hay is wasted in this manner, and the wool is not worn off the head and neck of the sheep.—*S. W. Jewett.*

The following rack has been used and is highly approved by my friend, GEORGE GEDDES, Esq., of Fairmount, N. Y., to whom I am indebted for the drawing and description of the cut. It serves both for a rack and feeding-trough:



THE HOPPER-RACK.

"The above is intended to represent a section of what I think the best sheep-rack I have seen. A piece of durable wood about 4½ feet long, 6 or 8 inches deep, and 4 inches thick, has two notches, *a, a*, cut into it, and two troughs, made of inch boards, *b, b, b, b*, placed in these notches and nailed fast, constitutes the foundation. If the rack is to be 14 feet long, three sills will be required.—The ends of the rack are made by nailing against the side of the sill-boards that reach up as high as it is desired to have the rack, and nails driven through these end-boards into the ends of the side-boards *f, f*, secure them. The sides may be further strengthened by pieces of board on the outside of them and fitted into the trough. A roof may be put over all if desired. With a roof the fodder is kept entirely from the weather, and no seeds or chaff can get into the wool.—*Randall's Sheep Husbandry.*

## A SPOILED COW vs. A GOOD ONE.

EDS. RURAL:—In 1830, if I remember correctly, I purchased a cow of JOHN C. DECAMP, of Mt. Morris. In August or September of that year, her milk was tested in producing butter. In one instance the milk she gave in 24 hours made 3 lbs. of butter. At one milking she gave 31½ lbs. of milk, only twelve 12 hours from previous milking. Any time in favorable weather ten quarts of her milk were believed sufficient to produce 1 lb. of butter. The milk was skimmed, and only the cream churned. Mr. D. said the cow was spoiled by coming in when only two years old. She was a native, or not known to be other,—and kept on grass only.

Thus much, briefly, from Western New York in answer to the statement relative to the "good cow" in Lee, Mass., in a late No. of the RURAL. SOLOMAN WILLIAMS.

Portage, N. Y., Nov., 1853.

## CHLOROFORMING BEES.

FRIEND MOORE:—An article in Vol. 4 No. 43 of the RURAL speaks of chloroforming bees to death. Now I think the writer quoted used too much chloroform. Seeing the article recommending chloroform in a former number of the RURAL, I tried it with one swarm, and succeeded admirably.

On a clear, cool morning in September I fixed my table according to the directions given, letting the hive remain over the chloroform twenty-five minutes. We then turned the hive over and cut as much honey as could be spared from it, and set it back in its place, and then watched the bees to see whether they would ever revive again, and before 12 o'clock that day they were all alive and at work, clearing the wreck that we had made. Yours,

JAMES D. WICKER.

Euclid, N. Y., Nov. 8, 1853.

THE State of Ohio has over *seventy* County Agricultural Societies all in full operation, besides several other institutions for the promotion of industry and mechanic arts.

## DESTRUCTION OF MICE.

THIS is the season for the destruction of mice, which will be congregating in our gardens and orchards for food and shelter during the coming winter the war being waged on the principle "prevention is better than cure;" and of all the numerous traps invented for the purpose, there appear none equal to the old-fashioned drip, made of a square board, turning on two of its opposite corners by pivots made of nails, while another corner *drips* over a glazed earthen pot or pan, partly filled with water, and placed on the ground, the best bait being a portion of butter or some kind of grease beaten up with flour and spread on the overhanging corner; as it affords no foothold for the mouse as the board descends, in the way of depositing its victim in the water at the bottom of the pot or pan, and is again in proper condition for its rise, to supply the temptation for another and the next victim. If such traps are protected from the weather and the depredations of other animals by having a box placed over them with a tilt just sufficient for the entrance of the mice under the bottom, the trap will remain in perfect order so long as the water at the bottom of the pot or pan remains unfrozen, the only attendance necessary being to renew the bait occasionally, and remove the drowned mice, which are oftentimes found very numerous, particularly after no more food is to be obtained in the open fields. After frost, the box-trap with entrance over inclined planes at the end, descending with the weight of the mouse and rising again when relieved of it, is perhaps the best, requiring, however, careful and frequent examination. By these means many mice may be taken and their depredations prevented; after which comes the best mode of protection to the trees, by placing strips of old bark around them, and confining them by tying with tarred twine, seeing that the covering be so carefully placed as to prevent the entrance of the mice between the joinings; or—which might by some be deemed preferable—common coarse wrapping cloth, carefully fixed and well tarred, will be found to afford perfect security against their depredations at the foot of the tree, during the longest and severest winters.

This plan may be considered by some as too laborious and troublesome, and especially if the trees are large and numerous, yet it has been found that their "promise to pay" has been duly honored at blossoming and gathering time, with a rate of interest forty-fold. Treading the snow around the trees has been recommended, but has not always been found effectual in the preservation sought after, which, however, ought to be obtained at any cost of time or labor if we wish to enjoy in the following spring and summer the bounties of nature in their most delicious form, and the luxury of knowing that we have done our best to deserve them.—*Boston Cultivator.*

## FATTENING HOGS ON WHEAT.

ON the 4th of October last, I shut up nine small hogs, weighing on an average 160 pounds each. I commenced feeding them on swill of wheat meal, and fed 10 bushels, ground without bolting. I then had my wheat bolted, and saved the head of the bolt, and fed the balance, made into swill, till I had fed out the coarse feed of 148 bushels; and then fed 20 bushels damaged wheat, and killed them, and found, after selling my flour and pork, and deducting the value of the hogs, when I commenced, at $3 per hundred, (the price of hogs at that time, and the damaged wheat at 56 cents per bushel, that my wheat brought me over 90 cents per bushel.—F. DANFORTH, *Olivet, Mich.*

There can be no doubt that damaged wheat is good for fatting hogs, but that it is superior, weight for weight, to peas, corn or barley, we are disposed to consider somewhat doubtful.

THE PORK MARKET.—A writer in the *Louisville Democrat* closes a long article on the price of pork as follows:

Looking then at the question in these different lights, it would appear most probable that, unless the supply should be very much larger than it was last year, the range of prices will be sufficiently high to pay the farmers a fair profit. This opinion is strengthened by the fact that, although there were in the season of '52 and '53 about half a million more hogs packed in the West than in '51 and '52, still this large increased product, will be consumed at prices which should be satisfactory to the farmers.

WAR UPON THE POTATO.—We soon expect to see medical and scientific works written against potatoes as an article of food. In France, the war has actually commenced, as the Society for the Encouragement of National Industry in France has offered a prize of one thousand francs for the best treatise "on the evils attending the universal consumption of the potato as an article of food."—*Boston Transcript.*

WEEVIL.—Those troublesome pests may be kept out of grain by using salt. Sprinkle a little fine salt on the bottom and around the sides of the bin as you fillI up, and over the top when full. Wheat kept in old salt barrels will never be destroyed by the weevils.

GREAT YIELD.—Pliny Moody, of South Hadley, Mass., raised in his garden the past season, from one potato, three bushels, which weighed, when washed, 140 lbs. If any one can tell a bigger potato story, we shall be glad to hear of it.—*Northampton Courier.*

### THE HORSE.

THE NERVOUS SYSTEM—URINARY ORGANS—BREEDING, FRACTURES, AND SHOEING.

THE following is a report of one of a series of lectures on the Horse, his Anatomy, Diseases, &c., by Dr. SLADE, of Boston, as published in the Boston Traveler:

The nervous system of the horse, the lecturer remarked in opening, is the grand motive power of the animal. It is centered in the brain and spinal marrow. The brain is very small in proportion to its bulk, contrasted with that of man. From the brain proceeds cords called nerves, by which he receives pleasurable or painful feelings. To the eyes, the nose, the ears, we find these cords extending. Nerves of involuntary motion are those which are kept in action, though the animal may be asleep. From the brain is also given off the spinal marrow, running through the spine and sending out into various parts of the body branches known as spinal nerves. Sympathetic nerves surround the heart and other vital parts.

Neurotomy, or division of the nerves, has for years been practised on men, but only lately in veterinary science. The nerve is divided just above the fetlock joint often, to relieve pain in the foot.

The urinary organs the lecturer next described. The kidneys are employed in separating the watery substance, and drawing from the blood the urine, which would prove highly injurious if allowed to remain. Dietetic medicines are often applied with great success in removing water from the chest, abdomen, &c. When applied, the horse should be allowed to drink all the water he pleases. Inflammation of the kidneys often occurs. The horse looks at his loins, separates his legs, and will not lie down. He also desires to urinate continually. Over-exertion, strains on the parts, exposure to wet, and the eating of burnt mown hay, or kiln-burnt oats, cause the disease. Sufficient care is not taken in this country to protect the loins of the horse when exposed in bad weather. The secretions of the horse differ very much at times.

The urine, after being secreted by the kidneys, passes into the bladder, a small vessel, having a neck through which it escapes. The bladder is sometimes inflamed, both the body and the neck. Sometimes we find stone in the bladder and kidney, and sometimes by skillful physicians they are removed.

The breeding of the horse is a subject of great importance. Nature has provided for the reproduction of the species, and from the month of April to July we find the female in "heat," when the genital organs experience a change which peculiarly fits them for breeding.

The period of going with foal is from eleven to twelve months, although the time varies much in different mares. The mare is capable of reproduction at three or four years of age, and should not be used before that age. The animal also should not be too old, as the colt inherits much of the weakness of the mother, and lacks that stamina so requisite for a good horse. The peculiarities of both parents are inherited by the colt, and attention should be paid to the breed of both animals.

"Breeding in-and-in," or the production of colts from blood relatives, is favored by some, and by others deemed a depreciating process. The lecturer thought that breeding in-and-in did not deteriorate the good qualities of the horse, although there are often hereditary evils which crossing will remove. The English blood horse, the best in the world, is a cross between the native English and the Arabian. Crossing, when properly conducted, improves the animal, but when abused produces poor horses.

Fractures, caused by blows, falls, and external violence, may sometimes be relieved by man.—There are three kinds of fractures—simple, compound and complicated. If old horses have their limbs fractured, it is of no use to attempt any relief. Horses with fractures, if rendered useless for work, can be sometimes profitably used in breeding. In most cases of fracture the animals should be killed.

The shoeing of the horse was first introduced into England by William the Conqueror. Shoes are necessary, and yet subject the foot to the liability of many injuries. The removal of old shoes is a most important part of the process of shoeing. The clinched nails should be removed with care, and not wrenched out, as is often the manner pursued by our blacksmiths. Rasping is the next process, and removes all pieces of nails.

Paring is a most important part of the operation, and few blacksmiths understand how to pare out skillfully. The heel should not be much pared, and good care should be taken of the bars. They should not be cut away, but should be respected. The portions between should be cut out. The frog should always be left on a level with the edge of the shoe. The selection of the shoe is also an important point, and often the foot is made to fit the shoe instead of the shoe the foot. The shoe should be bevelled out on the outer surface, and should fit exactly to the parts of the hoof, and for this purpose the shoe is applied hot, to show the parts necessary to be pared off to make it fit.

### ECONOMY IN SAVING FOOD FOR STOCK.

LINUS CONE, in the *Farmer's Companion*, in an admirable article on this subject, makes the following remarks:

When the corn is husked the stalks should be bound in small bundles and set up some twenty-five or thirty together, and bound firmly around the tops with a hay or straw band. If there are vacant spaces in the barns and sheds so as to scatter the stalks and leave them only two or three bundles in thickness it is well to haul them in when dry, but if not, it is better to leave them in the field until spaces occur to put them in or until they are wanted for use, for it will not do to put them in large bodies on account of their liability to heat. Cornstalks saved in the way here mentioned will be worth a vast deal more than those saved in the common way.

Straw is another valuable and important item of fodder, and one too that is often wasted, or secured and fed in such a manner as to be of little value. Because cattle, horses and sheep would not live and thrive on wet, frozen, half-rotted straw, some have supposed there was little nutriment in it, and hence take little care to save it in good order. When grain is thrashed, the straw should, if possible, be put immediately under cover, which can generally be done by returning it to the place from whence the grain was taken. But a far better plan would be to abandon the present mode of threshing the grain all at once, and thresh it at intervals, so that all the straw and chaff could be housed and fed to advantage.

SCOURS IN SHEEP.—The best remedy we know of for scouring in sheep, is milk thickened with wheat flour A pint should be given twice a day till the unnatural discharge is stopped.

## Orchard and Garden.

### AUTUMN vs. SPRING PLANTING.

WE are frequently asked, which is the best time for transplanting fruit trees—spring or fall. There is no subject connected with horticulture on which there is greater diversity of opinion, than on this.—A farmer who has planted a few trees in the spring that have done well, becomes a strenuous advocate of spring planting, while another whose trees did not succeed denounces it. So it is in regard to fall planting; one plants on cold, exposed, wet soil, and his trees winter kill, and he thinks and loudly asserts that in this cold winter climate, fall planting will not answer. The fact is, that on well prepared soil, either fall or spring transplanting will answer.—We have no choice on the subject. It is a more matter of convenience. It is difficult to say which is the best season to plant on a cold, ill-prepared, undrained soil, whether there is more to be feared from the cold of winter, or the drouth of summer. On one point, however, we are fully decided.—If a farmer cannot afford to prepare the soil properly, he cannot afford to plant at all. In good situations, on naturally dry, or what is still better, on thoroughly underdrained soil, fruit culture is attended with much pleasure, and great profit. On the other hand, careless and ignorant fruit growing, will afford neither pleasure to the mind, nor money to the pocket. In a recent number of Hovey's Magazine, the following reasons are given in favor of fall planting:

1. The time is longer than in spring.
2. The ground is in better condition.
3. The trees are then in the most dormant state.
4. The roots, where cut, heal better, and are prepared to send out fresh ones even before the frost is out of the ground.
5. The winter and spring rain settles the earth around the roots.
6. The trees are well established before warm weather overtakes them.

### AMERICAN GRAPES IN EUROPE.

OF the immense number of European varieties of grapes imported into this country, few, if any, have proved valuable; on the other hand, American varieties have been despised in Europe. The grape mildew, which we have several times mentioned as at present threatening the utter destruction of the vines in the principal European wine countries, brings a curious fact to light, which if confirmed by future trials, will revolutionize the entire system of grape cultivation in Europe. It is found that while every European grape is affected by the mildew, American varieties imported into Europe are but slightly, if at all, attacked by the disease. We, in America, have scarcely any realizing sense of the utter despair which this malady has cast upon all the principal vine growing districts of Europe. It is second only to the despair and misery produced in Ireland, in 1845, by the potato disease.

The London Gardeners' Chronicle has received specimens of diseased vines from the Upper and Lower Corgo, and says:

"The disease is quite as virulent as in the worst English specimens, and the shoots, instead of presenting a clear healthy brown, were partially or entirely black, an unfailing indication, unhappily, of unhealthy shoots the ensuing year. The grapes are in every stage of disease, from simple depauperation to downright corruption.

Though the method employed by M. Grison is so efficacious when practiced on a small scale, it requires too much capital for the poorer cultivators of Portugal; and the total amputation recommended by some authors is hope so long delayed as to make the heart of the needy vine-dresser sick indeed. Mr. Robert Thompson, however, to whom we are indebted for much of the accompanying information, writes as follows:—"Bleeding the vine, by cutting its roots, has been recommended, and instances have been adduced to prove the efficacy of this mode of treatment; but the vine has such power of developing shoots and leaves that I cannot imagine how plethora could take place. Beside, we find weakly plants are as liable to the disease as those of full habit. It may, therefore, be concluded that the beneficial result of root-pruning depends on something else. It does away with tap-roots that perhaps were worse than useless from being in dry subsoil, and which, from being the principal feeders, have not afforded an adequate supply to the vessels connected with them. I had some Apricot trees so attacked year after year with mildew that not one fresh healthy green leaf could be found. They were taken up carefully in autumn, and the border was well trenched. The trees were then replanted, and afterward bore a healthy foliage. The same may hold good as regards the vine."

It appears, moreover, that the American varieties or species, when introduced into Europe, are very slightly if at all subject to be attacked; on the contrary, the European varieties, when cultivated in the Northern States, at least of America, are so subject to mildew that no one will persist in their cultivation on a large scale, though in conservatories the sulphur system has been adopted, it is said, for years before the disease became generally known in Europe. The Americans have had cultivators from the wine countries on the Rhine and elsewhere, who have carried with them their own varieties, concluding from the soil and climate that they should make a fortune. But in three years all their plants were swept off by the mildew.

The attention, therefore, of the more opulent vine growers should be especially directed to the superior varieties of American grapes, especially such as are not of a foxy flavor, and the sooner such varieties are procured the better. Orders should be immediately transmitted through safe and judicious hands, for cuttings; or what would be better still, some intelligent practical men should themselves at once proceed to America to obtain them from the source most free from suspicion, or at least procure the best which at present exist in Europe. It is true that some years must elapse before any general benefit could be derived, but if this plan holds forth no hope, there is at present little reliance on any other. It is true that the American kinds are by no means equal to the European, and less calculated for wine, as it would seem from the small product of the American vintage; but a judicious selection might be expected in good hands not to be valueless.

We have in vain inquired after the vine mildew in the Southern States, though we have seen an imperfect specimen which had a very suspicious appearance. Unfortunately, among some fifteen hundred authentic specimens of the fungi of the United States described by Schweinitz, which we have lately received, there is not any specimen of *Erysiphe necator*, which is sometimes so destructive to the fruit.

It is curious that the grape mildew should have found its way to America from England, whereas there is some reason to believe Morren's notion that the *Botrytis infestans* of the potato-murrain travelled into Europe from America."

THE APPLE CROP IN GREAT BRITAIN.—An English correspondent in a recent letter says:—"Apples are unusually plentiful this season, so much so, that farmers are giving them to their milch cows and pigs, and find that they are quite equal to potatoes for feeding purposes. For the first time since I left Rochester, (3 years since,) I have been luxuriating on apple *sass*, and thinking of the good old times in Western New York. For the last fifteen months it has done nothing here but rain, rain, rain, making rare times for umbrella makers 'bus men and doctors."

GRAPE VINE MALADY.—The "Society of Encouragement" in France, has offered two prizes of three thousand francs each for the best treatise on the disease of the vine; and for the discovery of the best means to prevent it. The disease has attacked the vines in Portugal, causing great consternation among wine producers.

### FROST-PROOF GRAPES.

THE Boston Traveler says:—We acknowledge the receipt of the following note, accompanied by a basket of delicious grapes, gathered this morning from the *open grapery* of Dr. COGGSWELL, of Bedford:

Will you oblige me by accepting the accompanying basket of *frost-proof grapes*, a new variety, raised from seed of my own planting? They have defied Jack Frost in the open air to the present time (Nov. 1,) having been plucked from the vine this morning. They resemble, as you readily perceive, the Catawba, but are more succulent and *spirited*. Each grape is a homœopathic bottle of wine, which nature manufactures and offers to the public, in open defiance of the Maine Liquor Law.

As it is the perogative of the parent to christian his own child, I have named this grape *Champagne seedling*. The vine yielded sparingly, which is my apology for the size of the basket sent you.

### TREE PLANTING

STONE-producing kinds of trees are best produced from seeds in the vicinity where they are to grow. The stones of the peach, plum and cherry should be planted in the fall, in order that their germination may be assisted and expedited by the action of frost. When not convenient to plant them in the fall, they may be placed with wet sand in a proper receptable, and in this condition allowed to freeze during the winter. This will obviate the danger of their being destroyed by mice or other vermin, and insure an early germination when placed in suitable soil. Chestnuts and acorns are better planted in the spring, perhaps, though they are unquestionably stimulated by the action of frost as well as walnuts and other similar seeds of more difficult development. Rich land is necessary to secure the health of all trees, the ornamental as well as the fruitiferous varieties.—*Germantown Telegraph.*

STONE TREE.—There is a tree in Mexico, called the *chijol*, a very fine wood, which, according to a writer in the National Intelligencer, (W. D. Porter,) becomes petrified, after being cut, in a very few years, whether left in the open air or buried. From the timber, houses could be built that would in a few years become fire proof, and last as long as those built of stone. The wood, in a green state, is easily worked; it is used in building wharfs, forts, &c., and would be very good as railway sleepers, or for plank-road stringers.

## Mechanic Arts, &c.

### LIST OF PATENT CLAIMS

ISSUED FROM THE UNITED STATES PATENT OFFICE For the week ending November 8, 1853.

Samuel S. Allen, of Salem, N. J.—For improvement in the cutting gear of grain and grass harvesters. Dated November 8, 1853.

John Blue, of Covert, N. Y.—For improvement in carriers to grain separators. Dated November 8, 1853.

Cornelius S. Cooper, of New York, N. Y.—For improvement in violins, &c. Dated November 8, 1853.

Nath'l Gear, of Zanesville, Ohio—For machine for turning or cutting irregular forms. Dated November 8, 1853.

James Greenbalgh, Jun., of Waterford, Mass.—For improvement in power looms. Dated Novembes 8, 1853.

Jerome B. Greene, of Worcester, Mass.—For improvement in temples for looms. Dated November 8, 1853.

Jno. Jones and Alex'r Lyle, of Rochester, N. Y., For improvement in the cutting-gear of straw-cutters. Dated Nov. 8, 1753.

Samuel Karns, of Bloody Run, Pa.—For improvement in fastening the teeth to clover hulling cylinders. Dated Nov. 8, 1853.

Jonathan Knowles, of Cohoes, N. Y.—For improvement in looms. Dated Nov. 8, 1853.

Abraham Lash and Miles Moore, of Belleville, O.—For improvement in screens of winnowers.—Dated Nov. 8, 1853.

Wm. H. Meriwether, of the county of Comal, Texas.—For improved wire fence. Dated November 8, 1853.

Abram B. Peterson, of Dexter, Mich.—For improvement in grain threshers and separators. Dated Nov. 8, 1853.

William Robertson, of New York, N. Y.—For keyed finger board for violins. Dated November 8, 1853.

Safford E. Sturtevant, of Hartford, Vt.—For improvement in attaching the shafts of vehicles to the axles. Dated Nov. 8, 1853.

Thomas Spiller and Anthony Crowhurst, of Middlesex county, England.—For improvements in operating vibrating propellers. Dated Nov. 8, 1853. Patented in England Febuary 3, 1853.

George Spencer, of Utica, N. Y.—For improvement in railroad car ventilator. Dated November 8, 1853.

Saml. D. Tillman, of Seneca Falls, N. Y.—For revolving musical scale. Dated Nov. 8, 1853.

W. D. Williams, of Raleigh, N. C.—For improvement in wagon brakes. Dated November 8, 1853.

Joel. Wisner, of Aurora, N. Y.—For improvemen in washing machines. Dated Nov. 8, 1853.

Saml. Green, of Lambertville, N. J., assignor to Saml. Green & Cornelus Arnett, of same place.—For improvement in window shutter bolts. Dated November 8, 1853.

Alex'r C. Twining, of Hudson, O.—For improvement in manufacturing ices. Dated Nov. 8, 1853. Patented in England, July 3, 1853.

DESIGNS.

Ezra Ripley and N. S. Vedder, of Troy, N. Y. assignors to Geo. W. Eddy, of Waterford, N. Y.—For design for parlor stove. Dated Nov. 8, 1853.

N. S. Vedder, of Troy, N. Y.—For design for cooking stove. Dated November 8, 1853.

John Lane, of New Haven, Conn.—For design for sewing butterfly. Dated Nov. 8, 1853.

### THE USE OF COAL TAR.

THIS article has become so plentiful since the general introduction of Gas works, that it is now extensively used for a variety of purposes. Coal Tar, being a resinous substance, and not acted upon by water or air, is peculiarly advantageous as a substitute for paint in all out-door wood-work. It is well known, that wood exposed to the external atmosphere soon acquires a vegetable covering of the wood-moss or lichen which rapidly hastens its decay. Coal Tar, when properly applied, penetrates its surface, prevents vegetation, and renders it completely impervious to air, moisture, insects, &c. It is found to possess much greater durability than the best oil paint, and is therefore particularly adapted for the preservation of railing, gates, posts, hedge-stakes, beams, spars, joints, &c., or any kind of wood-work under ground, or in damp situations. In England, it has for sometime been almost exclusively used for cast and malleable iron-work of every kind; and, when properly applied, it gives it a durable, glossy black, and will prevent iron from rusting more effectualy than any other article. A short time since we observed near Genesee several board fences painted with gas-tar, and would ask those who have used it for this and other purposes their opinion of its value.

HYDRAULIC RAILWAY.—A new kind of railway, substituting water for atmospheric pressure, has been proposed both in England and France, with a view to economical working and security from accident.—The actuating power is to be obtained by means of continuous water power between the rails by artificial pressure. The water is worked by peculiar mechanical arrangement, and it is proposed to place the apparatus at distances of 300 feet along the line.

IT is wise not to seek a secret, and honest not to reveal it.

### HONITON LACE.

SILK is manufactured in Spitalfields, London, not lace. The lace, for the manufacture of which the village of Honiton, in Devonshire, England, is noted, is supposed to have been first made in Saxony, during the sixteenth century, whence it extended to Flanders, in France. In Brussels alone there were 100,000 females employed in lace making, at the close of the last century. The art was introduced into England soon after its invention in Saxony, and it is singular that Honiton has produced the best kinds from that time down to the present day. Honiton lace is distinguished by the beauty of its devices, the neatness of finish, and excellence of workmanship; and these qualities joined to its long established reputation, cause it to command at all times a high price.—*N. Y. Sunday Times.*

### IMPROVED THRESHING MACHINE.

J. L. GARLINGTON, of Snapping Shoals, Ga., has invented a new threshing machine, constructed as follows:—A series of beaters are arranged tangentially around the face of a vertical revolving disc, and another series are arranged radially around its periphery. These revolve within a stationary concavo, having a series of strippers arranged tangentially on the inner face of its sides, and another series placed radially for a short distance around its inner periphory. This disc is kept close against the stationary strippers by a spring, and is thus made to press constantly against the straw though it may be fed in unequally. Several important advantages are claimed for this invention. A patent has been applied for.—*Sci. American.*

### HOW TO MAKE A CISTERN.

FOR a cistern to hold 25 barrels of water, procure one barrel of water-lime—hydraulic cement—and three barrels of clear, coarse sand; if your soil is clay or any kind of compact earth, dig a hole as near the shape of an egg as far as you can; mix your cement, a little at a time, and plaster it directly upon the earth. If there is any considerable cavity in the sides of the pit, fill it with clay mortar and thus save your cement. When the first coat is dry put on the second, and perhaps the third, though much thinner than the first. Cover the top with a large flat stone, if procurable, having a man-hole and place for a pump broken through the centre. A cistern 8 feet in diameter and 9 feet deep will hold a hundred barrels.

AUSTRALIA AND CALIFORNIA GOLD MINES.—From an article in a San Francisco paper, it appears that the total produce of the gold fields of the colony of Victoria, in 1852, was about 4,545,780 ounces; which at $18 an oz., would amount to about $81,814,040. From California during the same time, there was shipped about $50,559,176. During the first half of 1853, the gold exported from Sidney and Melbourne is estimated at about $42,000,000; while from California the total shipments are set down at $31,000,000.—Thus it will be seen that the produce of the Australian mines is considerably greater than of the California mines. But then it should be borne in mind that the number of miners in Australia is fully double the number actually engaged in digging in California; so that the individual average is at least in favor of California.

THE ship Great Republic is one hundred and five feet longer than the height of the Bunker Hill Monument—the latter measuring 220 feet, and the Republic 325 feet.

## Domestic Economy.

PARSNIP STEW.—Cut a half pound of fat salt pork in slices, and a pound of beef or veal in bits; put them in a dinner pot, with very little water. Scrape some parsnips, and cut them in slices an inch thick; wash and put them to the meat; pare and cut six small potatoes in halves. Cover the pot close and set it over a bright fire for half an hour; then dredge in a tablespoonful of wheat flour, add a little bit of butter, and a small teaspoonful of pepper; stir it in, and set it over the fire to brown for fifteen minutes. Take the stew into a dish and serve.

EGG DUMPLINGS.—Make a batter of a pint of milk, two well beaten eggs, a salt spoonful of salt, and flour enough to make a batter as thick as for pound cake; have a clean saucepan of boiling water, let the water boil fast, drop in the batter by the tablespoonful; four or five minutes will boil them; take take them on a dish with a skimmer, put a bit of butter and pepper over, and serve with boiled or cold meat; for a little dessert put butter and grated nutmeg, with syrup or sugar over.

WASH FOR THE HEAD.—"A mother" asks, "What is an efficient remedy for removing dandruff in the hair, as she has an objection to using an ivory comb?" This objection is well founded, as it increases the evil. The following wash, applied with a small piece of flannel, to the roots of the hair, will be found excellent:—Three parts of oil of almonds; one part lime-water; to be shaken up well, and can be procured of any chemist.—*Lady's Book.*

POTATO PIE.—Boil until soft as many potatoes as you like; then peel and mash them through a tin seive. To a quarter of a pound of potatoes add one quart of milk, three teaspoonfuls of melted butter, four beaten eggs, and sugar and nutmeg to the taste. Bake in tins as you would custard or pumpkin.

# Educational.

### THE FEMALE TEACHER.—No. II.

One of the greatest causes of failure in young female teachers, arises from timidity and a want of confidence in themselves. It is an amiable weakness, (if weakness it may be called,) resulting from that gentleness of spirit and purity of heart, which challenges the admiration of all men, and renders the female character in its highest order of excellence, akin to that of the angels. But it requires some experience and ability, to enforce obedience if necessary, in order to render a female teacher perfect mistress of the school-room. Pupils, at a much younger age than most people imagine, read the character of their teacher, and very soon understand whether or not they can trespass upon her authority with impunity. Once let a new teacher waver in the confidence of her own ability to rule, once let the school observe a doubt upon her own part as to who is to dictate and who to obey, and her government is from that moment ended. She should go into the school at the outset perfectly self-possessed, requiring obedience, in all gentleness it is true, but in a manner which admits of no doubt as to the course to be pursued. A boisterous tone, a threatening aspect, and a flourish of authority, are not the evidences of perfect government either in church or state, in the home-circle or in the school-room; and the female teacher is the last of all who have the government of humanity, and especially of juvenile humanity, in their hands, that should indulge in them. A thunder cloud in a summer sky, from which come lightning and hail, is a more attractive object of contemplation than the traces of angry passions in a woman's face. A gentle but firm tone, a winning but an earnest way, a loving but a fearless heart, a meek but a commanding spirit are traits of a superior teacher.

Scholars are ever ready to credit the teacher with all she deserves, and universally allow her a higher degree of intellectual pre-eminence than she really possesses. It is difficult to determine the precise bounds of human knowledge, and when we see an individual, our own superior in intellectual endowments, or acquainted with matters to which we are strangers, we are quite disposed to look up to him reverentially. All this is in the teacher's favor, and she must be lamentably deficient indeed, if she allows this sentiment to decline in the breast of her pupils. Scarcely any single thing inspires a pupil with a greater sense of his own importance, or sinks the teacher in the estimation of the scholars generally, more than a knowledge of the fact that the former is in any branch of study the latter's superior.

"Susan parsed a sentence on which the teacher failed;" or, "John solved a problem that the mistress could not do," goes through the school like the subtle fluid on an electric wire. If the teacher is in doubt, or gets confused, or is at a loss on any of these matters, it is perfectly easy to postpone the consideration of the subject to another day, either to post herself upon the point, or to get posted upon it by a friend, who has had the advantage of a more extended experience.

A very distinguished female teacher, now deceased, who was for many years preceptress of the female department in one of the most flourishing literary institutions in the Western part of this State, and whose hallowed memory will be ever cherished by the large number of those who had the opportunity of profiting by her instruction, related the following personal reminiscence to the writer:

"It was," she said, "her first experience as teacher in a winter school." Her literary qualifications, so far as she had any, were self-acquired, having been, like many others of our young female teachers, limited in the opportunity as well as the means of education. She had never been over half way through the arithmetic, and as it chanced there came into the school several young men whose mathematical knowledge was superior to her own. Under this combination of circumstances she set to work with an earnestness characteristic of herself, and actually *kept out of the way, in advance of the class.* "Many a night," she remarked, "I sat up until two o'clock in the morning, to prepare myself for the next day's lesson." And the scholars never suspected but that she was really at that time, the excellent mathematician which in fact she afterwards became. One of the young men was subsequently heard to say,—"I studied arithmetic several winters before, but never understood it until the winter Miss —— taught in our district." The name need not be inserted here, the illustration only being wanted; but it will suggest itself to many a reader, and a tear of regretful memory for her decease will be shed over her ashes.—The young female teacher, however, in the light of her example and success, can truly say,

> "But though oft oppressed and lonely,
> All our fears are laid aside,
> If we but remember only,
> Such as these have lived and died."

In conclusion, then, we would say to the female teacher, enter upon your duties with humble but full confidence in your own powers; do whatsoever your good judgment dictates under the various combinations of circumstances, so multiplied as to admit of no set of positive rules. Be firm in your government but never tyrannical; and let the scholars see by your works that you are earnest only for their good. Move them forward by the cords of love, rather than by the spur of authority, and you will be sure both of meriting and receiving the approval of your own conscience, the support of all good men, and the smile of Heaven.

For the Rural New-Yorker.

### THINK.

Think! think, for by so doing you will discipline and expand your mind. Think, too, upon something worthy of your consideration—upon those things which are calculated to elevate your whole moral and mental nature.

Become master of your thoughts, so that you can command them at pleasure. Whenever you read, have your thoughts about you. Make careful observations as you pass along, and select subjects upon which your mind shall dwell when your book shall have been laid aside. He who reads only for present gratification and neglects to digest what he reads, nor calls it up for future contemplation, will not be likely to ever know the extent of his own powers, for the test best calculated to make them known will remain unemployed.

Consider the great field which is open before you. The manifold works of nature—earth, sea, air with their inhabitants, and the heavenly bodies, all invite your attention. Into whichever department you take your way, you will be amazed at the magnitude and grandeur of the objects by which you are surrounded, and your mind will be filled with the most exalted conceptions of the goodness, wisdom and power of the Creator.

S. G. W.

### SELF-EDUCATION.

Benjamin Franklin was a self-educated man. So was Benjamin West. The one among the most distinguished philosophers, and the other among the best painters the world ever saw. Each had a good teacher daily, because both were advancing daily in knowledge and in the art of acquiring it.

Baron Cuvier was also a self-made man. He was at all times under a good teacher, because he was always taught by Baron Cuvier. He, more than any other man, perhaps than all other men before him, brought to light the hidden treasures of the earth. He not only examined and arranged the mineral productions of our globe, but ascertained that hundreds, and even thousands of different species of animals, once living, moving in the waters and upon the land, now form rocks and ledges, and even mountains. Cuvier thought, however, that he owed a constant debt of gratitude to his mother for his knowledge, because, when a child, she encouraged him in linear drawing, which was of the utmost service in his pursuits. To the same encouragement the world is, of course, indebted for the knowledge diffused by Cuvier among all nations.

Sir Humphrey Davy, by "self-instruction," made more brilliant and more important discoveries in chemical science than any one who preceded or followed him.—Farmers, mechanics, housekeepers, and many others, are now enjoying the benefits of his labors.

Elihu Burritt, by self-instruction, had acquired at the age of thirty years fifty languages; and that, too, while he was laboring vigorously over the forge and anvil from six to twelve hours daily.

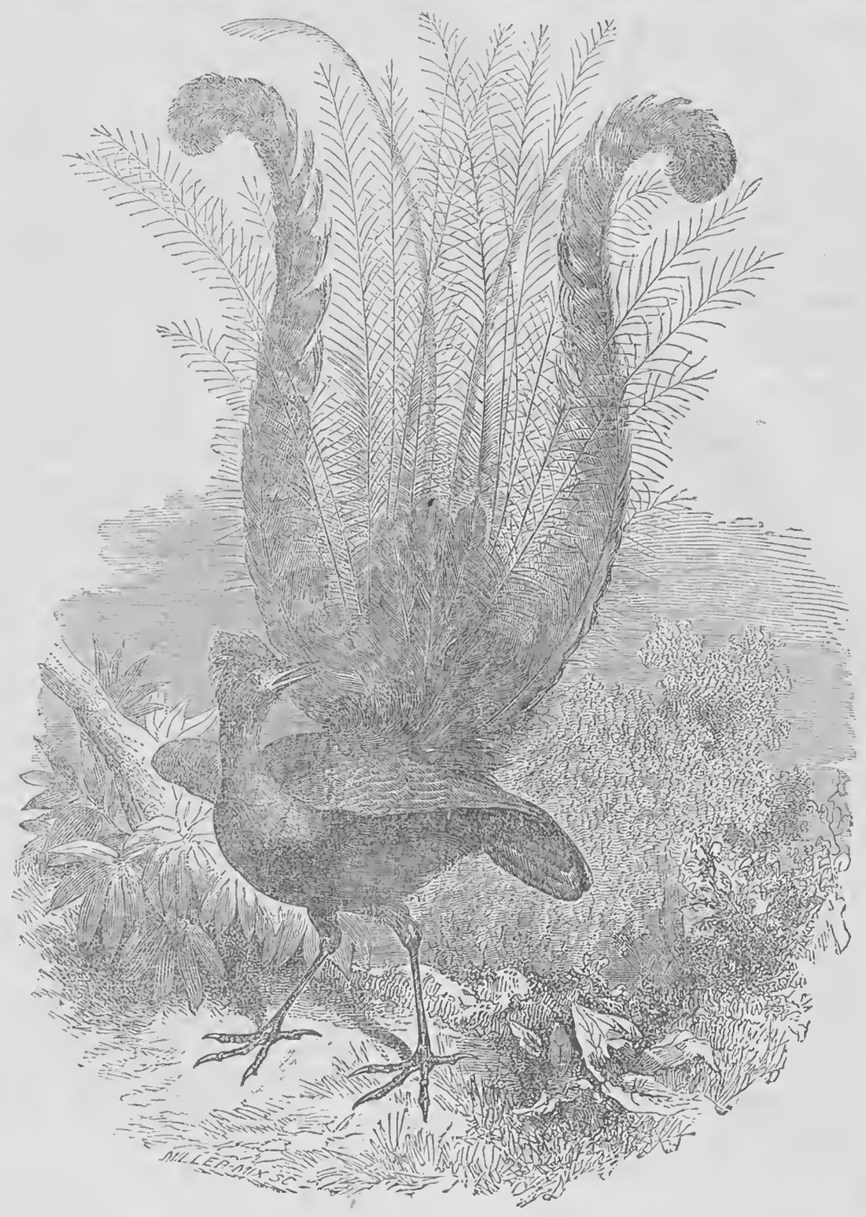
The late Dr. Bowditch taught himself until he exceeded all who had gone before him in mathematical science.

Roger Sherman, whose name will descend to posterity as one of the ablest statesmen and brightest ornaments of the American Congress, taught himself while working upon his shoe bench.

George Washington was a self-made man. His name will fill all future ages with reverence.

There were hosts of others, who in former ages moved the intellectual and moral world; also among those who now move and elevate themselves. Such must be the fact in all future ages.

Every child is his *own teacher*. He teach himself things, and every thing coming under his observation—animals, vegetables, minerals, tools and operations of farmers, mechanics, and housekeepers—science and art. He teaches himself by seeing, hearing, tasting, smelling, feeling, talking, handling, using and comparing things, and their operations with each other; also cause with effect. Every child of common talents learns a language before he is three or four years of age. Many thousand children now in our country, not over five years, speak fluently two languages—the English and the German.



### THE LYRE BIRD.

This beautiful bird, of which the above is a representation, is a native of New South Wales. It resembles the common pheasant in size, but its limbs are longer in proportion, and there are other considerable points of difference. The wings are short, concave and rounded, and the quill feathers are lax and feeble; the general plumage is full, deep, soft and downy. The tail, however, is very remarkable; it is modified into a beautiful, long, plume-like ornament, representing, when erect and expanded, the figure of a lyre; hence its name—the lyre bird—while, as the type of a new genus, it has received the appellation of *menura superba*.

This ornamented tail is restricted to the male bird. It consists of sixteen feathers; of these the outer one on each side is broadly but loosely webbed within, its outer web being narrow; as it proceeds it curves outwards, bends in, and again turns boldly outwards and downwards, both together resembling the framework of an ancient lyre, of which the intermediate feathers are the strings; these feathers, except the two central, which are truly but narrowly webbed on the outer side, consist each of a slender shaft, with long filaments, at a distance from each other, and springing out alternately. The appearance of these feathers, the length of which is about two feet, is peculiarly graceful; their color is amber brown, but the two outer tail feathers are gray tipped with black, edged with rufous, and transversely marked on the inner web with transparent triangular bars. In the female the tail is long and graduated, and the feathers are perfectly webbed on both sides of the shaft, although their texture is soft and flowing. The general plumage of the *menura* is amber brown above, tinged with olive, and merging into rufous on the wings and also on the throat. The under parts are ashy gray. Mr. Gould says that, were he requested to suggest an emblem for Australia among its birds, he would select the *menura* or lyre bird as being the most appropriate, being not only strictly peculiar to Australia, but, as far as is yet known, to the colony of New South Wales.

The bird is exceedingly shy, and hence the same eminent naturalist says: While among the brushes I have been surrounded by these birds pouring forth their loud and liquid calls for days together, without being able to get a sight of them; and it was only by the most determined perseverance and extreme caution that I was enabled to effect this desirable object, which was rendered the more difficult by their often frequenting the most inaccessable and precipitous sides of gullies and ravines, covered with tangled masses of creepers and umbrageous trees; the crackling of a stick, the rolling down of a small stone, or any other noise however slight, is sufficient to alarm it; and none but those who have traversed the rugged, hot and suffocating brushes can fully understand the labor attendant on the pursuit of the *menura*. Independently of climbing over rocks and fallen trunks of trees, the sportsman has to creep and crawl beneath and among the branches with the utmost caution, taking care only to advance when the scratching up the leaves in search of food. To watch its actions it is necessary to remain perfectly motionless, not venturing to move even in the slightest degree, or it vanishes from sight as if by magic.

These birds build in old hollow trunks of trees which are lying on the ground, or in the holes of rocks. The nest is merely formed of dried grass or dried leaves scraped together. The female lays from twelve to sixteen eggs, of a white color, with a few scattered light blue spots. One nest was observed placed on a prominent point of a rock, in a situation quite secure from observation from behind, but affording the bird a commanding view and easy retreat in front. It was of large size, formed outwardly of sticks; it was deep and basin-shaped, and lined inwardly with the inner bark of trees and fibrous roots, and it had the appearance of having been roofed.

The lyre bird is of a wandering disposition, and though keeping probably to the same brush, it constantly traverses from one end to the other, from the mountain top to the bottom of the gullies. It is said to be able at one leap to pass over as much as ten feet in a perpendicular direction from the ground. It seldom takes wing, but is fond of traversing trunks of fallen trees, and frequently reaches a considerable height by leaping from branch to branch.

Solitary in its habits, it sometimes shows a different disposition. On one occasion Mr. Gould saw two males at play; they were chasing each other round and round with extraordiny rapidity, pausing every now and then to utter their loud, shrill calls. While thus occupied they carried their tails horizontally, as they always do when moving quickly through the brush, that being the only position in which this large organ could be conveniently borne at such times.

### INTERESTING STATISTICS.

The whole number of languages spoken in the world amounts to 3,064; viz: 587 in Europe, 937 in Asia, 276 in Africa, and 1,264 in America. The inhabitants of our globe, profess more than 1,000 different religions. The number of men is about equal to the number of women. The average of human life is about 33 years. One-fourth die previous to the age of 7 years, one half before reaching 17 years of age, and those who pass that age enjoy a felicity refused to one-half the human species. To every 1,000 persons, only one reaches 100 years of age; to every 100, only six reach the age of 66, and not more than one in 600 live to 80 years of age.

There are on the earth 1,000,000,000 of inhabitants, and of these 333,333.333 die every year, 90,324 every day, 3,730 every hour, 60 every minute, or 1 every second. These losses are about balanced by an equal number of births. The married are longer lived than the single, and above all, those who observe a sober and industrious conduct. Tall men live longer than short ones! Women have more chances of life in their favor previous to being 50 years of age than men, but fewer afterwards.

The number of marriages is in proportion of 175 to every 1,000 individuals. Marriages are more frequent after the equinoxes—that is, during the months of June and December. Those born in the spring are generally more robust than others.—Births and deaths are more frequent by night than by day. The number of men capable of working or bearing arms, is calculated at one-fourth of the population.

Opium.—Many parts of India are well adapted to the production of opium, both in climate and rate of wages, and hence it produces by far the greatest quantity in the world—not less for exportation than 50,000 chests of 140 pounds each, or 7,000,000 of pounds. This great quantity is used by the Malays, Javanese, and others; but above all, by the Chinese, always much diluted and always in the form of fume; and it stands to them exactly in the same relation that foreign wines and ardent spirits do to the nations of Europe.—*Edinburgh Review.*

### I SEE THEE STILL.

BY CHARLES SPRAGUE.

I see thee still;
Remembrance, faithful to her trust,
Calls thee in beauty from the dust;
Thou comest in the morning light,
Thou'rt with me through the gloomy night;
In dreams I meet thee as of old;
Then thy soft arms my neck enfold,
And thy sweet voice is in my ear;
In every scene of memory dear
I see thee still.

I see thee still;
In every hallowed token round;
This little ring thy finger bound;
This lock of hair thy forehead shaded;
This silken chain by thee was braided;
These flowers, all withered now, like thee,
Sweet sister, thou did'st cull for me;
This book was thine—here did'st thou read;
This picture—ah, yes, here, indeed,
I see thee still.

I see thee still;
Here was thy summer noon's retreat;
Here was thy favorite fireside seat;
This was thy chamber—here each day,
I sat and watched thy sad decay;
Here on this bed, thou last did'st lie:
Here on this pillow, thou did'st die —
Dark hour! once more its woe unfold—
As then I saw thee, pale and cold,
I see thee still.

I see thee still,
Thou art not in the grave confined—
Death cannot chain the immortal mind;
Let earth close o'er its sacred trust,
But goodness dies not in the dust.
Thee, O my sister! 'tis not thee
Beneath the coffin's lid I see;
Thou to a fairer land art gone,
There, let me hope, my journey done,
I see thee still.

Written for the Rural New-Yorker.

### THE FALLEN OAK.—TIME'S DOINGS.

Rambling in the forest in the musing autumn-time. I chanced to seat myself on the mossy trunk of an ancient oak, and thus my fancies shaped themselves, half-dreamingly:

Long, long ago, the germ of this fallen and decaying trunk, lay hidden and slumbering in the tiny cup of an acorn. Then, thro' many dangers—

> "But warmed in heaven's sunshine, and fanned by its breath,"

it sprang up, a slight shoot almost too small for notice. The fostering atmosphere of many a summer added to its growth and beauty—the snows of many a winter were piled around its base, and lodged in its arching top, ere it grew to look over the heads of its humbler neighbors. It stood, the pride—the monarch of the forest for years,—but when they were counted by centuries, the life-sap ceased to circulate; and its honors of leaf, and twig, and branch, were wasted one by one, and, after a long and desperate struggle with the elements, a barkless and jagged trunk, it fell to the earth. Time and Decay have done their best to crumble it back to dust, but an air of grandeur yet clings to it as to some hoary and mysterious ruin of the elder world.

Since that oak has been in being, how many generations of men have lived and died—have played their brief parts in the drama of life, and left the stage of mortal existence forever! Since that little shoot first lifted the dry leaves which hid its tender head from the sunshine, how much of change has the earth witnessed! How much our own country! What an oak the acorn has become—to flourish, we trust, for ages yet—which the little May Flower brought to our shores!—what a nation was hidden within its narrow confines!

And, what gave all this change and progress to the oak—to the world, to our nation? It was Time! Time brought forth the shoot and gave it vigor and strength, as well as age and decay. Time has brought the world to its present state in the great cycle of its duration. So unto us, Time gives the spring of life, the happy period of childhood, the elastic hour of youth, the vigorous noon of manhood, as well as the chill evening of age. Then call him no harsh names:

> Forget not this, ye aged and gray—
> Though Time has marked your brow,
> The earlier joys he gave do stay,
> To bless and gladden now.
>
> Kind to your souls the deeds of Time,
> Children of Toil and Trust;
> From his realm ye rise to Heaven's clime—
> He claimeth but your dust E.

Forty Acres of Bibles.—The last number of the Bible Record, the useful and suggestive little paper of the Bible Society, states the issues of the Society for the past year to be 800,000 Bibles and Testaments. These books, he estimates, if they were spread out on a plain surface, and computed by square measure, would cover more than four acres. If the same issues were computed by long measure they would extend more than eight miles. If by solid or cubic measure more than one hundred and fifty solid cords. And these cords, piled one upon another, would reach higher than the spire of Trinity Church, New York, or the Falls of Niagara. The entire issue for the thirty-seven years of the Society's existence, would cover more than forty acres with Bibles and Testaments; or extend in long measure nearly a thousand miles; or make eighteen hundred and fifty solid cords.

# For the Ladies.

## THE PHILOSOPHER TO HIS LOVE.

BY O. W. HOLMES.

Dearest, a look is but a ray
Reflected in a certain way;
A word, whatever tone it were,
Is but a trembling wave of air;
A touch, obedience to a clause
In nature's pure material laws.

All the flowers that bend and meet,
In sweetning others, grow more sweet
The clouds by day, the stars by night,
Inweave their floating locks of light;
The rainbow, Heaven's own forehead's braid,
Is but the embrace of sun and shade.

How few that love us have we found!
How wide the world that gilds them round!
Like mountain streams we meet and part,
Each living in the other's heart,
Our course unknown, our hope to be
Yet mingled in the distant sea.

But ocean coils and heaves in vain;
Round is the subtle moonbeam's chain;
And love and hope do not obey
Some cold capricious planet's ray,
Which lights and leads the tide it charms,
To death's dark cave and icy arms.

Alas! one narrow life is drawn,
That links our sunset with our dawn;
In mist and shade life's morning rose,
And clouds are round it at its close;
But ah! no twilight beam ascends
To whisper where that evening ends.

Oh! in the hour that I shall feel
Those shadows round my senses steal,
When gentle eyes are weeping o'er
The clay that feels their tears no more,
Then let thy spirit with me be,
Or some sweet angel likest thee.

## A WAIF FROM WISCONSIN.

BY THE AUTHOR OF "NIAGARA MEMENTOES."

### LOST,

Somewhere between the romantic marge of the silvery "Fox," which kindly meanders so gracefully and bewitchingly through our valley village beauteous — and the circling belt of hills which, like the rich chaste setting of a jewel, surrounds and adorns our wee gem of a prairie —— MY KNITTING WORK!

'Twas no ordinary knitting of blue or grey, to be set up, and seamed, and narrowed, and slip, and bound, and toed off in a day. 'Twas my company work, that I kept somewhat for its prettiness—(yet none the less useful for being ornamental)—for my afternoon visits and tea drinkings.—'Twas of red yarn — ruby rod — set up on "Victoria knitting-pins" — although now their stripes and gilt are well worn off by the abrasion of wool and fingers. 'Twas ribbed "two and two" for some half-finger; and half way 'mid the ribbing was a stripe of pure white. 'Twas set up with fourteen double stitches on a needle — not of great circumference, you see, nor was it in its progress very far advanced; but *could* it speak, it some tales might tell! With every "pearl," I trow, is woven some gem of thought, some mystic word by some fair lip dropped. How can I live without it? Must I perforce send a sad regret when next invited out to tea? It was my vade-mecum, my thought-prompter. How can I be accompinable without you, my precious, talk-inspiring knitting work?

Saw you never one of our circles at a social tea gathering? Every pair of hands swiftly moving; with a delicate clinking go the busy needles; round and round weaves the mysterious circles of white or black, blue or grey—growing strangly fast, loop by loop, on to the extremity of its pedal destiny. Busy though we may be as the operatives in a factory, our ideas know no hampering, our tongues no silencing influences,—but are allowed to "wag" on at their own sweet wills. Just let a coterie of our ladies get into as many rocking chairs, and what, with knitting, and talking, and rocking, no English lady would dare venture the triple race with us in this our industry threefold national. They would, no doubt, pronounce the American ladies decidedly *actuose*.

So far from the top my little stocking tells of a pleasant gathering of farmer friends. In one corner grouped together are our spouses, with *idle hands* and loud talking. Disturbing *our* gentle minor tones come the high-sounding names of Virgalieu and Bigarreau, Famense and Fortunie, Belmonts and Baldwins, dwarfs and standards, Southdowns and Leicester, and Shanghais, and various other generic vibrations that go to make up the farm stock nomenclature. We, grouped in another corner, with *busy fingers* and heads close together, told our ways of making butter, and managing hens — of our contrivances to get up huge lunches and larger dinners when the great thrashing machines came along with their large companies of men and horses, to be fed and foddered; or the mussy, greasy, pork-killing times,— or the breaking-up-new-land times, with their many men and four or five yokes of oxen. Between you and me, I shouldn't much wonder if they dubbed her of the red "knitting work rather verdant — in that she had not yet been initiated into the extreme depths and extent of all these mysteries; but her day awaits her, and she awaits it unshrinkingly.

Further down the ruby shaft of my little stocking leg comes another sociable — less agrestical in character mayhap, but full of pleasing memories. * * *

After such evenings, wonderous bright, we reach our respective homes. Mind has met mind. Heart met heart, intellect aroused, wit sharpened, and thought by thought ignited. These sweet, burnishing influences go not out like festal lamps, nor die away during the pleasant ride or walk homeward.

By the home fire we sit, "John Anderson my Joe John" and I, and there carry out the trains of thought in the busy social circle awakened. And there *we*, slow of thought, have all our bright after-thoughts and after-sayings that never will spring at our bidding—but coming only when there's no merry circle to amuse, and oftenest when trying to coax slumber to a wakeful pillow.

Don't tell me of gossip and scandal as appurtenances to knitting and tea. We are charitable and judge others by ourselves, and hence are sceptical of the existence of such apochryphal attributes, and wonder *why* in this connection they have become adagial!

But my loss! I've well nigh lost my subject, as well as my knitting work. You see by this aberrance what a treasure, so very suggestive, that knitting work was. I could, from among its elastic, soft, wooly fibres spin many a long yarn—closely and firmly intertwined and knitted together though they be! Lucky finder! deem it for this to you no prize, since no touch but mine can unravel and draw them out. To you it may be only a common covering to a common foot!— look you, painters, sculptors all!— there are four little chubby feet, two pair scarce yet trained to a shoe, either one of which that little red stocking, when finished, would fit. Call such, not common — they may be in Wisconsin, but surely not everywhere!

What shall the finder do who findeth my loss? Is he some poor, disconsolate bachelor? Take it home and lay it carefully in one of those drawers where everything and nothing — useful and useless — are all jumbled together in a chaos of confusion. Lay it in that drawer whose contents no fair fingers have ever arranged, and scientifically classified. There to look would be to know that within those depths no "oriental," or "bishop," or "mutton-leg" sleeve ever fluttered. Look well at the little suggestion, when, in unlucky haste, you pull forth this and that and the other—wanting a string here, a button there, or rent neatly joined yonder. *Think*, when you pull forth crumpled linen once smoothly ironed,— drop down among the frazed cushions of your easy chair, and forget that you are to dine with Tom, Dick or Harry. Look around: bed ill-made—counterpane dingy—pillows awry—furniture rickety and abused. You haven't had the heart or the ambition to care for repairing or replenishing,—dusty windows, drapery just ready to tumble down. Old slippers and books, papers and boots — obsolete garments strung about — places for everything and nothing in place. Alas! the picture is too dreadfully, drearily sad further to portray. How could you so long have cherished such indolent neutrality to the gloomy state of your surroundings.

Metamorphose the scene — behold all straight, and bright, and fresh. There sits the transforming, presiding genius, the musical clinking of knitting needles coming in between the silvery music of the sweetest voice in the world, and the prattling of the little candidate for the new, red stocking growing beneath her busy fingers. As you open the drawer, up she springs. "Now, Jack, what *do* you want,— do tell me: I'd rather jump up every five minutes than to have to straighten out after you, if I do love you to distraction. You know it horrifies me and makes me nervous to see these piles of things all tumbled down and jumbled together; if you want to make stir-about do take the pudding-stick, for you certainly aren't fit to go to a bureau drawer." With a most luxurious indolence, perfectly happy to be waited on thus to your mind, even if scolded in the same breath, you stand back and out comes the snowy, neatly folded linen — everything to meet your taste and need.

But now you may wake up from this dream, too dear and bright for reality,— rub your eyes — yawn and make another dive for a pair of whole hose, or an unrumpled collar. Take one more look at your little thought-wakener, and resolve to go neither to Dick or Harry's—but make up your mind, after purchasing a new pair of kids across the way, and a handkerchief ready hemmed, whether you will call on that snug little widow with her snug *incumbrance*, or her fun-loving, though efficient cousin, who, sufficient in herself, needs neither silvering nor gilding.

Mayhap some crusty, acetoso agamist, meeting my unoffending little stocking in his path, may give it a kick of apparent disgust. Ah! I know 'twas absinthian envy nerved that kick—you didn't hurt it or me, but you hurt yourself, and your toe will ache like the very misehief, and you will say you guess your are getting a corn or the gout, but in your heart you'll know what ails you.

You of that neat, prim home, always in order, with nothing disarranged day after day, but all forever remaining in ceaseless, tiresome monotony,—where spring none of the joys suggested by the racketing, and rollicing, and scratching, and pulling, and hauling of more fortunate homes,— grow not morbidly envious and repining over my little suggestive subject. Take it, and go you to that "Home" where dear, precious, friendless children are sheltered — choose you a pair of little feet to fit the red stocking. Live no longer for selves alone,—unfold the wonderful maybes that may spring from the bestowing of love and affection and education upon a single, poor, homeless little one.

You who but a little time back were the happy parents of one whose little feet spring gladly and joyfully no more about your dwelling,— swelling no more your heart with fullness of joy,— turn not with woe and dread sadness, if the little reminder meet you on your way. Think not with bitter, morbid envy, of the homes still echoing the pattering of little feet. Press it to your bosom, not with the amaritude of grief, but with gratitude that you have the blessed, glorious honor to be the parent of a pure and lovely angel, taken with the purity of its sinless spirit, unsullied, unmarred.

Despise not knitting work; many a foot knows the delicious comfort of a regular home-knit pair of stockings. It is a blessed invention to fill up all those little odd, unappropriated interstices of time, and such portions as are appropriated to occasional socialities. The sweet comfort of which employment our spouses know not, as they sit down for their chats with idle hands thrust in pockets, right foot thrown up on left knee, and chairs tipped back *a la* American. In such free and easy delectable posture there comes not to them as to us, incessant, haunting thoughts of the preparation or progress of something to eat or to wear, to mar their genial humor.

You city ladies would deem such employment perhaps quite too agrestial for your fine fingers. But do not spurn my humble little red stocking, if ever you see or hear of it. It was a stocking knitting for more purposes than one, as I have hereby proven, I hope, to your delectation and satisfaction.

Waukesha, Wis., 1853. ELSIE.

### AN AFFECTING SCENE.

Lieut. Parsons, in his "Nelsonian Reminiscences," relates the following:

Richard Bennett, when mortally wounded in one of Nelson's great battles, had requested that a miniature and lock of his hair should be given by Lieut. P. to his sweet-heart, Susette, in Scotland. The gallant lieutenant thus describes the interview:

It was at the close of a day, when a bright July sun was setting, that I arrived at the pretty cottage of Susettes mother. I tremulously stated who I was to the most respectable looking matron I ever saw of French extraction. In broken, bitter accents of heartfelt grief, she told me her daughter's death was daily expected, and requested time to prepare her to see me.

At last she expressed a wish to see the friend of Richard Bennett, and I was admitted to the fairest daughter of Eve, and I found the world unequal to her in charms. She was propped up with pillows, near the open lattice of her bed-room, that was clustered with roses. Her white dress and the drapery of the room accorded with the angelic vision, who now turned her lustrous eyes upon me, veiled in long, fringed eyelids. She held out her transparent hand, and gently pressed mine as I stooped to kiss it; and as she felt my tears fall on it, softly murmured:—"I wish I could cry; it would relieve my poor heart." She gasped for breath, and respired with difficulty.—"The lock of hair, quickly, let me see it." She caught at it, wildly pressed it to her heart and fell back. Her mother and I thought she had fainted, but the pure and innocent soul had returned to God.

Death in Childhood.—To me, few things appear so beautiful as a very young child in its shroud. The little innocent face looks so sublimely simple and confiding amongst the cold terrors of death. Crimeless and fearless, that little mortal has passed alone under the shadow and explored the mystery of dissolution.—*Dublin Magazine.*

Themistocles being asked how he would marry his daughter—whether to one that was poor but honest, or to one that was rich but of ill reputation—made answer:—"I would rather have a man without an estate, than have an estate without a man."

# Miscellaneous.

For Moore's Rural New-Yorker.

## AUTUMN'S VOICE.

BY J. W. BARKER.

Fading, withering, falling, dying,
Moaning, gushing, weeping, sighing,—
O'er the brown earth swiftly stealing,
Hear the Autumn winds revealing
Tales of woe in tones of sorrow,
Dark'ning all the joyous morrow.

In the valley, on the mountain,
By the brooklet o'er the fountain,
There are hollow voices calling,
There are stilly footsteps falling,
Each some mournful prelude singing,
Or some gloomy message bringing,
Like a band of mourners sighing,
Round some dear companion dying.

Falling leaves and faded flowers
Dance around in thick'ning showers,
While the prudent squirrels gather
Harvest for the winter weather;—
Thus should mortals, prone to wander,
Ne'er a precious moment squander,
But while other things encircleth,
Know a *winter time* approacheth.

Kendall Mills, N. Y., 1853.

Written for the Rural New-Yorker.

## WOODLAND REVERIE.

Morning was spreading a beauty over hill and vale but faintly reflected even in poetry. The glorious rays of the rising sun fell softly on a lovely woodland retreat. A rich perfume was diffused through the atmosphere. Every flower that decked the plain and glistened in the morning dew, exhaled a delicious fragrance. Soft zephyrs laden with aroma from rosy bowers, fanned the fevered brow. A pellucid stream rolling its laughing waters over a broad, pebbly bed, charmed the ear by its lulling flow, and reflected from its limpid surface the cerulian purity of the sky. On its banks grew stately forest trees clothed with a thick green verdure. Their roots were deeply imbedded in the fertile soil, their tops luxuriant in the verdant wreath of life pointed to the sky whence they received their grandeur and beauty. The rugged oak, prince of the forest realm, proud in its living beauty, in the rich garland of leafy foliage clustering in its top, as the golden locks around the brow of youth, exulted in its enduring strength. The laughing aspen whose silken leaves rustled at every whispering breeze, fluttered, as the spirit loosed from the cerements of time basks in a scene of etherial purity. The light-leafed ash and haughty erested elm interlaced their umbrageous tops and interwove their flexible branches, as the tender feelings of childhood nestle on the bosom of age. The arrowy pine, decked with its gay garland of evergreen, shot its tapering spire far into the sky. The willow, gloomy in appearance, lonely in its weeping sadness, drooped its pliant branches over the stream. They touched the crystal wave and the drops fell, one by one, as tears from the eye of sorrow.

This woodland vale, stretched out in quiet beauty, was as the world in miniature. The green robe carpeting the bosom of the dark earth, the flowers and plants of richly tinted hue and spicy breath, might be likened to the poetic verdure covering the pathway of life, and the bright gems glittering in the coronet of existence. The stream was, as the stream of time bearing on its surface the hopes, passions, and destiny of human life.

Each tree appeared as the type of individual character. The firmness, energy, and unconquerable will of the stern nature of man, relying on his own unaided efforts, seemed fitly represented by the hardy oak, the rustling aspen, the ash, and the elm were truly emblamatic of the different phases seen in the variety of active life.

The weeping willow was as one lamenting over the grave of buried love. Man is not, however, like the tree or flower linked to earth for awhile, fanned by balmy breezes, refreshed by vernal showers; and then, with foliage withering and decaying, time casts its bright honors in the dust.—He is endowed with a spirit that will bloom in the garden of immortality—watered by lucid streams flowing from perennial fountains and warmed by the enlivening beams of holy affection. A. J. E.

University of Rochester, Nov. 7, 1853.

A Gentleman.—Mr. Justice Talfourd, in a recent trial, thus defined the character of a gentleman. The evidence proved that the defendant, while in the theatre, had said to the plaintiff, "Do not speak to me—I am a gentleman, and you are a tradesman;" and in summing up the learned Justice said:—"'Gentleman' is a term which does not apply to any station, but to the mind and the feelings in every station. The man of rank who deports himself with dignity and candor, the tradesman who discharges the duties of life with honor and integrity, are alike entitled to it; nay, the humblest artisan, who fulfills the obligations cast upon him with virtue and with honor, is more entitled to the name of a gentleman than the man who can indulge in offensive and ribald remarks, however high his station." If men would square their conduct by this definition, all would be gentlemen.

## THE OLD SUGAR-HOUSE.

BY GRANT THORBURN.

The monument to the Sugar-house martyrs, in process of erection in Trinity Churchyard, is beginning to rise above the Broadway railing. The monument when finished, will be an ornament to that part of the city. When ages shall have mingled with those beyond the flood, the spot on which stood this Prison, will be sought for with more than antiquarian interest. The demolition of this building is a blot on the escutcheon of the State of New York. It was built in the manner, and of the same material, as the post-office, and with reasonable care, it might have stood a thousand years—a monument to all generations, of the pains, penalties, sufferings and deaths their fathers met, in procuring the blessings they now inherit. It was built in 1680, and was occupied as a sugar-refining manufactory, till 1776, when Lord Howe converted it into a place of imprisonment for the American prisoners. At the close of the war for Independence, the business of sugar refining was resumed, and continued till 1830, or 1840, when it was removed, and the stores Nos. 30, 32, 34 and 36 Liberty street, fill the place where once stood this British slaughter-house for American prisoners. The yards of the sugar-house and Dutch Church [now post-office] were separated by an Albany board fence.

On the 18th of June, 1794, I came from the ship, to board, lodge, and work in Liberty street. From that day, I lived, moved, and had my being in Liberty street, between said sugar-house and Broadway, for the space of *forty yeare*. Part of that time, my dwelling was on the opposite side, directly fronting the sugar-house. Then it was almost daily visited by one or another of these war-worn worthies, with their children, that they might see the place where their fathers lay, and suffered.

The following anecdotes I heard from their own lips—from General Hamilton, Morgan Lewis, Colonel Varick, John Pintard, and other Revolutionary worthies, then in the prime of life, but now all numbered with the dead.

The sugar-house prison was a dark stone building, grown gray and rusty with age, exhibiting a dungeon-like aspect, and transporting the memory back to scenes of former days, when the Revolution poured its desolating waves over the fairest portion of the land. It was five stories high, and each story was divided into two dreary apartments, with ceilings so low, and the light from the windows (which were small and deep) so dim, that a stranger would readily take the place for a jail. On the stones in the wall, and on many of the bricks below the office window, were still to be seen initials and ancient dates, as if done with a penknife or nail. This was the work of many of the American prisoners, who adopted this, among other means, to while away the weeks and years of their long, monotonous confinement. There was a wall around the building, and the yard was fenced in with a wooden wall, ten feet high. Two Hessians or British soldiers walked around the building, day and night.

One morning, I noticed two of the soldiers in the sugar-house yard; they had only three legs between them—one having a wooden leg. I stopped a moment, listening to their conversation, and as they were slowly moving from the yard, said I to them, "Gentlemen, do either of you remember this building?" "Ay, indeed, I shall never forget it," replied he of the one leg; "for twelve months, that dark hole," pointing to the cellar, "was my only home; and at that door, I saw the corpse of my brother thrown into the dead-cart, among a heap of others, who had died the night previous of the jail fever. While the fever was raging, we were let out in the yard in companies of twenty, for half an hour, to breathe the fresh air, and inside we were so crowded, that we divided our numbers into squads of six each. Number one stood ten minutes as close to the window as they could crowd, to catch the cool air; they stepped back when number two took their places. Seats we had none: and our beds were straw, thrown on the floor, with vermin intermixed. And there," continued he, pointing with his cane to a brick in the wall, "is my kill-time work—A. V. S. 1777—viz: Abraham Van Sickler, which I scratched with an old nail."—When peace came, many learned the fate of their relatives from these initials. My house being near by, I asked them to stop in, break bread, and *wet their whistle*; (they looked very poor.) The bread, beer, and Yankee cheese let loose their tongues, and I heard from their lips "*The story of the lost leg*;" but it is too long for the present sitting, and too good to break in pieces, so we leave it for number two, next week.—*Home Journal.*

Mazeppa.—Voltaire, in his history of Charles XII., says:—"Mazeppa was a Polish nobleman, born in the Palatinate of Podolia. He was educated as a page to Jean Casimir, at whose court he acquired some knowledge of belles letters. An intrigue which he had with the wife of a Polish Palatine, having been discovered, the husband had him tied naked on a wild horse, which was then set loose. The horse, which was from the Ukraine, went back thither, carrying with him Mazeppa half dead from hunger and fatigue. Some peasants took care of him; he remained with them for a long time, and distinguished himself in several incursions against the Tartars. His superior information made him highly respected among the Cossacks, and his fame, which was daily increasing, induced the Czar to create him a Prince of the Ukraine."

Such is the historical fact which furnished Lord Byron with the subject of his poem with this title.

MOORE'S RURAL NEW-YORKER.

ROCHESTER, NOVEMBER 19, 1853.

### SPECIAL NOTICES.—TO AGENTS, &c.

☞ AGENTS.—Any person so disposed can act as agent for the RURAL NEW-YORKER,—and all who remit according to terms will be entitled to premiums, &c.

☞ THE RURAL is published strictly upon the CASH SYSTEM—sent no longer than paid for—and all orders should be in accordance with terms.

☞ OUR *lowest* club price is $1,25 for any number of copies over 20—and $1,50 under that number, unless a full club of twenty is obtained.

☞ IN making up clubs for the RURAL, the Wool Grower and Stock Register can be added at 35 cts. a copy, which is the lowest club price.

☞ EXTRA numbers of the RURAL will be forwarded to all disposed to aid in augmenting its circulation.

☞ SEE Terms, Premium List, &c., on next page.

### The Rural New-Yorker for 1854.

HAVING nearly completed our arrangements, we this week open the campaign of 1854 by publishing Prospectus, Premium List, &c., on next page—to which we invite the attention of all interested. Subscribers and Agents, and those wishing to become either, will there find all necessary information relative to terms, and inducements to such as may feel disposed to lend a portion of influence in behalf of this journal.

The largely increased support accorded to the RURAL NEW-YORKER during the year now closing, induces us to make very liberal expenditures for its future management, in both the Editorial and Publishing Departments. Confidently relying upon the continued encouragement and support of the thousands of warm-hearted and active friends who have heretofore so generously secouded our efforts—and anticipating, from recent indications, still larger accessions from the right-thinking, independent and discriminating portion of community—we have resolved upon expenditures and improvements far greater than the enterprise would heretofore have warranted, though its success has been unprecedented.—Regarding the *Contents* of the paper as the most important, we have selected and secured from among many capable and talented gentlemen, a corps of Associate and Corresponding Editors amply qualified, by practical experience and rare scientific and literary attainments, to add strength and excellence to this or any other periodical.

In the Agricultural and kindred departments, we have secured the assistance of Mr. JOSEPH HARRIS, late Associate Editor of the Genesee Farmer, and formerly an assistant in the Laboratory of Mr. LAWES, at Rothamsted, England. Mr. H. has had experience as a practical farmer in both England and this country, and is, moreover, well posted in Scientific Agriculture. In the Literary, News and Commercial departments, we shall have the aid of Mr. EDWARD WEBSTER, late of the Boston Journal, an able and ready writer, already favorably known to our readers by his contributions to the pages of the RURAL.—These gentlemen are already initiated, having been engaged upon the paper for some weeks, and will hereafter, in connection with the writer hereof, devote their chief attention and talents to its editorial management.

As Corresponding Editors we are happy to announce the names of two of our former Assistants, and one of our ablest Contributors—Messrs. J. H. BIXBY, and H. C. WHITE, of Western New York, and T. E. WETMORE of Kent county, Mich.,—all of whom are too well, and we trust favorably, known to our readers to require the ceremony of an introduction. In addition to this, we shall probably secure the assistance of one of our Female Contributors, as Editor (or Editress) of the Ladies' Department—thus perfecting our arrangements for making a superior volume of the most complete and perfect AGRICULTURAL, LITERARY and FAMILY NEWSPAPER published.

Our arrangements for printing neatly and correctly, and mailing accurately and promptly, are such that we hope to give very general, if not entire satisfaction in the Publishing Department.

—In conclusion, those familiar with the pages of the RURAL NEW-YORKER, and our manner of transacting business, are aware that we depend more upon its merits for support, than any extravagant announcements, or self-puffing bills or prospectuses. They are also aware that former pledges have been amply redeemed—that we always *perform* as much, if not more than we *promise*. But a great many people are not so well advised in the premises,—hence the necessity of talking somewhat on the subject, and requesting our readers to do likewise. Therefore we prominently announce what we purpose to accomplish, and our offers to those disposed to lend their efforts in furthering the enterprise. Our earnest desire is to furnish a journal which shall prove eminently useful—do good only and continually—to all into whose hands it may be placed; and to extend its usefulness, and obtain a proper return for a largely increased investment, we of course wish to greatly augment its present circulation. Hence we frankly ask the kind words and offices of each and all who like the RURAL—of every reader who believes the welfare of his neighbor, and the interests of community, are promoted by its publication. Judging from the past, we are confident that those to whom we appeal will respond generously—that our present effort, like previous ones to improve the character and augment the usefulness of this and other journals, will be promptly and nobly seconded by thousands of energetic and influential friends of "Progress and Improvement," and a pure literature, throughout the country.

### The State Election.

Now that the smoke and dust of the conflict have somewhat blown aside, an opportunity occurs to take a survey of the field of battle, to count up the number of the wounded and missing, and, like the pious monk on Flodden Field,

"To shrive the dying—bless the dead;"

sooth and console the defeated, and leave the victors to take care of themselves;—for in all such cases, they are usually sufficiently elated to be able to dispense with all outside and volunteer consolations. We would merely advise them however to be moderate in their administration, for the spring-tide of their fortunes will ebb again. It is an established fact, and fortunate for the country as it is true, that no political party can maintain absolute ascendancy for a long term of consecutive years. A little while ago the star of the Softs was in the ascendant, and that of the Whigs was merged in the shadow; now the latter is at its culmination and the former has sunk below the horizon. Who will pretend to foretell which of the half dozen *immaculate political parties* will next be in the ascendant? As it is at present, the Whigs have carried every thing, and there are scarcely enough of their opponents left in the field to cover the retreat of the routed party. In the "battle of the shells," as the Whig editors style the schism in the ranks of their Democratic opponents, on the popular vote it is believed the Softs are ahead about two thousand, while the Hards are in the advance of them in both branches of the Legislature and in the election of Judges.

The following are the latest estimates from the columns of the *Tribune*. Total vote estimated at, Whigs, 158,000; Softs, 97,000; Hards, 95,000. Senate—Whigs, 22; Softs, 2; Hards, 5; Undecided, 3. Assembly—Whigs, 80; Softs, 20; Hards, 28; Free Soil, 2. The Tribune believes that no less than 20 of the 32 Senators, and 80 of the 128 Assemblymen, are in favor of the speedy enactment of the Maine Law.

The entire State Ticket, with the exception of the two judges of the Court of Appeals, is Whig. The two above named officers elect were supported by both branches of the Democratic family.—Eight Supreme Judges for the full term, and one to fill a vacancy, have been elected, two of whom are Adamantine and seven Whig. "So mote it be!"

### "Do You Pay Premiums?"

"Do you ever pay the Premiums offered for subscribers to the RURAL?" was the rather uncomplimentary query propounded to us, a few days since, by a comparative stranger. We gave him a satisfactory answer,—and for the information of others interested in the subject, would here repeat that we have, during the past year, not only *offered*, but PAID nearly *Fifteen Hundred Dollars* in Premiums to Agents, Post-Masters, and others,—in proof of which we can exhibit sufficient evidence to convince any doubter.

Our large Premiums for 1853, were payable as soon after the 1st of May as the result could be ascertained,—and here is the acknowledgment of the person who obtained the first May, and one af the January premiums:

TRUMANSBURGH, N. Y., May 10, 1853.

DEAR SIR:—Your favor of May 6th is just received, with enclosure of $50 for May premium. Will acknowledge receipt of both premiums soon.

In haste, Yours, L. D. BRANCH.

In a subsequent letter, Mr. BRANCH enclosed receipts for both premiums, and closed his letter as follows—which we trust he will pardon us for quoting in this connection:

"I send you receipts as requested, but discover I have received more than my due—being entitled to only $10 in Books for January, instead of $15 in Cash. Please make known your pleasure in the premises, and a prompt compliance may be expected." [Our pleasure in the premises was for Mr. B. to retain the Cash—preferring to give in this, and many other instances, more than we offered.]

"By the way, I have made an investment of the Premiums for 1852 and 3 in a Gold Watch, (a genuine Railroad time-keeper,) as a memento of my success in obtaining subscribers to the RURAL, and of its worthy Editor.—Please accept of my acknowledgments for the means thus provided. Hope I may yet be of some service to the RURAL, but cannot expect hereafter to be a competitor for the first premiums. Am daily expecting my 'walking-papers,' and no doubt will soon be superseded by a 'Democratic' P. M. Having sold out my business in Trumansburgh, I am even anxious for the change, and about two weeks since sent in my resignation."

## Literary Notices.

A SPLENDID lithograph engraving of ANTIOCH COLLEGE, located at Yellow Springs, Ohio, has been left at our office, by the agent of the Institution, Mr. A. S. DEAN. The college edifice is a magnificent four story structure of pressed brick, built around three sides of a rectangular court, and is placed in the midst of ample grounds, containing forest trees, shrubbery, a fountain, and other beauties of nature and art. The Faculty of the College with the distinguished educator, HORACE MANN, L. L. D., as President, is unsurpassed for learning and ability, and the institution will no doubt soon become one of the best patronized and most flourishing in the country. It is under the direction of the Christian denomination, but will exercise no sectarian influence over its pupils. Females are admitted on equal terms with males to all the privileges of the institution, and awarded diplomas at the expiration of the College course.

HARRY HARSON.—This is the title of a work, just issued from the press of SAMUEL HEUSTON, N. Y., by JOHN T. IRVING, the author of the ATTORNEY. It is something of the character and style of the last named work, which it will be recollected was published in numbers, in the Knickerbocker Magazine, and excited at the time, a great deal of interest. The present work, like its predecessor, the Attorney, is appropriately illustrated and the letter press beautifully executed. WANZER, BEARDSLEY & Co., have it for sale.

### The Rural not a Dollar Paper.

WE have heretofore fully explained why the RURAL could not be afforded at $1 a year—stating the difference in expense of publishing such a paper and one that is a re-print of a daily or other journal. Still, people who do not discriminate, or are not good in figures, occasionally send a dollar, ordering the RURAL one year in return. Such persons should retain their money, for we cannot comply—and moreover, as before announced, instead of returning the amount, we credit and send the paper as per terms.

Of late we have heard of an instance where an agent obtained some fifty subscribers at $1 each, without our knowledge, and contrary to published terms. We assure him, and others interested, that the paper cannot be afforded at so low a rate—and desire all our friends and agents to note the fact. We confess our inability to compete, in *price*, with weekly papers filled with matter prepared expressly for readers of daily prints, (and first paid for as such,) or with certain trashy literary *weak-lies*. And yet thousands subscribe for such papers, simply because they suppose them to be *cheap*, without regard to *quality* or adaptation to their wants—whereas many of them are the most costly investments that a parent can make. Poor Richard would frown upon *such* economy.

—This paper is published at a heavy expense; its contents are written and prepared *expressly for its readers*—and not a second-hand commodity. Hence its cost is much greater than that of any dollar paper in the country, while, at our club rates, it affords less profit than the so-called cheap journals. But, even if the price has hitherto been too high, certainly no reasonable person will complain now—for our expenses are largely increased by the high prices of labor, provisions, &c., while those to whom we chiefly look for support, are generally better able to expend two dollars for a paper now, than they were to pay half the amount one, two or three years ago. And—— but "a word to the wise," &c.

### Proclamation,

*By HORATIO SEYMOUR, Governor of the State of New York.*

I hereby appoint THURSDAY, the twenty-fourth inst., as a day of THANKSGIVING for the people of the State of New York. I recommend its suitable observance by such religious assemblages and forms of worship, as our citizens may severally deem appropriate; so that we may as a commonwealth, with united hearts, humbly and gratefully render thanks to our Father in Heaven, for His benefits, and earnestly implore the continuance of His favor.

In witness whereof, I have hereunto subscribed my name, and affixed the [L. S.] privy seal of the State, at the city of Albany, this, 5th day of November, one thousand eight hundred and fifty-three.

By the Governor. HORATIO SEYMOUR.
H. W. De Puy, Private Sec'y.

THANKSGIVING DAY.—The Governors of Massachusetts, New Hampshire, Rhode Island, Connecticut, Pennsylvania, Indiana, Maryland, Ohio, and Illinois, have appointed Thursday, the 24th day of November, as a day of Thanksgiving and praise. Gov. CROSBY, of Maine, being the first Whig Governor that State has had for several years, could not wait to return thanks with his brethren of other States, but appointed Thursday, the 17th.

☞ The Methodists of the United States, have already eight first class colleges, with property and funds amounting in the aggregate to $494,-063, and another is projected in Missouri. They have also forty-six theological academies and seminaries, in twenty-nine of which there are 4,036 students, an average of 178 students to each seminary. The oldest of their colleges is at Wilbraham, and was founded in the year 1830, by the Rev. Wilbur Fisk.

## California News,

### Arrival of the Star of the West.

The steamship Star of the West, from San Juan on the evening of the 31st ult., arrived at New York on the 11th. She brings $1,299,644 in gold on freight, and $480,000 in the hands of passengers, and 600 passengers.

October 30, Wm. Earl, fireman of the Star of the West, died, and was buried at sea.

The news of this arrival has been anticipated by the arrival of the steamer Daniel Webster at New Orleans.

From the Sandwich Islands the news, which is of importance, is up to the 10th of September.—Dr. Judd had been removed from the office of Minister of Finance, and Elisha H. Allen, late U. S. Consul, had been appointed in his place; a decided step had been taken toward annexation to the United States; the British and French consuls had protested to the King against such an act; the American Commissioner had replied to their manifesto in a firm and dignified manner, and the greatest excitement prevailed in political circles in consequence of those important movements.

### Arrival of the George Law.

The steamship George Law, John McGowan, Esq., commanding, left Aspinwall at half-past 10 on the evening of the 31st ult., and arrived at Quarantine the same day with the Star of the West.

She brings the California mails of Oct. 16th; 465 passengers, and $872,831 in treasure on freight.

On the 6th and 7th inst., the George Law encountered rough weather, strong gales from the northeast, and a very heavy sea, during which time the steamer proved herself, in every particular, a superior sea boat.

There is no news of any importance from the Isthmus. The season there, thus far, has proved unusually healthy, and the weather continues good and favorable to crossing, which is now done with dispatch, as the road from Cruces to Panama has been improved, and every facility offered to passengers both by the railroad and transportation companies.

## News Paragraphs.

☞ Mat. F. Ward, who shot Prof. Butler, at Louisville, belongs to one of the most aristocratic families in that city. Sallie Ward, whose marriage with a son of Abbot Lawrence, and subsequent separation from him, created a good deal of talk, is his sister. Professor Butler was one of the most estimable citizens and distinguished scholars of the West, and his cold-blooded murder has cast a deep gloom over the community. The ruthless and sanguinary spirit of too many of the young men of Kentucky has now reached a climax of infamy, and if the law is not vindicated by the punishment of the murderer, Kentucky will be disgraced eternally.

☞ A child of Catholic parents having been chastised by the teacher, and afterwards expelled from school, at South Easton, N. Y., for refusing to study and read the Protestant version of the Bible, an appeal was made to the State Superintendent of Common Schools, and that functionary has just decided that the proceedings of the teacher were unauthorized, and contrary to law. The decision goes so far as to discountenance prayer in school, unless had before and after school hours, and even then the attendance of the scholars must be purely voluntary.

☞ The clipper ship Great Republic, fully rigged, left Boston for New York, last week. She will there load for Liverpool, and from thence go to Australia. The Boston Atlas understands that an English firm has made quite a liberal offer to buy her, deliverable at Liverpool. Since her launch a small fee has been charged to all who went on board her, for the benefit of the "Sailor's Snug Harbor." In one day, $111 50 were taken, and the total sum collected amounts to $912 17.

☞ The Petersburg Express states Mr. Henry Birdsong, of the county of Essex, so cruelly beat and whipped one of his negroes on Tuesday week, that he died in a few hours. A jury was summoned by the Coroner, and an inquest held, which resulted in the finding of a verdict that deceased came to his death by sundry blows, etc., inflicted by his master. A warrant was issued for the arrest of Birdsong, and the accused was immediately committed to prison.

☞ The Hudson River Railroad Company is building a locomotive, to run from New York to Albany—144 miles—in two and a half hours, and carry along six passenger cars at that. It is being constructed at Springfield, and will be placed on the road during the coming winter. She weighs over 30 tons, has eight feet driving wheels, and cost $11,000. People who have seen her model, say she will be the most magnificent engine ever turned out in this country.

☞ The Government of Brazil has addressed a note to the Peruvian Government, protesting against the recent law declaring the navigation of the Amazon free to all nations, as an infringment on her rights, and announces that she will hold Peru responsible for the injurious consequences she antipates. Peru, on the contrary, insists on her perfect right to pass such a law, and conceives she is under no such responsibility to Brazil.

☞ Yankee Sullivan, the prize fighter, has been rendered to the Massachusetts authorities, by whom he has been held to bail, for the brutal fight at Boston Corners, in the penal sum of fifteen hundred dollars. The offence is punishable with a fine of not less than $5,000, and imprisonment not exceeding five years. He will probably forfeit his bonds and not stand the risk of a trial

☞ The Boston *Transcript*, says that a plan for enlarging that city, by annexing all the towns within five miles and thus make it equal in size and population to the third city in the United States, will be presented for the early consideration of the next Legislature of Mass. The consolidated city would be entitled to one hundred representatives in the State Legislature.

☞ The quarrel between the Catholic Bishop and the Trustees of St. Louis Church of Buffalo, relative to the control over the temporalities, has been referred to the Pope's Nuncio, Bedini, who has decided against the Trustees, but they as yet have no objection, they say, to submit to the control of the Bishop and the Priest in spiritual things, but can manage their own temporalities

☞ A match for $6,000 ten miles out, between Prince (trotter,) and Hero (pacer,) came off at Union Course, L. I., on Friday, of last week. Hero gave out on the tenth mile. The fastest speed (2,38½) was made by the winning horse on the seventh mile of the course, and the entire ten miles was trotted by him in the almost incredible short time of 28 minutes 8¼ seconds.

☞ A fruit dealer of New Orleans has brought a suit against the Postmaster of that city for the unlawful detention of a letter, claiming damages to the amount of $560. The letter contained a bill of lading for a large lot of lemons from Vera Cruz; which spoiled at the wharf while the letter laid in the Post Office, the dealer applying for it repeatedly, but was told there was none for him

☞ Henry C. Bowen, of the firm of Bowen & McNamee, New York, has just ordered six hundred dollars worth of evergreens to be set out in the streets of South Woodstock, Ct., his native village. This is the New York silk firm, which Southern merchants refused to patronize, in consequence of their sentiments on the operation of Slavery.

☞ Some idea of the value of apples as an article of profit to the farmer, may be found in the fact that no less than 17,000 barrels have been purchased by two buyers chiefly in the towns of Kirkland, Marshall and Augusta, (Oneida Co.,) and shipped east to market. The amount received is probably $20,000.

☞ About $700 have been contributed for the erection of a monument to the memory of Knud Iverson, the Norwegian boy who was lately drowned by his companions at Chicago, for refusing to steal fruit,—or "the boy who would rather die than steal." The sum wanted, including the above, is $1,000.

☞ The Norwalk tragedy was rather a costly operation for the New York and New Haven Railroad Company. It has already paid about two hundred thousand dollars to those who were injured, and to the relatives of those who were killed, and the damages to their own property is also large.

☞ The Wheeling Gazette states that apples and other Fall fruit and vegetables, are now being sent in large quantities from that city over the Baltimore and Ohio Railroad to New York. Apples go at the rate of 500 barrels per day. They are worth $1 75 at Wheeling, and $3 in New York.

☞ A canal boat laden with a large steam boiler, and portions of an engine, from the Allaire Works, New York, passed through this city on Monday. The boiler weighed near 40 tons alone, and is one of a pair to be used in some gigantic steamer on the western lakes.

## News Brebities.

—— The wood sawyers of St. Louis are on a strike.

—— Congress meets on the first Monday (2d) of December.

—— The annual election in Massachusetts took place on Tuesday.

—— There is good sleighing in the Northern part of Michigan.

—— In Spafford the adamantines had half a vote. Otisco, none.

—— New and rich deposits of gold have lately been discovered in Russia.

—— A new iron yacht of 600 horse power, is to be built for the use of Queen Victoria.

—— On Friday last, 1,000 hogs, deliverable in December, were sold at Louisville at $4 87.

—— The immigration at New York from Oct. 21st to Nov. 3d, amounted to 12,139 persons.

—— The Steamers Southern Michigan and Northern Indiana, have gone into winter quarters.

—— A new Bank has been opened at Elmira. The Republican says it starts with favorable auspices.

—— The Washington Monument stands exactly in the middle of what was the "ten miles square."

—— The Racine Advocate says:—"The Free Democracy can bide its time "if it takes to all eternity."

—— The widow of Mendelssohn, the great composer, died lately, at Frankfort, at the age of thirty-five.

—— It is said that in London the sextons of churches demand a fee for procuring eligible seats for strangers.

—— Ohio sends daily to New York, quantities of meat, ready dressed, via Erie Railroad. An excellent idea.

—— A bronze statue of Webster, to be made by Powers, is to be placed in front of the State House, Boston.

—— The voters of St. Louis have decided in favor of obtaining a loan of $8,000 to build a House of Refuge.

—— Among the reforms to be introduced at the next session of the British Parliament, is one for a decimal coinage.

—— Pope Pius IX. is so corpulent, it is said, that he plays billiards every day, for the purpose of reducing his size.

—— Six Maine boys in Australia, write home that they realized upwards of $20,000 from their first six weeks labor.

—— The Hon. Arch. Dixon, U. S. Senator from Kentucky, was married last week to Miss Susan Bullit, near Louisville.

—— The anniversary of the discovery of Guy Fawkes' celebrated gunpowder plot was observed in Canada on the 5th inst.

—— An Irishman at Worcester has been sentenced to two months hard labor, for refusing to pay his fare on the railway.

—— The Democratic papers and politicians of Virginia, are quite unanimous in denouncing the removal of Collector Bronson.

—— One of the plans suggested for the depletion of Uncle Sam's overloaded treasury, is to reduce letter postage to one cent.

—— In the year ending the 5th January last, the duty on tobacco and snuff imported into England amounted to £4,542,572.

—— Uninterrupted railroad communication is now had between New York and St. Louis, in less than fifty hours running time.

—— E. G. Lapham, Esq., of Canandaigua, lost $600 in bills, on the 22d ult., while in the cars between that village and Rochester.

—— The surviving soldiers of the war of 1812, are to hold a National Convention in Philadelphia, some time in December next.

—— A large quantity of flour has accumulated in Montreal, there being from 75,000 to 80,000 bbls. now waiting for transportation.

—— Wm. B. Cudlipp, a boy, has been convicted at Richmond, Va., of killing another boy, and sentenced to the Penitentiary for five years.

—— In Boston, a few days ago, an old woman, eighty years of age, was brought into the Police Court charged with being a common druukard.

—— The city of Paris eats half a million of sheep a year, and one hundred thousand swine, and drinks twenty-six millions gallons of wine.

—— The Canal tolls of the State for the first week of November, were $110,000—a decrease on the corresponding week last year of $22,000.

—— There are 12,000 school districts, in Ohio and 36,000 directors under the new law. There are 838,000 youth between four and twenty one.

—— The canal boat J. B. Root sunk near Black Rock Tuesday of last week. She had 850 bbls. flour on board, belonging to Bentley & Co., of Buffalo.

—— Recent advices from Russia inform us, that in case of an emergency the Czar could bring into the field one million of trained combatants and 1,800 guns.

—— The Trieste Zeitung, an Austrian paper, states that American cotton goods have beaten British manufactures completely out of the field, on the shores of the Black Sea.

—— The thief who stole the $37,000 from the New York Bank, has been discovered, and proves to be a person who had access to the interior of the bank. His name is not given.

—— David Kennison, a private in the Revolution, and receiving a pension at the Albany Agency, under the act of March 18, 1818, died on the 24th of February, 1852, aged 117 years!

—— A hydraulic ram for raising water has been put into operation at the House of Refuge. It raises to the height of 100 feet as much water as will run through a hole 2½ inches in diameter.

—— A young colored girl belonging to Secretary Guthrie, while in charge of one of his clerks, who was taking her from Louisville to Washington, escaped at Cincinnati last week, and is now in Canada.

—— Patrick Ryan, a night clerk in the New York Post Office, has been arrested on the charge of purloining letters. He has confessed his guilt, and restored $4,360, which he had concealed in South Brooklyn.

—— The Illinois sailed on the 5th, for Aspinwall, and the Prometheus for San Juan. They took out 1,300 passengers. The Screw Steamer Glasgow, sailed the same day, for Glasgow, with about 200 passengers.

—— There is a great Poultry Show to be held in Albany on the 10th and 11th of January next. A large premium list has been adopted and competition is invited from all parts of the Union. Bring out your big "biddies."

# Foreign Intelligence.

### Arrival of the Steamer Franklin.

The Steamer Franklin, arrived at New York, Nov. 10th, with 162 passengers, and London dates to October 26th :

Advices from Odessa state that immense quantities of grain were arriving for shipment.

A telegraph despatch from Constantinople of October 17, announces that the combined fleet had passed the Dardenelles and would proceed to Constantinople.

The army in Asia was every day receiving new recruits.

Omar Pacha was at Widin, directing the works.

He was determined to cross the Danube near that place, having a large number of boats and pontoons in readiness.

The bridge between the fortress Widdin and the islands opposite, was already occupied by a Turkish corps.

The Russians were marching in great force to Kalofat, opposite Widdin.

A letter from St. Petersburgh says: The news of the declaration of war by the Porte, has produced a fearful sensation. In the north of Russia the army and the civil service were for war, but in the south they were more pacific.

Nothing like warlike enthusiasm was apparent anywhere, though various means had been taken to produce it.

It was rumored at Paris that the text of the new Russian manifesto had reached the French Government, which contained something very insulting to France—characterizing her as the hot bed of revolution.

One of its expositions is said to read as follows: "I am in the right. I will defend it, as well as the rights of my country and co-religionists, against all foreign interference altogether, and I shall not stand alone."

The cholera had broken out at Jassy.

The Russians were settling into winter quarters at Bucharest.

The navigation of the Danube is said not to be open, the last mail steamer not being able to reach her port.

The English merchants of St. Petersburgh had been assured by the Emperor, through his Minister of Finance, that their persons and property would be protected, and that there was no risks for ships or goods during the present season.

The British Parliament had been further prorogued to the 29th of November.

France.—The unfavorable accounts of the vintage are confirmed.

The price of flour and wheat was falling in the Provinces.

The dates from the Cape of Good Hope are to Sept. 22d.

Affairs were getting unsatisfactory beyond the borders since the withdrawal of the troops.

The overland mail had arrived at Trieste, with dates from Hong Kong to Sept. 9th, Calcutta 20th, and Bombay 28th.

Hostilities had again broken out in Burmah, and instigated by the King of Ava.

The revolution in China was progressing.

The Imperialists had had some success at Amoy, but the insurrection had invested Khanfung-Foo, on the Yellow river.

The whole country was in a state of anarchy and the trade at a stand still.

The following U. S. vessels were in Simons' Bay, Cape of Good Hope, viz :—Vincennes, F. Cooper, John P. Kennedy and the Porpus.

The Constitution was at Cape Coast Castle, and the Marion at Monrovia.

The American brig Clara was wrecked off Sierre Leone, in a toruado.

### Arrival of the America.

The royal mail steamship America, Captain Laing, from Liverpool Sept. 29, arrived at Halifax Nov. 11th. *en route* for Boston. Dates from the seat of war in Turkey are not so late as the 25th ult., the day fixed on by the Sultan for the commencement of active hostilities.

But the news nevertheless appears to be decisive as to the fact that a collision between the Russians and Turks had actually taken place on the Danube, although the latest reports speak of a very strong desire on the part of Count Nesselrode to still further negotiate on the subject in dispute. Yet all indications are decidedly in favor of war.

The unfavorable character of the Eastern news had but little effect upon the Liverpool Cotton market, and prices are not essentially changed since the sailing of the Franklin. Sales of the week are 37,000 bales.

Market for breadstuffs continues active at constantly increasing prices.

The top price for fine white wheat at Liverpool is 11s.

Western canal flour 37s6d@38s. Ohio 38s6d. Indian corn continues to advance, and fine qualities of white have realized in some cases as high as 46s.

The provision market has undergone no material change through the week.

The Manchester market dull, but the favorable advices from India have a tendency to maintain prices.

London money market continues as stringent as ever, and it has been expected that the Bank may be obliged to advance the discount rates.

All foreign stocks are inactive, and prices tend downward.

### Arrival of the Baltic.

The Baltic arrived at New Nork, Nov. 14th.

The latest news by submarine telegraph from the continent states that the Turkish cavalry and infantry corps crossed the Danube on the 27th, and took possession of Kalafat, and more are still passing. The Russians are still gathering around Kalafat, and a collision was expected on the next day. 20,000 Turks crossed the Danube near Nidan on the 28th, and occupied Kalafat with collision. The Russians had retreated.

A despatch has been received at London, dated Constantinople, 22d, stating that the Austrian Envoy had submitted to the Sultan a draft of a note from the four powers. Said note had been previously accepted by Russia.

The Times thinks negotiations may prevent general war.

Mr. Soule had presented his credentials to the Queen of Spain, and was graciously received.

Mr. Heap, U. S. Consul at Tunis, died suddenly.

Liverpool Market.—All articles of provisions dull. Demand for wheat and flour mostly runs on the best qualities, and the tone of the market follows closely the tenor of the advices received from the coast. Quotations may be called :—U. S. white wheat, 10s 6d@10s 11d; red and mixed, 9s 8d@10s 3d. Western Canal flour, 37s; Baltimore and Philadelphia, 37s 6d@38s@39s. In Indian corn the high rates check business. Prime yellow quoted at 44s, held for 45s ; white 43s 6d and little prime in market.

# Commercial.

### BUSINESS AND FINANCE.

The money market has been somewhat easier in our eastern cities during the past week, and business prospects are brighter. The two California steamers brought over two millions of dollars in gold, and the news from the mines is of a very cheering character, promising large shipments of the precious metals hereafter. The Collins steamer took out on Saturday last $401,000 in ingots and specie. The large receipts of gold over the exports, in connection with a still further advance in breadstuffs, is turning the financial tide somewhat in our favor, or at least checking its heretofore rapid ebb from our own shores.

The over-trading, over-speculating mania, which has raged for two or three years past in our country, is receiving a salutary check, which under a less favorable combination of circumstances would have produced a national bankruptcy. The millions which the Treasury has accumulated, and is now gradually disbursing, the large receipts from California, and the foreign demand for American breadstuffs and American cotton, are copious fountains of supply to the enormous drain made upon our finances in payment of our indebtedness abroad.—The uncertainty of European affairs, the stringency of the money market abroad, and the doubtful character of many railway and other securities, have shut down the gate for the present on their negotiation abroad, and checked the headlong race towards a general ruin of American credits. Many new and partially finished enterprises will suffer from inability to negotiate their bonds, but bitter medicines must be taken to cure chronic diseases. Better that a limb be amputated, than that the whole body perish.

The *Owego Bank* has not failed, as was reported. The story arose from the failure of their redemption agent in New York, which was occasioned by his over-speculations in railroad securities. The Bank immediately tranferred its agency to the Metropolitan Bank, and its bills are now redeemed at their counter. The holders of bills on the Patchin Bank of Buffalo will lose nothing if they retain possession of them until the bank department makes arrangements to redeem them. There are ample securities in mortgages and public stocks deposited with the *Controller* to protect bill-holders, and they will be wise to hold on and not submit to a shave. The bills will of course be at a discount at present, in consequence of the cloud restiug upon the credit of the bank, but time will set things right so far as the redemption of its circulation is concerned.

Money is tight in England, and bullion is moving towards the Continent from the vaults of the Bank of England at the rate of half a million pounds sterling a week; and the bank officers are talking of another rise in discount rates (now 5 per cent.) in order to check the drain upon their coffers.

The exports from New York for the week ending Nov. 12, were about two million dollars, principally in the three items of cotton, wheat and flour.

The stock market is more active, and sales are at an advance. New York Central Railroad stock is about 111¾; Erie 76; Hudson River 68; and other stocks in proportion.

# Market Intelligence, &c.

Rural New-Yorker Office,
Rochester, Nov. 16, 1853.

The price of breadstuffs again went up during the past week, with great activity in the markets, under the influence of foreign advices by the steamers Franklin and America. Flour advanced a quarter of a dollar a barrel, and wheat five to six cents per bushel—a few choice lots selling here as high as $1,56; but advices, however, per steamer Baltic, stating a dullness to exist in the English markets, has had a tendency to weaken prices, although as yet there has been no actual decline. Flour is quoted at $7a7,25, and wheat $1,50@1,54. No change in other grains.

Salt has advanced to $1,81 per bbl and a rumor is afloat that the manufacturers at Syracuse are about to put on another sixpence.

Eggs are three cents a dozen higher than last week.

Hay unchanged, but more active; tendency in price, if either way, upward, at least that is what *sellers* say.

### NEW YORK MARKET.

NEW YORK, November 15, 1853.

Flour—Market for Western and State opened buoyant, and closed dull and hardly so firm. Canada steady. Sales 600 bbls at $7@7,06. Sales Western Canal 13,000 bbls—$7 @7,06 for common to straight State, part to arrive; $7,06 @7,18 for mixed to fancy Michigan and Ohio.

Wheat—Decidedly better, and in good demand for export. Private advices by the steamer are favorable, and the decline of yesterday is recovered. Sales 135,000 bu.—$1,46@155 for red and mixed Western; $1,65@1,68 for fair o good Ohio; $1,74@1,75 fair to good Michigan; $1,77@ 1.80 fair to prime Genesee; $1,75 choice Canadian; $1,78 @1,75 for white Pennsylvania, in part to arrive.

Barley—Not plenty and firmer. Sales 3,100 bush. good four-rowed, to arrive, at 86c.

Oats—In demand at 47@50c.

Corn—Dull, but holders are firm. Sales 17,000 bush.—79@80c for unsound; 80½@82c for white Southern, $1@82c for round yellow.

Provisions—Demand for pork limited at $15,25@17 for mess; $12,50 prime.

Lard—Dull at 10¼@10½c.

Butter—Unchanged.

### ALBANY MARKET.

Albany, Nov 14.—There is no marked change in the general features of our market. The demand for flour is limited, and with the exception of wheat the demand for grain is fully equal to the supplies.

Flour—Ordinary to straight State $6,75@7; mixed Ind. and Mich. $6,87@7; straight Indiana and Michigan $6,87@ 7; favorite State $6,87@7,12; common to good Ohio $6,75 @7; fancy Indiana and Mich. $6,87@7; fancy Ohio $7,00 @7,25; fancy Genesee $7@7,25; extra Indiana and Mich. $7,12@7,37; extra Ohio $7,25@7,37; extra Genesee $7,25 @7,75.

Corn meal is steady and quiet at $1,56@1,62. Buckwheat flour not plenty and firm at $2,25@2,37.

Grain—Buyers of wheat do not meet sellers, and the market is quiet. Receipts are moderate. Prime Genesee afloat is held at $1,78 Sale on Saturday of 6,000 bu. red Milwaukie at about $1,52½. In corn nothing transpired. Barley firm; good mixed four-rowed, at 82; good prime four-rowed 86c. Oats scarce and wanted at 47@48c. for State and Western.

Hops—Sales 10 bales new at 46c., and for good old 40c. was refused.

Feed—A dull and quiet market with fair supply.

### BUFFALO MARKET.

Buffalo, Nov. 14.—There is a fair inquiry for good brands Michigan flour this morning, and the market firm. Sales 500 bbls fancy Michigan at $6,37½; 800 bbls choice Ohio at $6,25; 350 bbls Michigan at $6,25; 650 bbls Ohio at $6,18¾; 500 bbls mixed brands Ohio, in two lots, at $6,12½; aggregating 2,800 bbls.

Wheat quiet and supply of white limited. The only sale we note is 5,000 bu. white Michigan at $1,50.

Corn scarce and in demand. Some holders out of market, and others ask 66c.—which is a little above holders' views. Oats 35c and scarce. Good clover seed $6,25.

### NEW YORK CATTLE MARKET.

NEW YORK, Nov. 7.—At Washington Drove Yard—offered this day 2,971 Beef Cattle; offered during the week, 3,296. The market for Beeves is not so firm as it was last week. As compared with prices previously quoted, rates are fully 50c per 100 lower. We quote the rauge at 6@9c per lb.

Cows and Calves sold from $30 to $70.

Veal Calves at from 4@6½c. live weight.

Hogs and Shoats 5@5½c.

At Browning's—(Lower Bull's Head)—Offered, 543 Beef Cattle; 75 Cows and Calves, and 6,541 Sheep and Lambs.

Beef Cattle all sold at from $6@8,50 per hundred.

Cows and Calves sold at from $28@50—all sold.

Sheep, from $1,50@5; 1,000 unsold.

Lambs from $1,50@5; 1,000 unsold.

At Chamberlain's—(Hudson River Bull's Head)—Offered, 30 Beeves, 40 Cows and Calves, and 5,000 Sheep and Lambs.

Beeves are firm, at from 7@9½c per lb.

Cows $25. 40@65. Calves 5@7c. per lb.

Sheep $2,75, 4@6,50. Lambs $2, 3@4. All sold.

At O'Brien's—(No. 9 Sixth street)—Offered, 150 Beef Cattle; 50 Cows and Calves. Sales of the former at from $6@8; and the latter at from $20 to $45.

### CAMBRIDGE CATTLE MARKET

CAMBRIDGE, Nov. 9.—At market, 3,395 Cattle, about 2,000 Beeves, and 1,395 Stores, consisting of Working Oxen, Cows and Calves, yearlings, 2 and 3 years old.

Seunet, Cayuga Co., N. Y. JOHN R. PAGE.

**FURS! FURS! FURS!**

THE largest assortment in Western New York, and will be sold lower than can be offered at any other establishment in the city. No Humbug, call and be satisfied.
Buffalo Robes; Wolf Robes;
Jennett do. Fox do.
Badger do. Woolverine Robes.
Bear do. Opossum do.
Lynx Victorines and Cuffs.
Stone Martin, Blk Martin and French do. do.
Swedish and Silver Martin Victorines and Cuffs.
Hudson's Bay Sable do. do.
Mink, Opossum, and Fitch do. do.
Swans Down, Fur Trimmings, Fur Gloves, the greatest variety in the State, and will be sold by the single pair or dozen, 20 per cent. lower than any house in this city.

Our FURS are from the celebrated furriers, Ganther & Sons, Gault, Ballard & Co., Leopold, Lang, Backus, Osborn & Co.; Wm. Moser, and the Hudson's Bay Fur Manufactory—warranted superior in workmanship, color and stock, to any manufactured in this country.

We keep everything in the Fur line, and will retail or job as low as any New York house.
CLARK & GILMAN, 33 State street,
Wholesale and Retail Farriers and Hatters.
Rochester, Nov. 4, 1853. 202-3t

**TRACY FEMALE INSTITUTE,**
NO. 33 ALEXANDER STREET, ROCHESTER, N. Y.

THE second quarter of the present Academic year in this Institution, will commence on Thursday, the 17th of November instant.

For information relative to Course of Study, Terms of Admission, Boarding Department, &c., address
LUCILIA TRACY, Principal.
Rochester, Oct. 29, 1853. 201-3t.

SHEPHERD WANTED.—Wanted, an experienced Shepherd, to take charge of a flock of Sheep near Boston. Address with terms and reference to HOVEY & CO., 7 Merchant's Row, Boston. 202-2tw-1tm.

WHEELER'S HORSE-POWER.—I have one of Wheeler's Double Horse-Powers, in prime order, which I will sell for sixty dollars. Terms, cash—or six, nine or twelve months credit. J. W. DICKINSON,
201tf. Caledonia, Livingston Co., N. Y.

SUFFOLK PIGS.—10 pairs of purely bred SUFFOLK PIGS, four months of age. Also breeding Sows for sale by GEORGE HUNTINGTON.
Walpole, N. H., Oct. 15, 1853. 200-4t.

50,000 CHERRY SEEDLINGS for sale, one Summer's growth, large and fine.
200-4t JAS. C. CAMPBELL, Rochester, N. Y.

**SUFFOLK PIGS.**

THE subscribers are prepared to receive orders for pure Suffolk Pigs, bred from stock imported by the late William Stickney in 1848,—also by the subscriber in January last. Address
JOSIAH STICKNEY, Boston or Watertown,
or ISAAC STICKNEY, Boston, Mass.
Boston, August, 1853. 190-13w-1m

**Ornamental and Domestic Poultry.**

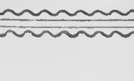
THE subscriber having invested a large amount in this business, is now prepared to fill any orders which he may receive. The celebrated Brahma, Sumata, Game, Palmer, Marsh and White Shanghais, with many other popular varieties, are from the yard of C. C. Plaisted, Esq., Great Falls, N. H., and of course cannot be surpassed in the world. My Imperial Cochin China Fowls are from Col. B. P. Johnson, his stock imported last year, '52, from the best breeders in England. All who well know Col. J., will understand that he has the best or none. My black Spanish are quite late, and will not be ready for market before next spring. They are from Mr. John Giles, late imported, the best blood in the country. These birds are so fast coming into repute that the price will doubtless run high for some years to come, as will also be the case with the Brahma, Sumatra, Game, &c. All persons purchasing fowls from me, can enjoy the benefit of my advertising, in case they wish to sell Chickens next year.

I am quite sure that our southern and western fanciers can be better suited here than farther east, as the long distance on railroad much injures the health and growth of the fowls.

As there are many fowls in market which have no claim upon the public favor, I will give my patrons something more tangible than my own words, for

"If self the wavering balance shake,
It's rarely right adjusted."

I am therefore permitted to refer all who entertain any scepticism, to the following gentlemen :—Col. B. P. Johnson, Secretary N. Y. State Agricultural Society, Albany, N. Y.; Hon. Ambrose Stevens, N. Y. City; Hon. Lewis F. Allen, Black Rock, N. Y.
Address O. B. EVANS, 214 Main street,
194-3m Buffalo, N. Y., Box 1662.



TO BOOKBINDERS.—FOR SALE—The Tools, Stock and Fixtures in a well established BINDERY, now doing a good business. The owner has been in it for the last twelve years, and only wishes to leave to do other business that will be better for his health.

For particulars concerning the business, address Democrat Office, Rochester, N. Y., or to the subscriber,
F. H. MARSHALL.
Rochester, July 21, 1853. 187-tf

# MOORE'S RURAL NEW-YORKER,

THE LEADING AMERICAN WEEKLY

## AGRICULTURAL, LITERARY AND FAMILY NEWSPAPER.

The Rural New Yorker is the standard journal of its class in America. This is no vain assumption, but fully sustained by its high reputation, great popularity and extensive circulation. As has long been acknowledged by its Patrons and the Newspaper Press, it has no superior as an

**AGRICULTURAL, LITERARY AND FAMILY NEWSPAPER.**

Its leading departments contain more Agricultural, Horticultural, Mechanical, Scientific, Educational, Literary and News Matter, than any other paper in the Union—thus rendering it unequalled in Variety and Usefulness of Contents.

Its Literary Department—comprising Tales, Essays, Historical Sketches, Biography, Poetry, &c.,—is conducted with taste and discrimination, and embraces a carefully prepared variety of

**CHOICE READING FOR THE HOME CIRCLE.**

Aside from the intrinsic value of its Reading Matter, the ample pages of the Rural are interspersed with many Appropriate and Costly Engravings—including illustrations in Agriculture, Horticulture, Rural Architecture, Science, Biography, Natural History, &c.

As a Newspaper the Rural New-Yorker is also most valuable, each number containing the

**LATEST AND MOST IMPORTANT NEWS,**

Briefly yet definitely stated—including reliable reports of the Grain, Provision and Cattle Markets, &c. It is independent and out-spoken—condemning humbug and quackery, and fearlessly and faithfully advocating the Best Interests of the Rural Population. In judging of it comparatively, remember that the Rural New-Yorker is not a *monthly*, of only twelve issues yearly, but a

**LARGE AND BEAUTIFUL WEEKLY OF FIFTY-TWO NUMBERS!**

The Fifth Volume, commencing Jan., 1854, will be printed on New and Handsome Type, and otherwise materially improved. An actual *increase of over Six Thousand Subscribers* during the past year, stimulates and enables us to make very liberal expenditures to improve the paper in both Contents and Appearance. With an able corps of Associate and Corresponding Editors, (five in number,) and many talented and experienced Contributors and Correspondents, the Conductor of the Rural is determined to render its whole contents eminently Valuable and Interesting.

**FORM AND TERMS.**

Each number of the Rural New-Yorker comprises Eight Double Quarto Pages (forty columns,) printed in the best style. An Index, Title Page, &c., at the close of each volume.

Terms in Advance—Single Copy $2 a Year—$1 for Six Months. Three Copies for $5; Six for $10; Ten for $15; Twenty for $25. As we are obliged to pre-pay the American postage, our lowest club rate to Canada subscribers is $1,50 per copy. See Premium List below.

Now is the Time to Subscribe and form Clubs to commence with the new year and volume. We confidently anticipate the continued influence of former Agents and active Friends,—while the kind offices of all favorably disposed toward the paper, will be gratefully appreciated.

☞ Specimen numbers, Premium Lists, &c., sent free to all applicants. Subscription money, properly enclosed, may be mailed at our risk, if addressed to

November, 1853. **D. D. T. MOORE,** Rochester, N. Y.

During the past year the Proprietor of the Rural New-Yorker has *paid* nearly *Fifteen Hundred Dollars* in Premiums to Agents and others, and now invites the attention of all interested to the following list of

## Splendid Premiums for New Subscribers!

1. SEVENTY-FIVE DOLLARS, in Cash, to the person sending us the greatest number of yearly subscribers (six month subscriptions to be counted proportionally) to the Rural New-Yorker—remitting payment according to our club terms—previous to the 15th day of April, 1854.

2. FIFTY DOLLARS, in Cash, to the person sending us the second largest number, as above.

3. THIRTY DOLLARS, in Cash, to the person sending us the next (third) greatest number.

4. TWENTY DOLLARS, in Cash, to the person sending the next (fourth) greatest number.

5. FIFTEEN DOLLARS, in Plate or Books, to the person sending the next (fifth) greatest number.

6. TWELVE DOLLARS, in Plate or Books, to the person sending the next (sixth) greatest number.

7. TEN DOLLARS, in Plate or Books, to the person sending the next (seventh) greatest number.

**JANUARY PREMIUMS!**

1. TWENTY-FIVE DOLLARS, in Cash, to the person sending us the largest number of subscribers, according to our terms, previous to the 1st day of January, 1854.

2. FIFTEEN DOLLARS, in Cash, to the person sending the second largest number, as above.

3. TEN DOLLARS, in Cash, to the person sending the third largest number as above.

☞ Persons competing for these Premiums must mail their remittances on or before the 31st of December. They are not excluded from the April prizes, so that one person may secure *One Hundred Dollars, in Cash!*

[In order to give Subscribers, Local Agents and Post-Masters a fair and equal chance, traveling agents, post-riders and citizens of Rochester are excluded from competition for any of the above Premiums.]

**SPECIFIC PREMIUMS!**

In order to reach and reward *every one* who may lend a portion of influence in support of the Rural New-Yorker, we offer to those who do not compete for either of the preceding prizes, the following liberal gratuities :

1st. FIVE DOLLARS, in Cash, or a copy of Webster's Unabridged Dictionary, (or $6 in Ag'l Books) to *each person* sending payment for fifty or more yearly copies (six month subscriptions proportionally,) according to our terms, previous to the 15th of April, 1854.

2d. FIVE DOLLARS, in Books, or four extra copies of the Rural, to every person remitting payment for forty or more subscribers, as above.

3d. THREE DOLLARS, in Books, or a handsomely bound volume of the Rural for 1853, to every person remitting for thirty subscribers.

4. To every one remitting for twenty copies, ($25,) we will give an extra copy of the Rural, and four (the present and three past) volumes of The Wool Grower and Stock Register—or, if preferred, an extra copy of the Rural and $1,50 in Books.

5th. To every one remitting for ten copies, ($15.) an extra copy of the Rural and three volumes (past or present) of the Wool Grower—or, instead of vols. W. G., $1 in Books.

6th. To every one remitting for six copies, ($10,) an extra copy of the Rural, either volume of the Wool Grower, *and* a bound vol. of Genesee Farmer for 1848 or '49.

7. To every one remitting for three copies ($5,) either volume of the Wool Grower, *and* a bound volume of Gen. Farmer for 1848 *or* '49.

8th. To every person remitting for one copy, ($2,) we will give a copy of either volume Wool Grower, *or* the Farmer for '48 or '9, as preferred.

All competitors for premiums are expected to adhere strictly to the following

**TERMS IN ADVANCE:**

Two Dollars a Year. *Three Copies, one year, $5—Six Copies for $10—Ten Copies for $15—Twenty Copies for $25, and any additional number at the same rate. Names of subscribers written on the papers if desired, however large the club. Club papers sent to different offices if desired.*

☞ Specimen numbers, &c., furnished free to all disposed to compete for the Premiums, or who desire to extend the circulation of the New-Yorker. Subscription money, properly enclosed, may be mailed at our risk, if addressed to

**D. D. T. MOORE,**
November, 1853. Rochester, N. Y.

**SAMUEL MOULSON,**
AT THE OLD ROCHESTER NURSERY.
Office, No. 36 Front St., Rochester, N. Y.

IS prepared to furnish inventories, to post-paid applicants, of the present very extensive stock of Nursery items, consisting in part of
120,000 Dwarf and standard Pear Trees.
90,000 Apple Trees.
50,000 Peach Trees.
30,000 Plum, Cherry and Apricot Trees.
Over 100,000 Hardy Evergreens.
Also, extra large Northern Spy Apple Trees, Dwarf and Standard Pear, Cherry, &c., &c.

Also, for immediate effect, a large quantity of extra sized Ornamental Trees, among which are fine specimens of Norway Spruce, Silver Maple, Pawlonias, Catalpas, Mountain Ash, Horse Chestnut, &c.

And a fine selection of Weeping Deciduous Trees, Ornamental Shrubs, Hybrid Perpetual Roses, together with such novelties as may be classed strictly hardy. Also a very limited assortment of half hardy plants of small size, such as Cryptomeria Japonica, Cedrus Deodara, &c., &c.

The amateur wishing prime fruits of well established repute, or the agriculturist needing fine cropping, thoroughly tested varieties, may rely upon the most careful execution of their orders.

The Ornamental items are entirely grown in the Nursery, consequently none of the heavy losses are sustained that usually occur to recent imported subjects.

The Evergreens are very robust and admirably furnished to the surface of the ground, none presenting the naked stems usual to imported plants.

Dealers are invited to give a call before making their purchases.

☞ Peach and Plum pits wanted.
September 1, 1853. 196-tf.

**NEW YORK STATE AGRICULTURAL COLLEGE.**

AT a meeting of the Trustees of the State Agricultural College, on the 21st Sept., 1853, it was resolved, to arrange and prepare the Veterinary department of the College, simultaneously with the earliest courses of instruction; and that every subscriber to the funds of the College be and hereby is declared to be entitled to the use of the Hospitals of the said department, for all Medical or Surgical treatment, necessary and proper for such diseases or accidents as may afflict any animal belonging to the said subscriber: to be subject to such rules and regulations as the Trustees may from time to time appoint and direct.

No cost or charge shall be made for Medical or Surgical advice or treatment. The necessary expense for the sustenance of animals received into the Hospitals under this resolution, shall be paid by the proprietors of the animals respectively. By Order.
197-4t J. W. BACON, Sec'y.

☞ PEOPLE'S COLLEGE OF THE STATE of New York, Incorporated April 12, 1853.—This Institution has been chartered by the Legislature of this State, for the purpose of reducing the expenses of Academic and Collegiate Education, and thereby open the Halls of Science to all classes of society by reducing the cost of tuition, board and clothing, and enabling the student to defray the greater part of the expense in labor.

Provision will be made to educate young men corporeally and mentally for specific purposes, by pursuing full and definite courses of study for each of the pursuits represented in the College—either Agricultural, Mechanical or Professional—and thus graduates will be qualified for entering at once upon the business of their choice.

At a regular meeting of the Trustees named in the Charter, held at Owego, on the 25th day of May, the following appointments were made :

D. C. McCallum, of Owego, President of the Board of Trustees.

A. I. Wynkoop, of Chemung, Vice President.

Tracy Morgan, of Binghamton, Treasurer.

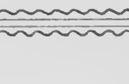
Harrison Howard, of Lockport, Secretary and General Agent.

Agents are being commissioned in each county of the State, that the people may have an opportunity to contribute to the capital stock, which is distributed in shares so small that every individual may become interested in an institution which commends itself to the favorable consideration of every intelligent person.

For further information upon the subject, application may be made, post-paid, to the Secretary, who will send a pamphlet containing the act of incorporation and objects of the Institution, and other needful information.
188-tf H HOWARD, Secretary.

The undersigned, having been appointed Agent for Rochester and Monroe county, will be most happy to furnish any new information desired, in reference to the College, to receive stock subscriptions, (the shares are one dollar each,) or to address audiences, on invitation, explaining at length the plans and objects of the People's College, and also as he views the idea of a true education.
Respectfully, G. F. NEEDHAM.

**MARSHALL'S BOOK BINDERY,**



BURNS' BLOCK corner of State and Buffalo street, over Sage & Brother's Bookstore, Rochester, N. Y.

Music Books, Pamphlets, Periodicals, &c., bound in plain and fancy bindings; old books rebound; Blank Books ruled to any pattern, and bound to order; Public and Private Libraries repaired at short notice. Packages containing directions for binding, punctually attended to.

N. B.—All work warranted, and done at low prices.
April, 1852. [122tf] F. H. MARSHALL.

## YE CANNOT BAR THE SUNLIGHT.

BY MRS. S. WEBSTER LLOYD.

Ye cannot bar the sunlight
From the dwelling of the poor;
It will fall with all its brightness,
O'er the humblest cottage door;
And the stars will shine out clearly,
The moonlight softly fall,
O'er the thatched roof of the peasant,
As o'er the lordly hall.

Ye cannot veil the landscape,
Outspread and varied still;—
The shadow rests in every vale,
The sunshine on each hill.
The mountain in its grandeur,
The foaming cataract's fall,
The beauties of the changing year
Are free alike to all.

Ye cannot quench the light of Love,
Within the poor man's breast;
Nor rob him of the sympathy
That makes his pathway blest,
Nor bid upon his happy hearth,
The darkened shadow fall;
Oh! the choicest gifts of heaven,
Are free alike to all!

Ye cannot bar the sunlight,
Of God's approving smile;
He hears the penitential prayer,
And answers it the while.
In poverty, but pure in heart,
While here on earth we stay,
Are higher joys than wealth or power
Can give or take away.

## TEN THOUSAND PER CENT.

BY EDWARD WEBSTER, ESQ.

A MAN can earn a living on the granite hills of New Hampshire, and lay up money besides, if he is industrious and economical; but it is usually a slow process in that locality. He digs the dollars out of the soil at the hardest; and generally if he succeeds in educating his family, takes care of the old folks, and, after they have gone to their long rest, and his own locks in turn have become white, if he saves enough to give each of the girls a "setting out" and the boys one or two hundred dollars each, and then turns over the homestead to one of the number with the express reservation of a snug corner to himself, and the partner of his joys and sorrows for the remainder of their days, he has done all that can reasonably be expected of him. At least this was the case before the era when factory villages with their throngs of busy citizens sprung up in a decade of years, along the banks of a thousand running streams, and the locomotive went shrieking and thundering through a hundred mountain passes before considered too difficult of access even for horse paths. Times have changed under the resistless tramp of human progress, by which now and then, a New England farm, like that at Lawrence, on the banks of the Merrimac, ten years ago considered almost too poor to live upon, has become the site of thirty million dollars worth of property.

These are specially favored localities however, although the whole of New England, and indeed the whole country, is vastly benefited thereby; but for every young and enterprising man who has remained at home and done well, a hundred at least have gone West and done better. A rich soil, cheaply purchased and easily tilled; an active market, readily reached through improved natural and artificial channels of transportation — have poured wealth in upon the hardy settler and remunerated him ten thousand fold. He fells the forest and lets in the light of day; clears his fields, makes his fences, and erects his first rough tenement, and before he has time to take breath or look around him, great communities rise up on all sides like exhalations of the morning mist. The rise on the value of his property makes him rich. Half a century ago the Genesee Country was on the verge of civilization, and now that very civilization is stretching its Briarian arms two thousand miles further towards the setting sun!

"FANNY," said a stout New England farmer to his wife, some forty years ago, "we had better go West. We can get a living here I know, and save a little money too perhaps, but you, as well as I, have to work like a slave for it; and unless we calculate closely as to every cent, we do not make the year come round. I can sell out here, pay up all my debts, and get West with my team and two hundred dollars. That will buy us two hundred acres of as good land as ever lay out doors."

"Where will you go, RICHARD?" inquired his wife.

"To the Genesee country; I should'nt be surprised, if all is true I hear, that the land which I can get for a dollar an acre now, would double in value every ten years."

"That would be sixteen dollars an acre in forty years," observed his wife. "You are now twenty-five years old, and it takes some stretch of faith to believe you will make your investment bring in sixteen hundred per cent. by the time you are sixty-five. I too, have heard of that terrible Genesee country, and rather think, instead of our making money at that usurious rate, we shall much more likely be bored through by musquitos, devoured by bears, shaken to pieces by the ague, and roasted alive by savages. Besides, it is too far off from the dear old homestead, where we were born, and have lived, and loved; where our parents lived before us, and where they died; where the turf is yet ungrown above their graves, and the little grave of our dear and only child. It will take a month at least to go thither, and there is not the remotest probability of our ever coming back, even for a visit, and there is no mail or other means of communication! Think better of it, dear RICHARD; we are happy and contented here, and we had better not exchange an humble certainty for a flattering uncertainty!" And the dear young wife kissed her husband's cheek, and as is usual in all such cases, brought him round — brought him round for a time, but the old vision haunted him still, and, as is also usual in all such cases, he in his turn brought her round.

Behold them then, about the year 1810, after "pulling up stakes" at the old homestead and bidding a tearful, and as they supposed in all probability, a last farewell to friends and kindred—after toiling westward with an ox team for a month over execrable roads, and for the last hundred miles over no roads at all—finally settled in a log house on a two hundred acre lot, amid the grand old forests of the Genesee, not an hour's ride from the place of our present writing! A place now numbering its fifty thousand citizens, with its rushing tide of business, chafing and roaring around us like the sea! It was lonesome and sickly for a time, and both of them were homesick for many a day. Bears and savages did not molest them, as the wife had feared, but the ague and the musquito were their tormentors, showing the wife's fears to have been at least half true, which is an unusually large per cent. to prove well founded. But in a brief period of time—almost too brief to be called a period—other lights broke in upon the forest; the smoke of other huts arose in the wilderness, and Nature in her savage moods began to tame down under the disciplining hand of civilization.

"We have been here now five years," said RICHARD to his wife, after that period had elapsed; "we have shaken the ague quite out of our systems, or the sunlight which we have let into the forest has driven it away, and we are beginning to live. I have been offered five dollars an acre for my farm to-day; shall I sell? Four hundred per cent. profit in five years is no bad adventure; it beats sixteen hundred per cent. in forty out of sight!" The brilliancy of the speculation quite captivated him, and he was very much inclined to close with the offer, but his wife this time looked into the future with a more prophetic eye.

"RICHARD, do not sell," she said; "the farm will advance *ten thousand per cent.* within the time you set for it to gain sixteen hundred! There will be a daily stage coach and a weekly eight-horse team between here and Albany within ten years."

"Ha! Ha! Ha!—He! He! He!—Ho! Ho! Ho!" roared her husband. "Why, FAN, you are going mad! I will swallow a four-horse coach and an eight horse team if that event takes place within our natural lives; and as for the ten thousand per cent. I will eat in coppers all we ever get offered for our farm over fifteen dollars per acre!"

The wife did not lose her temper at this boisterous exhibition of her husband's merriment, (for she was a good natured, patient and loving wife, like many others all of us know,) but answered complacently: —"We have seen stranger things than that, even in our time; and if ten dollars an acre is the highest valuation we shall ever see, it is better not to sell. We have become acclimated now; our two children have been born and passed the trying period of infancy under the influences of this Western sun; we have a good home and a farm, that with careful tillage and improvement will become second only to the Garden of Eden. We have good neighbors all round us now, and can live here in comfort, raise all we want with little labor, and rear up our family.—We are rich, dear DICK, and what can you ask for more? I yielded my wishes and inclinations to yours, in coming here — yielded them to our advantage, I grant—and it is my turn this time to prevail." And she did prevail. Her husband was persuaded and did not sell.

The project was soon after started, and for years agitated, of uniting the great Lakes with tide water by means of a canal. The matter was made at that time, as the enlargement is at present, a political issue, and the foot-ball of rival parties. Demagogues sneered at it, and grave Senators at the State capitol pronounced it a hair-brained scheme. Some contended it never could be built, and others said it never could be filled. One hoary-headed caviler in the upper house remarked that "if it is built the tears of our constituents will fill it." But there were some indomitable friends of the great measure, who looked into the future with prophetic eyes, and though oft defeated and beaten back, never yielded a point until their final triumph.

"They never will build it," said RICHARD to his wife one evening, after he had been reading a speech of DEWITT CLINTON on the subject; "that fellow must be mad, and yet his argument is almost conclusive enough to convert a Pharisee."

"I think they will build it," rejoined his better half.

"I'll drink all the water they ever bring in a canal through the Lockport ledge!"

"Be careful what you promise," replied his wife; "you have had seven years, since a daily stage, and eight-horse teams by the score, commenced running between this place and Albany, to swallow one of each, and you have not done it yet; and the prospect is you will have to digest several tons of copper ere long, for the price of land is even now treading close on the limit at which you are to begin! How much was it old SYKES's check in your face this morning for your farm?"

"Fourteen fifty," answered RICHARD. "It was a rash promise, wife, that swallowing business, and I will pay the forfit;" at the same time giving her such a rousing smack upon the cheek that the younger baby, which was sitting on the floor, opened its huge blue eyes in utter and *speechless* amazement.

Time sped past, as it ever speeds tireless and swift, and fifteen years after RICHARD pitched his tent in the Valley of the Genesee, the Erie Canal was finished. He saw the *madman*, DE WITT CLINTON, pass thro' Rochester on the first boat that ever kissed the waters, both of Lake Erie and New York Bay, and he heard the thunder of that relay of cannon which telegraphed by sound the story of its triumphal progress. The State paid RICHARD one thousand dollars for *the damages done to him* on account of the canal running through his farm; the very construction of which increased the value of his land ten dollars an acre within three years. A railroad followed in a brief time after the construction of the canal, and he now sees daily, thousands of passengers and long trains of freight whirled with the speed of the wind, along the very route, where once the absurdity and ludicrousness of the idea of seeing a daily four-horse coach and an eight-horse freight wagon, nearly threw him into fits.

In 1850 a retiring city merchant offered him one hundred dollars an acre, or *ten thousand per cent.* for his farm, which he refused; and he is still living with his wife, a hale and generous pair, on their two hundred acre farm, having also purchased two others of like area, in one of the Western States, to which he has sent two of his sons born and bred in the Valley of the Genesee —who, he says, are to repeat, in their own persons, the story of his life. And they will do it too; for what the Genesee Valley was forty years ago the West is now; and what the former now is, the latter will be hereafter, and in a space of time far more brief. Steam accomplishes in a month what before was the labor of years; and farms at the West will, within the compass of half a human life, increase *ten thousand per cent.* like those in our own loved Valley of the Genesee.

### THE DEAD OF THE MEDITERRANEAN.

THE whole channel of the Mediterranean must be strewed with human bones. Carthagenians, Syrians, Egyptians, Sydonians, Persians, Greeks and Romans—there they lay—side by side, beneath the eternal waters. It may be possible that the corruption of the dead now adds brightness to the phosphorescence of the waves.

All told me in the East that a superstition exists on this subject, which represents the spirits of the departed as hovering, whether on land or water, over where the ruins of their earthly tabernacles are found; so that in plowing the Mediterranean, we sail thro' armies of ghosts more multitudinous than the waves. These patient spirits sometimes ride on the foam, and at other times, repose in those delicious little hollows, which look like excavated emeralds, between the crests of the waves. It is their union and thronging together, say the Orientals, that constitute the phosphorescence of the sea, for everywhere there is light, and the billows flash with the luminousness of vanished generations, that concentrate, as it were, the starlight on their wings.

AFFLICTION.—The hiding places of men are discovered by affliction. As one has aptly said, "Our refuges are like the nests of birds: in summer, they are hidden among the green leaves; but in winter they are seen among the naked branches."

# Wit and Humor.

### THE RETORT COURTEOUS.

I ASKED: you would not give,
Yet ere we parted,
I knew by signs that but in glances live,
You were grown milder hearted.

You asked;—I would not hear,
Pride conquered Passion,
And now I murmur in your longing ear
In a strange other fashion.

You list;—and still you list,
Love loves to listen
Dreams of Young Hero by Leander kissed,
Until the full eyes glisten.

But your Leander lies
Drowned in cold scoroing,
Just at the entrance of his Paradise;—
Hero! good morning! [*Putnam's Mag.*

### CONTEMPT OF COURT.

THE Editor's Table of the Knickerbocker, among other things equally rich, contains the following from a metropolitan correspondent:

"Old John Baldwin, as he was familiarly called, one of the queerest fish found in any sea, was famous as a counceller in courts of 'Justises of the Peas;' in other words, a 'pettifogger,' in one of the southwestern counties of this state. He was a shrewd observer, and knew the calibre and metal of their "Honors of the Quorum' to a T.—When he found his case hopeless, or the scales of justice inclining to his adversary, he would sometimes 'come down' on the worthy Shallow with such a torrent of invective as would almost annihilate him, and furnish a rich treat for the crowd. One, more learned than usual, threatened that if he continued to abuse the court, he should commit him. He boldly defied the dispenser of the statutes, and avowed that he did not know enough to write a 'mittimus.'—The magistrate proceeded at once with the laborious task of copying from 'Edward's Treatise' the terrible instrument, and Baldwin continued pouring out the vials of his wrath upon the 'leather-headed dignitary.' As the threatening document was about being completed with those terrible words, 'Hereof fail not at your peril,' Baldwin deliberately picks up the inkstand and dashes it up-side down upon the commitment, the contents of which, like the recording angel's tear, 'blotted it out forever.' 'There,' says Baldwin, 'I shall be out of the county before you can boil down oak-bark ink enough to write another!'—and before the astonished sage had recovered his sight, (for sundry drops of the murky shower had flown into his eyes,) the great expunger had mounted his horse, and escaped from 'the jurisdiction.'"

### TREMENDOUS EFFECTS OF A KISS.

NICHOLAS and Francis Joseph have met at Olmutz; met and affectionately fraternised. For we are told that "loud applause followed from the spectators as the Emperors publicly *kissed* each other; and then the court dinner followed, the two Emperors spending the evening together in undisturbed *privacy*." But this scene (*see last week's Punch*) our artist has already immortalized, having sketched the imperial couple—even as in an old play—"from behind the arras." The royal salute has been embalmed in the lines of the Austrian Poet Laureat, Doctor Von Wattz:

"Snakes in their little nests agree,
And 'tis a pretty sight,
When Emperors of the like kid-ney,
Do kiss left cheek and right."

But other, and deeper effects resulted from that Imperial smack! And such a smack! As though a red-hot poker should have kissed a barrel of gunpowder. For as cheeks were kissed—

Poland writhed and groaned afresh!—

Hungary clenched her red right hand, and renewed her silent vow!—

Turkey with a flourish of the sabre, set her teeth, and cried "*Allah! Bismallah!*",

Naples—through King Bomba—cried "*Ancora;* kiss again!"

And Aberdeen, folding pacific hands, declared, "it was a sweet sight—unco' sweet—to see sick mighty Potentates in sick *awmeety*."

*Punch*—meeting his friend Baron Shekels at the Countess of Polkherlegsoff—asked the philanthropic Hebrew *his* private opinion of that salute. The Baron pathetically observed "it was a sight worth a Jew's eye. And so it was; even if the Jew had been Judas.—*Punch*.

"SEEN the Crystal Palace, Tommy?" asked a little urchin of a newsboy.

"Oh, yes. I'se been up thar several different times," replied another newsboy, as they stood in Nassau St., waiting for the extras to come out.

"Well, I know a man that would give $5,000 to see that ar' place."

"You do, Jim?"

"Yes sir-ee."

"And you know him, Jim?"

"Yes."

"Bet a quarter on it that you don't."

"Done;" and the money was put up.

"Now, who is he?"

"Why, he's a *blind man!*"

A COUNTERFEIT JOKE.—A capital joke is repeated by the Editor of the Memphis Eagle of his "business partner." Dan Rice had remitted to him, among other sums, a two dollar bill which he returned, informing him it was counterfeit, and requesting him to "send another." It was some time before he heard from Dan again, but an epistle came at last, and an apology for the delay, as Dan had found some difficulty in procuring "*another* counterfeit two dollar bill."

# Youth's Corner.

"Attempt the end, and never stand to doubt;
Nothing's so hard, but search will find it out."

### POETICAL ENIGMA.

The noblest object in the works of art,
The brightest gem that nature doth impart,
The point essential in a lawyer's case,
The well known signal in the time of peace,
The plowman's prompter when he drives the plow,
The soldier's duty and the lover's vow.
The planet seen between the earth and sun,
The prize which merit never yet has won,
The miser's treasure and the badge of Jews,
The wife's ambition and the parson's dues.
Now if your ingenuity combine
A corresponding word for every line,
By all these lessons clearly will be shown
An ancient city of no small renown.

Lysander, N. Y. S. E.

Answer to Biographical Enigma — *Rural New-Yorker for eighteen hundred and fifty-four.*

### A GOOD INVESTMENT FOR LABOR OR CAPITAL.

WITHIN twenty minutes drive of a great market.—The subscriber, being desirous of attending to his interests in the mineral region at the West, will sell his Farm on the Ridge Road, one mile north of Rochester city line, consisting of 130 acres, 30 of which are heavily wooded, worth as it stands, one-third of the purchase money; with over 600 fruit trees of all the varieties worth cultivating, the produce of which when in full bearing, will pay the interest of the entire price of the farm.

The land is in good heart, mostly in grass, and the stumps all out and well fenced.

There are three Houses and Barns on the premises.

Having a great traveled road through its centre, and the River road on the East, it would cut up to great advantage, or might be used for a great Nursery establishment, for which it is well adapted.

If not sold by the first of April, it will be rented for a term of years. L. B. LANGWORTHY.

Rochester, Oct. 25, 1853. 200-tf

### MOORE'S RURAL NEW-YORKER:

A WEEKLY HOME JOURNAL,

For both Country and Town Residents.

PUBLICATION OFFICE,

BURNS' BLOCK, CORNER STATE AND BUFFALO STS.,

ROCHESTER, N. Y.

TERMS, IN ADVANCE:

TWO DOLLARS A YEAR—$1 for six months. To Clubs and Agents as follows:—Three Copies one year, for $5; Six Copies (and one to Agent or getter up of club,) for $10; Ten Copies (and one to Agent,) for $15; Twenty Copies for $25, and any additional number, directed to individuals at the same rate. Six months subscriptions in proportion.

☞ Subscription money, properly enclosed, may be sent by mail at the risk of the Publisher.

Terms of Advertising

ONE DOLLAR per square (ten lines—100 words, or less,) for each insertion,—*in advance.* ☞ The circulation of the NEW-YORKER is much larger than that of any other newspaper published in the State, out of New York city. Only a limited space, however, is devoted to advertisements, and hence preference is given to those most appropriate—such as the cards and notices of dealers in Agricultural Implements and Machinery,—Horticulturists and Seedsmen,—Booksellers and Publishers,—Inventors, etc. All orders by mail should be accompanied with the cash.

To enable us to accommodate as many as possible, brief advertisements are preferred. Patent medicines, &c., will not be advertised in this paper on any terms.

☞ All communications, and business letters, should be addressed to D. D. T. MOORE, Rochester, N. Y.

### THE WOOL GROWER AND STOCK REGISTER.

THIS is the only American Journal primarily devoted to the interest of Wool and Stock Growers, and should be in the hands of *every owner of Domestic Animals.* It is ably conducted, published in the best style, and finely illustrated. Each number contains a careful Review of the WOOL and CATTLE MARKETS, and much other *useful* and *reliable* information which can be obtained from no other source. The Fifth Volume commences with July, 1853.

TERMS:—FIFTY CENTS A YEAR; Five Copies for $2; Eight for $3; Eleven for $4. Back volumes, bound in paper, at 40 cts. each,—unbound at 35 cts., or three for $1.

Published monthly, in octavo form. Specimen numbers sent free. Money, properly enclosed, at our risk.

Address D. D. T. MOORE, Rochester, N. Y.

☞ NON-SUBSCRIBERS into whose hands this number of the RURAL may fall, are requested to give it an examination, and, if approved, their support. See Prospectus, Premium List, &c., on preceding page.

### Progress and Improvement.

### BARN-YARD MANURE.—No. III.

THE first object of the farmer in making manure, will be to give his animals those kinds of food which, other things being equal, contain the most nitrogen. The next most important point is, how to treat the manure so as to retain all the valuable elements it contains, and at the same time reduce its bulk as much as possible by fermentation. The last consideration is seldom mentioned by scientific writers, but it must not be forgotten. It is intimately connected with the expense and profit attending the application of manure. If, as we assert, the carbon of the manure is of little value on a wheat farm, and its water of no value; and if carbon and water compose four-fifths of all unfermented barn-yard manure, as we knew they do, it cannot but be to our advantage to reduce their quantity, if it can be done without loss to the valuable portions of the manure.

The most valuable part of the excrements of animals is the liquid. More loss is sustained by allowing this to run to waste than in any other one thing. Rapid fermentation in a loose heap, is another source of loss. Allowing the eaves water to run on and leach out the soluble portion of the manure is another common mal-practice. These three evils every one familiar with agriculture must have observed. The loss to each individual farmer by such mismanagement is great, and, viewed as a national evil, is most appalling. The direct loss to the farmers themselves, in the aggregate, is immense; while the indirect loss to the country is positively inestimable. To prevent this loss we must, in the first place, save the liquid excrements. This is a problem which has puzzled the most scientific farmers of the age. The difficulty is much greater in England, where turnips containing 90 per cent. of water are used for stall feeding, than with us. Here if the buildings are all spouted, the greater part of the liquid of the animals and the rain falling on the surface of the yard may be absorbed in the course of the year. To do this, the bottom of the yard should be covered with dry peat, muck, saw-dust, waste straw, potato vines and numerous other absorbent substances which can be found on most farms, and which, valueless in themselves, can thus be made into enriching fertilizers. The bottom of the yard should gently slope to one point where a tank must be built. In this the superabundant liquid of the rainy season can be preserved and pumped back on to the heap, when it needs it.

In the second place, we must keep up a gradual and slow fermentation, keeping the heap as near as possible at a temperature of from 90 to 100°. If horse or sheep manure be thrown up loosely, so that there is a free admission of air and moisture, rapid and most injurious decomposition takes place with the evolution of carbonate of ammonia and water. This burning process (for it is nothing less than a slow process of actual combustion,) may be allowed to go on till the heap is reduced to a worthless mass of humus and ashes. On the other hand, if hog and cow manure be thrown into a *solid* heap, little or no fermentation takes place, and the mass will remain in a raw state unsuitable for direct application to rapidly growing plants. The object of the farmer, therefore, should be to mix these several manures together, so that the horse and sheep manure shall act as a ferment and induce the desired decomposition in the hog and cow manure. In this way they will be beneficial to each other, and the heap by spring will be in good condition for direct application to corn, potatoes, &c.—Sheep do not like to lie on a fermenting manure heap. They should, if possible, have a separate yard to run in at night, and the manure they make be hauled back to the common heap as often as practicable, fresh straw being supplied in its place. It is necessary that sheep and cattle should run on the manure heap in order to compress it and prevent too rapid fermentation. If these conditions—spouting the buildings to prevent leaching, having a tank to save the liquid which straw and other absorbents will not retain in wet weather, and mixing the different manures together in a compact heap, so as to sustain a slow and prevent a too rapid fermentation—are complied with, the value of the manure on most farms would be doubled. There is, however, one other point of special importance to which we shall call attention next week.

### TOP-DRESSING,—OIL-CAKE, &C.

MR. EDITOR:—In the RURAL of Sept. 24, you say that "the process of top dressing with manure is little better than lost."—Now, sir, I have for the last 16 or 18 years used all my barn-yard manure as top-dressing, that is, I draw out the manure and put it in a large heap or heaps, in spring. The end of September and early in October, I have it spread over grass land, which is to put in corn in spring, and plow down the manure immediately before planting. I still believe the practice to be good, as during all those 15 or 16 years my crops have, at least, been as good as any grown by my neighbors on similar soil, and surely you must have seen grass greatly improved by top-dressing with barn-yard manure. You may not have seen, but I have, extra crops of wheat raised by top-dressing with barn-yard manure after the wheat was sown, and also put on in winter when the ground was hard frozen. I know of no other way by which my poor land can be made to produce as good crops of wheat as by this way. In no way can manure be made to go over so much land, and raise a first rate crop, as by top-dressing. Try it and you will see I am right. No matter what kind of soil, only have it dry. I have seen it stated in a number of newspapers that LIEBIG says that 22 lbs. of oil-cake will put on as much fat as 56 lbs. of corn meal.

"Some books are lies, from end to end,
And some great lies were never penned."

There never was a greater falsehood penned, than that 22 lbs. of oil-cake is as good to put on fat as 56 lbs. of corn meal. I have for the last 16 years fed from 10 to 20 tons of oil-cake every winter, and have tried it with cattle of all kinds, from calves to oxen, and I yet cannot say whether oil-cake meal or Indian corn meal is best, bushel for bushel. Oil-cake meal will start cattle a little sooner than corn, but I have always observed the drovers, on handling, prefer those fed on corn meal. I have very often fed part of my cattle all oil-cake meal, and part corn meal to try to prove which was best. If there is any difference, I would give the preference to the oil-cake, but there is very little difference if any.

A word or two to the *Genesee Farmer*.—I noticed in one several months ago that a correspondent made inquiry through the *Farmer*, how oil-cake should be ground to feed sheep. The editor did not let it come before the public without his answer accompanying it, which was, "That for sheep, it should be ground into half inch lumps, as sheep liked something to nibble at, and that they were not very easy to learn to eat oil cake."

Now, I believe you might as well offer sheep musket flints to eat as offer them half inch pieces of oil-cake;—they could as readily crush the one as the other, and as for learning them to eat oil-cake meal, that I have never found any trouble. If they refuse it, any farmer of the commonest observation, knows that the horse, the ox and sheep never refuse oats when in health. If either refuse oil-cake meal, all he has got to do is to sprinkle oats over the oil-cake meal once or twice, and he will see sheep and cattle eat it freely. JOHN JOHNSTON.

Near Geneva, N. Y.

REMARKS.—The article from which the extract in reference to top-dressing was quoted, was written by one of the most intelligent practical farmers of Monroe county, and the statement, therefore, is not a mere theoretical deduction, as Mr. JOHNSTON evidently supposes. We have not now space to discuss this subject, and will therefore turn it over to our experienced correspondents.

The newspapers are in error if they ascribe to LIEBIG the statement that 22 lbs. of oil cake is equal to 56 lbs. of corn. BOUSSINGAULT, generally the most reliable authority, on such subjects, states that 22 lbs. of oil cake is equal to 59 lbs. of "new maize." He gives this as the result of actual experiments on his farm at Bechelbronn.

He states that *theory* would make 22 lbs. of oil cake equal to 70 lbs. of corn. This is correct if the theory that the relative nutritious value of food was in proportion to the nitrogen it contains, was true, but Mr. LAWES experiments on sheep feeding show that this is not the case, and we are inclined to think that the nutritious quality of corn is nearly as high as oil cake. Yet, the farmer who should feed corn instead of oil cake, when both are at the same price, would make a great mistake, for we have no hesitation in saying, that one load of manure made by animals eating oil cake, is equal to two made by animals eating corn. Will Mr. JOHNSTON give us his experience on this point?

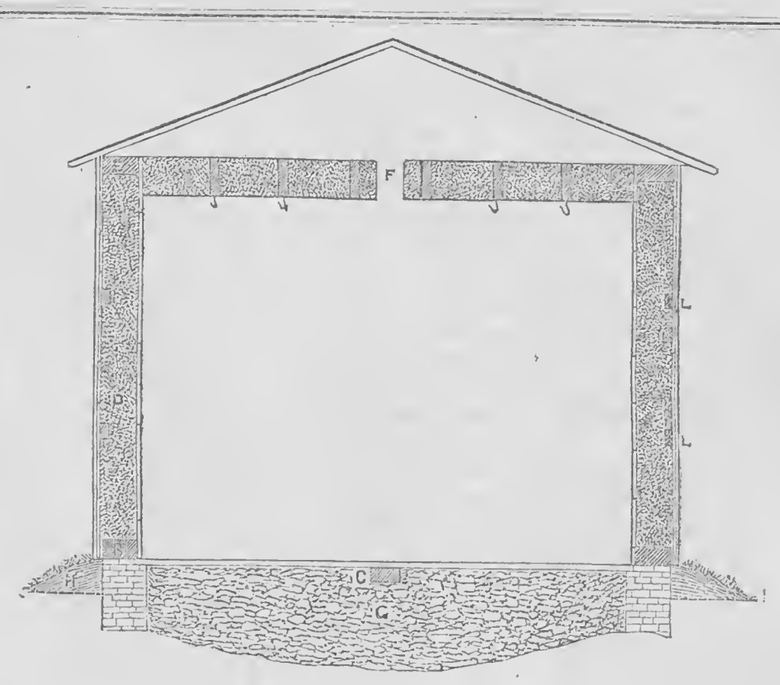
The article quoted from the *Genesee Farmer*, was from the pen of the writer. We do not think that sheep will eat leaden bullets, *but we know that sheep will eat half inch lumps of American oil cake.* We were in the habit, at Rothamsted, of feeding from 50 to 100 tons of American oil cake, each year, to sheep, and merely crushed it into half inch lumps, avoiding grinding it as much as possible, the shepard declaring that the sheep wasted the meal and appeared to like the *lumps* much the best. American oil cake is much better pressed than the English, containing *less* oil, and *more* nitrogen; the English is made in cakes about an inch thick, which were easily broken; the American came in cakes similar to a small cheese, and was so hard that it had to be broken by a heavy hammer previous to crushing into small lumps.

### PLAN OF AN ICE-HOUSE.

THE inquiry of your correspondent, two weeks since, relative to the best mode of constructing an Ice-House, recalled a conversation which passed a few days before between Mr. ALPHEUS MORSE of Eaton, Madison Co., and myself upon his ice house, which he said had now been built four years, and during the entire time had not been without ice in it from the first time it was filled. I very naturally inquired how it was built, and for the benefit of your reader, who covets this "cold comfort," send you a sketch showing a vertical section of the house down through its centre, together with a description of the same.

The house is 12 by 16 feet outside and about 10 by 14 feet in the clear, and 8 feet clear in hight, and, allowing 60 lbs. to the cubic foot, will contain of solid ice nearly five tons.

The most favorable site is upon a level or moderately sloping surface, with a subsoil free from hardpan, or at least so pervious to water that the small amount formed will pass gradually off without a drain. But when a drain is necessary it should be made



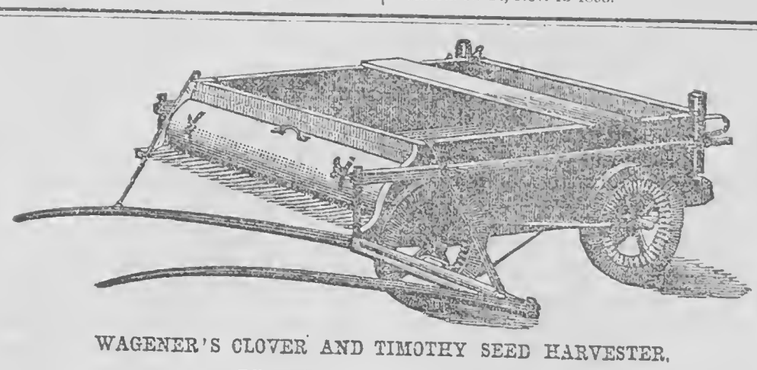
VERTICAL SECTION OF ICE-HOUSE.

as for laying an open throat, and then be filled in for a foot or less at the bottom with fine gravel; for in building an ice-house one fact must be kept steadily in view, that the *air* within the house will be heavier than that without during summer and will gradually flow out at any opening that may be left at or near the bottom of the building, and its place be supplied with warm air, through the ventilators; hence an *open* drain should be avoided. Beneath the building the soil is excavated to the depth of a foot or eighteen inches and an underpinning laid in lime mortar. The space within the wall is filled even with its top, with small stones, G. A single joist is placed across the middle to keep the plank floor level, which rests directly upon the loose stone, C. In an open subsoil the space among the stone beneath the floor affords sufficient drainage. The earth removed from beneath the building is drawn up against the wall as seen at H. The sills are 12 inches wide, as are the joists over head and the plates; studs are framed into the sills and plates on both the out and inside, and good common boards are nailed upon the inside of the inner set of studs, crosswise; and two thicknesses, the first, thin stuff and the other breaking joints, are nailed up and down upon rib pieces, L, let in to the outside tier of studs. The space between these ceilings is fill with tan, as is the space overhead, formed by boarding both above and below the joists. At F is a ventilating passage into the loft, and from the loft the ventilation is effected through open Venetian work windows, one in each gable end. Into the joists are driven hooks for hanging fresh meat, which keeps well for almost any length of time in the hottest weather.

Saw dust is used for packing the ice in; the same being used from year to year after being dried for the purpose. I should say that the door is, like the walls, made double and filled with dry tan. In order that it may open and shut, the door should be made beveling upon the edges, at least the front edge.

Upon a dairy farm a good ice-house is indispensable, both for cooling milk for keeping it sweet through the night for cheese, and for keeping milk, cream and butter at the proper temperature; beside a crystal lump of ice drops into a pitcher of water upon a hot summer's day with a sound peculiarly cooling, and portentious of a refreshing draught. A plate of butter on a similar occasion which gives strong symptoms of *running*, is most effectually brought to a stand, by the application of a small, flat piece of ice. GURDON EVANS.

Eaton, N. Y., Nov. 13 1853.



WAGENER'S CLOVER AND TIMOTHY SEED HARVESTER.

WHY do not all farmers grow their own clover seed? we have often asked, and been generally answered—"It pays very well, but then it is so much trouble harvesting, and such nasty dirty work thrashing and cleaning, that most of us prefer to buy seed of those who make a *business* of growing it." This was a regular knock-down argument, and cut short our enthusiastic calculation of how much the country would gain if clover seed growing were more general; thus, if farmers raised their own seed, they would not be so sparing of it, they would sow clover oftener and more acres each year, and this plowed under, or eaten on the farm, would greatly increase the wheat and corn crops, and so the whole universal Yankee nation and the rest of mankind would be enriched simply by every farmer growing his own clover seed. The objection of Squire DREADDUST, we say, upset this glorious calculation, and things remain as they were before.

Happily Mr. WAGENER, with his clover seed harvester, steps in at the right time, and with his assistance we will again urge our suit. This machine—consisting of a simple frame and box, mounted on wheels, with a cylinder in front, set with spiral knives acting in concert with curved spring teeth in combination with a straight knife, forming a perfect shear—cuts off the heads of the clover and deposits them in a box, leaving the clover stalks on the land, to be plowed in as manure for the succeeding crop. The seed is easily thrashed out and cleaned from these heads, and thus, with this machine, the great practical objection to growing clover seed—the trouble of harvesting, thrashing and cleaning—is removed. The machine is drawn by one horse, and will harvest ten acres per day. It is so constructed that it can be adjusted by a lever, on the left side of the box, to suit the height of any particular crop of clover or timothy. The teeth are made to spring and vibrate, so that it is said not a ear of clover escapes cutting, or the teeth become clogged. It is the invention of J. A. WAGENER, of Pultney, Steuben Co., N. Y.

T. G. STEADMAN, Holley, N. Y., exhibited a machine very similar to this at the Monroe Co. Ag. Society's Fair in '52, since which time we have not heard of it.

### ECONOMY IN THE USE OF FUEL.

Who does not love a wide hearth with a large, long log, blazing away in a farmer's kitchen, on a long, cold winter's night? If we could afford it, we would never adopt any other means of warming a room; but this luxury is confined to a new country, and, with most of us, has passed away with the good old times we read of. We hate a stove most cordially. We must admit, nevertheless, that a properly constructed stove affords the most economical means of warming a room,—a hot air furnace, perhaps, excepted. Granting then, that we must use stoves, what is the most economical method of heating them? Many of our citizens are using coal, preferring it on the score of cheapness to wood. A cord of beach wood (worth $4,) contains as much heat as a ton of bituminous coal, (worth $5;) that is to say, it contains as much carbon. The economy of using coal, then, is not that it is intrinsically more economical than wood, but because it is in a better state for evolving *all* the heat it contains. Wood always contains more or less water, that being converted into steam, absorbs a large quantity of heat, which is a dead loss to the heating power of the fuel. To avoid this loss as much as possible, wood should never be used till it is seasoned, and is as dry as it can be made. In Paris, where fuel is enormously high, wood is frequently dried by artificial means, so as to avoid the loss we have spoken of.

Another practical objection to the economical use of wood is, that when dry, it burns away so rapidly that much of the heat passes up the chimney and is lost. To avoid this, it is common to "shut up the draft." This, as we will show, is, to use a homely phrase, "jumping out of the frying pan into the fire." The heat evolved by burning, may be said to be owing to the absorbtion of oxygen by carbon, the quantity of heat generated being in *exact proportion to the quantity of oxygen united with carbon.* When any substance containing carbon is burnt in the air, the gas which is given off is always carbonic acid, containing six pounds of carbon united with 16 lbs. of oxygen. But when a highly combustible substance, such as dry wood, is thrown into a heated stove, and only a small quantity of air admitted, instead of carbonic *acid* being formed, as would be the case were a sufficient quantity of air admitted, carbonic *oxide* is given off, containing only *eight pounds* of oxygen united with six pounds of carbon. In this way it is seen, *one half the heat of the wood is entirely lost.* Coal is liable to the same loss, though as it is not so inflamable, the loss is seldom experienced to any great extent. With this fact before them, we hope none of our readers will be guilty of the folly of throwing a large quantity of finely split dry wood into a hot stove, and then shut up the draft, to prevent its burning away too rapidly; for under such circumstances half the wood is wasted. We believe good dry hard wood is cheaper than bituminous coal, at present prices in this city. Much more attention, and knowledge of the laws of combustion, however, are necessary to use wood economically than in burning coal. It should be dry, not too finely split, and only a small quantity be put into the stove at once, always allowing free access of air. If the draft is too strong it should be checked by a damper in the flue, and not by shutting up the draft in front.

### GUANO ON POTATOES.

Good Peruvian Guano is one of the best known manures for wheat, always increasing the yield. Wheat, however, generally, does not command price enough to make the application profitable. The comparative price of potatoes is usually much higher than wheat, and hence, it is probable if guano will benefit the potato its use would be profitable. To test this point, H. C. Ives, Esq., of this city, made the following experiment. He planted four acres of potatoes, the soil and treatment being the same, except that on two acres 600 lbs. of Peruvian guano were sown broadcast, previous to drawing out the furrows for planting.

As soon as the plants were visible, the guanoed ones exhibited a richer, darker hue than the others, and continued to grow better throughout the summer.

The potatoes were dug the last week in October, and accurately measured. On the unguanoed two acres, there were 238 bushels, and on the two acres guanoed 410 bushels, making a difference of 86 bushels per acre. The guanoed potatoes are much the largest, with scarcely a small one amongst them. The guano cost in New York, 2½ cents per pound; freight, breaking the lumps, sifting and sowing it would make its cost on the land 3 cents per pound, or $9 per acre. For this $9, eighty-six bushels of potatoes were obtained.

On another part of the farm Mr. Ives made another experiment to ascertain which was the best mode of applying the guano. The potatoes were planted in hills, one part had the guano sown broadcast, as in the first case; on the other, the guano was applied in the hill, placing the guano immediately over the potato, separating them with a little soil, as it is known that immediate contact is injurious to the sett. The potatoes with guano in the hill, *were much better than where it was sown broadcast.* Four rows left unguanoed were not more than half as good as where guano was applied.

### BURYING TURNIPS.

I can hardly expect that this will reach any, or scarcely any who have not yet gathered their ruta bagas this season; yet as this hardy plant is generally the last one harvested, and the pressure of other work, and early temporary closing of the season, may have left some fields yet unharvested, I venture to say a word. On a raw day last fall, one of my fellow townsmen came to the field of a neighbor of mine, and finding him alternately employed in pulling and topping bagas by hand, and whipping his hands, sang out, "Why don't you pile them up, and cover them with the tops on? the tops are just as good to feed out as any part." On neighbor B. replying that they would heat and spoil, he was told that he should have fifty cents per bushel for all that spoiled. The weather being favorable for trying anything that would shorten the process, the suggestion was adopted, and followed with the best results. Although the tops when piled by themselves, are sure to ferment, yet when left attached to the root they lie so loose as to prevent anything of the kind. I never use straw for burying bagas, unless I want them to feed out *in cold weather.* All that are to be kept through till spring, I cover with a thin coating of earth. It is enough so that *all* are covered. I don't care how many times they freeze and thaw during the winter, if they are protected from a *dry* atmosphere while thawing. If the frost is conducted out by water or damp earth, the process seems to improve them. Henry A. French.

Grand Ledge, Mich., Nov. 17, 1853.

We have kept ruta-bagas in the way recommended. It is a good plan so far as preserving the roots is concerned, for in no other way will they retain their freshness and lose so little nutriment. Nevertheless we abandoned the practice in consequence of the disagreeable labor of clearing them in the spring from decayed leaves and soil. There is we know a great loss in keeping "topped and tailed" turnips in a cellar or barn during winter and the plan of our correspondent is the best we know of to avoid it.

### THOUGHTS FOR FARMER'S SONS.

Eds. Rural:—On reading H. Greeley's address before the farmers of Indiana, I could but regret the necessity of calling upon those not practicel farmers, for such purposes; and still more, to acknowledge the dishonorable fact, that but few practical farmers can be found, capable of filling such places as well as Greeley did, on that occasion. And then, the return of recollection, from Tomfool's errand, searching in vain among the rubbish, in my small store of knowledge, for a reasonable excuse, for that necessity, when the unreasonable, inadmissible one only existed — ability! superior ability! Just as though the farmer did not possess natural, and could not acquire equal or superior abilities, to any other class of men; and as though some other class of men, had better advantages and opportunities to acquire superior abilities, when neither position is supported by facts but rather the contrary, as Greeley proved, with words that singed, and language too true.

Could farmer's sons, and those just starting on the unrepeatable journey of life, read, realize and understand the true value and importance to themselves, of facts and sentiments therein contained, and apply them to practical use, Greeley would soon find himself superseded in calls before such assemblages, by those better qualified to entertain and instruct on agricultural subjects; as much better as practice helps to perfect in all things. Possessing practical knowledge at home, on explored territory; able to pilot themselves in pursuit of words to express glowing thought and facts that edify.

All the advantages, time and opportunity, are at hand to every farmer's son. All else needful, is to feel the important necessity of improvement to right useful purposes, to be able to say with hearty sincerity—"the wants of our natures are cheaply supplied, and the rest are but folly and care," and "man wants but little here below, nor wants that little long." Avoid as vampires, expensive habits, useless folly and foolish fashions, that impose the heaviest taxes on man, without leaving or returning an equivalent; exacting time without compensation, and talents without reward! Six hours in every 24 of a person's life, faithfully applied to useful employment, at a fair compensation, would produce sufficient to furnish all the necessaries of life and leave a margin for all useful pleasure, leaving 18 hours for improvement, rest and recreation. Believe it, reduce it to practice, and convince the unbelieving, even against hope and desire; the gain will be with the believer, in as much as time well spent, is always gain, and the loss with the unbeliever, because time unemployed is always lost, and time misspent is worse than lost.

Let every farmer's son entertain the firm resolve not to be out-done in moral excellence, or in intellectual abilities, and mountainous difficulties, existing only in imagination, will dwindle into mole-hills in reality.

Marcellus, N. Y., 1853. S. GRAVES.

A Fowl Question.—I wish to inquire of you or some of your correspondents whether, where hens are kept solely for their eggs, as many or more eggs could be obtained without keeping roosters. If not, would enough more eggs be obtained to pay the extra expense of keeping roosters. As large numbers of hens are often kept for their eggs exclusively, I think an answer from some one who has tried the experiment might be interesting to some other readers of the Rural, as well as myself.

Long Island, Nov. 17, 1853. W.

### AGRICULTURAL PROGRESS IN NEW YORK.

We cannot commend the slow progress of agricultural improvement in New York, because the evidence of unskillful husbandry greatly preponderates when we hold an even balance between good and bad farming. The best cultivated districts in Great Britain, France, Belgium, and Holland, are those that produce the most manure, and keep the most stock for that purpose. The extensive turnip culture of England looks directly to this object. The densest peopled nation in Europe (Belgium,) unlike the State of New York, that imports so much meat to supply the consumption of its cities, exports a large surplus of fat cattle to London. Belgium has less than half the area under cultivation, according to its population, that New York has, yet the former has both grain and provisions of all kinds to send abroad, after supplying home consumption. At the last census, New York returned 12,408,968 acres of improved land; being within a very small fraction just four acres to each man, woman, and child within its limits. Belgium has a fraction over one arable acre to each inhabitant. Speaking of "the agricultural produce and practice" of that kingdom, Mr. McCullock says:—"Corn (wheat,) flax, hemp, and *timber*, constitute the most important materials of the agricultural wealth of Belgium. The soil, *artificially* enriched, produces more than double the quantity of corn required for the consumption of its inhabitants." The same reliable author states that the average of fat cattle sold in England for fourteen years by Belgian farmers, was 898,076 head per annum. With them, the urine of a cow is worth ten dollars a year to make grain and meat for exportation. London, Liverpool, and Paris markets govern the price of breadstuffs and provisions to a large extent in the State of New York, not less than at Brussels. With these facts before us, let us see what is the substantial progress of agriculture in the Empire State, according to the best lights of official statistics.

From 1840 to 1845, the number of sheep in the State was increased about 25 per cent.; and so prosperous did sheep husbandry appear to the editor of the *Wool Grower* in 1849, that he estimated the whole number of sheep in the United States in June, 1850, at 30,000,000, yielding two and three-quarters pounds of wool a head. When the census was taken, instead of 30,000,000 sheep, the official figures were 21,620,482; and New York, in place of a continued increase, as was expected, had reduced her flock from 6,443,855, to 3,453,241—a reduction of nearly one-half in five years.

With fewer acres of land under improvement by half a million, the farmers of this State were able to keep 1,584,344 hogs in 1845; while in 1850 their partially impoverished fields kept only 1,018,252—a reduction of 34 per cent. in five years, almost equalling that in sheep.

In 1845, their better pastures and meadows kept 2,072,330 head of neat cattle; in 1850, their poorer pastures and poorer meadows, notwithstanding they had nearly three millions less sheep to summer and winter, yielded sustenance to only 1,876,639 head of cattle. And to cap the climax of New York *progress* in husbandry, the number of horses kept was reduced from 505,155, in 1845, to 447,014, in 1850; and milch cows, from 999,490, to 931,324.

Have the State and County Agricultural Societies in this great commonwealth duly investigated the causes of this alarming decrease in the machinery for making manure? We suspect that they have turned away from the profound study of the science of statistics, to enjoy the light and trivial amusements of common cattle shows.—Whether the cultivators of the earth draw their increased crops of wheat and corn, oats and barley from the natural resources of the subsoil, or from manure honestly applied to the land, who among all the promoters of agricultural knowledge in New York has ever taken the least pains to inquire? Tell us plainly, kind reader, what sort of *progress* those farmers are making who do not purchase imported manure, nor the raw material to form their crops, and do not keep stock enough to replace a tithe of the elements of fertility extracted from their cultivated fields?

Can a cubic foot of any earth in these fields contain more than a quite limited quantity of the precise atoms that go to organize wheat and corn, grass and potatoes? Why are the dung and urine of a sheep worth a dollar a year in Belgium, and scarcely ten cents in New York? Because in Belgium no one is allowed to consume and waste the natural resources of the land that both feeds and clothes an intelligent and moral people. They use the soil, not abuse it; while we both use and *abuse* it.—*Genesee Farmer.*

Remarks.—We perfectly agree with Dr. Lee in regard to the importance of the facts presented in the above article. They are, as he says, worthy of the profoundest study. That the agriculturists of New York, taken as a body, are equal in enterprise, intelligence, ingenuity and thrift to those of Belgium or Great Britain, will not be questioned. Why then does the agriculture of Great Britain surpass that of New York? That it does so in *acreage* productions cannot be doubted. One reason is, that for the last ten years, there have been imported into England and Scotland annually, 150,000 tons of guano, 13,000 tons of rape-cake and 24,000 tons of bones, all of which have been used for manure. In addition to this, 57,000 tons of oil cake, 4,500,000 bushels of linseed, 2,000,000 bushels of beans, and 1,600,000 bushels of peas, are annually imported, which are fed to animals and the manure used to fertilize the farm. Besides these, there is considerable sulphate and muriate of ammonia, and thousands of tons of superphosphate of lime—made from coprolites, Mexican guano, apatite, bones, animal charcoal—and the poudrette of the London manure company, as well as many other fertilizing substances used to enrich the soil. By such means the British farmer gets large crops. More than one-half these crops are raised for feeding cattle on the farm. The turnip crop, occupying one-fourth the farm, and cultivated at a great expense; as well as vetches, lucerne, and clover, tends to enrich the soil and enables it to produce large crops of the cereals.—These cereal grains command *high prices* and the meat, fed on the green crops, sells for *three times as much as we have obtained during the five years preceding* 1850. If Dr. Lee will insure us English prices we will agree to farm as well as the English and Belgian farmers he so frequently holds up to our imitation.

It is not long since one of England's most scientific agriculturists wrote to ask us how it was that American farmers *could afford* to raise wheat at 75 cents per bushel, and meat at five cents per lb. He said if English farmers had their land for nothing, they could not sell their produce at such a price without great loss. We told him that we had millions of acres of fertile soil which were annually sown to grain, without manure, and that we were able to sell the grain cheap, because we adopted an impoverishing system of culture, taking all we could get from the soil without returning anything in the shape of manure. When we have impoverished all our soil in this way, we shall need and shall obtain higher prices. Did we give the right answer? Is it not the competition with rich, fertile western soils that prevents us from keeping more stock and adopting a more improving system of agriculture? Will not these matters right themselves among a free and intelligent community? Does not the fact that the number of stock in New York has diminished during the five years preceding the last census prove, that the production of wheat, hay and other crops raised for *exportation from the farm*, is more profitable than raising cattle and wool? Because the number of cattle in the state has diminished, while the number of acres of cleared land has increased, does it follow that the productiveness of the soil has been curtailed, and that we do not raise as much from the soil now as we did in 1845? It is the opinion of many eminent practical farmers with whom we have conversed on this subject, that their farms have greatly increased in fertility during the last ten years. We think the Patent Office Reports also indicate that such is the fact, at least in New-York, Pennsylvania, Ohio and Michigan.

A Canadian Agricultural Fair.—The Brockville (Canadian) *Statesman*, of the 13th ult., says:—"A Fair (and such a Fair) was held in this town yesterday. We observed on the ground about 15 *Cattle*, some of them looking as if they had just got over a pretty hard winter, and a few "fast nags" (not, however, 2,40 coursers.) Three or four of the *junior* cattle, we have been told, went for a price averaging each about $9 or $10; and a *pair* of horses brought 22l. 10s., or $45 each! The encouragement offered this year to farmers and breeders of cattle was *extensive*, the prizes being so *numerous* and *large* that no one could be got who had the presumption to attempt carrying off any of them. Take it altogether, the af-*fair* was a *p(r)etty* and *imposing* sight. Hold up your head, Brockville, and, and—let it down again as easily as possible."

### SELECTING BREEDING RAMS.

As the subject of sheep breeding is now seasonable, we publish, in addition to our own article on the next page, some valuable hints from the *London Farmer's Magazine.* It must be borne in mind that the writer has reference to mutton sheep which mature much earlier than our fine wooled merinos:

Breeders should be very cautious in selecting their rams. The requirements of their flock of ewes should be particularly noticed, and a careful separation of them made before hiring, so as to ascertain more accurately their precise defects, and to point out with greater certainty the peculiar kind of ram necessary to rectify these defects; this should be done before procuring the ram—not to hire first, and then try and suit the ewes to him afterwards. Never hire or purchase a ram from an unknown flock.—*An inferior ram from a flock of well-known repute will produce better stock than an accidental good one from an inferior flock.*—By all means keep to a good strain; adhere to flocks of well known and deserved celebrity; you are far more certain as to the result. There may be, and often is, much foolish fastidiousness in breeders relative to slight peculiarities in good animals; a spot, slightly discolored leg, or some little defect, is greatly magnified. These are of minor importance in good animals to common flock-breeders—they are important to ram-breeders, and are generally, if not universally, avoided; but no ordinary breeder, need reject a good ram for a slight peculiarity; they will seldom be propagated in the flock, particularly if taken from a good stock.

It is always better for a breeder to hire a ram than to buy one, provided he is guaranteed a good season with him. Rams "now-a-days" are so highly kept, so pampered, that vast numbers of them are very defective stock-getters. On this account it is better to hire than to buy. Shearling or yearling rams are undoubtedly the most active amongst the ewe flock, and are mostly sought after by flock-masters, but a good two-shear ram is to be preferred, if of known character. The shearling may prove right, and all you could wish; the two-shear ram is already proved; besides, his proportions are developed, and you know to a certainty what he is as a sheep. Experienced ram-breeders will generally hire a two-shear or even older sheep on this footing; it must not with them be a matter of doubtful character, and an old sheep well proved, is to them a certain security for future benefit.

A shearling ram is generally supposed to be fully equal to serve from 75 to 80 ewes; but a two-shear ram should not have more than 70 to 75. In all cases, the breeder hiring should see that his rams are in every respect right and active before putting them to his ewes; much disappointment and loss arise from these omissions.

In making choice of a ram to suit the ewe flock regard should be had to every requirement; neither "wool nor mutton" ought to take precedence—both must be held of equal value. If any quality is to be discontinued, or of necessity to be given up for the time, let it be beauty or symmetry, or some minor points; these are truly good in their place; but for these never give up the main qualifications—a good fleece, a fat back, and a full symmetrical proportion, of great substance.

In making choice of the ewes to put to each ram, much may be done to prove the flock. No breeder can find just the ram he wants—the very ram to suit his whole flock; he must therefore have the same due regard to what he most requires, and put his ewes to them accordingly. A "ram-breeder" will very properly put his choice ewes to his best ram, in order to obtain the best offsprings; but a "common breeder" may vary his ewes so as to procure his flock of like make and proportions—a short-legged ram to a long-legged ewe; a full-chested ram to a narrow-chested ewe; a heavy-wooled ram to a light wooled ewe; and so on, as his best judgment dictates—endeavoring to obtain from the male what is wanting in the female.

In breeding what are termed half-breeds great care should be given to obtain rams from good flocks, or the end to be answered in making such stock quickly off is defeated. The very best of rams should be used, possessing every good qualification of wool, mutton, and symmetry. It is quite a mistake to fancy any ram will do for half-breeds; no such thing. We know of half-breed sheep remaining as long or longer on fattening pastures than many much heavier and loss likely feeding-sheep. If half-breed sheep are to retain favor with the grazier, they must be bred with every care and attention to the many qualifications. Many breeders use ram lambs for this purpose; this is wrong, no breeder can tell what a lamb is to make in his future life. In all cases, use the best ram or the best kind of ram you can obtain, and be not too nice about the price. I have known many flocks of lambs make from 3*s.* 6*d.* to 7*s.* per head more than others of the like size, solely from better and more correct breeding; and the difference is far greater as they grow up, and are fattened.

Agricultural State Fairs have recently taken place at Augusta, Georgia, and Richmond, Virginia, which, like all others we have noticed, seem to have been peculiarly gratifying to all interested. The Virginians appear to be particularly proud of their Fair, and say that it shows a great degree of improvement in the agriculture of that State.

Prof. Bolman, of St. Petersburgh, has discovered that potatoes dried in a warm room are the best seed potatoes, the produce of which is never seized with the rot.

### SHEEP BREEDING.

Now is the time for Flock Masters to look well to their ewes, selecting such as possess those characteristics which they desire to perpetuate, and rejecting those that are fit for nothing but the butcher. Sufficient attention is seldom given to this point, for though it is perfectly true that the male, in all animals, is of more importance than the female, yet for the production of perfect animals it is absolutely necessary that both male and female be well bred, and, if not individually perfect in every point, the conformation of the *two* should be such as, when combined, to form the animal desired. Good breeders understand this matter well, and assort their flock into several lots, procuring a buck for each lot with those points strongly developed in which the ewes are most deficient. But a vast proportion of farmers who keep more or less sheep, neglect this matter altogether. They often procure a buck, which, however useful he might be for other flocks, is totally unfit for that which he is intended to serve. Again, in a large flock of ordinary sheep there are often two or more kinds of ewes with characteristics entirely different from each other; hence, a buck that might be beneficial to the one would be altogether unsuited to the other, and more likely to propagate imperfections than to neutralize them, yet how common is it to let the whole flock run together, and have the indiscriminate use of the same bucks. With judicious selection any of our ordinary heterogeneous flocks might in a few years, be vastly improved without any more expense than is incurred by the present heedless, careless, and unprofitable system of breeding.

The present high price of mutton has led many, in this vicinity at least, to cross their common merino sheep with a Leicester or South-Down buck for the purpose of obtaining good sized lambs for the butcher. We believe good mutton will always command a good price, higher than at present, and that this system of crossing fine wooled with mutton sheep will be the most profitable species of sheep husbandry. We do not like to recommend any one to breed from such a cross, yet we are not sure but a little South-Down blood would improve the size, constitution and fattening qualities of our *common sheep*, without materially injuring the quality of wool.

The time to place the bucks with the ewes depends upon the location, the breed, and the object of the breeder. As a general thing it is not desirable to have lambs before there is some grass for the mother, and as ewes go from 22 to 23 weeks, it is easy to calculate in any individual case. In Western New York the first of November is considered best. At this season grass is scarce and innutritious, and as it is particularly desirable that ewes be well kept while the buck is with them, it will be advantageous to give them a little clover hay, oats, peas, or oil-cake, and to keep them at night in dry, warm sheds. It is well to give the buck a little extra grain or oil-cake separate from the ewes. Care and attention to the flock at this season, and during the winter, will be amply rewarded by an increased number of large and healthy lambs, and by more wool of a superior quality. Remember that warmth is equivalent to food, and that salt and water are essential to health, while regularity in feeding is very desirable.

### POLLED SHEEP.

There are two reasons which induce me to offer a few remarks to the Farmer on the subject of Polled Sheep. One is, I believe a decided advantage may result to the wool growing community from a consideration of the subject. The other is, I am now compelled to buy horned rams for a cross of blood, because I cannot get such polled ones as I desire that are not nearly allied to my own stock.

I believe that nearly all middle and long-wooled sheep are polled, while the males of the finer wooled varieties are usually horned.

I have for many years regarded horns on sheep in a domesticated state, as not only useless, but a troublesome and expensive appendage; and in 1845 fortunately getting hold of a very superior polled ram, I commenced to try to breed a flock which should be hornless. I proceeded by not only selecting polled rams, but so far as practicable, perfect polled ewes also; and here let me remark, a ewe that appears to the casual observer to be without horns, is not always a perfect poll. There must be a cavity, instead of a fulness, where the horn usually attaches, or she cannot be depended upon to produce polled lambs with certainty, although the sire be polled.

The result of my eight years' labor is, I do not now have but one horned ram lamb in about ten or twelve; and I do not believe that I have sacrificed one iota in form or constitution, or in quality or quantity of wool.

Some of my objections to horns are briefly as follows:

1. The substance that goes to make horns is the same that enters into the composition of wool.

2. If rams are polled you may let all the pure blooded ones run *entire* to the age of one or two years, and then, any that are rejected as rams will make as good wethers as if gelded while lambs.

3. Where horned rams run in a flock in summer, they are sure to fight, and if they do not kill each other outright, loose the skin about the horns, become fly-blown, and without constant care, more or less of them die.

A gentleman who has been engaged in wool-growing over twenty years, and who keeps near two thousand sheep, told me he annually lost enough rams from these causes to pay all his taxes.

4. Horned rams frequently strike ewes in the side, bruising them, loosening their wool, and occasionally causing them to cast their lambs.

5. You can shelter and feed about double as many polled as horned rams in a given space.

In conclusion, I would say I am always open to conviction. Has any one a reason why sheep in a domesticated state should have horns?—Wm. H. Ladd, *in Ohio Farmer.*

The above article is well worthy the consideration of every sheep breeder. In their wild state, horns may be some protection to sheep and cattle, but in the domesticated state, we can see no possible use for them. Fifty years ago, the common sheep of England were mostly horned, but with modern improvement, horns have entirely disappeared, and no farmer would think for a moment of employing a buck that showed the least indication of being horned.

# Orchard and Garden.

### MANAGEMENT OF HOUSE PLANTS.

Flowering plants are over a source of pleasure, but in winter, they form such a contrast to the cheerless scenes without, as to become "a joy exceedingly." A few of the fair sister-hood — by the brightness of their beaming faces — will give to a corner of the sitting-room a grace and glory,

"Like sunshine in a shady place,"

to which one can turn in the stormiest day for summer thoughts and fancies. Many, very many, of the fair readers of the Rural, think thus, and their rooms lack not this cheap and comely adornment. A state of health and vigor, which at this season is somewhat difficult to attain and preserve, much increases the beauty of house plants, and a few hints on this subject, will be welcome to the many who love them.

Even green-house plants do not grow much in winter. Hence they do not need that warmth and moisture which is indispensable in the full progress of vegetation. It is generally a period of rest with them, and they should be kept cool and rather dry. A temperature of about 50° is better than that of 70° or 80° — between which points a living room is usually kept. But the "season of rest" may be made to vary by early or late potting, and other peculiarities of management, so as to bring some plants into full bloom in the middle of winter. Such, of course, are especially prized then, and it is worth some pains to have a beautiful plant in flower in January. In this case, they need more water and warmth than otherwise, yet not as much as in summer. It does not evaporate as rapidly, and while the soil is moderately moist, no water need be applied. Thorough draining is as necessary as in summer, and no plant should be potted without provision being made for the escape of all superfluous water. Filling one-fifth of the pot with broken charcoal, will furnish a sub-soil of the proper porosity. When it is desirable to keep plants growing, some fertilizing element, such as a weak solution of guano, should be applied occasionally, instead of pure water.

Freedom from dust is of importance to the health as well as the appearance of plants, and frequent washing is the only means of securing this desirable end. This may be effected most conveniently by syringing with *tepid* water; first placing the pot containing the plant on its side, that the soil may not be watered too freely. Those who have no syringe, may use a watering-pot, or any means by which the plants can be thoroughly sprinkled, which answers nearly as well. Many fine plants make but a sorry appearance as ornaments of a room, from the dusty state in which they are allowed to remain,— seemingly as though a coating of lint and dirt was needed as a protection.

Plants should have plenty of light at any season. They cannot flourish without it, and the flowers are destitute of half the brightness and fragrance which they would possess, had they their full share of sunshine. They grow up, too, spindling and tender, and besides being less beautiful, are far easier affected by any and every cause which has an injurious tendency.—B.

### LOW-LIMBED, vs. TALL TREES.

Oak, elm, maple, pine and most other trees, which in a dense forest, send up smooth, bare trunks, that may be measured by tens of feet, will in an open field, if left to themselves, limb out near or quite to the ground. Analogy seems to suggest the propriety of allowing apple trees, in similar circumstances and in our climate, to follow their own modest instincts in this respect, instead of compelling them to Bloomerize, without even a leaf to protect their spindle shanks from the direct rays of an August sun.

On this theory, confirmed by some little observation, I planted an orchard of over one hundred trees in the spring of 1850.— After considerable inquiry among nurserymen, I bargained with the Messers. Lake, of Topsfield, who said they could furnish just what I wanted—*trees not tall enough to sell well!* They were to be two years from the bud; consequently small at best, and still smaller for being "stunts." Some were however, three or four years old—loss attention being paid to age than to the required form of the trees. When they were delivered, Mr. L. pointed to a slim, lank-bodied,-small topped tree, and remarked, "there is a fine one—sold it for 75 cents; but, as it is not taken away, you may have it for 50 cents." I replied "I would like to see it grow with the low-limbed trees I have bought of you for a shilling each, and will promise to set it out well."

Now for the result of four seasons' growth. The tall tree was put in the garden, and in a soil in which a Louise Bonne de Jersey pear, planted near by and at the same time, has added full six feet to its stature; while the twigs of the apple have shot out one, two, sometimes six inches a season; but not enough in the four years to change its original forlorn appearance. The trunk, a foot from the ground, measures six and a half inches in circumference, and is now, as it was when planted, nearly of the size all the way from the ground to the limbs, which branch out 5 feet high.

The small trees were set in a light, sandy and gravelly soil, from which wood had been previously cut; was cleared off and plowed in the fall previous, when a compost of meadow-mud, lime, ashes and leaves, was made into piles, convenient for use in setting the trees in the spring. This is all the "manure" they have had, except what they may have stolen from corn and potatoes, lightly manured in the hill; they have annually been planted among the trees, and one *mulching* of coarse meadow hay. I have measured a row of 14 trees, which I think a fair average of the orchard, and find the circumference of the smallest six inches; of the largest ten inches; average of the whole fourteen, about one foot from the ground, seven and one-half inches. The shortest trunk, seventeen inches; the tallest, three feet; average of the fourteen trunks, two feet three inches. I measured one limb that had grown eight feet in the four seasons, but in most cases I could not decide where the first year's growth commenced. But, take the trees together, the small ones have made about as many feet as the tall one has inches.

The exact circumference of either the small trees or the tall one when planted, is not known; but, while the first have changed from mere bushes to respectable trees, the latter has remained in *statu quo.*

The tall tree has been full of blossoms every spring, but has borne no fruit. Of the small ones, seven bloomed last year, (the third year from planting,) and matured seven apples; this year twenty-one bloomed, but only one apple ripened.

In justice to the tall tree I ought to add that it has sent out shoots every season from both roots and trunk, apparently for the purpose of remedying its unnatural position; but these have been regularly Jack-knifed, to give the tree a "fair chance," and the full benefit of "cultivation."—*New England Farmer.*

Pears.—Why don't all the farmers raise pears? Good pears bring a higher price in this market than any other fruit. Choice Bartlett's have been sold here at 12½ cents each, and a few of another kind at 18¾ cents each. At such prices whoever could raise a crop of them would make his fortune speedily.—*N. Y. Journal Comerce.*

# Domestic Economy.

### TO ROAST FOWLS.

Pick and draw them; be careful not to break the gall-bag in drawing, as if the gall be spilled, it will render any part which it touches bitter; a fowl should be so cleanly drawn as to require no washing, but merely to be wiped out with a clean dry cloth.— Singe them; then press down the breast-bone. Break the legs by the middle of the first joint, draw out the sinews, and cut off the parts at the break. Put the gizzard in one pinion and the liver in the other, and turn the points on the back; put a skewer in the first joint of the pinion and bring the middle of the leg close to it; put the skewer through the middle of the leg and through the body, and the same on the other side; put another skewer through the small of the leg and the sidesman, and another thro' the other side. Cut the head off close to the body, leaving sufficient skin to tie on the back. Suspend it neck downwards.— Baste with butter for some time after putting to the fire. They will require from half an hour to an hour according to the size. When fowls are large they are very good stuffed like turkey.

Serve roast fowls with melted butter or gravy sauce. Before you send them to table, remove all skewers and strings which may have been used in trussing. Fowls and all other feathered animals are served with the breast upwards.

To Roast a Turkey.—Having picked, drawn and singed the turkey, truss it according to previous directions for trusing fowls. Stuff the breast with rich veal stuffing, adding a little sausage meat; sew up the neck. Cover the breast with buttered paper to preserve it from scorching, and roast it to a fine brown. Baste it well with butter; and a little while before it is done, remove the paper and allow the breast to brown. A good-sized turkey will require roasting from an hour to two hours. You must have plenty of good gravy in the dish, and garnish with lemon. Serve with bread sauce.

To Roast Ducks.—Pick, draw and singe them. Cut off the head; dip the feet in boiling water to remove the yellow skin; truss them plump, turning the feet flat upon the back. Stuff the same as goose, and serve with gravy and apple-sauce. An hour will roast a duck.

The Way to Spoil Potatoes.—It is a little singular that many who are otherwise excellent cooks are ignorant of the rich, dry, mealy vegetables, theirs are invariably "soggy" and heavy as bread when the yeast is worthless. Their method of spoiling potatoes after they are well cooked is wonderfully simple. They place over the dish containing them, hot and smoking from the boiler, a *tight cover*, and keep it there—any one can do it, and eat water-logged potatoes in consequence. Better put their cover out of sight, even if the contents of the dish should cool a few minutes sooner on that account. Boiled potatoes intended for the table should not be covered a moment.—*Norwich Examiner.*

# Mechanic Arts, &c.

### LIST OF PATENT CLAIMS

ISSUED FROM THE UNITED STATES PATENT OFFICE

For the week ending November 15, 1853.

Erastus B. Bigelow, of Boston, Mass., for improvement in looms for weaving pile fabrics.

Jno. Gledhill, of New York, N. Y., for improvement in power looms.

Henry P. M. Birkinbine, of Philadelphia, Pa., for supplemental valve to the equilibrium pipe of the Cornish engine.

James Brown, of New York, N. Y., for improvement in daguerreotype apparatus.

Chas. S. Bulkley, of New York, N. Y., for improvement in electro-magnetic annunciators.

Joseph D. Elliot, of Leicester, Mass., for machine for dressing staves.

Franklin Fruit, of Jefferson City, Mo., for improved chuck for cutting barrel heads,

Banford Gilbert, of Pittsburgh, Pa., for improvement in propellers.

Leonard Gilson, of Brighton, Mass., for machine for dressing circular sash, &c.

Daniel H. Hovey, of Kilborn, Ohio, for improvement in machines for creasing straps of leather.

J. Leeds, of Philadelphia, Pa., for improvement in ventilators.

Wm. & Wm. H. Lewis, of New York, N. Y., for improved coating box for daguerreotype plates.

Sergius P. Lyon, of Farmington, Mass., for improvement in self-acting dampers for air-tight stoves.

Wm. Henry Muntz, of Norton, Mass., for improved paddle wheel.

Geo. Phillips, of Philadelphia, Pa., for improvement in seed planting cultivators.

Timothy Randlett, of Enfield, N. H., for improvement in mop-heads.

Robert Sinclair, Jr., and Richard F. Maynard, of Baltimore, Md., for improvement in feed-rollers of straw-cutters.

John H., James M. and Hosea Q. Thompson, of Holderness, N. H., for improved machine for trimming soles of boots and shoes.

Wm. H. Towers, of Philadelphia, Pa., for hot-air registers.

Wm. Townshend, of Hinsdale, Mass., for improvement in looms.

Jon. E. Warner, of Boston, Mass., for machine for finishing the ends of staves.

Henry Waterman, of Hudson, N. Y., for improvement in safety-valves for locomotive engines.

Jon. White, of Antrim, N. H., for improvement in uniting shovel blades to handle straps.

Hosea H. Grover, of North Cohocton, N. Y., for improvement in rotary churns.

Evan H. Branson, of Fredericksburg, Va., assignor to Franklin Slaughter, of same place, for machine for dressing crooked timber.

RE-ISSUE.

Aretus A. Wilder, of Detroit Mich., for improvement in planing machines. Patented Dec. 21, 1852. Ante-dated July 17, 1852. Re-issued Nov. 15, 1853.

### COOKING BY GAS.

Of the complete success of gas as fuel for cooking, we can speak with a confidence founded upon careful observation and repeated experiments. We have eaten meats cooked by this new process, and can vouch for their fine flavor; as for the expense, we can speak with mathematical precision, having carefully computed the cost with Mr. Power and the President of the Brooklyn Gas Co. To cook 3 lbs. of mutton chops takes just 10 minutes of time, and costs only ⅓ of a cent; to boil a kettle containing half a gallon of water, occupies exactly 12 minutes, and consumes less than a cubic foot of gas. To get up a breakfast of four dishes, say one for meats, a second for coffee, a third for potatoes, &c., and a fourth for eggs, or whatever else you please, will cost only 3 cents, and can all be done within 15 minutes. If any of our readers are skeptical on this point, they can easily satisfy their curiosity by a visit to Skinner & Power's Gas Works Fulton street, Brooklyn.

The gas pipes are tapped, and the connection with the cooking apparatus made in the same way that we have described for heating. Fifty dishes can be cooked at the same time, if desired. A fine large turkey was roasted at the Astor House the other day by this process, and those princes of caterers, Messrs. Coleman & Stetson, pronounced this new mode of cooking the most complete and successful in its results that they had ever witnessed. The "days of stoves and cooking ranges are numbered.— The use of gas is to form a part of our domestic economy, and the kitchen will become an attractive place.

Many inventions of a somewhat similar character have been brought before the public, but they have all been radically defective. This is the first time that the gas has been so thoroughly decarbonized that no smoke would gather upon the dish.— Take the clearest gas burner in New York, place polished metal over the flame, and it will be instantly blackened. Take the brightest silver and hold it in the blaze that Mr. Power produces, and it will scarcely dim the surface.

Mr. P. has apparatus for every ramification of the kitchen—oven to heating a flat-iron—that is ever required. An ironing day will soon cease to be dreaded by housewives. He has a smoothing iron constructed in such a manner that it will be heated nearly as soon as the gas is turned on;— the gas is conducted into its body in the manner we have described, and can be graduated at pleasure, the wooden handle through which the gas passes before ignition, is a non-conductor of heat, and the flatiron can be used all day without a holder.

We cannot go into the minute description of the various cooking utensils, but we will say, in brief, that they are all made upon the same principle. The gas of one of our ordinary burners supplies about fifty jets— forming a distributed and attenuated flame —resembling in appearance the bluish alcoholic flame, and saving every particle of heat. The cooking is all done by *downward* radiation; the fire is brought to the meats, not the meats to the fire. In roasting, the *fire* keeps basting the meat all the time, thereby saving the cook all that trouble which he is now compelled to take.

The various jets unite and form a splendid sheet of flame, the heat of which increases in intensity the longer it burns, and which accounts for the great economy of the invention. Every particle of the heat generated is used—none of it being lost as is the case now when the fire is not cribbed and confined.

One of our average gas burners costs about 35 cents for every 100 cubic feet of gas, and as it burns only about 4 feet per hour, and as one burner of the ordinary size will keep the pot boiling, or most any of the dishes going, the economy will be apparent to every reader. A company of capitalists have taken hold of the matter, and will soon erect a large factory for making the cooking utensils, etc.; so that the public will soon enjoy a participation in the benefits of this new and valuable invention. —*New York Mirror.*

### THE SCREW PROPELLER.

Having sketched the progress of Screw Steam Navigation, a short space will suffice for an explanation of what this screw consists, how placed, and in what its great advantages reside. The reader will no doubt gladly be spared a treatise on the resistance of fluid bodies, on positive and negative slip, or centrifugal action. It may be enough to say, that the screw propellers now most commonly in use, are what are termed double-threaded, of about one-sixteenth of a convolution; in plainer language, they consist of two twisted iron blades fixed upon a shaft revolving beneath the water, at the stern. This shaft is surrounded by a a stuffing-box filled with hemp packing, to keep the aperture in the ship's stern watertight; its extremity is set in a socket attached to the rudder-post. The screw itself revolves in that part of the stern of the ship-called the dead-wood, in which a suitably sized hole is cut to admit of its working. It is the thrust, or forward pressure of the blades, or sections of the screw threads, which is effective in propelling the ship.

Numerous trials as to the relative qualities of the paddle and the screw have resulted in a most complete demonstration of the superiority of the latter as an auxiliary power to vessels under canvass. For long sea voyages, in which calms, light airs, or fair breezes are looked for, a screw ship of fifteen hundred tons and three hundred horse power, would be preferable in point of speed and economical working to a paddle steamer of the same size and of three times the horse power. It has been clearly shown that a screw steamer makes as much way under canvas and with half steam on, as without sails and with her whole steam power applied. Indeed, wherever sails can be used at all, the advantages of the screw appear most clearly; even in sailing close-hauled to the wind, a vessel by the aid of the screw may be propelled four knots, when previously making only one knot an hour.

Experiment has demonstrated that an auxiliary screw-power sufficient to propel a ship not more than a mile or a mile and a half an hour, when brought to the aid of the sails, has in reality added three or four miles an hour, to her speed. This is accounted for in the following manner:—when the vessel is propelled by canvas alone, and at a low rate of sailing, the wind quickly rebounds from the sails, and forms a sort of eddy or dead air in their rear, which acts to an extent adversely, for the sails do not receive nearly the whole advantage of the breeze; but, the moment more speed is imparted by auxiliary power, the sails retain the wind longer, having more of it, and there is not the same degree of rebound.— In like manner the sails assist the action of the screw, by enabling it to work upon a larger surface of water, and so extend its power.

It is evident, therefore, that except in running against a head gale, the screw-propelled ship must have the advantage. In regard to the original cost and working the two kinds of steamers, there is an enormous difference. Calculations show that the relative expense of the three classes of ships is as nine for paddle-steamers, to four for sailing vessels and three for auxiliary screw-ships.—*Household Words*

### COST OF A LOCOMOTIVE.

Our first class narrow guage engines, weigh empty, 44,000 lbs., and are worth 16 cents per pound. They will consume one cord of wood and 1,200 gallons of water per hour, and will generate 265,000 cubic feet of steam per hour, of a pressure equal to that of the atmosphere. The heating surface is of the extent of the bottom of a boiler, 24 feet in diameter. The strain upon the iron of the shell of the boiler, is from 6,500 to 11,000 lbs. per square foot under ordinary pressure. There is also an additional strain of about 4,000 lbs. per square foot exerted lengthwise of the boiler to pull it apart crosswise. The whole pressure exerted against all the internal surfaces of the boiler amount to 20 millions of pounds, or 10,000 tons! The usual distance traveled by the locomotive, being in motion but one-eighth of the time, is equal to once around the globe every year. In going 60 miles an hour, 88 feet are traversed per second, 5 revolutions of the driving wheels are made, requiring 20 strokes of the piston, and 20 intermediate periods of action in the valve, equal to the division of a second into 40 parts.

# Educational.

## THE ART OF COMPOSITION.

Eds. Rural:—Permit me to give my views through the medium of your columns, to my fellow Teachers, on the importance of instructing their pupils in the art of composing. To learn to think correctly, spell accurately, and write distinctly, are the most important of all literary acquirements. They are called into constant requisition in the every day business of practical life; and in no way can these valuable acquisitions be so well taught as by writing compositions, and the success of the scholar will depend much on the judgment and skill of the teacher, at the time of his beginning to write.

It is a most arduous task for the pupils at the commencement; they know not what to write about; they generally think it must be something more than common-place things, or every day business, that all are acquainted with,—and what is still worse, they too often think they must connect together a long string of words, even when they have no ideas to convey. This great error too often originates with the teacher, who thinks it a credit to his school that his scholars can write long compositions. I have heard of those who required their pupils (even at their first beginning,) to scribble over three pages of foolscap at each composition. A more absurd or injurious practice could not be adopted. It would be equally as wise of them to give their learners to read for their first lesson, the *tenth chapter of Genesis.* The habit of scribbling words to spin out a long yarn, cannot be too carefully avoided, for it is one that youths are very apt to acquire *without the teacher's assistance,* and ought to be strictly guarded against. It is a most valuable acquisition, for old as well as young, to learn to cease talking when they have nothing more to say, and to stop writing when they have no more ideas to convey.

The first and most important branch of composition writing, is to learn the art of thinking accurately, and distinctly, on whatever is to be written; for that purpose, I advise beginners to write on any thing they are familiar with and understand correctly, and endeavor to have them write it accurately, but as short and concise as possible, using no superfluous words, and then by degrees bring them to write on more profound subjects. All compositions should be carefully corrected, so as to let the scholars see their blunders. Errors in spelling ought to be marked, but let the learners correct them by the Dictionary. Grammatical errors, and blunders in style, ought to be correctly written by the instructor, so that the learners may see their defects, and after they are corrected, let the scholar rewrite them accurately.

It is generally a great inconvenience for timid youths to be required to read their own compositions in school. It is much better, in my opinion, to have the best readers in the school take turns in reading the whole of them — say one this time and another the next; (if the school is composed of both sexes, have the readers the same, so that each sex know not the authors of the others compositions.) The readers ought to have them in time to look them over, so as to be able to read them freely; and thus beginners avoid the inconvenience of having their performances made public, and those who read acquire the valuable art of reading various hand writings.

Monroe County, N. Y., 1853. A TEACHER.

The above remarks from our correspondent are well worthy of consideration. An elegant, simple and perspicuous style of composition, is one of the highest accomplishments of the scholar; and one too which can be acquired by all men of ordinary capacity and ordinary education. It can even be self-acquired, although in that, as in all other branches, the aid of a competent instructor is highly desirable. Parker's Composition, and Jamison's Rhetoric, or any other kindred works on those subjects, carefully studied, and the rules put in practice, will enable any one, with a tenth part of the time required in learning to play the piano, to write with facility and elegance. It requires practice, however, like the manipulations of a trade; for, however well understood may be the theory, that alone will never make a ready writer. As our correspondent truly says, the art of composition "is called into requisition in the every day business of practical life." Letters are to be penned, orders drawn, notes written and endorsed, receipts given, and a thousand other things done, requiring the use of the quill. The next most unsightly thing to "John Smith, X his mark," is a badly written, badly spelled, ungrammatical, wrong punctuated, illiterate scrawl; and it should be banished from reputable society, to wit: the society of farmers, mechanics, and tradesmen. How many thousands of letters more would be written between widely separated friends, by which the golden links of affection would be doubly strengthened, if the friends were not ashamed of exhibiting to each other their wretched compositions, or if it were not such a task to write? The community are losers in many other respects by this deficiency.—The practical observations and valuable hints of hundreds of persons are lost to the world, simply because they feel their own incompetency to put their thoughts on paper. They know full well that the matter would be of great value to the public, but the language in which they would clothe their thoughts might subject them, if not to ridicule, at least to the charge of being illiterate. It is in their case like compelling a good-looking and intelligent man to stay away from church, simply because he has nothing but a beggarly suit of clothes, unfit to be seen in the house of God. If teachers will give more attention to the subject of composition writing, the next generation will not be so lamentably deficient in one of the most important results of a good education.—Eds.

## SPELLING.

It is too late in the day to talk of the importance of correct spelling. He who does not know that, must indeed be of the unteachable sort. The question is rather, "How shall it be speedily and thoroughly taught?" There are many methods in common use all of which should receive more or less attention, with such modifications and changes as are desirable to keep up the proper interest in the study.

*The Good Old Way.*—This consists in giving out a lesson to be studied and when studied according to the directions, the recitation is conducted by the oral method; that is, the teacher pronounces the word and the pupil spells it. This method must ever continue to be the main reliance for teachers generally, as it is by far the most expeditious. More can be accomplished in a given time by this method than by any other now employed. The teacher should be prompt in giving out the word and should rigidly insist on plain articulation, prompt utterance and a regular pronunciation of syllables as the pupil progresses.—He must also see that every pupil pays close attention and spells mentally, every word given to the class. The accomplishment of this requires much vigilance and skill.

*The Sentential Method.*—In practicing this method, the teacher repeats a sentence, and the pupils spell a word each in regular order till it is completed. One advantage is that words are spelled in their appropriate connection and not as mere abstract syllables. Another is, that it secures the undivided attention of the class, and each may be in readiness for his word. It is also valuable as a discipline to the memory.—*New York Teacher.*

## WHO ARE OUR COMMON SCHOOL TEACHERS.

Are they educated men and women?—Have they really *mastered* the common branches? Can they *write* well? Do they understand *business matters?* Have they good common sense? Are they kind hearted? Do they *love* to teach? Are they in office not to get a living easy, but to do good? Do they command respect? Are they *polite?* Are they sons and daughters of intelligent, refined, educated parents?—Yes, often. Not always.

Have you secured your teacher for the winter? A *good* teacher is worth a deal of trouble. If care is used in getting good *cattle,* let care be used in getting good teachers. One winter's school is easily lost by hiring a self-conceited fop, or a wilful tyrant, or a soft dunce, even at a cheap rate. If you want a *cheap* teacher, why not get a cheap one? But who is cheap? Mr. Cost-little Worthless, or Mr. Paid-well Earn-it-all? *Examiner.*

Education.—We recommend the following pithy remarks, taken from *Blackwoods Magazine,* on the subject of *Education* to the consideration of all concerned:—Everybody should have his head, heart and hand educated. By the proper education of his heart, he will be taught to hate what is evil, foolish and wrong. And by proper education of the hand, he will be enabled to supply his wants, to add to his comfort, and to assist those around him. The highest objects of a good education are to reverence and obey God and to love and serve mankind. Everything that helps us in obtaining these objects is of great value, every thing that hinders us, is comparatively worthless. When wisdom reigns in the head, and love in the heart, the man is ever ready to do good; order and peace reign around him, and sin and sorrow are almost unknown."

Worthy of Imitation.—Not long since we were conversing with a prominent teacher, and sought to detain him a little longer than his business seemed to warrant. "I can not stop now," said he, "I must be at my schoolroom." "Are you always thus prompt?" we enquired. "Yes," said he, "and that is the best way I know of to teach my pupils to be always in time. I have not been a moment behind the time of commencing my school in two years, and during the six years I have been a teacher, I have never lost 15 minutes, all told, from my schoolroom by being late." As he left us, we thought we had discovered *one reason,* at least, why our friend was a successful teacher.

## THE MOON AND THE WEATHER.

Under the above title, Dr. Lardner, in his lectures, scouts the idea that the moon can exert any influence over aqueous meteors. He begins by referring to some of the *notions* of the ancients upon the subject of lunar prognostics. The first proposition adduced by him is this:—"*If the horns of the lunar crescent on the third day after the new moon, are sharply and clearly defined, the weather may be expected to be fair during the ensuing month.*"

This prognostic, when candidly examined, means simply this,—that if the moon is seen through our atmosphere, clearly and distinctly, and for a fair portion of the third evening (or during the whole of the evening,) the weather will probably be fair for some time, which time will be likely to continue during the major part of the month. Every one must admit, as does even Dr. Lardner, that this is a prognostic in the nature of a test of the relative humidity of the atmosphere. This being admitted, the only question is, how long will the clear, fair state of the atmosphere continue? Not long, with certainty, in our climate; but we must consider that this prognostic was promulgated in a country where the atmosphere is much drier and less liable to sudden changes, than that of moist, *weeping* England, or even our own country. This fact is lost sight of by the Doctor, and he hastily concludes that the Greek requires the same nutriment that the Russian does. He loses sight too, for the time, of the fact that the moon, by her gravity, causes atmospheric tides,— that these tides are disturbances of the atmosphere, that there is no Hygrometer which furnishes so delicate a test as does the moonlight at her earliest phases, of the state of the higher atmosphere.

The question, as stated by Arago, is unfair; the prognostic is not held out as a positive one, but simply as affording an indication or rather a suggestion for our assistance. The Doctor shows very conclusively that he is no believer in lunar influences as operating on the weather. We have already advanced the proposition that the rays of the moon produce a depression of the temperature of the atmosphere. Dr. Lardner furnishes us with the following results compiled from the observations of M. Schubler, made in 1830 by comparing and reducing observations made at Augsburgh, Munich, and Stutgard, during a period of 28 years. Those days are put down as rainy in which a fall of rain or snow was recorded in the journals, provided it affected the rain guage to an extent exceeding the six-hundredth part of an inch.

Within 20 years the number of wet days from the first quarter, full moon, and to the last quarter, was 1606—that being the period of the greatest moonlight; from the last quarter to the first quarter, there were only 1450 rainy days, leaving an excess of rainy days amounting to 156 occurring in the period of greatest moonlight. From 1809 to 1812, there were in the periods of the greatest amount of moonlight, 269 rainy days while in the periods of the least moonlight for the same time, there were but 242, leaving an excess of rainy days on the side of the full moon, of 27 days. From 1813 to 1816, there were in full moon (adopting the term for brevity) 314 rainy days, while in new moon there were but 281 rainy days, leaving an excess of 33 rainy days in favor of full moon.

From 1817 to 1820 there were in full moon, 335 rainy days, while in new moon there were but 280, leaving an excess of 55 in favor of full moon. From 1821 to 1824, there were in full moon 346 rainy days, while in new moon, there were but 232—leaving an excess of 14 days in favor of full moon. From 1825 to 1828, there were in full moon 342 rainy days, while in new moon, there were but 323— leaving an excess of 19 in favor of new moon, showing an excess in every period, of a number of days in favor of the period of greatest moonlight. When we consider that the moon gives a considerable quantity of light during the half month of least moonlight, we can easily see that there probably should be a greater number of storms ascribed to her influence on the atmospheric phenomena. In the period of 20 years, there occurred, during 4 days selected from the two days on and succeeding the first quarter, second octant, full moon, and the third octant, taking means of two days at each phase, 470 rainy days, while during the last quarter, 4th octant now moon, and 1st octant, (means taken as before) there were but 414 rainy days—leaving for these restricted periods an excess of 56 rainy days.

A similar result follows from comparing the observations during 28 years in the same manner. Those results were overlooked by Schubler in his calculations, but they are easily deducible from his tables Dr. Lardner has also overlooked these results. In calculations made (from the data to which we have referred) by Dr. Lardner, we find that out of every 10,000 rainy days, for every 306 which fell on the day of new moon, there would be 337 on the day on which the moon fulls.

Pilgrim, in 1788, found that there were 29 days of rain on the full moon, where there were 26 on the new moon, and 25 on the quarters. The Doctor concludes that there is existing, "some permanent correspondence between the prevalence of rain and the phases of the moon," and admits, "that rain falls more frequently about four days before *full moon,* and less frequently about four or five days before new moon, than at other parts of the month; seems to be a conclusion attended, to say the least, with some degree of probability."

We have endeavored to show in this article, that the results noticed above are uniform in their occurrence, and not having time to examine the subject further at present, will defer the prosecution of these inquiries to a future day.

C. H. Strowger.

## THE SENSE OF VISION.

How beautiful and noble in its structure is the human form, the dwelling-place of the soul. Emanating from the Divine hand, it partakes of that perfection which characterizes all the works of Deity. The various organs of which it is composed are adapted with precision to each other, and to the numerous offices they are destined to perform.

The most interesting organs of the human body are those through whose medium the soul, forming in its own narrow precincts a world within, is introduced to, and permitted to communicate with, the world without.—This association with external objects is necessary to the full development of the faculties it may possess. The mind, being thus brought in contact with the world without, is not thereby furnished with new powers, but those it already possesses are developed and strengthened, which, if it were not thus, would remain in a dormant state, rendering the possessor unconscious of their presence.

The communication is effected thro' the medium of the senses, and their physiology is highly interesting to every student of nature, since they essentially contribute to all our enjoyments. If there be any one organ by which, above others, the mind holds an intimate intercourse with external objects, it is the organ of *vision,* the most refined and admirable of all our senses. In attempting to investigate the obscure functions of this organ in the animal economy, we find it fraught with the deepest interest.

It is characterized by that grandeur of conception and perfection in structure which reveal its Divine master-workman. It shows the perfect design of its Creator, in its skillful, accurate adaptation to all the physical laws of light, having all its parts finished with the mathematical exactness which the design to be produced requires. Although no human art could design or execute an instrument so perfect, yet this organ, better than any other, admits of comparison with those of man's invention, for it most resembles machinery, and is called a refined optical instrument. It is composed of lenses, having different degrees of convexity and concavity, for the purpose of correcting the aberation of the rays of light, and causing them to be brought to a focus. Thus, objects brought within the range of vision are painted upon the retina, composed of a transparent membrane, behind which is situated a dark substance called the pigment, for the purpose of absorbing all the scattering rays of light. The eye has also, from its structure, the power of adaptation to different distances, and to the varying intensity of light. Being turned by its muscles in different directions, vision is thus rendered perfect. By its aid we are enabled, not only to have extended command over the objects surrounding us, to traverse and explore the most distant regions of the globe, but it introduces us also to the knowledge of bodies composing the solar system, and the countless host of stars scattered throughout the firmament. It extends our ideas of creation, unfolds to the mind all the grandeur and sublimity of the phenomena of nature, and furnishes themes to all for profound intellectual investigation.

Rochester, Oct., 1853. H. J. S.

Greater progress has been made in the sciences within the few past centuries than throughout all the previous ages of the world. Inductive philosophy is the true cause of modern progression; a careful study of the phenomena of Nature and a deduction therefrom of just conclusions.

## AN AUTUMN THOUGHT—IN SICKNESS.

I put aside the curtain white,
On my pillow falls the pleasant light,
The day is fair but the air is keen,
No flowers gladden the frosted green;
For they perished when the wood-leaves fell—
Their dying breath scented hill and dell;
The purling stream in its lonely flow,
Seems sighing their dirge with its murmur low.

And the door-yard flowers—their reign is o'er—
The frost has torn them from window and door,
They were sheltered well, but ceased at last
Sweet thoughts within our room to cast.
Yet—blessings on them!—we have flowers,
Though like caged birds they scarce seem ours;
They are far away from their sunny home,
Yet for love and care they brightly bloom.

I will not grieve for the faded flowers—
When Spring returns with his joyous hours
As brightly fragrant will they appear,
As those that die with the dying year.
And I will not grieve if I must go
From this wintry world of pain and wo,
A spring shall come to me and mine
And we'll bloom for aye in the world divine.

Alabama, N. Y., Nov. 7, 1853. S. E. B.

## THE HAND THAT SAVES US.

Two painters were employed to fresco the walls of a magnificant cathedral; both stood on a rude scaffolding constructed for the purpose, some forty feet from the floor. One of them was so intent upon his work, that he became wholly absorbed, and in admiration stood off from the picture, gazing at it with intense delight. Forgetting where he was, he moved back slowly, surveying critically the work of his pencil, until he had neared the edge of the plank upon which he stood. At this critical moment his companion turned suddenly, and, almost frozen with horror, beheld his imminent peril; another instant, and the enthusiast would be precipitated upon the pavement beneath. If he spoke to him, it was certain death; if he held his peace, death was equally sure. Suddenly he regained his presence of mind, and seizing a wet brush, flung it against the wall, spattering the beautiful picture with unsightly blotches of coloring. The painter flew forward, and turned upon his friend with fierce upbraidings; but startled at his ghastly face, he listened to his recital of danger, looked shuddering over the dread space below, and with tears of gratitude blessed the hand that saved him. Just so, we sometimes get absorbed upon the pictures of the world, and, in contemplating them, step backwards, unconscious of our peril, when the Almighty, in mercy, dashes out the beautiful images, and draws us at the time we are complaining of his dealing, into his outstretched arms of compassion and love.

## THE DEAD.

How seldom do we think of the dead!—Although we sit around the same hearth where they once sat, and read from the same volume they so loved to peruse, yet we do not think of them. Oh, how the heart throbs with wild and uncontrollable emotion as we stand beside the dying friend we dearly love! We wildly strive, but all in vain, to prolong the precious life: we follow in the deepest anguish down the dark flowing river, the spirit of loved ones passes onward alone, and we are left to linger on the shore of time. We think, as we behold the inanimate form consigned to the cold, damp grave, and hear the damp earth rattle over it, that we will never forget the life-scenes of the departed—that their memory will always remain fresh in our hearts, and almost wonder that the busy multitude can move so briskly around us. But the sun shines brightly as ever on the new made grave.—Nature looks as gay and smiling, and the birds sing as merrily as before.

Again we mingle with the busy, jostling throng. weeks and months roll on—we visit the grave less frequently, and gradually cease to think of the lost ones, save when some voice or incident of bygone days recalls them to our memory. The feelings of bitter anguish and bereavement are soon worn off by the accumulating cares and pleasures of life. Thus we, in turn, must ere long pass away and be forgotten. Such is human life.

## THE BETTER CHOICE.

"I envy no quality of the mind or intellect in others, be it genius, power, wit or fancy; but if I could choose what would be most delightful, and I believe, most useful to me, I should prefer a firm religious belief to every other blessing, for it makes me a disciple of goodness, creates new hopes when all earthly hopes vanish, and throws over the decay, the destruction of existence the most gorgeous of all lights; awakens life even in death; and corruption and decay call up beauty and divinity; makes an instrument of fortune, and scales the ladder of ascent to Paradise; and far above all combinations of earthly hordes, calls up the most delightful visions of palms and amaranths, the gardens of the blest, the security of everlasting joys where the sensualist and the skeptic view only gloom, decay, annihilation and despair."—*Sir Humphrey Davy.*

Bible-reading as a school exercise is repudiated by the State Superintendent unless voluntary on the part of the pupil and his guardian. Roman Catholicism heads the opposition, and Atheism brings up the rear. The former complains of the Godless tendencies of our common schools, and, at the same time, seeks to shut out of them the light of revelation. The latter denies the existence of Deity, and of course scoffs at His sacred word.

# Miscellaneous.

For the Rural New-Yorker.—From an Album.

## FRIENDSHIP'S OFFERING.

KIND FRIEND:

You ask an offering rich and rare—a golden line of thought
Traced on thy Album's spotless page, with richest mem'ries fraught;
And if I were a fairy spirit,—one of the spirit band,
I'd bring thee dreams of joyousness from out the unseen land.

I would not bring fame's icy wreath to twine around your brow,
It might glisten in the glad sunbeam, might sparkle o'er thee now;
But envy's dark corroding breath would melt it down to tears,
Would fill Life's chalice with its dregs,—a bitter draught for years.

I've wishes for thee pure, sincere—gems from the spirit's mine;
I'll bring them from my heart's deep shrine, an offering for thine;
They're jewels that remain undimmed by Time's corroding hand,
Bright flow'rets from the heart's parterre, cords from true friendship's band.

I would that life might prove to thee one sunny dream of love—
That Peace might ever shed o'er thee her star-beam from above;
That Hope might sing her seraph song—might find a nestling bough
Within thy heart—a biding place forever pure as now.

And when the dark wing'd angel, Death, has plumed his arrowy dart—
Life's journey closed,—Hope's garland dead, and still'd thy beating heart,
May He who watches o'er thee now, still lead thee in His Love,
And give to thee an angels harp, attuned to notes above,
Such my wish for thee.

West Port, Ky., 1853.

Written for the Rural New-Yorker.

## HOW OTHER PEOPLE SEE US.

How we look to other people's eyes is a question often proposed, but not often answered satisfactorily. Often, could we "see ourselves as others see us," we should think we had a *reversed* telescopic view of our virtues, and that our vices were shown us with a microscope,—the one would be so much smaller and the other so much larger, than they had ever appeared to us before.

Such, at least, would be our view with some people's eyes; others would show us a fairer picture than even our own.

Could that blushing maidon see herself as her lover does, in his reveries by day and his dreams by night—so beautiful—the perfection of all loveliness—she would walk the earth more trippingly than now, nor wonder at his homage. She would be prouder and more queen-like then ever, did she know how much of sunlight and happiness fell from a single glance upon her enthralled worshipper, whose heart she sways so entirely and so thrillingly.

Could that ambitious youth look upon himself with the eyes of his fond mother, his heart would beat even quicker than now.—He would see one who is winning a name to reflect honor on her that bore him—one who shall be worthy of the confidence of the good and wise among his compeers—and one in whose success the hearts, and hopes of his parents centre. Would that many a youth knew the importance which he wears in the eyes of those, nearest to him, and would care rather for their glance than for that of all the world beside!

But such views as these are not the most useful which may be taken. Not alone with the eyes of affection and hope, should we look upon ourselves. Nor would we view our actions and motives as with the careless and unfeeling eyes of the world—who have no charity for our errors, and no mercy for our *supposed* intentions. They torture our virtues into vices—our little faults appear malignant crimes, our mirth is the veriest folly, and our charity and kind-heartedness become but ostentation and selfishness.

It were better to see ourselves *as we are*,—"as others see us" when not blinded by malice or dazzled by love, but looking with impartial and charitable eyes on our real character. How valuable is the power of self-examination and self-judging, which enables us to decide how we would think and speak of our every action, were it performed by another. Alas, how unfrequently do we take this precise view of the subject. We think what others will say of us, but not of what we would say of our own thoughts and actions when proceeding from any but ourselves.—B.

For the Rural New-Yorker.

## RUNNING THE GAUNTLET.

"RUNNING the Gauntlet,"—who has not learned its meaning from aboriginal history?

Think of the horror that has filled the mind of the captive, as he has beheld two long lines of Indians separated from each other by only a sufficient distance to enable him to fly between them to the council house, amid the stabs of knives and the blows of clubs and tomahawks. And then, too, how the very hairs of his head must rise on end, and his teeth chatter, when the time comes round for him to start on his perilous race! How imminent his danger—what hair breadth escapes, as he bounds forward amid unearthly yells, the savage host pursuing! The "Council House," only, promises him safety.

There is another method by which men are made to run the gauntlet, adopted by an enlightened people,—less dangerous to life, but not without its perils. Let circumstances or position place a man before the public for office, and he is started off to run the political gauntlet. The chances of success are against him. He may come off without any broken bones or disabled limbs, he may escape the stabs of the knife, but he cannot avoid the thrusts of the pen. The blows of the club and the tomahawk he may not feel, but the political ax is hurled at his devoted head. He is pursued by his unrelenting foes to his own door and into his own dwelling. The privacy of his household is invaded; he is sought out in almost every relation which he sustains, and, if found, is dragged forth to be labeled with lies and covered with slander. No worth, however exalted, no innocence however pure, can well escape, under such circumstances, the most malignant detraction. O, who does not sigh for the sweets of political life!

Rochester, N. Y., Nov., 1853. S. G. WILCOX.

## POPULATION OF THE VICINITY OF ROME.

THE inhabitants of the mountainous region near Rome are, generally speaking, a fine looking race. The men are well formed, and, in their movement and bearing, free and graceful. They fall naturally into striking and statuesque attitudes, and, when speaking, break into kindling and expressive gestures. The women did not seem to me so handsome as the men, though among them are often fine heads and striking countenances. From their habit of carrying burdens upon the head, they are very erect, and their gait and movement are full of emphasis and expression. In young men and women both, there is a great deal of a kind of beauty to which our northern eyes are not accustomed—that derived from color alone. With them, the tone of color is Venetian; with us, Umbrian. The complexion is of a rich healthy yellow, with a burnish and glow upon it like that of a ripe nectarine; the eyes are of sparkling brown or black; the teeth, white and regular; and the massive raven hair shines with a sort of metalic light, like a bit of freshly broken anthracite coal. These fine colors, so common in Italy, are in part the result of that open-air life which all the people lead. In Southern Italy, at least, no man or woman, especially in the rural regions, stays under a roof any longer than is inevitable.

Every person who has lived in Rome or its neighborhood, must have noticed the antipathy felt by the inhabitants to a fire. An Italian child, from the moment he is born, begins to know the light and air of heaven. He tumbles about the grass like a dropped orange. Even when within doors, the sun shines and the wind blows in through huge, yawning windows—if windows they can be called which are without glass or shutters—and through great openings where doors ought to be but are not. He never breathes an atmosphere poisoned by stoves or furnaces, but grows up in the sunshine and the breeze. Thus it is rare to see a sickly complexion, and almost every countenance has a look of ripeness and soundness.

The peasantry near Rome, both male and female, are fond of showy costumes, and they have a native taste for the disposition of colors, and the appropriate use of ornaments of gold and silver. On all festival and holiday occasions, when they appear in their attire, the general effect produced is very fine, and forms a strong attraction to artists, who learn here the difference between costume and dress.—*Hillard's Six Months in Italy.*

## HINTS TO STRANGERS IN NEW YORK.

BEWARE of hackmen and cabmen. If you are going to a hotel take the regular coach which belongs to the hotel to which you wish to go.

Beware of all steamboat, railroad or hotel runners. Always purchase your tickets at the office of the company, and thereby ensure the genuine. Those hotels which send out runners, are the resort of pick-pockets, gamblers, who also represent the runners.

Beware of mock auctions. You will find them in all parts of the city. They *can* impose upon you if you give them a chance; therefore shun them, and do not enter, for wiser men than you have been "fleeced."

Beware of those *gentlemen* who are ever ready to show the "*strangers*" their beautiful city. Give them the cold shoulder if you would escape being robbed.

Beware of all pocket books that may be picked up and handed to you, as the finder is obliged to leave the city, and if you will give him ten dollars he will leave it with you, and you can find the owner and claim the reward, or keep it. If you open it you will find that it contains nothing but counterfeits and imitations. Always decline them, and you will not get "sold."

Beware of all venders of "silver polish," watches, "knife-sharpeners" and an article for taking the impression of leaves, &c.; as they are *all* humbugs, and you will find them so if you purchase.

Beware of pick-pockets. By using a remarkable amount of precaution you can escape their "light fingers."

Beware of looking or acting "green" in the city, and the sharpers will not pounce upon you. Carry your head up, and walk along as though you belonged there. Do not stare at every new sight and gaze into the window.—*Ex.*

## A MODERN CINCINNATUS.

IN a long and pleasant conversation recently with a distinguished friend, whose mind is rich with the recollections of the past, we gathered many incidents, not the least interesting of which was the following:

At the session of the South Carolina Legislature in 1814, the members were perplexed for a suitable man to elect Governor. The difficulty did not arise from any scarcity of candidates, for then, as now, men were ambitious, but from a want of the right sort of a man. The matter became worse as the time wore on, and the election of some objectional candidate seemed inevitable. One day, however, as several of them were conversing upon the matter, Judge O'Neal, then a young man and present by invitation, said: "Gentlemen, why not elect General David R. Williams?"

"David R. Williams, he's our man—he's the man," they all exclaimed, as they began to scatter to tell the news.

The day of election came on, and General Williams was elected by a large vote. A messenger was at once dispatched with a carefully prepared letter to inform the General of his election—request his acceptance, and hoped he would name the day on which he would take the oath of office. After a long and hard ride, the messenger stopped at the General's residence, in Marlborough District, we believe, and inquired if he was in. He was told that Mr. Williams was over at his plantation. The gentleman said he would ride over, as he had a note to deliver to him as soon as possible. When about half way he met a fine looking man, dressed in plain homespun, and driving a team of mules.

"Am I on the road to the plantation of General Williams?" asked the messenger.

"Yes, sir; it is about a mile further on," was the reply.

"Is the General at home?"

"No, sir."

"Where is he?"

"I am the man."

"Don't deceive me. I have an important letter for Gen. Williams. If that is your name," said the doubting messenger, "here it is," handing it to the General.

Mr. Williams opened the letter and found to his utter astonishment that, without his knowledge or consent, he had been elected Governor of South Carolina. He took the messenger home and entertained him for the night, preparing a note in the meantime, accepting the appointment, and naming a time on which he would be in Columbia. The messenger returned.

On the appointed day, a few minutes before 12 o'clock, a man dressed in homespun, and on horseback, rode into town; hitching his animal to a tree, he made his way to the Capitol, where he found a brilliant concourse of people. But few knew him personally; but there was something commanding about him. He took his seat in a vacant chair; and when the clock in front of the speaker had struck the hour of twelve, the General arose and delivered the most masterly speech that had ever been delivered there on any occasion. The farmer-statesman entirely electrified the assembly. He made an excellent Governor.

The thing conveys a beautiful idea. Here was a farmer elected; he accepted, and from the plow went to the Governor's office to preside, in a stormy crisis, over the destiny of a sovereign State. Long live his memory.

## ANECDOTE OF WASHINGTON.

ONE Reuben Rouzey, of Virginia, owed the General one thousand pounds. While President of the United States, one of his agents brought an action for the money; judgment was obtained, and execution issued against the body of the defendant, who was taken to jail. He had considerable landed estate, but this kind of property cannot be sold in Virginia, unless at the discretion of the owner. He had a large family, and for the sake of his children preferred laying in jail to selling his land. A friend hinted to him, that probably Gen. Washington did not know anything of the proceeding, and that it might be well to send him a petition, with a statement of the circumstances. He did so—and the very next post from Philadelphia, after the arrival of his petition in that city, brought him an order for his immediate release, together with a full discharge, and a severe reprimand to the agent for having acted in such a manner. Poor Rouzey was consequently restored to his family who never laid down their heads at night without first presenting prayers to heaven for "their beloved Washington." Providence smiled upon the labors of the grateful family, and in a few years Rouzey enjoyed the exquisite pleasure of being able to lay the money with interest, at the feet of the truly great man. Washington reminded him that the debt was discharged. Rouzey replied the debt of his family to the father of their country, and the preserver of their family could never be discharged; and the general, to avoid the pleasing importunity of the grateful Virginian, who could not be denied, accepted the money—only, however, to divide it among Rouzey's children, which he immediately did.—*Old Colony Memorial.*

ANECDOTE.—Professor Silliman, in his "Visit to Europe," just published, relates the following anecdote:

"In the year 1558, Henry Cole, dean of St. Paul's, stopped at Chester on his way to Ireland, commissioned by Queen Mary to prosecute the Protestants, and exultingly showed his commission, which he replaced in his bag; but as soon as he left the room the good lady of the house took out the commission and replaced it with a pack of cards, with the knave of clubs uppermost.—Of course the dean made a ridiculous figure when he opened his supposed commission at Dublin, in presence of the dignitaries; and before a new one could be obtained, the persecuting Mary breathed her last.

# For the Ladies.

From Arthur's Home Gazette.

## THE REPROOF.

WHISPER it softly,
When nobody's near,
Let not those accents
Fall harsh on the ear.
She is a blossom,
Too tender and frail
For the keen blast—
The pitiless gale.

Whisper it gently,
'Twill cost the no pain;
Gentle words rarely
Are spoken in vain;
Threats and reproaches
The stubborn may move—
Noble the conquest
Aided by love.

Whisper it kindly,
'Twill pay thee to know,
Penitent tear-drops
Down her cheeks flow.
Has she from virtue
Wandered astray?
Guide her feet gently,
Rough is the way.

She has no parent,
None of her kin;
Lead her from error,
Keep her from sin.
Does she lean on thee?
Cherish the trust;—
God to the merciful
Ever is just.

Written for Moore's Rural New-Yorker.

## IS WOMAN'S WORK EVER DONE?

BY MRS. M. W. H.

THERE is a trite saying among our "household words:"—"Woman's work is never done:" this would seem to settle the question, but while we admit its truth, I think the subject at this time, on various accounts, demands a few moments reflection.

*Woman's work!* this is truly a comprehensive phrase, and admits of a more extensive application than it generally receives in its most frequent use. Woman's work does not consist merely in providing with her own hands, or by proxy, for the physical wants of those dependent on her care; multifarious as these duties are, they can sometimes be so arranged as to afford a little leisure, yet this leisure even, brings its work. Has she a single hour at command, some sick friend is to be visited, some work of kindness or charity, to be performed.—One might be led to suppose, by the nature of the fields some of our sex are seeking to occupy, that they had found means to perform all the work that legitimately belongs to them, and had volunteered in services better adapted to the habits and physical condition of the other sex. While there are children to rear and educate, infirm humanity to nurse, and sorrowing hearts to soothe, husbands, brothers, sons and daughters to influence, lead and direct by the operations of a kind and loving spirit, let these works be the unostentatious preachers to guide in the paths of religion and virtue, and the social circle the political platform from whence she shall seek to participate in the government of the Nation.

To give the subject the most common and practical application, let us look at the wife of the farmer, or of the mechanic in city or country, who has no resources for the maintenance of his family but the labor of his hands; is that woman's work ever done?—I mean the veritable physical labor. Unable to pay for help, she is wearing away her best days without time to improve a mind already "cumbered about many things," or means to supply the mental wants of those little inquisitive beings who think "mother knows every thing," and question accordingly. How often I have heard such women say, "I have no time to teach my children to work or read"—which is no doubt true. This is especially true, in families where the wife finds it necessary to do all, or the greater part of her sewing; in such cases little time can be spared for recreation or social enjoyment, which are as necessary to the proper development of the mental, as food and clothing are to the physical organization.

I believe the introduction of sewing machines is destined materially to affect female labor, and through that, female character. Many who now depend on the needle by which to obtain a living, are becoming alarmed at the idea of having sewing so cheapened, that it will be impossible for them to compete with so formidable a rival. The fear seems to obtain among them, that they will be obliged to betake themselves to some more menial employment; what these more menial employments are I do not clearly understand, as I hold all employment honorable that is honorably performed—it is true, we all have a choice in what way to labor. I do not consider a girl who cooks the food for a family, any more a menial on that account than the one who does the sewing. I think those persons take an erroneous view of the case, for all experience teaches, that every invention that has ever been introduced to lessen the price of labor in any particular department, has had the effect to increase the demand, and open up channels which more than compensated any loss that accrued to any particular class from its use. Sewing machines can never be endowed with intelligence: consequently can never be made to cut and fit a garment. If they cheapen the making of clothing so that a person can have two garments instead of one, then will the two be to fit and finish instead of one. At the present time, the cost of making many garments of the plainest kind, is more than the material of which they are made. As sewing becomes consigned to the machine, a demand for heads and hands to manage it will be increased, so that sewing women and girls will at the worst only change the form of labor. The tendency too, of all the "strikes" that pervade every class of labor, is to make new openings for more remunerative, and quite as healthy female labor as that of sewing.

When the time arrives that a woman can be hired into the house with a sewing machine, and do the family sewing in a week, that the toiling mother has heretofore scarcely accomplished in a whole season, those families with small means will be better clothed, and the females have more time to devote to such pursuits as contribute to physical and mental vigor. How gladly will those mothers who ply the shining steel by the midnight lamp that their families may be respectably clothed, avail themselves of any means whereby they can save time to devote to the minds and morals of their children.

I admit that quite too much time is frequently spent in an unnecessary use of the needle. I admit too, that there are mothers even, who think the embroidering of a little dress, is of more importance than supplying the natural wants of the dear object who is to wear it; not that she would wilfully neglect her duty, but she thinks it will be "so pretty and becoming," it must be done, even if the child suffers from the want of her personal attention while she is doing it.

Women, as well as men, of the present day, have many sins of omission and commission to answer for, and the proper way, in my view, to correct many of the evils under which we labor, is to give young men and women right ideas. In behalf of those wives and mothers who work incessantly from necessity, I would urge men to study the means of lightening their toil, by providing as far as practicable, such improvements and aids as may from time to time be invented, and found of decided utility; and above all things, by kind and sympathizing words and acts, let them know that you appreciate their efforts, and would relieve them if in your power; these aids are wonderful in their effects, and available to the poorest individual.

Among the various inventions for household labor-saving, particularly in cities, I have heard of none which strikes me as being of more importance than *cooking by gas*, providing it can be brought into practical use, of which there can be little doubt, according to the statement of the editor of the *New York Mirror*, by which we learn that it has been tested, and found so far, to work admirably.* Cities are becoming so generally supplied with gas, and fuel is already so expensive, there is no doubt people will avail themselves of the former to do their cooking and warm their houses if practicable, as well as to light them. If this can now be done in the city, how long will it take the chemists to devise some cheap and effective mode of generating gas for the farm-house, or any other country residence?

*What the Mirror says upon the subject of cooking by gas will be found under the head of Mechanical Arts, in the present number of the RURAL.—EDS.

## FUTURE HOUSEKEEPERS.

WE sometimes catch ourselves wondering how many of the young ladies whom we meet with are to perform the part of housekeepers, when the young men who now eye them so admiringly have persuaded them to become their wives.

We listen to those young ladies of whom we speak, and hear them not only acknowledging but boasting of their ignorance of all housework duties, as if nothing would so lower them in the esteem of their friends as the confession of an ability to bake bread and pies, or cook a piece of meat, or a disposition to engage in any useful employment. Speaking from our own youthful recollection, we are free to say that taper fingers and lily white hands are very pretty to look at with a young man's eyes, and sometimes we have known the artless innocence of practical knowledge displayed by a young Miss to appear rather interesting than otherwise. But we have lived long enough to learn that life is full of rugged experiences, and that the most loving, romantic and delicate people must live on cooked or otherwise prepared food, and in homes kept clean and tidy by industrious hands. And for all the practical purposes of married life, it is generally found that for the husband to sit and gaze at a wife's taper fingers and lily hands, or for a wife to sit and be looked at and admired does not make the pot boil or put the smallest piece of food therein.

MOORE'S RURAL NEW-YORKER.

ROCHESTER, NOVEMBER 26, 1853.

### SPECIAL NOTICES.—TO AGENTS, &c.

☞ AGENTS.—Any person so disposed can act as agent for the RURAL NEW-YORKER,—and all who remit according to terms will be entitled to premiums, &c.

☞ THE RURAL is published strictly upon the CASH SYSTEM—sent no longer than paid for—and all orders should be in accordance with terms.

☞ OUR *lowest* club price is $1,25 for any number of copies over 20—and $1,50 under that number, unless a full club of twenty is obtained.

☞ IN making up clubs for the RURAL, the Wool Grower and Stock Register can be added at 35 cts. a copy, which is the lowest club price.

☞ EXTRA numbers of the RURAL will be forwarded to all disposed to aid in augmenting its circulation.

☞ SEE Terms, Premium List, &c., on next page.

### News of the Week.

THE news of the week is neither of a startling or exciting character. The Arabia brings out news, telegraphed from the Continent, on the eve of sailing, that the belligerents have come into actual collision in the Danubian Provinces, but it is stated that strong efforts are put forth by interceding powers to bring about a reconciliation, and hopes are yet entertained that it will be effected. If the ire of the hostile parties is still further excited by the shedding of blood, it will be a very difficult matter to prevent war. Time only will determine the matter, and further advices are looked for with great interest on this side of the Atlantic.

Politics have subsided into a state of quiescence, all parties submitting cheerfully to the arbitrament of the ballot box; the victors have expended the excess of their patriotism in powder and bonfires, and the vanquished withdrawn into their own territories to recruit for the next campaign.

In Massachusetts, the new constitution, which cost the State a conventional session of three month's duration and $150,000, has been rejected by a majority of over five thousand. It was a miserable tissue of shreds and patches, made up of compromises between certain parties and satisfactory to none. Even the fathers of the nondescript buntling were many of them ashamed to acknowledge the paternity of their own son. New Hampshire rejected one under similar circumstances a year or two ago, and these two examples ought to serve as a warning to other States not to tamper with their fundamental laws unless radical defects exist which imperatively demand a reform.

There is great excitement at Erie, Penn., on account of a change of gauge about to be adopted on the Erie and North-east railroad. As it is now all passengers and freight must change cars, on this short link of lake-shore road, twenty miles in length, passing through the north-west corner of Pennsylvania; which change is a source of great annoyance to travelers, and an obstacle to the transit of freight. All this annoyance arises from the fact that the gauge on this road differs from that either above or below. The Pennsylvania legislature at its last session authorized the railroad company to change its gauge, and the citizens of Erie have resolved to resist it with arms, if necessary, and have mustered their forces in battle array, intent upon nullification. The Buffalo papers say the Erie folks are bent upon compelling the traveling public to purchase their pea-nuts, and eat indifferent food at a high price, by a compulsory stoppage in their city. The oyster war of Accomac is likely to be thrown into the shade, by this blood-threatening demonstration.

---

WOMEN'S RIGHTS.—A call has been signed by a large number of the advocates of Women's rights for a Convention, to be held in this city on the 30th inst., and to continue in session two days.—The preamble to the call, among other things, says:—"The wise and humane of all classes in society, however much they may differ upon speculative points as to Woman's Nature and Function, agree that there are *actual abuses* of women, tolerated by custom and authorized by law, which are condemned alike by the genius of Republican Institutions and the spirit of the Christian Religion." No one certainly can gainsay the above, whatever opinions may be entertained as to the nature of those abuses, or their specific remedies. Many of the most distinguished champions of Women's rights of both sexes will be present and address the Convention, among others, the Rev. Antoinette L. Brown, Lydia A. Jenkins, Emma R. Coe, Ernestine L. Rose, Elizabeth C. Stanton, Frederick Douglass, Rev. W. H. Channing, Rev. S. J. May, L. C. Cuyler, and Rev. Hiram Gregg. See advertisement in the dailies for particulars.

---

THUNDER STORMS IN CALIFORNIA.—A friend in Marysville, Cal., writes under date of Aug. 28th that they have just had a very heavy thunder, shower, the first ever known there by any of the present inhabitants. The Indians across the river from Marysville were dreadfully frightened—the lightening struck three times in the immediate vicinity; the thunder was, of course, terrific.—They have a tradition that the "Great Spirit" once spoke to the Indians in a terrible voice, and they think this must be a similar one. The writer says he was at Salt Lake city three years ago last April, when they had the first thunder shower known there. He attributes the fact of the shower to the clearing and breaking up of the surface of the ground, which is favorable to the formation of clouds. He says, if, as the country becomes settled, showers should be of frequent occurrence, California will be one of the finest agricultural countries in the world.

### The Weather.

THE weather for the past week has been as mild almost as summer, although not altogether pleasant. The barometer fell as the thermometer rose, and on Sunday "cloud compelling Jove" enveloped city and country in mist, and smoke, and rain. A super-stratum of water, and a substratum of mud, were the principal geological features of the country; and those luckless individuals who were too poor to own umbrellas, and had too much conscience to —— *borrow* them, either were compelled to get a wetting or to stay away from church, an excuse of which too many, it is feared, availed themselves,—and possibly the writer also is not altogether guiltless. Many of the days, however, have been really beautiful, and much like those of April and May, alternate sunshine and shower.

How long this etherial mildness is to continue it is impossible to say, but it is the part of wisdom to take some thought of to-morrow, and prepare to give old Boreas a warm greeting when he comes; and to aid the poor in like preparation. Do not let us fold our hands and say to the poverty-stricken and unfortunate, "be you clothed and be you fed," but let us, according to our means, be generous almoners of Heaven's bounties, not as a loan, and with expectation of reward, although sacred writ says, "he that giveth to the poor lendeth to the Lord;" but with hearts full of gratitude for innumerable blessings bestowed upon us by a benignant Providence.

## Literary Notices.

TALPA, OR THE CHRONICLES OF A CLAY FARM.—AN AGRICULTURAL Fragment by C. W. H.; with an introduction and notes by L. F. ALLEN. Buffalo: DANFORTH, HAWLEY & Co., 1854.

This is a collection of a series of articles which originally appeared in the Gardener's Chronicle. Their reprint in the present handsome form is a decided hit; for it is a work which is sure to sell. It is a history of a lawyer, who having a wet, clay, sterile, farm come into his possession, set about improving it himself. He underdrained, subsoiled, grew turnips with guano and kept a large stock, till from being the worst, the farm became the best in the neighborhood. Several chapters are devoted to a discussion on a steam digging machine, which the Author and Editor think will, in a very few years assuredly take the place of the plow.

We have never read a work on Agriculture with more pleasure than this one. It is well calculated to awaken an interest in agricultural improvement, while innumerable suggestions are thrown out which will induce thought, and thus, though the book contains very little direct instruction, it will materially increase the knowledge of every farmer.

---

THE NEW HYDROPATHIC COOK BOOK, with receipts for Cooking on Hygienic Principles. By R. T. TRALL, M. D. New York: Fowlers & Wells.

THE typographical execution of this work is most excellent. It is illustrated with abundant wood cuts, and written in a pleasing and popular style. It contains not merely receipts for cooking, &c., but enters fully into the "why and wherefore," of the processes recommended. The chemical and physiological character of alimentary substances are discussed, as well as the relative value of animal and vegetable foods. Rules for the selection and preservation of fruits, vegetables, &c., are given, and the theory of nutrition, and the general laws of health, explained. We consider this book quite an addition to our culinary literature. Without agreeing in many important particulars with the author, we cannot but think the general circulation of the work will be attended with much good to *all*—inasmuch as *all* have to cook to eat, and eat to live.

---

THE AMERICAN CATTLE DOCTOR.—By G. H. DADD, M. D. New York: C. M. Saxton.

FROM a slight examination, we believe this will be found a most valuable work, and one which every owner of animals should possess. There is a great and increasing need of a scientific and practical treatise on the veterinary art. Besides that invaluable little book, "Cole on the Diseases of Animals," we had no American work that was reliable and practical on this important subject. This new work discusses at some length, the general principles of physiology and pathology; much of it is merely a compilation, and there are some things introduced which are irrelevant in a work of this kind, but, on the whole, the book will be found a valuable accession to every farmer's library. Price, $1.

---

A CATALOGUE OF AMHERST COLLEGE, just received, shows the number of undergraduates in that institution to be 201. Scientific course 10. The College has an efficient faculty, at the head of which is Dr. HITCHCOCK, of Geological and Scientific celebrity.

---

GRAHAM'S MAGAZINE for December has been received form the publishers. It is as usual a superior publication and contains the prospectus of the volume for the ensuing year promising an increase of its attractive features.

---

GODEY'S LADY'S BOOK for December has come to hand. It is embellished with a fine steel engraving entitled "Christ healing the sick," and other plates, and is for sale by DEWEY in the Arcade.

---

THE Utah (Salt Lake) paper says:—"On the 13th of Sept., President Young presented us with as fine a bunch of grapes as we ever ate in California, weighing one pound, grown in his garden. We also helped President Young measure an onion in his garden 18 inches in circumference. Peaches, of the highest flavor, have ripened well in the valley this season, and very plentifully for the number of trees existing."

### Our Albany Correspondence.

ALBANY, Nov. 22, 1853.

THE great pitch battle is over. Defeated candidates have had time to estimate the extent of the depletion to which their purses and their honor have been subjected in the contest; and the successful ones are already studying schemes by which they can make up their extravagant outlays. Philosophers of all schools are trying to assign a cause for the peculiar turn of events.—The Hards say that the Softs have been weighed in the balance and found wanting; the Softs claim that Whig votes given for the Adders (a new name for the Adamantines,) are the cause of their falling behind the Hards; while the Whigs are chuckling over their triumph, brought about by the aid of the Hards.

But facts and figures go farther than reasons.—The Whigs have a decided majority, and there is a Maine Law Legislature probably. It is also a notorious fact that the State House contains quite a number of very *long* faces, though their owners are known as "*short* boys."

Speculations have commenced with reference to the Speakership of the Assembly, which comes in January.

ROBERT H. PRUYN, of this city, is probably the one who will receive that honor, as he has distinguished himself as a legislator in a previous session. A stupid Speaker, such as we sometimes have, is a disgrace to the State. RAYMOND, now editor of the N. Y. Times, is as good a one as the State ever produced. He was quick, forcible and accurate. PRUYN would make a similar one.

The sale of land for taxes has been going on for some time, and will be continued till the list is exhausted. The system of disposing of lands in arrear for taxes has been altered, so that hereafter the sales will take place in the different counties, rendering it much more convent for delinquents to attend in person. The time for redemption remains two years, the same as now.

*OWE.*

---

A FIGHT occurred on the Mississippi river on board the steamer Dresden on Tuesday of last week, during which three men and one woman were killed. There were, it appears, a large number of Irish families on deck, going to New Orleans, and when the boat arrived at Memphis, a young Kentuckian got on board, and by some means got into a quarrel with some of the Irish passengers, several of whom undertook to whip him, when he drew out a revolver and fired into the party six times, instantly killing three men and one woman.

The Kentuckian was afterwards set upon by others of the deck passengers and badly beaten, so much so that he was not expected to recover.

---

THE COMMISSIONERS in the case of the Northern Indiana and Chicago Railroad Co. vs. the Illinois Central Railroad Co., have decided that the track of the Central Railroad Co. shall cross the track of the complainants at the same point as hitherto, but that the crossing shall be by means of a bridge which shall be built by the defendants at least eighteen feet in the clear above the surface of the rails of the complainants. It was at this crossing where, it will be recollected, the terrible collision occurred between the trains of the Michigan Central and the Michigan Southern Roads, the former going into Chicago on the Illinois Central, and the latter on the Northern Indiana.

---

REV. MR. PEASE, Missionary at the Five Points, New York, in an address before the Sabbath School of the Church of the Puritans, made the following statement: When he commenced giving out work to the destitute who thronged his rooms, he was cautioned by those who furnished the materials, as well as those of whom he purchased bread, that his hearers would probably steal from him at every opportunity, and that he would never see half his work returned. But after three and a half years' experience, although, by their own confession, some of the articles were made in the Station-house, and others by the light of the street lamp, he had never lost one article.

---

IN one of the interior towns of Chili there has arisen a dispute between the curate, who is represented as a worthless man, and the local Governor of the town or department. In consequence, the Archbishop has laid the town under interdiction; ordered the cemetery to be closed, so that the dead have lain unburied; and deprived the people of all other religious ordinances in the meantime. It is thought the Government will yield to the demands of the church, replacing the curate, and ejecting the Governor. Shame on such a priest-ridden people! They are fit only to be temporal, as they certainly are spiritual, slaves!

---

THE MURDER RECORD of New York city was lessened on Saturday, by the conviction of Hoare, for the murder of his mistress, and the sentence of De Corn to the State Prison. The latter prisoner avers that he entertained no malice toward the murdered man, and adds that he shot him in self-defence, fearing that the assault of Melville upon him was to be immediately attempted. De Corn pleads guilty to a feeling of sudden alarm, and declares that the pistol was fired at random, and only after he believed his life to be in danger.—*N. Y. Times.*

---

THE outside form of the Journal of Commerce for the morning of the 10th, weighing 800 pounds, while going to press, fell a distance of sixty or seventy feet, penetrating through the basement and into the ground, and of course becoming a mass of *pi*. In large metropolitan printing offices the type are set in the upper stories of the building, while the press-room is in the basement, to which the formes are let down through a scuttle, by means of a wheel and axle.

---

MRS. MINERVA BRADSHAW recovered, in the Marion Circuit Court, a judgment for $4,000 against the Penn and Indianapolis Railway Company, as damages for the death of her husband, who was an employee of the Company, and was killed from injuries received on a train while in the service of the Company. This decision is in opposition to the common law and the decisions of the Courts of some of the States, where it is held that a paid agent assumes his own risk.

---

THE Superior Court in New York last week awarded Mr. Richard M. Crane $1,750 damages against the Hudson River Railroad Company, for injuries sustained by a collision on the 4th of September, 1851, at Peekskill.

## News Paragraphs.

☞ Hickman County, Ky., is situated on the Ohio and Mississippi rivers. The *Argus* says, what we very well know, that the land of that part of the State, is well suited to the production of fruit and hay. The soil is clayey and uneven, and very convenient to shipping ports of easy access from New Orleans. It is only very recently that the people have found out that these two products are more profitable than corn and tobacco.

☞ The canal boat "Ira B. Carey," owned by J. Chappell & Co., of this city, sunk in the East River, at New York, a few days since, with a cargo of 2,800 bushels of wheat, and 15 tons of cheese, valued at $8,000. The boat was being towed to Brooklyn by a steamer at the time of the accident, and went down in 40 feet water. The cargo is nearly a total loss. Insured for $3,000.

☞ The first American Magnetic Telegraph Line was established in 1844, between Washington city and Baltimore. The aggregate number of main and branch lines in the United States at the present time, is about one hundred. There are completed and in operation, 27,000 miles, and 10,000 more in process of construction.

☞ The discoverer of gold in Australia is to be rewarded by the British government. The Colonial authorities of Australia propose to give to Mr. Hargraves, the discoverer, £10,000, but the Duke of Newcastle, who is the head of the Colonial Department in the Ministry, offers him only half that sum, which Mr. Hargraves objects to.

☞ In the office of the Green Castle Banner, published at Gosport, Indiana, there is said to be a blind printer, who sets from 5,000 to 7,000 ems a day! His partner reads the copy to him, and as he has an extraordinary memory, he can compose half a dozen lines without it being necessary to report the words to him.

☞ The tomato is a native of South America, and was first introduced to cultivation in Europe in 1596. The French and Italians are said to have been the first to adopt its extensive use, and during the early part of the present century there were fields of the crops growing in the vicinity of Rome and Naples.

☞ One hundred and twenty-seven emigrants to Liberia sailed from Baltimore last week, in the ship Parmlee, chartered by the American Colonization Society. The Parmlee will touch at Norfolk, where she will take on board one hundred and sixty-eight more emigrants, and nine white missionaries.

☞ The London Chronicle announces the recovery of £1,800 from an English thief who robbed his employer, and fled to America; it states that he was followed to the United States by an English detective policeman, and traced to a "place called Geneva, *in the State of Albany.*"

☞ The three survivors of the Harvard College Class of 1787, represent the three learned professions:—Judge William Cranch, of Washington, D. C., the Legal; Rev. Dr. Abiel Abbott, of Peterboro', N. H., the Clerical, and Dr. Walter Hunnewell, of Watertown, the Medical.

☞ Three Inspectors of Election have been arrested in New York, for alleged frauds in canvassing. It is charged that they had a batch of tickets printed off the day after election, which they surreptitiously placed in the ballot box, removing others in their stead.

☞ In the Boston Police Court, recently, Sarah Flynn was charged with a severe assault upon her husband, James, with a chair. Sarah was a second wife, and much the most vigorous of the two. She was sentenced to two months' imprisonment in jail.

☞ The Ohio State Teachers' Association meets at Columbus, on the 28th and 29th of Dec. next. President Thompson, of Delaware, will address the Association on the morning of the 28th, and Horace Mann, of Antioch College, in the evening.

☞ Shelly, a slave belonging to W. Paddleyford, of Georgia, who recently ran off, returned and begged to be taken back, saying that he had been persuaded by white men to run away. His master consented, and he is now on his way to Savannah.

☞ The sinking of the West Newton, below Lake Pepin, last week, is the first accident that has ever occurred to a steam vessel on that part of the upper Mississippi, between Galena and St. Paul, although steam has been used there for 20 years.

☞ The editor of the Columbia Democrat has received a specimen of cotton grown from seed brought from California two years ago, where it was found growing wild. The staple is said to be longer than the Dean cotton, and nearly as fine.

☞ The Railroad Record, of the 10th, says: "There are now 1,600 miles of railway finished in Ohio, which have cost about forty millions of dollars. These roads will pay about four millions per annum on the cost of construction."

☞ The number of acres of swamp land lying in the State of Missouri, is reported to be 2,765,871, and in Illinois 2,370,635. Much of this land can and will be reclaimed, and, in general, the soil is so rich as to make it very valuable.

☞ The Independent says there are now seven churches in Kentucky designated as "free churches, having no connection with slavery"—and that though they have encountered opposition, they regard their prospects as brightening.

☞ The Chicago Democratic Press states, within the last three weeks one house in that city has paid out $145,000 for beef cattle. The shipment of beef, by lake, from that port during the last month, amounted to 11,499 barrels.

☞ The English papers state that among the emigrants who perished in the British ship Annie Jane, wrecked on the coast of Scotland, were a hundred house-carpenters and joiners from Glasgow—fresh, able young men.

☞ The first premium for plowmen at the Virginia Agricultural Fair, was awarded to Mr. Richard Sampson's negro man Randolph, who managed his four mules without lines. The premium was fifty dollars.

☞ St. John papers of the 5th inst., mentions numerous desertions of British soldiers at Fredericton and St. John. At the latter place, on Saturday night, 13 deserted in a body, taking with them their side arms.

☞ A house at Birmingham had received from a pen-maker at New York, an order for fifty working girls. The order was executed in less than one week, and passages were secured for the whole party at £8 per girl.

☞ Pleasant M. Huffman, a cabinet maker of Hartsville, Tenn., was killed by his partner in that place on Wednesday week. The two were making a coffin, and came to some misunderstanding about a plank.

## News Brevities.

—— The fishermen from the British North American coast, report that the weather has been terribly severe there for the past few weeks, and that the British fleet was going into quarters for the winter.

# Foreign Intelligence.

### Arrival of the Arabia.

The steamship Arabia, from Liverpool on the 5th inst., arrived at New York, Nov. 17th.

It is true that the Turks have crossed the Danube in strong force, and occupied Kalafat.

By Submarine Telegraph.—Fighting is going on briskly at Wallachia. 2,000 Turks appeared at Giqugevo, and fired upon the town. This brought on an engagement with a Russian force, which was dispatched to the assistance of the place. Considerable slaughter ensued. Another encounter took place between 4,000 Turks and a like number of Russian cavalry, between Kalafat and Sotha, when the Russians were forced to fall back.

The Arabia passed, on the 12th, the steamer Glasgow, bound east.

In Carcassia and Baghistan the mountaineers have defeated the Russians and taken some forts.

There was a talk of opening a Turkish Loan in the United States. The allied fleets were collecting in the sea of Marmora, having been dispersed by a storm.

Great inundations have occurred in the south of Ireland, and much damage done at Cork.

A plot of some kind had been discovered in Ticino, Switzerland.

A naturalized American citizen named Paperi, had been kept in custody by the Austrian officials at Aucona, on no charge at all, except the liberty of opinion. The U. S. Consul had done what he could, and was met mostly by being put off. The man was eventually released, when he was required to sign a declaration that he would never revisit Italy. This he refused to do, and he is still kept under surveillance.

Liverpool Markets.—The demand for Breadstuffs was more limited. Wheat declined 3d@4d per 70 lbs. Flour 1s@1s 6d per barrel. Indian corn quiet and unchanged. U. S. white wheat 10s 6d@10s 6d for red. Little sweet offering at 10s 4d. Western Canal flour 36s@36s 6d; extra Indian corn 46s for white and yellow.

Very little doing in either Beef or Pork. Bacon sells freely at previous rates. Shoulders in fair enquiry at 30s. Lard quiet at 59s. Tallow dull at a further decline of 1s.

---

Fanny Fern's Juvenile Book for the Holidays, (*Little Ferns for Fanny's Little Friends,*) will be issued by Derby & Miller about the first of December. We have been favored with a perusal of the proof sheets, and do not hesitate to say, that it is the best 'juvenile' that has ever come under our notice. It is a *living* book: it is all a-glow with wit, humor, pathos, and instruction. Although written in a style which will be irresistibly winning with children, it is no less captivating to adults; and we feel an assured conviction that *Little Ferns* will be as popular with the *Old Folks at Home*, as with *Fanny's little friends.* It is got up in elegant style, and with appropriate illustrations: price 75 cents. The orders already received (before the work is advertised) demand an edition of *twenty thousand to start with!*—which edition, like our 'great country,' will probably be 'continually growing.'—*New York Musical World and Times.*

---

☞ Gov. Seymour, has issued his Thanksgiving Proclamation. Thursday, the 24th inst., is designated. The year has been prosperous, and the people happy. Our State in particular, has enjoyed in a remarkable manner the favor of a benignant Providence.

# Commercial.

### BUSINESS AND FINANCE.

Money matters have assumed a more cheerful aspect in our commercial cities, and confidence seems to be again restored. There has been but one departure and one arrival of Liverpool steamers since our last; the former, the Africa, taking out less than $600,000 in gold, and the latter, the Arabia, bringing in news of actual hostilities between Russia and Turkey, and a decline in the English market for breadstuffs. No alarm or wavering of financial confidence was manifested on account of the belligerent news, and panic makers cease to be regarded in Wall street. The tight times, the decline in stocks and general extravagance, have served to show up several defaulters who were unable to carry along the loads under which they staggered. A number of the New York banks have lately suffered most seriously in this way, among which are the Bank of the State of New York, $160,000; Bank of State of New York, bills stolen from the counter, $37,810; Bank of Commerce, $80,000; Merchants Bank, $200,000; Metropolitan Bank, $150,000; American Exchange $60,000; Hanover Bank $25,000.

The fears manifested in regard to the stability of our banks prove to be groundless. Thompson's Reporter says:—"In answer to a multitude of inquiries about banks, we would say only two have failed, viz: the Bank of Massillon, Ohio, and the Patchin Bank of Buffalo.

The many rumors about other Banks are all wrong, and we do not know where there is a decidedly doubtful one.

The fright, the pressure, and the danger is over, and there is an easy and prosperous future before us."

The amount of public debt cancelled last week was upwards of half a million of dollars, leaving the total outstanding obligation of the United States, $57,593,707 52.

The total imports at New York for the week amounted to $2,680,109, of which in round numbers, near $500,000 were in silks, $340,000 iron, and $250,000 woolen goods.

Stocks have gone up as the money pressure cases off.—N. Y. Central 115, Erie 81½, etc.

# Marriages.

In Lyons, Wayne Co., on the 17th inst., by the Rev. Mr. Kellogg, Mr. DARIUS C. AUSTIN and Miss LYDIA YORK, all of Lyons

At Henrietta, on the 10th inst., by the Rev. S. W. Streeter, Mr. DUNCAN McLOUD and Miss MARY J. ELLIS.

In North Haven, Ct., on the 15th inst., by the Rev. S. W. Robbins, Mr. WM. D. GREGORY, of Canandaigua, N. Y., and Miss CHARLOTTE F. LINSLEY, of the former place.

# Deaths.

In Utica, on the 13th inst., ALFRED HUBBELL, Esq., of this city, merchant, and late one of the Aldermen of this city, aged 48 years.

On Friday morning, Nov. 11th, FRANK CASWELL, infant son of J. Wesley and Jane A. Osborn, of Watervliet, N. Y.

In Avon, Ohio, Oct. 5th, JOHN CRISP, aged 38 years.

In this city, on the 20th inst., at the residence of his uncle, Anson House, Esq., EDWIN E., son of Joseph and Amanda House, of Houseville, Lewis Co., N. Y., aged 24 years. Possessed of fine talents, strict moral uprightness, sterling integrity and every manly virtue united with social, amiable and strong filial affection, he was a young man of great promise, and his removal in the morning of life, will cast a deep gloom over an extensive circle of relatives and friends.—[Com.

# Market Intelligence, &c.

Rural New-Yorker Office,
Rochester, Nov. 23, 1853.

Prices seem to have reached a culminating point about the time of our last issue, and in some respects have since slightly declined, although in most instances the recession is manifested by a weakness in the markets, rather than by any actual decline in price or quotations. The price of Wheat may be stated at $1,50@1,53, the latter, however, being considered the extreme maximum limit for the very best qualities. Flour, price unchanged. Corn is lower and sells at 63@65c.

Butter is plenty and prices tending downward, but as yet, no change in quotations. There is a large amount moving forward to the eastern markets and prices have declined in those cities.

Poultry is plenty and one cent lower than last week.

The wool market is weak, and eastern advices seem to indicate a lower market, the effect of which is also to prevent a rise in sheep's pelts, notwithstanding the increased value of the staple produced as the season advances.

Salt is quoted at sixpence per barrel lower.

### Rochester Wholesale Prices.

| | | | |
|---|---|---|---|

### NEW YORK MARKET.

NEW YORK, November 21, 1853.

Flour—Fair demand for Western and State flour for export. Market opened firm, but owing to the inclemency of the weather prices yielded 6¼c. At the decline the inquiry was good. Canadian unchanged. Sales Western canal at $6,71@6,81 common to straight State; $6,87@7 mixed to fancy Michigan and common to good Ohio, closing firmer.

Grain—Demand for wheat fair, with more offering. At the opening prices yielded slightly, but closed with much firmness. Sales white Ohio at $1,65½; white Michigan $1,73½@1,74; Canadian $1,60 for mixed, and $1,74 prime white; prime Southern white $1,67; prime red do. $1,57½; red Ohio, upper lake, $1,50.

Corn—Fair demand for export. Sales at 79c unsound; 79@80c Western mixed; 80@82c Southern white and yellow.

Provisions—A fair supply of Pork on market and prices again lower and unsettled; sales at $14,37½@14,50 mess; $11,50 prime.

Dressed hogs dull and heavy at 6@6¼c.

Lard dull and quite heavy; sales 210 bbls. and tes. at 9¾@10¼.

Butter in limited demand and plenty at 12@14c, Ohio and 16@20c. State.

Cheese in request at 8@10c.

### ALBANY MARKET.

Albany, Nov. 21.—Flour and Meal—The eastern demand is restricted, and there is only a moderate home and river inquiry at the closing rates of Saturday. We quote Ordinary to straight State $6,75@6,87; mixed Indiana and Michigan $6,87@7; straight Indiana and Michigan $6,87@7; favorite State $6,87@7,12; common to good Ohio $6,75@7; fancy Indiana and Mich. $6,87@7; fancy Ohio $7,00@7,25; fancy Genesee $7@7,25; extra Indiana and Mich. $7,12@7,37; extra Ohio $7,25@7,37; extra Genesee $7,25@7,75.

Corn Meal is selling steadily at $1,56@1,62. Buckwheat Flour is in good request at full previous rates. Sales at $2,25@2,38 ℔ cwt.

Grain—Market for wheat is quite languid and dull.—Genesee was offered on 'Change at $1,70@1,71, without finding a buyer, and at the close the stock afloat was about being re-shipped to a southern market. Corn is quiet and unchanged in value. Western mixed may be quoted nominal at 77@78c Barley opened this morning with an active inquiry. Sales Wisconsin at 80@81½c, prime two-rowed on p. t., 80½@82c, the latter figure also for Jefferson and Madison county, four-rowed at 84c for fair and 86 for prime. Oats are scarce and much wanted at better prices. We quote Western and State in the absence of sales at 49@50c.

Feed—A moderate inquiry. Sales 4,200 bu. 24 lb Feed at 17½c.

Hops—A steady market with a fair demand. Sales 88 bales new at 45@47½c. for fair to prime. Old are held at 40 cents.

### BUFFALO MARKET.

Buffalo, Nov. 21.—The receipts for the past 48 hours have been large, but the market has been very quiet and the sales slow. There was only a moderate inquiry for flour this morning, with market a shade firmer. Sales at $6,12½@6,25 for good to choice Ohio, and $6,06¼ for Wisconsin.

Wheat in good supply and market quiet, buyers being generally below holders' views. Sales white Michigan at $1,42@1,44, and Chicago at $1,20.

Corn heavy. Sales at 64c. No sales of oats. Sales of Rye at 81c.

Canal freights higher and irregular. Flour shipped to N. York at 90c, with 20 days guarantee, and wheat at 25c.

### NEW YORK CATTLE MARKET.

NEW YORK, Nov. 14.—At Washington Drove Yard—offered this day 2,019 Beef Cattle; offered during the week, 2,209. The supply of cattle to-day is not so large as usual owing to the cars being detained on the Harlem Railroad. The flood of Sunday carried away the bridge at Purdy's Station. We quote the range of market at 6@9c per lb.

Cows and Calves sold from $35 to $60.

Veal Calves at 4@6½c.

Sheep at from $2@9. Lambs $2@5,50.

No Swine on hand, but they would fetch from 5@5½c.

At Browning's—(Lower Bull's Head)—Offered, 502 Beef Cattle; 64 Cows and Calves, and 3,676 Sheep and Lambs.

Beef Cattle all sold at from $6,50@8,75 per hundred.

Cows and Calves sold at from $25@55—all sold.

Sheep, from $2,50 to 4@8; Lambs from $1,50, 3,50@5.

At Chamberlain's—(Hudson River Bull's Head)—Offered, 30 Beeves, 45 Cows and Calves, 35 Veal Calves, and 4,500 Sheep and Lambs.

Beeves ranged at from 7@9c per lb.

Cows and Calves, $25, 40@65. Veal Calves 5@7c. per lb.

Sheep $2,75, 3,50, 4@6,50. Lambs $2, 3@4. 500 Sheep left over.

At O'Brien's—(No. 9 Sixth street)—Offered, 175 Beef Cattle; 30 Cows and Calves. Sales of the former at from 5@8; and the latter at from $20 to $35.

### ALBANY CATTLE MARKET.

ALBANY, Nov. 21.—W. W. Woolford's, Bulls' Head, Washington street.

Beef Cattle—600 at market. Prices—Extra, $7,00; 1st quality, $6,50; 2d do. $6; 3d do, $5@5,50.

Cows and Calves—10 in market. Prices from $30, 35, @45.

Sheep and Lambs—1,255 in market. Prices at from $2,50, $3@5.

Hogs—600 in market. Prices from $5@5,12.

Remarks.—Cattle are selling very well. Sheep and Lambs are doing better this week than they have in two or three weeks back.

### CAMBRIDGE CATTLE MARKET

CAMBRIDGE, Nov. 16.—At market, 2,895 Cattle, about 1,895 Beeves, and 1,000 Stores, consisting of Working Oxen, Cows and Calves, yearlings, 2 and 3 years old.

Prices—Market Beef—Extra sold at $8,00 per cwt.; 1st quality, $7,00; 2d do, $6,25@6,50; 3d do, $6,00; ordinary, $5,50@6.

Hides—$6@6½ per cwt.

Tallow—$8.50@9 per cwt.

Pelts—$1@1,50.

Calf Skins 11@11½c per lb.

Barrelling Cattle—$5@6.

Veal Calves—$7, 9@10.

Stores—Working Oxen—$95, 102, 115@182.

Cows and Calves—$25, 30, 35, 44, 50@72.

Yearlings—$8, 9@10.

Two years old—$18, 21, 25@44.

Three years old—$27, 32, 45@59.

Sheep and Lambs—5,903 at market.

Prices—Extra, $4½, 5, 6@8.

By lot—$1,88, 2, 3@4.

Swine—Large hog trains not in. Wholesale, still fat 5c, hard corn fed 5½c per lb.

Remarks—Market well stocked, and sales animated, compared with last week. A few large fat Oxen, raised in Ohio, and fatted at White Creek, N. Y., brought in by Mr. Pulsifer, famous for his extra cattle, were taken by Mr. Taylor of Brighton, at $8,50 per cwt. Live Turkeys in large numbers, and sales slow. Market day next week on Tuesday, 22d; at Brighton the 23d.

### BRIGHTON CATTLE MARKET.

BRIGHTON, Nov. 17.—At market 3,400 Cattle, (say 1,900 Beef and 1,500 Stores,) 6,000 Sheep and 1,450 Swine.

Prices—Beef Cattle—The best qualities met with quick sales at a small advance. Extra $7,75@8; first quality $7@7,25; 2d do, $5,75@6,50; 3d do. $4@5,50.

Stores—Yearlings $7@11.

Two years old $12@19.

Three years old—$21@33.

Working Oxen—Sales $70, 80, 85, 92, 100, 120@135.

Cows and Calves—Sales $22, 28, 32, 37, 40@50.

Sheep—Dull, $2,33, 2,62, 2,92, 3.35, 4,25@5.

Swine—Dull; Shoats to peddle 5@5½c. for sows, 6@6½c. for barrows. Old Hogs 4¾, 5@5¼c. Still fat hogs 5c.—Corn fed 6c. At retail from 5½@7½c.

### PHILADELPHIA CATTLE MARKET.

PHILADELPHIA, Nov. 16.—The offerings at market during the past week comprised 2,600 head of Beef Cattle, 600 of which were driven to New York; 160 Cows and Calves, 2,500 Hogs, and 1,600 Sheep and Lambs.

Prices not so firm as last week. Beef Cattle sold at $7,50 to 8,75.

Wigs, old prices, $10 to $15, now $7 and $11; Toupees $10 to $8 now, $8 and $6 down to $4; Ladies' bands 50 per cent. less; Braids 75 per cent. less; Curls the same. Perfumery and Gents. Furnishing Goods the same discount from usual prices. Three-ply collars 15 cts. each, or $1,75 per dozen. Come, or send to 56 Buffalo St.
204-tf PROF. BROWN.

**A GOOD INVESTMENT FOR LABOR OR CAPITAL.**

WITHIN twenty minutes drive of a great market.—The subscriber, being desirous of attending to his interests in the mineral region at the West, will sell his Farm on the Ridge Road, one mile north of Rochester city line, consisting of 130 acres, 30 of which are heavily wooded, worth as it stands, one-third of the purchase money; with over 600 fruit trees of all the varieties worth cultivating, the produce of which when in full bearing, will pay the interest of the entire price of the farm.

The land is in good heart, mostly in grass, and the stumps all out and well fenced.

There are three Houses and Barns on the premises.

Having a great traveled road through its centre, and the River road on the East, it would cut up to great advantage, or might be used for a great Nursery establishment, for which it is well adapted.

If not sold by the first of April, it will be rented for a term of years. L. B. LANGWORTHY.
Rochester, Oct. 25, 1853. 200-tf

**Ornamental and Domestic Poultry.**

THE subscriber having invested a large amount in this business, is now prepared to fill any orders which he may receive. The celebrated Brahma, Sumata, Game, Palmer, Marsh and White Shanghais, with many other popular varieties, are from the yard of C. C. Plaisted, Esq., Great Falls, N. H., and of course cannot be surpassed in the world. My Imperial Cochin China Fowls are from Col. B. P. Johnson, his stock imported last year, '52, from the best breeders in England. All who well know Col. J., will understand that he has the best or none. My black Spanish are quite late, and will not be ready for market before next spring. They are from Mr. John Giles, late imported, the best blood in the country. These birds are so fast coming into repute that the price will doubtless run high for some years to come, as will also be the case with the Brahma, Sumatra, Game, &c. All persons purchasing fowls from me, can enjoy the benefit of my advertising, in case they wish to sell Chickens next year.

I am quite sure that our southern and western fanciers can be better suited here than farther east, as the long distance on railroad much injures the health and growth of the fowls.

As there are many fowls in market which have no claim upon the public favor, I will give my patrons something more tangible than my own words, for

"If self the wavering balance shake,
It's rarely right adjusted."

I am therefore permitted to refer all who entertain any scepticism, to the following gentlemen:—Col. B. P. Johnson, Secretary N. Y. State Agricultural Society, Albany, N. Y.; Hon. Ambrose Stevens, N. Y. City; Hon. Lewis F. Allen, Black Rock, N. Y.

Address O. B. EVANS, 214 Main street,
194-3m Buffalo, N. Y., Box 1662.

# MOORE'S RURAL NEW-YORKER,

THE LEADING AMERICAN WEEKLY

## AGRICULTURAL, LITERARY AND FAMILY NEWSPAPER.

The Rural New Yorker is the standard journal of its class in America. This is no vain assumption, but fully sustained by its high reputation, great popularity and extensive circulation. As has long been acknowledged by its Patrons and the Newspaper Press, it has no superior as an

**AGRICULTURAL, LITERARY AND FAMILY NEWSPAPER.**

Its leading departments contain more Agricultural, Horticultural, Mechanical, Scientific, Educational, Literary and News Matter, than any other paper in the Union—thus rendering it unequalled in Variety and Usefulness of Contents.

Its Literary Department—comprising Tales, Essays, Historical Sketches, Biography, Poetry, &c.,—is conducted with taste and discrimination, and embraces a carefully prepared variety of

**CHOICE READING FOR THE HOME CIRCLE.**

Aside from the intrinsic value of its Reading Matter, the ample pages of the Rural are interspersed with many Appropriate and Costly Engravings—including illustrations in Agriculture, Horticulture, Rural Architecture, Science, Biography, Natural History, &c.

As a Newspaper the Rural New-Yorker is also most valuable, each number containing the

**LATEST AND MOST IMPORTANT NEWS,**

Briefly yet definitely stated—including reliable reports of the Grain, Provision and Cattle Markets, &c. It is independent and out-spoken—condemning humbug and quackery, and fearlessly and faithfully advocating the Best Interests of the Rural Population. In judging of it comparatively, remember that the Rural New-Yorker is not a *monthly*, of only twelve issues yearly, but a

**LARGE AND BEAUTIFUL WEEKLY OF FIFTY-TWO NUMBERS!**

The Fifth Volume, commencing Jan., 1854, will be printed on New and Handsome Type, and otherwise materially improved. An actual *increase of over Six Thousand Subscribers* during the past year, stimulates and enables us to make very liberal expenditures to improve the paper in both Contents and Appearance. With an able corps of Associate and Corresponding Editors, (five in number,) and many talented and experienced Contributors and Correspondents, the Conductor of the Rural is determined to render its whole contents eminently Valuable and Interesting.

**FORM AND TERMS.**

Each number of the Rural New-Yorker comprises Eight Double Quarto Pages (forty columns,) printed in the best style. An Index, Title Page, &c., at the close of each volume.

Terms in Advance—Single Copy $2 a Year—$1 for Six Months. Three Copies for $5; Six for $10; Ten for $15; Twenty for $25. As we are obliged to pre-pay the American postage, our lowest club rate to Canada subscribers is $1,50 per copy. See Premium List below.

Now is the Time to Subscribe and form Clubs to commence with the new year and volume. We confidently anticipate the continued influence of former Agents and active Friends,—while the kind offices of all favorably disposed toward the paper, will be gratefully appreciated.

☞ Specimen numbers, Premium Lists, &c., sent free to all applicants. Subscription money, properly enclosed, may be mailed at our risk, if addressed to

November, 1853. **D. D. T. MOORE,** Rochester, N. Y.

---

During the past year the Proprietor of the Rural New-Yorker has *paid* nearly *Fifteen Hundred Dollars* in Premiums to Agents and others, and now invites the attention of all interested to the following list of

## Splendid Premiums for New Subscribers!

1. SEVENTY-FIVE DOLLARS, in Cash, to the person sending us the greatest number of yearly subscribers (six month subscriptions to be counted proportionally) to the Rural New-Yorker—remitting payment according to our club terms—previous to the 15th day of April, 1854.

2. FIFTY DOLLARS, in Cash, to the person sending us the second largest number, as above.

3. THIRTY DOLLARS, in Cash, to the person sending us the next (third) greatest number.

4. TWENTY DOLLARS, in Cash, to the person sending the next (fourth) greatest number.

5. FIFTEEN DOLLARS, in Plate or Books, to the person sending the next (fifth) greatest number.

6. TWELVE DOLLARS, in Plate or Books, to the person sending the next (sixth) greatest number.

7. TEN DOLLARS, in Plate or Books, to the person sending the next (seventh) greatest number.

**JANUARY PREMIUMS!**

1. TWENTY-FIVE DOLLARS, in Cash, to the person sending us the largest number of subscribers, according to our terms, previous to the 1st day of January, 1854.

2. FIFTEEN DOLLARS, in Cash, to the person sending the second largest number, as above.

3. TEN DOLLARS, in Cash, to the person sending the third largest number as above.

☞ Persons competing for these Premiums must mail their remittances on or before the 31st of December. They are not excluded from the April prizes, so that one person may secure *One Hundred Dollars, in Cash!*

[In order to give Subscribers, Local Agents and Post-Masters a fair and equal chance, traveling agents, post-riders and citizens of Rochester are excluded from competition for any of the above Premiums.]

**SPECIFIC PREMIUMS!**

In order to reach and reward *every one* who may lend a portion of influence in support of the Rural New-Yorker, we offer to those who do not compete for either of the preceding prizes, the following liberal gratuities:

1st. FIVE DOLLARS, in Cash, or a copy of Webster's Unabridged Dictionary, (or $6 in Ag'l Books) to *each person* sending payment for fifty or more yearly copies (six month subscriptions proportionally,) according to our terms, previous to the 15th of April, 1854.

2d. FIVE DOLLARS, in Books, or four extra copies of the Rural, to every person remitting payment for forty or more subscribers, as above.

3d. THREE DOLLARS, in Books, or a handsomely bound volume of the Rural for 1853, to every person remitting for thirty subscribers.

4. To every one remitting for twenty copies, ($25,) we will give an extra copy of the Rural, and four (the present and three past) volumes of The Wool Grower and Stock Register—or, if preferred, an extra copy of the Rural and $1,50 in Books.

5th. To every one remitting for ten copies, ($15,) an extra copy of the Rural and three volumes (past or present) of the Wool Grower—or, instead of vols. W. G., $1 in Books.

6th. To every one remitting for six copies, ($10,) an extra copy of the Rural, either volume of the Wool Grower, *and* a bound vol. of Genesee Farmer for 1848 or '49.

7. To every one remitting for three copies ($5,) either volume of the Wool Grower, *and* a bound volume of Gen. Farmer for 1848 *or* '49.

8th. To every person remitting for one copy, ($2,) we will give a copy of either volume Wool Grower, *or* the Farmer for '48 or '9, as preferred.

All competitors for premiums are expected to adhere strictly to the following

**TERMS IN ADVANCE:**

Two Dollars a Year. *Three Copies, one year, $5—Six Copies for $10—Ten Copies for $15—Twenty Copies for $25, and any additional number at the same rate. Names of subscribers written on the papers if desired, however large the club. Club papers sent to different offices if desired.*

☞ Specimen numbers, &c., furnished free to all disposed to compete for the Premiums, or who desire to extend the circulation of the New-Yorker. Subscription money, properly enclosed, may be mailed at our risk, if addressed to

**D. D. T. MOORE,**
November, 1853. Rochester, N. Y.

**SAMUEL MOULSON,**

AT THE OLD ROCHESTER NURSERY.

Office, No. 36 Front St., Rochester, N. Y.

Is prepared to furnish inventories, to post-paid applicants, of the present very extensive stock of Nursery items, consisting in part of

120,000 Dwarf and standard Pear Trees.
90,000 Apple Trees.
50,000 Peach Trees.
30,000 Plum, Cherry and Apricot Trees.
Over 100,000 Hardy Evergreens.

Also, extra large Northern Spy Apple Trees, Dwarf and Standard Pear, Cherry, &c., &c.

Also, for immediate effect, a large quantity of extra sized Ornamental Trees, among which are fine specimens of Norway Spruce, Silver Maple, Pawlonias, Catalpas, Mountain Ash, Horse Chestnut, &c.

And a fine selection of Weeping Deciduous Trees, Ornamental Shrubs, Hybrid Perpetual Roses, together with such novelties as may be classed strictly hardy. Also a very limited assortment of half hardy plants of small size, such as Cryptomeria Japonica, Cedrus Deodara, &c., &c.

The amateur wishing prime fruits of well established repute, or the agriculturist needing fine cropping, thoroughly tested varieties, may rely upon the most careful execution of their orders.

The Ornamental items are entirely grown in the Nursery, consequently none of the heavy losses are sustained that usually occur to recent imported subjects.

The Evergreens are very robust and admirably furnished to the surface of the ground, none presenting the naked stems usual to imported plants.

Dealers are invited to give a call before making their purchases.

☞ Peach and Plum pits wanted.
September 1, 1853. 196-tf.

**FARM FOR SALE.**

THE subscriber offers to sell his farm, in the town of Phelps, Ontario Co., N. Y.—three miles south of Vienna, east of Melvin Hill, lying on the thorough-fare leading from Canandaigua to Free Bridge. It consists of 102¼ acres, 15 of it heavily timbered. Upon it 1,500 bushels of grain and 20 tons of hay, may be produced annually, beside the keeping of considerable stock. Is conveniently watered by a never-failing spring. Nearly 30 old bearing Apple Trees, and a young orchard of 130 trees now coming into bearing, consisting of the most approved varieties. Fine Peach orchard of over 50 trees, all of the most delicious fruit. Buildings worth $3,000. Good well and cistern. Location pleasant and healthy. Part of purchase money can remain on bond and mortgage a length of time. Price $65 per acre. For further particulars apply to the proprietor on the premises or by mail, post-paid,

G. W. PEARCE.
Phelps, N. Y., Oct. 20, 1853. 200

☞ **PEOPLE'S COLLEGE OF THE STATE** of New York, Incorporated April 12, 1853.—This Institution has been chartered by the Legislature of this State, for the purpose of reducing the expenses of Academic and Collegiate Education, and thereby open the Halls of Science to all classes of society by reducing the cost of tuition, board and clothing, and enabling the student to defray the greater part of the expense in labor.

Provision will be made to educate young men corporeally and mentally for specific purposes, by pursuing full and definite courses of study for each of the pursuits represented in the College—either Agricultural, Mechanical or Professional—and thus graduates will be qualified for entering at once upon the business of their choice.

At a regular meeting of the Trustees named in the Charter, held at Owego, on the 25th day of May, the following appointments were made:

D. C. McCallum, of Owego, President of the Board of Trustees.
A. I. Wynkoop, of Chemung, Vice President.
Tracy Morgan, of Binghamton, Treasurer.
Harrison Howard, of Lockport, Secretary and General Agent.

Agents are being commissioned in each county of the State, that the people may have an opportunity to contribute to the capital stock, which is distributed in shares so small that every individual may become interested in an institution which commends itself to the favorable consideration of every intelligent person.

For further information upon the subject, application may be made, post-paid, to the Secretary, who will send a pamphlet containing the act of incorporation and objects of the Institution, and other needful information.

188-tf H HOWARD, Secretary.

The undersigned, having been appointed Agent for Rochester and Monroe county, will be most happy to furnish any new information desired, in reference to the College, to receive stock subscriptions, (the shares are one dollar each,) or to address audiences, on invitation, explaining at length the plans and objects of the People's College, and also as he views the idea of a true education.

Respectfully, G. F. NEEDHAM.

**MARSHALL'S BOOK BINDERY,**

BURNS' BLOCK corner of State and Buffalo street, over Sage & Brother's Bookstore, Rochester, N. Y.

Music Books, Pamphlets, Periodicals, &c., bound in plain and fancy bindings; old books rebound; Blank Books ruled to any pattern, and bound to order; Public and Private Libraries repaired at short notice. Packages containing directions for binding, punctually attended to.

N. B.—All work warranted, and done at low prices.
April, 1852. [122tf] F. H. MARSHALL.

# Poetical.

## THE MAIDEN'S DREAM.

A maid one day in a mournful mood,
(For this maid was getting older,)
Sat down o'er her single state to brood;
Poor thing, she very much wished to be wooed,
But she thought the men grew colder.
She pined for a husband, kind and good,
A husband who would not scold her.
A single life she admired far less
Than that state of double blessedness
That's known by the name of marriage.
Moreover she wished, and the wish was wise
That it might be her fate to pluralize
With a lover who kept his carriage.
For in holy matrimony's hive
There's nothing so nice to keep love alive,
As a good supply of money,
It tends so much to "elegant ease,"
'Tis as welcome to wives, as to summer bees
Are clover blooms full of honey.
In the midst of her musings she fell asleep,
But her thoughts continued still to sweep
In a wedding-ward direction.
She thought that Cupid her shoulder tapped
With his shaft, as she lay in slumber wrapt,
And calling her "sweet perfection,"
Remarked that a husband should yet be hers,
A spouse for better and not for worse,
Who would love her with true affection.
Young lady—said he—be pleasant and gay,
From the other sex do not turn away,
Yet be not too forward neither;
And instead of moping here in the house,
Where you cannot expect to find a spouse,
Whene'er there's a party to be there,
Dress with taste, never wear a frown,
And you're sure to capture some proper noun
Of the bearded and whiskered gender!
To his wooing give an attentive ear.
Don't answer his vows with a laugh or jeer;
Be modest, but yet be tender.
Pursue this course if you wish to wed,
And the game's your own—little Cupid said,
Then opened his wings, and bowed his head,
Prayed Heaven a lover to send her.
The prayer was heard—she is married now—
To win an adorer Love taught her how,
And well her husband has kept his vow
To cherish her and defend her.

*Merchant's Ledger.*

# Rural Sketch Book.

## THE TWO INVALIDS.

BY T. S. ARTHUR.

The chamber in which the sick woman lay was furnished with everything that taste could desire, or comfort demand. Yet, from none of those elegant surroundings, came there an opiate for the weary spirit, or a balm to soothe the pain from which she suffered. With heavy eyes, contracted brow, and face almost as white as the lace fringed pillow it pressed, canopied with rich curtains, she reclined sighing away the weary hours, or giving voice to her discontent in fruitless complaining.

She was alone. A little while before her attendant had left the room, taking with her a child, whose glad spirits—glad because admitted to his mother's presence—had disturbed her.

"Take him out," she said, fretfully.

"You must go back to the nursery, dear."

The attendant spoke kindly, as she stooped to lift the child in her arms.

"No — no — no. I want to stay here. Do let me stay here, won't you?"

"Mamma is sick and you disturb her," was answered.

"Oh, no. I won't disturb her. I'll be so good."

"Why don't you take him out at once?" exclaimed the mother in a harsh, excited voice.

"It's too much that I can't have a little quiet! He's made my head ache already. What does the nurse mean by letting him come over here!"

As the screaming child was borne from the room, the sick woman clasped her hands to her temples, murmuring —

"My poor head! It was almost quiet; but now it throbs as if every vein were ready to burst! Why don't they soothe that child!"

But the child screamed on, and his voice came ringing upon her ears. Nurse was cross, and took no pains to hush his cries; so the mother's special attendant remained for some time away from the sick chamber. By slow degrees she succeeded in diverting the child's mind from his disappointment; but it was many minutes after his crying ceased, before he would consent to her leaving him.

In the meantime the sun's bright rays had found a small opening in one of the curtains that draped the windows, and commenced pouring in a few pencils of light, which fell in a bright spot, on a picture that hung on the wall; resting, in fact, upon the fair forehead of a beautiful maiden, and giving a hue of life to the features. It was like a bit of fairy work—a touch, almost, of enchantment. The eyes of the invalid were resting on this picture, as the magic change began to take place.

How the lovely vision, if it might be so called, won her from thoughts of pain! Ah, if we could say so? Raising herself, she grasped the pendant tassel of the bell-rope, and rung with a violent hand; then sunk down, with a groan, exhausted by the effort, shut her eyes, and buried her face in the pillow. Leaving the only half-comforted child, her attendant hastily obeyed the summons.

"The sun is blinding me!" said the unhappy invalid, as she entered the chamber. "How could you be so careless in arranging the curtains!"

A touch, and the sweet vision which had smiled all so vainly for the poor sufferer, was lost in shadows. There was a subdued light, and almost pulseless silence in the chamber.

"Do take these flowers away; their odor is dreadful to me!"

A beautiful bouquet of flowers, sent by a sympathizing friend, was removed from the chamber. Half an hour afterwards, the attendant thought her sleeping, she exclaimed:

"Oh, how that does worry me!"

"What worries you, ma'am?" was kindly asked.

"That doll on the mantle. It is entirely out of place here. I wish you would remove it. Oh, dear, dear! And that toilette glass — straighten it if you please. I can't bear anything crooked. And there's Mary's rigolette on the bureau; the careless child! She never puts anything away."

These little annoyances were removed, and the invalid was quiet again—externally quiet; but within, all was fretfulness and mental pain.

"There come the children from school," she said, as the ringing of the door bell and gay voices were heard below. "You must keep them from my room. I feel unusually nervous to-day, and my head aches badly."

Yet even while she spoke, two little girls came bounding into the room, crying —

"Oh, mother! dear mother! We've got something good to tell you. Miss Martin says we've been two of the best ——

The attendant's imperative "H-u-s-h!" and the mother's waving towards the door, the motion enforced by a frowning brow, were successful in silencing the pleasant and excited children, who without being permitted to tell the good news they had brought from school, and which they had fondly believed would prove so pleasant to their mother's ears, were almost pushed from the chamber.

No matter of surprise is it, that a quick revulsion took place in their feelings. If the voice of wrangling reached, soon after, the mother's ears, and pained her to the very soul, it lessened not the pressure on her feelings, and a little self-denial on her part, a little forgetfulness of her own feelings, and a thoughtfulness for them, would have prevented the unhappy discord.

And so the day passed, and when evening brought her husband to her bed-side, his kind inquiries were answered only by complainings that made, from mental reactions, bodily suffering the greater. For so long a time had this state of things existed, that her husband was fast losing his wonted cheerfulness of temper. He was in no way indifferent to his wife's condition; few men, in fact, would have sympathized more deeply, or sought with more untiring assiduity to lighten the burden which ill-health had laid upon her. But, in her case, thought was all turned to self. It was like the blood flowing back, in congestion upon the heart, instead of diffusing itself, healthfully, over the system.

Thus it went on, the invalid growing worse instead of better. Not a want was expressed, that money did not supply; not a caprice of fancy or appetite, which met not proffered gratification. But all availed not. Her worst disease was mental, having its origin in inordinate selfishness. It never came into her mind to deny herself for the sake of others; to stifle her complaints, lest they should pain the ears of her husband, children or friends; to bear the weight of suffering laid upon her, with at least an effort at cheerfulness. And she became a burden to those who loved her. In her presence, the sweet voices of children were hushed, and smiles faded away. Nothing that was gay, or glad, or cheerful, came near her, that did not instantly change into sobriety or sadness.

Not very far away form the beautiful home of this unhappy invalid, is another sufferer from ill-health. We will look in upon her. The chamber is poorly furnished, containing scarcely an article, the absence of which would not have abridged the comfort of its occupant. We enter.

What a light has come into those sunken eyes, and over that pale face? We take the thin white hand. A touch of sadness is in our voice that will not be repressed, as we make inquiries about her health; but she answers cheerfully and hopefully. "Do you suffer pain?"

"Yes, but mostly at night. All day long I find so much to interest me, and so many thoughts about my children to fill my mind, that I hardly find time to think of my own feelings. Care is a blessing."

With what a patient, heavenly smile this is said! How much of life's true philosophy is contained in that closing sentence? Yes, care is a blessing. What countless thousands would, but for daily care, be unutterably miserable. And yet, we are ever trying to throw off care—to rise into positions where we will be free from action or duty.

The voice of a child is now heard. It is crying.

"Dear little Aggy! What can ail her?" says the mother, tenderly. And she inclines an ear, listening earnestly. The crying continues.

"Poor child! Something is wrong with her. Won't you open the door a moment?"

The door is opened, and the sick mother calls the name of "Aggy" two or three times. But her voice is too feeble to reach the distant apartment.

We second the mother's wishes, and go for the grieving little one.

"Mother want Aggy."

What magic words! The crying has ceased instantly, and rainbow smiles are seen through falling tears.

"Dear little dove! What has troubled it?" How tender and soothing and full of love is the voice that utters these words!—We lift Aggy upon the bed. A moment, and her fresh, warm cheek is close to the pale face of her mother; while her hand is nestling in her bosom.

The smile that plays so beautifully over the invalid's face, has already answered the question we were about to ask—"Will not the child disturb you?" But our face has betrayed our thoughts, and she says:

"I can't bear to have Aggy away from me. She rarely annoys me. A dear, good child—yet only a child, for whom only a mother can think wisely. She rarely leaves my room that she doesn't get into some trouble: but my presence quickly restores the sunshine."

The bell rings. There is a murmur of voices below; and now, light feet come tripping up the stairs. The door opens, and two little girls enter, just from school.—Does the sick mother put out her hand to enjoin silence? Does she repel them by look or word? Oh no.

"Well, Mary—well, Anna!" she says kindly. They bend over and kiss her gently and lovingly; then speak modestly to the visitor.

"How do you feel, mother?" asks the oldest of the two girls. "Does your headache?"

"Not now, dear. It ached a little while ago, but it is better now."

"What made it ache, mother?"

"Something troubled Aggy, and her crying sent a pain through my temples. But it went away with the clouds that passed from her darling face."

"Why, she's asleep, mother!" exclaimed Anna.

"So she is. Dear little lamb! Asleep with a tear on her cheek. Turn her crib around love, so that I can lay her in it."

"No, you musn't lift her," said Mary, "it will make your head ache." And the elder of the children lifts her baby sister in her arms, and carefully lays her in her crib.

"Did you say all your lessons correctly, this morning?" now asks the mother.

"I didn't miss a word," answers Mary.

"Nor I," says Anna.

"I'm glad of it. It always does me good to know that you have said your lessons well. Now go and take a run in the yard for exercise."

The little girls leave the chamber, and soon their happy voices come ringing up from the yard.

The sound is loud, the children in their merry mood are unconscious of the noise they make.

"This is too loud. It will make your headache," we say, making a motion to rise, as if going to check the exuberance of their spirits.

"Oh no," is answered with a smile. "The happy voices of my children never disturb me. Were it the sound of wrangling my weak head would throb instantly with pain. But this comes to me like music. They have been confined for hours in school, and health needs a reaction.

"Every buoyant laugh or glad exclamation expands their lungs, quickens the blood in their veins, and gives a measure of health to mind as well as body. The knowledge of this brings to me a sense of pleasure; and it is better for me, therefore, that they should be gay and noisy for a time, after coming out of school, than it would be if they sat quietly down in the house, or moved about stealthily, speaking to each other in low tones lest I should be disturbed."

We could not say nay to this. It was true, because unselfish philosophy.

"Doesn't that hammering annoy you," we asked.

"What hammering?"

"In the new building over the way."

She listens a moment, and then answers:

"Oh, no. I did not remark it until you spoke. Such things never disturb me, for the reason that my mind is usually too much occupied to notice them. Though an invalid, and so weak that my hands are almost useless, I never let my thoughts lie idle. A mother, with three children, has enough to occupy her mind usefully—and useful thoughts, you know, are antidotes to brooding melancholy, and not unfrequently to bodily pain. If I were to give away to weakness—and I am not without temptation—I would soon be an unhappy, nervous, helpless creature, a burden to myself and all around me."

"You need sympathy and strength from others," we remarked.

"And I receive it in full measure," is instantly replied. "Not because I demand it. It comes, the heart-offering of true affection. Poorly would I repay my husband, children and friends for the thousand kindnesses I received at their hands, by making home the gloomiest place on all the earth. Would it be any the brighter for me that I threw clouds over their spirits? Would they more truly sympathize with me, because I was forever pouring complaints into their ears? Oh, no. I try to make them forget that I suffer, and, in their forgetfulness, I often find a sweet oblivion. I love them all too well to wish them a moment's sadness."

What a beautiful glow was on her pale countenance as she thus spoke!

We turn from the home of this cheerful invalid, with a lesson in our hearts not soon to be forgotten. Ill health need not always bring gloom to the dwelling. Suffering need not always bend the thoughts painfully to self. The body may waste, the hands fall nerveless to the sides; yet the heart retain its greenness, and the mind its power to bless.

---

Man is like a snowball. Leave him lying in idleness against the sunny fence of prosperity, and all the good that is in him melts like fresh butter in those days; but kick him round, and he gathers strength at every revolution, until he grows into an avalanche. To make a figure in the world you must keep moving.

---

"False Pretences."—Pretending to be religious when you are immoral; sick when you are quite healthy; honest when you are a knave; to have political principles when you have none, with a list of &c., &c., "too numerous to mention."

# Wit and Humor.

## A MODEL CERTIFICATE.

The Knickerbocker Magazine says:—"Our eccentric and almost ubiquitous correspondent, Mr. James Pipos, of Pipesville, pays the following tribute to the great merits of the Graffenburg Pill, Lip Salve and Green Mountain Ointment:"

"To the President of the Younited Staitos Graffenburg Pil Manufaktering Lip Sarve and Green-Mountaine Ontment Kumpany in Congress not assembled:

"Sur—I were afflicted with a wery wiolent pane in my lower stummick by reeson of induring much Licker in my sistom. It remaned with me for sum time untill my previous insido was materially lessened in its parts. Driven orlmost to madness, by one of Kipp and Brown's omnibuses, I alited at your Pil Repository in dreadful agoni, and found your docter just helping to some Bitters, for to give him an appotito for the Pils after dinner. He advised me to take sum—which I did, and found Relief before I'd finished takin it. It warmed my intesinos and othor things, and corzed the preparation to exclude from my skin and the Kyyenne Popper to raise in my stummick so that I hollered right out no moar fur the present, from yours trooly, J. P."

## FATAL CASE.

Polly Smith was a terrible plain woman. She would have borne off the jack-knife from all competitors, and given them the odds of fifty start in the race. She was endlessly complaining of her ailments, to the no small annoyance of such listeners as she chanced to hold, and no one was more annoyed than old Dr. Bolus, a comical old fellow of her neighborhood. Meeting Mrs. Smith one morning, he ventured to salute her with the usual compliment of the morning, with the accostomed "How d'ye do?" "Why, doctor, feel putty mizable thank'e. My old complaints is troubling me. There never was a creature suffered more than I do. Pains and aches, and pains all the time!" "But," interrupted the doctor, growing impatient, "you don't look very sick." "No," replied she, "I know I don't, but I feel a great deal worse than I look." "Bless me!" cried the doctor, throwing up his hands, "then you had better make haste home, for you can't live an hour!" Mrs. Smith had the good sense to know what he meant, and never made any more complaints to him.

---

Definition of Humbug.—A severe instance of the use of the term "humbug" occurred in a Court of Justice. A female in giving evidence repeatedly used this term. In her severe cross-examination, the counsel (a very plain, if not ugly person) observed she had frequently used the term humbug, and desired to know what she meant by it, and to have an explanation; to which she replied:

"Why, sir, if I was to say you were a very handsome man, would you not think I was humbugging you?"

The counsel sat down perfectly satisfied.

---

Nicholas Biddle, when President of the U. S. Bank, obtained the opinion of Chancellor Kent on some point of law, for which the Chancellor charged a fee of one hundred dollars.

"That is not enough Judge," said Mr. B—; "here are two hundred dollars, and your services are cheap enough at that."

"How is this?" said the Chancellor; "do you think I do not know the value of my own opinion? You have insulted me; but on the whole, I'll *pocket* the insult!"

---

Tom Marshall of Kentucky, and one Pilcher, were rival candidates for office, and were "stumping" against each other. Pilcher was haranguing about "*his* father having been a poor man," "*his* father was a cooper," and more of that sort of thing.—Marshall said he would admit the gentleman's father was a poor man; perhaps he had been a cooper, but if he was, (pointing to Pilcher,) he had made a mighty *poor head* to *one* of his whiskey-barrels!

---

Would Not be a Fool.—The uncle of a Welsh minister being sorely offended, declared that he should never forgive the offender. The minister asked him if he knew what the Bible said?

"No," said he, "what does it say?"

"Anger resteth in the bosom of fools."

"Well, Thomas," said he, "go instantly and tell the man that I forgive him all. I will not be a fool to please him, or anybody else."

---

Sergeant Davy was accused of having once disgraced the bar by taking silver from a client. "I took silver," replied he, "because I could not get gold; but I took every farthing the fellow had in the world; and I hope you don't call that disgracing the profession."

---

A Clergyman of "undefinable" character, going to say prayers, had great difficulty in putting on his surplice. "I think," said he to the clerk, "the devil is in the surplice." The astonished clerk stared till he got it on, then sarcastically exclaimed, "I think he is, sir?"

---

Hard Hit.—The witty Duke of Wharton, having introduced a Scripture story into one of his speeches in the House of Lords, was asked by a right reverend prelate, when he should have done preaching.—"When I am made Bishop, my lord," was the sarcastic reply.

---

The man who was "fired with indignation," has been extinguished.

## MISCELLANEOUS ENIGMA.

I am composed of 22 letters.
My 19, 7, 14, 10, 18, 12 all should do.
My 1, 2, 5, 17, 1 often occurs.
My 13, 8, 15, 11, 13, 18 merchants buy.
My 17, 15, 18, 9, 14, 13, 22, 10, 4 is a girl's name.
My 13, 18, 8, 15 is dug from the earth.
My 6, 22, 19, 12 is used by weavers.
My 22, 15, 15, 5, 20 is a town in New York.
My 15, 8, 17, 14, 6, 7, 1, 1, 5 was a general in the Revolutionaay war.
My 1, 2, 4, 22, 1, 5, 19 is visited by many.
My 15, 16, 20, 12, 7, 1 is the name of a bird.
My 21, 20, 12 is not out.
My 10, 20, 18, 19, 7 many do unconsciously.

My whole is an interesting work about the gold regions.

Hunt's Hollow, N Y., 1853.

## A PROBLEM.

It is required to row a boat from New York to Albany with the least possible expense of human labor. I find by placing four hands in it, that they can just stem the current, without progressing; and by placing a fifth hand in the boat, the power requisite to move it with a given velocity, was increased one-eighth; and one-tenth for each additional hand. What number of hands must be placed in the boat?

Answer to Historical Enigma — *Alexander the Great, King of Macedon.*

**FURS! FURS! FURS!**

THE largest assortment in Western New York, and will be sold lower than can be offered at any other establishment in the city. No Humbug, call and be satisfied.

Buffalo Robes; Wolf Robes;
Jennett do. Fox do.
Badger do. Woolverine Robes.
Bear do. Opossum do.
Lynx Victorines and Cuffs.
Stone Martin, Pek Martin and French do. do.
Swedish and Silver Martin Victorines and Cuffs.
Hudson's Bay Sable do. do.
Mink, Opossum, and Fitch do. do.

Swans Down, Fur Trimmings, Fur Gloves, the greatest variety in the State, and will be sold by the single pair or dozen, 20 per cent. lower than any house in this city.

Our FURS are from the celebrated furriers, Gauther & Sons, Gault, Ballard & Co., Leopold, Lang, Backus, Osborn & Co.; Wm. Moser, and the Hudson's Bay Fur Manufactory—warranted superior in workmanship, color and stock, to any manufactured in this country.

We keep everything in the Fur line, and will retail or job as low as any New York house.

CLARK & GILMAN, 33 State street,
Wholesale and Retail Furriers and Hatters.

**MOORE'S RURAL NEW-YORKER:**

A WEEKLY HOME JOURNAL,

**For both Country and Town Residents.**

PUBLICATION OFFICE,

Burns' Block, corner State and Buffalo Sts.,

Rochester, N. Y.

TERMS, IN ADVANCE:

Two Dollars a Year—$1 for six months. To Clubs and Agents as follows:—Three Copies one year, for $5; Six Copies (and one to Agent or getter up of club,) for $10; Ten Copies (and one to Agent,) for $15; Twenty Copies for $25, and any additional number, directed to individuals at the same rate. Six months subscriptions in proportion.

☞ Subscription money, properly enclosed, may be sent by mail at the risk of the Publisher.

Terms of Advertising

One Dollar per square (ten lines—100 words, or less,) for each insertion,—*in advance.* ☞ The circulation of the New-Yorker is much larger than that of any other newspaper published in the State, out of New York city. Only a limited space, however, is devoted to advertisements, and hence preference is given to those most appropriate—such as the cards and notices of dealers in Agricultural Implements and Machinery,—Horticulturists and Seedsmen,—Booksellers and Publishers,—Inventors, etc. All orders by mail should be accompanied with the cash.

To enable us to accommodate as many as possible, brief advertisements are preferred. Patent medicines, &c., will not be advertised in this paper on any terms.

☞ All communications, and business letters, should be addressed to D. D. T. Moore, Rochester, N. Y.

THE WOOL GROWER AND STOCK REGISTER.

This is the only American Journal primarily devoted to the interest of Wool and Stock Growers, and should be in the hands of *every owner of Domestic Animals.* It is ably conducted, published in the best style, and finely illustrated. Each number contains a careful Review of the Wool and Cattle Markets, and much other *useful* and *reliable* information which can be obtained from no other source. The Fifth Volume commences with July, 1853.

Terms:—Fifty Cents a Year; Five Copies for $2; Eight for $3; Eleven for $4. Back volumes, bound in paper, at 40 cts. each,—unbound at 35 cts., or three for $1.

Published monthly, in octavo form. Specimen numbers sent free. Money, properly enclosed, at our risk.

Address D. D. T. MOORE, Rochester, N. Y.

☞ Non-Subscribers into whose hands this number of the Rural may fall, are requested to give it an examination, and, if approved, their support. See Prospectus, Premium List, &c., on preceding page.

# MOORE'S RURAL NEW-YORKER.

VOLUME IV. NO. 49. } ROCHESTER, N. Y.—SATURDAY, DECEMBER 3, 1853. { WHOLE NO. 205.

MOORE'S RURAL NEW-YORKER:
A QUARTO WEEKLY
Agricultural, Literary and Family Newspaper.
CONDUCTED BY D. D. T. MOORE,
WITH AN ABLE CORPS OF ASSISTANT EDITORS.

THE RURAL NEW-YORKER is designed to be unique and beautiful in appearance, and unsurpassed in Value, Purity and Variety of Contents. Its conductors earnestly labor to make it a Reliable Guide on the important Practical Subjects connected with the business of those whose interests it advocates. It embraces more Agricultural, Horticultural, Scientific, Mechanical, Literary and News Matter—interspersed with many appropriate and handsome engravings—than any other paper published in this Country.

☞ FOR TERMS, &c., see last page.

### Progress and Improvement.

### BARN-YARD MANURE.—No. IV.

To convert the volatile *carbonate* of ammonia into the non-volatile *sulphate* of ammonia, has occupied the attention of the most profound chemists of the age. Many plans have been proposed, but none of them, so far as we are informed, are practical and economical. Sprinkling the heap with dilute sulphuric acid has been proposed. This will convert all the carbonate of ammonia existing in the heap at the time of application into a sulphate, but it will prevent fermentation and the formation of any more carbonate of ammonia. This plan, therefore, will not accomplish the object. Sulphate of iron (copperas,) has been often proposed. It will answer well in a chemical sense, but not in an economical one. The copperas costs too much to make its application profitable, and the presence of the iron in the manure, is injurious rather than beneficial. Superphosphate of lime, with an extra proportion of sulphuric acid, made on purpose, we have used with success. As a general thing, however, we think its use would not pay. "But," the reader exclaims, "you are forgetting sulphate of lime, (gypsum.) I have seen it stated, time and again, in agricultural papers, as well as in 'LIEBIG'S Agricultural Chemistry,' in 'STOCKHARDT'S Chemical Field Lectures,' in 'The Progressive Farmer,' and in every other work I have read on this subject, that plaster scattered in stables and on manure heaps, would arrest all the escaping hartshorn and convert it into a fixed salt. Gypsum is cheap and the application so easy that we cannot desire anything better for the purpose." That is all true, except in one particular; *plaster will not convert the carbonate of ammonia into a sulphate of ammonia.* LIEBIG, STOCKHARDT and NASH, and the agricultural papers, to the contrary notwithstanding. We are exceedingly sorry that it will not. It would be such a great advantage to the farmer. By its aid, he could reduce his whole manure heap, by fermentation, to a few wagon loads, and it would be so strong that a few bushels would be sufficient for an acre, saving an immense amount of labor and expense in hauling it to the field, &c. "But can it be possible that such able chemists have made so great a blunder?" It is easy to account for this fact. Chemists always work with their reagents in solution, and sulphate of lime *in solution* will convert carbonate of ammonia into carbonate of lime and sulphate of ammonia. Such being the case, the chemist, stung with the taunt, "Chemistry has done nothing for agriculture," asserts that he has discovered something that will be of great benefit to every practical farmer, and states that by scattering gypsum on fermenting manure, the escaping ammonia will be arrested. Learned authors embodied it in new works. The newspapers take up the assertion and scatter it broadcast over the land; so that at the present time, it is as familiar as household words, and if you attempt to undeceive a person on the subject, he will take you for a young upstart, and advise you to speak a little more respectfully of the great teachers of science.

A short time since we were at the house of such a person, and were discussing this subject with him. He is quite a scientific farmer and writer, and had been using guano and plaster. There was some of both left in the barn. "Your arguments in favor of the theory," said we, "are good, but let us apply a practical test. Here is some guano and plaster. There is probably carbonate of ammonia flying off from the guano; let us see what effect mixing plaster with it will have. If your theory is correct it will of course stop the exhalation. We put the two together, rubbed them briskly between the hands, moistened with a little water, and then applied the mixture to the nostrils of our friend. He quickly jerked his head away. Instead of fixing the ammonia, the plaster aided the decomposition of the guano, and the ammonia was driven off with considerable rapidity. This simple test satisfied our friend; and we would recommend all who are sceptical on the point to make the experiment for themselves.

Scattering dry or moist plaster on the manure heap, then, is of no use. But if we could only dissolve it, it would be just the very thing we want. Cannot this be done? It is true that something like 400 lbs. of water are required to dissolve one pound of plaster, but the water could be used over and over again, the manure taking the sulphate of lime from the water as it filtered through it. The water in the tank should always be kept saturated with plaster, and no water should ever be allowed to get on to the heap that did not contain plaster in solution. In this way plaster sufficient to form a considerable quantity of sulphate of ammonia might be placed in the heap without rendering the manure too wet for fermentation, inasmuch as the carbonate of lime resulting from the transformed sulphate of lime, would materially assist decomposition.

We see but one practical difficulty to this plan, and that is, the water would dissolve the sulphate of ammonia and carry it with it into the tank, rendering fresh water necessary. This may be avoided by placing at the bottom of the barn-yard, a quantity of clay soil, mixed with peat, &c., and making the water pass through this filter before it could get into the tank. In this way the plan of saturating the drainage of the barn-yard with plaster, and pumping them on to the heap, and then re-saturating and re-pumping them back again, as soon as they drain back into the tank, will be found highly profitable. Not only will it preserve all the most valuable substances of the manure, but it will enable the wheat growing farmer, to drive off a great part of the valueless portion of the manure—carbon and water—and so reduce the weight and bulk of the heap, and the labor and expense of applying it to the soil. Manures managed in this way, and fermented to the extent proposed, may be used as top-dressing, with little if any loss. On loamy soil, it may be drawn out in the fall—the comparatively leisure season of the farmer—and spread on the land, ready for plowing in for corn, potatoes, &c., the next spring.

NITRATE OF SODA.—The *American Agriculturist* copies our account of Mr. H. SHUBART'S experiments with nitrate of soda and guano on corn, and earnestly appeals to farmers to make accurate experiments with the nitrate, saying that it has "a good deal of confidence in the idea that nitrate of soda will soon be a successful competitor against monopolized guano," we trust the experiment will be made though we have but faint hope thas the idea of the *Agriculturist* will prove correct. The value of guano consists in containing much ammonia; the value of the nitrate in containing much nitric acid, and it is supposed that the latter will afford nitrogen to plants as well as the former.—This may be true. We think however, the chief value of ammonia is not in supplying the plants with nitrogen, but in organizing starch, or in depositing silicic acid on the stalks of corn or wheat &c. If this view is correct nitric acid can never take the place of ammonia in the vegetable organism, nor nitrate of soda compete with guano as a manure for the cereals.

RESIDENCE OF O. S. FOWLER, ESQ., FISHKILL, N. Y.

FOR GROUND PLAN AND DESCRIPTION OF THE ABOVE, SEE NEXT PAGE.

### NOTES FOR THE MONTH.—BY S. W.

J. W. BARKER, in the RURAL of the 12th, says that, "an educated, intelligent society of farmers, would indeed present a striking anomaly, and a thing much to be desired." I would ask if an intelligent, well educated society of shop-keepers, mechanics', or even lawyers and doctors, would not be an anomaly in the social circle. How often do we see a man who rejoices in his diploma, ask for information on the most simple matters of geography, history, or natural science. A writer in *Putnam's Magazine* says of the American ladies, (anglice women,) made at the thousand dollar boarding schools, that "they are not practically furnished forth, with the knowledge and skill for which their parents have paid so much." How much better fitted for the battle of life, is the farmer's daughter, well and early trained; and how much more respectable she is in her practical usefulness, domestic tact and accomplishments, than the spoiled daughter of fashion is, in her very superficial knowledge of a very little French, painting, music, &c., &c.; acquirements, in nine cases out of ten, so evanescent that like soap bubbles, they explode quickly in the atmosphere of married life; leaving the poor matron helpless, in her increasing responsibilities, with nothing to compensate her for her abject dependence on *kitchen* help, of the most inefficient, trying sort, but a superficial knowledge of light reading and colloquial facility, which passes for female accomplishment in this, our day and age? But while the duties of a farmer's wife, and all other wives, however respectable, are simple and practical; that of the farmer, so far at least as relates to his vocation in Nature's great laboratory, the farm, without being at all complex or mysterious; requires much thought, observation and care, with correspondent study and practical industry; hence, the truth of Mr. BARKER'S assertion, that an intelligent community of farmers is "a consummation devoutly to be wished."

Much is now said about the tightness of the money market in New York, and the consequent heavy failures there. The revulsion that succeeded 1836, shook the whole country to its centre, farmers felt it in common with all the industrial classes; but the present crisis seems to be confined to the large commercial cities, where stock gambling and building railroads with paper devices, has been pushed to the ultimate point. Our farmers never owed less, they get large prices for all their products, and the industrious, managing ones, who have something to sell, have pockets full of money. The manner in which our banks are now restricted, in their issues, has doubtless saved many of them from being complicated with railroads of the fancy variety, and their manifold bonds. It has now become a fixed fact, that railroads to be solvent and profitable, must be built by the actual capital of the stock subscribers, and not by borrowing at usurious interest. The exports from the city of New York, during the second week in this month, amounted to $2,316,457, more than double the amount of the corresponding week last year. The largest amount, says the *Journal of Commerce*, ever before exported from New York in a single week. During the great monetary revulsion of '37, instead of exporting, we imported wheat from Europe, several boat loads of which was brought west on the canal, as far as Utica, and even Seneca Falls, where it was ground into flour for home consumption. No wonder our farmers then felt the tightness of the times. The credit system, induced by bank inflations, had then done its perfect work in depressing our industry.—At this time our agricultural and manufacturing interests are too collossal and prosperous to be jostled by stock-gambling, bank inflations, or inflating tariffs, for protection.

GRAPE VINES.—I know of no gift of Pomona more perfect in our soil and climate, than that of the Isabella grape vine. While peach and plum trees are devoured root and branch, by impracticable insects, and every apple has its worm, the Isabella grape is in full perfection, ripening slowly from the 15th of September to the last of October; after which they may be saved intact, in saw dust through the winter. The vine requires little more care than a common fruit tree: it must be closely trimmed, before the sap starts in the spring; dig around the root two or three times in the season and manure with fresh stable dung and soap suds. The vine does best in a clay loam, on the south or east side of a house, the cellar serves as an underdrain; it may be trained up or from the house, by the aid of long posts and palings. A vine thus treated, at seven years old, will bear four or five bushels of grapes.

Waterloo, Seneca Co., N. Y., Nov. 25, 1853.

PHOSPHATE OF LIME.—The *Farm Journal* asks if any one can tell what has been done in regard to the beds of mineral phosphate of lime discovered sometime since, and which were supposed to be of great value. We have made some inquiry into this subject, and find that nothing has been done with the phosphate. The reason of this is that the owners supposed the deposits to be as valuable as a California gold mine, and three years since asked the writer $50 per ton for it. Animal charcoal is equal to it, and can be bought in any of our large cities for $10 per ton. The mineral phosphate is worth, in London, about $15 per ton, and if the owners can sell it for that it would be extensively used there.

### COUNTY AGRICULTURAL FAIRS.

MR. EDITOR:—Although it may be considered out of season to say any thing about our late County Fair, still, having been prevented from noticing it before, I beg to be indulged in a few remarks. It will be conceded by all, that the legitimate object of our County Fairs is, progress and improvement. The design is to excite emulation; to stimulate to renewed and greater efforts, our active, enterprising, practical farmers. The exhibition of superior stock, and fine products is made, for the double purpose of showing the excellence of the articles offered, and also of comparing them with the productions of others. Such comparison is considered one of the most efficient means of exciting ambition among producers. In further aid of this object, premiums are offered for the best specimens of stock and products. It is not the amount of the premium that exerts such influence, but it is the fact that a premium is a public testimonial in favor of the article to which it is awarded; and also, of the person by whom it is offered. Now, to give reasonable satisfaction to exhibitors, and to give due influence and importance to this testimonial, the judges should be competent men—men of character and sound judgment—men of influence, whose opinions and decisions would command respect. To committees composed of such men, a fair and reasonable compensation for their time and services should assuredly be made.

To ensure, also, the highest benefits of such exhibition, it should be as extensive as possible. The larger the amount of stock and products exhibited, the greater the merit for excelling in the comparison. In this view of the subject, I have considered it unfortunate, that our recent County Fair should have been divided, and separate exhibitions be held, in the Eastern and in the Western sections of the County. Such exhibitions would excite but little more than half the interest that would be felt in a Central Fair, embracing the entire County. As the Ag. Society will meet in January to decide upon regulations for the coming year, I hope no such arrangement as the one adopted the past year, will be thought of for a moment.

I have a word also to say in regard to the dispensing of premiums. When we consider that the object in awarding premiums, is not to benefit the speculator, but to encourage the producer; and to stimulate him to efforts in rearing the best stock, growing the best products, and manufacturing the best articles, it would, in my view, greatly frustrate this object to award the premium for articles, (however excellent they might be,) that had been purchased by the speculator for exhibition, and not grown

or produced in the County, by the person offering them. It would be to reward a man for using his money, in purchasing a fine animal or a fine article, instead of rearing or producing it himself. Such articles may be placed on exhibition, but should not be permitted to compete for premiums with those reared in the County, at the expense of time, labor and money, by the person offering them. Injustice has been done to breeders, as I think, by allowing stock obtained through the range of the State, and purchased in view of such exhibition, to compete for County premiums. An extensive dealer, who never bred an animal, or reared a fowl in his life, through the influence and publicity of premiums thus obtained, might command abroad the reputation of a skillful and responsible breeder, to the detriment of actual producers, while he might be the last man to merit such reputation.

We by no means realise here, all the beneficial results that should be connected with, and flow from, either the state or county fairs. A prominent object if not the paramount object of the Fairs in Europe is, to furnish the best opportunity for effecting sales, and making purchases, of the most valuable and desirable stock and products. This object seems to be entirely overlooked here. All kinds of valuable property, both of the farmer and mechanic should be exhibited with lowest prices attached, so that those who wish to see and buy, can do so at the time, and those who wish to purchase at a future time, will know where to look for articles desired. This ought to be made one of the leading, as it might be one of the most useful objects, of the county fair.

To facilitate such object in all its details, each County Society should have a place for its annual exhibitions; at least a couple of acres,—on lease or in its ownership,—eligibly situated; suitably enclosed,—having convenient fixtures, with plain, cheap substantial sheds and buildings for stock and products, and manufactured articles; these could be brought in, registered, located and arranged at convenience. An opportunity would thus be offered, to persons wishing to purchase, for a leisurely examination, on the day previous to that on which the judges are to act; thus preventing hurry and confusion on that day; and remedying also the necessity to those who reside at a distance, of removing their stock and articles from the exhibition, on that day at an early and inconvenient hour. Being in charge of persons, entrusted with their custody by the President of the Society, articles so deposited, would be securely watched and protected, night and day.

If these suggestions should avail in bringing this subject, in all its bearings, to the consideration of the County Agricultural Societies at their annual meeting, and result in progress and improvement, it will gratify your correspondent. FARMER D.

Monroe, County N. Y. Nov. 1853.

### THE POOR SOIL OF NEW ENGLAND.

THE address delivered before the Plymouth Co., (Mass.) Agricultural Society by SANFORD HOWARD, Esq., Editor of the *Boston Cultivator*, contains many excellent suggestions on the cultivation of the poor soils of the eastern Atlantic States. The West has much the best soil, but the eastern States have the best markets close at their own doors. To compete with them, the speaker said, we must meet them with their own weapons. *Cultivate the best soil we have.*—But what shall we do with the poor soil?—*Devote it to wood.* White-birch, Scotch-larch, pitch and white-pine, chestnut and silver-poplar are recommended for planting. In the cultivation of crops, we must consider what is most needed here, what can be most readily produced, and what is obtained with most difficulty from abroad. Bulk and weight rather than the pecuniary value of articles, regulate the cost of transportation. The actual cost of transporting a ton of hay, a thousand miles, is as great as that of transporting a ton of wood the same distance, while their actual value bears no proportion. Hay and grass for feeding laboring animals and milch cows always command high prices, and are the most profitable crop to raise. Indian corn stands next in profit. Vegetables and fruits generally afford a remunerate profit. In cranberry culture Mass. need not fear competition. It can be produced no where else cheaper than here. The disputed point as to whether the production of meat to a greater extent would be profitable is discussed and the opinion advanced that sheep kept not merely for their wool, but for mutton would prove highly remunerative.—Mr. H. mentioned a farmer in N. Y. who had practiced sowing turnips, after clover or rye, about the middle of October, and feeding off with sheep confined by hurdles on small portions of the field at a time. In this way the sheep if in tolerable order at commencement will get fat, and the ground get rich.

### THE PASSENGER CAR, TIME,
WINTER TRAIN OF THE 1853 RAILWAY.

DECEMBER 1st.

Now screams the whistle of the self-willed monster, admonishing passengers that they are starting for the last station on this company's track, preparatory to changing cars on a new line and broader gauge.

How the mist of its panting breath streams through the frozen air. Away we go.—What a long train it is. How all sublunary things flit by like the gorgeous pageantry of a dream. What a congregation of human limbs and muscles, most wonderfully and fearfully made. What a cargo of the quintessence of dust—a struggling world rushing to its doom. What is this vast multitude in search of, or where bound?—Their present object, that unknown and fairy region called *Happiness*, which all are in search of, and so few attain—and bound to that region of hope and fearful uncertainty, the great gulf of *Sleepy Hollow*, in the far off land of Futuria—the entrance on the broad and endless continent of *eternity*.

This train is sure and without error, or variation in time, chance, or destiny—nothing stops, or detains its motions or period of arrival; though many fail and perish by the way—are dropped and engulphed by the Lethean waves of forgetfulness: but on sweeps the train, and will not vary the one consecutive part of a second in reaching the depot of the 1854 road. *So "look out for the cars when the bell rings,"* and see that your baggage is ready. Look over the log-book of memory and see that every duty is performed for a long and perilous voyage.

Is the wood-shed filled and the cellars banked, and all the perishables properly housed and secured—the animals protected against colds and storms, and the fattening swine kept clean, warm, dry, and well fed. Racks and feeding bins ready for fodderring, to avoid the tramping of cattle and destruction of one half the feed. Are all the summer-used tools under cover, and every thing picked up and put in their places, preparatory to winter snows and sleets and rains.

Have you a good bag of *Dutton* or *White-flint* meal, cheek by jowl with the flour barrel. It is twice as cheap and much more nutritious and healthy. Look at the butter-faced, chubby, red-gilled, roly-poly saplings of humanity that cluster and canter around the log cabins of the poor in a new country. Superfine wheat bread and the noxious pastries are innocent of all this health and hardihood—Potatoes and Jonny cake are the great specifics—the grand panacea that cures dyspepsia and produces this robustuous outpouring of life and joyousness.

Are all the little responsibilities shod, panted and jacketed, and to school in time, and the school library books duly thumbed and dog-eared by use.

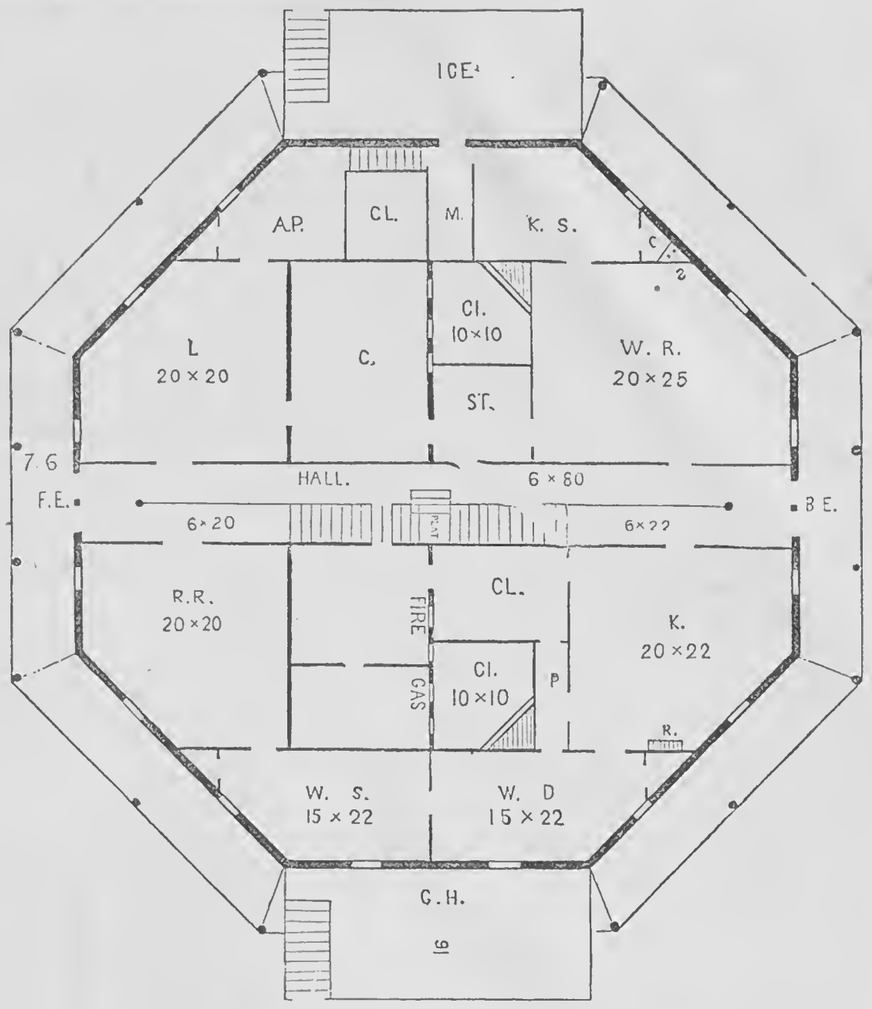
Have you really kept Thanksgiving, or only eaten a fat turkey and forgotten the poor. This is a case in *foro conscientiae*, we pause for a verdict. If it is all right, whoop! for a merry Christmas—a happy New Year, and a pleasant and safe arrival at the grand Depot of the new rail-way line, 1854.

PROMPTER.

### CONSUMPTION OF OATS IN LONDON.

FOR the year ending Sept. 3, 1853, the consumption of oats in London amounted to the enormous quantity of 11,446,360 bushels, or *thirty thousand eight hundred and fifty-three bushels per day.* Of these ten per cent. were grown in England, seven in Scotland, twenty five in Ireland, and *fifty-eight* (more than half) were imported from foreign countries. Statistics are given for the last 14 years from which it appears that for the year ending Sept. 4, 1840, the consumption of oats was but 7,914,336 bushels or twenty-one thousand seven hundred and forty-one bushels per day, or *nine thousand bushels per day less than in* 1853.

We recollect, grumbling, old English farmers, declaring that the introduction of railway traveling would be very injurious to their interests, by lessening the demand for horses and horse food; and even some intelligent American farmers were somewhat of the same opinion. But the experience of this country, as well as of England, as shown by the above statistics, proves that *cheap* mechanical modes of traveling on the long routes, so amazingly increases the amount of staging on the short routes in cities that the introduction of the iron horse so far from lessening the demand for his old fashioned, muscular brother, has had the opposite effect, and a good horse is worth more now than he ever was in the palmiest days of staging. The same fact is observed to attend the introduction of every labor saving machine. It always, in one way or another, increases the demand for manual labor. Hence every inventor is a public benefactor, and should receive all possible encouragement.



GROUND PLAN OF O. S. FOWLER'S OCTAGON HOUSE.

### THE GRAVEL WALL, AND OCTAGON MODE OF BUILDING.

FOWLER & WELLS have recently issued a work entitled, "A Home for All, or the Gravel Wall and Octagon Mode of Building."

Its two leading features are the gravel wall, or, concrete mode, and the octagon form of building, applied to domestic architecture. It gives specific directions for selecting, proportioning, mixing, and depositing the materials, erecting the requisite boxes or moulds, and putting on the outside finish; so that, by following them, ingenious persons can erect their own houses, and fit them for occupancy, almost without aid from mechanics—doors, windows, roofing, and plastering excepted. Especially, it tells the poor man, the *very poorest*, how to proceed to make a comfortable cottage, at a trifling cost, except his own labor, of from $30 to $50, including a plan for *adding* to it afterwards, as time and means may allow, without losing the part first built, besides applying these modes to barns and out-houses. It also throws out numerous observations, and suggestions, applicable to all forms and kinds of buildings; shows how to make fixtures, green-houses, flower-pits, chimneys, &c.; makes some judicious observations respecting fruit culture, and describes the board wall and plank wall plans, besides introducing the hexagonal form, and other miscellaneous matters of great practical value. Progress in building is just as possible as in other departments of human industry and comfort; and our author has taken several steps in the right direction—that of *cheapening, bettering* and *multiplying* human homes in general, and the laboring man's cottage in particular.—All who intend to build should give this little work a careful examination before commencing.

In building on this principle the first object is to select the right *material.* And, fortunately this abounds in some form on nearly every square mile of the earth's surface.

All that is wanted is stone and lime. The stone requires to be of various sizes, from tolerably fine sand, all the way along up to stones as large as you can well deposit in your wall. There must, however, be enough of the fine to connect the coarser stones together.

All that is required, is something *solid* for the lime to adhere to. The more fine sand you have, the more lime will be required, the more coarse stones, the less, and the more solidly the materials are compacted together, the thinner will that wall need to be. Probably the very best materials will be found in those gravel knolls which abound throughout our country, which are composed of all sizes, from middling fine gravel, all the way along up to stones the size of the fist or head; and wherever such a bank can be had, all required is to mix the lime with it, and throw it right into the wall.

The excellent engraving on the first page gives the elevation of the author's residence and needs no explanation. The description of the accompanying ground plan cannot be given better than in the author's own language:

My house is located on an oval knoll, digging off the top of which furnished me with nearly all the stones, large and small, used in putting up its walls. All my cellar, therefore is *above ground*, except two holes, C L and M, alongside of my ice-house.

My ice-house consists of two stories—the upper one for ice, the lower, a room kept cool by the ice and its drippings, a preservatory for keeping fruit, butter, eggs, fresh meat, fish, bacon, pies, etc. Its structure is simple and as follows:

Erect studs as for a wall. Lath and plaster *both sides*, and finish the outside as you do your house. This furnishes a place for *dead air*—the best non-conductor in the world—superior, says Professor Silliman, to tan-bark, or even charcoal. In the plastering use a little cement. Then erect another set of studs, first having nailed on your lath before they are raised; then raise and fasten them, and plaster from the inside, or between the studs; this gives two confined air-chambers. Then lath on the inside of these studs, and plaster, and you have three air-chambers all around your ice-house and preservatory for both stories. Next lay your floor to the bottom of your ice-house and top of proservatory, and make it water-tight, by caulking, or plastering with cement, or in some other way; and having this floor descend a few inches from the middle each way, so as to carry off the water, and resting this floor on rows of studs below, which serve both to support the ice and fasten shelves to, and to the outside row of studs lath and plaster with cement, so that the ice drippings may run off behind this inner wall of the preservatory, or between it and the two rows of studs above described. Your preservatory is now perfectly dry, and of one temperature the year round. Its bottom should also be double, so as to be dry, yet let water pass under it. In mine the ice is gathered at the door, under which it runs through a lead pipe, bent upward like a new moon, which allows water to pass out, but prevents air from passing in. It passes into this cellar C L, and my milk closet M, which also has two stories, the lower for preserves and what else we want to keep, yet do not think worth the tronble of going into the preservatory, and the top for milk, having two floors, which admits the cold air up into the milk-room, yet prevents the dirt from descending by the lower one catching it.

All required to make this floor is, having laid your floor timbers, nail a floor to their under side, leaving a space an inch or two wide at one side, and a shelf over this crack will prevent much dirt from getting down, and then nailing another floor to the top of these timbers, having another opening on the other side of the floor.

M for milk; the cold air passing up from the bottom story, into which the water runs from under the preservatory, both having shelves. A like arrangement at C L gives two large cellars, one above the other, on a like principle.

The entrance to my preservatory is with two stairways leading to it, one from the side toward the kitchen, for the cook, and the other larger, for the gardener to take down barrels of beef, fruits, and the larger articles. Thus all the cold of my ice is saved, and cools five rooms, the preservatory and the other two double-storied rooms contiguous. Even the cold which escapes in opening the preservatory door passes into these rooms, besides cooling the room marked A P, for apples, potatoes, etc., and that marked K S, for kitchen stores, both of which are fitted up with shelves.

In the closet C, one angle S carries up a stove-pipe hole, made out of that very material described for making the wall, and drawing up, as you filled up, a round stick the size of the flue desired—a cheap way of making chimneys, and as good as the very best. A wash-boiler is stationed in the adjoining room, W R, having a cistern, C I, 10 by 10—it can easily be made larger or smaller—which receives the surplus water from the cisterns above, and the roof having at one corner three straight walls, one of which extends from bottom to top of the cistern, made of this same wall material, or of brick, and cemented both sides, having holes at the bottom. The other two are a foot or eighteen inches high, and say a foot on each side of the other, also cemented, and the spaces between them and the high wall filled in with charcoal and coarse gravel, so that the water rising to this low wall runs down through this filtering charcoal through those holes at the bottom of the high wall, then up through charcoal and coarse gravel on the other side, and thus doubly filtered, makes the very best drinking water in the world.

At the left of this cistern is a dark cellar, C, for sauce, or whatever you wish to keep from freezing; cool in summer, because excluded on all sides from the sun, and on the side joining the two-story cellar, C L, and the cistern on another, and free from frost in winter, besides being easily aired by its two doors. And this airing of cellars is all important, for, otherwise, decaying vegetables infect and poison the rooms above, by finding its way up through the floor. Still the main body of the farmer's vegetables should be stored under his barn floor, so that he can drive his cart to the hatchway and dump right into his potato, cabbage, carrot, ruta-baga, beet, parsnip, and other cellars or bins.

By the side of this is another room, L, which may be used for storing bedsteads, lumber, barrels, and such rubbish as garrets usually contain, tools included, with this advantage, that it is handy, and just where you want it, whereas the garret is very bad to get to and from. Or any other use can be made of it the proprietor chooses.

Between it and the wash-room, and at the end of the cistern, is a store-rooom. S T, some 7 by 10, just the place to put family stores, sugar, molasses, flour, pork, etc., also furnished with shelves and some drawers.—A small closet off the apple-room, from which also starts another stack of chimneys, completes this, the north half of my house. How it would suit the reader I care little, since it suits its planner and owner to a charm.

Next comes the entry. It consists of two parts. That line running nearly through it, and terminating in two octagonal pillars, is the central wall of the house, running from bottom to top, while the two walls on each side of it are for this story only, and are eight inches thick, while the middle one is a foot, and built like the outside walls.—Tremendous pressure comes on parts of it, yet it stands. F E is the front entrance, where stangers will naturally apply for ingress to the house; and the the room R R is for a common receiving room, hat-stand, reading-room, etc., and that pillar in the entry has an elk's head and horns, and some deer-horns masoned into it, on which to hang hats and cloaks.

The other side of the centre wall is a through entry; serves every purpose of one, and is just where you want it.

Passing through this entry we enter the kitchen, K, the great stomach of the house. Two pantries, C L and P, connect with this kitchen and one another, and one with the adjoining room, W D. At the back end of the closet, C L, is a dumb-waiter, which goes from the bottom to the top of the house. Those angular stairways, erected on the angles of the ice and green houses, and an offset both for receiving in—there being an outside entrance to the ice-house here—and for landing from and entering the carriage, completes the main features of this story: which is submitted not to builders and men merely, but especially to women and practical housekeepers, for such approval or criticism as they may award it. That it cannot be bettered is not asserted, but that it is far superior to any basement arrangement before invented is maintained. And mark to what extent the octagon form contributes to this end. Building reader, is not this plan worthy general adoption?

### THE PRICE OF GRAIN IN 1854.

THE *Mark Lane Express* thus concludes an able article on the "influence of war upon agriculture and the grain markets of Europe:"

"We arrive, therefore, at the conclusion that war between Russia and Turkey will have but little influence upon the agriculture and corn markets of England, or Western Europe, either as to the present crop, (1853,) or succeeding one (1854.) America making up for any short-comings of the Danubian provinces. Should the Principalities be occupied for twelve months, under offensive operations, there cannot be a doubt but they will experience a deficient crop next year, as well as the adjoining provinces of the belligerent parties; so that during 1855 the provinces of the Black Sea may require their own wheat, if not something more, if they can get it. But under war we cannot see how either Turkey or Russia can import corn so as to have any influence upon other exporting states for want of capital, even should they require it. The blockade of the Russian ports will settle the one side of the question, on which account her ordinary exports of rye, oats, and Indian corn may find a home market this year. We are more afraid of the bad weather now experienced at home, and the consequences of last year affecting our markets, than the warlike attitude of the east; and here our transatlantic neighbors will neither neglect their own interest nor overlook ours. Bad weather and disturbances in Europe hold out very flattering prospects to them to break up a few million acres of prairie and bush lands extra to aration, and even increase the breadth of wheat on old reclaimed lands. Independent of the extra crop in America this year, the surplus corn of 1852 is likely to carry us over one-fourth of the period of consumption of crop 1853, thus balancing its deficiency, and keeping down the price, independent of crop 1854; and if the latter is early, it may appear in the market with a good stock of old wheat on hand, both in England and America.

# Orchard and Garden.

## HORTICULTURAL HINTS.

Spring vs. Fall Plowing.—A correspondent of the *Ohio Farmer* who has had much experience in planting trees, thinks spring planting much the best, but that trees *planted in spring in holes dug in the fall*, are still better—making a more vigorous growth and doing well every way. The plan was pursued by accident in the first place, some years ago, and he says, "I have repeated the experiment on a larger or smaller scale almost every year since, and with uniform success; the trees not only growing better the first year, but continuing far to outstrip in growth and vigor, trees planted in holes not exposed to the frost and atmosphere of a winter, which seem to prepare the ground for the roots better than any mechanical means whatever." The statement is worth remembering, and it is not too late in some localities yet, to try the experiment.

High-priced Apples.—At the "Pomological Conversations," held at the last State Fair, mention was made of the large profits made by some cultivators of the "Lady Apple." It is a beautiful apple, and in demand in cities for fashionable evening parties, both in this country and in England, and far beyond the supply. Mr. Denning, of Dutchess Co., had sold for some years, $40 worth from a single tree—the price varying from $8 to $12 per bushel. His was a gravelly soil; on soils of a different character the crop had been quite unsuccessful. From an orchard in Orange Co., five barrels were gathered, but not fifty apples were without blemish, and the least defect prevents their sale for this purpose. From an orchard of this variety, cultivated near Philadelphia, a nett profit of $200 per acre, was realized. There were four acres of orchard—fifty trees to the acre—and it was manured with bone-dust and constantly cultivated in crops, and was looked upon as one of the neatest and most profitable orchards in the State. If *fashions* were not so liable to *change*, it might be well to go into the cultivation of this variety more extensively.

Soap-suds for Grape Vines.—We have spoken repeatedly of the value of this often neglected fertilizer, and find in the London *Gardener's Chronicle*, a statement confirming our own. A vine was planted on a very stiff soil,—at ten inches deep—and very carefully attended to,—for the first two or three years it made little progress, but after the fourth year it grew vigorously. It produced shoots fifteen or twenty feet in length and a good crop of fruit, much to the surprise of all who knew the soil. But a drain five feet from the vine, which led from the sink of the wash house ceased to flow, and was taken up, and it was found that the roots had completely filled it. They were removed and the vine ceased to grow—it had lost its accustomed and needed stimulant. The grape is a gross feeder, and the more manure it receives, under a certain point, the more vigorous and productive it becomes.—B

## FRAUD IN FRUIT TREES.

In a late number of the Rural, we find an article quoted from the *Worcester* (Mass.) *Spy*, under the heading, "Fraud in Fruit Trees;" upon which, together with the editorial comments, I wish to make a few remarks. Such frauds as here spoken of, have been extensively practiced in this part of the State, the sellers invariably representing themselves as agents of the "Rochester Nursery." The purchasers, in most cases, appear to think there is but one nursery in Rochester, and do not even know the name of the person with whom they contracted. Of course nobody is accountable, and no person's reputation has suffered by the transaction. A single example will show how this business has been done up here.—A neighbor engaged a few trees, and among them was a Black Tartarian cherry. The trees, labelled according to contract, were delivered and paid for, and our neighbor, not being very observing, did not discover, until the agent was gone, that the tree for which he had paid 50 cents, supposing it to be a Black Tartarian cherry, was an apple tree. It may be readily inferred that the "Rochester Nursery" is not very popular, and yet I find no evidence that one of these trees ever came from Rochester. But be that as it may, I am confident that no nurseryman would hazard his reputation by sending abroad such trees on contracts as are brought in here, unless at the same time, he could hide himself behind some irresponsible agent.

But what shall we say of the peculiarities of that "tree manufactory located in an obscure part of New York State," referred to by the *Worcester Spy?* Can we stretch our credulity enough to believe that trees can be root-grafted in winter, and grow like suckers for two years and then be large enough to "cheat greenies." Surely nothing of the kind was ever before thought of in Massachusetts, or the writer would not have traveled to "an obscure part of New York State," for an example! With regard to these agents, I give it merely as a matter of opinion, and would like to be corrected if wrong, that the Rochester nurserymen have no agents abroad for whose transactions they hold themselves responsible.

Now if we do not wish to be "gulled by this regular wooden nutmeg operation, nor to be verdant enough to purchase of peddlars," how shall we obtain our fruit trees? We should obtain them at nurseries, conducted by men of good standing and reputation, on whom we can rely. However satisfactory this answer may be, it is I think, still liable to some objections. If nurserymen did not sell to dealers and agents at wholesale, but confined themselves to furnishing directly those who purchase for their own setting, is it not plain that the large nurseries of the cities, which now send out thousands of choice fruit trees, would be dimished to rods instead of acres? If no trees were transplanted except by those who would go to the nurseries and obtain them, there would not be one fruit tree set, where there are now twenty, and in many locations, at a distance from nurseries, our choicest fruits would remain long unknown. Another difficulty: a farmer comes to the nursery in the spring and wishes to obtain some fruit trees, but he is ignorant of varieties, and yet does not wish to trust the judgment of the nurserymen, but expects a verbal description of the different fruits to aid him in selecting.

Now during the season of transplanting, the busiest of all busy men, are nurserymen, and arrangements should be made to encroach as little as possible upon their time at this season. Every man that owns an acre of land, should own a copy of the works of Downing, Thomas, or Barry, he can then judge for himself in reference to varieties.

I concluded there is but one safe way of purchasing trees and that is, to deal with those who are responsible, and have a reputation at stake, and whenever this can be done, it matters not whether a man buys at the nursery, or at his own fireside, he will be safe in either case. A. M. Williams.

Marcellus, Onondaga Co., N. Y., 1853.

## FOREST TREE LEAVES.

It is but recently that the *Forest Trees* were draped with the most variegated and beautifully colored leaves, and we have enjoyed a visit to the wild woods, as to a picture gallery.

The great artist's wand was but outstretched and there came over the scene a beautiful change from the long *Summer green* to the *orange* the *scarlet* and other tints of colors. We have been like the boys, eager to pick up and preserve many of the falling leaves, and here avail ourselves to make known to others the manner in which they with their coloring may be preserved as pretty mementoes of the past season's production. A New England lady furnishes the plan, who, to use her own words, says—select the leaves from time to time, and put them under the leaves of a large book, to press them free from wrinkles, and frequently expose them to the air and light—after they become dry I transfer them to large sheets of coarse paper, (not printed on) there to be kept till you wish to varnish them, which is done by taking the best of coach or cabinet maker's *varnish*, which should be put on lightly with a small paint brush. They will afterwards soon dry if placed exposed in a cool parlor, and away from furnace or stove heat. Beautiful bouquets of leaves may be arranged, to be sent to absent friends and for the purpose of conveying to distant countries specimen leaves of our forests. The *maple*, *sumac*, and *silver-leaf poplar* are pretty for the purpose. Washington Irving, in his Crayon Miscellany, sketches the following:—"We were overshadowed by lofty trees, with straight, smooth trunks, like stately columns; and as the gathering rays of the sun shone through the transparent leaves, tinted with the many colored hues of autumn, I was reminded of the effect of sunshine among the stained windows and clustering columns of a Gothic Cathedral. Indeed, there is a grandeur and solemnity in our spacious forests of the West, that awaken in me the same feeling I have experienced in those vast and venerable piles; and the sound of the wind sweeping through them, supplies occasionally the deep breathings of the organ."

J. H. W.

Rochester, Nov., 1853.

Pear Trees.—Any man having a small plot of ground can rear a number of dwarf pear trees which in a few years will furnish quite a variety, and abundance of most luscious fruit.

## SAWDUST FOR ORCHARDS.

A year last fall I hauled a load of old rotten sawdust and threw it around my young apple trees. My neighbor over the way is one of those characters who plods on in the same old track that his father and grandfather did, believing that they know all and more too. My neighbor said if I put sawdust around my trees it would surely kill them. He said he put manure around some of his trees, and killed them. I told him I would risk it "any how."

I put fresh stable manure around one row and sawdust around the next; around another row I put leached ashes, and the remainder of the orchard I manured with well rotted barn-yard manure, and in the Spring spread it well and planted the ground with corn and potatoes. The result was, many trees grew very luxurintly, but the trees where the sawdust was, grew the best, the bark being smoother, and the trees had a healthier appearance. I will state also, that part of the orchard planted to potatoes grew greatly better than that part planted to corn. The soil a clay loam.—*Dol. News.*

The practice of growing corn or potatoes under fruit trees cannot be commended.—It is, however, generally believed that turnips, clover, potatoes, &c., injure the fruit trees much less than cereals. We cannot understand the above experiment. Sawdust is of little manurial value in its raw state, and why it should be a better mulch than barn-yard manure we do not see. If it was plowed in on a "clay loam soil" it might have some beneficial mechanical action. We should be glad to hear from any of our readers who have any experience on this matter.

## HARDINESS OF APPLE TREES.

In Wisconsin and other portions of the north-west, it is well known that young apple trees, and sometimes older ones, are liable to disaster from the peculiarity of soil and climate. The following list of the different sorts in cultivation there, and the results of the experiments made upon their hardiness, are given by F. K. Phœnix, of Walworth county in that State:

"Varieties, which, though they may sometimes succeed when root grafted, have proved with us tender and untrusty on the root: Baldwin, Esypus, Spitzenburgh, Roxbury Russet, Hubardston Nonsuch, Rambo, Bullock's Pippin, (or American Golden Russet,) Maiden's Blush, Jersey Sweet, R. I. Greening, Spice Sweet, Brabant Bellflower.

"Varieties that are rather tender the first year or two, but afterwards pretty safe on the root: Early Harvest, Golden Sweet, Fall Pippin, Vandervere, Pomme Grisse, Drap d'Or, Winter Pearmain, Carthouse, (or Red Romanite) Northern Spy.

Hardy sorts.—Red Astrachan, Sops of Wine, Duchess of Oldenburgh, Early Red, Harvest Red Streak, Carolina June, Fall Orange, Hoss Apple, Monstrous Pippin, St. Lawrence, Autumn Strawberry, Pound Sweet, Fall Wine, Yellow Bellflower, Flushing Spitzenburgh, Domine, Pregor Red, Rawler Jannet, English Golden Russet, Blue Pearmain, Perry Russet, Seek-no-further, (Westfield,) Talman Sweet, Wine Sop."

## HOW I SAVED MY CURRANTS.

On returning home after an absence of a couple of years, some four years since, I found my currant bushes, which were in rows on the outside of my garden, overgrown with witch grass, and was informed by my *better-half* that she could not welcome my return with a glass of currant juice, as her bushes had yielded but a very few currants the season past. I could not think of losing them, as I was too fond of their fruit, and, besides, they had cost me much labor. Digging them up and rooting out all the grass was too great a task, therefore I thought I would *try* and *smother* it out. I covered the earth around them to the depth of two or three inches with tan bark, putting some half a dozen shovelfuls into the centre of each bush. It operated to a charm,—the grass was exterminated, and the next season I spaded in the tan bark, and since then my bushes have yielded bountifully. I am satisfied that vegetable dressing is equally as good, if not better, for trees and shrubbery than barn-yard manure, which I save for field dressing.—*Maine Farmer.*

## CHESTNUT TREES.

On poor land or a rocky soil, the chestnut is one of the most profitable forest trees that can be cultivated. Its growth is very rapid, the timber is always in good demand, and the fruit is of considerable value. Some cultivate this tree for its fruit alone. We have often wondered that it is not more regarded as an ornamental tree. None grow larger, and few more symmetrically; its blossoms are handsome and unique, and so are its golden burrs and rich nuts. Parks and pleasure grounds should always be supplied with chestnut trees; also with the black walnut, and best varieties of the hickory nut. Strange that these splendid fruit trees should be almost ostracised from ornamental grounds; it is mere caprice that has done this in the United States; in other countries they are highly prized and carefully cultivated.—*American Agriculturist.*

Cheap Fruit.—We hear continual predictions of a glutted market of fruit—*when*, we ask emphatically, will it come? At the present rate, with the millions of trees set out annually, it seems on the contrary, to be constantly receding from us, the supply increasing actually less than the still more rapidly increasing and enormous demand in every direction.

# Mechanic Arts, &c.

## AMERICAN COMPETITION WITH ENGLAND.

A writer to whose compilations the Times gives space and a conspicuous position, has taken more than one opportunity of enlarging upon a competition with which our merchants are threatened in India and Asia on the part of American traders. The ships of the United States appear on the Mekran coast, as well as at Kutch, Muscat and other places, with various articles which they barter for the produce of those countries; the American commodities being principally a certain coarse cotton fabric which they call sheeting and dollars. The Americans appear to enjoy a particular advantage over our traders—that of conducting their barter individually, in ships, which are independent, pushing shops, instead of working by routine through large establishments at Bombay, and thus they not only save expense, but in each particular transaction, secure the largest amount of profit.

Another advantage they have is expressed by the political agent at Kutch, who says of the sheeting, that it finds acceptance among the people of the country, because it lasts longer than cloths imported from Bombay. This indicates the true force of the competition which we have to dread from the United States. If America can cut us out in India, where we occupy the entire country with our Goverment and commerce, the ridicule and the disgrace would be greater than any which the most anti-commercial country has incurred.

But there is something in this superiority of tissue over the manufactures in England. The comparison is not made for the first time, nor only in cotton sheeting. It is reported from the Hudson River Railway, that British iron rails become in a worse condition within twelve months than American rails within a number of years. There may be exaggeration in this; but we have heard complaints of our rails from our own official and scientific investigators, who have declared the bad make of our iron to be a frequent source of accident. At the last meeting of the Sheffield Cutlers, the master cutler declared that American Cutlers were cutting them out in knives; knives of American make being preferred to ours, because the material does not give way under use as those of Sheffield are sometimes found to do. In short, notwithstanding the short practice and hasty habits of America, they are in some branches of trade earning the repute for sterling stuff and make, which used to be our own; and if we suffer them to win that reputation from us altogether, then indeed we shall have lost more than if India were annexed to-morrow.—*London Examiner.*

## EFFECT OF STEAM ON TIMBER.

Mr. Violiter has lately presented to the Academy of Science, in Paris, a communication on the dessication of different kinds of wood by steam. He stated that steam raised to 482° was capable of taking up a considerable quantity of water, and acting upon this knowledge, he submitted different kinds of oak, elm, pine and walnut, about eight inches long, and half an inch square, to a current of steam at seven and one-half pounds to the square inch, but which was afterwards raised to 482°. The wood was thus exposed for two hours. It was weighed before it was exposed to the steam, and afterwards put into close stopped bottles until cool, when the samples of wood were again weighed, and showed a considerable loss of weight, the loss of which increased with the increase of temperature of the steam. For elm and oak, the decrease in weight was one-half, ash and walnut two-fifths, and pine one-third. The woods underwent a change of color as the heat was rising from 392° to 482°; the walnut became very dark, showing a kind of tar, formed in the wood by the process, which was found to have a preserving effect on the wood.

It was found that wood thus treated became stronger—having an increase in the power of resisting fracture. The maximum heat for producing the best resisting fracture power for elm, was between 302° and 347°, and between 257° and 302° for the oak, walnut, and pine. The oak was increased in strength five-ninths, walnut one-half, two-fifths for pine, and more than one-fifth for elm. These are but preliminary experiments, which may lead to very important results, and are therefore interesting to architects especially. By this process, the fibres of the wood are drawn closer together—and maple and pine, treated in the steam to a temperature of 482°, were rendered far more valuable for musical instruments, than by any other process heretofore known.—*Scientific Annual*, 1853.

Reaping Machine.—Benjamin Smith, of Batavia, Ill., has invented certain improvements in reaping machines, on which he has applied for a patent. The invention consists in a new mode of elevating or depressing the sickle-bar, by means of which it is enabled to pass over any obstructions, and also in the employment of a pressure roller to prevent the grain or grass of an adjoining swath from being drawn into the fingers by the sickles. The sickle-bar is also peculiarly constructed, and a friction roller is attached to the connecting rod for the purpose of diminishing friction and ensuring a steady movement of the knives.—*Sci. Am.*

Good Cement.—Take some common lime and mix it with a quantity of tar—just enough to make a tough dough. Use it quick, because it becomes hard in a few moments, and will never soak or crumble.—This is is a first-rate cement for the purpose of making swine troughs, feed boxes, eave-troughs and many other things.

## AMERICAN CUTLERY

At a recent dinner of the cutlers of Sheffield, England, at which some of the most distinguished men of Great Britain were present, the Master Cutler, who is also the Lord Mayor of the city, made the striking admission that as a general thing American manufacturers of cutlery more uniformly use good materials than those of Sheffield. "The manufacturers of edge-tools in America," said he "invariably used the best steel that Sheffield produced, regardless of price, while some of the Sheffield manufactures were arriving at a greater profit by making a cheaper article from inferior material.—It was not in workmanship, but in the use of the best material, that the Americans gained any superiority." He then admits further that the defect in the material is often supplied by an extra finish, and implies that such goods are principally made for exportation.—*Springfield Republican.*

A Substitute for Stereotyping.—A system of electrotyping moulds taken of type in wax, is said to have a decided advantage over ordinary stereotyping. This process is as follows:—A mould of the type in wax is put into a solution of copper, and a powerful galvanic battery applied to it, which causes the copper to be deposited with such accuracy upon the mould, as to make a perfect copper face, which will last much longer than the ordinary metal face, without costing any more. The process occupies about twelve hours.

Electricity as a Motive Power.—At the Mechanics' Fair in Boston, was exhibited an engine moved by an electrical battery which is driven at a speed of two hundred and fifty revolutions per minute. This power has proved more costly in former experiments than steam, but it is thought that such discoveries have of lato been made, that shortly it will be the cheapest motive power in the world, and stationary machinery, railroad cars, and every thing else will be run by lightning.

Improved Stove-pipe Elbow.—Israel Higgins, of Salem, N. J., has invented a new elbow for stove-pipes. It is made of cast-iron and is cast in two parts, upon which are small flanges that are united firmly together by means of small bolts. The object is to make an elbow both cheaper and more durable than the common one. We commend it to the notice of iron founders. The inventor has applied for a patent.—*Sci. American.*

# Domestic Economy.

## VALUABLE RECIPES.

To Prevent Metals from Rusting.—Three parts of lard, and one of rosin in powder, melted together, and a thin coating applied with a brush, to grates, stoves, brass, copper or steel ware, will prevent their rusting when not in use. For stoves, &c., black-lead may be added.

The same compound is used as a water-proof blacking for boots and shoes, and is said to be excellent.

To Remove Rust.—If wire fence, or any rusty wire or iron, is rubbed in boiled linseed oil, in which some red lead has been mixed, on a warm day, the progress of the rust will be arrested.

To Remove Marks from Tables.—Hot dishes sometimes leave whitish marks on varnished tables, when set, as they should not be, carelessly upon them. To remove it, pour some lamp-oil on the spot, and rub it hard with a soft cloth. Then pour on a little spirits, and rub it dry with another cloth, and the white mark will disappear, leaving the table as bright as before.

To Clean Paint.—Mix common whiting with warm water to the consistency of common paste. Rub the surface to be cleaned quite briskly, with this mixture on a piece of flannel, and wash off with pure cold water. Grease spots and dirt may be removed in this way without injury to the beauty of the paint.

Water Proof Glue.—Soak glue until perfectly soft, but not liquid, in cold water; then dissolve it by gentle heat, in linseed oil. It dries very soon, and is not affected by water.—B.

A Plain Cake.—We have just eaten a piece of most excellent cake made as follows:—Two eggs, one teacupful of sugar, one teacupful of flour, half a teacupful of cream, one tablespoonful of saleratus and one tablespoonful of rose water. Bake in a slow oven.

To Make a Candle burn all Night.—The following is represented to be a certain plan:—"When in case of sickness a dull light is wished, or when matches are mislaid, put finely powdered salt on the candle till it reaches the black part of the wick. In this way a mild and steady light may be kept throughout the night, by a small piece of a candle."

If you wish to preserve fine teeth, always clean them thoroughly after you have eaten your last meal at night. We have preserved half decayed teeth many years, by washing them after every meal and rubbing them once a day with fresh charcoal from the fire.

# Educational.

## ERRORS IN TEACHING.

Eds. Rural;—In none of the articles on education, however clearly the necessity and advantages may be set forth, are the writer's ideas of what constitutes education clearly expressed; whether it is book learning,—storing away in the mind, the tho'ts of others, or the cultivation of judgment, reason and understanding, so as to enable the pupil to criticise, or sift the thoughts of others; to separate truth from error, and originate and express ideas and thoughts correctly and truthfully.

It is a material error in the present system of juvenile education, to fill the mind with thoughts of others from books, teaching implicit reliance on their truthfulness, before reason and judgment are sufficiently matured to enable the learner to comprehend and decide understandingly as to such truth and worth, thereby acquiring a habit difficult to overcome, of relying upon others for opinions, operating like a clog, a drag chain, an incubus on the advancement of mind. For evidence, examine the proceedings of the late educational conventions and discover, if possible, (with one solitary exception,) a remedy proposed for admitted existing evil, unless that evil affected the teacher also. Extreme caution was manifested to keep within orthodox limits, not to overstep the bounds for a truth however apparent, through fear of being thought heretical; preferring orthodoxical error to heretical truth, and forgetting that all newly discovered truth is heresy, and all exploded orthodoxies are admitted errors.

"Ignorance is bliss, and 'tis folly to be wise," in a general sense is an exploded axiom, that no sensible person of the present day would be likely to defend; but rather that thorough education which would advantage all classes of community. The grand difficulty lies in first adopting and pursuing the right course. A knowledge of the arts, sciences, literature and philosophy, are essential as useful or ornamental qualifications to perfect characters; still a person may possess every other possible attainment, and yet be a nuisance in society from lack of moral principle. The present condition of political parties is evidence of the consequence of thorough intellectual culture and neglect of moral, and the effects upon the people of selecting and following smart, cunning leaders, who are destitute of moral principle. The natural consequences of falsehood and deceit or a departure from right and truth, await the perpetrators, which are as sure to follow as the sun does the light, or as results follow causes, and from which none yet have been found smart enough to escape. Professor Halderman, at the Pittsburgh Convention, (the exception referred to above) recommends the study of the natural sciences as the best means to strengthen and mature the judgment, but he still leaves the main difficulty untouched, as how, when, and where the study should be commenced and pursued; whether from man's or nature's book—in the school room or in the broad expanse of nature; learning to manufacture thoughts and sentiments for himself, instead of relying upon imported articles from abroad.

The true philosophy of education consists in assisting experience in social, active life, to mature reason and judgment, and in always keeping such maturity in advance of the search for knowledge. All attempts to forestall and study the abstruse sciences in advance of such maturity, will always prove abortive, or produce juvenile prodigies that never fulfill the promise of youth, or an unsurmountable disgust from the inability to understand or comprehend the subject.

The whole school system needs overhauling because errors lie in the foundation; and all repairs to the superstructure are like putting new wine in old bottles, or new ideas in old heads, and this reform must necessarily be the work of parents and guardians of the interests of the rising generation, and not of the teachers whose pecuniary interests are to defend the system from whence their livings flow.

Marcellus, N. Y., Nov. 14, 1853. S. GRAVES.

For the Rural New-Yorker.

## USEFUL PRECEPTS.

Many a man, who has received a good knowledge of the art of multiplication, while in school, is apt in after-life, to forget *this* art more easily than any other,—a proof that he has not learned it thoroughly, else he would remember also how to make use of it. For instance, I spend every day a dime for dainties, considering it a trifling sum. But at the end of a year, lo! thirty-six dollars are gone, three hundred and sixty in ten years, a large sum indeed squandered away, that might have been employed for useful purposes.

Again, I idle away three hours every day, and consider it insignificant. But, behold, the year has passed and 1095 hours have been idly spent; in the life usually allotted to man (not including the years of childhood,) three hours wasted every day in idleness, make 6¼ years! Therefore let us learn to make good use of time and money, and remember well the rule of multiplication with pennies and minutes.

"All is well, that ends well:" By this we must not understand that, if a person has to remain in some place for a whole year, he may conduct himself ill 364 days of the year, but that it would in the end be well if he only forsakes his bad conduct at the end of the year. This proverb is mainly intended for those who can conduct themselves well till the end of the year, and yet, when the year is drawing to a close, grow impatient and peevish, exclaiming, "I am glad that it will not continue long now."—Again, there are many things, of which the end only will show, whether they are good or not. For instance, in sickness I would like to eat what the physician prohibits, but pour out into the street the medicine prescribed for me to drink; but in the end I feel myself restored to health. The apprentice may sometimes think his master is capricious; but, by means of that capriciousness he becomes a skillful mechanic, or a tailor, &c. Thus the end will teach us that everything was good. T.

## STUPIDITY AND IGNORANCE.

The Shepherd of the Valley, a newspaper edited by a Catholic, and sanctioned by the Archbishop of St. Louis, presents the following stupid effusion from its brain:

"We are not the friend of popular education as at present understood. The popularity of a humbug shall never, we trust, lead us to support it. We do not believe that "the masses," as our modern reformers insultingly call the laboring class, are one whit more happy, more respectable, or better informed for knowing how to read.—This is our private opinion, however; and as we entertained it before we had the happiness to be a Catholic, the parsons are hereby warned not to set it down as peculiarly Popish doctrine. We think that the "masses" were never less happy, less respectable, and less respected, than they have been since the Reformation, and particularly within the last fifty or one hundred years—since Lord Brougham caught the mania of teaching them to read, and communicated the disease to a large proportion of the English nation—of which, in spite of all our talk, we are too often the servile imitators. Reading is only one method of gaining information; and a method that can seldom be pursued with any success in private, where there is no one to direct the student, and no guaranty that he desires his own improvement rather than his own amusement. One of the best informed, most respectable, and most respected men of his station in life that we ever knew, could not and cannot read a letter to this day. The idea that teaching people to read furnishes them with innocent amusement, is entirely false. It furnishes the majority of those who seek amusement from it with the most dangerous recreation in which they can indulge. In view of these and other facts, we, on our own private account, and not as a Catholic, but a prudent man and as a good citizen, unhesitatingly declare that we regard the invention of printing as the reverse of a blessing; and our modern ideas of education as entirely erroneous."

## TEACHERS PROPERLY ESTIMATED.

Thank Heaven, there are some countries in which the teacher's vocation is honored. The King of Bavaria has lately delivered, with extraordinary emphasis, the following reply to an address of certain schoolmasters, who had sent to thank him for having increased their stipends. This royal reply deserves, says the *Augsburg Gazette*, to receive universal publicity:—"I thank you, gentlemen, and I rejoice if in what I have done you recognize that I am the friend of schoolmasters; that I honor and esteem their profession; not only do I esteem it, but I love it. Your mission is, I acknowledge, hard and difficult, and to fulfil it you have need of an angelic patience. Attend to the education of the people, for it is in a great measure in your hands; disseminate everywhere useful knowledge, for it is that which forms a moral and believing people. Tell your brethren that I love them, and" (placing his hand upon his heart) "the King gives you his word that he will do everything in his power for you."

A Warning to Bad Writers.—The Toledo Blade tells a good story of a man who owned a building which was situated on land belonging to the Michigan Central Railroad. The superintendent, who writes a very bad hand, sent a short letter to Mr. S. ordering him to remove the building at once. But the house was not removed, and three months afterwards the superintendent met S. and began to scold him for not removing the nuisance as desired, when it appeared that the man had received the note and not being able to make out its contents, had supposed it to be a pass over the road, and had been riding back and forth all summer on the strength of it!

The teacher is like the candle which lights others in consuming itself.—*Italian Proverb.*

# Personal Sketches.

## THE RUSSIAN PRINCE MENSCHIKOFF.

Prince Menschikoff is in fact the representative of the ancient Russian party; that is, the old nobility, in whose eyes the reforms achieved by Peter the Great have always appeared the most unholy revolutionary changes—that party which hates and curses the existing ameliorations, and looks forward to the future in renewing the abominations of the past. He is the representative of the violent and fanatical individuals who feel themselves "cabined, cribbed, confined" within the boundaries of their vast "steppes," and seek to lay still larger tracts of land in bondage at their feet—of the declared enemies of European civilization, reveling in the absurb idea that one day they will be able to subjugate the western continent, and remodel it in their own school of slavish, base dominion; of that party, in fine, who know no right but that of force, no onward march but that dictated by vile self-interest, and who inherit all the barbarous impulses of a Cossack horde. Men are not wanting who, in the blindness of their partisanship, see nothing but legitimate action in the fall of Turkey and the success of Russia; but they are not aware of the perilous evils that must wait upon the triumphs of the Czar. Up to the present moment the imperial policy has been but dimly shadowed forth; hitherto the policy of Nesselrode only has been permitted to become apparent; but should the genius of the old Russian party—the barbaric genius of Menschikoff—be once in the ascendant, all diplomacy and negotiation will cease, and the domination of Might alone ensue.

No one can form a correct idea of Prince Menschikoff's personal appearance by the portraits purporting to represent him, he has constantly refused to sit to any artist. This great-grandson of Peter the Great's favorite, is about seventy years of age, of middle stature, base lose-cut milk-white hair, a high, open forehead, sharply-defined features, and a bright, sparkling eye. His gait is haughty, but slightly limping, from a wound that he received at the seige of Nerna, in 1828. It is affirmed that one evening having given some orders that he wished to see implicitly obeyed, he strolled through the camp; and as he was returning to his quarters, he stopped and remained with his legs stretched wide apart while he enjoyed a pinch of snuff. Suddenly the report of a gun was heard, and the prince fell headlong to the ground; but, on being taken up, it was found that a cannon ball had passed between his legs, and had wounded him severely in the thigh.

Prince Menschikoff is one of the most extensive landed proprietors in the empire, and counts his serfs by thousands; but unlike the generality of the Russian nobles, who throw away their riches in extravagance, he adds daily to his wealth. His economy is without a parallel, and indeed, is stated to descend to parsimony of the lowest grade. Strange tales are rife about him, but however grinding his avarice and extortion in his patrimonial estates may be, he knows too well the duties he owes to his high rank and station in the Russian empire to sin openly against etiquette, and on all state occasions his appearance, carriages and suite are most magnificent. He possesses a superb mansion at St. Petersburgh; his establishment of servants and equipages is on the the most lavish footing; and he is surrounded by numerous aids de-camp, glittering in "barbaric pearls and gold."

Another peculiarity of this remarkable man is the aversion he entertains for foreigners. Not one—even an ambassador—has ever been permitted to enter his palace. Nor is this repugnance confined to those who are strangers in the strict sense of the word, for several Finlanders of eminence, who had been acquainted with him when Governor General of that provice, have been denied access to him when they happened to be casually at St. Petersburgh; the only favor accorded to them being the permission to take refreshment in his ante-chambers with the upper servants of the house.

Various reasons have been assigned for this antipathy; but, from whatever cause it may arise, the fact cannot be denied, and it is equally true that in his private life he conducts himself with all the imperiousness of an ancient boyard, possessing the power of life and death without the least responsibility. He is rough and fickle, and, when anything offends him, he becomes absolutely brutal. It is whispered in his own territories that at times he has entertained ideas of freeing himself from the imperial yoke; but while he bends to it at present from motives of avarice or ambition, he revenges his official servitude by brow-beating, threatening and abusing all who have the misfortune to be connected with him; and as he is a man of considerable talent and indemitable energy, he succeeds most marvelously in his amiable occupation. It is not therefore to be wondered at that he has many enemies.

Menschikoff is married to the Princess Dolgorouki, of the best blood in the empire, by whom he has a son and a daughter; the latter who is wedded to a nobleman of high rank, is in many respects the antipodes of her father, being passionately fond of foreign countries, and making every possible excuse to travel. Not long ago, when she was taken alarmingly ill, the countess obtained a passport for Baden Baden; but far from remaining at those celebrated baths, she traversed half the continent; and on her return to St. Petersburgh with roses in her cheeks, her father tartly exclaimed: "Congratulate the countess, gentlemen, on the benefit she has received from the mineral waters in the capital of France."—*Ex.*

# Descripitbe.

## THE DARDANELLES.

The old gates of Janus were opened when Rome was at war; and their modern prototypes, the Dardanelles straits, are open only when a state of war makes treaty stipulations void, and the Porte deems it to be necessary to admit his allies through them to protect his capitol. The accounts we have are that they are now open for the passage of the British and French fleets.

The Dardanelles, from which the strait, or Hellespont, derives its name, are four strong castles built opposite to each other on the European and Asiatic coasts; and are the keys of Constantinople. Two of these castles, were raised by Mahommed II., soon after the conquest of Constantinople, in 1453; the other two, the new castles, were built in the middle of the seventeenth century to protect the Turks against the Venetians.—The latter command the entrance to the Hellespont, and the distance from each is about two miles and a quarter; in four hours' sail up the strait are the old castles, which are about three-quarters of a mile apart. These are well mounted with formidable batteries. All along the European shore to the Marmera, the aspect of nature in its ruggedness corresponds with the frown of the guns; but the scenery on the Asiatic shore is beautiful. The region abounds, too, in places famous in classic story. Here it was Leander paid his nightly visit to Hero; here the ill-fated hosts of Xerxes crossed on a bridge of boats; here Solyman crossed on a bare raft; and, in modern times, here Byron swam from Sestos to Abydos.

These famous straits have been more than once passed. In 1770, the Russian squadron, under Elphistone, appeared before the tower castles; and the admiral actually went by without damage. But the other ships did not follow him, and he returned, with drums and trumpets sounding. A British fleet under Admiral Duckworth forced their passage in 1807. Duckworth, in his dispatch to his government, giving an account of this feat, acknowledges that he ran a narrow chance. He set sail on the morning of the 19th of February. At a quarter before nine the whole squadron, under a tremendous fire, had passed the outer castles; at half past nine the leading ship, the Canopus, entered the narrow passage of Sestos and Abydos, under a heavy cannonade from both castles, receiving stone shot of 800 pounds weight. Each ship, as it passed, had to endure this cannonade. The admiral remained before Constantinople until the 3d of March, when his squadron of ten ships returned. In this interval the Turks had been so busy that the castles were made "doubly formidable." The admiral weighed anchor in the morning of this day, and "every ship was in safety outside of the passage about noon." The admiral, in his dispatch, expresses his "most lively sense" of his good fortune, and admits that had the Turks been allowed a week longer, "it would have been a very doubtful point whether a return would lay open to him at all." He lost 42 killed and 235 wounded. The Turks were so indignant at the escape of the British fleet that they believed the Governor of the Dardanelles was bribed by Duckworth, and beheaded him.

The Dardanelles are said to be in such a formidable condition as to be impregnable.

## THE VATICAN.

This word is often used, but there are many who do not understand its import.—The term refers to a collection of buildings on one of the seven hills of Rome, which covers a space of 1,200 feet in length, and 1,009 in breadth. It is built on the spot once occupied by the gardens of the cruel Nero. It owes its origin to the Bishop of Rome, who, in the early part of the sixth century, erected an humble residence on its site. About the year 1160, Pope Eugenius rebuilt it on a magnificent scale. Innocent II. a few years after gave it up as a lodging place to Peter II. King of Arragon. In 1305, Clement V. at the instigation of the King of France, removed the Papal See from Rome to Avignon, when the Vatican remained in a condition of obscurity and neglect for more than seventy years. But after the pontificial court returned to Rome, an event which had been so earnestly prayed for by poor Petrarch, and which finally took place in 1376, the Vatican was put into a state of repair, enlarged, and it was thenceforward considered as the regular palace and residence of the Popes, who, one after the other, added fresh buildings to it, and gradually encircled it with antiquities, statues, pictures and books, until it became the richest depository in the world. The library of the Vatican was commenced fourteen hundred years ago. It contains 40,000 manuscripts, among which are some by Pliny, St. Thomas, St. Charles Boromee, and many Hebrew, Syrian, Arabic, and Armenian Bibles. The whole of the immense buildings composing the Vatican are filled with statues found beneath the ruins of ancient Rome; with paintings by the masters; and with curious medals and antiquities of almost every description. When it is known that it contains more than 70,000 statues, from the ruined temples and palaces of Rome, the reader can form some idea of the riches of the Vatican. It will ever be held in veneration, by the student, the artist, and the scholar. Raphael and Michael Angelo are enthroned there, and their thrones will be endurable as the love of beauty and genius in the hearts of their worshippers.

Men's fame is like their hair, which grows after they are dead, and with just as little use to them.

# Sunday Reading.

## TIME.

Why sitt'st thou by that ruined hall,
Thou aged carle so stern and grey?
Dost thou its former pride recall,
Or ponder how it passed away?

"Know'st thou me?" the Deep Voice cried,
So long enjoyed, so oft misused—
Alternate, in thy fickle pride,
Desired, neglected, and accused?

Before my breath, like blazing flax,
Man and his marvels pass away;
And changing empires wane and wax,
Are founded, flourish, and decay.

Redeem mine hours—the space is brief—
While in my glass the sand-grains shiver,
And measureless thy joy or grief,
When Time and thou shalt part forever!— *Scott.*

## LITTLE CHILDREN.

Weep not for them! it is no cause for sorrow,
That their's was no long pathway to the tomb;
They had one bright to-day; no sad to-morrow
Rising in hope, and darkening into gloom.

Weep not for them! their snowy plumes, expanded,
E'en now are waving through the world of light;
Perchance, on messages of love remanded,
They sweep across your slumbers in the night.

Weep not for them! Give tears unto the living!
Oh, waste no vain regret on lot like their's
But rather make it reason for thanksgiving
That ye have nurtured angels unawares.

[*Knickerbocker Magazine.*

## THE GARDEN OF THE HEART.

"What has become of your garden?" I said to a lady I was visiting; "Grown up to weeds," was her reply. In meditating upon it I thought of the "*Garden of the Heart:*" how many there are who suffer to grow in their hearts, garden, weeds so rank that they can never be subdued. I have now in mind an instance quite to the point. A young man (who resided near my native place) of bright genius, superior talents, and fine intellect, but wholly destitute of any moral training, was suffered to grow up a wild, idle, vicious youth, and had so suffered the Garden of his Heart to grow up to weeds, that it would have been almost impossible for a plant requiring the genial ray of truth, hope, love, and righteousness to have flourished there. At times he would visit the house of God, and during a period of special interest in the church in the vicinity in which he lived, when many first tasted "the sweets of pardon," he was deeply convicted, but could not give up his old companions in sin and choose Christ as his portion, and cast all his burden on Him who careth for all. I well remember the look of agony that was depicted on his countenance, when, as he was leaving the room one night in company with one of his companions, he met a beseeching look from a young friend who wished his soul's salvation; and he afterwards told her that he did desire to stay, but as he went in with his companion, he thought he ought to go out with him likewise. Though he was often seen in the house of God during that work of grace, yet he always left it unreconciled to his Maker.

The winter passed, the man of God left, and as the spring came, decked its vernal beauty, my young friend departed from the place, since which time I have heard nothing respecting him.

There was another, in whom the "fragrant blossom, that maketh glad the Garden of the Heart," had flourished well, its root lay deep, and 'twas as "lasting as the lilac crocus of Autumn:" who, during that work of grace was also convinced of his sin, in refusing the forgiveness of a merciful Father; but he laid himself a willing sacrifice on the altar of his God, and found peace and pardon.

Where do we find him now? Toiling for his Master among the heathen in Africa; he is one of that noble band who have taken their lives as it were in their hands, and gone forth to proclaim the news of salvation to a world lying in wickedness. They will both have their reward!

Cousin Cara.

Ogden, N. Y., Nov, 1853.

## THE DESIRE FOR APPRECIATION.

While giving pleasure to another we fill our own cup of rejoicing. And, it is scarcely wrong or selfish to wish that our efforts to please be successful and appreciated—that we may not only bestow blessings but incite feelings of grateful affection! In this way, though the weight of the obligation as well as the greater joy may rest with the giver, it will tend to promote a deeper love and a wider benevolence,—spreading farther and farther an active conviction of the truth which so strangely asserts, that, "it is more blessed to give than to receive." So, too, though we doubt not the sincerity of those who thank us, we like to be reassured of a fact so pleasant to believe, and never tire, when we have aimed to do our best, of heartfelt, and grateful appreciation.—B.

If you would not have affliction to visit you twice, listen at once to what it teaches.

# Miscellaneous.

Written for the Rural New-Yorker.

## WHAT A GLORIOUS LOT IS THE FARMER'S.

What a glorious lot is the farmer's,
In the hours of partisan strife,
When so many are bleeding and dying,
For the charms of political life!

While a legion of loafers, now seeking
A chance to "grind in the mill,"
Must meet with a sore disappointment,
From the merciless popular will.

The farmer pursues his vocation;
Content with "the powers that be,"—
He stays at home peaceably gath'ring
The fruits of "the Land of the Free."

The hopes of the demagogue, building
On the smiles of dissolute men,
By a sentence of public opinion
Must return to the cold earth again.

But the farmer has hopes far surer,
He has gathered from mountain and bray;
No whim of the "Administration,"
Can blight them, or sweep them away.

On the plains of Washington's country—
On the fields that ne'er heard of defeat;
A long line of "whipt" politicians,
Are beating a sorry retreat.

But the farmer is clothing in beauty,
The valleys, the wastes, and the wood,
Which were once but devoted to carnage,
And drench'd in the patriots blood.

What a glorious time have we farmers,
In this melee of partisan strife!
When so many are weeping and sighing,
O'er the woes of political life!

York, Nov., 1853. A. K.

Written for Moore's Rural New-Yorker.

## MY FIRST BOOK—"KIRKE WHITE."

### A RAMBLING REMINISCENCE.

Home—that realization of all that affection longs for—promised to become in reality mine, and I gathered thereat my scattered books; among them those that I had known earliest and loved longest. One author—the first who condescended to enter my humble library—I have long desired to write about, and thus, perhaps, bring to the notice of new admirers; but the thoughts suggested are so rambling and egotistical, that I scarce dare tear them from my note-book. But I give them to the Rural, with the hope that even the general reader may find something of interest in what particular readers look upon so leniently—for the few we know, must always measure for us the many who are beyond our circle of intimacy.

It is well for the young to possess a taste for reading, but the indiscriminate and careless perusal of many books is more frequently an injury than a benefit. A large library is valuable to one who knows how to draw needed aid from its treasured stores, but the young mind is apt to confuse itself by the medley of information which it attempts to dispose of, and a mental dyspepsia is produced, as injurious to intellectual vigor, as the bodily disease is to the growth and power of the physical system.—Without a portion of ability to classify facts and assimilate ideas, for the increase and aid of our own mental stamina; as far as the cultivation of the thinking powers are concerned, we are scarcely better off for the multiplied privileges of reading, now so generally possessed. The world is so full of books, the schools are so full of "sciences brought down to the simplest capacities," and there are so many incentives to mere surface learning, that superficiality, far more than depth, is a mental characteristic of the people of the bustling present time.

Not that my own privileges were thus limited, but rather from injury experienced from a contrary course—from the too free gratification of an appetite for reading—do I thus, even incidentally, disparage books, my dearest friends. From the time when, sitting on an Uncle's knee, I read with him that wonderous story of adventure, "Riley's Narrative," to the present anxious and sorrowful season, I have gained strength and solace from their perusal. And, it is always pleasant and profitable to commune with the gifted and good who speak to us in books. Make a good book your friend, and you may always turn to it for companionship and consolation.—It has power to lead our thoughts to the scenes and feelings it depicts, or the sentiments its inculcates, and we seem, with it, to turn aside into some shady nook or quiet place, and forget the cares and turmoils of wearying life. Yet there is danger here.—Lured by their fascinating power, we may play truant to active duty, and while seeking to gratify this taste, evil thoughts and blighting influences, disguised with flowing robes and stately moving steps, may win our hearts from virtue. We may seek amusement and excitement merely, careless of instruction, and thus enervate the mind until it loses the ennobling power of deriving its purest and highest pleasures from sources which call for earnest and patient thought.

In my thirteenth year I first became possessor of a full-grown book, or one not made for children and school-boys alone—and this was "The Remains of Henry Kirke White," edited and prefaced by the poet Southey. It was in two volumes, and I have them yet, in about the same condition as at first—with broken backs and missing leaves—for they were obtained at third-hand, and by working at odd spells for a neighboring chair-maker. An apology might be made for introducing these simple details, but in writing of "My First Book," they cannot well be avoided. Happy was I in my lucky purchase, and, carrying them home, I exerted all my book-craft to repair and hide their damaged condition, and prevent further dilapidation.

An account of the life of Kirke White, prefaces his Literary Remains—the letters, poems, &c., which go to make up the work. From this we learn that Henry was the son of a Nottingham butcher, and was born in 1785, and died in 1806, at Cambridge University. His love of reading was manifested very decidedly at an early age, and he had a talent for writing which produced compositions quite remarkable for one so young. His father had ambitious hopes for his son, and at fourteen he was apprenticed to stocking-weaving—the staple manufacture of his native town. The business was very distasteful to him, and his mother procured his release after a year's time had been wasted. He was then articled to a legal firm in Nottingham, and applied himself to the study of law, and to the acquirement of the ancient and modern languages, and a knowledge of general literature, with much diligence and success. The farther he advanced, the more anxious he became to obtain a thorough education; and, to aid in procuring the means of entering college, his little volume of poems was published in 1803. In a pecuniary point of view, the venture was not successful, (though he lost nothing by it,) but it brought Henry into notice, and the malice with which it was attacked in certain quarters, raised up friends who were of material service to him throughout his future brief career.

With much anxiety and with varying hopes, he sought the paths of learning, and at one time his prospect of entering the University seemed totally clouded. In the pursuit some time had been lost from his law studies, and he felt that he must apply himself more severely than ever to regain his ground. He allowed himself no time for relaxation, little for his meals, and scarcely any for sleep,—studying night and day until his health sank under it, and a sharp fit of sickness was the result. From this he never entirely recovered. His prospects for entering college became brighter, and the new hope seemed to give him new life. He went to Cambridge, and spent two years there, with varying and fast-declining health, but with unabated ambition and industry. He sank rapidly towards the close of his life, and his brother only arrived to see him die—after his speech had failed. It is sad to think of one so gifted—whose prospects for usefulness were so bright—thus going down to the grave, the victim of his own high aspirations.—Speaking of this, Lord Byron beautifully says:

"'Twas his own Genius, gave the fatal blow
And helped to plant the wound which laid him low:
—So the struck eagle stretched upon the plain,
No more through rolling clouds to soar again,
Viewed his own feather on the fatal dart,
And winged the shaft that quivered in his heart;
Keen were his pangs, but keener far to feel
He nursed the pinion which impelled the steel,
While the same plumage that had warmed his nest,
Drank the last life-drop of his bleeding breast."

But I have failed to do justice to one great reason for his earnestness in seeking an education. At one time he seemed of a skeptical turn of mind, but his thoughts were providentially turned to the subject of religion, and a total change in his views and feelings was the result. He came to the determination to devote his life and talents to the work of the ministry, and to fully prepare himself, seemed the one end kept constantly in view. His piety was of the purest and most evangelical character, and what he did accomplish in the cause so much at heart, shows what an elevated influence he would have exerted had he been spared to bless the earth.

His private character won him many warm, true friends. In all the relations of life he was most amiable and worthy of love and confidence. An affectionate son, a kind and tender brother—he was the confident and adviser of every member of the family. His letters show this; they also show how genial and valuable his friendship, to those who were so happy as to enjoy the blessed boon—for such indeed is a true and wise friend. His genius, his piety, his industry, and his amiability, were remarkable, but his uniform good sense was none the less so,—he seemed to show none of those excentricities of conduct and temperament which so often cast a shade on the most gifted minds. It is this trait, running thro' his whole life and writings, which makes them so worthy to be held as a model to youthful aspirants in the commencement of their literary career, and I shall never forgot how much I owe to this first book, in the humble collection I dignify with the name of "my library."

Of his poetry there is scarcely room to speak as fully as I, and perhaps my readers, desire. It was mostly written before he entered the University, but a few later fragments prove how much its early excellence would have gained from his maturer powers. Among the poems which made their deepest impress upon my memory, and to which I still recur with the greatest pleasure, are "Childhood," his earliest, and "Time," which stands amongst his latest compositions. Of his shorter poems, one "To the Morning," is eminently full of feeling and picturesque naturalness. Another commencing,

"Go to the raging sea and say 'Be Still!'"

answers with becoming earnestness the *twattle* of those who,

"Recumbent on the laquered barge,
Have dropt down joy's gay stream of pleasant marge,"—

who know nothing of misery and disappointment, and yet are always ready to tell the sufferer "that life is wondrous fair"—brimming over with the rarest happiness; and how bravely he ought to bear up under the pressure of sickness and poverty, for which he sees no succor or remedy, and dares hope for none. The sonnet was a favorite with Kirke White, and his compositions in this form are generally of a pensive but pleasing character. I subjoin a single specimen:

"Yes, 'twill be over soon. This sickly dream
Of life will vanish from my feverish brain;
And death my wearied spirit will redeem
From this wild region of unvaried pain.
Yon brook will glide as softly as before,—
Yon landscape smile—yon golden harvest grow,
Yon sprightly lark on mounting wing will soar,
When Henry's name is heard no more below.
I sigh when all my youthful friends caress,
They laugh in health and future evils brave;
Them shall a wife and smiling children bless,
While I am mouldering in my silent grave.
God of the just,—Thou gavest the bitter cup;
I bow to thy behest, and drink it up!"

"The Shipwrecked Solitary's Song" is full of pathos and beauty, but I must cease to particularize, save to mention that he was the author of the beautiful hymn, everywhere known and admired—"The Star of Bethlehem." The poem he had most at heart, was "The Christian"—descriptive of the life and character of the Savior—of which he had written some thirty Spenserian stanzas, which evince great power of execution. Just before his death he added these touching lines to this noble fragment:

"Thus far have I pursued my noble theme
With self-rewarding toil;—thus far have sung
Of God-like deeds, far loftier they beseem
The lyre which I in early days have strung;
And now my spirits faint and I have hung
The shell that solaced me in saddest hour,
On the dark cypress and the strings which rung
With Jesus' praise, their harpings now are o'er,
Or when the breeze comes by, moan, and are heard no more.

"And must the harp of Judah sleep again,
Shall I no more re-animate the lay!
O thou who visitest the sons of men,
Thou who dost listen when the humble pray,
One little space prolong my mournful day!
One little lapse suspend thy last decree!
I am a youthful traveler in the way,
And this slight boon would consecrate to Thee
Ere I with Death shake hands, and smile that I am free."

Henry died soon after entering his twenty-first year. No youthful poet compares with him, except Chatterton, and perhaps, Keats, and none have left brighter and purer memorials behind than the pensive bard of Nottingham. If any youthful mind, led by these thoughts, shall find a tithe of the pleasure I have found in Kirke White, he will not say I have written in vain.—B.

## FASHIONABLE SLANG.

The slang of the fashionable world is mostly imported from France; an unmeaning gibberish of Gallicisms runs through English fashionable conversation, and fashionable novels, and accounts of fashionable parties in the fashionable newspapers. Yet, ludicrously enough, immediately the fashionable magnates of England seize on any French idiom, the French themselves not only universally abandon it to us, but positively repudiate it altogether from their idomatic vocabulary. If you were to tell a well-bred Frenchman that such and such an aristocratic marriage was on the *tapis*, he would stare with astonishment, and look down on the carpet in the startled endeavor to find a marriage in so unusual a place. If you were to talk to him of the *beau monde*, he would imagine you meant the world which God made, not half-a-dozen streets and squares between Hyde Park Corner and Chelsea Bun House. The *the dansante* would be completely inexplicable to him.—If you were to point out to him the Dowager Lady Grimguffin acting as *chaperon* to Lady Amanda Creamville he would imagine you were referring to the *petit Chaperon Robue*—to little Red Riding Hood. He might just understand what was meant by *vis-a-vis*, *entremets*, and some other of the flying horde of frivolous little foreign slangisms hovering about fashionable cookery and fashionable furniture; but three-fourths of them would seem to him as barbarous French provincialisms, or at best, but as antiquated and obsolete expressions picked up out of the tales of Cribillon the younger. —*Household Words.*

# For the Ladies.

For Moore's Rural New-Yorker.

## THE MILKMAID.

Her sweet songs have cheered me often
When returning from the fields,
And my heart doth ever soften
To the power her kindness wields.

Dark her eyes, and brown her tresses,
And her smile is free from art;
He who sees her, soon confesses
That she leads his captive heart.

Sweetest lassie, maid the fairest;
Brightest star o'er life's dark ways!
Well I know thou never carest,
Aught for him who sings thy praise.

But thy heart so kindly beating,
Though it may not hold me dear;
Ne'er will chide me for repeating
What thou knowest is sincere.

Rarest maiden, may life's blessings
Ever thickly strew thy way—
But amid thy friends' caressings
May no Judas-kiss betray!

Kendall, N. Y., 1853. G. B. L.

## SINGLE WOMEN.

Not being mother on their own account, they have leisure to be mothers for everybody else. What a blessing in the circle of the families to which she belongs is an unmarried sister! She watches by the aged father or mother with a vestal's fidelity, while her sisters and brothers abandon the old homestead for Cupid, or cupidity. Who so ready as she to solace the bereavement of a friend, all of whose earthly hopes have been swallowed up in the grave? To the widowed brother, her sympathetic voice and spontaneity of kindness seem almost like a return from the tomb of the idol he had laid there; and to the bereaved sister, whose stay and support have been stricken down, she becomes, as it were, the strength of another manhood. Next to the mother herself, she is the last to cease her expostulations with a wayward daughter, or her efforts to reclaim an unfilial son. To children bereft of parents, she becomes both father and mother, and trains unconscious orphanage in the way it should go. How Proetan her capabilities of usefulness, transforming herself by turns into friend, nurse, physician, or spiritual guide;—into the grave companion of the old, or the frolicsome playmate of the young, as ever-varying occasion may demand! Who does not know that when any child of all her kindred is deaf, or blind, or halt, or whom a step-dame Nature has maltreated in any other way, a never-failing resource is found in the 'universal Aunty;' as though she kept a full assortment of eyes and ears and faculties for all kinds of 'impotent folk'? Then, for the children's dresses, does she not always know the latest style; for their learning, has she not seen the sagest books, and for their health, has she not the newest cure-alls all by heart? and O! for the romping and roistering groups of the nursery, does she not carry all the toy-shops of France and China in her pockets? Who, of all the household, can help paying homage to such a divinity, even though it sometimes does seem as though she would kill us with kindness?

Outside, and beyond the family relation, this personage often becomes a kind of public character, though without the envy or the odium which attaches to the notoriety of public men. As a teacher of schools, how she shames the wisdom of the lawgiver and the retributions of the judge, by saving where they sacrifice, and redeeming where they destroy! To hospitals for disease and suffering, to prisons for penal retribution, to receptacles for reformation from deepest debasement and guilt, how divinely does she come, her head encircled with a halo of heavenly light, her feet sweetening the earth on which she treads, and the celestial radiance of her benignity making vice begin its work of repentance through very envy of the beauty of virtue! The two Misses Fellows of Boston, within the last ten years, have found homes for more than a thousand destitute, orphan children, carrying on this warfare against ignorance and perdition, as the apostle said, *at their own charges.*—What mothers, unless it be such as the mother of Washington, deserve so much as they the admiration and homage of mankind?—*Horace Mann.*

## HOME.

As we repeat this word, we have a feeling of comfort at the heart, and bright, glowing images in the mind. There is a fire on the hearth, shedding a cheerful warmth through the room. Mother sits in her easy arm-chair, holding and amusing the baby, with many inquiries whether it is not "its mamma onneydony." Willie has forsaken his toys and the operation of putting "bob-tails" to his kite, and is helping Mary to get through with the "hard words," in her reading. While Tray sits near, looking as if he understood the whole lesson.—Occasionally, when Mary makes a ludicrous mistake, the mother and children will laugh merrily, the baby smiling and clapping its hands, and Tray barking in harmony.—It is a very happy place, this home; and the poet said with truth that there is no place like it to be found, roam where we will. Then father comes in. He is wearied with his toil and is glad to get to his fireside. He takes Willie upon one knee and little Mary on the other. Tray settles down at his feet. Mother informs him that the baby has been *so* good, and he says he knew that it was a "dear little darling." Then, while the party chat away, the servant throws open the door and informs them that "the tea is ready," and they adjourn, without delay, a happy group to the supper-table.—*Illustrated Family Friend.*

## MISSPENT LABOR.

Mrs. Swisshelm, the editress of the Pittsburg Visitor, has recently visited the Crystal Palace in New York. She is a great advocate for *utility*—and consequently conceives that every great effort of human skill and industry, should be made for some decidedly *useful* purpose. It may be interesting to see the views she expresses on the subject of Mosaic work, making patchwork bed-quilts, and "working worsted." Read what she says:

"To us, 'misspent labor' was written all over the exhibition, or at best the proportion of things of no use, and of results which might have been attained at a twentieth of the labor, were as two to one, of the useful and the sensible.

The portrait of John the Baptist in Mosaic, is an object of great interest. Queen Victoria offered fifteen hundred pounds for it, but it is valued at $60,000. Well, this great master-piece of Italian art, and monument of human patience, looks very like St. John in 'cross stitch,' or a fine old painting cracked and about to chip off the canvas.

Some parts of the shading and blending are very wonderful, when we reflect it is all done with minute pieces of stone, of the natural color; but in most parts, the joining can easily be detected, and this gives it the 'cross stitch' appearance we noticed.—Altogether, it is certainly misspent labor, for the effect could have been much better obtained in an oil painting.

The piece is a copy of a portrait in oil, and it is not according to the natural order of things to have an imperfect imitation worth more than the original. It is not worth while to spend a lifetime making a stone picture, when a better one in oil can be made in a month.

All this applies to the Mosaic tables, one of which is valued at $1,500: to the miniature watches, ten cent locomotives, patchwork quilts, worsted worked cats and dogs, needle worked Henry Clays, &c., &c., &c. It is all labor which brings no adequate result, and which should send the laborer to a lunatic asylum.

We never could understand how a woman in the exercise of reason, could spend her time cutting calico into little bits, and sewing it together again, when it looked so much better in the whole cloth, or in working cross stitch roses for stool covers, when for fifty cents they could get a bit of carpet, that would look better on a stool, than the work of six months in Berlin wool.

Well, the cutting of wood and stone into bits, and fitting them into a picture, when a better one can be made by painting, is more conclusive evidence of insanity.

Mosaic is the worsted work of artists—the 'patch-work' of the 'wiser sex.'"

## BEAUTIFUL TRIBUTE TO A WIFE.

Sir James Mackintosh, the historian, was married early in life, before he had attained fortune or fame, to Miss Catherine Stuart, a young Scotch lady, distinguished more for the excellencies of her character than for her personal charms. After eight years of happy wedded life, during which she became the mother of three children, she died. A few days after her death, the bereaved husband wrote to a friend, depicting the character of his wife in the following terms:

"I was guided in my choice only by the blind affection of youth. I found an intelligent companion and a tender friend, a prudent monitress, the most faithful of wives, and a mother as tender as children had ever the misfortune to lose. I met a woman who, by the tender management of my weaknesses, gradually corrected the most pernicious of them. She became prudent from affection; and though of the most generous nature, she was taught frugality and economy by her love for me. During the most critical period of my life, she preserved order in my affairs, from the care of which she relieved me. She gently reclaimed me from dissipation; she urged my indolence to all the exertions that have been useful and creditable to me; and she was perpetually at hand to admonish my heedless improvidence. To her I owe whatever I am; to her whatever I shall be. In her solicitude for my interest, she never for a moment forget my feelings or my character. Even in her occasional resentment, for which I but too often gave her cause, (would to God I could recall those moments!) she had no sullenness or acrimony. Her feelings were warm and impetuous, but she was placable, tender and constant. Such was she whom I lost, and I have lost her when her excellent natural sense was rapidly improving after eight years of struggle and distress had bound us fast together, and moulded our tempers to each other; when a knowledge of her worth had refined my youthful love into friendship, and before age had deprived it of its original ardor. I lost her, alas! the choice of my youth, the partner of my misfortunes, at a moment when I had the prospect of her sharing my better days."

Cheerfulness.—The blessed results of cheerfulness can be seen in every family where it uniformly prevails. Unless the husband is a brute, the bright cheerful smile and the kindly greetings of the wife, when he returns worn, weary and dispirited it may be, from the scene of daily toil, will drive the cloud from his brow like mist before the rising sun. Its reflex influences will in the end effect a change even in a disposition naturally morose, so that the man who has a cheerful home to go to, will eventually become a kinder husband, a more valuable citizen, and a better man.

MOORE'S RURAL NEW-YORKER.

ROCHESTER, DECEMBER 3, 1853.

SPECIAL NOTICES.—TO AGENTS, &c.

☞ AGENTS.—Any person so disposed can act as agent for the RURAL NEW-YORKER,—and all who remit according to terms will be entitled to premiums, &c.

☞ THE RURAL is published strictly upon the CASH SYSTEM—sent no longer than paid for—and all orders should be in accordance with terms.

☞ OUR *lowest* club price is $1,25 for any number of copies over 20—and $1,50 under that number, unless a full club of twenty is obtained.

☞ IN making up clubs for the RURAL, the Wool Grower and Stock Register can be added at 35 cts. a copy, which is the lowest club price.

☞ EXTRA numbers of the RURAL will be forwarded to all disposed to aid in augmenting its circulation.

☞ SEE Terms, Premium List, &c., on next page.

## News of the Week.

THE arrival of the Canada brings news confirmatory of hostilities between the Turks and the Russians; and indefinite statements of several battles being fought, in all of which the former are victorious. The news has created a good deal of attention and excitement in England, coupled as it is with the rumor that the Czar is about to form a league offensive and defensive with some of the enemies of the British in East India; in which case, if the home government makes a demonstration in favor of the Turks, her possessions in Southern Asia will be assailed by hostile barbarians. It is well known that Great Britain holds in subjection, in India, a hundred and fifty millions of people, and that too by means of an army so small, that if the inhabitants possessed a tithe of the courage and energy of the European races, it would be swept away like the autumn leaves. The British arms in India have never received more than two permanent defeats, viz:—that in Afghanistan, and more latterly in Birmah. They have carried their conquests northward and north-westward, until they threaten to meet the opposite wave of Russian invasion, in which event there will be a struggle between them for the mastery of the Orient.

It will be the policy of NICHOLAS, if he can form alliances with existing Asiatic sovereigns, to strike a blow at the British dominion, or at least by threats of so doing, endeavor to deter the latter power from interfering in the Turkish quarrel. The efforts of Russian diplomacy to excite jealousy and distrust between France and England have utterly failed, and all appearances indicate that the Gaul and the Anglo Saxon will stand shoulder to shoulder in the coming European struggle, if by chance such a struggle comes.

The foreign news has also created much interest at Washington, and notwithstanding the pressing duties of preparation for the meeting of Congress, has received the attention of the President and Cabinet. It is to be hoped, as indeed it is believed, that the course of Congress and the Administration will be wise, prudent, and pacific.—There is no occasion or justifiable pretext for our country to mix itself up with the matter in any shape, and there is wisdom at least in one branch of the Monroe doctrine, to wit, the non-interference of America in European politics.

The Erie excitement has somewhat subsided in consequence of the Railroad Company having postponed for a time the change of gauge. The military have either disbanded or gone into winter quarters, and the special police and constables have gone home to their wives. The city of Erie and the State of South Carolina, or the *State of Erie and the city of South Carolina*, can now be set down in the Zodiacal chart as the Geminii of nullification, or as a newly discovered double star.

The forwarding business is very active, and no boats as yet have been withdrawn. There has not a particle of ice been formed in the canal, and navigation bids fair to continue yet for some time. The water is warm, no amount of snow having fallen this season, and the weather has been but little below freezing point. Nothing reduces the temperature of the water so rapidly as the melting of a large body of falling snow, which absorbs and renders latent 140° of heat. Without the aid of this effective auxiliary, much severe weather is necessary to bind the water courses in icy chains.

—Since the above was in type, the Collins' steamer Atlantic has arrived, which confirms previous intelligence of Russian and Turkish hostilities, in which the latter are everywhere victorious. The brunt of battle has not yet been reached, however, and fighting thus far may be set down as mere scattering drops before the tempest. The most important items of the Atlantic's news will be found under the head of Foreign Intelligence; to which the reader is referred.

## The Weather and its Suggestions.

BRIGHT skies are over head at the time of present writing, and the sun looks down upon us from out the deep blue sky, with a mild and genial, although a declining ray; as if reluctant to approach the winter solstice. Within a month of this he will have reached the extreme limit of southern declination, the *tropos* of the Greek, and commenced again his returning journey. The inclination of the earth's axis, which MILTON poetically ascribes to the shock experienced by physical nature in the fall of man, has rendered essential service to the seasons; for without this, the god of day would have retained the eternal equatorial position of a March and September sun, and instead of the pleasing variety from summer, to winter which we at present experience, we would have had in our latitude through all time, lukewarmness by day and frost by night; a compromise between the temperature of the spring and the autumn equinoxes.

The ice upon the ponds has not yet been formed, although skates and sleds are in readiness to greet its coming, and the boys like an impatient audience before the drop curtain of a theatre which is slow to rise, are watching closely, but as yet have received no sign. Not being however a very wicked or very perverse generation, a sign will undoubtedly be given them ere long. But when it comes there are certain words of caution and advice we would give the juveniles, of the masculine gender, and earnestly impress upon their minds and hearts. Let them not be tempted by the glassy surface of the lake or pond to desecrate the Sabbath nor play truant from school; and let them beware of venturing upon thin or treacherous ice, and of skating and sliding in places where the depth of water and the safety of the ice has not been tested. Many a bright eyed boy has lost his life, and many a parent's heart has been wrung by a neglect of these precautions. Skating is a healthful exercise and an innocent diversion, if temptation does not carry one either morally or physically too far.

The apple frolicks and husking bees have mostly been banished from the land, but their memory comes back with the returning season, like ghostly shadows on the wall; or rather like glowing images lit up by wandering sunbeams. The highest attributes of human perfection are associated in our boyish recollections with those young ladies who were at that time, just sufficiently our seniors to be beyond our reach, and enough so to enable them to smile upon us, without the imputation of receiving us as beaux. Time since then has made long strides towards its consummation, and daughters now occupy the place which was then their mother's in the affections of young America.

## Our Albany Correspondence.

ALBANY, Nov. 28, 1853.

THE past two weeks have developed nothing very striking in this locality, as every body is absorbed in the approaching opening of Congress. The "war of the Skells" is expected to be renewed at Washington with great activity. The questions that will test the relative strength of the two factions, being the election of a Speaker and the confirmation of Mr. BRONSON's successor as Collector of New York. Members of Congress are passing through this city in considerable numbers.

State politics are in rather a quiescent state.—The newly-elected officers are selecting their deputies and planning their future policy. As a Canal Board, they will use their influence for a speedy consummation of the enlargement policy. It is expected that one of the first acts of the new Legislature will be the re-enactment of the amendments of the Constitution. This will be done probably during the first fortnight.

It then remains for them to decide *when* and *how* the vote of the people shall be taken. A special election will undoubtedly be ordered to be held some time in the winter. If the vote be favorable (which of course it will) the same Legislature will pass a law for putting the work under contract. By this plan, the work of enlargement will be resumed early in the Spring. Unless the members forget their duties, this course will be pursued.

The old State officers are busy making out their reports for the Legislature. It is hardly worth while to comment on the figures and recommendations they will present. I may glean something of interest for next week from the figures. As to their recommendations, it is hardly to be supposed that they will have much influence with the people's representatives, who are of a very different faith. As an illustration of the recommendations of retiring officials, the case of Secretary MORGAN may be mentioned. He recommended the separation of State Superintendent of Schools from that of Secretary of State, but this was done just as *he went out of office*. Secretary RANDALL, his successor, thought it was well enough as it was. But after consuming a large portion of his time in *observation* (though he was professedly a school man) he has concluded to recommend the same separation. But the next administration may do some as he did, till near its close. Thus the people are fooled. But it is really probable that Mr. LEAVENWORTH will mark out a different plan, and accomplish something while he is in office, and the separation of these offices will be one of the first objects of his attention. As a matter of congratulation to the people, and to the class of teachers in particular, I may mention that Mr. LEAVENWORTH will select a practical teacher as his deputy Superintendent, instead of a mere politician. This first act shows his wisdom and foresight.

The tax sales have closed, but a county sale for a similar purpose will take place during the coming winter.

The lectures before the Young Men's Association, continue to be very interesting. Rev. Dr. MAGOON had for his subject "The Westward March of Empire," in which he showed that all improvements in arts and civilization have gone west. Commencing with Western Asia, they appear in Egypt, then in England, and then in America, a fact of no little interest. WENDELL PHILLIPS, Esq., the distinguished advocate of the abolition of Slavery, lectured on "The lost Arts." He showed that the ancient Egyptians were farther advanced in arts and sciences than we are, but that these were lost during the "dark ages." He further showed that the civilization of this age is *generally diffused*, while that of the ancients was kept in the hands of Priests and Princes, who used their attainments to deceive and sway the people.

The HENDRICKSON case is to be decided next week. *OWE.*

## California News,

### Arrival of the United States.

THE steamship United States, from Aspinwall, arrived at New Orleans, Nov. 25th, and brings California dates to the 1st inst. The Illinois left Aspinwall for New York on the 19th, with $1,000,000 in gold, and 150 passengers.

The news is of but little importance. The most absorbing questions are the proposed removal of the capital, and the election of a U. S. Senator to take his seat in 1855.

Two steamers, the American Eagle and Stockton had exploded, killing 10 passengers.

The mining news was interesting, and the miners were generally prosperous. Many new placers had been discovered.

Emigration to Australia has ceased.

The Sonora Fillibustering expedition had attracted much attention and there was but little sympathy for it among the people. It will probably prove a failure.

The complimentary dinner to John Mitchell took place on the 24th Oct., and he sailed on the 1st of November, *en route* for New York.

The whaling ship Citizen, of New Bedford, had been lost in the Arctic Ocean. A portion of the crew were saved after having undergone terrible suffering.

The total amount of treasure shipped from San Francisco on the 1st of November, by both routes, was $2,750,000, mostly for New York.

### Arrival of the Prometheus.

NEW YORK, November 29.

The Prometheus arrived at 1 o'clock, with 650 passengers and $1,754 000 on freight.

The Prometheus put into Havana for coal, and left there on the 23d. The Falcon, for New York, was still in port undergoing repairs.

Among the passengers by the Prometheus are John Mitchell and Gen. McDougal.

### Method in Madness.

AN inmate of the Insane Hospital in Augusta, Me., named Samuel M. Whelpley, but who calls himself Edgar Maurice, made his escape a few days since, obtained a horse and wagon of a hotel keeper, on the representation that he wanted it to *pursue a crazy man who had just escaped from the hospital*, (he being the very man,) and thus equipped left town. The only clue to his whereabouts is derived from a letter since received from him by the Superintendent of the Hospital, who had taken special pains to securely lock up the insane man on the night previous to his escape. The letter is one of the coolest imaginable, and reads as follows:

"Five o'clock. I am somewhat in a *hurry*, so you must excuse any informalities of address, &c. I find that swimming a river in November, in this climate, is no enviousjob. Thank you, dear doctor, for the remarkable care with which you had me secured last night. I was really afraid something might have happened to me if I had not been so snugly ensconced. If you happen to see or hear anything concerning that *key*, please inform me by return mail. I got one this morning that answered as well. I am writing in a fellow's shop, and he is so d—— surley, and I am so completly chilled, that I must close. To all *inquiring* friends please quote those admirable lines from Harper's Magazine:

"Is it any body's business
What *another's* business is?"

"If you wish to know concerning my *hegira*, I have not time to write the particulars, but can say with warlike Richmond, 'Thus far into the bowels of the land have we marched on without *impediment*.'

"God bless you and yours, and farewell.

"E. MAURICE."

A NEGRO KILLED.—A negro was killed in St. Louis, on the 25th ult., in a very singular manner. He had been sent to Dr. E'Dowell's Medical College, and on the way, was told that the doctor was a terrible man, and if he got him inside the College, would be very apt to cut him up and pickle him. This frightened the negro, and when he got to the Doctor's room, he wouldn't go in.—The Doctor started towards him, when the negro stepped back suddenly, fell down a pair of stairs, and injured himself so severely, that he died the same night.

THE utility of Sixpenny Saving Banks is exemplified in their prosperous condition in New York, where they have been established. The amount of sixpenny deposits in the Institution there has reached the sum of $23,000. This sum, raised by sixpenny deposits, proves that there are thousands of persons who are ready to avail themselves of the advantages of such an institution, as soon as the opportunity is presented.

HIRAM POWERS, the distinguished artist, has declined the Commercial Agency at Florence, tendered him by President Pierce, as being wholly incompatible with his pursuits. He has recently been elected one of the honorary Vice Presidents of the European Association for the encouragement of Arts and Industry, a more appropriate compliment. He was notified of his election by Lord Biello, in a very complimentary letter.

IN the United States and the Territories there are 234 colleges, with 1651 teachers and 27,159 pupils. Annual income, from endowment, $452,-314; taxation, $15,485; public funds, $184,549; other sources, $1,264,280; total, $1,916,528. Of public schools there are 80,991; teachers, 92,000; pupils, 3,354,173. Income, from endowment, $182,594; taxation, $4,686,414; public funds, $2,574,669; other sources, 2,147,853; aggregate, $9,591,530.

ADVICES FROM ROME state that the exciting news from the banks of the Danube has created much excitement among the young soldiers of the French Army of occupation, and also among the veterans in the service, and that numerous applications have been transmitted to the competent authorities for permission to witness the operations of the Turkish army.

IT IS STATED THAT, at the average of the last twenty years, a ton of corn is estimated not to be worth hauling by wagon when 170 miles from market; while at the same distance, upon a line of railroad, it would be worth $22 10. A ton of wheat 330 miles from market, is not worth hauling by wagon; but by railroad, it would be worth $44 55.

THE tonnage of vessels through the Welland Canal this year, according to returns made up to the 30th September last, is 780,335 tons, an increase of twenty per cent. over the same time of 1852; and the large fall business of October and November will doubtles raise it to twenty-five or thirty per cent.

## News Paragraphs.

☞ The jurors on safes, at the Crystal Palace, have issued a circular to the exhibitors of safes, proposing to have them tested by a fire under their authority. The time for such an interesting exhibition is not yet fixed. Those who have been so long wrangling as to who was the maker of the best safes will now have an opportunity to try their works. There are about a dozen on exhibition in the palace, and these, with the others which will be contributed for the trial, will make a large fire. This seems to be the only proper way to test the quality of these articles.

☞ An Irishman out shooting ducks near Whitewater, Wisconsin, on the 13th inst., was accosted by a Norwegian boy named Hans Johnson, who asked him what he was doing. "None of your business," replied the Irishman, who raised his gun and shot the boy through the head, killing him at once. The murderer was arrested.

☞ The following statistics exhibit the strength of the Universalists at the present time in the U. States:—1,099 societies, 837 houses of worship, 612 preachers, 20 periodicals, 10 academies or schools, 119 ecclesiastical associations, including State conventions, missionary, tract and education societies.

☞ The Directors of the Rutland and Burlington Railroad have assigned the property of the Road to the Trustees of the Second Mortgage Bonds, for the benefit of all concerned being unwilling to pay the present high rates of interest for money to meet their floating debt on six per cent. bonds falling due.

☞ The Christian Times informs us that the German Infidel paper in Peoria, Illinois, has been discontinued for want of support. Its influence, so much as it had, was pernicious in the extreme, and its short continuance rebukes the boastful expectations of its patrons, that it would live to see all forms of religion abandoned.

☞ It is understood that Secretary G[illegible]rie is in favor of the reduction of the duty on iron of all kinds to 25 per cent. ad valorem. It is said that he will also recommend that salt, dyestuffs, mahogany, and other furniture woods, raw silks, crude drugs and fruits be put on the free list.

☞ The Washington Monument has reached a height of 146 feet, to which it is hoped four feet more will be added before the weather shall be so cold as to require suspensions of operations for the season. The number of hands at present employed, including watchmen, is about fifty.

☞ Phœbe Ann, wife of Comly Randall, aged 28 years, died at Tullytown, Bucks county, Pa., on the 3d ultimo, from the effects produced by sleeping and breathing the gas arising from burning stone coal, in a coal stove which was placed in a close room, wherein she slept.

☞ The Treasury statements of revenue and expenditures have been made up to the 30th of June last. It appears that the revenue from customs for the fiscal year was fifty-eight millions. The receipts from the lands were very small, about a million and a half.

☞ A correspondent of the Christian Observer, resident in Texas, says, that "of the ninety-six counties in this State, there are between forty and fifty in which there is no stated preaching from either the Old or New School branches of the Presbyterian Church."

☞ The anniversary of the Methodist Missionary Society will be held at Cincinnati on the 5th and 6th of December. The Mission Committee, at its recent sitting in New York, appropriated $260,000 for general missionary purposes for the ensuing year.

☞ By the will of Daniel Kieffer, who died on the 20th October last, at his residence in Oley township, Schuykill county, Pa., ten thousand dollars is bequeathed to the Theological Seminary of the German Reformed Church, at Mercersburg.

☞ A late English traveler in the United States, says:—"I do not hesitate to say that nowhere in the world is there so wide spread domestic unhappiness as here in the United States of America—especially among the more wealthy classes."

☞ The French Propaganda sent out eighteen Roman Catholic Missionaries to Asia within the last six months, viz:—Seven to China, two to Cochin-China, one to Siam, one to Thibet, four to Poudicherry, two to Tonquin, and one to Mesonne.

☞ One of the first, if not the very first, express agents from Boston to New York, was sent with an account of the destruction of the tea in the Boston harbor, and he made the entire distance in the incredible short space of *four days*.

☞ Baer, a German astronomer, calculates that when we shall have an instrument nine times more powerful than Lord Rosse's, it will bring the moon within a German mile of us, so as to show an object as small as a man.

☞ The official paper at Naples records another miracle. This time an image of the "Mother of God, the Holy Virgin," caused flames to issue from her chest. The whole affair is very gravely printed in the government paper.

☞ The money required by the Board of Education for Public Schools for the city of New York, in the year 1854, is $624,263 43. Of this sum $33,000 will be wanted for the support of the Free Academy.

☞ Some boys, amusing themselves by firing loaded pistols in a yard in New York, shot a woman who was hanging up clothes. She ran into the house screaming that she was shot, and died in five minutes.

☞ The citizens of Dunkirk, with commendable liberality and enterprise, have voted to raise the sum of $5,000 for the purpose of building a village school-house, after a plan for an elegant structure.

☞ The Printers in all the daily newspaper offices of Cincinnati struck on the 25th ult. The proprietors agree to pay the prices demanded, but refuse to submit to other terms dictated by the Union.

☞ At the late North Carolina State Fair, at Raleigh, a mule of extraordinary size was exhibited. It measured six feet six inches in height, and was as active as a horse. It was raised in Georgia.

☞ Chauncy Johnson, a noted thief, was arrested in New York on Saturday last, and $3,000 out of the $37,000 lately stolen from the Bank of the State of New York, were found secreted in his room.

☞ The Star of the West sailed for San Juan on the afternoon of the 19th with a large number of passengers, and the George Law for Aspinwall on Monday the 21st.

## News Brevities.

—— The tax sales in this State were brought to a close on the 25th ult.

—— The Upper Mississippi was filled with floating ice on the 14th of November.

—— Mrs. Mitchell, the wife of the Irish patriot, sailed from Melbourne with her children Aug. 25th, for San Francisco.

—— The Miller doctrine is spreading in Maine. There are thousands who believe the world will be burnt up next spring.

—— The total population of Cleveland is 31,-214, of whom 8,426 are young Americans between the ages of five and twenty-one.

—— The steamboat Bay State ran down, in a fog on L. I. Sound, the sloop Sylph. Two of the crew were saved and two drowned.

—— The last of the mackerel fishermen arrived at Gloucester, Nov. 21st. The season has been the most unprofitable for many years.

——Whitney & Co., of Mt. Morris, have sued the Valley Railroad Company for the payment of 40 cars built by that firm for the Company.

—— In the Broadway R. R. case, Judge Duer has delivered his decision making the injunction, prohibiting the laying of the road, perpetual.

—— It is supposed that the first Thanksgiving in the United States was observed at Plymouth, Mass., about the 11th of Dec., old style, 1621.

—— Messrs. Clay and Fitzpatrick have been elected by the Legislature of Alabama to the Senate of the U. States. Both are secessionists.

—— It is estimated that during the years 1848, '49, '50, and '51 the Irish in this country sent to their friends in Ireland the immense sum of $15,-000,000.

—— For whipping his daughter, aged 19 years, on Sunday week, Oliver Shaw, of Palmer, Mass., has been sent to the House of Correction for ninety days.

—— A lad fell between the rails of the Central Road at Geneva, a few days since. He laid still, and the approaching train passed over him without injury.

—— On the banks of the Miami Canal may be daily seen females of German descent, engaged in unloading and loading boats. They work like laborers.

—— The wife of Prof. Butler, who was murdered at Louisville by one of the Wards, is overwhelmed with her loss, and has been at times delirious.

—— The arrivals of steamboats at St. Paul, Minnesota, for the last few years have been as follows:—in 1850, 104; in 1851, 119; in 1852, 171; in 1853, 229.

—— Lawrence Fogarty was executed in Buffalo on the 25th ult., for the murder of Mr. Brown, of Alden. He asserted his innocence of the murder to the last.

—— The total number of buildings erected in Indianapolis, during the past season, is two hundred and sixty-six, the cost of which is estimated at $559,150.

—— The whaling ship Citizen of New Bedford has been lost in the Arctic Ocean. A portion of the crew were saved after having undergone terrible sufferings.

—— A monster eagle, of the Rocky Mountains variety, according to the Galt (C. W.) Reporter, was shot recently, in Puslinch. It measured ten feet in length.

—— The Bank of British North America, at St. Johns, N. B., was robbed on the 25th ult., of £800 all in ten pound notes. The money has since been recovered.

—— A boy about 12 years of age, named Jas. Kelly, fell into a lime kiln, at the foot of 13th street, East River, on Friday morning week, and was burnt to death.

—— A lady in the south of France, who wore a cap, mounted on wires, was recently struck by lightning, which in the opinion of the doctors was attracted by the metal.

—— The Pittsburghers are now in the midst of bustle and activity. The rivers are up, and the steamboats are *up* for all points from Beaver to the Falls of St. Anthony.

——A German Bible, printed in 1580, and consequently 273 years old, was sold lately, at the sale of Henry Shenk's property, in Manor township, Lancaster county, Pa.

—— The New Haven Palladium predicts that when the National Baby Show takes place, Western Massachusetts will take the prize for the greatest product to the square mile.

—— Elihu Burritt has returned from Europe where he has been engaged in Peace efforts, and in furthering the Ocean Penny Postage system. He will agitate this system in this country.

—— The latest news states that the Indians had become very bold, committing many depredations on the Mexican border. Eight companies of infantry had left San Antonia for Eagle Pass.

—— New cars have just been built for the Philadelphia, Wilmington and Baltimore Railroad Company, intended to be used as ladies' sleeping cars. They are furnished with patent spring seats.

—— The mortality of this year, in Boston, the Traveler says, has been considerably larger than last year, the number of deaths to the present time exceeding the number in 1852, by more than 500.

—— The Commissioners appointed by the Governor, have decided upon Corning as the half-shire town of Steuben county. The friends of that measure expected that Addison would be the town.

——A young lady of Hancock co., Indiana, has recovered a verdict of $3,000 against a young man in a suit for slander. A twin sister of the lady some time since, recovered $1,700 from the same man.

—— Iowa is described by a correspondent of the New York Independent as growing rapidly in wealth and population. Much attention is paid to agricultural improvement, especially in fruit-growing.

# Foreign Intelligence.

## Arrival of the Canada.

NEW YORK, Nov. 25—10 A. M.

THE Canada arrived at Halifax in the A. M. of the 24th, and started for Boston, at 1 P. M.

The steamer Washington arrived at 6 P. M., on Thursday. Her news is anticipated.

Russia has formally declared war. Several battles have been fought and well contested. The Turks are everywhere victorious, in Europe and Asia.

The following is an official despatch from the French Consul, dated Nov. 6th:

On the 2d and 3d inst., the Turks crossed the Danube from Turtukai to Olpenitza, to the number of 18,000. On the 4th, Gen. Parlof attacked them with 9,000 men, and after a brisk cannonade a combat with bayonets took place. The Turks maintained their position at Olpenitza and have fortified themselves. The combat lasted 3 hours. In it the Russians lost several officers and 136 privates; and 6 superior officers, 18 subalterns, and 176 privates wounded.

The loss on the Turks side not known. There are rumors of several other movements of the Turks at different points along the Danube, and by the destruction of a Russian steamer at Horsola, but these reports, though probable, do not rest on sufficient authority to state as facts.

Selim Pasha has crossed the Russian frontiers to Asia and a battle has taken place near Battoum. 5,000 men were engaged, and both armies fell back as night came on.

On the 20th of October, Maskel Bey, an officer of Selim Pasha's Staff, with a small force was suddenly attacked by a body of Russian cavalry. He fell back fighting towards the main body of the Turkish army and the battle speedily became general, 15,000 Russians were engaged in it.

After hard fighting, the Russians were defeated and fled pursued by the Turks, who planted the Sultan's standard at the Russian's position. The Russian force defeated were driven back to Buckarest, where the main body of Russians under Gen. Danevbery, were from 30 to 40,000 strong.

If this be true, the news is summed up thus: *The Turks have beaten the Russians in Asia.* The Turkish left wing in Europe has beaten the Russian's right, comprising their principle force, while the Turkish centre has whipped 9,000 Russians at Turnckai and is now pressing in upon Buckarest.

The following important news from India has been received by telegraph from Trieste:

The Czar has formed an alliance with Dost Mohammed to proclaim war against British India, if Great Britain persists in supporting Turkey. A large Russian force is to invade Bukharia, and the Persian army is collecting in the valley of Soltaria, to co-operate with Russia against Turkey.

If this is confirmed, the British Parliament will assemble forthwith to devise measures to avert the danger which threatens India.

From other sources, we learn that Persia is not hostile to Turkey.

The British fleet at Spithead is ordered to be ready for sea on the 11th, but its destination is not stated.

The Humboldt reached Southampton on the 5th, having been detained two days by an accident to her machinery.

The Canada reached Liverpool on the 6th—the Atlantic on the 9th.

FRANCE.—The trial of the conspirators in the Opera plot was proceeding. It seems to have been really a plot to assassinate the Emperor.

LIVERPOOL MARKET.—Breadstuffs were dull in the early part of the week, but recovered towards the close. Wheat was reported in moderate demand at nearly the currency of last week.

United States and Canada flour in good request at full previous prices.

Indian corn held firmer at former quotations.

Brown and Shipley quote Western Canal flour at 36@36s. 6d. for good. Philadelphia, Baltimore and Ohio, 37@37s. 6d.; U. S. white wheat 10@10s. 8d.; red 9s. 10d.@10s. 3d.

White Indian corn 46s.; mixed 46s. 6d.

Bacon, dull and lower, prices accepted to effect sales. Lard in small stock and holders firm for an advance. Pork unchanged. Tallow in limited demand and declining.

Ashes in moderate inquiry, at barely previous rates.

Iron market was very firm. Common bars £8@8 5s. Rails £8 5s.@8 10s.

## Arrival of the Atlantic.

THE steamship Atlantic, from Liverpool on Wednesday, 16th, with 100 passengers, arrived at New York, Nov. 29.

We have details of the recent affairs at Olpenitza, which was a brilliant Turkish victory, and 1200 Russians killed and wounded.

More or less fighting goes on daily.

The Turks have now nearly 100,000 men across the Danube.

The Russian commander, Georschakoff, has received orders to act on the defensive.

The Turkish fleet is in the Black sea, and the French fleet in the sea of Marmora

Russia lays an embargo on the Turkish shipping from the 22d inst.

Neutral flags will be respected.

The Circassians continue to have success in Asia.

Napoleon expresses himself strongly in favor of active operations to aid Turks, but the British government evidently vascilates.

Prussia notifies, that it reserves to itself liberty of acting in eastern affairs.

Austria proposes neutrality. Shanghi was captured by Chinese insurgents on the 7th Sept.

BREADSTUFFS.—The general tone of the market is stronger—fair but not excited. Business done in wheat and flour at fall previous currency.—Middling descriptions of wheat might be quoted and 1d per bush. dearer and choice qualities of flour 6d per bbl. dearer. Indian Corn dull at 46s for white and 45s for yellow.

PROVISIONS.—Bacon quiet; shoulders in moderate request; cheese saleable at a decline of 2s3s.

Beef of favorite brands had more attention; pork very dull; lard unchanged; tallow very steady at the recent decline.

Vienna despatches says:—On the 11th, the Russian commander moved forward to Olpenitza to chastize the Turks. A pitched battle ensued. The Russians were compelled to retreat a second time in disorder on Bucharest, having lost in four attacks on Olpenitza 3,000 men.

On the 9th the Turks were driven from the Island opposite Guirgero. Reinforcements afterwards came up, when they re-took the Island and held it.

The Czar has summarily discharged all English operatives from the Russian navy yards.

---

DIVESTED of the "great seal" and the official names, the Proclamation of Gov. Farwell, of Wisconsin, runs as follows, and is the shortest on record:

"It is hereby recommended that Thursday, the 24th day of November, instant, be observed in the State as a day of Thanksgiving."

# Commercial.

## BUSINESS AND FINANCE.

THE money market has again become comparatively easy. The temporary pressure has been removed, and the elasticity characteristic of American financial, as of all other departments of physical economy, has again stimulated every department of business to an increased activity. The California news is of the most cheering character, and new and rich deposites are daily discovered by the miners. The gold shipped from San Francisco on the first of November, reached the very large figure of *two million, seven hundred and fifty thousand dollars*, of which amount the steamer Illinois, arriving at New York on the 29th ult., had on board $1,000,000.

The ship Bavaria has brought to New York from Australia $120,000 in gold, which is the first direct consignment from that new field of the precious metals. A large quantity of American goods have been heretofore shipped thither, and we may look hereafter for other gold consignments in return.

The steamer America took out to Liverpool $450,000, and the Pacific about the same amount; in addition to which a small sum has been exported in sail vessels, making the total of a million. The Sub-Treasury balance still diminishes; the deposite in New York, having fallen below five and a half million.

The imports of the week, other than dry goods, reach $1,422,615, making of dry goods and miscellaneous $2,-000,000. The exports of the week, of produce, reach $1,-640,000, including 86,000 bbls. Flour; 362,000 bushels of Wheat, and 22,000 bushels Corn.

The cashiers of those banks, of which large defalcations were reported last week, have each for his own institution, written a denial of the statement, declaring that the rumor has not the slightest foundation in fact. The report originated in the columns of the *New York Herald.*

Returns from a large number of the leading railways show a large increase in business over that of any previous year, which indicates the prosperity not only of the roads themselves, but of the whole country. Progress and Prosperity are the "watchword and reply!"

# Market Intelligence, &c.

RURAL NEW-YORKER OFFICE,
Rochester, Nov. 30, 1853.

PRICES have stiffened somewhat since last week. Wheat is quoted two or three cents higher, and corn and oats in proportion. Other marketable commodities find ready sales, but at nearly previous rates of quotation.

The fine open weather, which yet continues, is very favorable, and great activity is manifested in our streets.—No ice in the canal as yet, and forwarding by water is still going on. If a change occurs in the weather, so as to shut up navigation soon, a slight decline may be expected in the produce market, in consequence of the enhanced price of forwarding by cars.

### Rochester Wholesale Prices.

## NEW YORK MARKET.

NEW YORK, November 28, 1853.

Ashes—Rather firmer, with a fair demand at $5,50@56 for pots; $5,56¼ pearls.

Flour—Increased activity for Western and State. Prices 6¼@12½c better. Demand mainly for export, in part for Liverpool. Better grades in good request and quiet.—Canadian firm; sales at $7. Western canal $6,87½@93¾ State on the spot; $7@7,06 mixed to fancy Michigan and common to good Ohio.

Grain—Good demand for wheat and prices about 1c better. Demand active for red and mixed. Sales white Pennsylvania at $1,55; red and upper lake $1,51@1,55; red Southern $1,56; white do. $1,65@1,66, afloat and delivered; prime white Canadian $1,73; inferior choice white Genesee $1,70@1,80; fair to prime white Michigan $1,71@1,74; white Ohio $1,66@1,70.

Barley more plenty and heavy for mixed lots 83@88c common to prime.

Oats buoyant 51@53½c State and Western.

Corn better and quite active, mainly for export. Sales at 82@83c Western mixed; 82½@83c Southern white; 83@84c flat and round yellow; 83c round white.

Provisions—Market steady for pork; demand fair; sales at $13,75@14 for mess; $11@11,12 for prime.

Lard in better request and scarce; sales 230 bls. and tcs 10@10½c.

Butter fair request and 11@13c Ohio; 16@19c for State dairy.

Cheese sells slowly at 7¾@10c.

## ALBANY MARKET.

ALBANY, Nov. 28.—Flour and Meal—The demand for Western and State Flour is rather more active for the east, with increased river and home inquiry. The tone of the market is decidedly firmer, and for very choice extra brands better prices have been obtained. Ordinary to straight State $6,87@6,94; mixed Indiana and Michigan $6,87@7; straight Indiana and Michigan $6,87@7; favorite State $7@7,12; common to good Ohio $6,87@7; fancy Indiana and Mich. $6,87@7; fancy Ohio $7,00@7,25; fancy Genesee $7@7,25; extra Indiana and Mich. $7,12@7,37; extra Ohio $7,25@7,37; extra Genesee $7,25@7,75.

Corn Meal is firm and in good request at $1,56@1,62.—Buckwheat Flour is firm and saleable at $2,25@2,37 ℔ cwt.

Grain—There is but little Wheat offering and no prime afloat. Mixed Wisconsin at $1,48@1,50. Corn is firm—Western mixed is held at 79c afloat, and 80c in store.—Barley is in active request at full previous prices. Sales Wisconsin, to arrive, at 82@82½c; two-rowed at 80½c for inferior and 82c for good; prime four-rowed, afloat and in store, 86c. Oats are not plenty and the market is firm, with a fair shipping inquiry. State at 52@53c.

Feed—We have only to notice a sale of 1,500 bush. fine Feed at 95c. ℔ 100 lbs.

Hops—There is no change to notice in the value of old or new. The last sales of the former were made at 37@40c, and the latter 45@47c.

Wool—We learn of a sale of 3,000 lbs. fine fleece, the first sale made public in several weeks, at 47½c, 4 months—equal to 46½, cash. This lot was held in July at 58c.

## BUFFALO MARKET.

BUFFALO, Nov. 28.—The weather is again warm and pleasant, and there seems at present every prospect of a late close of navigation. The market is very quiet this morning and very little offering. The transactions in flour are principally confined to small lots, above which the only sales we note are 100 bbls. Wisconsin, and 120 bls Ohio at $6,12½, the latter afloat.

No sales of wheat or corn.

## NEW YORK CATTLE MARKET.

NEW YORK, Nov. 21.—At Washington Drove Yard—Beeves $6,50@9.

Cows and Calves $32@60. Veal Calves at 4¼@6c.

Sheep $2,50@7. Lambs $2@6.

Swine, 5@5½c.

At Browning's—(Lower Bull's Head)—Offered, 453 Beef Cattle, and 1,650 Sheep and Lambs. About 100 Sheep left over.

Prices of Beeves ranged from $6@8,50—all sold.

At Chamberlain's—(Hudson River Bull's Head)—Offered, 400 Beeves, 45 Cows and Calves, 30 Veal Calves, and 4,660 Sheep and Lambs.

Beeves ranged at from 7@9c per lb.

Cows and Calves, $35, 40@65. Veal Calves 5¾@7c. ℔ lb.

Sheep $2,75, 3,50@6,60. Lambs $2, 3@4—all sold.

## ALBANY CATTLE MARKET.

ALBANY, Nov. 28.—W. W. Woolford's, Bulls' Head, Washington street.

Beef Cattle—300 at market. Prices—Extra, $7,50; 1st quality, $6,75; 2d do. $5,75; 3d do, $5@5,25.

Cows and Calves—None in market.

Sheep and Lambs—500 in market. Prices at from $2,50, $3@4,50.

Hogs—360 in market. Prices from $5@5,50.

Remarks.—The number of Cattle and Sheep in marke was quite small. The demand for Cattle was very good.

## CAMBRIDGE CATTLE MARKET

CAMBRIDGE, Nov. 22.—At market, 443 Cattle, about 375 Beeves, and 58 Stores, consisting of Working Oxen, Cows and Calves, yearlings, 2 and 3 years old.

Prices—Market Beef—Extra $8.00 per cwt.; 1st quality, $7,00; 2d do, $6,25@6,50; 3d do, $6,00; ordinary, $4,-75@5,50.

Hides—$6@6½ per cwt.

Tallow—$8.50@9 per cwt.

Pelts—$1@1,25.

Calf Skins 11½c per lb.

Veal Calves—$7, 8@12.

Barrelling Cattle—$5@5,75.

Stores—Working Oxen—$75, 78, 84, 101@155.

# Marriages.

IN Union, Monroe Co., by the Rev. W. H. Douglas, Mr. NEWTON RANDALL, of Barre, Orleans Co., and Miss HARRIET SMITH, of Union.

AT East Avon, on the 22d ult., by the Rev. B. G. Riley, Mr. WM. DIXSON, of Livonia, and Miss EMILY JANE, daughter of Chas. L. Shepard, of East Avon.

# Deaths.

IN Waterloo, C. W., on the 2d ult., ELIZA FRANCIS, aged 10 years. On the 10th ult., HANNAH MARIA, aged 4 years, daughters of Thos. and Harriet Gelder.

IN this city, on Monday evening, Nov. 21st, of consumption, LORETTA C. BROMLEY.

A COMPANION TO THE "DIARY OF A PHYSICIAN."

**DR. WARREN'S GREAT WORK,**

THIS DAY PUBLISHED,

**The Old Doctor; Or, Stray Leaves from my Journal.**

Being Sketches of the most interesting Reminiscences of a retired Physician.

[*From the Rochester Daily Advertiser.*]

THE OLD DOCTOR has been received. The New York press speak in terms of flattering commendation of this book, and we have no doubt, justly.

The author prefaces an introduction chapter by saying, "The following narratives are brief sketches of scenes that have actually come under the observation of an eminent Physician of this city, in the course of a long and extensive practice." The public do not require to be reminded, for every one knows from experience, that to the Physician the most secret thoughts of the heart are laid bare, in the hours of sickness, danger and death, and he thus necessarily becomes acquainted with those peculiar idiosyncrasies of the human mind which are sealed to most other men. We have no doubt the book will prove of marked interest, and will add, that it is neatly printed and beautifully illustrated.

6,000 COPIES SOLD IN TWO WEEKS.

A new edition now ready; published in one volume, beautifully illustrated, 50 cents. Library edition, bound in cloth, 75 cents. For sale by H. LONG & BROTHER, 43 Ann street, N. Y., and all Booksellers.

*** Copies mailed on receipt of price, address as above. 205-2t.

THE ONLY LADY'S BOOK IN AMERICA.

So pronounced by the entire Press of the United States

**Godey's Lady's Book for 1854.--24th Year.**

ONE HUNDRED PAGES of reading each month, by the best American authors. *A NEW AND THRILLING STORY.* Certainly the most intensely interesting one ever written; entitled—

THE TRIALS OF A NEEDLEWOMAN:

By T. S. ARTHUR; will be commenced in the January No.

THE ONLY COLORED FASHIONS

Upon which any reliance can be placed, received direct from Paris, and adapted to the taste of American Ladies by our own "Fashion Editor," with full directions.

DRESS MAKING.—Our monthly description of Dress-Making, with plans to cut by. None but the latest fashions are given. The directions are so plain, that every lady can be her own dress maker.

EMBROIDERY.—An infinite variety in every No.

DRESS PATTERNS.—Infants and childrens' dresses, with descriptions how to make them. All kinds of Crochet and Netting work. New patterns for Cloaks, Mantelets, Talmas, Collars, Chemisettes and Undersleeves—with full directions. Every new pattern of any portion of a ladies dress, appears first in the Lady's Book, as we receive consignments from Paris every two weeks.

THE NURSERY.—This subject is treated upon frequently.

*Godey's Invaluable Receipts upon every Subject.*

Indispensable to every family, worth more than the whole cost of the Book.

MUSIC.—Three dollars worth is given every year.

DRAWING.—This art can be taught to any child—by a series of drawings in every No. for 1854.

MODEL COTTAGES.—Cottage plans and cottage furniture will be continued as usual.

*Splendid Steel Line and Mezzotint Engravings*

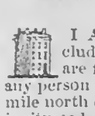
in every No. They are always to be found in Godey.

Godey's Lady's Book contains precisely that for which you would have to take at least three other magazines to get the same amount of information

TERMS.—One copy, 1 year, $3; 2 copies $5; 5 copies, 1 year, and an extra copy to the person sending the club $10; 8 copies, do. do. $15; 11 copies, do. do. $20. Godey's Lady's Book and Arthur's Home Magazine or Arthur's Home Gazette will both be sent one year on receipt of $3,50. L. A. GODEY,

205-2t 113 Chestnut street, Philadelphia.

**VALUABLE FARM FOR SALE IN GENESEE COUNTY.**



I AM about to quit farming and have concluded to offer my Farm for sale. There are few farms more valuable or desirable for any person who wishes a good farm. It is located one mile north of the village of Batavia, on Bank street, and is situated on both sides of the road, with the buildings located nearly in the centre of the farm, so that from them nearly all of it can be seen at a glance. It contains about two hundred and twenty acres, and there are about one hundred and ninety acres of improvements, of which one hundred and seventy-five acres are *first quality wheat land.* The timber is principally beech and maple, with black ash sufficient to keep the farm well fenced. The whole farm is under first rate fences, staked and capped. The soil of the farm is lime, gravel and marl, resting upon limestone. The buildings are commodious and pleasantly located—being a 1½ story framed house, nearly new, three barns, one large shed, two granaries sufficient to store 3,000 bushels of grain, a large corn crib, and other out-buildings, besides a framed house for a hired man. There are three wells upon the place, having good water, and five living springs on different parts of the farm. There are two orchards, in which there is a choice collection of fruit, selected with great care, consisting of Apples, Pears, Peaches, Plums, Cherries, Nectarines, Apricots and Quinces,—with Raspberries, Strawberries and Asparagus beds.

Such is a description of my farm, and I offer it for sale at a bargain. Any one wanting a first rate wheat farm, admirably located upon a good road, and near a beautiful village in one of the finest sections of country in the world, cannot do better than to come and see the farm.—I will give a liberal credit on the sale.

C. R. BRINCKERHOFF.

Batavia, N. Y., Nov. 21, 1853. 205

# MOORE'S RURAL NEW-YORKER,

THE LEADING AMERICAN WEEKLY

## AGRICULTURAL, LITERARY AND FAMILY NEWSPAPER.

THE RURAL NEW YORKER is the standard journal of its class in America. This is no vain assumption, but fully sustained by its high reputation, great popularity and extensive circulation. As has long been acknowledged by its Patrons and the Newspaper Press, it has no superior as an

AGRICULTURAL, LITERARY AND FAMILY NEWSPAPER.

Its leading departments contain more Agricultural, Horticultural, Mechanical, Scientific, Educational, Literary and News Matter, than any other paper in the Union—thus rendering it unequalled in VARIETY AND USEFULNESS OF CONTENTS.

ITS LITERARY DEPARTMENT—comprising Tales, Essays, Historical Sketches, Biography, Poetry, &c.,—is conducted with taste and discrimination, and embraces a carefully prepared variety of

CHOICE READING FOR THE HOME CIRCLE.

Aside from the intrinsic value of its Reading Matter, the ample pages of the RURAL are interspersed with many APPROPRIATE and COSTLY ENGRAVINGS—including illustrations in Agriculture, Horticulture, Rural Architecture, Science, Biography, Natural History, &c.

As a NEWSPAPER the RURAL NEW-YORKER is also most valuable, each number containing the

LATEST AND MOST IMPORTANT NEWS,

Briefly yet definitely stated—including reliable reports of the GRAIN, PROVISION and CATTLE MARKETS, &c. It is independent and out-spoken—condemning humbug and quackery, and fearlessly and faithfully advocating the BEST INTERESTS OF THE RURAL POPULATION. In judging of it comparatively, remember that the RURAL NEW-YORKER is not a *monthly*, of only twelve issues yearly, but a

LARGE AND BEAUTIFUL WEEKLY OF FIFTY-TWO NUMBERS!

THE FIFTH VOLUME, commencing Jan., 1854, will be printed on NEW and HANDSOME TYPE, and otherwise materially improved. An actual *increase of over Six Thousand Subscribers* during the past year, stimulates and enables us to make very liberal expenditures to improve the paper in both CONTENTS and APPEARANCE. With an able corps of Associate and Corresponding Editors, (five in number,) and many talented and experienced Contributors and Correspondents, the Conductor of the RURAL is determined to render its whole contents eminently Valuable and Interesting.

FORMS AND TERMS.

Each number of the RURAL NEW-YORKER comprises EIGHT DOUBLE QUARTO PAGES (forty columns,) printed in the BEST STYLE. An INDEX, Title Page, &c., at the close of each volume.

TERMS IN ADVANCE—Single Copy $2 a Year—$1 for Six Months. Three Copies for $5; Six for $10; Ten for $15; Twenty for $25. As we are obliged to pre-pay the American postage, our lowest club rate to Canada subscribers is $1,50 per copy. See Premium List below.

NOW IS THE TIME TO SUBSCRIBE AND FORM CLUBS to commence with the new year and volume. We confidently anticipate the continued influence of former Agents and active Friends,—while the kind offices of all favorably disposed toward the paper, will be gratefully appreciated.

☞ Specimen numbers, Premium Lists, &c., sent free to all applicants. Subscription money, properly enclosed, may be mailed at our risk, if addressed to

November, 1853. D. D. T. MOORE, ROCHESTER, N. Y.

---

DURING the past year the Proprietor of the RURAL NEW-YORKER has *paid* nearly *Fifteen Hundred Dollars* in Premiums to Agents and others, and now invites the attention of all interested to the following list of

## Splendid Premiums for New Subscribers!

1. SEVENTY-FIVE DOLLARS, IN CASH, to the person sending us the greatest number of yearly subscribers (six month subscriptions to be counted proportionally) to the RURAL NEW-YORKER—remitting payment according to our club terms—previous to the 15th day of April, 1854.

2. FIFTY DOLLARS, IN CASH, to the person sending us the second largest number, as above.

3. THIRTY DOLLARS, IN CASH, to the person sending us the next (third) greatest number.

4. TWENTY DOLLARS, IN CASH, to the person sending the next (fourth) greatest number.

5. FIFTEEN DOLLARS, IN PLATE OR BOOKS, to the person sending the next (fifth) greatest number.

6. TWELVE DOLLARS, IN PLATE OR BOOKS, to the person sending the next (sixth) greatest number.

7. TEN DOLLARS, IN PLATE OR BOOKS, to the person sending the next (seventh) greatest number.

### JANUARY PREMIUMS!

1. TWENTY-FIVE DOLLARS, IN CASH, to the person sending us the largest number of subscribers, according to our terms, previous to the 1st day of January, 1854.

2. FIFTEEN DOLLARS, IN CASH, to the person sending the second largest number, as above.

3. TEN DOLLARS, IN CASH, to the person sending the third largest number as above.

☞ Persons competing for these Premiums must mail their remittances on or before the 31st of December. They are not excluded from the April prizes, so that one person may secure *One Hundred Dollars, in Cash!*

[In order to give Subscribers, Local Agents and Post-Masters a fair and equal chance, traveling agents, post-riders and citizens of Rochester are excluded from competition for any of the above Premiums.]

### SPECIFIC PREMIUMS!

In order to reach and reward *every one* who may lend a portion of influence in support of the RURAL NEW-YORKER, we offer to those who do not compete for either of the preceding prizes, the following liberal gratuities:

1st. FIVE DOLLARS, IN CASH, or a copy of WEBSTER'S UNABRIDGED DICTIONARY, (or $6 in Ag'l Books) to *each person* sending payment for FIFTY or more yearly copies (six month subscriptions proportionally.) according to our terms, previous to the 15th of April, 1854.

2d. FIVE DOLLARS, in Books, or four extra copies of the RURAL, to every person remitting payment for FORTY or more subscribers, as above.

3d. THREE DOLLARS, in Books, or a handsomely bound volume of the RURAL for 1853, to every person remitting for THIRTY subscribers.

4. To every one remitting for TWENTY copies, ($25,) we will give an extra copy of the RURAL, and four (the present and three past) volumes of THE WOOL GROWER AND STOCK REGISTER—or, if preferred, an extra copy of the RURAL and $1,50 in Books.

5th. To every one remitting for TEN copies, ($15,) an extra copy of the RURAL and three volumes (past or present) of the WOOL GROWER—or, instead of vols. W. G., $1 in Books.

6th. To every one remitting for six copies, ($10,) an extra copy of the RURAL, either volume of the Wool Grower, *and* a bound vol. of Genesee Farmer for 1848 or '49.

7. To every one remitting for THREE copies ($5,) either volume of the Wool Grower, *and* a bound volume of Gen. Farmer for 1848 *or* '49.

8th. To every person remitting for ONE copy, ($2,) we will give a copy of either volume Wool Grower, *or* the Farmer for '48 or '9, as preferred.

---

All competitors for premiums are expected to adhere strictly to the following

### TERMS IN ADVANCE:

TWO DOLLARS A YEAR. *Three Copies, one year, $5—Six Copies for $10—Ten Copies for $15—Twenty Copies for $25, and any additional number at the same rate. Names of subscribers written on the papers if desired, however large the club. Club papers sent to different offices if desired.*

☞ Specimen numbers, &c., furnished free to all disposed to compete for the Premiums, or who desire to extend the circulation of the NEW-YORKER. Subscription money, properly enclosed, may be mailed at our risk, if addressed to

D. D. T. MOORE,

November, 1853. ROCHESTER, N. Y.

---

**Ornamental and Domestic Poultry.**

THE subscriber having invested a large amount in this business, is now prepared to fill any orders which he may receive. The celebrated Brahma, Shanata, Game, Palmer, Marsh and White Shanghais, with many other popular varieties, are from the yard of C. C. Plaisted, Esq., Great Falls, N. H., and of course cannot be surpassed in the world. My Imperial Cochin China Fowls are from Col. B. P. Johnson, his stock imported last year, '52, from the best breeders in England. All who well know Col. J., will understand that he has the best or none. My black Spanish are quite late, and will not be ready for market before next spring. They are from Mr. John Giles, late imported, the best blood in the country. These birds are so fast coming into repute that the price will doubtless run high for some years to come, as will also be the case with the Brahma, Sumatra, Game, &c. All persons purchasing fowls from me, can enjoy the benefit of my advertising, in case they wish to sell Chickens next year.

I am quite sure that our southern and western fanciers can be better suited here than farther east, as the long distance on railroad much injures the health and growth of the fowls.

As there are many fowls in market which have no claim upon the public favor, I will give my patrons something more tangible than my own words, for

"If self the wavering balance shake,
It's rarely right adjusted."

I am therefore permitted to refer all who entertain any scepticism, to the following gentlemen:—Col. B. P. Johnson, Secretary N. Y. State Agricultural Society, Albany, N. Y.; Hon. Ambrose Stevens, N. Y. City; Hon. Lewis F. Allen, Black Rock, N. Y.

Address O. B. EVANS, 214 Main street,
194-3m Buffalo, N. Y., Box 1662.

**CHOICE STOCK FOR SALE.**

25 SPANISH Merino Ewes, bred in Vermont,..$3,50
150 do. do. the result of 20 years careful breeding,..... 3.50
100 Merino Lambs from these Ewes,..... 2,63
200 Fat Weathers,..... 4.00
4 Leicester and South Down Bucks,.....$15 to 25,00
6 Good Cows impregnated by my thorough-bred Durham Bull Yorkshireman, bred by S. P. Chapman,..33,00
2 High bred Morgan mares, 3 and 4 years old, combining the stock of Sherman, Burbank, and Gifford Morgan,.....200,00

E. MARKS.

Fairmount, Onondaga Co., Nov. 21, 1853. 204-2t*

The Rural New-Yorker is one of the most ably edited, interesting and successful papers of its class in this country, and during a period of the three years which it has been published, has acquired a very large circulation.—[Bostou (Mass.) Journal.

☞ PEOPLE'S COLLEGE OF THE STATE OF NEW YORK, INCORPORATED APRIL 12, 1853.—This Institution has been chartered by the Legislature of this State, for the purpose of reducing the expenses of Academic and Collegiate Education, and thereby open the Halls of Science to all classes of society by reducing the cost of tuition, board and clothing, and enabling the student to defray the greater part of the expense in labor.

Provision will be made to educate young men corporeally and mentally for specific purposes, by pursuing full and definite courses of study for each of the pursuits represented in the College—either Agricultural, Mechanical or Professional—and thus graduates will be qualified for entering at once upon the business of their choice.

At a regular meeting of the Trustees named in the Charter, held at Owego, on the 25th day of May, the following appointments were made:

D. C. MCCALLUM, of Owego, President of the Board of Trustees.

A. I. WYNKOOP, of Chemung, Vice President.

TRACY MORGAN, of Binghamton, Treasurer.

HARRISON HOWARD, of Lockport, Secretary and General Agent.

Agents are being commissioned in each county of the State, that the people may have an opportunity to contribute to the capital stock, which is distributed in shares so small that every individual may become interested in an institution which commends itself to the favorable consideration of every intelligent person.

For further information upon the subject, application may be made, post-paid, to the Secretary, who will send a pamphlet containing the act of incorporation and objects of the Institution, and other needful information.

188-tf H HOWARD, Secretary.

---

The undersigned, having been appointed Agent for Rochester and Monroe county, will be most happy to furnish any new information desired, in reference to the College, to receive stock subscriptions, (the shares are one dollar each,) or to address audiences, on invitation, explaining at length the plans and objects of the People's College, and also as he views the idea of a true education.

Respectfully, G. F. NEEDHAM.

---

**PRICES IS THE TEST.**

I AM selling Goods at reduced prices, to reduce my stock, in order to sell out.

HAIR WORK.

Wigs, old prices, $10 to $15, now $7 and $11; Toupees $10 to $8 now, $8 and $6 down to $4; Ladies' bands 50 per cent. less; Braids 75 per cent. less; Curls the same. Perfumery and Gents. Furnishing Goods the same discount from usual prices. Three-ply collars 15 cts. each, or $1,75 per dozen. Come, or send to 56 Buffalo St.

204-tf PROF. BROWN.

# Poetical.

## MAIN TRUCK; OR, A LEAP FOR LIFE.*

BY GEORGE P. MORRIS.

OLD IRONSIDES at anchor lay
In the harbor of Mahon;
A dead calm rested on the bay—
The waves to sleep had gone,
When little Jack, the captain's son,
With gallant hardihood,
Climbed shroud and spar, and then upon
The main-truck rose and stood.

A shudder ran through every vein,
All eyes were turned on high,
There stood the boy with dizzy brain,
Between the sea and sky.
No hold had he above, below;
Alone he stood in air,
At that far height none dare to go;
No aid could reach him there.

We gazed—but not a man could speak—
With horror all aghast,
In groups with pallid brow and cheek,
We watched the quivering mast.
The atmosphere grew thick and hot,
And of a lurid hue,
As, riveted unto the spot,
Stood officers and crew.

The father came on deck. He gasped,
"O, God, thy will be done!"
Then, suddenly, a rifle grasped,
And aimed it at his son.
"Jump far out, boy, into the wave!
Jump, or I fire!" he said,
"For only that your life can save!
Jump, jump, boy!" He obeyed.

He sunk, he rose, he lived, he moved,
He for the ship struck out;
On board we hailed the lad beloved,
With many a manly shout.
His father drew, in silent joy,
Those wet arms round his neck,
Then folded to his heart the boy,
And fainted on the deck.

*Founded upon a well known tale from the pen of WM. LEGGETT, Esq.

# Rural Sketch Book.

## THE POOR OFFICE-HOLDER.

### LEAVES FROM MRS. FRANKLY'S DIARY.

BY MRS. M. W. H.

NOVEMBER 1.—The gloomiest month of the year is upon us, and brings with it the usual amount of wants—a whole month before CHARLES' quarter's salary is due—how we are to make it hold out to pay the bills already due, and make the children comfortable for the winter, is more than I know. CHARLES is always hopeful, and I will try to be so. It makes me feel sad to see him look so pale and care-worn; I don't think his health is as good as it was when he worked at carpenter's work, and I am quite sure my work is harder, for we must keep up a respectable appearance, while he is in his present situation. His salary is too small for such a family to live upon, so that I have to plan every way I can devise, to make it hold out. That sickness of the children threw us behind hand very much. I hope they will be more healthy in future.

Nov. 2.—In a few days the annual election takes place. I always feel sorry to see CHARLES electioneering. I cannot think it is quite right to give oyster suppers, money and ardent spirits, to influence the ignorant and unprincipled, to vote for any particular candidate. CHARLES was a temperance man before he was elected to office; he does not drink himself, but sometimes I think it is as bad to furnish those who do, with the means of getting intoxicated, as it would be to do it himself — but he says every body has to manage in this way if he wants or expects to get an office, or keep one after he has it; yet after all, that does not make it *right*. I do not like to have our boys familiar with such things; this certainly cannot be the way to make good citizens or patriots.

Nov. 3.—Sunday Morning.—One of those beautiful, invigorating mornings that braces one up, and dispels the gloom of the preceding dark day. Resolved to attend church with my family—felt chagrined that ELLEN's dress looked faded and worn, (by the way, she is now sixteen, pretty, well-behaved and modest,) how I wish we could dress her a little better. CHARLES is so proud-spirited I am afraid he will not want her to go to church. Reflected that HARRY's best pantaloons had been patched, JOHNNY's shoes down at the heel, WILLIE's cap very threadbare; but ill health alone should keep us from public worship, therefore, after much brushing, went to church and heard an excellent sermon by Dr. PRACTICAL, from these words:—"The Lord will provide,"—was much comforted by it. He exhorted us to provide as far as possible, honestly and honorably, for the temporal wants of ourselves and those dependent on us, and if we do not succeed as well as we could wish, if we ask aright our Heavenly Father will assist us to bear misfortunes with such a spirit, that though cast down, we may not be dismayed.

P. M.—Took a walk with CHARLES in the suburbs of the city—how refreshing to get into the pure air of the country. After tea he read to us, then sung some Hymns with the children,—ELLEN has a sweet voice; how pleasant it would be to give her an opportunity to cultivate it; she wishes very much to learn music—poor girl! HARRY sings very well indeed, I am glad they teach singing in the public schools.

Nov. 4.—Rose early, after a refreshing sleep—called KITTY to begin her work.—Monday is always such a busy day—so many chores to do before the boys could get off to school—many articles of linen to mend, before they were washed, &c., &c. All the pleasant impressions of the Sabbath driven out of my mind by carking care.

Nov. 6.—CHARLES had just gone to the office when JOINT, the butcher, came with his bill, which amounts to twenty dollars—he must have seen that I looked confused, as I took the bill and told him I would hand it to Mr. FRANKLY, who would pay it as soon as he could. I felt afraid he had heard how much that last oyster supper cost. I asked him to send a leg of mutton for our dinners—he answered gruffly, he had none, but could send a neck—well, I could make broth with it—that is very wholesome.—JOINT's looks and manner said plainly, I don't like to trust you any more, till my bill is paid. How these things pain me, but I don't like to plague CHARLES with such trifles, so I keep them to myself. I must economise closer, but I scarcely know where to begin—here are six of us besides KITTY, the servant girl, and we must eat to sustain life. I would give up tea and coffee, but CHARLES says he cannot do without them. The children drink cold water, and as for cakes and pies, we scarcely know how they taste. Let me see. I think I can turn ELLEN's green dress, so it will do to wear this winter, and she can wear her last winter's bonnet. It is some comfort to know that our real friends will think just as well of us, in our old dresses. I think ELLEN will have to take in some sewing to get her a good warm shawl, and some shoes. My own clothes are rather out of date, but I don't mind that, if my husband and children look respectable. If ELLEN gets a shawl, I can wear that sometimes.

Nov. 10.—The election is over and CHARLES is defeated. He is sure he would have been re-elected if Mr. FLUSH, his opponent, had not been so free with his money. Besides, Mr. FLUSH would go into all manner of filthy places to talk with the voters and that CHARLES said he could not do. I am almost glad he was not re-elected, but I do feel sorry he has spent money that would have obtained so many comforts for the family. I don't think Uncle BARNABAS would be so hard with us, if he did not hate politicians so badly. He says all the patriotism of these days is lost in the desire for self-aggrandizement and party strife. Some *women* want to vote and take a part in the government, but I am afraid women would be more bitter politicians than the men.—CHARLES retains his office till March, that will give him time to look about and plan some other business.

Nov. 12.—CHARLES came to dinner, and handed me a letter from Uncle BARNABAS, who is a bachelor, and very rich. I am his nearest relative, but get no favors on that account. I read the letter with much concern, for he presses hard for the yearly interest of my husband's note for five hundred dollars, on which he has been paid seven per cent. punctually, for five years. This must be paid at all events, for my Uncle is not a man to be put off; he says, in his letter, that he expects money is plenty with CHARLES about election time—how unkind! I wonder if he expects to carry his money with him when he dies. While this presses on my husband's mind, I can't give him JOINT's bill, to add to his perplexity.

Nov. 15.—The month half gone, and nothing yet to brighten our prospects. I have been hoping, like poor MICAWBER, that "something would turn up." Made up my mind to ask Mrs. DARLEY for some sewing for ELLEN; she is not very healthy, but she must do something. Mrs. DARLEY is such a friend to us I need not hesitate to ask her. After dinner, dressed and called on Mrs. DARLEY—with a very little trembling in my voice, I made my errand known. Putting on a very patronizing air, that lady said, she had no sewing at present, that she wished to have done, and wondered I did not do without a girl, and let ELLEN do housework. HARRY too, was quite old enough to earn his living, why did we not put him to work, or to learn a trade. She knew of many who lived very genteelly on a less salary than my husband gets, but then the wives are admirable managers. Mrs. DARLEY does not know how hard it is in a city, to find the right kind of employment for a delicate boy, or to surround him with proper influences. He is in a free school, preparing for future usefulness, and it is hard to deprive him of an education, which we will not do, if we can possibly avoid it. I know there are people who live with a less salary than CHARLES receives—live in good style, dress richly, and appear to have all the luxuries that are in fashion—*how* they do it, I am at a loss to conjecture—some are malicious enough to say they defraud the government, or society that employs them, but I don't like to believe that. Mrs. DARLEY was very generous of her advice, to which I listened with a heavy heart—left her house with tearful eyes—walked awhile to compose my feelings, and gather courage for another trial. Called on Mrs. ELLIOT, who has known adversity, but is now rich and prosperous. Was received kindly, and obtained a dozen shirts for ELLEN to make, for which she is to be paid a fair price. How I love Mrs. E. for her kind sympathy; she is one of the few, who do not forget that poor people have troubles enough, without having haughty unkindness from equals, perhaps inferiors in every thing but wealth, heaped upon them.

Nov. 20.—Mrs. DARLEY has taken much pains to circulate the information, that "the FRANKLY's are taking in sewing." Mrs. HICKS called to-day, and in a vulgar, domineering manner, asked to see some of ELLEN's sewing. I handed her the shirt ELLEN was making, which she pulled and examined very closely, handing it back she said, "The girl sews very well—I guess she can have a dozen shirts to make for my ARTHUR WELLINGTON, when he *gits to go to* College—I *kinder* think he will go in the spring, for he hates old PROSODY and his *'Cademy;* and LUCRETIA ARAMINTA is going to Boarding School, I guess she will want you to do some work for her, if you don't ask too much."—ELLEN could scarcely suppress her disgust, and with a dignity I had not thought she possessed, told Mrs. HICKS she was provided with sewing for the present; when she was ready to do hers, she would send for it. How strangely people sometimes mistake their true position and interest. Mrs. H. was once my mother's hired girl. She and her husband have become rich, and possessing a vulgar mind, she wished to impress me with the change that had taken place in our circumstances. How contemptible!—Heaven grant me patience and humility!

Nov. 24.—Rose early, so as to get time to help ELLEN, as those shirts must be done this week. In the afternoon Mrs. FRIENDLY came in, and after a little pleasant conversation, she said ELLEN was looking pale, she thought she confined herself too closely, and proposed to her to go and walk, while she would sew for her. ELLEN at last consented, and came back in very good spirits. How much good a little kindness will sometimes do; Mrs. FRIENDLY is so cheerful and always talks so hopefully, and not the least of gossip. Invited her to remain and take tea with us, which she did. Had nothing but bread and butter to set before her—I conquered my pride, and concluded not to make my little stock of money less, by buying cake. Some would have thought me stingy, but we must live plainly at all times. CHARLES came home late to his tea, looked disturbed—when we were alone I asked him if he was sick—he said no, but BODKIN, the tailor, had demanded payment of his bill in a very offensive manner, in presence of the clerks, and it could not be paid. How dreadfully mortifying. O dear!—how that quarter's salary melts away even before we get it. What are we to do; comes up in my mind, continually.

Nov. 26.—I knew when CHARLES came to his dinner that something dreadful had happened; I knew not what—he looked very pale, and did not taste his dinner—he said he was well, but he had such a distracted look I felt alarmed. Was miserable all the afternoon, with an undefined dread of, I knew not what. Night at last came and with it my dear husband, looking very wretched. After the children had retired he told me his trouble. Mr. BORROW, for whom he is endorser, has utterly failed and cannot pay ten cents on the dollar, and my husband has been called upon for three hundred dollars, the amount for which he is security, and if it is not paid within two weeks, every thing will be taken from us that the law will allow. How angry Uncle BARNABAS will be when he hears of it. He says he never was surety for any body, and never will be. Mr. BORROW was very influential in procuring the office for CHARLES, that he now holds, and I am sure he could do no less that sign with him. Ah well! all we can do is to give up every thing we can spare, (in fact that is not much,) and crowd into some small tenement that rents cheap; I must dismiss KITTY and try to do my work myself, though I do as much now as my feeble health will admit. But amid all our troubles, let us be thankful they cannot imprison my dear husband for debt, as they once might have done.

Nov. 28.—Dark—dark, is the hour. If CHARLES should be led to commit some dreadful act, how could I live, and what would become of the dear children. His looks frighten me, and visions of forgery and suicide haunt me. It is terrible to think of our distressed circumstances.—How I wish Uncle BARNABAS would help us. I wonder why he can want to keep his money so closely. I dare not write to him what trouble we are in, for he would say—"It is all CHARLES' own fault, and he deserves it."

Nov. 30.—How wonderful are the ways of Providence! when all was midnight darkness, he has sent a ray of light to illumine our path. We received a letter to-day from one of the executors of Uncle BARNABAS' will, announcing the sudden death of my Uncle, with a copy of his will, by which he has left me his property, amounting to sixty thousand dollars. Heaven help us to bear the change as we ought.

DEC. 2.—The news of our sudden accession to a fortune has become known—congratulations pour in upon us; improper as it is, but I do not see company, nor can I, till I am more composed, and I will certainly show a proper respect for the memory of our benefactor.

DEC. 10.—Having had a little time to digest our plans, CHARLES has resigned his office, to attend to his own business; fully determined never again to occupy any situation that must be gained by pandering to ignorance and vice. I think we will buy a farm and live in the country—however, there is yet time enough to decide about that. What a difference the possession of money makes in the estimation with which many regard us. Mrs. DARLEY has made the discovery that ELLEN is a beauty, ladylike, and has a wonderful talent for music, and that Mrs. FRANKLY is such a lovely woman, and such an excellent manager,—she always called her one of her best friends.—Another has discovered that HARRY is a fine boy, so smart and intelligent, instead of being the lubberly dunce they previously tho't him,—the other boys are such promising lads, they will be an honor to their parents—and so on, to the end of the list of sycophantic flatterers who, one month ago, shunned us as they would an infectious disease. May Heaven so teach us to use the wisdom we have gained in adversity, that we may be enabled to give a good account of our stewardship.

## SCHOOL EXERCISES.

FIRST CLASS.—"Willy Chase, what is the currency of the United States?"

"Cash and money."

"What are its denominations?"

"Copper, bogus and Bungtown cents, pennies, fips, fourpence ha'pnies, levies, ninepence, Spanish quarters, pistareens and shinplasters."

"That will do."

"Jones, what is the standard weight of the United States?"

"Scale weight, and wait a little longer."

"Samuel, how many kingdoms are there in the material world?"

"Four."

"Three—only three."

"Four, I think, sir."

"Well, name them—what are they?"

"Mineral kingdom, animal kingdom, vegetable kingdom, and kingdom come."

"John Brown, wasn't David a musician?"

"Yes, sir—he played psalms on the harp, a favorite instrument with the Jews, and at the present day it is called a jewsharp.—I have one in my pocket—here it is. Place it in your mouth, thus—breathe on the tongue gently, strike it with your fingers in this way—and the psalms, in harmonious concord, fructify on the ear as natural as thunder."

"George Smith, do you recollect the story of David and Goliah?"

"Yes, sir—David was a tavern-keeper, and Goliah was an intemperate man."

"Who told you that?"

"Nobody. I read it—and it is said that David fixed a sling for Goliah, and Goliah got slewed with it."—*New York Spirit of the Times.*

BOBUS SMITH, one day, in conversation with Talleyrand, having brought in somehow the beauty of his mother, Talleyrand said, "C'etait donc votre pere qui n'etait pas bien." (It was your father, then, that was not good looking.)

SCROOPE DAVIES called some person who had a habit of puffing out his cheeks when he spoke, and was not remarkable for his veracity, "The Æolian lyre."

A CONVICT, perhaps, deserves to have his head shaved; but it does not follow that his treatment should be altogether *barbarous.*

A RADICAL editor out West asserts that the principles of his party are as progressive as the *eternal rock of Gibralter!*

SPREAD OF PAPACY.—The *Times* says:—"Our wives and daughters wear gaiters with *wafers* for *souls.*"

Is it lawful to hang clothes on Mason & Dixon's line?

# Youth's Corner.

"Attempt the end, and never stand to doubt;
Nothing's so hard, but search will find it out."

For the Rural New-Yorker.

## CHARADE.

When my *first* hath seized thy bridle,
While still night is round thee thrown,
Nerve thine arm then!—words are idle!
Heaven protect thee, pilgrim lone!
Yet oft *it* proves a warm defender,
As we clasp it to our breast,
And full many a bosom tender,
In its soft embrace is press'd.

Where the bright, cold steel is clashing,
Round Ambition's blood-red car,
There my *second,* ceaseless flashing,
Lights the lurid front of war.
Yet full oft, as some blest token,
O'er the wanderer's heart 'tis wreathed,
Fresh recalling accents spoken,
When love's gentle tones were breathed.

Wouldst thou, o'er some cherished treasure
Seek to place a guardian pure?
Choose my *whole*—nor bribe, nor pleasure,
E'er can tempt it or allure.
Though rich gems around are shining,
It may play no traitor's part,
Ne'r its sacred trust resigning,
'Till the steel hath pierced its heart.

East Bethany, N. Y. A. J.

## MATHEMATICAL QUESTION.

A and B bought 176 marbles, and agreed to divide them in proportion to the amount paid by each. B, after figuring awhile, says to A, ¾ of yours and 4 more, equal ⅔ of mine; now if you will tell me how this can be, I will give you ¼ of mine. They then put them into a hat, and agreed to divide them a second time, by each taking out what he could with one hand. After each had taken out what he could, they looked into the hat, and found they had taken them all; and immediately commenced counting what each had,—when B found that if he should give A ⅛ of his and 10 more, their numbers would be equal. How many had each after the first division; after B giving A ¼ of his; and how many had each at the last?

Ransomville, N. Y., 1853. C. B. S.

**MOORE'S RURAL NEW-YORKER:**

A WEEKLY HOME JOURNAL,

**For both Country and Town Residents.**

PUBLICATION OFFICE,

BURNS' BLOCK, CORNER STATE AND BUFFALO STS.,

ROCHESTER, N. Y.

TERMS, IN ADVANCE:

TWO DOLLARS A YEAR—$1 for six months. To Clubs and Agents as follows:—Three Copies one year, for $5; Six Copies (and one to Agent or getter up of club,) for $10; Ten Copies (and one to Agent,) for $15; Twenty Copies for $25, and any additional number, directed to individuals at the same rate. Six months subscriptions in proportion.

☞ Subscription money, properly enclosed, may be sent by mail at the risk of the Publisher.

Terms of Advertising

ONE DOLLAR per square (ten lines—100 words, or less,) for each insertion,—*in advance.* ☞ The circulation of the NEW-YORKER is much larger than that of any other newspaper published in the State, out of New York city. Only a limited space, however, is devoted to advertisements, and hence preference is given to those most appropriate—such as the cards and notices of dealers in Agricultural Implements and Machinery,—Horticulturists and Seedsmen,—Booksellers and Publishers,—Inventors, etc. All orders by mail should be accompanied with the cash.

To enable us to accommodate as many as possible, brief advertisements are preferred. Patent medicines, &c., will not be advertised in this paper on any terms.

☞ All communications, and business letters, should be addressed to D. D. T. MOORE, Rochester, N. Y.

THE WOOL GROWER AND STOCK REGISTER.

THIS is the only American Journal primarily devoted to the interest of Wool and Stock Growers, and should be in the hands of *every owner of Domestic Animals.* It is ably conducted, published in the best style, and finely illustrated. Each number contains a careful Review of the WOOL and CATTLE MARKETS, and much other *useful* and *reliable* information which can be obtained from no other source. The Fifth Volume commences with July, 1853.

TERMS:—FIFTY CENTS A YEAR; Five Copies for $2; Eight for $3; Eleven for $4. Back volumes, bound in paper, at 40 cts. each,—unbound at 35 cts., or three for $1.

Published monthly, in octavo form. Specimen numbers sent free. Money, properly enclosed, at our risk.

Address D. D. T. MOORE, Rochester, N. Y.

☞ NON-SUBSCRIBERS into whose hands this number of the RURAL may fall, are requested to give it an examination, and, if approved, their support. See Prospectus, Premium List, &c., on preceding page.

### Progress and Improvement.

### BARN-YARD MANURE.—No. V.

To carry out successfully, the plan of preparing manure, which we have briefly attempted to sketch, it will be necessary to have the farm buildings arranged with this object in view. As a general thing, at present, the barn and cow house, the stables, the piggeries, and the sheep-yard, all occupy separate places, often quite a distance from each other. This ought not so to be.—They should all open into, and encircle a common yard, having a southern aspect, and containing a good range of open sheds for young cattle, &c. The importance of this cannot be over-estimated. As we now write, our kindling enthusiasm for agricultural improvement is nipped in the bud when we think of the miserably arranged homesteads common throughout the length and breadth of the land. We cannot call to mind half a score of farm buildings either in the States or Canadas, that come up to our ideas of what a homestead should be.—We have innumerable handsome barns with domes, venetian shutters and glass windows, which an Englishman would mistake for a dissenting chapel or a country school house. We have barns costing $10,000, and others with a superfluity of jim-cracks, but we have very few really good, well arranged, substantial farm buildings. We do not desire to see expensive buildings, but such as are simple, plain and substantially arranged for convenience, utility and profit. You cannot make the *most profit* on your farms, inasmuch as you cannot make good manure, the sheet anchor of all good husbandry, without them.

Another requisite for carrying out our system is—*a good large wheel-barrow.*—Reader, you probably have not got one.—Few farmers have. Perhaps you have a common dirt barrow. This is better than nothing, certainly, but is not worthy a place in any respectable barn-yard. Do get a good one, with a large flat bottom, a high front-piece and deep side boards which can be taken off at pleasure. Such a barrow is a treasure above all price. Then when you clean out your stables, do not throw the litter close to the entrance, where it will lie in a loose heap, and spoil by rapid fermentation, but get your new wheel-barrow and take the litter to a distant part of the yard where it will be mixed with the litter of the pig pens, cow house and sheep fold. The advantages of such a mixture we have already explained.

This is scientific farming. Is there anything very forbidding in it? Is there anything but what is simple, economical and easily accomplished? Would it cost much more to manage a barn-yard in this way than it costs at present? We believe not. We know, on the other hand, that the labor, on the whole, is much less. There is, perhaps, a little more labor required to prepare the manure in the yard, but by judicious and long continued fermentation, the manure can be carted out to the field easier, and plowed under much easier and better. It can be allowed to remain in the yard till the leisure season of the year, and be spread on the land and exposed all winter without much loss; and, finally, the manure itself will be so much superior in immediate effect that you will get so much in love with scientific book farming, that you will send your sons to an Agricultural College, which we hope soon to see flourishing in every State, and where he can learn farming on scientific principles.

We would just add that though we dwell so much on the importance of nitrogen in the manure, we do not underrate the value of the inorganic elements. We speak more directly about nitrogen because we think it of greatest importance, and because we know there is no way of increasing its amount on a farm without at the same time increasing the amount of inorganic elements, and also that there is no way of judiciously preserving and fermenting the nitrogen without at the same time preserving the inorganic elements, and rendering them in a better state for assimilation by the plant. Especially is this true of the phosphates and silicates. Nitrogen and phosphoric acid are generally in the same ratio, while the solubility of the latter is greatly increased by fermentation.

### REQUISITES FOR A GOOD FARM.

A GOOD FARM has a good soil—either naturally, or made so by cultivation and manuring—adapted to the production of the different crops grown in the country around it. It is well tilled—every crop being sown on properly prepared ground, and its after-culture thoroughly attended to. The production of weeds is made no part of its object—the fields, fences, and road-sides, are kept as clear as possible of "the enemy."—It is well watered, either naturally or artificially, by streams, wells, or cisterns, convenient to the dwelling-house, barns, and other farm buildings. It has a wood-lot for the supply of fuel, fencing, &c.

A good farm is well fenced—divided into suitable and convenient lots, by substantial enclosures, either of stone, rails, boards, or other permanent material, conformable to its size, value, and situation.

It is provided with barns and stables, well built, and conveniently placed and arranged, and of sufficient size to contain the produce of the farm and house comfortably the stock usually kept upon it. Cellars for storing roots, and for the manufacture of manure are placed under the barn and stables, and convenient yards are attached, so arranged as to prevent wastage of fodder, which may be fed therein, so of liquid manure. These yards are well sheltered from the winds and convenient to water; the whole forming a comfortable winter residence for the domestic animals of the farmer—such that he, though "a merciful man," may sleep in peace, knowing that nothing suffers under his jurisdiction.

A good farm has a good dwelling-house: judiciously arranged for the comfort and convenience of the "women folks;" neatly built and kept in the best repair; with a good cellar, a well and cistern, a wood-house, ash-house, smoke-house and ice-house, near at hand; and these and all other buildings well painted, and secured from decay. It has a neatly fenced door yard, a grassy lawn with fine ornamental trees, plants and flowers, tastefully arranged,—the whole appearance of the house and grounds indicating the abode of taste, neatness and comfort.

A good farm has various out-buildings to facilitate the different operations in its management, among which, in addition to those enumerated in connection with the dwelling, may be named, a wagon and tool-house, a work-shop, a granary and corn-house, a convenient piggery, a poultry-house, &c., &c., all conveniently arranged and situated, and neatly and durably constructed and painted.

It has also a kitchen garden, where are raised in their perfection, all the culinary fruits and vegetables usually grown in the best gardens. Also, a fruit garden and orchard, containing the best varieties of apples, cherries, plums, peaches, pears, &c.; and also, grapes, currants, raspberries, gooseberries, &c., &c., in short, all the desirable fruits which may be grown in the open air.—B.

### DRAWING WATER BY A SYPHON.

EDS. RURAL:—Having noticed about every other method for drawing water except with a syphon, I will with your permission relate a little experience and ask some questions on the subject.

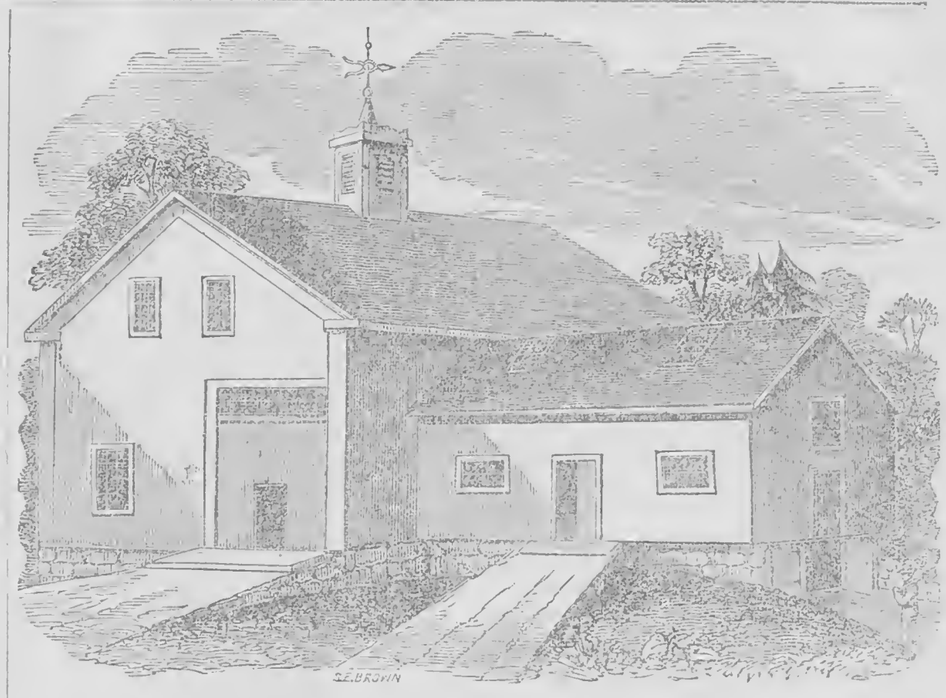
When I settled on my farm ten years ago, it was nearly destitute of that indispensable element, living water above ground.—After toiling along for six years, fetching the water for family use 40 rods, I made an effort to obtain water on a side-hill about 16 rods from my barn. On the third trial I struck a vein of water 12 feet from the surface, affording, as nearly as I could calculate, some 15 or 18 bbls. of water in 24 hours. Now, how to get it to the surface was the question. To dig a ditch that distance on a level with the vein in the well was a great task, there being but about 5 feet fall to the barn. Recollecting an incident of my boyhood, of going to the garden and getting a crooked onion stalk and putting one end in a pail of water, applying my mouth to the other and drawing the water through it, keeping one end the lowest it would run until it drew the water all out of the pail, and hearing others express an opinion that it would work, I purchased a lead pipe, half inch calibre, burying it about 18 inches under ground, leaving 9 feet running down in the well. I then applied an air pump to the lower end and drew up the water. It worked as well as the onion stalk. But I found the syphon was drawing the water much faster than it came into the well; consequently I had to stop it up, and let it run no faster than the spring would supply. But here I found a difficulty. It would stop running occasionly, in warm and dry weather in the summer, as often as once in 3 days. On opening it, and applying the air pump to start it if necessary and letting it run the full stream until it had drawn off what water there was to the extreme height, air or gas would escape, as could be seen by the gurgling motion of the water, after which it would run as free as ever. How does this air come in the pipe? I can account for it upon no other principle than this: you place a tin pail of water in the sun or over the fire, and as it becomes heated little bubbles of air will accumulate on the inside of the pail; these running together finally rise to the top. Are my conjectures right? Please give the analysis of water. Where the fountain is sufficiently large to admit of the water running the full stream, this difficulty would be obviated. The next year I purchased eleven rods more pipe and carried it across the road to an adjoining field, making in all 25 rods. It has been in operation four years, and works as well as it did at first.

Now, if it is the pressure of the atmosphere that causes the water to run up, how many pounds does it press to the foot? and in how many feet would you obtain an equilibrium, or how many feet would the atmosphere force the water up?

Victor, N. Y. HIRAM WILCOX.

REMARKS.—The action of a syphon is similar to that of a common suction pump, the only difference being in the *mode* of producing a vacuum.—With a suction pump we do this by repeatedly lifting off the atmospheric pressure, equal to 15 lbs. to the square inch. Into this vacuum, forced by the atmospheric pressure in the well, water will rise to the height of 32 feet, at which height a column of water is equal to 15 lbs. on the square inch. Whiskey, alcohol or any light fluid will rise much higher, while quick-silver will only rise 28 inches. The syphon is a plan for producing a vacuum by the *force* of the descending water in the long limb of the tube; into this vacuum, formed at the highest point of the bent tube, the water immediately rushes and descends by specific gravity in a *continuous stream.* By allowing water to *stagnate* in the tube, as was the case in Mr. WILCOX's first trial, the air, which water always contains, and the steam, generated in warm weather, filled up this vacuum and so rendered the syphon inoperative. The result may be susceptible of some other explanation; this one, however, suggests itself at once as most probable.

We should think there would be no *practical* difficulty in getting a syphon to work to the height of 28 feet. Theoretically it will work 32 ft.



### PLAN OF A MODEL BARN.

THE accompanying elevation and ground plan of a model New England Barn, with manure cellar beneath, having an entrance on the south side, will prove valuable to many of our readers. The hay barn, carriage room, granary, &c., occupy 36 by 60 feet. The cow stable is 33 feet square. The design is furnished by Mr. HAMMOND for the *New England Farmer*, from which we quote the following explanation of the ground plan:

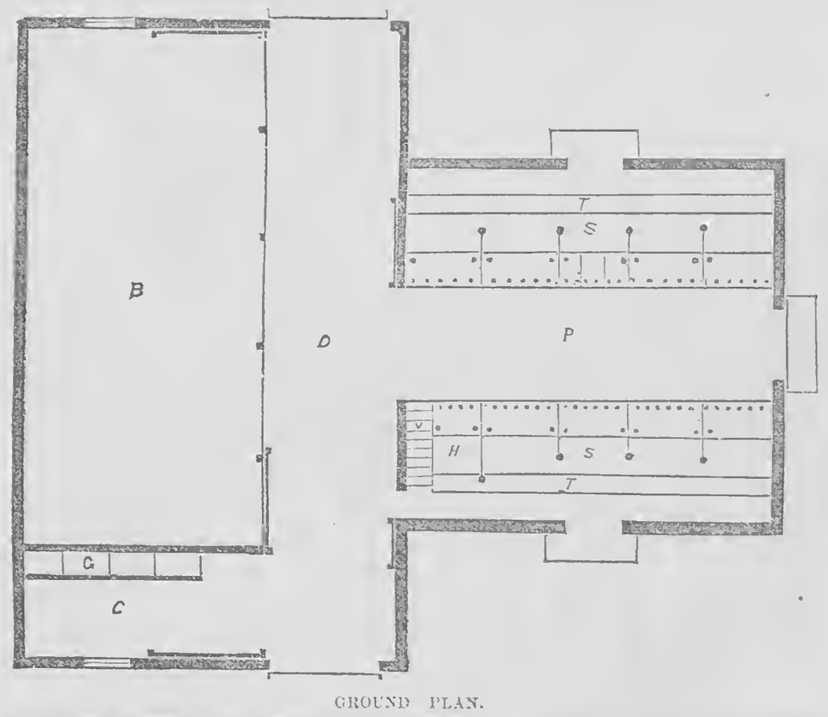
"The drive way for the hay barn is on the south side, throughout the length of the barn, having a bay for hay 24 feet deep; height of posts, 19 feet. The scaffolding over the barn floor in the two first sections to be fourteen feet, in the clear—the third and fourth sections to be eleven and a half feet, in the clear; the remainder fourteen feet.

"C, carriage-room. B, bay for hay. D, driveway. G, grain and meal bins. P, passage way between cow stables. S, stalls for cows. H, horse stable. T, trench behind cows. F, stairway.—This plan is to have three windows of ten by fourteen glass, twelve lights to each, on the front or west end; also two of the same size in the opposite gable end. Two windows in each side of the stable, of six lights each, ten by fourteen, with a blind to slide with each sash. All outside doors put on rollers; two sky lights in the roof of stable to serve as ventilators.

"One grand object to be obtained is to separate the cattle stable from the hay barn by sliding doors above and below, to prevent the hay being damaged by the vapor and ammonia which are constantly arising from the cellar. A small barrow of simple construction on a truck to convey the hay to the feeding passage, will save much time in feeding.

"Many large and valuable barns have been very much damaged by being placed over a manure cellar, without proper ventilation."

There are, in our opinion, many objections to a manure cellar under a barn, and but few advantages which could not be obtained quite as economically by other means. The barn itself is a good one,—"a model one,"—yet it strikes us we have seen many better in Western New York. Will not some of our readers who own such, give us plans and descriptions for publication?



GROUND PLAN.

### LIME AS A MANURE FOR WHEAT.

I WISH to make an inquiry through the RURAL, as to the best mode and time of applying lime to wheat land, and at the same time will give you the result of an application made by myself last year. Some time in August I plowed five acres of land, the soil mostly of a light clayey loam—it was said that there never had been raised on it more than 7or 8 bushels of wheat per acre, although it had been frequently sown previous to my taking possession of the farm. The last crop that had been on it was sown 5 years ago, and I helped to harvest and know there was only 7½ bushels per acre. Since that time it had been in grass. After plowing nine or ten inches deep, I put on twenty bushels of stone lime per acre, letting it lie in heaps of half a bushel each, until it was well slaked, then spread with a shovel, harrowed the ground thoroughly, afterwards plowed with a gang plow, sowed wheat Sept. 18, and gang plowed it in.—The wheat got but a poor start in the fall, and in the spring it looked as if there would not be five bushels per acre; but when the warm weather came on it revived, and although it looked rather thin on the ground, it yielded twenty-two bushels of very plump wheat, while ten acres by the side of it that had been well fallowed, without the lime, yielded but 18 bushels, although it looked well in spring, and at harvest time it stood thicker on the ground, and looked as tho' it would yield far better than the other.—The lime cost me 10 cents per bushel at the kiln, one and a quarter miles to draw it.—I am satisfied, from my experience so far, that lime is a good fertilizer.

J. W. PEIRCE.

Alabama, N. Y., November, 1853.

### APPLICATION OF MANURE.

Which is best, to trench in stable manure in a garden in the fall, or to pile it up and as it ferments, convert the carbonate of ammonia into sulphate by the application of water in which plaster is in solution, and spade in the product at planting time in the Spring?—soil an ameliorated clay loam.

A friend has bought 150 bushels fine old stable manure, in which the wire worms are so numerous, that he is afraid to apply it to his corn land in the spring; what can he do in his dilemma? X. X.

In the present state of our knowledge we cannot answer the inquiry of our friend.—It is a question of experiment; and so far as we are informed the experiment has not been satisfactorily made. If any of our readers have made the experiment, they would oblige by making it public through the Rural. In the meantime we may *theorise*. When long unfermented manure is turned under a stiff soil it has a beneficial *mechanical* action; and besides, there is little if any loss from evaporation or leaching. But it is more labor to draw out and turn under such a great bulk of manure than it would be if the bulk and weight were reduced by judicious fermentation. It is in our view, simply a matter of labor. On a farm we should reduce the bulk of the manure as much as possible before drawing out on a garden, where labor compared with the value of the crops is relatively small, and where fine tilth is absolutely necessary we should be inclined to trench in the coarse manure *early* in the fall. But it is a matter of experiment.

If your friend were to spread the manure on his corn land now, would not the frost kill the wire worms?

### THE EARTH-WORM. (Lumbricus Terrestris)

The common earth or angle-worm is found in most rich soils, and very generally infests gardens, much to the detriment of the appearance of their walks and alleys, where neatness is always desirable. They usually come to the surface after rains and in heavy dews—(hence taking the name of *dew*-worm,) bringing with them a portion of the soil and leaving their casts and trails wherever they move. This every one has observed, but few, perhaps, know how useful they are, or what part they perform in the economy of nature. From "The Journal of a Naturalist," an English work of much interest, we condense the following account of this worm, which is almost the only reference we have been able to find to it among the books and papers now consultable. Both Kirby and White, of Selborne, concur in this view of their usefulness, and add that they deepen the soil.

A very important creature in the operations of nature, is the common earth-worm (*lumbricus terrestris,*) but it is surrounded by dangers, or harrassed and pursued unceasingly, becoming the prey of all. This animal, destined to be the natural manurer of the soil, and the ready indicater of its improved state, consumes on the surface of the ground, where they would soon be injurious, the softer parts of decayed vegetable matters; and conveys into the soil the more woody fibres, where they moulder and become reduced to a simple nutriment, fitting for living vegetation. The parts consumed by them are soon returned to the surface, whence, dissolved by frosts and scattered by rains, they circulate again in the plants of the soil.

"Death still producing life."

This worm is also serviceable as furnishing the food of many other animals, and is an example of an individual race being subjected to universal destruction. The very ant seizes it when disabled, and bears it away as its prize; it constitutes throughout the year the food of many birds; fishes devour it greedily; the mole pursues it in the pastures and along the moist bottoms of ditches, and burrows after it through the banks of hedges, to which it retires in dry seasons. And, though inhabiting the earth, many aquatic animals seem acquainted with it, and prey on it as a natural food whenever it falls in their way; frogs eat it; and the great water-beetle (*ditiscus marginalis,*) is sometimes drawn up when it is the bait of the angler. Yet its increase is fully equal to its consumption, and Reaumer conjectured that the number of worms in the earth, exceeded that of the grains of all kinds of corn collected by man.

Worms, generally speaking, are tender creatures, and water remaining a few days over their haunts drowns them: they easily become frozen, and their retiring deeper into the soil is no bad indication of cold weather; but no sooner is the frost out of the earth than they approach the surface to feed on decayed vegetable matter. They sometimes draw young plants under the soil for the same purpose—generally those newly transplanted, and somewhat wilted. The holes which they make in their passage through the earth, serve also the purposes of drainage, and our author remarks, that if he knew any further good of them he would make it known. Did we know any great harm they do, it should also be related.—B.

### WESTERN POULTRY EXHIBITION.

Eds. Rural:—I have just passed a very pleasant afternoon, in witnessing the exhibition of the "Western Society for the Improvement of Domestic Poultry," and in becoming acquainted with its officers and members. Peter Melendy, President; Jno. C. Scheeley, Secretary; John K. Green, of Carthage, Dr. Warder, of the Western Horticultural Review, and others of the same stamp, are gentlemen who know exactly how to take care of a stranger and make his sojourn among them agreeable. They showed me around in the kindest and most attentive manner, and allowed me access to their books, from which I copied some of the awards of premiums, which I give you below. From the last year's report of the Society, I judge the present exhibition is not as large as that of last season; our Ohio friends however, need not be ashamed of this show, for they certainly offer some of the finest fowls I ever saw.—The Shanghais and Cochin Chinas, contributed by Mr. Green, are splendid birds. He showed me a *pullet* weighing *nine pounds*, and as perfect in form as I would imagine it possible for any Shanghai to be; not a bit clumsy or coarse, and but little heavier than a number of other pullets of the same stock in another coop, which were, aside from this one, the best I ever beheld, regarding size and form. There were some fine specimens of Brahmas, White Shanghais, Dominique, buff and red do., Polands, Guilderlands, Games, Bantams, Bolton Greys, Calcutta fowls, cross-breeds, &c., and a fine display of Aylesbury ducks, Muscovy, Silesian, and Poland ditto; turkeys and geese also figured a little, but the number contributed was not large. The display of fancy pigeons was very fine, J. C. Webster of Cincinnati, alone contributing 18 varieties, in large, nicely-finished cages, forming a very attractive and pleasing feature in the exhibition. In addition to the feathered race, there were Madagasca rabbits, with their long ears and their huge paunches. Guinea pigs, pretty little things, and rat terriers, for which a premium was offered by the Society, with a view to the extermination of these pests of the poultry raiser, the most provoking of all chicken destroyers, *rats*.

The Committee award to President Melendy, premiums for the best Guelderlands, white Shanghais, Brahmas, Turkeys and Geese, and also for the best display of fowls. Wm. Cox, best Games and second best display of fowls. John K. Green, of Carthage, best Cochin China, buff and red Shanghais, and a sweepstakes for the best cock and hen of any breed. J. Vandusen, Cintinnati, best Calcutta fowls, and Bolton Greys; J. Neely, Cincinnati, best black Polands, white Bantams, Silesian and Aylesbury ducks. Many other premiums were awarded upon fowls of much merit, but among the lots I have mentioned, were to be found most of the best fowls.

Our Ohio friends have a great advantage over us in being able, on account of climate to hold their exhibitions so much later in the season. Two months make a great difference in the appearance of spring chickens, besides the old fowls at this season, have got pretty well along with their moult ing, whereas in Sept. or Oct., when we generally hold our Fairs, they are sick and nearly naked, not fit to be shown. The greater length of their warm seasons is also favorable to the growing of poultry, as warmth is nearly as essential to the production of large fowls, as to the growth of corn, and a chick enjoying fine weather from March to December, will undoubtedly be larger than one equally as good, pinched in spring and fall with cold.

In the management of their exhibition the Western Society is decidedly ahead of us: first, in selecting a proper place—a large, commodious hall, where neither poultry nor visitors need be crowded; also, in the uniformity of their coops in shape and size, and their arrangement about the room, upon tables, each standing by itself and giving to all an equal chance to be seen.—Whereas, our chickens are crowded into small coops, and the coops heaped one upon another, in a little confined yard, or narrow hall, giving more than one half no chance at all. In all these things I hope to see great improvement another year at home, for while I wish to render its due to the West, my interests and sympathies are with the east, and my sentiment, "Old Monroe" forever. C. P.

Cincinnati, Ohio, Nov. 23, 1853.

### EUROPEAN GRAIN MARKET.

If the growth of wheat in the United Kingdom in 1853 be really as deficient as believed, and all the evidence which careful investigation has been enabled to collect tends to confirm the impression—the absolute certainty of abundance in the autumn of 1854 cannot prevent high prices during the intervening period. The question, in our opinion, is therefore, whether the present quotations are sufficiently high to cause economy in consumption, and to draw large supplies from abroad. The effect of dear bread usually influences the consumption of other articles of food; meat is less freely used, pototoes and other vegetables are given up; but bread is eaten as long as it can possibly be obtained, and, with the great majority of the population, nearly to the same extent at a comparative high as at a low price. That the great advance which has been established in the valne of wheat in this country will cause all that can be spared abroad to be consigned to our markets there can be no doubt; but unusnal difficulties exist in obtaining large supplies. The most formidable of these is the fact that France stands as greatly in need of foreign aid as England, and that no stocks of old corn of importance are held at any of the near continental ports. America has, no doubt, a large quantity of breadstuffs for exportation; and at the Black Sea ports stocks have accumulated to so great an extent, that it has become exceedingly difficult to find warehouse room, and the granaries at Odessa and Galatz are filled to repletion; but with a deficiency of a third in the produce of the United Kingdom, and the crop in France short to the same extent, there is likely to be great competition between these countries to secure wheat wherever it may be obtainable. Thus far the French buyers have outbid the English, and by far the greater portion of the wheat shipments which have been made from the Black Sea ports during the last two or three months has been for Marseilles, where so active a demand has been experienced from the interior that prices have continued to rise in the face of abundant supplies. The scale is now turned somewhat in favor of this country; but there is no chance in reshipments from France, and the state of political affairs in the East may interfere with the regular course of trade with the Black Sea. On the whole, we are inclined to think that the advance, thus far, has been warranted by circumstances; and, though we deem a temporary reaction by no means improbable, we see no reason to anticipate any material decline.—*Mark Lane Ex.*

### DAMP STABLES.

When I first came to the farm which I now hold by purchase, I found the stables built under large trees and near a spring of water, with a northern aspect. My horses were soon in poor condition, with long and rough coats, and almost always lax in their bowels, nor could I get them up by extra food or lighter work; but my cows suffered the most, for they were always sick. Their milk fell off and their butter was poor, and of a bad color and taste, and four of them slipped their calves before their time.—When the spring came they left their winter quarters in a worse state than I had ever seen them, and two of them died from scours on going to pasture. On inquiry, I found that the tenant who had left had always been what the neighbors termed unfortunate in his horses and cattle, and from that cause more than any other, he had not been able to make both ends meet. The truth flashed upon me in an instant, and in a very little longer time than it has taken me to tell my story, I had commenced pulling down the stable, the unhealthiness of which had been, I was convinced, the cause of all the evil and all the loss; and it was no more than two days before there was not left one stone upon another of the whole fabric. I now set to work and erected another on higher ground, removed from water, and clear from the shade of trees, with a south-east aspect, and dry capacious yard; and from that day I have had neither sickness nor sorrow in my ont door household. My horses live on less food, are always sleek and in good condition, and my cows are a credit to their keep. Our butter brings two cents a pound more in the market, and for the last year our sales are more than double from the same number of cows and the same pasturage, and no more premature calves. Instead of watering my cattle as heretofore, at the spring under the trees—the water cold, with a deadly taste and bad color—I sunk a well and put in a pump; and at a long trough in the yard for the summer, and another under shelter for the winter, my cattle slake their thirst without setting up their coats, as they used to do after drinking at the hole under the trees. Even when the weather was warm, they were accustomed to shake all over as if they were in a fit of ague after drinking their fill of this water; and to this, with the bad aspect of the stables, I attribute all the sickness and misery which I have experienced among my cattle and horses.—*Bost. Cultivator.*

Rat Proof Corn Cribs may be made by placing a large milk pan, bottom up, on the top of each post on which the crib stands, and having a movable ladder by which to enter the door. The rats climb up the posts, but can get no farther. Mice will also be excluded, unless carried in with the corn. If you have not already done it, pick out the best ears of corn for seed, and hang them up in the kitchen, or some other dry place, where they will not freeze. You may also give them a good smoking with your hams, which will prevent birds and insects from injuring the seed when planted, and rather improve the vegetable powers. Try it.—*Ex.*

## Orchard and Garden.

### PEARS AT BOSTON.

The Massachusetts Horticultural Society offered large prizes for collections of the best twelve varieties of pears. Of the four successful competitors each, one gave the Louise Bonne of Jersey and Bartlett. Three gave Le Cure, Easter Buerre, Duchess Angouleme, Buerre d'Anjou, White Doyenne, Urbaniste and Flemish Beauty. Two gave Buerre Diel, Belle Lucrative and Glout Morceau. The Buerre d'Aremberg, Bezi de la Motte, Vans Mons Leon le Clerc, Passe Colmar Dix, Winter Nelis, Marie Louise, Thompson, Gray Doyenne, Swan's Orange, Buerre Bosc and Doyenne Boussock, were the single ones. This will give a correct indication of the most favorite varieties of pears around Boston. That there is choice enough may be inferred from the fact that Marshall P. Wilder alone exhibited 310 varieties of pears.

Early Tillotson Peach.—The *Horticulturist* states that this peach, originating in Wayne Co. N. Y., and which does not succeed in orchards around Rochester, is found to be a most valuable variety in Ohio and Kentucky. It grows vigorously, is exempt from mildew, and the fruit is large, often eight inches in circumference, and of the finest quality. The editor adds this is one of the few instances where a variety succeeds better in other localities than that in which it originated.

### INQUIRIES AND ANSWERS.

Tarring Fruit Trees.—Will you say whether you have tried tarring young fruit trees to prevent mice from injuring them in the winter. I have seen it stated that it is a sure preventive. If so it will be a great blessing in this region. Do you think it will injure the trees? C. Hutchings.

We have never tried the above plan.—Should think that tar would not injure the trees. Though it should be used with caution. We published an excellent method for destroying mice last week. A shovel full of manure or some loose earth thrown up round the trees, about a foot high, will generally keep off the mice.

Cranberry Vines.—Can you inform me what variety of cranberries would be most profitable to raise for market purposes and where they can be procured most conveniently? Is it necessary to plant roots, or can I raise them from the berries? What is the proper time for planting or sowing?—Is there any book published on the cultivation of the cranberry? W. M.

Alfred, Alleg. Co., N. Y.

### FACTS IN GRAPE CULTURE.

E. A. McKay, of Naples, N. Y., gives through the *Horticulturist* some interesting facts in regard to the mode adopted by him in the cultivation of an acre of Isabella grape vines. The vines were planted five years ago last Spring, one vine to a square rod. The holes were dug about two feet deep and six to eight feet across. In the bottom of each of these holes was placed half the carcass of an ox—a drove of eighty oxen having died in the neighborhood while on their way to market. The holes were then half filled with good surface soil. Sixteen loads of leather shavings, which had been accumulating at a currier's shop, were then divided equally among the 160 holes, which were then filled by surface soil, mixed with the leather. A bushel of well-rotted stable manure, mixed with the same quantity of charcoal dust, completed the preparations for the vines. He states that most of the vines measured last Spring, a foot in circumference, some of them fifteen inches, and one seventeen inches. He allowed them to bear considerably the past season, and the quality of the fruit was so superior as to command fourteen cents a pound, when most grapes of the same kind were selling at the same place at twelve and a half cents a pound. The crop of the present season he estimated at 20 lbs. to the vine, or 3,200 lbs. to the acre. He states that he has repeatedly dug down to the bones, and found them "completely surrounded with a net-work of *living*, fibrous grape roots."

### PRESERVATION OF GRAPES.

A traveler who lived at St. Petersburg during the winter season, states that he ate there, the freshest and most beautiful grapes he had ever seen. To preserve them they should be cut before being entirely ripe. Do not handle the berries; reject all damaged ones, then lay the grapes in a stone jar holding about thirty gallons. The mouth should be narrow, so that the grapes will not touch each other. Fill the spaces between them with millet. Cover closely with a stone cover well fitted and cemented. Over this paste a thick paper, and let it be hermetically sealed so as to entirely exclude the air. In this air tight jar the grapes ripen fully, and acquire a flavor seldom attained by any other method, and are preserved for two years in the best condition.

Leached ashes are an excellent manure for quince trees.

## Mechanic Arts, &c.

### LIST OF PATENT CLAIMS

ISSUED FROM THE UNITED STATES PATENT OFFICE

For the week ending November 22, 1853.

Wm. Beschka, of Alexandria, Va., for improvements in joining and riveting metalic plates.

Gardner S. Browne, M. D., of Hartford, Conn., for improvement in body braces.

Henry Carter and James Rees, of Pittsburg, Pa., for improvement in nut machines. Antedated June 3, 1853.

Thos. & Samuel Champion, of Washington, D. C., for improvement in transporting bridges. Ante-dated May 22, 1853.

Stillman A. Clemens, of Springfield, Mass., for improvement in ventilation railroad cars.

Oliver A. Kelly, of Woonsocket, R. I., for improvement in looms.

Frederick Smith, of Pontiac, N. Y., for improved water-wheel.

Jas. R. King, of Tiffin, Ohio, for apparatus for cutting screws on bedstead rails.

Wm. & Wm. H. Lewis, of New York, N. Y., for improvement in boxes for supplying business cards.

Samuel T. McDougall, of New York, N. Y., for improvement in platform scales.

J. Parsons Owen, of Norwalk, O., for machine for cutting screws on bedstead rails, &c.

Wm. Pierpoint, of Salem, N. J., for improvement in the cutters of grain and grass harvesters.

Morgan L. Rood, of Marshall, Mich., for improvement in revolving fire-arms.

Wm. Silver, Jr., of Pittston, Pa., for improvement in blasting powder.

Hiram Smith, of Norwalk, O., for apparatus for cutting screws on bedstead rails, &c.

Dr. Jos. Goldmark, of New York, N. Y., for improvement in facing ends of percussion caps.

Enoch R. Morrison, of Troy, Pa., for improved shingle machine.

Ebathan Sampson, of Cornish, N. H., for improvement in platform scales.

James H. Crygier, of New York, N. Y., for improvements in bank locks.

Lawrence F. Frazee, of New Brunswick, N. J., for improved life boat.

Wm. K. Hall, of Phillippi, Va., for improvements in grass harvesters.

S. R. Holt, of Worthington, O., for improvement in self-acting presses.

Willard B. Cummings, of Tyngsborough, Mass., and Nathan P. Danman, of Chelmsford, Mass., assignors to Willard B. Cummings, of Tyngsborough, Mass., N. P. Danman, of Chelmsford, Mass., and Chas. A. Blood, of North Chelmsford, Mass., for improvement in machines for dressing millstones.

RE-ISSUES.

David L. Latourette, of St. Louis, Mo., for improvement in oil presses. Patented October 28, 1851. Re-issued Nov. 22, 1853.

Thos. G. Clinton, of Cincinnati, Ohio, assignor (through others,) of Joshua Laird, (now deceased,) late of Cincinnati, aforesaid, for improvement in attaching vitrifiable matter to metal. Patented May 22, 1849. Re-issued Nov. 22, 1853.

### SHAVING BY MACHINERY.

The editor of the Philadelphia Bulletin remembers in his younger days, seeing a comical print at a barber shop, which represented a crowd of customers being shaved by machinery. Many of our readers, perhaps, have seen this curious old engraving. It depicted a group, with napkins under chin, sitting, if we recollect, around a huge shaving-cup, to which a soap-boiler's kettle is a pigmy, while razors at various angles, propelled by steam, were waiting to operate on the customers. What was intended for a joke, less than twenty years ago, has proved a reality, if we are to believe our English exchanges. The Gateshead Observer, for instance, says that a joiner at North Shields has invented a machine for shaving, consisting of a chair, with an arrangement of razor blades, which is set in motion by the weight of the sitter. Experiments, it is said, have been tried and found satisfactory. Not boasting any peculiar aptitude in mechanics, we are free to confess that we are somewhat skeptical as to this pretended machine; and what is more, have no particular fancy to test it. Our chin shall be kept a little while longer, at least, under our own control, or until "all the world and the rest of mankind" have adopted the shaving machine. Even then, we fear we shall not patronize it, unless it can talk, for listening to the barber's chat, as all men know, is "part and parcel" of the operation of being shaved.

Lever Press.—Elias Davis, of Montpelier, Vt., has applied for a patent on an improved self-acting press, the novelty of which consists in so arranging a series of horizontal and vertical knuckle joint levers below the screw and bed plate, in combination with the peculiar manner of constructing and operating the press that a progressive upward pressure will be exerted upon the article being pressed by its own gravity and the gravity of the movable portion of the press, and also in combining said levers with the screw in such a manner that when a very elastic substance is being pressed, and the main levers have exerted their full power upon it, a further pressure may be communicated to it by elevating the bed plate.

The rail-car making business of the United States is said to involve $5 000,000 capital, giving employment to several thousand men, and producing a value in property, estimated at $17,000,000 per annum.

# PRESIDENT'S MESSAGE.

*Fellow Citizens of the Senate, and*
*of the House of Representatives:*

The interest with which the people of the Republic anticipate the assembling of Congress, and the fulfilment, on that occasion of the duty imposed upon a new President, is one of the best evidences of their capacity to realize the hopes of the founders of a political system at once complex and symmetrical. While the different branches of the government are, to a certain extent, independent of each other, the duties of all alike, have direct reference to the source of power. Fortunately, under this system, no man is so high, and none so humble, in the scale of public station, as to escape from the scrutiny, or to be exempt from the responsibility, which all official functions imply.

Upon the justice and intelligence of the masses, in a government thus organized, is the sole reliance of the confederacy, and the only security for honest and earnest devotion to its interests, against the usurpation and encroachments of power on one hand, and the assaults of personal ambition on the other.

The interest, of which I have spoken, is inseparable from an inquiring, self-governing community, but stimulated, doubtless, at the present time, by the unsettled condition of our relations with several foreign powers; by the new obligations resulting from the sudden extension of the field of enterprise; by the spirit with which that field has been entered, and the amazing energy with which its resources for meeting the demands of humanity have been developed.

Although disease, assuming at one time the characteristics of a wide spread and devastating pestilence, has left its sad traces upon some portions of our country, we have still the most abundant cause for reverent thankfulness to God for an accumulation of signal mercies showered upon us as a nation. It is well that a consciousness of rapid advancement and increasing strength be habitually associated with an abiding sense of dependence upon Him who holds in his hands the destiny of men and of nations.

Recognizing the wisdom of the broad principle of absolute religious toleration proclaimed in our fundamental law, and rejoicing in the benign influence which it has exerted upon our social and political condition, I should shrink from a clear duty did I fail to express my deepest conviction that we can place no secure reliance upon any apparent progress if it be not sustained by national integrity, resting upon the great truths affirmed and illustrated by divine revelation. In the midst of our sorrow for the afflicted and suffering, it has been consoling to see how promptly disaster made true neighbors of cities and districts separated widely from each other, and cheering to watch the strength of that common bond of brotherhood which unites all hearts in all parts of this Union when danger threatens from abroad, or calamity impends over us at home.

Our diplomatic relations with foreign powers have undergone no essential change since the adjournment of the last Congress. With some of them, questions of a disturbing character are still pending, but there are good reasons to believe that these may all be amicably adjusted.

For some years past, Great Britain has so construed the first article of the Convention of the 20th of April, 1818, in regard to the Fisheries on the North-eastern coast, as to exclude our citizens from some of the fishing grounds, to which they freely resorted for nearly a quarter of a century subsequent to the date of that treaty. The United States have never acquiesced in this construction, but have always claimed for their fishermen all the rights which they have so long enjoyed without molestation.—With a view to remove all difficulties on the subject—to extend the rights of our fishermen beyond the limits fixed by the Convetion of 1818, and to regulate trade between the United States and the British North American Provinces, a negociation has been opened, with a fair prospect of a favorable result. To protect our fishermen in the enjoyment of their rights, and prevent collision between them and British fishermen, I deemed it expedient to station a naval force in that quarter during the fishing season.

Embarrassing questions have also arisen between the two Governments in regard to Central America. Great Britain has proposed to settle them by an amicable arrangement, and our Minister at London is instructed to enter into negociations on the subject.

A Commission for adjusting the claims of our citizens against Great Britain, and those of British subjects against the United States, organized under the Convention of February last, is now sitting in London for the transaction of business.

It is in many respects desirable that the boundary line between the United States and the British Provinces in the northwest, as designated in the Convention of the 15th of June, 1846, and especially that part which separates the territory of Washington from the British possessions on the north, should be traced and marked. I therefore present the subject to your notice.

With France our relations continue on the usual friendly footing. The extensive commerce between the United States and that country, might, it is conceived, be released from some unnecessary restrictions, to the mutual advantage of both parties. With a view to this object, some progress has been made in negotiating a treaty of commerce and navigation.

Independently of our valuable trade with Spain, we have important political relations with her, growing out of our neighborhood to the Islands of Cuba and Porto Rico. I am happy to announce, that since the last Congress, no attempts have been made by unathorized expeditions within the United States, against either of these Colonies. Should any movement be manifested within our limits, all the means at my command will be vigorously exerted to repress it. Several annoying occurrences have taken place at Havana, or in the vicinity of the island of Cuba, between our citizens and the Spanish authorities. Considering the proximity of that island to our shores—lying, as it does, in the track of trade between some of our principal cities—and the suspicious vigilance with which foreign intercourse, particularly that with the United States, is there guarded, a repetition of such occurrence may well be apprehended.

As no diplomatic intercourse is allowed between our Consul at Havana and the Captain-General of Cuba, ready explanations cannot be made, or prompt redress afforded, where injury has resulted. All complaint on the part of our citizens, under the present arrangement, must be, in the first place, presented to this government, and then referred to Spain. Spain again refers it to her local authorities in Cuba for investigation, and postpones an answer till she has heard from those authorities. To avoid these irritating and vexatious delays, a proposition has been made to provide for a direct appeal for redress to the Captain-General by our Consul, in behalf of the injured fellow-citizens. Hitherto, the government of Spain has declined to enter into any such arrangement. This course on her part is deeply regretted; for, without some arrangement of this kind, the good understanding between the two countries may be exposed to occasional interruptions. Our Minister at Madrid is instructed to renew the proposition, and to press it again upon the considerations of her Catholic Majesty's government.

For several years Spain has been calling the attention of this government to a claim for losses, by some of her subjects, in the case of the schooner Amistad. This claim is believed to rest on the obligations imposed by our existing treaty with that country. Its justice was admitted, in our diplomatic correspondence with the Spanish governmens, as early as March, 1847; and one of my predecessors, in his annual message of that year, recommended that provision should be made for its payment. In January last it was again submitted to Congress by the Executive. It has received a favorable consideration by committees of both branches, but as yet there has been no final action upon it. I consider that good faith requires its prompt adjustment, and I present it to your early and favorable consideration.

Martin Kozsta, a Hungarian by birth, came to this country in 1850, and declared his intention in due form of law, to become a citizen of the United States. After remaining here nearly two years, he visited Turkey. While at Smyrna, he was forcibly seized, taken on board an Austrian brig of war then lying in the harbor of that place, and there confined in irons, with the avowed design to take him into the dominions of Austria. Our Consul at Smyrna and Legation at Constantinople, interposed for his release, but their efforts were ineffectual.—While thus imprisoned, Commander Ingraham, with the United States ship of war St. Louis, arrived at Smyrna, and after inquiring into the circumstances of the case, came to the conclusion that Kozsta was entitled to the protection of this government, and took energetic and prompt measures for his release. Under an arrangement between the agents of the United States and of Austria, he was transferred to to the custody of the French Consul-General at Smyrna, there to remain until he should be disposed of by the mutual agreement of the Consuls of the respective governments at that place.

Pursuant to that agreement he has been released and is now in the United States. The Emperor of Austria has made the conduct of our officers who took part in this transaction a subject of grave complaint. Regarding Koszta as still his subject, and claiming a right to seize him within the limits of the Turkish empire, he has demanded of this government its consent to the surrender of the prisoner, a disavowal of the acts of its agents, and satisfaction for the alleged outrage. After a careful consideration of the case, I came to the conclusion that Koszta was seized without legal authority at Smyrna; that he was wrongfully detained on board the Austrian brig of war; that, at the time of his seizure, he was clothed with the nationality of the United States; and that the acts of our officers, under the circumstances of the case were justifiable, and their conduct has been fully approved by me, and a compliance with the several demands of the Emperor of Austria has been declined.

For a more full account of his transaction and my views in regard to it, I refer to the correspondence between the Charge d'Affairs of Austria and the Secretary of State, which is herewith transmitted. The principles and policy, therein maintained on the part of the United States, will, whenever a proper occasion occurs, be applied and enforced.

The condition of China, at this time, renders it probable that some important changes will occur in that vast Empire, which will lead to a more unrestricted intercourse with it. The Commissioner to that country, who has been recently appointed, is instructed to avail himself of all occasions to open and extend our commercial relations, not only with the Empire of China, but with other Asiatic nations.

In 1852, an expedition was sent to Japan under the command of Commodore Perry, for the purpose of opening commercial intercourse with that Island. Intelligence has been received of his arrival there, and of his having made known to the Emperor of Japan the object of his visit; but it is not yet ascertained how far the Emperor will be disposed to abandon his restrictive policy, and open that populous country to a commercial intercourse with the United States.

It has been my earnest desire to maintain friendly intercourse with the governments upon this continent, and to aid them in preserving good understanding among themselves.—With Mexico a dispute has arisen as to the true boundary line between our territory of New Mexico and the Mexican state of Chihuahua.—A former Commissioner of the United States, employed in running that line, pursuant to the treaty of Guadaloupe Hidalgo, made a serious mistake in determining the initial point on the Rio Grande: but, inasmuch as his decision was clearly a departure from the directions for tracing the boundary contained in that treaty, and was not concurred in by a surveyor appointed on the part of the United States, whose concurrence was necessary to give validity to that decision, this government is not concluded thereby; but that of Mexico takes a different view of the subject.

There are also other questions of considerable magnitude pending between the two republics. Our Minister in Mexico has ample instructions to adjust them. Negotiations have been opened, but sufficient progress has not been made therein to enable me to speak of the probable result. Impressed with the importance of maintaining amicable relations with that republic, and yielding with liberality to all her just claims, it is reasonable to expect that an arrangement mutually satisfactory to both countries may be concluded, and a lasting friendship between them confirmed and perpetuated.

Congress having provided for a full mission to the states of Central America, a minister was sent thither in July last. As yet he has had time to visit only one of these states, (Nicaragua,) where he was received in the most friendly manner. It is hoped that his presence and good offices will have a benign effect in composing the dissensions which prevail among them, and in establishing still more intimate and friendly relations between them respectively, and between each of them and the United States.

Considering the vast regions of this continent and the number of States which would be made accessible by the free navigation of the river Amazon, particular attention has been given to this subject. Brazil, through whose territories it passes into the ocean, has hitherto persisted in a policy so restrictive, in regard to the use of this river, as to obstruct, and nearly exclude, foreign commercial intercourse with the states which lie upon its tributaries and upper branches. Our Minister to that country is instructed to obtain a relaxation of that policy, and to use his efforts to induce the Brazilian government to open to common use, under proper safeguards, this great natural highway for international trade. Several of the South American States are deeply interested in this attempt to secure the free navigation of the Amazon, and it is reasonable to expect their co-operation in the measure. As the advantages of free commercial intercourse among nations are better understood, more liberal views are generally entertained as to the common rights of all to the free use of those means which nature has provided for international communication. To these moral, liberal and enlightened views it is hoped that Brazil will conform her policy, and remove all unnecessary restrictions upon the free use of a river which traverses so many States and so large a part of the continent. I am happy to inform you that the republic of Paragua, and the Argentine Confederation have yielded to the liberal policy still resisted by Brazil, in regard to the navigable rivers within their respective territories. Treaties embracing this subject among others have been negociated with those governments, which will be submitted to the Senate at the present session.

A new branch of commerce, important to the agricultural interests of the United States, has, within a few years past, been opened with Peru. Notwithstanding the inexhaustible deposits of guano upon the islands of that country, considerable difficulties are experienced in obtaining the requisite supply. Measures have been taken to remove these difficulties, and to secure a more abundant importation of the article. Unfortunately, there has been a serious collision between our citizens, who have resorted to the Chincha Islands for it, and the Peruvian authorities stationed there. Redress for the outrages, committed by the latter, was promptly demanded by our Minister at Lima. This subject is now under consideration, and there is reason to believe that Peru is disposed to offer adequate indemnity to the aggrieved parties.

We are thus not only at peace with all foreign countries, but, in regard to political affairs, are exempt from any cause of serious disquietude in our domestic relations.

The controversies which have agitated the country are passing away with the causes which produced them and the passions which they awakened; or, if any trace of them remains, it may be reasonably hoped that it will only be perceived in the zealous rivalry of all good citizens to testify their prospect for the rights of the states, their devotion to the Union, and and their common determination that each one of the states, its institutions, its welfare, and its domestic peace, shall be held alike secure under the sacred ægis of the constitution.

This new league of amity and of mutual confidence and support into which the people of the Republic have entered, happily affords inducements and opportunity for the adoption of a more comprehensive and unembarrassed line of policy and action, as to the great material interests of the country, whether regarded in themselves, or in connection with the powers of the civilized world.

The United States have continued gradually and steadily to expand, through acquisitions of territory, which, how much soever some of them may have been questioned, are now universally seen and admitted to have been wise in policy, just in character, and a great element in the advancement of our country, and with it, of the human race, in freedom, in prosperity, and in happiness. The thirteen states have grown to be thirty-one, with relations reaching to Europe on the one side, and on the other to the distant realms of Asia.

I am deeply sensible of the immense responsibility which the present magnitude of the republic, and the diversity and multiplicity of its interests, devolves upon me; the alleviation of which, so far as relates to the immediate conduct of the public business, is, first, in my reliance on the wisdom and patriotism of the two Houses of Congress, and secondly, in the directions afforded me by the principles of public policy, affirmed by our fathers of the epoch of 1798, sanctioned by long experience, and consecrated anew by the overwhelming voice of the people of the United States.

Recurring to these principles, which constitute the organic basis of union, we perceive that, vast as the functions and duties of the federal government, vested in or entrusted to is, three great departments, the legislative, executive, and judicial, yet the substantive power, the popular force, and the large capacities for social and material development, exist in their respective states, which, all being of themselves well constituted republics, as preceded, so they alone are capable of maintaining and perpetuating the American Union. The federal government has its appropriate line of action in the specific and limited powers conferred on it by the constitution, chiefly as to those things in which the states have a common interest in their relations to one another, and to foreign governments; while the great mass of interests which belong to cultivated men, the ordinary business of life, the springs of industry, all the diversified personal and domestic affairs of society, rest securely upon the general reserved powers of the people of the several states. There is the effective democracy of the nation, and there the vital essence of its being and its greatness.

Of the practical consequences which flow from the nature of the federal government, the primary one is the duty of administering with integrity and fidelity the high trust reposed in it by the constitution, especially in the application of the public funds, as drawn by taxation from the people, and appropriated to specific objects by Congress. Happily I have no occasion to suggest any radical changes in the financial policy of the government. Ours is almost, if not absolutely, the solitary power of Christendom having a surplus revenue, drawn immediately from imports on commerce, and therefore measured by the spontaneous enterprise and national prosperity of the country, with such indirect relation to agriculture, manufactures, and the products of the earth and sea, so as to violate no constitutional doctrine, and yet vigorously promote the general welfare. Neither as to the sources of the public treasure, nor as to the manner of keeping and managing it, does any grave controversy now prevail, there being a general acquiescence in the wisdom of the present system.

The Report of the Secretary of the Treasury will exhibit in detail the state of the public finances, and the condition of the various branches of the public service, administered by the department of the government.

The revenue of the country, levied almost insensibly to the tax-payer, goes on from year to year, increasing beyond either the interests or the prospective wants of the government.

At the close of the fiscal year ending June 30, 1852, there remained in the Treasury a balance of fourteen million, six hundred and thirty two thousand, one hundred and thirty-six dollars. The public revenue for the fiscal year ending June 30, 1853, amounted to fifty-eight million, nine hundred and thirty-one thousand, eight hundred and sixty-five dollars from customs, and to two million, four hundred and five thousand, seven hundred and eight dollars from public lands and other miscellaneous sources, amounting together to sixty-one million, three hundred and thirty-seven thousand, five hundred and seventy-four dollars; while the public expenditures for the same period, exclusive of payments on account of the public debt, amounted to forty-three million, five hundred and fifty four thousand, two hundred and sixty-two dollars; leaving a balance of thirty-two million, four hundred and twenty-five thousand, four hundred and forty-seven dollars of receipts above expenditures.

This fact, of increasing surplus in the treasury became the subject of anxious consideration at a very early period of my administration, and the path of duty in regard to it seemed to me obvious and clear—namely: first, to apply the surplus revenue to the discharge of the public debt, so far as it could judiciously be done; and secondly, to divise means for the gradual reduction of the revenue to the standard of public exigencies.

Of these objects, the first has been in the course of accomplishment in a manner and to a degree highly satisfactory. The amount of the public debt of all classes was, on the 4th of March, 1853, sixty-nine millions one hundred and ninety-thousand and thirty-seven dollars; payments on account of which have been made, since that period, to the amount of twelve millions seven hundred and three thousand three hundred and twenty nine dollars—leaving unpaid, and in the continuous course of liquidation, the sum of fifty-six millions four hundred and eighty-six thousand seven hundred and eight dollars. These payments, although made at the market price of the respective classes of stocks, have been effected readily, and to the general advantage of the treasury, and have at the same time proved of signal utility in the relief they have incidentally afforded to the money market and to the industrial and commercial pursuits of the country.

The second of the above-mentioned objects, that of the tariff, is of great importance, and the plan suggested by the Secretary of the Treasury, which is to reduce the duties on certain articles, and to add to the free list many articles now taxed, and especially such as enter in manufactures, and are not largely, if at all, produced in the country, is commended to your candid and careful consideration.

You will find in the report of the Secretary of the Treasury, also, abundant proof of the entire adequacy of the present fiscal system to meet all the requirements of the public service, and that, while properly administered, it operates to the advantage of the community in ordinary business relations.

I respectfully ask your attention to sundry suggestions of improvements in the settlement of accounts, especially as regards the large sums of outstanding arrears due to the government, and of other reforms in the administrative action of his department, which are indicated by the secretary; as also to the progress made in the construction of Marine Hospitals, Custom Houses, and of a new mint in California, and Assay office in the city of New York, heretofore provided for by Congress; and also the eminently successful progress of the coast survey, and of the light house board.

Among the objects meriting your attention will be important recommendations from the Secretaries of War and Navy. I am fully satisfied that the Navy of the United States is not in a condition of strength and efficiency commensurate with the magnitude of your commercial and other interests; and commend to your especial attention the suggestions on this subject made by the Secretary of the Navy. I respectfully submit that the Army, which, under our system must always be regarded with the highest interest, as a nucleus around which the volunteer forces of the nation gather in the hour of danger, requires augmentation or modification, to adapt it to the present extended limits and frontier relations of the country, and the conditions of the Indian tribes in the interior of the continent; the necessity of which will appear in the communications of the Secretaries of War and the Interior.

In the administration of the Post-Office Department for the fiscal year ending June 30, 1853, the gross expenditure was seven million nine hundred and eighty-two thousand seven hundred and fifty-six dollars; and the gross receipts, during the same period, five million nine hundred and forty-two thousand seven hundred and thirty-four dollars; showing that the current revenue failed to meet the current expenses of the department by the sum of two million forty-two thousand and thirty-two dollars. The causes which, under the present postal system and laws, led inevitably to this result are fully explained by the report of the Postmaster General; one great cause being the enormous rates the department has been compelled to pay for mail service rendered by railroad companies.

The exhibit in the report of the Postmaster General of the income and expenditure by mail steamers, will be found peculiarly interesting, and of a character to demand the immediate action of Congress.

Numerous and flagrant frauds upon the Pension Bureau have been brought to light within the past year, and, in some instances, merited punishment inflicted; but, unfortunately, in others, guilty parties have escaped, not through the want of sufficient evidence to warrant a conviction, but in consequence of the provisions of limitation in the existing laws.

From the nature of these claims, the remoteness of the tribunals to pass upon them, and the mode in which the proof is, of necessity, furnished, temptations to crime have been greatly stimulated by the obvious difficulties of detection. The defects of the law upon this subject are so apparent, and so fatal to the ends of justice, that your early action relating to it is most desirable.

During the last fiscal year, nine millions, eight hundred and nineteen thousand, four hundred and eleven acres of the public lands have been surveyed, and ten millions three hundred and sixty-three thousand, eight hundred and ninety-one acres brought into market. Within the same period the sales by public purchase and private entry amounted to 1,083,495 acres; located under military bounty land Warrants, 6,142,360 acres; located under other certificates, 9,427 acres; ceded to the States as swamp lands, 16,684,253 acres; selected for railroad and other objects, under acts of Congress, 1,457,457 acres.

Total amount of lands disposed of within the fiscal year, twenty-five millions three hundred and forty-six thousand nine hundred and ninety-two acres—which is an increase in quantity sold and located under land warrants and grants, of twelve millions two hundred and thirty-one thousand eight hundred and eighteen acres over the fiscal year immediately preceding. The amount received therefor was six hundred and twenty-three thousand six hundred and eighty-seven dollars. The quantity sold the second and third quarters of the year 1853, was one million six hundred and nine thousand nine hundred and nineteen acres; and the amount received therefor, two millions two hundred and twenty-six thousand eight hundred and seventy-six dollars.

The whole number of land warrants issued under existing laws, prior to the 30th September last, was two hundred and sixty-six thousand and forty-two; of which there were outstanding, at that date, sixty-six thousand nine hundred and forty-seven. The quantity of land required to satisfy these outstanding warrants is four millions seven hundred and seventy-eight thousand one hundred and twenty acres.

Warrants have been issued to 30th September last, under the act of 11th Febuary, 1847, calling for twelve millions eight hundred and seventy-nine thousand two hundred and eighty-six acres; under acts of September 28, 1850, and March 22, 1852, calling for twelve millions five hundred and five thousand three hundred and sixty acres—making a total of twenty-five millions three hundred and eighty-four thousand six hundred and forty acres.

It is believed that experience has verified the wisdom and justice of the present system, with regard to the public domain, in most essential particulars.

You will perceive from the report of the Secretary of the Interior, that opinions which have often been expressed in relation to the operation of the land system, as not being a source of revenue to the federal treasury were erroneous. The net profits from the sale of the public lands to June 30, 1853, amounted to the sum of fifty-three million two hundred and eighty-nine thousand four hundred and sixty-five dollars.

I recommend the extension of the land system over the territories of Utah and New Mexico, with such modifications as their peculiarities may require.

Regarding our public domain as chiefly valuable to provide homes for the industrious and enterprising, I am not prepared to recommend any essential change in the land system, except by modifications in favor of the actual settler, and an extension of the pre-emption principle in certain cases, for reasons and on grounds which will be fully developed in the reports to be laid before you.

Congress, representing the proprietors of the territorial domain, and charged especially with power to dispose of territory belonging to the United States, has, for a long course of years, beginning with the administration of Mr. Jefferson, exercised the power to construct roads within the territories; and there are many and obvious distinctions between this exercise of power and that of making roads within the States, that the former has never been considered subject to such objections as apply to the latter, and such may now be considered the settled construction of the power of the Federal Government on the subject.

Numerous applications have been, and no doubt will continue to be made for grants for land, in aid of the construction of railways. It is not believed to be within the intent and meaning of the constitution, that the power to dispose of the public domain should be used otherwise than might be expected from a prudent proprietor, and, therefore, that grants of land to aid in the construction of roads should be restricted to cases where it would be for the interest of a proprietor, under like circumstances, thus to contribute to the construction of these works. For the practical operation of such grants thus far, in advancing the interests of the States in which the works are located, and at the same time the substantial interests of all the other States, by enhancing the value and promoting the rapid sale of the public domain, I refer you to the report of the Secretary of the Interior. A careful examination, however, will show that this experience is the result of a just determination, and will be far from affording encouragement to a reckless or indiscriminate extension of the principle.

I commend to your favorable consideration the men of genius of our country, who, by their inventions and discoveries in science and art, have contributed largely to the improvements of the age, without, in many instances, securing for themselves anything like an adequate reward.—For many interesting details upon this subject, I refer you to the appropriate reports, and especially urge upon your early attention and apparently slight, but really important modification of existing laws therein suggested.

The liberal spirit which has so long marked the action of Congress in relation to the District of Columbia, will, I have no doubt, continue to be manifested.

The erection of an asylum for the insane of the District of Columbia, and of the army and navy of the United States, has been somewhat retarded; but full preparation for the reception of patients, before the return of another winter is anticipated; and there is the best reason to believe, from the plan and contemplated arrangements which have been devised, with the large experience furnished within the last few years in relation to the nature and treatment of the disease, that it will prove an asylum indeed to this most helpless and afflicted class of sufferers, and stand as a noble monument of wisdom and mercy.

Under the acts of Congress of August 31, 1852, and of March 3, 1853, designed to secure for the citizens of Washington and Georgetown an abundant supply of good and wholesome water, it became my duty to examine the report and plans of the engineer who had charge of the surveys under the act first named. The best, if not the only plan calculated to secure permanently the object sought was that which contemplates taking the water from the Great Falls of the Potomac, and consequently I gave it my approval.

For the progress and present condition of this important work, and for its demands, so far as appropriations are concerned, I refer you to the report of the Secretary of War.

## "WRITING FOR THE PAPERS," Etc.

Eds. Rural:—In some recent remarks on "The Art of Composition," you say that "an elegant, simple and perspicuous style of writing is one of the highest accomplishments of the scholar; and one too, which can be acquired by all men of ordinary capacity and ordinary education. It can be even self-acquired, although in that, as in all other branches, the aid of a competent instructor is highly desirable." This is very true, but it will be found that the great majority of those who "write for the papers," both in prose and verse, were mainly self-taught, and that whatever facility they possess, is the result of persevering practice. Most of those who take up writing of themselves, commence with rhyming; a fact which I will not undertake to explain—but will simply say, that I know from a wide acquaintance with those who write, that such is the case. Some never get any farther than this; others attain to good prose and fair poetry, but it is all the result of persevering practice.

That all scholars of ordinary capacity and education can learn the art of composition, I have not the least disposition to dispute. But I know they will not learn it as it is taught at present—they will not learn it until they gain that lively interest which shall lead them to delight in it, and to practice it for the pleasure which it bestows in return. When they come to learn that to write is only to speak, in their best manner, the thoughts naturally suggested by the subject they would discuss—when they begin to choose subjects upon which they are accustomed to think—then will they really begin to learn the art of composition—then, after sufficient practice, will many of them commence "writing for the papers," both acceptably and interestingly. You have seen, Messrs. Editors, more or less attempts at composition from those who had learned none of these things, and who yet "had their aspirations"—aspirations which came before the public in a "respectfully declined," or met with a silent but pitying rejection.

I have before me a letter from one—whom years of experience had taught something about writing for the public, as well as given an encouraging measure of success—to another of as good or superior natural powers, but a comparative beginner; which I am tempted to send you, as expressing views which may be of use to some of your poetical contributors. It accompanied a poem returned with corrections and suggestions of amendment—considerately yet hopefully uttered—the only tone and spirit in which a young writer of promise should be examined and criticised. R. N. Y.

——, Thursday, March 23, 1848.

My Dear Friend:—"Faithful are the wounds of a friend, but the kisses of an enemy are deceitful," said the wise Proverbialist, so bear with me while I lecture you, once again. *Labor*, patient plodding toil, is as necessary to success as genius. "Admirably conceived! neglectfully executed!" is the exclamation of many an editor, over the unpolished ores which come to his hand. * * * * This is a fault of mine—this want of polish—as well as yours, and it is one which I can only overcome, even measurably, by spending hours, perhaps, on a single sentence. And I had better do this than to let a thought worth printing at all go off my hands in any other shape than *the very best I can give it.* One short poem, finished and complete, is worthy of, and will gain more admiration, than volumes of unpolished and crude conceptions. If we study attentively the best poets, we shall see that they make *every word tell* in the progress and for the advancement of the effect intended. No incongruous word or sentiment is admitted—but all is harmonious, so that all may be complete.

Your poem is worthy of being labored on yet more. Thoughts and feelings are expressed therein, worthy of the heart which utters them so touchingly, and they should not go forth in the ore, or as unpolished gems, liable to be mistaken for common and worthless rubbish. It is well to write rapidly—it is also well to correct studiously and carefully. "It is strange," you say, "that one cannot see their own defects."—Practice will sharpen one's eyes, and we must learn, however humiliating it may be, to see what an enemy might say of us, or our writings. This is valuable in more respects than one, as an acquaintance with the world readily teaches us.

You will not blame my plainness, when you think how much easier it is to praise and flatter than it is to judge discriminately and express that judgment candidly. But when I give you my opinions at all, you shall have my honest thoughts, and to these you are welcome, as long as you receive them in the spirit in which they are offered.

Yours cordially, *H.*

For the Rural New-Yorker.

## DESULTORY READINGS AND SCRIBBLINGS.

Four Kinds of Readers.—Coleridge says that there are *four* kinds of readers. The *first* is like *the hour-glass*; and their reading being as the sand, it runs in and runs out, and leaves not a vestige behind. A *second* is like the sponge, which imbibes every thing, and returns it in nearly the same state, only a little dirtier. A *third* is like a *jelly-bag*, allowing all that is pure to pass away, and retaining only the refuse and dregs. And the *fourth* is like the slave in the diamond mines of Golconda, who, casting aside all that is worthless, retains only pure gems.

Books.—Nobly, indeed, has the author of "Paradise Lost" expressed himself, in treating of the liberty of the press. "Books," says he, "are not absolutely dead things, but do contain a potency of life in them, to be as active as that soul whose progeny they are; nay, they do preserve as in a vial, the purest efficacy and extraction of that living intellect that bred them. A *good* book is the precious life-blood of a master-spirit, embalmed and treasured up on purpose to a life beyond life."

How to be a Man.—When Carlyle was asked by a young friend to point out what course of reading he thought best to make him a man, he replied in his usual characteristic manner:—"It is not by books alone, or by books chiefly, that a man becomes in all points a man. Study to do faithfully whatsoever thing in your actual situation, then and now, you find either expressly or tacitly laid down to your charge—that is, stand to your post; stand in it like a true soldier.—Silently devour the many chagrins of it—all situations have many—and see you aim not to quit it, without doing all that is your duty."

Education.—Locke, once on a time, being asked by a school teacher, how to get at the true secret of education, remarked: "He that has found a way to keep a child's spirit easy, active, and free, and yet at the same time to restrain him from many things he has a mind to, and *to draw him to things that are uneasy to him*—he, I say, who knows how to reconcile these seeming contradictions, has, in my opinion, got the true secret of education."—L.

Scolding and Fretting.—Some teachers, like some parents, are forever scolding and fretting, and a pleasant smile upon their faces is as totally unknown as a winter sun in the regions of Polar ice. In the latter locality, the god of day hides his face in a six months' night, and in the school-room certain teachers veil their faces in cloud and storm, in order to render a naturally homely physiognomy as forbidding as possible.—A good natured teacher is one of heaven's best gifts to the young, and a hearty laugh at a ludicrous mistake, or an amusing incident, in which teacher and pupils all join, is frequently a better enlivener of ideas in a school than a wholesale administration of birch or ferule.

## EDUCATION OF IDIOTS.

It was a mother's love that proved the capacity of the idiot for improvement.—Before any scientific experiments had been made in the education of idiots, a lady in Massachusetts, occupying a high position in society, and whose husband was one of the prominent public men of that State, had two children, both idiotic. When the terrible conviction of this fact was first forced upon her, she gave up all society, removed from the city to a retired country place, and devoted the whole energies of her nature, stimulated by the strong, undying affection of a mother, to their improvement. The result was that they improved both physically and mentally, were able to go to school, receive prizes for scholarship, and finally graduated in one of our best Colleges, receiving some of the honors which are bestowed on the few. If these children had received the ordinary treatment, they would have passed through life wretched objects of pity and disgust, instead of being respected members of society.—*Wesleyan.*

Ignorance vs. Knowledge.—Ignorance pays such a tax that we can't imagine how any body can afford to be a blockhead. Mc Cracken works for a dollar a day, while Spring, his neighbor, commands 20 shillings. A wide difference, and all caused by Spring's knowing how to read, write and cypher.—From these figures it will be seen that Mc Cracken's want of knowledge costs him four hundred dollars a year—which shows that ignorance costs him more than his wife and children, house rent inclusive.—*N. Y. Dutchman.*

Parents who do not set a good example, *in their own acts,* can not expect good from their children.

# Historical.

Written for Moore's Rural New-Yorker.

## CANADA.—No. I.

BY J. CLEMENT.

PHYSICAL GEOGRAPHY,—CLIMATE,—SEASONS AND PRODUCTIONS.

The territory embraced in the two Canadian Provinces, is estimated to contain 196,000,000 acres of dry land. It is about fourteen hundred miles in length, and from two to four hundred in width. Traversing it by the river St. Lawrence and lakes Ontario, Erie, St. Clair, Huron and Superior, and the streams which connect them, the distance, stretching along the shore of navigable waters, is two thousand miles. This country lies between the meridians of fifty-seven degrees and fifty minutes, and one hundred and seven degrees west longitude, and the latitudes of forty-two and fifty-two degrees north.

The soil and general aspect of a country having so wide a range of territory, is necessarily somewhat varied. The great valley of the St. Lawrence is hedged in, on either side, by ranges of mountains, here and there pressing close to the shores, and giving a barren appearance to the country; in other parts, receding and leaving broad and rich intervals, presenting a picture of most grateful luxuriance.* Among the most prominent of the mountains which wall the north shore of that great river, is Cape Tourment, which commences twenty-five miles east of Quebec, and stretches a little south of west, for three hundred miles. Between it and the St. Lawrence is a level tract, from ten to forty miles wide, fertile in its nature, and in some places highly picturesque in its appearance.—North of that ridge is another range running north-westerly, into the interior, and forming the height of land which divides the tributaries of the St. Lawrence from those of Hudson's Bay.

The soil of Upper Canada, is, as a general thing, better than that of Lower. It consists of dark loam; in some localities its color is red. It is usually mixed with vegetable mould, and in the southern parts is very rich and tolerably well cultivated. Its nature is varied sufficiently to adapt it to the production of almost every kind of grain and domestic vegetable raised in the northern temperate zone. Most sections are favorable to the growth of wheat, corn, rye, barley, oats, buckwheat, peas, potatoes, beans, hops, hemp and the various kinds of tame grasses. The southern parts, west of lake Ontario, produce peaches, plums, grapes, &c.

The land along the north shore of lake Ontario, is slightly elevated, and, though presenting here and there a pleasant slope, is rather level. Through it runs a ridge which sweeps around the head of the lake—where it is known as Burlington Heights—and extends into New York at Niagara Falls. It makes an agreeable diversity in the landscape, and where it spreads westward between lakes Erie and Huron, it forms extensive and exceedingly productive table-lands.

The vast inlet of the Bay of Quinta, commencing just above Kingston, and forming an indentation of sixty or eighty miles, and taking in the towns of Belleville and Picton, is highly fructiferous. Between the peninsula of Prince Edward—of which Picton is the chief town—and the head of lake Ontario, are several flourishing and handsome cities and villages. Among them are Cobourg, seventy-two miles east of Toronto; Port Hope, seven miles west; Darlington, twenty miles farther west; Toronto, the late capital, with its thirty-two thousand inhabitants; and Hamilton, with a population of fifteen thousand, nestled most cozily on the shore of Burlington Bay and half walled in by Burlington Heights.

Thirty-five miles north of Ontario, is lake Simcoo, a beautiful sheet of water, communicating by the Severn river, with Georgian Bay, on lake Huron. The neck of land between lakes Ontario and Simcoe, is the eastern extremity of the table lands before referred to, and which lie in the shape of a peninsula. This peninsula contains about nine millions acres, or, in other words, is about the size of the State of Maryland. It lies in a very salubrious climate. Farther west, along the shore of lake Superior, the country is skirted with table-lands which are fertile and present, in the summer season, a luxuriant robe, which calls forth the admiration of every traveler. At the foot of those lands are rocky headlands of old red sandstone, the tops of which overlook scenes of the most solemn grandeur. The geologist, like Hugh, would there luxuriate in the field of science, and the poet feed his soul on the manna of the sublime and beautiful.

* Views of Canada and the Colonies, by Jas. P. Brown. We are indebted to the same source for other facts, in regard to parts we have not visited.

Copper, we may add, in passing, is there found in abundance, and the Canadians are beginning to work the inexhaustible mines, which stretch eastward to the Huron, and far along its shore.

The climate of Canada has been much abused. The winters in the southern and most populous part, are similar to those in the States lying contiguous; and the spring work commences in Upper Canada the early part of April. We have seen farmers plowing in the vicinity of Niagara Falls, in March. In June the air becomes balmy; July and August are uncomfortably warm; September is mild and charming; and the "Indian Summer," commencing usually about the middle of October, and often extending into November, is exceedingly delightful. We know not where it is more so; for the air is then soft and hazy; a mellow light overspreads the landscape; the skies, frequently for a dozen consecutive days, are cloudless and serene; the forests are magnificently attired; and everything is pleasant to the senses and refreshing to the spirits. Some of the most delightful autumn days we have ever known, were passed in rambles around the head of lake Ontario. Woodland scenes are nowhere else in the valley of the Lakes more gorgeous. The maple, beech, ash, elm, oak, basswood, hickory, cherry, chestnut, birch, cedar, &c., present their parti-colored leaves, vieing with each other in brilliancy of hue, and making a glorious appearance.

The prevailing winds in the Province, are the south-west, north-west, and north-east. The last only can be denominated disagreeable. It is usually cold and damp, like the same wind in the New England and some of the other States, and has a nourishing influence on moroseness and "the blues." The north-west, which is the prevailing winter wind, is also cold, but is usually dry and elastic, making one feel vigorous, and bracing his courage for the storms of life. It never fans the cold brow of the suicide; is the great expeller of heavy thunder-showers; the herald of hard frost; and the chorister at the grave of Indian Summer. The south-west wind, which prevails nearly three-fourths of the warm season, is the most welcome. It brings rich argosies of fragrance from the Mississippi valley, and the prairies which bloom beneath its long and viewless track. Its breath some may at times regard as sufficiently hot; but it is too sweet to be seriously repulsed. There are few winds from due west or south, and fewer still from the north.

According to the census taken nearly two years ago, there are 94,449 occupants of land in Lower Canada, and 99,860 in Upper Canada, making a total of 194,309. The amount held by these persons is 17,937,148 acres, of which 7,303,241 are under cultivation. The kinds of products and the amount of each kind produced from the 4,347,539 acres under crops in 1851, may be seen at a glance, by the following Agricultural abstract from Parliamentary returns:

| Produce. | Lower Canada. Bushels. | Upper Canada. Bushels. | Total. Bushels. |
|---|---|---|---|
| Wheat | 3,075,868 | 12,693,853 | 15,768,720 |
| Barley | 668,620 | 626,875 | 1,291,501 |
| Rye | 341,443 | 479,651 | 821,094 |
| Beans | 23,602 | 18,109 | 41,711 |
| Peas | 1,182,190 | 2,873,394 | 4,055,584 |
| Oats | 8,967,594 | 11,193,844 | 20,161,438 |
| Buckwheat | 530,417 | 639,284 | 1,169,801 |
| Maize | 490,287 | 1,606,513 | 2,096,800 |
| Potatoes | 456,111 | 4,987,475 | 9,443,586 |
| Turnips | 369,909 | 3,611,942 | 4,014,851 |
| Clover and Grass Seeds | 18,921 | 42,460 | 61,381 |
| Carrots | 82,344 | 171,895 | 257,239 |

Note.—It should be stated that the grain crops in Lower Canada are usually reckoned by the minot, which is about one-eighth more than a bushel; and in giving an estimate of the products of Canada, it ought to be mentioned that her waters yield annually a hundred thousand barrels of fish. Furthermore, about one-fifth in valuation of her exports is in the produce of the forest, such as staves and sawn and unsawn timber.

An Old Turtle.—Mr. Ashael Clark, of Milford, recently picked up a turtle on his farm, which was marked by Aaron Mallory, in 1759, and found again in 1813, by Samuel Clark, who inscribed his initials and the date upon it. The first date, it will be observed, was ninety-four years ago. How much older it is, of course there is no means of knowing. What is a little singular in this case is the fact, that Mr. Ashael Clark, who recently found it, was with his brother Samuel when it was found and marked by him forty years since. It was found in both of the latter instances in the same lot, and within a few rods of the same place. After adding his name to the traveling record, Mr. Clark again set the old fellow on his "course of time."—*New Haven Palladium.*

## DEATH OF THE YOUNG.

BY WILLIS G. CLARK.

When into dust, like dewy flowers departed,
From our dim paths the bright and lovely fade;
The fair in form, the pure, the gentle-hearted,
Whose looks within the breast a Sabbath made—
How like a whisper on the inconstant wind
The memory of their voices stirs the mind!

We hear the sigh, the song, the fitful laughter,
That from their lips in balm were wont to flow,
When Hope's beguiling wing they hurried after,
And drank her syren music long ago;
When Joy's mild harp to sweetest lays was strung,
And poured rich numbers for the loved and young.

When the pure stars are streaming high in heaven,
And the low night winds kiss the flowering tree,
And thoughts are deepening in the hush of even,
How soft those voices on the heart will be!
They breathe of raptures which hath bloomed and died,
Of sorrows by remembrance sanctified.

Yet when the loved have from my pathway vanished,
What potent magic can their smiles restore?
Like some gay sun-burst by the tempest banished,
They passed in darkness, they will come no more!
Unlike the day beam, when the storm hath fled,
In light renewed breaks on their lowly bed.

## THE SECRET OF HAPPINESS.

"The whole of it is,' said Uncle Phil, to his daughter, "just *do your duty thoroughly*, and you'll be contented in this world and happy in the next, and poverty or riches, don't make a straw's difference either way."—*Mrs. Sedgwick.*

"Do your duty thoroughly," is indeed, as Uncle Phil. says, "the *whole* of it"—and the one grand rule of action for those who would enjoy real and enduring pleasures—It is the truth expressed in plain and forcible language; and how strange it is that mankind, who in most pursuits adopt the directest means for the accomplishment of their ends, should so generally neglect this straight, sure road to happiness.

"'Tis conscience doth make cowards of us all."

but "Do your duty thoroughly," and you shall have courage to brave every danger—to endure the scorn and insults of the howling many—and yet feel in your own soul a confident peace, that the loftiest may envy but cannot enjoy. O, it is sweet to hear that unfaltering monitor whisper its words of commendation and encouragement. "That is right—you have done your duty!" How bitter—how destructive to happiness, on the contrary, is its condemnation—when we must own to our own hearts—

"Ye knew your duty but ye did it not,"

and he that "lives up to his light" never listens to these reproaches, or writhes under the remorse they bring him.

As to happiness and the means of its attainment, "Poverty or riches don't make a straw's difference either way." So says Uncle Phil. and he is supported in his assertion by both reason and revelation. The poor have duties to perform as well as the rich, and if these *are performed*, they have just as good a ground for contentment here and a bright hope of happiness hereafter, as the rich, and *the same.* All are on one level here. If to the poor less is given, from them less is required. No one is accountable for the possessions of another, and those who have little wealth, have but little anxiety about its safety and proper disposal.

For every man, woman, and child, for the world at large, this is the true "secret of happiness,"—Do your duty thoroughly to yourself, your neighbors, and your Creator.

H.

## A DYING MAN'S GOD.

I knew the old man; he was rich, and his riches were his God. I rode in company with him a considerable distance through his possessions. I sought means to turn the conversation from his groves, and his orchards, his fields and his treasures, to something more serious and profitable.—But no—his heart was on these things:—He was between eighty and ninety years of age, and yet I could not bring him for a moment to speak of leaving his earthly inheritance. To the Sabbath and the sanctuary, and all the things of God, he was an utter stranger.

It was painful to see an old man, just ready to close his eyes on all that belongs to earth, refusing to admit into his mind a single thought of death, and that eternity so shortly to be his home. With a kind of melancholy satisfaction, I saw him take a different road from myself, thus releasing me from my fruitless efforts to direct his mind towards that world where his real interests lay.

Not long after this interview, disease attacked his mortal frame, giving no doubtful intimation that the machine which had been in motion more than four-score years, was about to stand still. As he lay struggling with death, he spoke of fields of corn, and then said, "Bring me my bundle of notes." Inspecting one of them, he said, with earnestness, "I believe we shall not lose it," or to that effect. While he thus lay holding his notes and obligations before his face, in his withered hands—he *died!*

Trust in Providence.—A cheerful trust in the beneficence of Providence, is one of the most effective remedies against the ills of life. Many an anticipated difficulty, once met with confidence and courage, vanishes like the morning mist.

## THE VACANT CHAIR.

BY J. W. BARKER.

SAD memory wakes her mournful lyre,
And chants a melancholy air,
As seated by the cheerful fire,
I gaze upon that *vacant chair*,
Bright images that ne'er depart,
Flit in the shadows of my heart.

The band is broken,—that bright CHAIN,
Of golden links, dissevered seems;
My brightest earthly hope is slain,
And shadows haunt my sunny dreams;—
The hours move on with slower pace,
I miss that dear familiar face.

The silvery tones of friendship
Like showers upon the smitten earth,
The dying look, the funeral pall,
Still linger round the social hearth;
Tho' joy seems reigning everywhere,
My bleeding heart,—'tis midnight there.

That silken tie, which many years
Had closely knit together,
Made firm by joys, and grief, and tears,
Refuses now to sever;
Tho' death hath sent an arrow there,
And vacant made his wonted chair.

Yet one sweet ray, one glittering star,
Darts gently o'er the darkening scene,
Like angel-whispers, from afar,
A soothing voice is heard between;—
"I still am near, with soothing power,
To comfort every lonely hour."

Kendall Mills, N. Y., 1853.

## PIONEER ANNOYANCES.

MESSRS. EDITORS:—In the early days of Rochester, among other bad things which the pioneers had to contend with, was the full grown but gaunt musquitoes, natives of the rich valleys and deep swamps that were formed here. In summer, the "musquito question" was one of no ordinary importance, and, as the new settlers here, or everywhere had no nets or bags to guard against these nocturnal intruders,—the only way they had to fight them off was to build up smouldering fires in front of their houses, and smoke them out. So when night drew on, at every place where the hut or home of a family was pitched, might be seen one or more fires planted in front of the door, and near the windows—and when perchance, one who had been disturbed by the owl's hoot, or the screech owl's scream, or the wolf's howl, was up at midnight, all around might be seen the dying fires which had been kindled at early evening, like waving candles in their sockets, flickering in the fitful breezes. In the day time also, if one had to go into the woods, he was beset by clouds of these trumpet-tongued, or more properly trumpet-trunked insects, presenting their *bills* in his face and eys. So large and long-geared were the musquitoes of that day, that we used to declare they were manufactured, and their bills sharpened by an old recluse named COBB who had a hut at that time in the woods near Mt. Hope, where he lived alone, occasionally coming among the villagers with his old bag and patches, and thread-bare clothes on—the peculiar wonder of the women and children, and especially of the boys. I remember the old greasy, taciturn lump of mortality, with a quick winking eye which you never could look into, as he was seen like some guilty fugitive, once in a great while in the streets. But to the musquitoes. When BRANT, the Indian chief was in the woods in Canada, in 1812 or 13, with the then Governor General, and from some cause they were obliged to stop a short time, he saw the musquitoes alighted upon the Governor in such swarms, that his excellency was compelled to ply his hand nimbly to protect his person. BRANT was highly enraged, and with great vehemence said: "Guvnor, skitters big like hawk—eat 'em eyes out—ugh! too much skitters now!" But as the swamp forests were felled, and the swamps drained, and habitations put up, and a village appeared, these unmusical buglers took themselves off with the wild animals, and ceased to make their annoying visits; as if not pleased with the refinements of mixed community, or with the opposition. With the exception of Cincinnati, which has always retained its original musquito population, the rule named above has universally prevailed. But for two or more years past, these native suckers have been indicating strongly that they were going to change their mode of operations, and in many cities of our country have taken up their residences. In our own city, the past season, they have annoyed us prodigiously, and in Cleveland and other western cities, they have come in like a plague; and I imagine that they will grow formidable, and, without protection, will destroy the rest of our bed-chambers, and especially of our nurseries, as they seem to have a peculiar relish for the young. They demand our *blood*, and they will *have it*, too, if they are not opposed with *bars*. So much for musquitoes.

Another tenant of the woody dell and marshy mire, which seems to show *strong* symptoms that he is intending to change his country residence for a city life, is the *skunk!* Just think of a *gentleman skunk!* and he too well known of old, to be a *chicken stealer* and a fellow who is a *stench in the nostrils* of all good citizens as well as farmers! I see that in a neighboring town some fellows have been caught who have been robbing hen roosts, &c., no doubt they are nearly related to these *other skunks* which I have named! The animal skunk in early time, annoyed us when the musquitoes did, and with the departure of this winged elephant, went away his skunkship also. But within a few years they have traveled in the sunny, soft days of the Indian Summer, and in the barns or way alleys, and in some houses in the city has the *savour* of their presence been apparent, to the great annoyance of the occupants near them. These fellows, if they persist in becoming citizens, will be the worst addition that we have had—for if you attack them, they never run, and my experience is that they will storm any battery that human ingenuity has yet devised. It may not be amiss, here, to relate an encounter with one of these spicy little fellows, which an Englishman had some years ago, on a western prairie. Adopting his own description as he sent it home to his own country, he says:

"Going along slowly over the wide prairie, filled with many thoughts in relation to the economy and cause, &c., of these strange and surprising formations, all at once my attention was arrested by the appearance, in my path, of a small, sleek little animal with a bushy tail. I approached cautiously, but he did not appear inclined to get out of the way; so coming near him, I alighted from my horse, and with whip in hand approached him. Instead of running, he faced me, and at the same moment, by a flourish of his tail, cast upon me a kind of Stygian liquor more fœtid than anything I can describe. The air all around was instantly loaded with its choaking, suffocating effluvia, and my breath was stopped! I mounted my horse and gave him spur till I reached the inn not far distant, on the edge of the prairie. Coming up in confusion and in great perplexity, how my blood boiled in every vein, as a lot of lazy lubbers, barroom loungers met me, with loud laughs and jeers, and asked me how I liked a *skunk!*"

Now against some skunks we have laws which will assist them in their mean practices, but against this new comer and the practice of his many odors, we have no laws, nor can we overpower him by all the odors that French chemistry has elaborated to perfume the dwellings of the world.—Besides he is a native citizen, and his claims will be *strong* wherever he goes. Jefferson said that cities were sores on the body politic, and there are indications in the above facts, that they will become something more than this, with the addition of this brace of "pesky critters." AN OLD CITIZEN.

[Translated from the French for the RURAL.]

## PERSEVERANCE NECESSARY TO SUCCESS.

THE following is a beautiful parable from the German, to which the translator has affixed the application:

A peasant was driving two feeble horses attached to his heavy laden wagon through a marsh, when, on seeing that his horses were unable to draw it through the mire, he invoked Hercules, the god of strength, to help him in this miserable condition. But one of his countrymen drawing near, heard this ejaculatory prayer, and immediately directed him to help himself with the two horses he brought thither; this being done, the one who had come to his relief, said: "Now, then, urging on these additional horses, invoke Hercules and see if you do not succeed." In a few moments the wagon was on the dry land.

The application is obvious. It is indeed pitiful to relate, in how many instances one imagines himself given up by fortune, do what he will to change temporary incumbrances. Take one of the many thousand cases: when Napoleon was progressing higher and higher in the glorious career of his victories, suppose that the defeated, but not yet conquered nations had given way, and in utter despair of ever enjoying their previous happiness, exclaimed, "Alas! we are forsaken and forlorn; this is our destiny; Providence has thus decreed, and will prevail despite what we can do to escape this deplorable state; we must yield and be subject to the iron rod of the conqueror," instead of rousing themselves to withstand and check the victor with energy and activity, do you think that Europe would exist in that state which they maintained after the defeat of Napoleon, merely because destiny would have it thus, and which prevail?

ONE can no more judge of the true value of a man by the impression he makes on the public, than we can tell whether the soal was gold or brass by which the stamp was made.

## LESSON TO NEWSPAPER BORROWERS.

TIME: Saturday morning, eight o'clock. Scene: the breakfast table. A rap is heard at the door, and the newspaper is for a few minutes opened before the fire—"Come, John, it won't do to dry it too long, for I see neighbor Snooks is sending his son after it." Another rap at the door.

"Father wants to know if you will lend him your newspaper just five minutes: if you ain't done with it, he will send it right back. He only wants to see if the brig Star has been heard from, what our Tom went in."

"Tell your father that the brig is not reported."

Home he trips and as speedily returns.

"Mother wants to know who was buried yesterday. Can't you lend it to her just two minutes?"

"Tell your mother that all the deaths this week are Mr.—, and a child of Mr.—.'

In a few minutes another tap—

"Sister Susan wants to know if anybody's married this week, and old Josh wants to know if there is any auction to day, and father wants to know what the news is from Virginia, and aunt Snooks wants to know if there are any more pretty stories about that Jarvis woman: if you can't spare the paper, why can't you just write down what there is just 'cause I don't want to keep running back and forward so——"

"Here, my lad, take this paper to your father, and round to all your uncles and aunts, and bring back whatever is left of it, next Saturday morning, at eight o'clock, precisely, when you come to borrow the next."

Ten applications on Saturday by borrowers; all sent to neighbor Snooks with a particular caution to return it when done with.

Monday morning rap at the door, and the boy with the paper is ushered in.

"Mother says it is too much plague to keep the paper all the week: people keep coming after it so."—*McMakin's Courier.*

## YOUNG MAN READ.

THE following is an extract from the Address of Judge Johnson, of Georgia, in sentencing G. T. Commet to death, for the murder of W. W. Hails *without provocation*, delivered on the 16th day of Sept., 1851:

Nor shall the place be forgotten in which occurred this shedding of blood. It was in one of the thousand ante-chambers of hell which mar like Plague Spots the fair face of our State. You need not be told that I mean a tippling shop—the meeting place of Satan's minions, and the foal cesspool, which by spontaneous generation, breeds and nurtures all that is loathsome and disgusting in profanity, babbling vulgarity and Sabbath breaking. *I would not be the owner of a grog-shop for the price of this globe converted into golden ore.* For the pitiful sum of a dime he furnished the poison which made the deceased a fool, and converted this trembling culprit into a demon.

How paltry the price of two human lives! This trade is tolerated by law and therefore the vender has committed an offence not cognizant by earthly tribunals. But in the sight of Him who is unerring in wisdom, he who thus deliberately furnishes the intoxicating draught which inflames men to anger, violence and bloodshed, is *particeps criminis* in the moral turpitude of the deed. Is it not high time that these sinks of vice and crime should be held rigidly accountable to the laws of an enlightened public opinion?

## WONDERFUL.

THE degree of skill attained by the testers of gold in detecting spurious coin is wonderful and almost incredible. Last Monday, at the office of the Assistant Treasurer in this city, thirty-one thousand six hundred pieces of gold passed through the hands of one man (Mr. Birdsall) and every piece was separately tested. Eleven thousand of them were gold dollars. About four hundred millions of dollars have passed thro' Mr. B.'s hands, and been tested by him.—Of course he works with great rapidity, and yet not a single instance of a spurious coin escaping his detection has ever been known. He discovers more or less every day. A short time since, as he was passing a quantity of coin rapidly through his hands, Gen. Dix came up to the counter, at the side of him, and scooped up from the pile which he was testing, a handful of coin. As quick as a flash, he placed his finger on the General's hand. "Will you please to hold on to that a moment," said he. As soon as he had finished what he had before him, turning to Gen. Dix—"You have got a spurious piece amongst that," he said. Then, picking up the pieces from Gen. D.'s hand, he selected the bad coin. His practiced ear detected the ring of the bad metal, even in a whole handful of coin.—*N. Y. Herald.*

## ANECDOTE OF A GATE.

A CORRESPONDENT of the Home Journal, writing of gates, tells this anecdote:

I once passed through a door-yard gate which did, though unintentionally, give an indication of the designer's character.—The gate was a common one, shut by a chain and ball. But the post to which the inner end of the chain was attached, was carved and painted in the likeness of a negro, with one hand raised to his cocked hat, and the other extended to welcome you in. As you opened the gate toward you, in going in, the negro post-pointer bent toward you, by a joint in his back fairly bowed you in. Upon letting the gate go a spring in his back "brought him up standing" again, ready for the next comer. This faithful fellow performed the amiable for his master for many years, without reward, except now and then a new coat—of paint; and finally died of a rheumatic back, contracted in his master's service.

# For the Ladies.

## GONE.

I HAVE the letter yet, Minnie,
You sent the very day
That gave your first-born to your arms,
And I was far away.
I saw through every trembling line
How precious was the boy,
How pleasure shook the weakened hand
That wrote to wish me joy.

Of all thy mother's little ones,
The plaything and the pet,
Poor children, lovingly they come
To rock the cradle yet;
And, knowing not how sound his sleep,
All ares to wake him try.
Alas! from so much love, Minnie,
To think that he should die!

Look at the small pure hand, Minnie,
So motionless in mine,
I used to let it, soft and warm,
About my finger twine;
And as it fastened in my heart
That slight uncertain hold,
Its touch will linger on my hand
Till my hand too is cold.

Our bridal day; that summer day
Dost thou remember now?
Joy's blossoms were unsullied then
As those above thy brow.
Thank God! I have my fair bride still;
And, by thy loving eye,
Thou wouldst not give *me* up, Minnie,
Even that he might not die

A Heaven of safety and repose;
Ah! should we wish him back
From its clear lights and thornless flowers
To tread life's dusty track.
Think what a radiant little one
Shall meet us by-and-by.
And yet that he should die, Minnie—
Alas, that he should die!

[*Household Words.*

## THE TWINS.

IT seemed as if in the case of his daughter's estrangement, the heart of Tindell, the stern soldier and general, was adamant. No one dared speak of that beautiful and erring one in his presence. Gloomily day by day he stalked through his ancient halls; there were no silvery voices to welcome him, nor eyes to grow bright with gladness at his approach. Years ago it was not thus. Two twin children blessed every hour of his life. In the garden they ran by his side, and plucked the rich roses, and then sitting, one on each knee, plaited them in his thick locks. And he would wear them where the helmet had rested—emblems of the peace he had found in the love of his little ones after a stormy and warrior life.

Together they grew to blooming girlhood, but no further. A fatal sickness blighted one bud, and laid it, with all its beauty, an offering upon the altar of death. It seemed as if the great man's heart would have broken, for if it could be, she who was gone was his favorite—gentler, more angel-like, lovelier with the beauty of heaven, and more loving than the other. For weeks he walked his mansion in a passion of grief, hardly eating or sleeping, and in all that time the twin and living bud laid on his bosom. But her presence served only to remind him of what he had lost.

When his sorrow had grown still, though yet flowing like a deep river through his heart, he gathered all her robes with his own hand, every thing that had been prized by her,—her little playthings, her books, her little prizes, and laid them in a strong and beautiful box. This he stood in his own room, commanding that it should be touched by no mortal hand, and requesting that in case of fire, or any calamity that might happen in his absence, it should be sacredly preserved.

Alina, the only daughter, grew every year more lovely, and advanced to the stage of womanhood, she was almost a wonder of beauty. Far and near, suitors sought her for a wife—not for money, strange to tell, for General Tindell was not rich, but for her transcendent charms and her mental superiority. To whom should he give his own jewel, the pride of his life? was the question often asked of his heart by the gray-haired man; but she had already anticipated his answer. One morning she was not to be found. The house and grounds were searched, the pond dragged, the river nearly drained, but no tidings of the lost one for days, weeks, months and years.—No wonder the old man shunned his kind, and lived voluntarily imprisoned, refusing to see or be seen by the world. No wonder his very grey hairs were bowed down to the tomb before their time. Often had he said in his loneliness, "If I could but hear from her, how this withered heart would leap!" And he *did* hear from her, and his heart *did* leap—but with the transport of rage. She was married. She had left her stately home—her father's protecting arms, for a soldier's love and a worthless husband. Ah! too often the unspoken ban of a parent's malediction rests upon the heads of those who, forgetting the ties of duty, the bonds of love, and the hallowed precepts of filial obligation, rush into an unknown future with no sanctions from heaven or earth.

She plead to be forgiven—to be restored. Oh! might she come back, if only to die there—might she once more lay her poor head on his bosom, and win his forgiveness? Might she only tread the halls where with her beautiful sister she had danced in the exuberance of innocence and youth, or pluck one rose from her own rose-tree, or only come as a transient guest, and look once more upon the scenes of old, doubly endeared by her recent suffering?

No! no! the old man stormed and raved. He would disown her. All the pent up feeling of years burst its frail barrier, and what anguish, despair, fear and horrible anticipations, had been forced back in his old bosom, swelled like a mountain torrent that inundates its sister bank. Never should she enter the home she had disgraced. He would die before he would see her. She might have wherewithal to be clothed, to eat, to be sheltered, but on pain of his curse, let her dare darken his walls!—ungrateful, reprobate child!

The old housekeeper and her daughter, the latter bearing a pretty babe in her arms, took their way from Tindell mansion one fine morning, and walked towards a poor little cottage, sheltered by trees and romantic rocks. They reached it long before the sun had reddened the moss-cups in the hollows, or fired the dew upon the tall grass. Opening the door they entered, and at that moment, a pale face looked out from the poor curtains, and the lips murmured, "did you bring him?"

The silence of the nurse was full of meaning to the desolate woman. Her head fell back, and the long, glistening waves of curls hung from the mean pillow, and over her cheeks, making still more ghastly the whiteness of her face. The good nurse, with a movement or gesture of encouragement softly turned down the coverlet, and disclosed the beautiful faces of two twin babes, so like and so lively, that she stood, lost in admiration.

For many hours the three held consultation, and before the nurse and her daughter left the cottage, Alina was sitting up, propped by pillows, a brightness in her soft eyes that had long been foreign to them, talking, smiling, altogether a hopeful, beautiful being again. Since her return, strangely enough, the old general had become passionately fond of hunting, and sometimes for days together would he enjoy this sport. Enjoy! far from that, it was to allay the uneasy pangs of conscience; for strip him of his military pride, his false notions of influence and position, he had one of the most gentle of hearts.

All importunity had thus far been in vain, until the housekeeper's daughter, with the penetration of a mother, contrived a plan that seemed likely to succeed. But it was a daring one, involving the possibility of failure in more than one instance, for it might cost the place of both her mother and herself.

The old general had returned from the chase. His hounds were led away, his favorite charger stabled, and with his usual quick tread he entered the hall. A letter was handed him. He opened and read it on the way to his room. Pausing for a moment, he tore it in fragments, and angrily exclaiming—"she shall not come!" he threw open the door of his private apartment.

It wore a strange look. He entered, and gazed about him. Astonishment, tenderness, kept him mute. There on a couch were spread several little old-fashioned robes, that brought the tears to his prone eyes. A table held some pretty toys, tiny slippers, embroidery, many a little fragment that her hand made sacred—that dear little rose-bud who had gone to the better land. He lifted them one after another, and how his lip trembled! how all the father whelmed his anger, and the old love beat at the door of his heart. There stood over her little crib, with a costly covering of silk and lace thrown over it. He thought not to ask who had done this sacrilege. He looked at that little couch through his tears. The past came upon him; there they once slept; from that tiny couch they threw their rosy arms about his neck, and kissed him with their dewy lips. Still as he gazed he trembled, his head bent forward. What held him as one entranced! What made his breath come short and quick, heavy and gasping, as one struggling for life? The covering of lace and satin! surely it moved! it throbbed! There was a palpitation unnatural to quietude. Or did he mistake? Surely, surely his tears blinded him! Still—again a tiny movement! the beating of his heart choked him; the illusion grew, till springing towards the crib, he snatched away the drapery, and there, lying with their innocent little faces upturned, beaming with a sort of infant rapture, sweetly sleeping, were the twin babes; to him they seemed, of his early love. Emotion overpowered the father; he burst into tears, and held his hands over them as if for a benediction. A sob startled him. He turned, and saw his child, leaning, pale as death, against a massive arm-chair.

"For their sake," she murmured, but she needed to say no more. The outstretched arms enfolded her frail form, as the old man in a choking voice, exclaimed, "Come to my heart my daughter; God be thanked that I am no longer childless!"

The twins are very beautiful,—two fond girls, who hover round the old man's chair, or follow all his footsteps. And every year, is celebrated in that famous house, the anniversary of the old man's twice-found treasures.—*Olive Branch.*

## FEMALE SOCIETY.

No society is more profitable, because none more refining and provocative of virtue, than that of a refined and sensible woman. God enshrined peculiar goodness in the form of woman, that her beauty might invite, and the desire of her favor persuade men's souls to leave the path of sinful strife for the ways of pleasantness and peace.—But when woman falls from her blessed eminence, and sinks the guardian and the chorisher of pure and rational enjoyments into the vain coquette and flattered idolator of fashion, she is unworthy of an honorable man's admiration. Beauty is then at best,

——"A pretty plaything:
Dear deceit."

We honor the chivalrous deference which is paid in our land to woman. It proves that our men know how to respect virtue and pure affection, and that our women are worthy of such respect.

## PRESIDENT'S MESSAGE.

*(Concluded from page 399, this number.)*

The present judicial system of the United States has now been in operation for so long a period of time, and has, in its general theory and much of its details, become so familiar to the country, and acquired so entirely the public confidence, that if modified in any respect, it should be only in those particulars which may adapt it to the increased extent, population, and legal business of the United States. In this relation, the organization of the Courts is now confessedly inadequate of the duties to be performed by them; in consequence of which, the States of Florida, Wisconsin, Iowa, Texas and California, and districts of other States are in effect excluded from the full benefits of the general system, by the functions of the Circuit Court being devolved on the District Judge in all those States, or part of States.

The spirit of the Constitution, and a due regard to justice, require that all the States of the Union should be placed on the same footing as regards the judicial tribunals. I, therefore, commend to your consideration this important subject, which, in my judgment demands the speedy action of Congress. I will present to you, if deemed desirable, a plan, which I am prepared to recommend, for the enlargement and modification of the present judicial system.

The act of Congress, establishing the Smithsonian Institution provided that the President of the United States, and other persons therein designated, should constitute an "establishment" by that name, and the members should hold stated and special meetings for the supervision of the affairs of the Institution. The organization not having taken place, it seemed to me proper that it should be effected without delay. This has been done, and an occasion was thereby presented for inspecting the condition of the Institution, and appreciating its successful progress thus far, and its high promise of great and general usefulness.

I have omitted to ask your favorable consideration for the estimates of works of a local character in twenty-seven of the thirty-one states, amounting to one million seven hundred and fifty-four thousand five hundred dollars; because, independently of the grounds which have so often been urged against the application of the Federal Revenue for works of this character, inequality with consequent injustice is inherent in the nature of the proposition, and because the plan has proved entirely inadequate to the accomplishment of the objects sought.

The subject of internal improvements, claiming alike the interest and good will of all, has, nevertheless been the subject of much political discussion, and has stood as a deep graven line of division between statesmen of great ability and patriotism. The rule of strict construction of all powers delegated by the state to the general goverument has arrayed itself, from time to time against the rapid progress of expenditures from the National Treasury on works of a local character within the states. Memorable as an epoch in the history of this subject is the Message of President Jackson, of the 27th of May, 1830, which met the system of internal improvements in its comparative infancy; but so rapid had been its growth, that the projected appropriations in that year for works of this character had risen to the alarming amount of more than one hundred million of dollars.

In that message the President admitted the difficulty of bringing back the operations of the government to the construction of the Constitution, set up in 1793, and marked it as an admonitory proof of the necessity of guarding that instrument with sleepless vigilance against the authority of precedents, which had not the sanction of its most plainly defined powers.

Our government exists under a written compact between sovereign States, uniting by specific objects, and with specific grants to their general agent. If, then, in the progress of its administration, there have been departures from the terms and intent of the compact, it is, and will ever be, proper to refer back to the fixed standard which our fathers left us, and to make a stern effort to conform our action to it. It would seem that the fact of a principle having been resisted from the first by many of the wisest and most patriotic men of the Republic, and a policy having provoked constant strife, without arriving at a conclusion which can be regarded as satisfactory to its most earnest advocates, should suggest the inquiry whether there may not be a plan likely to be crowned by happier results.

Without perceiving any sound distinction, or intending to assert any principle as opposed to improvement needed for the protection of internal commerce, which does not equally apply to improvements upon the seaboard for the protection of foreign commerce, I submit to you, whether it may not be safely anticipated that, if the policy were once settled against appropriations by the general government for local improvements for the benefit of commerce, localities requiring expenditures would not, by modes and means clearly legitimate and proper, raise the fund necessary for such construction as the safety or other interests of their commerce might require.

If that can be regarded as a system, which, in the experience of more than thirty years, has at no time so commanded the public judgment as to give it the character of a settled policy—which, though it has produced some works of conceded importance, has been attended with an expenditure quite disproportionate to their value—and has resulted in squandering large sums upon objects which have answered no valuable purpose—the interests of all the State require it to be abandoned, unless hopes may be indulged for the future which find no warrant for the past.

With an anxious desire for the completion of the works which are regarded by all good citizens with sincere interest, I have deemed it my duty to ask at your hands a deliberate reconsideration of the question with a hope that, animated by a desire to promote the permanent and substantial interests of the country, your wisdom may prove equal to the task of devising and maturing a plan which, applied to this subject, may promise something better than constant strife, the suspension of the powers of local enterprise, and exciting of vain hopes, and the disappointment of cherished expectations.

In expending the appropriations made by the last congress, several cases have arisen in relation to works for the improvement of harbors, which involve question as to the right of soil and jurisdiction, and have threatened conflict between the authority of the State and General Government. The right to construct a breakwater, jetty, or dam would seem necessary to carry with it the power to protect and preserve such constructions. This can only be effectually done by having jurisdiction over the soil. But no clause of the Constitution is found on which to rest the claim of the United States to exercise jurisdiction over the soil of a State, except that conferred by the eighth section of the first article of the Constitution. It is then submitted whether, in all cases where constructions are to be erected by the General Government, the right of soil should not be first obtained and legislative provision be made to cover all such cases.

For the progress made in the construction of roads within the territories, as provided for in the appropriations of the last Congress, I refer you to the report of the Secretary of War.

There is one subject of a domestic nature, which, from its intrinsic importance, and the many interesting questions of future policy which it involves, cannot fail to receive your early attention. I allude to the means of communication, by which different parts of the wide expanse of our country are to be placed in closer connection, for the purposes both of defence and commercial intercourse, and more especially such as appertain to the communication of those great divisions of the Union which lie on the opposite sides of the Rocky Mountains.

That the government has not been unmindful of this heretofore, is apparent from the aid it has afforded, thro' appropriations for mail facilities and other purposes. But the general will now presents itself under aspects more imposing and more purely national, by reason of the surveys ordered by Congress, and now in the process of completion, for communication by railway across the continent, and wholly within the limits of the United States.

The power to declare war, to raise and support armies, to provide and maintain a navy, and to call forth the militia to execute the laws, suppress insurrections, and repel invasions, was conferred upon Congress, as a means to provide for the common defense, and to protect a territory and a population now wide-spread and vastly multiplied. As incidental to and indispensable for the exercise of this power, it must sometime be necessary to construct military roads and harbors of refuge. To appropriations by Congress for such objects, no sound objection can be raised. Happily for our country, its peaceful policy and rapidly-increasing population, impose upon us no urgent necessity for preparation, and leave but few trackless deserts between assailable points and a patriotic people ever ready and generally able to protect them.

These necessary links, the enterprise and energy of our people are steadily and boldly struggling to supply. All experience affirms that wherever private enterprise will avail, it is most wise for the general government to leave to that and individual watchfulness the location and execution of all means of communication.

The surveys before alluded to were designed to ascertain the most practicable and economical route for a railroad from the Mississippi to the Pacific ocean. Parties are now in the field making explorations, where previous examinations had not supplied sufficient data, and where there was the best reason to hope the object sought might be found. The means and time being both limited, it is not to be expected that all the accurate knowledge desired will be obtained; but it is hoped that much and important information will be added to the stock previously possessed, and that partial, if not full reports of the surveys ordered, will be received in time for the transmission to the two Houses of Congress, on or before the first Monday in February next, as required by the act of appropriation.

The magnitude of the enterprise contemplated has aroused, and will doubtless continue to excite, a very general interest throughout the country. In its political, its commercial, and its military bearings, it has varied, great, and increasing claims to consideration. The heavy expense, the great delay, and at times fatality attending travel by either of the Isthmus routes, have demonstrated the advantage which would result from territorial communications by such safe and rapid means as a railroad would supply.

These difficulties, which have been encountered in a period of peace, would be magnified and still further increased in time of war. But whilst the embarrassments already encountered, and others under new contingencies to be anticipated, may serve strikingly to exhibit the importance of such a work, neither these nor all considerations combined can have an appreciable value, when weighed against the obligation strictly to adhere to the Constitution, and faithfully to execute the powers it confers.

Within this limit, and to the extent of the interest of the government involved, it would seem both expedient and proper, if an economical and practicable route shall be found, to aid, by all constitutional means, in the construction of a road which will unite, by speedy transit, the populations of the Pacific and Atlantic States.

To guard against misconception, it should be remarked that, although the power to construct or aid in the construction of a road within the limits of a territory is not embarrassed by that question of jurisdiction which would arise within the limits of a state, it is, nevertheless, held to be of doubtful power, and more than doubtful propriety, even within the limits of a territory, for the general government to undertake to administer the affairs of a rail road, a canal, or other similar construction, and therefore that its connection with a work of this character should be incidental rather than primary.

I will only add at present, that, fully appreciating the magnitude of the subject, and solicitous that the Atlantic and Pacific shores of the republic may be bound together by inseparable ties of common interest, as well as of common fealty and attachment to the Union, I shall be disposed, so far as my action is concerned, to follow the lights of the constitution, as expounded and illustrated by those whose opinions and expositions constitute the standard of my political faith in regard to the powers of the government. It is, I trust, not necessary to say that no grand-ur of enterprise, and no present urging inducement promising popular favor, will lead me to disregard those lights, or to depart from that path which experience has proved to be safe, and which is now radiant with the glow of prosperity and legitimate constitutional progress. We can afford to wait, but we cannot afford to overlook the ark of our security.

It is no part of my purpose to give prominence to any subject, which may properly be regard d as set at rest by the deliberate judgment of the people. But while the present is bright with promise, and the future full of demand and inducement for the exercise of active intelligence, the past can never be without useful lessons of admonition and instruction. If its dangers serve not as beacons, they will evidently fail to fulfil the object of a wise design. When the grave shall have closed over all, who are now endeavoring to meet the obligations of duty, the year 1850 will be recurred to as a period filled with anxious apprehension. A successful war had just terminated. Peace bro't with it a vast augmentation of territory. Disturbing questions arose, bearing upon the domestic institutions of one portion of the confederacy, and involving the constitutional rights of the states.

But, notwithstanding differences of opinion and sentiment which then existed in relation to details and specific provisions, the acquiescence of distinguished citizens, whose devotion to the Union can never be doubted, has given renewed vigor to our institutions, and restored a sense of repose and security to the public mind throughout the confederacy. That this repose is to suffer no shock during my official term, if I have power to avert it, those who have placed me here may be assured. The wisdom of men, who knew what independence cost—who had put all at stake upon the issue of the revolutionary struggle—disposed of the subject to which I refer, in the only way consistent with the union of these states, and with the march of power and prosperity which has made us what we are.

It is a significant fact, that from the adoption of the constitution until the officers and soldiers of the revolution had passed to their graves, or through the infirmities of age and wounds had ceased to participate actively in public affairs, there was not merely a quiet acquiescence in, but a prompt vindication of, the constitutional rights of the state. The reserved powers were unscrupulously respected. No statesman put forth the narrow views of casuists to justify interference and agitation, but the spirit of compact was regarded as sacred in the eye of honor, and indispensable in the great experiment of civil liberty, which, environed with inherent difficulties, was yet borne forward in apparent weakness by a power superior to all obstacles.

There is no condemnation which the voice of freedom will not pronounce upon us, should we prove faithless to this great trust. While men inhabiting different parts of this great continent can no more be expected to hold the same opinions, or entertain the same sentiments, than every variety of climate and soil can be expected to furnish the same agricultural products, they can unite in a common object, and sustain common principles essential to the maintenance of that object. The gallant men of the South and North could stand together during the struggles of the Revolution; they could stand together in the more trying period which succeeded the clangor of arms. As their united valor was adequate to all the trials of the camp and dangers of the field, so their united wisdom proved equal to the greater task of founding, upon a deep and broad basis, institutions which it has been our privilege to enjoy, and will ever be our most sacred duty to sustain.

It is but the feeble expression of a faith strong and universal, to say that their sons, whose blood mingled so often upon the same field, during the war of 1812, and who have more recently borne in triumph the flag of the country upon a foreign soil, will never permit alienation of feeling to weaken the power of their united efforts, nor internal dissentions to paralyze the great arm of freedom, uplifted for the vindication of self-government.

I have thus briefly presented such suggestions as seem to me especially worthy of your consideration. In providing for the present, you can hardly fail to avail yourselves of the light which the experience of the past casts upon the future.

The growth of our population has now bro't us, in the destined career of our national history, to a point at which it well behooves us to expand our vision over the vast perspective.

The successive decennial returns of the census since the adoption of the Constitution, have revealed a law of steady progressive development, which may be stated, in general terms, as a duplication every quarter century. Carried forward, from the point already reached, for only a short period of time as applicable to the existence of a nation, this law of progress, if unchecked, will bring us to almost incredible results.

A large allowance for a diminished proportional effect of emigration would not very materially reduce the estimate, while the increased average duration of human life, known to have already resulted from the scientific and hygienic improvements of the past fifty years, will tend to keep up through the next fifty, or perhaps hundred, the same ratio of growth which has been thus revealed in our past progress, and to the influence of these causes may be added the influx of laboring masses from Eastern Asia to the Pacific side of our possessions, together with the probable accession of the population already existing in other parts of our hemisphere, which, within the period in question, will feel, with yearly increasing force, the natural attraction of so vast, powerful, and prosperous a confederation of self-governing Republics, and seek the privilege of being admitted within its safe and happy bosom, transferring with themselves, by a peaceful and healthy process of incorporation, spacious regions of virgin and exuberant soil, which are destined to swarm with the fast-growing and fast-spreading millions of our race.

These considerations seem fully to justify the presumption, that the law of population above stated, will continue to act with undiminished effect through at least the next half century; and that thousands of persons who have already arrived at maturity, and are now exercising the rights of freemen, will close their eyes on the spectacle of more than one hundred millions of population embraced within the majestic proportions of the American Union. It is not merely as an interesting topic of speculation that I present these views for your consideration.

They have important practical bearings upon all the political duties we are called upon to perform. Heretofore our system of government has worked out what may be termed a miniature scale, in comparison with the development which it must thus assume, within a future so near at hand, as scarcely to be beyond the present of the existing generation.

It is evident that a confederation so vast and so varied both in numbers and territorial extent, in habits and in interests, could only be kept in national cohesion by the strictest fidelity to the principles of the Constitution, as understood by those who have adhered to the most restricted construction of the powers granted by the people and the States. Interpreted and applied according to those principles, the great compact adapts itself with healthy ease and freedom to an unlimited extension of that benign system of federative self-government, of which it is our glorious, and, I trust, immortal character.

Let us then, with redoubled vigilance, be on our guard against yielding to the temptation of doubtful powers, even under the pressure of the motives of conceded temporary advantage and apparent temporary expediency.

The minimum of Federal Government, compatible with the maintenance of national unity and efficient action in our relations with the rest of the world, should afford the rule and measure of construction of our powers under the general clauses of the Constitution.

A spirit of strict deference to the sovereign rights and dignity of every State rather than a disposition to subordinate the States into a provincial relation to the central authority, should characterize all our exercise of the respective powers temporarily vested in us as a sacred trust from the generous confidence of our constituents.

In like manner, as a manifestly indispensable condition of the perpetuation of union, and of the realization of that magnificent national future adverted to, does the duty become yearly stronger and clearer upon us, as citizens of the several States, to cultivate a fraternal and affectionate spirit, language and conduct, in regard to other States, and in relation to the varied interests, institutions, and habits of sentiment and opinion, which may respectively characterize them. Mutual forbearance, respect, and non-interference in our personal action as citizens, and an enlarged exercise of the most liberal principles of comity in the public dealing of State with State, whether in legislation, or in the execution of laws, or the means to perpetuate that confidence and fraternity, the decay of which a mere political union, on so vast a scale, could not long survive.

In still another point of view is an important practical duty suggested by this consideration of the magnitude of dimensions, to which our political system, with its corresponding machinery of government, is so rapidly expanding.—With increased vigilance does it require us to cultivate the cardinal virtues of public frugality and official integrity and purity. Public affairs ought to be so conducted that a settled conviction shall pervade the entire Union that nothing short of the highest tone and standard of public morality marks every part of the administration and legislation of the government. Thus will the Federal system, whatever expansion time and progress may give it, continue more and more deeply rooted in the love and confidence of the people.

That wise economy, which is as far removed from parsimony as from corrupt and corrupting extravagance—that single regard for the public good, which will frown upon all attempts to approach the Treasury with insidious projects of private interest cloaked under public pretexts—that sound fiscal Administration, which, in the Legislative department guards against the dangerous temptations incident to overflowing revenue, and in the executive maintains an unsleeping watchfulness against the tendency of all national expenditure to extravagance—while they are admitted elementary political duties, may, I trust, be deemed as properly adverted to and urged, in view of the more impressive sense of that necessity, which is directly suggested by the considerations now presented.

Since the adjournment of Congress, the Vice-President of the United States has passed from the scenes of earth, without having entered upon the duties of the station, to which he had been called by the voice of his countrymen. Having occupied, almost continuously, for more than 30 years, a seat in one or the other of the two Houses of Congress, and having, by his singular purity and wisdom, secured unbounded confidence and universal respect, his failing health was watched by the nation with painful solicitude. His loss to the country, under the circumstances, has been justly regarded as irreparable.

In compliance with the act of Congress, of March 2, 1853, the oath of office was administered to him on the 24th of that month, at Ariadne estate, near Matanzas, in the Island of Cuba; but his strength gradually declined, and was hardly sufficient to enable him to return to his home in Alabama, where, on the 18th day of April, in the most calm and peaceful way, his long and eminently useful career was terminated.

Entertaining unlimited confidence in your intelligence and patriotic devotion to the public interest, and being conscious of no motives on my part which are not inseparable from the honor and advancement of my country, I hope it may be my privilege to deserve and secure, not only your cordial co-operation in great public measures, but also those relations of mutual confidence and regard which it is always so desirable to cultivate between members of co-ordinate branches of the Government.

FRANKLIN PIERCE.

Washington, D. C., Dec. 5, 1853.

MOORE'S RURAL NEW-YORKER.

ROCHESTER, DECEMBER 10, 1853.

### SPECIAL NOTICES.—TO AGENTS, &c.

☞ AGENTS.—Any person so disposed can act as agent for the RURAL NEW-YORKER,—and all who remit according to terms will be entitled to premiums, &c.

☞ THE RURAL is published strictly upon the CASH SYSTEM—sent no longer than paid for—and all orders should be in accordance with terms.

☞ OUR *lowest* club price is $1.25 for any number of copies over 20—and $1,50 under that number, unless a full club of twenty is obtained.

☞ IN making up clubs for the RURAL, the Wool Grower and Stock Register can be added at 35 cts. a copy, which is the lowest club price.

☞ EXTRA numbers of the RURAL will be forwarded to all disposed to aid in augmenting its circulation.

☞ SEE Terms, Premium List, &c., on next page.

J. H. STANLEY, Esq., is agent for the RURAL NEW-YORKER in Le Roy and vicinity.
H. C. WHITE & Co., West Seneca-St., Buffalo.
W. H. McDANALD, 102 Nassau-St., New York.

### The President's Message.

IN order to give this important State Paper, we omit a portion of our usual variety. As the Message was received later than we anticipated—and after our regular time for putting the RURAL to press—we are unable to commence mailing this number as promptly as usual, yet hope, by night work and extra assistance, to complete the whole edition as early in the week as heretofore.

—Of the merits of the document each reader can judge for himself. We have no comments to offer—at least not until we shall have given it a careful perusal.

### A Personal and Particular Request.

As our Prospectus is omitted this week, we offer a few words here relative to the forthcoming volume of the RURAL. As our readers are already apprised, the extraordinary success of this paper during the past year, has induced us to make more liberal expenditures and greater efforts than ever before, to *increase its value* and *extend its circulation and usefulness*. Our arrangements for 1854 include an *increased expenditure of several thousand dollars*—to meet which we confidently anticipate a large, though perhaps not corresponding, increase of subscribers. Relying upon the continued support and encouragement of its present friends—and we are confident no paper has more ardent, influential, or generous supporters—and believing that *they* will kindly lend their assistance to introduce the RURAL to thousands who are waiting for an invitation or opportunity to become subscribers, we can "face" the additional cyphers with some degree of composure. And yet here is a practical and important question—Will our readers generally second our efforts, by exercising personal influence in behalf of the enterprise? Placing the paper upon its merits alone, and soliciting no patronage as such, we frankly ask *each* and *all*—you, reader—to see what may be done toward augmenting our subscription list.

The season for obtaining subscriptions and renewals has already arrived, and we trust former agents and subscribers are prepared to open the canvass in earnest. Now is the time for those who formed clubs last year, to secure renewals and obtain new subscribers—and we hope each will resolve to increase, if not double, his former list. This is not so difficult a matter as many suppose—and those who take, and can therefore commend the paper, and *show a number*, are generally the most successful in procuring subscribers. A little personal effort—a few words, fitly spoken—will procure many subscribers, and often without devoting special time to the business. Give neighbor JONES, and SMITH and JOHNSON, (and *all the borrowers*,) an invitation to subscribe at the club price—and certainly every farmer and head of a family can afford to take the RURAL, even at the price of single subscription: many aver they would not be without it for ten times the amount. Farmers are now most prosperous, (vide their heavy purses, and the high prices of farm products,) and each can afford to be happy, and impart pleasure and instruction to his family, when the only investment necessary is the paltry amount of a year's subscription to the RURAL NEW-YORKER!

—Reader, will you not have the kindness to give this matter a little attention and action—thereby seconding and sustaining us, and benefiting your neighbors and acquaintances? Please do so, and "report progress" at your convenience. Your report will of course be favorable.

☞ Canal business is substantially closed, tho' the canal is still navigable. No more freight will be shipped from here this season.

### Washington News.

BOTH houses of Congress met and organized on Monday. Senator ATCHISON called the Senate to order at 12¼ o'clock and after the presentation of credentials, a resolution was adopted, directing the Secretary to notify the House that a quorum of the Senate was present, and ready to proceed to business.

Notices of several bills to be hereafter presented were given after which the Senate adjourned.

In the House. J. W. FORNEY former clerk of the house called that body to order; after which the members proceeded to elect officers. LYNN BOYD of Ky., was chosen Speaker, J. W. FORNEY Clerk, and the remaining officers were reelected. A message was sent to the Senate notifying them of the organization, and another to the President of similar import. The members then selected their seats by lot and soon after adjourned.

TUESDAY, Dec. 6—*Senate.*—After reading the journal, a message was received from the House, announcing the appointment of a Committee to inform the President that both Houses were organized, and ready to receive any communication he might have to make.

Mr. DODGE, of Iowa, offered a resolution that a like Committee be appointed on part of the Senate, and Messrs. DODGE and BELL were appointed.

Mr. GWIN introduced a bill granting lands to California for a Railroad from San Francisco, up the valley of the Sacramento to the boundary of Oregon.

Mr. PETIT offered a resolution directing the Committee on commerce to inquire into the expediency of making Michigan City, Ia., a port of entry. Laid over.

Mr. CHASE gave notice of a bill ceding to Ohio all the public lands remaining unsold in that State.

During the absence of the Committee, Mr BRIGHT said that a bill was passed by the House at the last session, to indemnify the State of Indiana for certain lands ceded to her on her admission into the Union in 1818, but which lands had been previously taken by settlers.

This bill, he said, owing to some neglect on the part of an officer of the House, failed to receive the signature of the President of the Senate and of the United States. Under those circumstances Mr. B. asked to introduce the same bill now. Leave was granted, and the bill passed.

Mr. CHASE gave notice of the Homestead bill.

*House*—Several additional members appeared and qualified.

At ten minutes past 1, the President's message was delivered by SIDNEY WEBSTER, Private Secretary, and read.

OFFICIAL CANVASS.—The Tribune of Monday announces the canvass of the vote for officers on general ticket, at the late election in this State. The result had not been announced by the Board of State Canvassers at Albany, but the Tribune thinks there is no probability of any variation from its figures, which are as follows:

| | Whig. | Adam'c. | Free Dem. |
|---|---|---|---|
| Sec. of State | 160,592 | 99,835 | 96,073 |
| Comptroller | 166,609 | 92,888 | 96,380 |
| State Treasurer | 160,401 | 97,913 | 99,927 |
| Attorney General | 169,245 | 92,514 | 97,098 |
| Canal Com'r | 161,842 | 97,902 | 96,954 |
| State Prison Ins. | 160,638 | 98,339 | 96,422 |
| State Engineer | 164,949 | 93,172 | 97,598 |
| Judge Appeals | 165,700 | 176,422 | |
| Clerk Appeals | 161,743 | 92,859 | 97,056 |

DANGEROUS COUNTERFEIT!—Dye's Bank Mirror is received, and announces a dangerous counterfeit $100 note on the Bank of Utica. The plate has been seized and secured by the Cincinnati police. The figures 100 are on each corner of the bill; on the left is the figure of a female holding a sheaf, with one arm resting on a pillar; on the right is a ship under sail; the vignette is the New York State arms. The Mirror says,—"Let every paper, East, West, North and South, give warning of this dangerous note."

STEAMER ASHORE.—The American steamer Humboldt, bound from Havre to New York, was announced by telegraph, Dec. 6, fast ashore off Halifax; and fears are expressed that she will not be set afloat. The passengers are all safe.

—— The steamers of the Michigan Central Railroad Line have laid up for the winter.

—— The exports of Specie from Boston in November were $594,000.

—— Some of the Pennsylvania papers nominate G. M. Dallas for the next President.

—— The lumber production of Oregon and California is increasing at an enormous rate.

—— The Charleston Mercury takes ground against the annexation of the Sandwich Islands.

—— Elizabeth Harker has been sentenced to death in Huntington county, Pa., for poisoning her sister.

—— The city authorities of Springfield, Ill., are agitating the propriety of lighting that place with gas.

—— The ravages of yellow fever are scarcely over in New Orleans, when it is again afflicted with the cholera.

—— F. G. Ruffin, editor of the Southern Planter, has been elected Secretary of the Virginia Ag. Society, at a salary of $1,500 per annum.

—— The Clement C. Clay, elected to the U. S. Senate from Alabama, is a son of the former Senator of the same name.

—— The Norfolk Herald states that the M. D.'s of that city have struck for higher fees—300 per cent. rise in the case of visits.

—— The receipts of the Hudson River Road for November were $123,525, against $88,698 for the same week of last year.

—— The oldest preacher in the world is Rev. George Fletcher of London, who, in February next, will be one hundred and seven years of age.

—— Norfolk, Va., is rapidly improving, and beginning again to assume the aspect of a commercial mart. This is ascribed to her railroads.

—— New Bedford ranks as the third port in the United States in point of shipping, greatly exceeding Philadelphia or Baltimore.

—— The Governor of Vermont has appointed Thursday, the 8th of December, and the Governor of Louisiana Thursday, the 22d of December, to be observed as a day of Thanksgiving.

—— Margaret Simons has been arrested at Chicago for murdering her own daughter, aged twelve years, by beating and drowning her in a tub. The mother was intoxicated.

# Foreign Intelligence.

## Arrival of the Steamship Europa.

THE Europa, from Liverpool, arrived at New York, Dec., 6. She left on the 17th and experienced very heavy weather during the passage

The news from the seat of war is very contradictory. Reports of the Turkish and Russian defeats are about equally balanced.

The Sultan officially announces that he will himself take the field at the head of his army in the spring.

A new note is said to be proposed, but neither the Czar or the Sultan will listen to it.

The course that Britain will take is kept secret.

Direct French correspondondence says that Napoleon is amassing troops between Strausburg and Marseilles, so that he can send off, in less than five days if necessary, 100,000 men for foreign service.

LATEST.

The report that the Turks had recrossed the Danube at all points except Kalafat—which they s ill retained and have strongly fortified—is confirmed from Hermstadt.

They retired without battle. Some grand movement is in contemplation, which the passage of the Danube has in the meantime served to mask.

France has formally announced to Austria that if she gives refuge to armed Russians, retreating from the Turks, France will regard it as a declaration of War.

Vienna letters of the 14th say that the Turks had attacked Gallertz and Braila. Former advices mention that they were moving on both places.

The Russians are sending their sick and wounded to Kircheneau, a town of Bessardon, Moldavia being insufficient to contain them.

The mails at Liverpool on the morning of the Europa's sailing, would indicate that there had been a good deal of fighting wherever the posts of the two armies came in contact, but without any result of importance.

Reinforcements were hurrying along to the Russians, and additional levies continue to arrive at the Turkish camp.

If the season will permit operations of magnitude, assaults are to be made upon the Russian army, which being much extended, is quite vulnerable.

The Island opposite Guirgero has been the scene of severe contests. It has been taken and retaken several times by both sides, and at present remains in the hands of the Turks.

LIVERPOOL MARKET.

Breadstuffs.—Wheat and flour in fair demand during the week. Wheat firmer—quotations 1d dearer.

Flour 6da1s dearer.

Indian corn maintained price, without animation.

Macon & Son quote prime Western Canal flour 37sa37s 6d. Philadelphia, Baltimore and Ohio 38s.

Denniston & Co., give higher quotations, 39s 6d for Ohio.

Richardson & Bro. call white wheat 10s 4da10s 9da10s6d.

Indian corn—prime 45sa46s. Secondary dull of sale.

The weather continued favorable for agricult ure.

LIVERPOOL PROVISION MARKET.

Demand at full rates.

Pork dull—holders pressing on the market.—American Bacon very dull and rather lower.—Small sales of Lard 58s. Tallow 1s6da2s dearer. Ashes in moderate request. Pearls 27sa28s. Pots 30sa31s6d.

—— Intelligence has reached the Department of State, from our Minister in England, that the Fishery treaty sent out a few weeks since, will be ratified by the British Government.

—— Capt. J. Everson, of Memphis, Tennesse, has recently secured a patent for glass tubes to conduct water from wells and cisterns, which supersede those made of lead, iron or wood.

—— So great is the demand for silver coin, that the British government has been deliveri g florins to the public through the bank at the rate of a ton, or 73,620 pieces, per day for three weeks.

—— An old lady died recently in Newburyport, who was a belle in her youth, and refused to marry John Quincy Adams. She never had but one reason for regretting it—the White House.

# News Paragraphs.

☞ There are some exceedingly stylish turn outs now to be seen about San Francisco. The horses are brought over the plains, and the carriages are imported from New York, at an expense of four hundred dollars for freight alone. It costs three hundred dollars a month to keep a pair of horses in the Pacific metropolis. The hackney carriages are thirty in number; and the regular charge, five dollars an hour.

☞ A slave, once the property of Blennerhasset, is now living on the plantation of Capt. Scott, near Jefferson, Texas. He was on Blennerhasset Island when the militia were sent to arrest his master, and remembers the incident well. He describes Aaron Burr as being the finest gentleman he ever saw, and says, "white women in these days can't come up to what Mrs. Blennerhasset was."

☞ The first bell in Haverhill, Mass., was purchased in 1781; before that time there was a singular substitute, as appears by a vote passed in 1630—"That Abraham Tyler blow his horn half an hour before meeting time on Lord's day, and on lecture days, and receive one pound of pork annually for his services, from each family."

☞ The propeller Independence, Capt. John McKay, left her dock at the head of Portage river on the evening of the 21st ult, with a heavy freight of winter supplies for Ontanagon and Lapointe, and a large number of passengers. When about a mile out her boiler burst, tearing the boat to atoms, and killing four persons.

☞ The proprietors of the Cumberland Iron Works, on Cumberland river, Tennessee, have engaged the services of twenty Chinese Coolies as iron workers. They are expected to arrive shortly at Cincinnati, from whence they will be forwarded to their destination. It is stated that the Chinese are very expert in working iron.

☞ A despatch was transmitted from New Orleans to New York, Dec. 3d, in a single circuit over the wires of the National Telegraph. The distance is over 2,000 miles. It is usual to break the circuit into relays of four or five hundred miles each, as the electric current becomes too weak to work the instrument a greater distance.

☞ Returns from the supplementary election in Massachusetts, for Representatives in the towns which before failed to make a choice, indicate an increased whig majority. The House now stands 197 whigs to 11 democrats and 100 coalitionists. Whig majority over all others, 86.

☞ Three men from Philadelphia shot a bear in Jersey, about forty miles from that city, while hunting on Thanksgiving day. The bear turned upon Mr. Loomis after being wounded, when a ball, fired by Mr. Williams, saved the latter from a rough encounter.

☞ The Internal Trade of the United States is a source of vast public and private wealth, almost surpassing belief. It now amounts, Lake and Western River trade, to about five hundred millions a year, and nearly eleven millions of our people are directly interested in its prosperity.

☞ The Roman Catholic Bishop of Buffalo has addressed a letter t> the congregation of St. Louis, in that city, threatening to excommunicate them if they do not conform to the decision of the Papal Nuncio, and deliver their church property into his hands.

☞ On Sunday of last week, the body of Mrs. Margaret Fisher was buried at Liverpool village, and the grave was robbed the same night. Suspicion rests on the students of Syracuse Medical College,—one has been arrested, and warrants are out for more.

☞ Five vessels arrived at New York Dec. 2d, from Europe, bringing in the aggregate 1,969 passengers; and there were only six deaths out of the whole number during the passage. These being on two of the vessels, the others not having had a single death.

☞ The Governor of South Carolina, in his Message to the Legislature, recommends them to support the President, as he is "a fair exponent of South Carolina principles!" This, in many quarters, will be regarded as a somewhat of doubtful compliment.

☞ It is said that when the Emperor of Russia refused the cushion offered to him at Olmutz to kneel on, at the religious service, he said, "I am dust like other men, and I shall return to dust. Before God and the Church all men are equal."

☞ At a public sale of slaves in Charleston, a few days since, a girl of sixteen was sold for $770, one of eighteen for $970, and one of twenty for $760; a man of forty, a laborer, brought $770, and a boy of eighteen, apprentice to a tailor, $900.

☞ It is understood that Mr. Guthrie will propose a reduction of duties to the extent of $7,600,000 by adding to the free list to that amount. Salt, which now pays 20 per cent., and yields $200,000, is put in the free list.

☞ Three Cattaraugus Indians walked into Buffalo Creek through the Draw of a Bridge that had been left open. The night was dark. Two of the men were drowned. The third clung to the abutment of the Bridge. They were brothers.

☞ A freight train of seventy-five cars ran over a cow near Whitehall, Dec. 3d, throwing the engine and several cars from the track. The engineer, Mr. McMullen, was killed, and two cars full of hogs were pitched into the canal.

☞ A white woman, a milliner, of industrious habits, and having a large family, was convicted last week, at Charleston, of larceny, and sentenced to be imprisoned two months, and to receive one lash on the bare back.

☞ It appears by Comptroller Flagg's Report that the expenses of the city government in New York, during the present year, are expected to reach $3,600,000—or an average of about $6 for each inhabitant.

☞ A negro in Petersburgh, Va., took up and "toted" on his shoulder a hogshead of tobacco from the depot to the Centre Warehouse. It weighed 385 pounds. The Southside Democrat says this is a fact.

☞ The Sandwich Islands are quiet again. The people are reported satisfied with the change of the Ministry. The Annexation feeling is slowly gaining ground, but makes no premature demonstration.

☞ Gen. Lano, late Governor of New Mexico has gone to Washington for the purpose of contesting the seat of Padre Gallegoe, the newly elected delegate from New Mexico.

☞ The Newark Advertiser states that a grave stone recently cut at one of the establishments in that city, has at the top a daguerreotype of the deceased person neatly set in the stone.

☞ The Portland Advertiser is informed that 7,000,000 feet of lumber, having been brought down by the fall freshets, are now lodged at the Bonney Eagle boom, on the Saco river.

# Commercial.

## BUSINESS AND FINANCE.

THE money market is very quiet and easy just at present. There does not seem to be any exciting cause operating either to advance or depress the funds; and the unusual long interval which has elapsed since the arrival of a foreign steamer, and the hourly expected coming of the Europa, now several days due, tend to hold in equipoise the financial scale.

The California steamer Prometheus which arrived on the same day with the Illinois, but at a later hour, brought in addition to the latter's invoice, a million and a half in gold; making two and a half millions by the two arrivals.

The steamship Arabia, which sailed for Liverpool, Nov. 30, took out $672,000 in specie.

The weekly statement of the New York banks shows a continuance of the expanding movement of the loans and discounts of another million, making two millions from the lowest point. The deposits also continue to increase, being twelve hundred thousand dollars larger than in the previous statement.

We learn from the New York Times that the amount of imports of foreign merchandize at that port, for the month of November, was $12,130,385, being an increase over those during the same period of last year of $3,774,585. The total imports at New York for eleven months of the present year, reach the very large figure, in round numbers, of $177,000,000, being an increase over the same period of last year of near $60,000,000.

The exports of domestic produce for November were $7,489,137; increase this year of about $1,000,000. Total for the eleven months, to Dec. 1st, $51,122,000. Export of specie for the some time $23.627,000. Deposite at the mint for coinage, $48,131,000. Every branch of industry, domestic and foreign, has been stimulated to unusual activity during the year, and commercial transactions have increased enormously with a prospect of still further and an indefinite extension.

Since the above was in type a telegraphic despatch, announces the arrival of the steamer Europa, but with no news to vary essentially the present aspect of things except an advance in breadstuffs.

# Market Intelligence, &c.

RURAL NEW-YORKER OFFICE,
Rochester, Dec. 6, 1853.

THE steamer Europa arrived to-day, and her news announces another advance in breadstuffs abroad. The consequence is a corresponding advance in our own market, and wheat may now be quoted at $1,56@1,58, with very little in the market at that. Flour will probably also be higher, although no change of quotations is made to-day. Oats are two cents higher than last quotations and cannot be bought probably under 44c.

Beef and Pork are lower, and the market dull. Sellers seem to be more plentiful than buyers in the present warm and wet state of the weather, and some lots of inferior quality have gone begging for a purchaser.

Butter, with us, is full up to prices warranted by the eastern market, and may be quoted from 16 to 18c.

The canal is still open and the water full banks, affording an uninterrupted navigation, but boats are to a great extent withdrawn, and laid up for the season. Very few clearances are made from this point.

### Rochester Wholesale Prices.

## NEW YORK MARKET.

NEW YORK, December 6, 1853.

Flour—There is increased firmness in low grades of State and Western flour, under the favorable advices by the steamer. The arrivals are light and freights at close less firm. Better grades have been in brisk demand, while the low grades are quiet. Canadian held with some firmness at $7@7,06. Sales Western canal at $6,87½@7 for common to straight State; $7@7,06 for common to good Ohio and mixed to fancy Michigan and Indiana, closing buoyant.

Grain.—Wheat is in good demand and market rather better at the close. Inquiry good and arrivals light.—Sales white Michigan at $1,75; white Genesee $1,77@1,78; white Pennsylvania $1,73; white Canadian $1,70@1,73; white Southern $1,70@1,72; red Southern $1,56.

Barley more plenty and lower. Sales mixed at 80@84c.

Oats in brisk demand at 50@53c for State and Western. Light stock of good.

Corn opened rather dull and heavy, but at close more active and firmer. Sales at 80@81c for Western mixed, 81@82½c Southern yellow and white do., 78@80c new Southern do.

Provisions—Market again better; demand fair; sales Pork at $13,50@13,67½ mess; 11@11,50 prime.

Dressed hogs sells at 6@6¼c.

Lard steady; demand moderate; sales 9½@10 old.

Butter in fair demand at 10@13c Ohio; 16@19 State.

Cheese in fair supply and dull at 7½@9½c.

## ALBANY MARKET.

ALBANY, Dec. 5.—Business continues moderately active, with but little change to notice in the value of any of the leading articles.

Flour and Meal—There is no change to notice in the value of Western and State Flour. The demand is not active, but fair for the season, and mainly for the supply of the river and the home trade. Ordinary to straight State $6,75@6,87; mixed Indiana and Michigan $6,87@7; straight Indiana and Michigan $6,87@7; favorite State $6,87@7,12; common to good Ohio $6,87@7; fancy Indiana and Mich. $6,87@7; fancy Ohio $7,00@7,25; fancy Genesee $7@7,25; extra Indiana and Mich. $7,12@7,37; extra Ohio $7,25@7,37; extra Genesee $7,25@7,75.

Corn Meal and Buckwheat Flour are unchanged in value with a moderate business doing.

Grain—A fair milling demand for wheat, with but little offering. Sales Upper Lake, at $1,53. Corn, Western mixed can only be quoted nominal at 79@80c. Barley opened dull, with a fair supply offering. Sales mixed, in store, at 81c.; good two-rowed, at 73c, afloat; fair four-rowed, at 84c. Oats steady, and in better request, at 51c.

## BUFFALO MARKET.

BUFFALO, Dec. 5.—The market continues without any change this morning. The inquiry is only moderate and confined to lots for the retail trade at $6,12½@6,25. The absence of the steamer's news checks transactions in grain and we note no sales.—[Com. Adv.

## NEW YORK CATTLE MARKET.

NEW YORK, Nov. 28.—For Beeves at the Washington Drove Yard, corner of Fourth Avenue and Forty-Fourth street, and at Chamberlain's Hudson River Bull's Head, foot of Robinson street. For Cows and Calves, Sheep and Lambs, and also for Beeves, at Browning's, in Sixth street, near Third avenue, and also at O'Brien's Central Bull's Head, (for Cows, Calves and Beeves only,) No. 9 Sixth street, and at Chamberlain's.

At Allerton's Washington Drove Yard—Offered to-day, 1,606 Beef Cattle; offered during the week, 1,653.

Prices.—The supplies of Beeves have fallen off a little since our last report, and prices are something higher in consequence. The range of the market, to-day, was from 7 to 10 cents per pound.

Cows sold at from $30@60, as in quality.

Veal Calves at 4@6¼c. Sheep $2,50 to $9.

At Browning's—(Lower Bull's Head)—Offered, 342 Beef Cattle, 51 Cows and Calves, and 2,000 Sheep and Lambs.

Prices of Beeves ranged from $5,50@8,50 ₱ hundred.

Cows and Calves $25@55.

Sheep, from $2,75 to $7; Lambs from $1,50@5,50.

At Chamberlain's—(Hudson River Bull's Head)—On sale 300 Beef Cattle, 30 Cows and Calves, 25 Veal Calves, and 3,200 Sheep and Lambs.

Beef Cattle ranged at from 7@9½c per lb.

Cows and Calves, $25, 10@65. Veal Calves 5@7c. ₱ lb.

Sheep $3, 3,50, 4,50@6. Lambs $2.50, 3@4,50—all sold.

At O'Brien's—(No. 9 Sixth street)—At market, 175 Beef Cattle; 30 Cows and Calves. Sales of the former at from $6@9, as in quality, and the latter at from $30@40.

## ALBANY CATTLE MARKET.

ALBANY, Dec. 5.—W. W. Woolford's, Bulls' Head, Washington street.

Beef Cattle—510 at market. Prices—Extra, $7,50; 1st quality, $7,00; 2d do. $6,50; 3d do, $6.

Cows and Calves—10 in market. Prices—$20, 25@30.

Sheep and Lambs—1,134 in market. Prices at from $3, $@4.25.

Hogs—260 in market. Prices at from $5, 5,50@5,75.

## CAMBRIDGE CATTLE MARKET

CAMBRIDGE, Nov. 30.—At market, 1,614 Cattle, about 1,400 Beeves, and 214 Stores, consisting of Working Oxen, Cows and Calves, yearlings, 2 and 3 years old.

Hogs—Prices have declined, and now range from $5,75 @7 ₱ 100 lbs.

Sheep and Lambs—There are no changes. Prices, $2,-50@6 each.

# THE RURAL FOR 1854.

## Rare Inducements to Agents and Others.

As heretofore announced, the Fifth Volume of the RURAL NEW-YORKER, for 1854, will be materially improved, the Proprietor having determined that it shall in all respects excel either of its predecessors, and all contemporary journals. He also offers greater inducements than ever before to each and all disposed to act as agents or form clubs. The attention of all interested is respectfully invited to the following list of very liberal

## PREMIUMS FOR SUBSCRIBERS!

1. SEVENTY-FIVE DOLLARS, IN CASH, to the person sending us the greatest number of yearly subscribers (six month subscriptions to be counted proportionally) to the RURAL NEW-YORKER—remitting payment according to our club terms—previous to the 15th day of April, 1854.

2. FIFTY DOLLARS, IN CASH, to the person sending us the second largest number, as above.

3. THIRTY DOLLARS, IN CASH, to the person sending us the next (third) greatest number.

4. TWENTY DOLLARS, IN CASH, to the person sending us the next (fourth) greatest number.

5. FIFTEEN DOLLARS, IN PLATE OR BOOKS, to the person sending the next (fifth) greatest number.

6. TWELVE DOLLARS, IN PLATE OR BOOKS, to the person sending the next (sixth) greatest number.

7. TEN DOLLARS, IN PLATE OR BOOKS, to the person send the next (seventh) greatest number.

## JANUARY PREMIUMS!

1 TWENTY-FIVE DOLLARS, IN CASH, to the person sending us the largest number of subscribers according to our terms, previous to the 1st day of January, 1854.

2. FIFTEEN DOLLARS, IN CASH, to the person sending the second largest number, as above.

3. TEN DOLLARS, IN CASH, to the person sending the third largest number as above.

☞ Persons competing for these Premiums must mail their remittances on or before the 31st of December. They are not excluded from the April prizes, so that one person may secure *One Hundred Dollars, in Cash.*

[In order to give Subscribers, Local Agents and Post-Masters a fair and equal chance, traveling agents, post-riders and citizens of Rochester are excluded from competition for any of the above Premiums.]

## SPECIFIC PREMIUMS.

In order to reach and reward EVERY ONE who may lend a portion of influence in support of the RURAL NEW-YORKER, we offer to those who do not compete for either of the preceding prizes, the following liberal gratuities:

1. FIVE DOLLARS, IN CASH, or a copy of WEBSTER'S UNABRIDGED DICTIONARY, (or $6 in Ag'l Books,) TO EACH PERSON sending payment for FIFTY or more yearly copies (six month subscriptions proportionally,) according to our terms, previous to the 15th of April, 1854.

2d. FIVE DOLLARS, in Books, or four extra copies of the RURAL, to every person remitting payment for FORTY or more subscribers, as above.

3d. THREE DOLLARS, in Books, or a handsomely bound volume of the RURAL for 1853, to every person remitting for THIRTY subscribers.

4th. To every one remitting for TWENTY copies, ($25,) we will give an extra copy of the RURAL, and four (the present and three past) volumes of THE WOOL GROWER AND STOCK REGISTER—or, if preferred, an extra copy of the RURAL and $1,50 in Books.

5th. To every one remitting for TEN copies, ($15.) an extra copy of the RURAL and three volumes (past or present) of the WOOL GROWER—or, instead of vols. W. G., $1 in Books.

6th. To every one remitting for six copies, ($10,) an extra copy of the RURAL, either volume of the Wool Grower, and a bound Vol. of Gen. Farmer for 1848 or '49.

7th. To every one remitting for THREE copies ($5.) either volume of the Wool Grower, *and* a bound volume of Genesee Farmer for 1848 *or* '49.

8th. To every person remitting for ONE copy, ($2.) we will give a copy of either volume Wool Grower, *or* the Farmer for 1848 or '49, as preferred.

All competitors for premiums are expected to adhere strictly to the following

## TERMS IN ADVANCE:

TWO DOLLARS A YEAR. Three Copies, one year, $5—Six Copies for $10—Ten Copies for $15—Twenty Copies for $25, and any additional number at the same rate. Names of subscribers written on the papers if desired, however large the club. Club papers sent to different offices if desired.

☞ Specimen numbers, &c., furnished free to all disposed to compete for the Premiums, or who desire to extend the circulation of the NEW-YORKER. Subscription money, properly enclosed, may be mailed at our risk, if addressed to D. D. T. MOORE,

November, 1853. ROCHESTER, N. Y.

*HALLOCK'S*

**AG'L WAREHOUSE AND SEED STORE.**

*No. 21 Exchange St., Rochester, N. Y.*

THE subscriber, late from the Establishment of Emery & Co., Manufacturers at Albany, where he has been engaged for the past six years, has been appointed their SOLE AGENT in Rochester and Western New York, for the sale of

EMERY'S CELEBRATED RAILROAD HORSE-POWERS AND THRESHING MACHINES; CIRCULAR AND CROSS-CUT SAW MILLS, FEED MILLS, CORN-STALK AND HAY-CUTTERS, ETC,

adapted to the Power, and now offers them at manufacturer's prices, with the transportation added, and subject to the warrantee, as follows:—"To work to the satisfaction of purchasers, as represented in Circulars and Catalogues, or to be returned within three months, and full purchase money to be refunded." The attention of Farmers is solicited, and a careful investigation into the construction of this Power, and its comparative merits, as well as price requested, before purchasing elsewhere. He is also agent for their

*COMBINED REAPER AND MOWER,*

and keeps constantly on hand, Plows, Hay-Cutters, Corn Shellers, Seed Planters, &c., &c., comprising a complete and extensive stock of Agricultural and Horticultural Implements generally, together with a full assortment of Field and Garden Seeds, of the best Imported and Shaker growth.

He is also agent for the sale of Seymour and Morgan's New York Reaper, Pierpont Seymour's Grain Drills and Broad-cast Sowers, Wheel-Cultivators, Gang Plows, Clover Hullers, Cider Mills, Clover Gatherers, Horse Rakes, Scythes and Snaths, Hand Rakes, Grind Stones, &c.

He will be prepared to furnish dealers with Dunn and Taylor's well-known Scythes; also Manure, Straw, and Hay Forks, Snaths, Rifles, and other haying tools at manufacturers' prices, wholesale and retail.

Particular attention is called to a NEW PLOW, which is believed to be the best cast iron Plow ever offered, and which is warranted to do better work, with less expense of team, than any Plow heretofore sold in Rochester—while the price is less than any other equally well finished.

The "uniform one-price cash system" will be adopted, with prices as low as the cost of articles, and just compensation for labor and time, will allow.

Farmers and others are invited to call and examine the stock of Machines and Implements, and are assured no effort shall be wanting to meet promptly the wants of a discriminating public.

☞ Circulars and Catalogues furnished gratis on application personally or by mail. E. D. HALLOCK,
206tf No. 21 Exchange st., Rochester.

A RARE CHANCE.—For sale, a large SPANISH JACK, thirteen hands, well proportioned, and a first rate stock getter. He is perfectly kind and docile, and weighs between seven and eight hundred pounds. For further information call upon or address, post-paid,

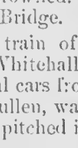
Oneida Lake, Madison Co., N. Y.

**VALUABLE FARM FOR SALE IN GENESEE COUNTY.**



I AM about to quit farming and have concluded to offer my Farm for sale. There are few farms more valuable or desirable for any person who wishes a good farm. It is located one mile north of the village of Batavia, on Bank street, and is situated on both sides of the road, with the buildings located nearly in the centre of the farm, so that from them nearly all of it can be seen at a glance. It contains about two hundred and twenty acres, and there are about one hundred and ninety acres of improvements, of which one hundred and seventy-five acres are *first quality wheat land.* The timber is principally beech and maple, with black ash sufficient to keep the farm well fenced. The whole farm is under first rate fences, staked and capped. The soil of the farm is lime, gravel and marl, resting upon limestone. The buildings are commodious and pleasantly located—being a 1½ story framed house, nearly new, three barns, one large shed, two granaries sufficient to store 3,000 bushels of grain, a large corn crib, and other out-buildings, besides a framed house for a hired man. There are three wells upon the place, having good water, and five living springs on different parts of the farm. There are two orchards, in which there is a choice collection of fruit, selected with great care, consisting of Apples, Pears, Peaches, Plums, Cherries, Nectarines, Apricots and Quinces,—with Raspberries, Strawberries and Asparagus beds.

Such is a description of my farm, and I offer it for sale at a bargain. Any one wanting a first rate wheat farm, admirably located upon a good road, and near a beautiful village in one of the finest sections of country in the world, cannot do better than to come and see the farm.—I will give a liberal credit on the sale.

C. R. BRINCKERHOFF.
Batavia, N. Y., Nov. 21, 1853. 205

A COMPANION TO THE "DIARY OF A PHYSICIAN."

**DR. WARREN'S GREAT WORK,**

THIS DAY PUBLISHED,

**The Old Doctor; Or, Stray Leaves from my Journal.**

Being Sketches of the most interesting Reminiscences of a retired Physician.

[*From the Rochester Daily Advertiser.*]

THE OLD DOCTOR has been received. The New York press speak in terms of flattering commendation of this book, and we have no doubt, justly.

The author prefaces an introduction chapter by saying, "The following narratives are brief sketches of scenes that have actually come under the observation of an eminent Physician of this city, in the course of a long and extensive practice." The public do not require to be reminded, for every one knows from experience, that to the Physician the most secret thoughts of the heart are laid bare, in the hours of sickness, danger and death, and he thus necessarily becomes acquainted with those peculiar idiosyncrasies of the human mind which are sealed to most other men. We have no doubt the book will prove of marked interest, and will add, that it is neatly printed and beautifully illustrated.

6,000 COPIES SOLD IN TWO WEEKS.

A new edition now ready; published in one volume, beautifully illustrated, 50 cents. Library edition, bound in cloth, 75 cents. For sale by H. LONG & BROTHER, 43 Ann street, N. Y., and all Booksellers.

*** Copies mailed on receipt of price, address as above.
205-2t.

**PRICES IS THE TEST.**

I AM selling Goods at reduced prices, to reduce my stock, in order to sell out.

HAIR WORK.

Wigs, old prices, $10 to $15, now $7 and $11; Toupees $10 to $8 now, $8 and $6 down to $4; Ladies' bands 50 per cent. less; Braids 75 per cent. less; Curls the same. Perfumery and Gents. ## "GENE."

Loose among my heart's old pictures
  Lies full many a treasured scene;
Most among them one I cherish
  Of the boy we nick-named—"Gene."
Only ten of his bright summer's
  Had he given to the past,
Giv'n as showers give back the rainbows
  Made too beautiful to last.
Only ten;—the clouds I fancied
  Gathering above his fate,
May dissolved be in sunshine
  Streaming now from pleasure's gate;
Or the star that leads him onward,
  May be one of heavens' bright lights
Gleaming out upon the way side,
  To restore a wanderer's sight;
Perchance some simple bud or flower,
  He has analyzed to find,
Folded in its close recesses
  Proofs of a creating mind.

Often times I lose the present,
  In the earnestness of thought;
Wondering to him, what changes
  All these added years have brought:
Thinking if upon that white brow
  Any care has left its trace,
Not a print upon the snow-drift
  Finds a fairer resting place;
Or if any tear has trembled
  In his penitential eye,
Not a shower that falls in summer
  Ever dims a purer sky.

Often, over the dear pages
  Where I sketched the golden days,
And loved hands upon their margins
  Left their pencil-marks of praise,
I am saying, "lost forever;"
  If the hours were but as dreams
Soon would be my painted visions
  Of the flower-loving "Gene:"
But they're of the past; not future,
  Nor are they in slumbers made;
And in differing from dreamings
  They will never—never fade.
So among my heart's old pictures
  Lies full many a treasured scene;
Most among them this I cherish
  Of the boy we nick-named—"Gene."

## CROSS LOTS.

### A SCHOOL-DAY REMINISCENCE.

BY MRS. S. WEBSTER LLOYD.

I believe there is an inherent propensity in children of both genders, to endeavor on all possible and impossible occasions, to leave the beaten track for the footpath; and wherever their footsteps may tend, the plain wagon road is forsaken in order to scale fences and leap brooks—to climb hills, thread cornfields, and cross ravines—and the juveniles vote themselves gainers, if perchance, by all their extra exertion, a fraction in distance happens to be saved. At least, I know that to have been the case with the race of children with whom I was contemporary; and we but walked in the footsteps "of our illustrious predecessors," for the path over the hills had "come down to us from a former generation," and was well worn when our infant feet first tried its steep ascent, hanging upon the hand of an older brother or sister.

I wish, kind readers of the Rural, you could but see the hills we used to climb on our way to the District School, and that too when a good wagon road, following the stream, was nearly level, and only a trifle farther. But cross lots was decidedly the passion of us all, and woe to the poor urchins whose careful mama's commands compelled them to go round. It makes my feet ache now, when I think of our cross path; and often, since grown to womanhood, I have scanned the almost perpendicular ascent, and wondered how, for years, we could go up and down such hills, running, scampering, frolicking over them, as if we were doing it all for fun, as indeed we were. Even the School-master, when his turn of boarding round sent him our way, was led over them; it was a sort of test by which to try his mettle, and when one refused to struggle up and down our well-worn path, we looked contemptuously upon him ever after. The *Schoolma'am* was not expected to perform the penance, but when each mother's child had in turn conducted her home on her introductory night, she was left to her solitary walk, for our road was over the hills, and this was the order of march: Up the hill back of Grand'ther Johnsons, (as an old Revolutionary soldier was styled among us,) the ascent being as steep as the roof of his own house; across the old Indian burying ground, and down a corresponding hill, at the foot of which ran a brook which we had bridged, or rather which our predecessors had bridged before our time, with large stepping stones — then up another hill, across a tillable piece of land, and down into the gully behind the School-house, where ran another brook, and where a spring bubbled up beneath an old beech tree. This hollow, and both the hills, were wooded, not thickly, but with large oaks and maples, and were our play ground. The girls built houses of moss at the roots of the trees, or united with the boys in playing "I spy" from behind their trunks.

My purpose is not so much, however, to make the reader acquainted with our pathway, as to relate an incident connected therewith, which has so often excited my risibles that I cannot refrain from giving it publicity, in order to get it off my mind, or in other words, to exorcise that one remembrance, that I may have chance to dwell upon happier and less ludicrous scenes.

It was at the close of our long winter session, and just at the time of early spring, when the melting of the snow had made the cross-lot path almost impassable, that our last spelling school was appointed. They had been very much in vogue during the winter, and were a great treat, not only to us scholars, but to the young lads and lasses of the village generally, who made a practice of attending; and there was a fair sprinkling of love-making to give a zest to the entertainment. All were required to join the spellers, however, and a little tact in choosers and chosen would seldom fail to bring about a happy arrangement among all parties. Among the steady attendants of our spelling schools were a pair of lovers, in whom I took particular interest—Lysander Treat, the Miller's apprentice, and pretty Abbie Wing, one of the operatives in the Woolen Factory. Lysander was a great favorite of mine. He belonged to the generation of boys immediately preceding the present race of big boys, and had many a time helped me up the steep hills, or made intermediate tracts between those of my eldest brother (at this time a printer's apprentice) in the unpathed snow, to accommodate my shorter footsteps; and besides, I loved gentle Abbie Wing. She was a fair, slight girl, of happy temper, winning manners, and graceful carriage, and might have been a coquette among our little society, for she was very generally admired, only she was too modest and retiring; and besides, Lysander had monopolized her when she first came into our neighborhood. Howbeit, on this particular evening Lysander was thrown into the back-ground by a nephew of the teacher, an assistant in the County Clerk's office, who was on a visit there, and who had been very attentive to Abbie the two or three times they had happened to meet; to say truth, Abbie did seem a little proud of the young clerk's admiration, and no ways sorry for poor Lysander's evident chagrin. I was at this time just coming thirteen, very tall, and very thick-set, and very shapeless for my age; and though, from constant practice, I could climb the most slippery hill, or jump a brook one and a half my length, I was anything but sylph-like. I was not old enough or pretty enough to have a lover of my own, but I could fully sympathize with those who had. Especially I delighted in the affair between Abbie and Lysander, and had aided not a little in fanning the spark to a flame; and now I felt great sympathy for him, and great indignation for her and Hubbert Simons, and longed to check their intimacy. At last I thought my time had come, when Patty A. and myself took our places at the head of the two long side seats, as choosers. The first choice was mine—"Lysander Treat!" said I, very loud and plain.—"Abbie Wing!" Patty immediately exclaimed, and the persons we had chosen took their places beside us respectively. It was bad generalship on my part, as I ought to have chosen Abbie first; for she was an unerring speller, while Lysander was only respectable. Then I chose again, and was again injudicious, for Patty immediately said, "Hubert Simons!" (Lysander declared Abbie whispered her to do so:) and again the clerk sat beside Abbie — the very arrangement I had determined to defeat, and had only my own awkwardness to blame; for if I had chosen Abbie first, I would not have been obliged to chose the clerk, even if I could not have got Lysander. But there was no helping it now; the former sat beside Abbie, and more than that, as one side had the first choice and the other the first spelling, Simons caught all the words missed by poor Lysander, whose very vexation at the evident triumph of his rival, made him blunder when he knew the right. The half hour's trial, however, came to an end. I was beaten, of course, and the whole five words that I was declared in arrear, besides two that were offset, had been lost by poor Lysander, as the clerk exultingly explained.

"Now you may spell down," said the teacher; and the whole school arose. Our plan was to spell from side to side alternately, so that if one party was reduced to a single representative, while the opposite boasted half a dozen, he must take his turn against them all, to wit: spelling against each one in succession. The trial began, and the first round thinned the ranks on both sides, especially towards the foot, where the indifferent spellers were located. A second and a third told upon our numbers and mowed down our ranks; a fourth, fifth and six, and Patty, Abbie, and the clerk alone remained, while my men numbered eight. Whether it was that Lysander's vexation had at last quickened his ideas, I do not know; but he spelt now admirably, and as I had missed long before, he stood at the head. "Now," said the teacher, "I will pronounce this word as you are in the habit of doing, and see who can spell it."

"Popoose!"

The sixth speller on my side tried,—"p-o-p pop o-u-s-e, popeuse."

"Next," said the teacher, and Patty spelt,—"p-o-p pop o-o-s-e, popoose."

"Next,"—"p-o-p pop o-o-u-s-e, popoouse," said my seventh.

"Next,"—Abbie thought a minute,—"p-o-o-p pop o-u-s-e popouse."

"Next,"—"p-o-p pop o-us."

"Next." We waited for the clerk, who said hesitatingly,—"p-o-o-p pop o-u-s-e.—Then the master laughed, and said

"Next." It was Lysander's turn,—"p-a-p pap p-o-o-s-e poose, pappoose," came loud and plain. "Right," said the teacher; and the victory this time was ours. A clear victory, with five men left. How gloriously Lysander spelled then, until the master's patience was exhausted, and the hardest and most difficult words were selected; finally he was down last of all, and the school broke up.

We always went home in a flock, and this night it was absolutely necessary we should do so, in order to have the benefit of the lantern lights, there being but two in the company. We got along pretty well, considering the melting snow, the clay mud, and a strong south wind ahead, all of which would have made our path none of the easiest, even by daylight, until we came to the last brook, now swollen far beyond its banks, where the light in the tin lantern went out.

"Let me light it by yours, James," said the boy who carried it.

"No, mine will go out too," replied James.

"No it wont; turn your back to the wind, and you can take out the lamp while I light my candle."

But the moment the wick lost the shelter of the glass globe, the wind struck it, and in a twinkling we were in total darkness, with the brook uncrossed, and a hill, long and steep, and slippery, (for it had began to freeze,) to ascend and descend between us and home.

"We must carry the girls over; I don't think we shall go over our boots if we manage to step across the bed of the stream;" and setting the example, the teacher lifted one of the largest girls, and set her safely on the other side.

Abbie was standing close beside me, but she disappeared in the darkness just as some one said very gallantly, "Let me lift you over," and the slender village clerk, whom I could easily have carried half a mile, put his arm around my waist, and staggering under his burden managed to reach the opposite shore in safety, only to set me down above my stockings, (I had almost said above my knees, which is the truth,) in water; there being a deep hole just below our crossing, from which the roots of a giant oak had been upturned by the wind, and which was now full of half-melted snow. Whether he knew of the accident or not, I could not say, but he immediately deserted me, having probably found my bulky figure a somewhat different weight from the delicate one he thought to have protected.

How I got out I never knew, but unless I live to be frozen I never expect to be colder, and I was striving to rejoin the rest of the party as fast as my chilled limbs and the rough nature of the ground would permit, when an arm that had many a time assisted me up the same steep hill, was put around me, and Lysander said indignantly:

"He has been a perfect nuisance to you and me all the evening, Sophy! but you keep my counsel and I will yours; that is if the cold you will get don't kill you!"

"How did you know *he* set me in the water?"

"I was watching to see if he had Abbie."

"And where is Abbie?"

"I don't know. She is not with the others as I can find; and I came back to see if she had been left, as well as to help you over, for I saw he had deserted you."

I called Abbie; but as no one answered, I concluded she must be ahead, and told him so; indeed, when I remembered how suddenly she had been taken from beside me, a glimpse of the truth flashed cross my mind. A roguish brother of my own, a perfect Handy Andy for mischief, had caught her just as Simons came up, and jumping nimbly across the brook in the darkness, had hurried her on far in advance of the rest. Simons had, in consequence, caught me by mistake, much to the discomfort of both. Abbie's self-appointed beau saw her safe home, and then overtook us before we had reached ours; and clapping Lysander on the back, said:

"I have done you good service to-night, Lysander; and if you let that little whipersnapper come around Abbie any more, you ought to lose her."

"Then you carried Abbie across?"

"To be sure I did; I seized her just as the clerk got to her side."

"And he seized me," I interposed, "and set me down in the hole where the old tree has been turned out, in two feet of water."

"Fury! why Sophy you will get your death cold!"

But I did not get cold easily in my girlhood; and thanks to good health, do not yet; and I came off unscathed.

Simons went the next evening to call on Abbie, and had just turned up the steps, when that same brother of mine happened to be passing.

"Going to see how Abbie stands the ducking you gave her last evening?" inquired the latter sarcastically."

"She wasn't the girl I carried across the brook!" remarked Simons.

"Wasn't she though! and the girl you ran off and left in the water, too! I heard her and Lysander laughing about it on their way home."

"It can't be! Abbie is not such a dump of a girl as that! I carried Sophy by mistake."

"Yes, but Abbie was close beside Sophy, and *you carried both*, though you only set Abbie in the water!"

"Well, I thought no one girl could be so heavy. I had a good tug of it, at any rate."

"And Lysand' had a nice walk home after you went on and left the girls."

"Tell me, honestly," said the chagrined clerk, "has the story got wind?"

"No,—Abbie feels flat enough over it; for, to tell you the truth, she was mightly taken with you; and Lysander agreed to keep it still on condition that she should *mitten you*."

The next morning Simons vacated, and as Abbie never heard from him again, she grew very penitent towards Lysander, who was only too glad to be received again into favor, and was never afterwards repelled. He never knew, however, the second service rendered him, and he is now living happily with Abbie, with half a dozen juveniles around them.

I have seen the clerk but once since then. I met him in the streets of Buffalo, with a wife upon his arm, a woman twice and a half my weight, to speak within bounds. I laughed when I thought of spring brooks, and wondered if Mr. Simons could carry his lady across any easier than he carried Abbie and me!

# Wit and Humor.

Young America.—"My son," said a doating father who was about taking his son into business, "what shall be the style of the new firm?"

"Well, governor," said the one-and-twenty youth, looking up in the heavens to find an answer, "I don't know, but suppose we have it 'John H. Samplin and father.'"—The old gentleman was struck with the originality of the idea, but could not adopt it.

The editor of a western paper says:—"We witnessed two important days while in Washington. The first was the fourth of March, and the other was *March forth*.—The first was most interesting—the latter the most solemn."

"Mister, how do you sell beef this morning?" "Fourteen cents a pound." "Fourteen cents, oh—have you got a *heart?*"—"No, I just sold it." "Well, I know'd you couldn't have a heart, and ax fourteen cents for beef."

"Go it, old fellow," said two idle scapegraces to an honest laborer at work—"work away while we play—sow and we'll reap." "Very likely, my lads," replied the old man coolly, "I'm sowing hemp."

"Daddy, I want to ask you a question." "Well, what is it, my son?" "Why is neighbor Smith's liquor shop like a counterfeit dollar?" "I can't tell, my son." "Because you can't pass it," said the boy.

A boy said to an outsider who was making a great ado during some impressive mortuary ceremonies, "What are you crying about—it's none of your funeral."

Simms says if it wasn't for the hole in the hoop you couldn't put it on the barrel, and then the barrel would burst.

It is said that the "pillars" of liberty are stuffed with the feathers of the American eagle.

An actor has been arrested out West for murdering Hamlet.

# Youth's Corner.

"Attempt the end, and never stand to doubt;
Nothing's so hard, but search will find it out."

At the suggestion of several correspondents we commence a new series of Illustrated Rebuses, to be continued as long as the subject shall prove acceptable and interesting. We shall give some queer conceits, and hard puzzles, in this line during the winter, and invite those interested to contribute any thing new or particularly "crotchical."

ILLUSTRATED REBUS.—No. I.

☞ Answer in two weeks.

The author of the above Rebus authorizes us to send the Rural for 1854 *free* to the person (residing out of this city,) sending the first correct answer previous to the publication of the solution.

For the Rural New-Yorker.

MISCELLANEOUS ENIGMA.

I am composed of 20 letters.
My 1, 19, 13, 18, 11, 15, 18 is the name of a country.
My 10, 5, 16, 19, 11 is a weapon.
My 2, 6, 8, 1 is the name of a Greek letter.
My 5, 9, 18, 14 is what often begins a question.
My 4, 1, 7, 18, 9 is the name of a lady.
My 13, 16, 7, 17, 10 are unpleasant things to have when you wish to dance.
My 3, 15, 13 is the appellation of a distinguished dark personage.
My 6, 1, 8, 10 are good for horses.
My 20, 18, 7, 17 is what old ladies know much about.
My 12, 17, 3 is what a weary traveler hails with delight.
My 10, 2, 17 is a legacy left us by Adam.
My 9, 1, 7, 14 is the name of an animal.
My 10, 16, 3, 17, 20 is an appellation of affection.
My 5, 12, 11, 6, 5 is an afflicted female.
My whole is a very useful book for students.

White Plains, N. Y., 1853. Tiffin.

MOORE'S RURAL NEW-YORKER:
A WEEKLY HOME JOURNAL,
For both Country and Town Residents.

PUBLICATION OFFICE,
Burns' Block, corner State and Buffalo Sts.,
Rochester, N. Y.

TERMS, IN ADVANCE:

Two Dollars a Year—$1 for six months. To Clubs and Agents as follows:—Three Copies one year, for $5; Six Copies (and one to Agent or getter up of club,) for $10; Ten Copies (and one to Agent,) for $15; Twenty Copies for $25, and any additional number, directed to individuals at the same rate. Six months subscriptions in proportion.

☞ Subscription money, properly enclosed, may be sent by mail at the risk of the Publisher.

Terms of Advertising

One Dollar per square (ten lines—100 words, or less,) for each insertion,—*in advance*. ☞ The circulation of the New-Yorker is much larger than that of any other newspaper published in the State, out of New York city. Only a limited space, however, is devoted to advertisements, and hence preference is given to those most appropriate—such as the cards and notices of dealers in Agricultural Implements and Machinery,—Horticulturists and Seedsmen,—Booksellers and Publishers,—Inventors, etc. All orders by mail should be accompanied with the cash.

To enable us to accommodate as many as possible, brief advertisements are preferred. Patent medicines, &c., will not be advertised in this paper on any terms.

☞ All communications, and business letters, should be addressed to D. D. T. Moore, Rochester, N. Y.

THE WOOL GROWER AND STOCK REGISTER.

This is the only American Journal primarily devoted to the interest of Wool and Stock Growers, and should be in the hands of *every owner of Domestic Animals*. It is ably conducted, published in the best style, and finely illustrated. Each number contains a careful Review of the Wool and Cattle Markets, and much other *useful* and *reliable* information which can be obtained from no other source. The Fifth Volume commences with July, 1853.

Terms:—Fifty Cents a Year; Five Copies for $2; Eight for $3; Eleven for $4. Back volumes, bound in paper, at 40 cts. each,—unbound at 35 cts., or three for $1.

Published monthly, in octavo form. Specimen numbers sent free. Money, properly enclosed, at our risk.

Address D. D. T. MOORE, Rochester, N. Y.

☞ Non-Subscribers into whose hands this number of the Rural may fall, are requested to give it an examination, and, if approved, their support. See Prospectus, Premium List, &c., on preceding page.

# MOORE'S RURAL NEW-YORKER.

VOLUME IV. NO. 51. } ROCHESTER, N. Y.—SATURDAY, DECEMBER 17, 1853. { WHOLE NO. 207.

MOORE'S RURAL NEW-YORKER:
A QUARTO WEEKLY
Agricultural, Literary and Family Newspaper.
CONDUCTED BY D. D. T. MOORE,
WITH AN ABLE CORPS OF ASSISTANT EDITORS.

THE RURAL NEW-YORKER is designed to be unique and beautiful in appearance, and unsurpassed in Value, Purity and Variety of Contents. Its conductors earnestly labor to make it a Reliable Guide on the important Practical Subjects connected with the business of those whose interests it advocates. It embraces more Agricultural, Horticultural, Scientific, Mechanical, Literary and News Matter—interspersed with many appropriate and handsome engravings—than any other paper published in this Country.

☞ FOR TERMS, &c., see last page.

## Rural New-Yorker.

### Progress and Improvement.

### COMMUNICATE YOUR EXPERIENCE.

THE vignetto heading of the Prairie Farmer—a capital paper, by the way—is labeled with "Farmers, write for your paper!" This sentiment we endorse in regard to the RURAL; although we must acknowledge a lack of proper attention to many correspondents during the past season, through want of time and the illness and absence of assistants—all which we propose to amend, now that our new corps are becoming initiated. We want the experience and observation of practical and scientific men on all subjects that concern and affect the every-day walk and business of life. Next to brief, practical articles from experienced and observing men on timely and important topics, we like to see the point of interrogation. We like to be asked questions—for we know a little (very little, perhaps,) on about all subjects connected with the battle array of the farmers and mechanics' fight of life—and for what we don't know we have plenty of documents for reference, and kind and learned friends for consultation. We started the RURAL with a determination of accomplishing some good on this mundane sphere; trust we have made no little progress, and intend to make considerable more, with the aid of thinking and intelligent friends disposed to second our efforts.

Our aim has been, and still is, to combine in one, the gist of what is usually obtained in several journals, each mainly devoted to one subject. To accomplish this object we have several departments, to properly fill *each* of which requires as much labor as is often bestowed upon a whole newspaper devoted to a single interest. The labor of writing, revising, condensing and selecting for each and all these, every week, is too much for any one man—though we were obliged to *try* to perform it for months the past season—and hence a strong force is necessary. With our present and prospective working corps of Home and Corresponding editors—seven in number—we can readily fill the paper, and ought to do it creditably. But we wish to give the results of the experience, and the hints and observations, of hundreds of enterprising men in the various branches of industry. We wish to make every line and paragraph—especially in the pages devoted to practical subjects—tell to the best advantage.—Therefore we ask every man and woman who has a new idea, or a good second-hand one, on any practical useful subject, to communicate it for the general benefit. No matter about the style or grammar—facts and figures are of far more importance than terseness. We speak now to practical, sensible men, who are unaccustomed to writing for the press—but who can, if they will, teach many things not dreamed of in the philosophy of supposed wiseacres. We will make all necessary corrections in style, &c., if the facts are concisely furnished.

—In conclusion, we enlarge upon the text with which we started by saying—Farmers, Horticulturists, Mechanics, Men of Science, Teachers, and Clergymen, write for *your paper*—the RURAL NEW-YORKER. We feel justly proud of our present large corps of correspondents, yet have ample room for others to "teach one another."

### IMPROVED SUPERPHOSPHATE OF LIME.

OUR readers have doubtless heard of Superphosphate of Lime, an artificial fertilizer which has been used in England for the last ten years most extensively as a special manure for turnips. They have also probably heard that J. J. MAPES, editor of the *Working Farmer*, claims to have made very important improvements in its manufacture, whereby it is rendered not only a good manure for turnips, but also a most valuble fertilizer for the wheat crop—the English superphosphate having failed to benefit wheat, barley, oats and the cereal grasses. Mr. MAPES manufactures this article on his farm in New Jersey, and thousands of tons have been sold at $50 per ton. The Professor makes no secret of his discovery, but tells precisely of what his superphosphate is composed. Purchasers, however, are not in the habit of placing implicit confidence in the assertions of the seller, and in this instance it was thought desirable to ascertain the composition of the fertilizer—not from what the maker said of it, but from chemical analysis. Accordingly, Mr. S. W. JOHNSON, of Yale College, made such an analysis of the article as would show to practical farmers its fertilizing value. This analysis was published in the *Country Gentleman* of March 3d. Previous to this, Mr. MAPES had declared that,

"Long experience has now taught the English farmers that superphosphate of lime and sulphate of ammonia, when properly prepared, is worth nearly twice its weight of Peruvian guano; and attempts have been made to manufacture an article containing these requisites in proper proportions, and in a dry form, at £20 per ton, at which price it could readily be sold, but the high price of phosphate of lime and of sulphate of ammonia, has rendered this impossible. The improved superphosphate of lime, used by us for the last five years, and now made for sale at $50 per ton at New York, cannot be duplicated in England for double that sum, and if it could, to our certain knowledge it would be done, and would soon take the precedence of Peruvian guano at the present prices."

On the appearance of Mr. JOHNSON'S analysis, we quoted the above remarks of Mr. MAPES, and asserted (in the *Genesee Farmer*,) that if such was the composition of his manure, a *much better super phosphate was, and had been for several years, sold in London for $28,22 per ton.* The validity of Mr. MAPES' statement was at stake. He must needs show that the analysis was inaccurate. To do this he called to his aid Dr. ENDERLIN, a learned German chemist, who endeavored to prove the worthlessness of the analysis by showing that Mr. JOHNSON had made several absurd chemical blunders. First he had called the phosphate of lime as found in bones, animal charcoal, apatite, coprolites, guano, &c., *neutral* phosphate, instead of *basic* phosphate. Second.—He found free sulphuric acid and insoluble phosphate of lime. This was declared to be "against all chemical possibility." We answered these charges at the time, as also did Professor JOHN A. PORTER, of Yale College. We admitted that the first was a *nominal* error, justifiable on the ground of rendering the chemical explanation of the manufacturer of the manure more intelligible to practical farmers. The latter we showed from our own experience, to be not only possible but common in a superphosphate mixture. At this stage the matter rested till the issue of the December number of the *Working Farmer* which contains an article from Dr. ENDERLIN, of *ten* closely printed columns in length, ushered in by a four column introduction from Mr. MAPES.

Nearly the whole of DR. ENDERLIN'S article is occupied in proving what we had admitted, to wit, that in strict chemical nomenclature, MR. JOHNSON, the writer, and many others, had made a nominal error. We must still contend that while they are not strictly correct, the terms give a better and more correct idea to the unscientific reader than the chemically correct terms of Dr. ENDERLIN. The more serious charge respecting the presence of free sulphuric acid and undecomposed phosphate of lime in the same mixture, Dr. E. has abandoned. We admited that were the mixture in solution, or in direct chemical contact, it would be against all chemical possibility to find free sulphuric acid and undecomposed phosphate of lime. But as superphosphate of lime is usually made by the best manufacturers it is not only possible, but probable that these two ingredients will be found.

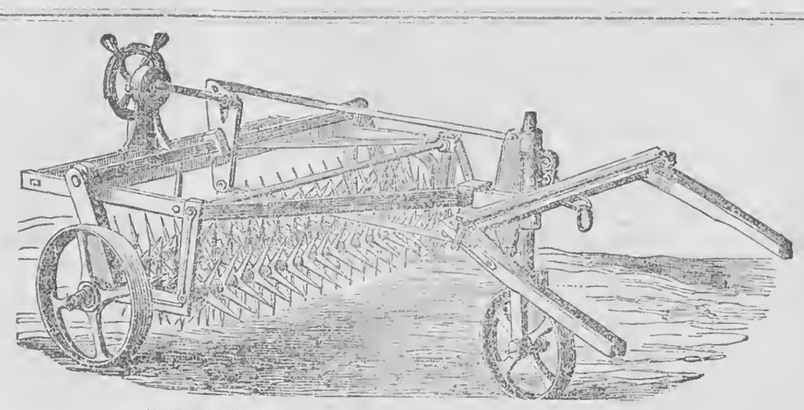
We said that from our own experience we know that when *unground* animal charcoal was used, it was impossible to decompose the whole of it. Dr. E. now admits that he was "speaking of the *chemical* action under the supposition of due proportion and *contact* of the ingredients." In another place he parries our remarks by asking, "Did I fix any time, did I speak of hours days, weeks or months of contact, &c?" And again, "any one could suppose it not *against, but with all chemical possibility* for free sulphuric acid and undecomposed lime to exist, &c." With this admission, Mr. JOHNSON stands acquitted—his enemies themselves being judges. Dr. ENDERLIN'S long and learned papers do not show the slightest error, except an *unimportant* one in regard to a *name*.

Dr. ENDERLIN will admit, in fact he has substantially admitted, that it is essential that the phosphate of lime, previous to its mixture with sulphuric acid, should be reduced to a fine powder, and made semi-fluid with water. Such being the case, what will Dr. ENDERLIN say, when we tell him, that on a recent visit to MAPES' factory we found that the animal charcoal was used in its natural state, that the only means employed to obtain the "due proportion" were those of an "elevator" to convey the charcoal from the floor to the mixing vessel, and an auger hole bored into the vessel containing the acid, to let it run at a given rate? The elevator might go slower or faster, (even steam engines do not run at an invariable speed,) and the acid would run faster when the vessel was nearly full, than when nearly empty, unless some impurities should get across the hole. The mixing vessel appeared to be an old cast-iron boiler, placed in an aperture in the floor, with a rude hole about 9 inches in diameter knocked in the bottom. The only "mixing" the acid and charcoal got, was a rapid "stirring" as they fell through this vessel from the elevator and the acid receptacle. The workmen called this the "*burning*," apparatus—a most appropriate name, as may readily be conceived. *After* this "burning" process, the mixture is *ground*, in order, the men said, to "dress it up for market." Had the animal charcoal been ground *previous* to its mixture with acid, the manure would have been much "improved;" as it was, we could not see its use, except to "dress it up for market." Will it be considered an "impertinence" to ask Dr. ENDERLIN, "for the sake of science and truth," to visit the factory, and then tell us whether he thinks it a "chemical impossibility" for Mr. JOHNSON to find undecomposed phosphate and free sulphuric acid in MAPES' improved superphosphate of lime?

We wish to keep this subject as free from side issues as possible, or we might mention some exceedingly interesting data in regard to Mr. MAPES' discovery of the "improvement," and of his "numerous experiments." When he has shown Mr. JOHNSON'S analysis erroneous, when he has proved that the improved superphosphate of lime cannot be made in England for $100 per ton, and that our statement that it is made for $28,22 per ton is false, all of which he is constantly reiterating, we will bring these data to bear on some of his other statements.

J. H.

SAVE everything in the shape of refuse or offal; it is all good to make the crops grow. Let your eyes, your mind, your heart, and your hands be all directed to the accumulation and preservation of the materials to make manure. Follow this advice, and your lands will grow rich, and your pockets heavy.



THE NORWEGIAN HARROW AND CLOD CRUSHER.

THIS is an English Implement, though, as the name seems to imply, the leading idea of its construction was obtained from Norway. As now used in England, it is made of a strong iron frame six feet long, and three wide, with three iron shafts or spindles running through lengthwise, on which are fixed cast-iron bosses or rowels, having four or six sharp teeth about nine inches long, and so placed on the spindles that the teeth of the middle spindle shall pass between those of the other two when revolving; in this way the teeth of one roller or spindle clean the others from obstructions, and prevent clogging; at the same time, the most thorough pulverization of the soil is effected. The apparatus behind is for regulating the depth of the teeth and for lifting them from the ground when traveling. It is considered an admirable implement for pulverizing heavy clays, though in our opinion not equal for this purpose, to CROSSKILL'S clod crusher, a cut of which we will give in a future number. For tearing light-soil sod to pieces, when not dry enough for other rollers, it has no equal.

### STRAY NOTES.—BY S. W.

JOSIAH KEENE, of North Providence, R. I., gives in the New England Farmer, of March 1st, 1851, an account of his several successive annual experiments in the relative fertilizing value of Peruvian Guano, 320 lbs. to the acre, cost seven dollars; and sixteen loads of manure to a like conditioned acre, half peat and half cow's dung, composted in the stable, value $24, as a top-dressing for grass, rye, &c. The seven dollars worth of guano goes ahead of the compost worth twenty-four dollars, more than fifty per cent. the season it is applied. Strange that the writer does not tell us the effect of both kinds of manures on crops the year after the application; as experiment has shown that the kind of compost he used has a better effect on crops the second and third year after its application than the first. The guano had probably given off all its ammonia to the first crop, whereas the compound of dung and peat being less diffusible, was retained in the soil for the benefit of future crops. Strange as it may seem, the Patent Office Report of 1851 has copied this superficial, one-sided experiment without a word of comment. We are told by Mr. KEENE that the victorious guano was from 'PETER HARMONY, NEPHEWS, the Peruvian Government agents in New York." But I take it if those experiments were published for an advertisement of this monopolized guano, they prove too much for the guano, or too little for the compost. Methinks Peruvian guano, like good wine, needs no bush; neither need well composted animal manure fear any comparison with guano as an economical and permanent amendment to a needy soil.

AN AGRICULTURAL COLLEGE.—A plan for an Industrial University is presented to the Legislature of Illinois, by Professor TURNER, of Jacksonville. Shade of the lamented DELAFIELD, can it be that the great, enlightened Empire State is to be distanced in such an institution by a young and comparatively poor western State? The Professor well says that the "most natural effect of mental discipline possible for any man arises from setting him to earnest and constant thought about the things he daily does, sees and handles, and all their connected relation and interests;" that the final object to be attained with the industrial class, is to make them "thinking laborers." He sets it down as a fact that the present age "has arrived at that crisis in progress, when it can no longer feed on the offals of preceding ages!" He also contends that "a Farmer's Industrial College is the only remedy for *caste* education, legislation and literature."

TOP DRESSING.—In the RURAL of the 26th ult. JOHN JOHNSTON says he has been in the habit of top-dressing grass land with stable manure for the last eighteen years, with the best results. Such practice is undoubtedly good under the circumstances, but I know a friend who bought at a livery stable a large heap of mouldy dung that had evidently lost its nitrogen by combustion. He says he was at a loss to account for the very trifling benefit his meadow received from a top-dressing with this manure, and that the secret cause never got "through his wool," until he took the hint from an agricultural paper. Perhaps the Monroe Co. farmer who avers that top-dressing is little better than manure and labor wasted, might have tried his experiments with the same sort of a carbonaceous mass, in which all the azotised matter has been washed or burned out. But that which is an economical mode of manuring the rich calcarious soils of Western New York, might be a wasteful manner of applying stable dung to the hungry, silicious soils of New England. There such manure must be made the most of by composting it with peat or swamp muck, in order that its nitrogen may not only be saved, but increased; as the soil itself has no inherent aluminous compounds like ours, to fix and retain the carbonate of ammonia until it is assimilated by the growing crops, and it would seem as though Providence had kindly provided almost every New England farm with a swamp, the direct means thus to overcome its natural sterility by making the most of its animal manures in a compost with the peat or swamp muck. On the other hand, the lack of swamps is proverbial in Western New York, particularly here in Mr. JOHNSTON'S Seneca Co., where the rich landscape is tame, only from the absence of the alternate hills and swamps of Yankee land.

### COMPLIMENTARY.

A CORRESPONDENT of the *Germantown Telegraph*, "the long evenings affording him leisure," gives "a short article on food for stock." It is seldom that an honest farmer is guilty of a plagiarism; in this instance however, the writer, instead of employing his "long evenings" in giving us some of his experience, *merely re-writes one of our old articles*, sticking very close to the copy, but still leaving out some of the most important sentences. This reminds us that the same article has had similar honors before. A correspondent of the *Ohio Farmer* took one half this article and put it in the shape of an inquiry, while the editor took the other half and answered the question with it! It was altogether the most ingenious device for purloining the thoughts of others we have yet seen. We commend it to the profession.

BALON HUMBOLDT proclaims himself the first introducer of guano to the world as a manure. He explained its advantages, published an analysis of it, and tried in vain to introduce it extensively, for forty years.

## EXPERIMENTS WITH MANURES.

Mr. Editor:—In the Rural of the 19th ult., I noticed the publication, from the Country Gentleman, of my experiments with the various manures in raising Indian corn, and also extensive remarks of your own. These experiments were undertaken for my own individual benefit to test the relative value of the different manures, and the best method of their application. They were carefully, and accurately conducted, and as carefully stated. In giving them to the public, I appended a simple statement of *my own* of the results, as I conceived, were clearly shown, not intending to give any advice nor wishing any one to adopt my conclusions in the matter, and if the results, as you fear, "mislead" any one, it must be him who "does not read and digest for himself." You commenceyour remarks by awarding to "Mr. Eastman much credit for what he has done to throw light on this subject." This is *sincere praise*, for which I am much obliged, and is the only kind of compensation I expect for the labor and expense of experimenting for the benefit of others. But the closing paragraph of your remarks leads me to question the sincerity of the above praise, and to conclude it is only *ironical* after all. You say—"We make these remarks from fear that the results might mislead, and not from any unkind feelings towards Mr. Eastman, who we think is entitled to much praise for showing the inaccuracy of such a system of experimenting."

You allege, then, that the system adopted by me in these experiments is inaccurate and liable to mislead, and as a proof of the allegation you undertake to point out discrepances in the several experiments.—If you deem the system objectionable, and can produce no good and reliable results, will you point out a better one, and one that is practicable? If an eighth of an acre is the smallest portion of land, as you allege, which should be occupied in each of these experiments, how many such experiments shall we have? how many farmers will be to the trouble and expense of experimenting on so large a scale? To arrive at correct results in experiments of this kind, several things are necessary. The soil should be as nearly alike as possible.—The plowing, the planting and the hoeing should be uniform. The corn in the various stages of its growth should be kept constantly under the eye of the experimentor. Could all these, and other indispensable requisites be better obtained on an eighth of an acre, containing 1210 hills than on the one hundred and ninety-third part containing 25 hills? If causes interfere to change the result could they not be more readily detected are checked on 25 hills than on 1210 hills? As further proof of the inaccuracy of the system, you undertake to point out discrepances in the various experiments. These discrepances, where they appear to exist, and very naturally accounted for by reasons which do not, in my judgment, prove the inaccuracy of the method.

You refer, first, to the two unmanured plots, Nos. 1 and 18. It should be borne in mind that these rows were in different parts of the field. This shows two things only: 1st. That the two soils were differently adapted to the raising of Indian corn. This is evident from the uniform increase of yield in all the rows in that part of the field with No. 18. 2d. That experiments on a small portion of land are more reliable on account of the variation of the soil. Why did you not compare Nos. 18 and 20? This would have been fairer. You next compare Nos. 12 and 19 with guano in the hill, and profess to discover discrepances here. Had you noticed my statement I am sure you would not have made this comparison. In that statement you are told that guano in the hill, in contact with the seed, killed the seed. This shows what might have been inferred from the statement — that more of the seed was killed in No. 10 than in No. 12, which is the fact. You compare Nos. 7 and 15. This comparison is made, evidently, to prove the falsity of my conclusions as to the value of superphosphate of lime as a fertilizer, &c. The best method of applying manures is an important matter to be settled. One of the objects of these experiments was to test this very question. It is shown that the best method of applying superphosphate of lime is in the hill—but applied on the top of the hill is not so valuable as gypsum. Compare, if you please, Nos. 6 and 7 treated with gypsum in the hill and top of the hill, with Nos. 14 and 22, treated with superphosphate of lime in the hill, and what is the result?—Does it not establish the entire correctness of my conclusions—"that superphosphate of lime applied in the hill is a powerful fertilizer, and abundantly remunerative to the cultivater of Indian corn," and gives better returns at $50 per ton? With these remarks I submit the question whether the results of my experiments or your remarks are the more likely to mislead.

H. H. Eastman.

Marshall, Oneida Co., N. Y., Nov. 1853.

Remarks.—Our esteemed correspondent mistakes our remarks if he thinks them *ironical*. We were as sincere in our praise as in our animadversion. We meant to laud the *object*, while we objected to the means used to attain it. Our opinion in regard to the trustworthiness of Mr. Eastman's experiments is entirely independent of the results obtained. Had we seen the plan before the experiments were commenced, we should have pronounced them fundamentally erroneous, or at least that such a system of experimenting could not give satisfactory results. They *might* be right, but they also *might* be wrong.

English and American agricultural papers for the last 20 years have abounded with such experiments, and we are just as ignorant now, on the points they were intended to settle as we were then. One experiment shows one thing, while another equally trustworthy, shows the reverse.—Some time since we were conversing with one of the most eminent scientific men of the day—a professor who has attained great popularity as a writer and lecturer on agricultural chemistry, geology, botany, &c. The subject of our conversation was the value of phosphates as a manure for wheat. We thought them of no value, saying that extensive and long continued experiments, as well as practical experience showed this to be the case. The professor thought we must be mistaken. He had tried experiments and found that the phosphates greatly increased the growth of wheat. The experiments were conducted by himself with great care and accuracy. How much did they increase the crop per acre? we asked. He did not ascertain that, but the beneficial effect was very perceptible. How much land was occupied by each experiment?—The experiment, he said, at length, was made *in a very large flower pot!* This gentleman had publicly stated that he had made experiments with phosphates on wheat, corn, &c., and found them valuable.

We might mention the experiments of Dr. Daubeny, made on a few square feet in the college garden, at Oxford, Eng., the results of which have been embodied in many a learned treatise, and were supposed to be infallible, seeing that they were conducted with great care and accuracy. Subsequent field experiments, and the practice of experienced farmers prove that those experiments gave erroneous results. But let these two instances suffice. Who does not know that there are many such experiments made every year and published, the results of which "mislead" all who trust them. It is high time that such experimenters should cease from their labors. They do much harm, and no good.

Mr. Eastman, perhaps, will not object to be placed in the same category with these professional gentlemen. His experiments certainly belong to the same class. No matter how "accurately and carefully" they may be conducted, they are on *too small a scale* to be trustworthy. Mr. E. supposes that we object to them because the two unmanured plots show great *variation* in the land. This is not so. No one could see that there was any variation till we calculated the *acreage* results. As Mr. E. published them, no discrepances were manifest. Mr. E. said the soil was "about the same." *Now* he attributes the difference of 27 bushels per acre, to the variation of the soil. We say the method of ascertaining the acreage yield is inaccurate, and therefore the results do not prove whether the soil is or is not variable. The fact that Nos. 18 and 20 were *identical* did not escape us. It is a remarkable coincidence to which we have no parallel in our experience. Mr. E. thinks if an eighth of an acre is the smallest area that should be used we should have few such experiments. This is probably true. We know that to make trustworthy experiments is an expensive business. A princely fortune is required to make even a few satisfactory experiments. Mr. Lawes has been spending about $15,000 annually for the last ten years, in this labor of love, and has really *proved* but very little. His wheat experiments are each on a fifth of an acre, and he thinks, after ten years experience, that this area is quite small enough. What then would he say of the *one hundred and ninety-third part*, or to an experiment in a *large flower pot*?

Prof. Nash.—This gentleman returned from an eight months tour in Europe on the 3d inst. During his tour he has furnished the *Country Gentleman*, and other papers, several interesting letters on European Agriculture. The Professor however has doubtless many more valuable notes which we hope will shortly be given to the public. He has resumed his chair as Agricultural Professor at Amherst College, Mass.

## INQUIRIES AND ANSWERS.

Stump Raising Machine.—Can you inform me where the best stump extracter is built, and by whom, and at what price? I. C. H. Swann.

Crawfordsville, Ind.

Parsnips.—It is well known that parsnips are uninjured by being left in the ground all winter. Can you or any of your correspondents inform me whether parsnips *sown in the fall* would stand the winter, and whether this method would give a larger crop? In the spring it is seldom that my soil allows parsnips or carrots to be sown early enough, and if the frost would not kill the young plants, fall sowing would be a great advantage.

John Williams.

We have never sown parsnips in the fall, but have frequently seen it stated that fall sowing gives a better crop of parsnips than spring sowing. But as we have no personal experience on the subject, we should be glad to hear from those who have.

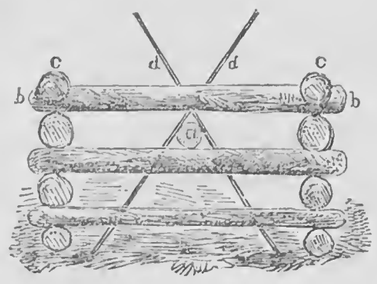
Knitting Machines.—Being a subscriber and constant reader of your most excellent Rural, and seeing the interest you take in improvements of all kinds I take the liberty of asking you to give us through the columns of your paper a description of the most approved patented "Knitting Machine"—the price, size, where they may be purchased, and any other information you may be pleased to give. I believe all kinds of patented machines have found a place in your Rural, except those which might be made useful to your lady Subscribers.

Weston, Mo., Nov, 1853.

We are not conscious of having neglected the interests of our lady readers—"Heaven bless them"—and certainly have never done so intentionally. Will some one properly posted on the subject, please answer the above inquiry?

Millet.—Can you or any of your correspondents inform me in respect to millet. The proper time to sow, how much seed per acre, the soil best suited to its growth, and the general treatment required, &c. R. L.

We have had but little experience in the cultivation of millet, and should be glad if some of our readers who have would answer the above inquiry. The editor of the *Farmer & Planter*, Pendleton, S. C., in an article recommending the more general cultivation of millet in the South, says he sowed half a bushel of millet seed, a gallon of red clover and a peck of herd's grass to the acre. This was in July. The millet came up in a few days and grew finely till the time of cutting, 3d Oct., when about half of it was in head. He estimated the yield of hay at *four tons* per acre. A Mr. Maxwell is said to have raised five tons per acre of millet hay. The editor adds:—"Why any man should abandon its culture, producing as it does, of good hay, double or treble the amount of the best northern meadows, we cannot imagine."



FODDERING RACK.

Mr. Editor:—The time is at hand again when farmers are obliged to commence foddering their stock, and where it is done out of doors, as is commonly the case, there is often a great waste, from not having some convenient place or fixture to put the fodder in. I have had a very simple contrivance for the last four years that answers a very good purpose, and which I do not remember to have seen anywhere else. It recommends itself on account of its cheapness and the short time required to construct it.

I make (first) a crib of long, heavy poles, say from six to eight inches through, 5 feet wide and two and a half feet high. For 10 or 12 head of cattle it should be about 30 feet long. Then, through the middle, lengthwise, on the top of the last cross piece lay a good, stiff, straight pole, *a* with a cross piece under it in the middle. This done, take common fence stakes, or small poles, *b*, *b*, 7 feet long, and cross them on the middle pole, *a*, on each side alternately, until the whole crib is filled, then lay another pole, *c*, *c*, on each side of the crib well notched into the cross pieces, *d*, *d*, to prevent their being pushed out of place; and the rack is completed.

The above sketch shows an end view.—The space, *a*, between the rack and sides of the crib forms a manger into which all the scattering fodder falls, so that there is no possibility of the cattle treading on any. I think it far preferable to square boxes, or any other barn-yard apparatus that has ever come under my observation.

J. W. Peirce.

Alabama, N. Y., Nov., 1853.

## THE DAIRY INTEREST.

A writer in your paper of March last had a rather limited idea of the extent to which the dairying business is carried on when he remarked that "the dairying business had so increased, that near two hundred thousand lbs. of cheese were made per annum." Dairying is the chief business of the farmers in this section of country; and "Herkimer county cheese" has a wide celebrity. The dairymen in this town keep from twenty to ninety cows each, forty being about the average. The census of '45 shows that there were kept in this town (about six miles square) during the previous year, three thousand nine hundred and ten cows, and that there were made during the same year 1,355,967 lbs. of cheese, and 94,713 lbs. of butter. These figures would give an average of about 347 lbs. per cow, on the supposition that cheese was made from all the cows, which was not the case, some being kept for milk alone. Five hundred lbs. per cow, in a good season is frequently made, sometimes 600 and there is one well authenticated instance where a man in this county made 712 lbs. per cow, in a dairy of 20 cows. On account of the increased skill in making cheese, and in the management of cows, it is not unreasonable to suppose that the amount now made is one and a half million lbs. per annum, or about four hundred lbs. per cow; this at the average market price this year, nine cents per lb., would amount to one hundred and thirty-five thousand dollars.

Most of the cows milked are not raised here, but are purchased during the winter and spring in the western and northern portions of the State, where but little cheese is made, and the cows so purchased are generally of an inferior quality, their owners being too shrewd to sell their best cows.—The farmers will undoubtedly find it for their interest in future, to raise their own cows, on account of their superior quality, though the cost per head should be increased. The large quantity of cheese made per cow does not arise so much from the superior quality of the cows as from the peculiar adaptation of the soil. The fact is pretty well established that a given quantity of land here will keep more cows during the the year, than the same quantity in almost any other portion of the Union. During the latter part of summer our pastures are almost as green and flourishing as in spring, while in most other portions of the State, particularly the western, they are parched and dry. This arises both from the capacity of the soil to retain moisture, and from the frequent showers which fall during the latter part of summer. Actual observation shows that about one-third more water falls here during the month of August than in the vicinity of Rochester.

Cows are usually worth here in the spring from $30 to $35 per head.

Dairying has some advantages over grain raising; the returns are more, since the land is not impoverished, and what is particularly important, it pays better.

E. R. Porter.

Fairfield, Herkimer Co., N. Y., Dec., 1853.

## SAW-BUCK FENCE—AGAIN.

Eds. Rural:—A correspondent, in a late number of your valuable paper, furnished a description of his saw-buck fence. The idea of such a fence is not entirely new in this section. I have built some of it, and find it much better and cheaper than the old fashioned board fence. My manner of building is to have posts two and a half inches square (instead of six by two.) These are sufficiently strong and save at least half the timber. They may be of elm, beech, black or white ash, or hemlock 5½ feet long, notched together about one inch deep, at the proper angle, say 3 feet apart at the bottom. Board up on one side. Nail the posts at the lock with a "20 d. nail;" and to prevent sheep, swine, or young cattle from disturbing the posts on back side, nail a narrow refuse board about midway from the ground and cap the whole with a pole of any length and of moderate size, and the fence is completed.

Two men may frame 200 pairs in a day, and three may set up from 30 to 40 rods in the same time. I have not, as yet, estimated the expense, but am assured that it is by far the cheapest fence I can build with posts and boards. G. Hoskins.

Meridian, Cayuga Co., N. Y., 1853.

To Make a Balky Horse Draw.—In India when a horse can and will not draw, instead of whipping, spurring or *burning* him, as is frequently the practice in more civilized countries, they quietly get a rope and attaching it to one of the fore feet, one or two men take hold of it, and advancing a few paces ahead of the horse, pull their best.—No matter how stubborn the animal may be, a few doses of such treatment effects a perfect cure.

## ECONOMY IN THE WEST.

A correspondent of the *Boston Cultivator*, who is traveling out west, says—"On my way to Portage, Ill., I noticed a man feeding some 20 or 30 "porkers" by the side of the road, among which I noticed some very fine Suffolks. I know Yankees who would get rich on what farmers waste here. Nature yields her gifts so bountifully that they never think of being economical or saving." There is much matter for serious reflection in this short sentence. Feeding hogs by the road side cannot be good economy even on the rich prairies of Illinois. We are aware that it will not pay to be at much expense in erecting buildings and drawing out manure, &c., but the porkers might at least have been fed in some lot where their manure would be dropped on the soil ready to be plowed under for the next crop. Manure will not poison the fertile soil of the west, and will sooner or later be needed to obtain good crops. Husband it, therefore, in time.

## RISING PRICES.

Every thing is going up—except morals, in this City. Houses are going up. Streets are going up. People are going up—up town. Rents are up. We do not know that they can go higher. Every thing eatable is constantly going up, up, up. Flour is so high at the grocer's, that it refuses to rise in the kitchen. A good many will be put to it to raise bread, if flour rises any higher. Coal is so high that many people cannot get it to go down the coal slide to the cellar. Notwithstanding it is constantly falling through the grate—it takes a great deal of money, seven dollars, to raise a ton. Firewood must have grown on tall trees, or it never could stand up at present prices. Butter is so high—two and six pence per pound—that it will not go down poor folk's throats. The supply comes from so far "up country" there is nothing low about it, except quality. Potatoes have been getting up ever since they were put into their beds. They took a rise when they were dug, and it has been hard digging to make a raise to reach them ever since. Beef, though neither high fed, nor high bred, is high priced enough to make up for both. Sixteen cents a pound for steak, warranted as tough as any white oak. Our mutton all comes from mountain sheep. The price is above any thing in the low lands. The price of pork is enough to make the buyer do what the pig did when he was seized to be killed.—Chickens are all of the Shanghai breed.—They are high enough. Turkeys have grown quite out of reach. Even geese, short as their legs are, are able to rise on wings above the vulgar herd. Ducks have got up, like a flock out of a frog pond. We cannot raise a quack, without a dollar. Water, that used to run down hill to the level of common people, has now got a way of getting up above their reach. You have to come down ten dollars to make it come up from the Croton pipes. Dry goods used to be low; "selling off at cost." We never hear of such things now. Even brandy, that used to run down so easy, is up now. A shilling for a drink. Every thing we eat, drink, and wear is—Heigh-ho, ho, how high!—*Tribune.*

## COST OF CROPS IN ENGLAND.

The following estimates are given by the *London Agricultural Gazette*, as the average cost of various crops at Cirencester, Ag. College, including rents and taxes:

1. Potatoes—Crop, from 30 to 200 bushels per acre; cost £11 16s. 6d. or $56 per acre.
2. Carrots—£9 1s. or $43,50 per acre.
3. Mangolds—£7 7s. 8d. or $35 per acre.
4. Turnips—Crop, 13 tons per acre, cost £5 13s. 3d. or $26,50 per acre.
5. Grass seed for meadows, $2 per acre.
6. Barley—Crop, 40 imperial bushels per acre; costs ready for market, £2 12s. 3d. or $17 per acre.

Live Hogs.—3,773 live hogs for the N. Y., market, were brought over the Erie Railroad yesterday. The daily receipts of hogs over this road for the past month, have averaged about or over a thousand. A considerable amount of other live stock comes to the city over this road, and notwithstanding the immense receipts of country produce by the different avenues of transportation, the prices of most kinds of provisions are higher than ever known in the city. Nothing seems to warrant this state of things, and the secret of it appears to be monopoly and profit.—*N. Y. Courier.*

It is stated that the pest of New England farmers, the white daisy, may be exterminated by Guano. If it is in land that can be plowed, break it up and sow 250 pounds of guano per acre, with oats or wheat and clover. If it is in pasture, sow the guano with half a bushel of plaster to each hundred pounds of guano, and the daisies will disappear. Or, if they don't, a good deal of guano will disappear, to make room for further importations, and keep up the price.—*Boston Post.*

Coal in Abundance.—Here is a paragraph from the Fairmount Virginian. "It would astonish people who pay twenty cents a bushel for coal, to see that article dug out of our streets in grading them.—Such was the case last week. In grading the street leading to the bridge, Mr. Martin, the contractor, struck a vein, from which he allowed persons to dig and haul away what they wanted, at the rate of 1½ cents per bushel." Wish they would do so here.

# Orchard and Garden.

## CULTIVATION OF ORCHARDS.

A correspondent of the Germantown Telegraph, says he has planted two orchards, One in '35 the other in '39. The ground for the former was thoroughly pulverized to the distance of eighteen inches around each tree, previous to planting, and every spring the soil was loosened up around them and at three different times during the past twelve years the trees were manured with hog-pen manure. In the second orchard, instead of having the ground pulverized, a hole was dug, and the trees set without having any of the clods broken.—The fall following, the ground was sown with grass seed, and left in grass for six years. The mice harbored around the trees and did much damage. Now, fourteen years since the time of planting, the trees are not more than half as large as the former, and have never borne any fruit worth mentioning, while the others grew very fast and bore much fruit.

## APPLES AND PEARS IN THE WEST.

A WRITER in the *Prairie Farmer* gives his experience with several choice varieties of apples and pears in Indiana, as follows:

*Northern Spy.*—I received grafts of this variety six years ago, and for three years past have been looking for fruit from them, but they have not borne until this year; from this I infer that it is tardy in coming into bearing. It is all that could be desired, however, when it does bear: fruit large very handsome, and of the best quality. I doubt not it will become very popular at the west.

*Wagner.*—This has also fruited for the first time, this year, on three year old grafts. Fruit above medium size, very handsome, and excellent. I think this will prove worthy of extensive cultivation.

*Dominie.*—This will prove, I think, one of our most profitable fruits. I have had it in fruit for the last three years, and admire it more each successive year. It is the greatest bearer in my orchard. The branches are literally loaded from one extremity to the other, and yet the fruit is uniformly fair, and above medium, nearly large in size; in quality too, although it may not rank as best, it certainly is entitled to the position of very good.

*Porter.*—This, I believe, will be extensively cultivated as an early autumn fruit. It is a much better fruit than the Maiden's Blush, which ripens at the same time. The fruit is equally handsome in appearance, and the tree a good bearer.

*Dutch Mignone.*—This is a rapid and strong grower; bears young, and is a handsome and good fruit; will take rank when generally known, with our best early winter apples.

*Gravenstein.*—This apple ripens at the same time with the Fall Pippin, and from the few specimens I have yet seen, I think it fully equal to it in quality. If it should prove to be a good bearer, as it promises to do, it will be a formidable rival to the pippin.

*Swaar.*—This has been in bearing with me for several years, and fully maintains its high reputation as one of the best of its season—from December to March.

Of those varieties better known — the Baldwin, Rhode Island Greening, Esopus, Spitzenberg, Jonathan, Roxbury Russet, Newton Pippin, &c., I shall say nothing at present, except that they maintain their high reputation fully, and are worthy of a place in every orchard.

Of *Pears*—I fruited the last season the Bartlett, Summer Franc Real, Andrews, Buffum, Stevens' Genesee, White Doyenne, Seckel, Winter Nelis, Louise Bonne d'Jersey, and several other varieties. The four following, in my opinion, are all that are really desirable for extensive cultivation.

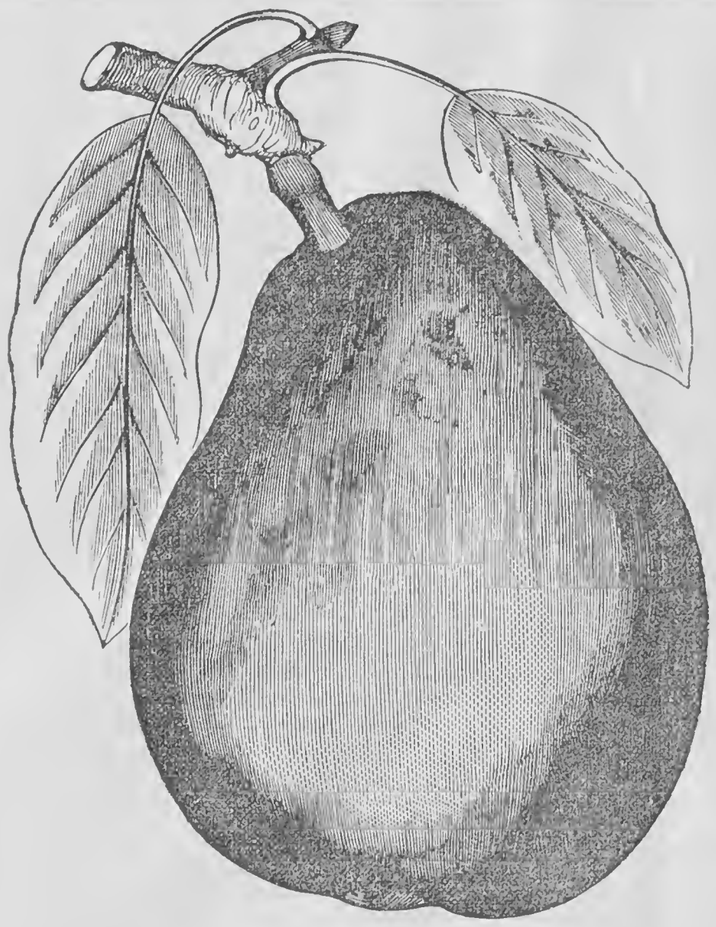
*Bartlett.*—This bears early and well; fruit large and fair; is improved both in size and quality by growing upon the quince. When this becomes generally cultivated, it will drive that wretched apology for a pear, the Summer Bell, out of the market.

*Buffum.*—This is a remarkably rapid and upright grower, and, though it does not come into bearing as early as some other varieties, yet it bears very abundantly and regularly. The fruit is at least very good in quality. In the estimation of many it is equal to the White Doyenne.

*Seckel.*—This proves to be a very good bearer, and the fruit considerably larger than I expected from the description in the books. It deserves its reputation as the standard of excellence of flavor.

*White Doyenne.*—This old favorite stands amongst us without a stain upon its character—no cracking of fruit or other symptoms of decline or decay. I think we might safely challenge the world to show larger and better specimens of this fruit than were exhibited at our county Fair.

TREES RECEIVED WHEN THE GROUND IS FROZEN.—We occasionally hear of people being quite at a loss to know what to do with trees received in a cold time, or when the ground is frozen. The way is, either deposit the packages in a cellar as they are received, or open them and set the roots in earth until the weather changes: or a trench may be made in the open ground, even if the surface must be broken with a pickaxe, and the trees laid in until they can be planted. They may remain in this state quite safe all winter. Every season we receive packages of trees from Europe in mid winter, and we find no difficulty in taking care of them in this way.—*Horticulturist.*



BEURRE DE ANJOU PEAR.

THE above beautiful portrait was taken from a pear furnished to the editor of the *New England Farmer*, by the Hon. MARSHALL P. WILDER, from his garden in Dorchester, and is a faithful representation of the fruit, leaves, and a portion of the branch upon which it hung.

*Synonym*—Neplus Meuris of the German and French Catalogue. *Size*—Large.—*Form.*—Obovate, obtuse, pyriform, outline and surface often slightly irregular. *Stem*—Short, thick, inserted without much depression. *Calyx*—Moderately sunk in small uneven basin. *Skin*—Greenish yellow, coarsly dotted, russeted at the stem and eye, and with a brownish red cheek on the sunny side. *Flesh*—Yellowish white, very juicy, melting and buttery. *Flavor*—Rich sub-acid, with a delicious aroma resembling that of the Brown Beurre. *Season*—November to January. *Class*—"Best." *Tree*—Hardy and productive either on the pear or quince stock.

The Bourre de Anjou was introduced by Mr. WILDER, from Europe, about ten years ago. Mr. W. considers this variety one of his most valuable acquisitions, and worthy of general dissemination.

## GARDEN HINTS FOR DECEMBER.

IT often happens that even here at the north a considerable portion of this month is open, and allows out-door work to be carried on. Last year we planted trees till within a few days of Christmas. Every fine day should be improved, until the ground is frozen solid. All kitchen gardens should be spaded up in the fall, and manured. If grubs are troublesome, apply a dressing of soot and ashes.

*Fruit trees* should be mulched. Mulching protects the roots from frost, and renders the tree less sensible to sudden and violent changes of temperature. If the ground be already rich, and manure dangerous, mulch with leaves. Spread them about the tree six inches deep, and throw a little earth over them, to keep them from being blown away. Stake up carefully, or in some way secure, newly planted trees from being rocked about by the winds; an opening is soon made at the base of the tree, in which water lodges, and when it freezes the tree is frequently destroyed.

Cover *Strawberry beds* with leaves; some kinds are tender, and are nearly killed out by a severe winter, if there be little snow. All sorts, hardy or not, are the better for being covered. The leaves can be raked off on the opening of spring.

*Raspberries* should be protected, and the best way is to fasten the canes to the ground by means of a hooked peg, and cover with leaves or some earth. When the canes are much injured by winter, the crop is poor. Protection is cheap and safe.

*Beds of bulbous roots,* such as Hyacinths, Tulips, Japan Lilies, &c., should be covered with leaves. Carnations, and other herbaceous plants, may be nicely protected by a covering of moss from the woods.

*Rare or tender evergreen trees* may be very tastefully protected, by boughs of evergreens fastened around them by unconspicuous ties. This is safer than straw sheathing, and much less unsightly in the landscape.

The *fruit room* and *root cellar* will need frequent examination, to see that all decaying objects are removed promptly. Both these places should be kept uniformly cool as possible, not to freeze, and quite dry.

*Dahlia roots* are often lost by being housed in a damp state, and left in a cellar. They should be well dried, even if fire heat be necessary, and then put on shelves in a dry place. They must also be looked to occasionally, and mouldy, decaying parts removed, and, if need be, moved to a dryer place.—*Horticulturist.*

## HEALTHFULNESS OF FRUIT.

I AM inclined to view the abundant supply of fruit in hot climates, and during the summer and autumn, and the great longing of people, especially of children, (in whom the biliary functions are very active,) for fruit, to a wise provision of an overruling and over-watchful Providence, which generally plants the remedy side by side with the disease, at a time when the biliary system is in most danger of becoming disordered. I have generally observed that children who are strictly, and I think injudiciously, debarred the use of fruit, have tender bowels, and I have noticed they are almost universally pallid; while, on the other hand, children who are allowed a moderate daily proportion of sound fruit are usually florid, especially among the poor. I therefore imagine that the use of fruit facilitates the introduction of iron, the coloring principle of the blood into the circulating system. When living in the country, with the advantages of a large garden and plenty of fruit, I always allowed my children a liberal proportion, and never had occasion to treat them either for diarrhœa or skin eruptions, though it is a very common opinion that cutaneous diseases are often brought on by the too free use of fruit. On first removing my family to town, the usual supply being cut off, two or three of the younger ones became affected with obstinate diarrhœa and dysentery, which resisted all the ordinary modes of medical treatment. My opinion on the subject afterwards induced me to give them a good proportion of fruit every day, such as grapes, oranges, ripe apples, &c., when all the symptoms presently subsided, and they have never since been troubled either with bowel complaints or skin eruptions to any noticeable extent.—The editor of the *Lancet*, in animadverting on the health of London during the week ending August 20th, makes the following remarks:—The deaths ascribed to diarrhœa are 126, of which 115 occurred among children. The tender age of nearly all the sufferers, 97 of them not having completed their first year, is sufficient to dispel the popular error that the use of fruit is the exciting cause.—*M. D., in London Times.*

# Domestic Economy.

## TO REPAIR FRACTURED EARTHENWARE.

MESSRS. EDITORS:—Some years ago while sojourning in one of the southern counties, my good wife, who is something of an economist, learned a method of repairing broken china, and earthenware, which is better than all the cement that was ever hawked about the county. After your dish is broken, and before it has been wet, tie the pieces together in place and boil them in skim milk for half an hour, when they should be taken out carefully, and let stand till perfectly dry. They will then be found as strong at the crack as at any other part, we have a potato dish served in this manner which has been in constant use for two years and gives no signs of failing. A tea saucer boiled in this way was afterwards knocked from a shelf, but the fractures were all in new places; this was again boiled and is still in use. This may be new and useful to many of your readers who "despise not the day of small things" and for their benefit I give it.

F. W. L.

Greece, Nov., 1853.

WE have used the above method with success. In many cases it is the best means of repairing fractured earthenware we know of. The only difficulty about it is in fastening the broken pieces together before placing them in the milk.—EDS.

SUET keeps good all the year round, if chopped and packed down in a stone jar, covered with molasses. Mince pie meat may be equally well preserved if boiled, chopped, and similarly packed.

# Mechanic Arts, &c.

## LIST OF PATENT CLAIMS

ISSUED FROM THE UNITED STATES PATENT OFFICE

[For the week ending November 29.]

Samuel F. Allen, of New York, N. Y., for improvement in fluid lamps.

J. Bloom, of East Woburn, Mass., for improvement in condensing smoke and gases.

M. C. Gritzner, of Washington, D. C., for improved gold separator.

Benj. F. Miller, of New York, N. Y., for improved iron fence.

John W. Peer, of Schenectady, N. Y., for improved trip-hammer.

David N. Ropes, of Meriden, Conn., for improvement in attaching handles to the blades of table knives.

Robert R. Taylor, of Reading, Pa., for improved arrangement of valves, ports and passages, for operating steam hammers.

Silas B. Terry, of Terryville, Plymouth, Conn., for mode of applying the vibratory spring of balance clocks.

R. C. Wrenn, of Mt. Gilead, O., for improvement in seed planters.

Ephraim B. Benedict, of Clinton, N. Y., for improvement in coupling shafts to axles.

Erastus T. Russell, of Shelbyville, Ind., for improvement in combined India rubber and steel springs.

Samuel Chapman, Jr., of New York, N. Y., for improvement in stone saws.

Richard Edwards, of Eagle River, Mich., for improvement in machines for washing ores.

Jno. Crabtree and Jos. Hopkinson, of Philadelphia, Pa., for improvement in tightening packing of engine and pump pistons.

Israel Graves and Charles A. Bogart, of West Dresden, N. Y., for shingle machine.

Chas. Phelps, of Salem, Mass., for improvement in supporting falling table leaves.

J. B. & W. F. Poague, of Caney Hill, Va., for improvement in forming hydraulic cement pipes.

Fred'k. Seibert, of Williamsburgh, N. Y., for improvement in machines for polishing leather.

Samuel J. and Charles H. Trofatter, of Salem, Mass., for improvement in machines for skiving boot counters.

J. Heilman, administrator of Joshua Heilman, deceased, of France, for improvement in combing fibrous materials. Patented in France, Dec. 17, 1845.

Wm. Baird, of Philadelphia, Pa., assignor to John J. Hepworth, of same place, for improvement in power looms.

Fred'k. Nicholson, of Warsaw, N. Y., assignor to Nelson A. Hume, of Rushford, N. Y., for improvement in screw jacks for raising buildings.

DESIGN.

Simon F. Moore, of Batavia, N. Y., for design for cooking stoves.

For the week ending December 6, 1853.

Jno. Davis, of New Bedford, Mass., for improvement in indicating electro-magnetic telegraphs.

Simeon Goodfellow, of New Orleans, La., for improved arrangement of screw-cutting dies in the die-stock.

Ebenezer W. Hanson, of Spring Garden, Pa., for improvement in pen-holders.

David Matthew, of Philadelphia, Pa., for improved spark burner and water heater for locomotives.

Ira F. Payson, of New York, N. Y., for improvement in soap ingredients.

Jas. Watt, of South Boston, Mass., for improved valve arrangement for steam hammers.

Geo. Wellman, of Lowell, Mass., for improvement in cleaning machine cards.

Jno. E. Whitmore, of Joliet, Ill., for improvement in overshot water wheels.

Alfred Carson, of New York, N. Y., for improved mode of ringing fixed bells. Ante-dated June 6, 1853.

Lucian B. Flanders, of Dunkirk, N. Y., for improvement in replacing cars upon railroad tracks.

Jas. Glenn, of New York, N. Y., for improvement in illuminated clocks.

Ira Warren, of Boston, Mass., for improvement in shower syringes.

R. M. Evans, of Gilford, N. H., assignor to himself and Asa Weeks, of South Boston, Mass., for improvement in cutters for planing mouldings.

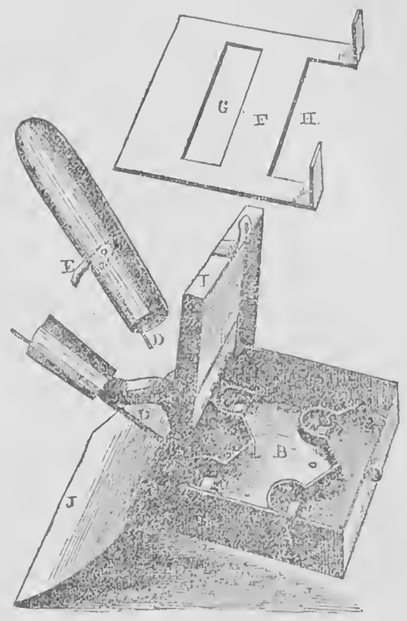
Carl E. Werner, of New Castle, Ill., for improvement in condensers for stills.

COATING IRON WITH COPPER.—The metal is first cleaned in the ordinary manner with dilute sulphuric acid, and with some of the acid on it left exposed a few days, to let it corrode and rust, in order to form a rough surface; it is then brushed over with solution of sal ammoniac and immersed in a bath of zinc; then into a bath of copper, and held there till it ceases hissing: then withdrawn and cooled to a cherry rod, when it is found coated with copper. If we want a thicker coat, it is then dipped again in the sal ammoniac while at a cherry-red heat, and then in the zinc, and in the copper, as before, till the thickness of copper is attained.—*Patent Office Report.*

PROTECTION FOR CARRIAGE SPRINGS.—W. N. Rood, of Lancaster, Wis., has invented a method of protecting from breaking, the elliptical springs of carriages. It consists in the employment of a vertical rod, which passes down through the bottom of the wagon, sand-board, spring and axle, for the purpose of bracing the spring and preventing it from bending backward or forward, right or left—the said rod securing all the parts together while it keeps the elliptical spring upright, and thus removes one great cause of breaking. The inventor has applied for a patent.

## CORN PLANTING HOE.

WE have often thought that corn planting, in company with a hearty, active, emulous set of young fellows, curbed in a little by steady, careful old fogies, was the pleasantest work of the whole year. It must be admitted, however, that Mr. BACKACHE often spoils the fun. But happily, his days are numbered. He is, for the future, to be banished from the lot, and glee be the order of the planting day. The instrument to keep him away, is here portrayed. It is a



hoe and seed dropper combined, and operates in this wise:—A is the side, and B is the bottom of the box in which is placed the corn; C C C C are valves worked by the trigger, E, on the end of the handle; F is placed in the box upon the projections which are soon curving around the apertures *a a a a*, and is intended to prevent the escape of more than one kernel at a time, the corn passing down through the openings, G H; I is the lid of the box, and J the blade of the hoe. All that is required to drop the corn is to pull upon the trigger, E. The operation is simply striking the hoe into the ground with the fore-finger of the right hand, which drops the corn, which is then covered by the back stroke of the hoe, as it is lifted from making the forward stroke. It will be readily seen that dropping the corn into the hill separate, each kernel three or four inches from the other, gives each stalk a chance for nourishment, which cannot be obtained when they are dropped by hand, all in a heap. It is an ingenious invention, and worthy a trial. For further information apply to J. A. PEASE, & Co., 79 Nassau St., N. Y.

## CORN AND COB MILL.

E. M. KILLGORE, of Athens, Tennessee, has invented and applied for a patent upon an improvement in mills for grinding corn. The invention consists in having a cylinder provided with radial V-shaped teeth, said teeth forming circles or rings upon the cylinder, placed side by side, the edges of the teeth of every alternate ring being in a line between the edges of the teeth of its adjoining rings. The teeth of the cylinder run in V-shaped grooves in a concave, the grooves being corrugated or toothed in a direction tangential with a circle somewhat smaller in diameter than that of the cylinder. The teeth of the grooves in the concave are so placed that the edges of the teeth in every alternate groove, are in a line between the edges of the teeth in the adjoining grooves.—*Scientific American.*

LAKE SUPERIOR IRON.—The American Railroad Journal says:—We are in possession of two remarkable specimens of this iron. One is a shaving turned from a cast iron shaft, and when removed was over ten feet long, but has since been broken. The structure of the iron, however, resembles that of the wrought iron, and many would judge it to be a sample from a Lowmoor or Bowling tire. Shavings turned from cast iron hardly ever exceed a few inches in length.

The other sample is of Lake Superior pig. It presents large and beautiful crystals, and gives indication of great purity and toughness.

DURABILITY OF WOOD.—The piles under the London bridge have been driven five hundred years, and on examining them in 1849, they were found to be little decayed. Old Savoy Place in the city of London, was built six hundred and fifty years ago, and wooden piles, consisting of oak, elm, beech, and chestnut, were found upon recent examination, to be perfectly sound. Of the durability of timber in a wet state, the piles of a bridge built by the Emperor Trajan, over the Danube, afford a striking example. One of these piles was taken up and found to be petrified to the depth of three-fourths of an inch; but the rest of the wood was not different from its former state, though it has been driven 1000 years.

WATER-PROOF CEMENT.—The following is a patented water-proof cement—Half a bushel of slaked lime, one fifth of a bushel of powdered rosin, with water sufficient to make the whole into a stiff mortar or paste.

INDIA RUBBER, it is said may be preserved in liquid state by allowing the juice to flow from the tree into a vessel partly filled with pure common salt.

# Educational.

## SELF-INSTUCTION.

Many a mechanic and laboring man goes through life with very little knowledge of the arts and sciences, except the one he practices, and shut out from all the delights of intellectual existence. His pleasures are merely animal, his recreations of the lowest grade, his highest enjoyments those experienced in eating and sleeping.

If a man neglects the cultivation of his intellect until the period of early manhood is past, or until the cares of a family, and other pressing duties of existence have multiplied upon his hands, there is very little probability of the lost opportunities ever being retrieved. The dew of youth has then exhaled; the acuteness of the intellect has become partially dulled; the retentive powers of the memory are somewhat weakened; and what is more, the noble aspirations—the day-dreams of greatness, the spur of ambition, the earnest desire to rise—have all partially passed away.

Ethical writers say "youth is the time to serve the Lord," and it is equally true that it is also the time to serve one's self; not in opposition to, or neglect of the former and higher service, but collateral and anxiliary thereto. Colleges, schools, professors, and distinguished instructors are not absolutely necessary to the acquisition of knowledge.

What we would especially impress upon the young mechanic and agriculturist, is the importance of *self-instruction*; and as an illustration of triumphant success would cite the case of Elihu Burritt; who, as a laboring man and one in the performance of a mechanical trade, has made himself one of the most distinguished linguists of the present or any other age. We are ourselves familiar with an instance where self-instruction at least, in the outset, has led to less brilliant it is true, but still to very desirable results. A young man engaged in a laborious mechanical employment was in the habit of studying a couple of hours every evening after the labors of the day were done. He had a small room to which he retired after supper and studied until half-past ten. His associates, for the two hours which he thus employed, were loitering away their time in stores or groceries. In this way, within a few brief years, he had acquired a general knowledge of most subjects within the range of physical science, as well as of history.—He had studied carefully, treatises upon Natural Philosophy and Chemistry, and become familiar with the process of book-keeping by double entry. The feat which he prided himself most upon was the mastery of Day's Algebra, almost unaided and alone. The teacher of a select school in town assisted him in one or two instances, but with these exceptions the acquisition was by his own unsided efforts. "I worked," he told us, "every leisure moment of a whole week upon one problem in simple equations, and I solved it too, at last! I never felt more elated at any one thing in the whole course of my life! I threw the problem into every conceivable form of equation and when it came out right at last I was half tempted to rush into the street with the exclamation of the ancient Philosopher—Eureka! Eureka!"

The problem was as follows, and will undoubtedly be recognized by many readers:

"A merchant supported himself three years for £50 a year; at the end of each year he added to his capital a third part of that which remained unexpended; and at the end of the three years he found that his original capital was doubled.—What was the original capital?"

The equation as formed by him was the one most analytical in its form, but certainly not the one easiest of solution. Letting a, b, and c, stand for the successive thirds of unexpended capital, his formula was as follows:

X—50+a—50+b—50+c=2X. By substituting the values of a, b, and c, in fractional terms of X and 50, it is readily seen that the equation will become greatly extended and somewhat difficult to reduce, at least for a beginner.

Having at length, by continued and persevering effort, acquired what might be called a good practical education, but not sufficiently extensive to satisfy himself, he abandoned his situation and devoted himself exclusively to literary pursuits, in which he has ever since been engaged. But whether he had done that, or continued to the end of his days a working mechanic, the intellectual pre-eminence he has gained will be a source of infinite gratification to himself, and will command the respect of his fellow men. Let instances of this kind not be lost upon others in like humble circumstances. Slow progress, but continuous and without cessation, will carry one a good way forward during the period of a human life; and although it is better to begin early, it is never too late.

BARON VON HUMBOLDT.

Prof. Silliman, while in Europe, called upon the veteran Humboldt—and, in his recently published volume, gives the following interesting account of the interview:

In fulfilment of an appointment, we went at once, and were admitted by his faithful servant, the companion of many an arduous journey. His mansion is a plain edifice, situated in a retired part of the city; and he would not have been now at home had not the king gone to Konigsburg; for his residence is generally with the king at Postdam, who keeps him hear his person, as his father did before him, not only for his society and conversation, but, no doubt, also as a counsellor, wise from his many years and his large experience in the world. We passed through his library, which fills, on all sides, a room of considerable size; and he issued from a door on the remote side of the apartment, opening apparently from his private room. He met us with great kindness and perfect frankness, and with a pleasant rebuke for my having hesitated to call on him, (i had written a note, asking permission to call,) implying that he was not ignorant of my efforts and position at home. I then introduced my son and Mr. Brush, and we were at once placed perfectly at our ease. His bright countenance expresses great benevolence; and from the fountain of his immense stores of knowledge, a stream, almost constant, flowed for nearly an hour. He was not engressing, but yielded to our promptings, whenever we suggested an inquiry, or alluded to any particular topic; for we did not wish to occupy the time with our own remarks any further than to draw him out. He has a perfect command of the best English, and speaks the language quite agreeably. There is no stateliness or reserve about him; and he is as affable as if he had no claims to superiority. His voice is exceedingly musical, and he is so animated and amiable that you feel at once as if you were an old friend. His person is not much above the middle size; he is not unlike in form to the late Colonel Trumbull. He stoops a little, but no appearance of decrepitude; his eyes are brilliant, his complexion light; his features and person are round, although not fat; his hair thin and white; his mind very active, and his language brilliant, and sparkling with thoughts. He alluded in a flattering manner to our progress in knowledge in the United States, and to the effect which The American Journal of Science and Arts had produced in promoting it. He showed himself perfectly acquainted with the progress of physical science and general improvement in our country, and particularly commended the labors of Colonel Fremont in the far West, of Prof. Bache in the coast survey, and of Lieut. Maury, in navigation. Bringing out his maps, and tracing his lines without glasses, he pointed out a channel of communication across the Isthmus of Darien, which he had observed and described more than forty years ago, and to which his attention had been recalled by a paper of Capt. Fitzroy's in The Journal of the Royal Geographical Society. He showed us that there are no mountains in the course he indicated, which is more southern than any of the existing routes, and that it possessed several important advantages. I alluded to his brief visit in the United States, in 1804, when he traveled no further north than Philadelphia. He told us that he passed three weeks at Monticello with the late Mr. Jefferson, who entertained him with an extraordinary project of his inventive but often visionary mind, regarding the ultimate division of the American continent into three great Republics, involving the conquest of Mexico and of the South American States. He discussed many topics regarding the United States. The discovery of gold in California furnished him an abundant theme—our topography, climates, productions, institutions, and even political controversies, were all familiar to him.

Baron Humboldt, although associated intimately with kings, is evidently a friend to human liberty, and rejoices in the prosperity of our country. He made some very interesting remarks on the present state of Europe, and on the impossibility of keeping down moral power by physical force.—In his library hung an excellent likeness of the King, and another of his own brother, the late William Humboldt, the eminent philogical and ethnological antiquary.

We retired greatly gratified, and the more so, as a man in his 83d year might soon pass away.

When we were about leaving Berlin, I addressed a note to the Baron, expressing our great satisfaction at the interview, bidding him farewell, and asking for his autograph. He readily replied, but instead of his signature merely, he sent an interesting original letter, written on the occasion. * *

It is proper to add, that at the time of our visit, Baron Von Humboldt was engaged in the preparation of a new production on the Outline Form of Mountain Peaks, in which he was working up original observations and drawings made during the course of his various wanderings. He assured us that the greater part of his literary labor was of necessity performed when others slept, as the hours of usual labor were with him consumed by the demands of the King. He added, that he early made the discovery that he could get on very well with 4 hours of sleep. This, as has often been remarked, accounts for his prodigious performances in literary labor.

Such is the modest and unassuming language and appearance of one who has, in person, explored a larger portion of our globe than any other living traveler; of a philosopher, who has illustrated and enlarged almost every department of human knowledge: general physics and chemistry, geology, natural history, philology, civil antiquities, and ethnography, have all been illustrated by him.

He has endured the extreme vicissitudes of opposite climates, and seen men, and animals and plants, under every phase and aspect. His published works are a library. His faculties combine the enthusiasm of poetry with the severity of science; and from the culminating point of four-score years and four, he surveys all his vast labors, and the wide panorama of universal science, which, as probably his last labor, he is now presenting to his follow-men by the reflection of that splendid intellectual mirror, his Kosmos—the comprehensive *Hellenism*, which expressed both *the universal* and *the beautiful*.

Such is the philosopher, who of all living men belongs not so much to his country as to mankind, and who, when he departs, will leave no one who can fill his place.

## CANADA.—No. II.

BY J. CLEMENT.

### ORIGIN AND INCREASE OF POPULATION.

Nearly three-fourths of the people of Canada are natives of the Province. Most of the emigrants are from England and Wales, Scotland, Ireland, and the United States, though almost every nation of Europe has its representatives there. The following table shows the entire population by origin:

| | Origins. | L. C. | U. C. | Total. |
|---|---|---|---|---|
| Natives of | England and Wales | 11230 | 82699 | 93926 |
| | Scotland | 14565 | 75811 | 90376 |
| | Ireland | 51499 | 176267 | 227766 |
| | Canada, French Origin | 669528 | 26417 | 695945 |
| | " not of French origin | 125580 | 526093 | 651673 |
| | United States | 12482 | 43732 | 56214 |
| | Nova Scotia and P. E. | 574 | 3785 | 4259 |
| | New Brunswick | 480 | 2634 | 3111 |
| | Newfoundland | 51 | 79 | 130 |
| | West Indies | 47 | 345 | 392 |
| | East Indies | 4 | 106 | 110 |
| | Germany and Holland | 159 | 9957 | 10116 |
| | France and Belgium | 359 | 1007 | 1366 |
| | Italy and Greece | 28 | 15 | 43 |
| | Spain and Portugal | 18 | 57 | 75 |
| | Sweden and Norway | 12 | 29 | 41 |
| | Russia, Polaud and Prussia | 8 | 188 | 196 |
| | Switzerland | 38 | 209 | 247 |
| | Austria and Hungary | 2 | 11 | 13 |
| | Guernsey | 118 | 24 | 142 |
| | Jersey and other British Islands | 293 | 131 | 424 |
| | Other places | 830 | 1351 | 2181 |
| Born at Sea | | 10 | 168 | 178 |
| Birth place not known | | 2446 | 889 | 3335 |
| Total Population | | 890261 | 952004 | 1842265 |

The population of African descent, is included in this abstract, though not separately designated. The colored population of Upper Canada is between eight and nine hundred thousand. The increase has been very rapid during the last three or four years, owing to the passage of the Fugitive Slave law and the stringent laws of Indiana, Illinois and some other States with reference to colored citizens.

It will be seen by the above table that something like three fourths of the inhabitants of Lower Canada, are of French origin and natives of the Province; while of Upper Canada less than a thirtieth part are of that stock. Between forty-three and forty-four thousand inhabitants of the latter Province are from the United States, and their influence is strongly felt. England, Scotland and Wales have each a large representation, and Ireland more than any other two countries. Among the Irish, however, are but few influential minds. As a whole, they are much like the same people in the United States, illiterate and quarrelsome. They are not so generally Catholics as are the French in Lower Canada—many of them being Orangemen and fervent haters of papists—but they have as little enterprise as the French, neither of the two classes being very "progressive." The French in Lower Canada cling to the customs which their grandfather's great grandfathers brought from Europe; and the Irish in Upper Canada, with rare exceptions, know no more about rural architecture, and arboretums than the Arabs, and they would no sooner think of planting a shade tree, than of committing suicide. Many of the English and Scotch exhibit a good degree of taste and a commendable spirit of enterprise. They are the leaders of community, and give tone and caste to society.

It may be interesting to American readers to know how the population of the Province stands as it regards religious tenets; and the following table will afford the information:

| Religions. | L. C. | U. C. | Total. |
|---|---|---|---|
| Church of England | 45,402 | 223,190 | 268,592 |
| " Scotland | 4,017 | 57,542 | 61,589 |
| " Rome | 746,866 | 167,695 | 914,561 |
| Free Presbyterian Church | 267 | 65,807 | 66,074 |
| Other Presbyterians | 29,221 | 80,799 | 110,020 |
| Wesleyan Methodists | 5,799 | 96,640 | 102,439 |
| Episcopal " | 7 | 43,884 | 43,891 |
| New Connexion " | 3,142 | 7,547 | 10,989 |
| Other " | 11,935 | 59,585 | 71,520 |
| Baptists | 4,493 | 45,353 | 49,846 |
| Lutherans | 18 | 12,089 | 12,107 |
| Congregationalists | 3,927 | 7,747 | 11,671 |
| Quakers | 163 | 7,460 | 7,423 |
| Bible Christians | 16 | 5,726 | 5,742 |
| Christian Church | 10 | 4,093 | 4,103 |
| Second Adventists | 1,369 | 663 | 2,032 |
| Protestants | 10,475 | 1,733 | 12,208 |
| Disciples | | 2,064 | 2,064 |
| Jews | 348 | 103 | 351 |
| Menonists and Tunkers | | 8,230 | 8,230 |
| Universalists | 3,450 | 2,681 | 6,131 |
| Unitarians | 349 | 834 | 1,183 |
| Mormons | 12 | 247 | 259 |
| Creed not known | 393 | 6,741 | 7,134 |
| No Creed given | 4,521 | 35,719 | 42,261 |
| All other Creeds not classed | 13,834 | 7,805 | 21,639 |

Touching the matter of religion, it may be proper to remark that Protestantism, is growing mush faster than Catholicism.—Thirty years ago the population of the two Provinces was abont 550,000, when less than one third were Protestants. At the close of 1853 it cannot be much less than two millions, and at least one million and fifty thousand are Protestants, making this branch of the Christian family now in the ascendant. Its increase during the last thirty years has been at least 900,000; while the Catholics have not gained 600,000—probably not more than 550,000. This change of position numerically of the two great Christian branches, is not owing materially to change of religious sentiment, but to the circumstance that, of late years, much the larger portion of emigrants to Canada, are Protestants. Most of the Irish and German Catholics who now leave Europe, seek a home in the United States, and the same is true of the majority who leave France.

The annexed table shows the progressive population of the two Provinces, irrespective of origin or religion:

| Lower Canada. Years | Lower Canada. Pop. | Upper Canada. Years. | Upper Canada. Pop. |
|---|---|---|---|
| 1676 | 8,415 | 1791 | 50,000 |
| 1688 | 11,249 | 1811 | 77,000 |
| 1700 | 15,000 | 1824 | 151,097 |
| 1706 | 20,000 | 1825 | 158,027 |
| 1714 | 26,904 | 1830 | 210,437 |
| 1750 | 65,000 | 1832 | 261,060 |
| 1781 | 113,000 | 1834 | 320,693 |
| 1825 | 423,630 | 1836 | 372,502 |
| 1827 | 471,876 | 1839 | 407,515 |
| 1831 | 511,922 | 1841 | 465,357 |
| 1844 | 690,782 | 1842 | 486,955 |
| 1848 | 779,000 | 1848 | 723,292 |
| 1850 | 791,000 | 1850 | 791,069 |
| 1852 | 890,261 | 1852 | 952,004 |

Our next and concluding article will be upon the *Prospects* of Canda.

Early Teaching.—Scratch the green rind of a sapling, or wantonly twist it in the soil, and a scarred or crooked oak will tell of the act for centuries to come. How forcibly does this figure teach the necessity of giving right tendencies to the minds and hearts of the young.

There's not a hearth, however rude,
But hath some little flower
To brighten up its solitude,
And scent the evening hour.

There's not a heart, however cast
By grief and sorrow down,
But hath some memory of the past,
To love and call its own.

# Sunday Reading.

## FOOTSTEPS OF ANGELS.

BY H. W. LONGFELLOW.

When the hours of day are numbered,
And the voices of the night
Wake the better soul that slumbered,
To a holy calm delight—

Ere the evening lamps are lighted
And like phantoms grim and tall,
Shadows from the fitful fire-light
Dance upon the parlor wall—

Then the forms of the departed
Enter at the open door;
The beloved, the true-hearted,
Come to visit me once more.

Ah, the young and strong who cherished,
Noble longings for the strife,
By the roadside fell and perished,
Weary with the march of life.

They, the holy ones and weakly,
Who the cross of suffering bore;
Folded their pale hands so meekly,
Spoke with us on earth no more.

And with them the being beauteous,
Who unto my youth was given,
More than all things else to love me,
And is now a saint in Heaven.

With a slow and noiseless footstep
Comes the messenger divine,
Takes the vacant chair beside me,
Lays her gentle hand in mine.

And she sits and gazes at me,
With those deep and tender eyes,
Like the stars so still and saint-like,
Looking downward from the skies.

Uttered not, yet comprehended,
Is the spirit's voiceless prayer;
Soft rebukes, in blessings ended,
Breathing from her lip of air.

O, though oft depressed and lonely,
All my tears are laid aside,
If I but remember only
Such as these have lived and died.

[Translated from the German for the Rural.]

## THE ARCH OF PEACE.

There thou standest between heaven and earth, thou beautiful arch of peace! Thou many-colored sign of the covenant, to-day the same as thousands of years before!—When Noah went out of the ark of safety, and stood alone upon the purified earth, his first action was that of building an altar and offering sacrifices to the Lord. The Almighty answered him through the arch of peace, saying, "I have set my bow in the clouds; it shall be the token of the covenant between me and the earth."

Look at its *origin!* The heavenly light of the sun is reflected in the drops of the rain. The water is the earthly element, that comes to light in the rain. Thus our sinful, earthly nature comes to light in the tears of repentance. But the light of the everlasting Sun of righteousness is refracted in them, and behold, the belief of a reconciliation standing in the heart, like the glorious arch of peace in the sky.

Look at its *constituent parts!* When the pure light of heaven is refracted in the earthly water, it beams in seven colors.—Thus sevenfold is the joy of a believing heart. Of the seven colors, *three* stand forth in bold relief; the blue and red on the two sides of the arch, the green in the middle. Are not these Fidelity and Love and Hope? And when Fidelity and Hope touch each other, is there not joy? And when Love and Hope flow together, is there not peace?

Look on its *form!* The arch of peace joins heaven and earth. And is not Religion the chain, wherewith God unites with man? But that bow joins heaven and earth by standing on the earth and reaching into the air,—and have we not recognized our belief as in that holy meditation which rises from our faulty heart to our Father in heaven?

How finely we may view the heavens through that arch of peace! Like a heavenly gate he stands and invites us. Welcome thou beautiful and resplendent gate of heaven! Now our eyes begin to open, and we believe. But our belief, like unto thee, arches up to the holy gate of entrance, and one day we shall, through our faith, enter the everlasting home. T.

## RELIGIOUS THOUGHTS.

It is an easier thing at all times to please God than to please men, because God is pleased with what is in every man's power to exercise, viz., simplicity and sincerity; whereas, men to be pleased, often require a display of talents and address, which fall to the share of very few, and which, after all, will not perhaps secure favor, in consequence of the caprice which so frequently influences the judgments of mankind.

"To give knowledge of salvation unto His people by [in] the remission of their sins." Luke i. 77. It would appear from these words, that man attains the knowledge of salvation, or saving knowledge, only so far as he experiences a remission of putting away of evils from his heart and life, through the Divine power.

There is too much cause to believe that many render their salvation hazardous by a careless confidence in its security; in other words, they might be saved beyond a doubt, if they were more doubtful about being saved.

# Miscellaneous.

## SONG.—I THINK OF THEE.

BY MISS C. M. WILLIS.

I.

When stars are fading from the blue,
And from her rosy wings
The morning shakes the pearly dew,
And up the welkin spring:
The sky-lark, singing, soars away
Through heaven's unclouded sea,
And sadly, as I strive to pray,
I sigh, and think of thee!

II.

And when the sun has sunk to rest,
And evening's dewy palm
Is laid on Nature's verdant breast,
A holy, heavenly calm
Comes stealing o'er my soul,
Like moonlight o'er the sea,
And yielding to its soft control,
I think, dear friend, of thee!

Russell, Ohio, 1853.

## PRIMITIVE SIMPLICITY.

It is quite the fashion of *old-fogyism* to aver the degeneracy of the times, and to sigh for the return of the good old ways and customs of our ancestors of by-gone generations. The memory of past pleasure lingers in the minds of men, and gilds with a kind of rainbow glory the evening of our days; while pain and sorrow, anxiety and fear, toil and trouble, poverty and hardships, which were cotemporary with those enjoyments, are all forgotten.

The spinning wheel, which was wont to hum in the farmer's kitchen through the live-long days of summer, is banished from the land; the loom in the chamber is displaced, and the measured pulsations of its beating lathe are heard no more. The home-spun rod-flannel, and the butternut colored fulled-cloth are out of date; the primitive carding machine is at present nowhere to be seen, and the tenter-bars have rotted away from their posts. All these things, and a thousand other equally antiquated and slow affairs have passed away, to make room for more scientific, more expeditious, and more economical processes of manufacture. What sense or propriety is there in lamenting over the disuse of anything which is superseded by a better? If the combined labor of a hundred girls in a mill, can manufacture, by machinery, more goods and of a better texture, tastier pattern, more beautiful colors, and finer fabric, than a thousand could by hand in the dwellings of our fathers, are not the other nine hundred relieved from the toil of the distaff and the shuttle, for other and nobler pursuits?

If the self-acting mule will, of its own motion, unaided by the intervention of a human hand, draw out and twist, and wind upon the spool, with mathematical precision, a thousand endless threads, by which a thousand females are released from the twirling spindle, why should we sigh for the "good old times" that would bring back this drudgery again upon their hands? If one sewing machine will do the work of ten seamstresses, will not the death-producing toil of these seamstresses be done away?—The innovation may and will produce distress at first, as such an invention always does, among the class of persons whose labor it supersedes; but the evil will work its own cure, and at the worst it will only bring about absolute want in the place of lingering starvation. It is putting to an end at once the long agony which wrings from the heart of the stitcher, the dolorous song of the shirt:

"Oh! men with sisters dear!
Oh! men with mothers and wives!
It is not linen you're wearing out,
But human creature's lives!
Stitch—stitch—stitch!
In poverty, hunger and dirt,
Sewing at once, with a double thread
A SHROUD as well as a shirt!"

It is one of the triumphs of modern civilization, that the powers of nature are made to work for man; that the tenacity of insensible steel shall lift the burden from the aching muscle and overtasked tendon; that electricity, and steam, and fire, shall do the duty of the most menial slave; that the human mind shall be the director of those demons which preside over the powers of the earth and air, and chain to the triumphal car of humanity, even the lightnings of heaven!

The man who sighs for a return to the primitive simplicity of other times, and would bring back the spindle and the loom as they existed in days of yore, would banish also the threshing machine and the saw mill, the trip hammer and the water-wheel, the steam engine and the electric telegraph, the rail car and the steamship; and his doctrines, carried to their ultimate and legitimate consequences, would turn our manufacturing cities into deserts, our commercial marts into desolate places, our lakes and oceans into wastes of water, and civilized man into a savage.

The good old primitive simplicity of even fifty years past, would, if restored to-day, destroy by cold, exposure and starvation, one-half of the human race. The whole producing labor of the old thirteen States, would be required to do the carrying trade of half a dozen of our sea-board cities.—Our forests would melt away in a year to supply as fuel the place of anthracite coal. Five hundred wagons would take the place of one Railroad train, and be twenty days at that, in doing the work of a locomotive for a day. Twenty crack vessels of fifty years ago would not bear a single burden of the clipper ship Great Republic. Starvation and want would stare in the face and tread on the heels of "PRIMITIVE SIMPLICITY." It answered for the days in which it existed, but it will not do for those that have succeeded; and the man who prays for its return, unwittingly invokes upon the heads of his fellow men a most direful curse.

For the Rural New-Yorker.

## LIFE IN THE COUNTRY.

We all have a natural desire for rural life. Far from the noise of cities and the factitious enjoyments which their vain and tumultuous society can display, with what vividly felt pleasure we go thither to breathe the air of health, liberty and peace.

A scene, a thousand times more interesting than those which art invents to amuse or divert you, is here spread before your view. The silence of the night is as yet interrupted only by the plaintive and tender singing of the nightingale, or by the light zephyr which murmurs in the foliage, or the confused noise of the brook which rolls its sparkling waters in the meadow. Do you see yonder hills gradually disrobe themselves of the purple veil which conceals them, those gently agitated harvests swing to and fro under uncertain shadows, those castles, those woods, those cottages fantastically grouped, rise from the bosom of vapor, or mark themselves out with waving strokes in azure swells of the air?

We do not sufficiently remark the astonishing influence by which nature holds us subjection, in spite of the great variety of our tastes, and the low depravity of our inclinations. I have no doubt that in the country our sensibility becomes less proud and more lively, that we love our friends with more frankness, our wives with more tenderness, that we feel greater pleasure in the gayeties of our children, that we speak with less acrimony of our enemies, with more indifference of fortune. Is it while breathing the balmy air of the evening, while walking in the sweet and tranquil light of the stars, that you can contrive a perfidious plot, or meditate upon sad vengeance? This arbor which your hands have planted, where the honey-suckle, the jessamine and the rose interlace their fragrant stems, have you adorned it with so much care only to be subject to painful dreams of ambition? In this rural solitude which your fathers have inhabited, in this asylum of morals, of confidence, of peace, what signifies to you the vain discourses of men, their base intrigues, their impotent hatred, their deceitful promises? What impression can the tiresome recital of their errors or their crimes still make upon your mind? When a stormy day declines, thus the thunder in the cloud floating above the borders of the horizon roars—thus the torrent, which ravages at the distance a wild and rustic earth, resounds.

## LAWS OF HEALTH.

CHILDREN should be taught to use the left hand as much and as well as the right.

Coarse bread is much better for children than fine.

Children should sleep in separate beds, and should not wear night-caps.

Children under seven years of age should not be confined over six or seven hours in the house—and that time should be broken by frequent recesses.

Children and young people must be made to hold their heads up and shoulders back while standing, sitting, or walking. The best beds for children are of hair, or in winter of hair and cotton.

Young persons should walk at least two hours in the open air.

Young persons should be prevented from bandaging the chest. We have known three cases of insanity, terminating in death, which began in this practice.

Every person, great and small, should wash all over in cold water every morning.

Reading aloud is conducive to health.

The more clothing we wear, other things being equal, the less food we need.

Young people, and others, cannot study much by lamp-light with impunity. The best remedy for eyes weakened by night use, is a fine stream of cold water frequently applied to them.—*London Lancet.*

THERE is no estimating the good which each and every individual may accomplish if they will but make a proper use of the talents they possess. "I can do something for good," should be the standing, ever present rule of our lives. To accomplish this good should constitute the greatest aim of our existence. Thus will the world be made somewhat better by our having lived in it.

## THE CITY OF NEW YORK ASLEEP.

It is curious to see the circulation of a great city commence in the morning—the great city that had *roared* itself to sleep.—True there was a feeble pulse all night; the cars beat to and fro; a carriage now and then gave a flutter, but after all there had been a quiet hour. About half a million of the people had been lying "on a dead level," for four or five hours; some on pillows of down and some on curb-stones; some beneath silken counterpanes and some beneath the great blue quilt of heaven.—Queer figure they make in the mind's eye, to be sure—400,000 folks, more or less, lying on their backs—lying in tiers or rows five or six miles long—lying three or four deep. In the cellar that is the "primitive formation"—then first floor, second, third, and so on up to the garret. Three hundred thousand people snoring—what a concert! Two hundred thousand people dreaming.—Two hundred thousand people in red night-caps; one hundred thousand in white, and here and there one trimmed with lace.—Fifty thousand curls twisted up in papers, giving their owners an appearance of having made a pillow of cigar-lighters. Twenty thousand curls hanging over the backs of chairs, or tossed upon tables. How gently Time touches such people: they never grow gray at all! Ten thousand people weeping, and now and then one dying; dying in his sleep; dying in a dream. And then the getting up is ridiculous enough; though going to bed—*should* we say "rotiring" in these refined times?—is a solemn piece of business, whether people think of it or not. But the getting up, and waking up, is funny enough for a farce—its process a species of gradualism. Here's one who has slept "like a top" for nine solid hours, and now begins to wake; first its a half-lurch and a long breath and a yawn; then an arm is thrust out, then a foot; the muscles are waking up. Next, the rattle of the early wagons strikes his ear; hearing is "coming to."—Then his tongue moves uneasily; taste is returning. Last, his eyes open, one after the other—then half close, then open again, and the man's awake—awake all over—awake for all day. There's another, sound asleep this minute, and *this* he shakes himself like a huge Newfoundland, springs up "perenssion," and the thing is done; the fellow hasn't a sleepy hair about him.—Snowy quilts that have just risen and fallen with the soft bosom beneath, begin to grow uneasy. The sweet sleepers are waking, so we'll draw the curtains and leave them to their toilette. Bundles of rags in dark, damp corners toss and tumble; there's something alive underneath. Out it comes—*more* rags. Misery *makes* no toilette, and there are no curtains to draw.—*N. Y. Tribune.*

## THE NORTH CAROLINA TWINS.

THE Raleigh Post says:—These little wonders have been exhibited in this city for several days during the present week to many visitors. They are regarded by all who have seen them as the most remarkable human curiosity ever produced with a prospect of life.

They are two little negro girls, about two years and three months old, of a brown color, well grown, good looking and very sprightly. Their names are Christian and Milly, but each applies the latter name to the other. The visitor will generally find them seated on a table, neatly dressed, exhibiting to the first view no evidence of deformity; but on examination, the anatomist will find them united to each other in a most remarkable manner at the lower extremity of the spine, the vertebræ of what is called, in anatomical language, the "os sacrum," being blended so as to constitute apparently one bone. All of the pelvic organs are evidently distinct, with the single exception of a common termination of the intestines.

These interesting little creatures are just beginning to learn to walk with the aid of an attendant, but their progress in locomotion must necessarily be slow and awkward for some time to come. The personal identity of the two does not seem to be at all confounded by the union.

There is no community of sensation, and they sleep and eat, and laugh and cry, as independently as any two individuals who are entirely unconnected. It is remarkable that the pulse of the one generally beats considerably more to the minute than that of the other.

We advise all medical men every where to see those remarkable children, as they present a case of unparallelled interest to the anatomist. They are incomparably more wonderful than the celebrated Siamese Twins, or any other living specimen of natural anatomical union.

## THE AMERICAN CHARACTER.

YES, my sweet Agatha, I cannot tell whether I rightly know the American character; but of this I am certain, that what I do know of it is more beautiful and more worthy to be loved than any other that I am acquainted with in the world. Their hospitality and warm-heartedness, when their hearts are once warmed, are really overflowing, and know no bounds. And as some travelers see and make a noise about their failings, it is very well that there should be somebody who, before anything else, becomes acquainted with their virtues. And these failings of theirs, as far as I can yet see their national failings, may all be attributed principally to the youthful life of the people. In many cases I recognize precisely the faults of my own youth—the asking of questions, want of reflection, want of observation of themselves and others, a boastful spirit, and so on.—*Fredrika Bremer.*

# For the Ladies.

Written for the Rural New-Yorker.

## THE CONSUMPTIVE.

It was a fair bright evening in the early Spring;
And nature had put on her glorious attire
Of bright hued flowers; and gentle zephyrs
Lightly fanned the placid features of the smiling
Earth, and softly whispered 'mid the dew-laden
Leaflets of the shady grove, within whose
Leafy bowers the Nightingale trilled forth
His soul subduing vesper anthem, on the
Stilly night. The purling brook, that
All day long had leaped, and danced,
In joyous ecstasy, to meet the glorious sunlight;
Now flowed calmly on, as though it feared
To wake the deep and holy hush of even tide:
All Nature slept. And over all, fair
Cynthia shed her silvery ray of
Beaming light, and the bright stars,
Peeped out from Heaven; like angels eyes,
To guard the sleeping world from harm.

So peaceful, and serene it seemed,
As Paradise at first, ere sin had
Introduced its hideous form into man's
Eden, withering the bright flowers of
Truth, and Innocence, and Joy, with
Its pestiferous breath. Oh! 'twas a scene,
On which an angel might have
Dwelt for aye. Strange! that in such
A world of untold beauty, sorrow
Should tread upon the heels of joy;
And Death commingle with the
Warm, quick pulse of Life.

But so it is; Death holds a wide extended
Empire, and his dread mandates ne'er
Are disobeyed. He speaks! and sunny
Hearted childhood quick subdues his
Ringing laugh, and joyous shout, and
Plumes his cherub pinions for an upward
Flight. Manhood forgets his Dreams
Of Love, and Fame; and doting Age
Looks trusting forward through the
Mists of time, to a far happier and
A better world. Still it is hard to die:
And all, from smiling infant, to the
Gray haired sire, shrink from the chilling
Wave. And harder still for those who live,
To give the cherished and the loved ones up,
And view the insatiate monster seize his prey.

Within a humble cottage, in the far-off wilds
Of mighty Oregon, a widowed mother sat
And watched beside the dying couch of one,
Who for ten lonely summers had repaid
Her anxious toil, with childhood's pure,
And trusting love. And she had learned
In his bright looks to trace the semblance
Of the early lost, and look with hope
Unto the time, when manhood's proud
Estate he'd gained, that he would be
Her solace, and her stay, and smooth
Her onward passage to the grave. But
There he lay, within the shadow of the
Deepening twilight, waiting the coming
Of the expected messenger to bear him home.
His wealth of clustering curls, through
Which her gentle fingers oft had strayed,
Now lay in dark and heavy masses on his
Parian brow, while the whispering breeze
That struggled through the vine-wreathed
Casement, in vain essayed to lift them
From their resting place, or cool the fever tide
That rushed like molten lava through
His burning veins. Those loving eyes, once
Beaming with affection's glance, gave
Now no token of remembrance to her
Aching gaze. And scarce the surface
Of the polished mirror told that yet
The wheels of life rolled on. Since
Early morn, in that deep Death-like trance
Her boy has lain, Oh! who can tell
What painful memories of the unforgotten
Past, mingle with her thoughts beside
That dying couch. Blest visions of a
Happy youth; a peaceful home,
And the companionship of faithful friends,
All! all! are gone, but the one feeble
Link in the great chain of Life.
And this is almost broken; "Oh God!
It is too much;" and with an aching
Heart, and quivering lip, she turns away,
And falling on her bended knees,
The Christian and the mother prays.
Long! long! upon her bended knees
She holds communion with her Maker;
And when again she stands beside the couch,
And presses hard her burning palms
Upon those clay cold temples—"Oh!
Might he but wake to consciousness
Again, that I might hear once more
Those well loved tones. I then could
Give him up, my heart's own cherished
Idol!"

Wearily the lagging hours rolled
On; no sense of weariness oppresses
Her. Oh! what is purer than a mother's love!
Night mergeth into day, and as APOLLO'S
Fiery steeds prepare to mount the azure
Vault, and the dim fleeting shadows fly
Away, he opes his languid eyes. And
On her listening ear those thrilling words,
"Mother, I'm going home," strike faintly.
Then, again they closed, and upward,
Mounting with the rising sun, his
Pure young spirit flies away to the
Elysian fields.

They laid him in the
Grand old forest, there to rest. The sighing
Winds sang o'er his leafy bier their
Mournful dirge. And the fond widowed mother
Was alone with God! ELLINGWOOD.

## TO A MOURNING MOTHER.

YOUR child is gone, is dead. No more shall your ear be charmed by the music of that infant voice. He was your youngest, and before he had become familiar with the dark ways of the world, in which all is not pure as when turned from the Creator's hand—while yet his voice went forth in childish glee, and love to all—while every tone was yet sweet to your ear, and before by any sinful act his presence brought a pang to your heart, his heavenly Father called him to come up higher. "It is well" that you should weep on the grave of your youngest. Yet remember your child is but a few steps before, led by the hand of the most High, to lure you on to heaven.

One Sunday morning I found a humming bird unable to escape through the open window by which it had entered my room.—To aid its flight, I caught it, and, as this was my first opportunity of examining closely one of those tiny creatures, I held it a few moments for that purpose. After satisfying our curiosity, and pained by its cries of fear, we concluded to let it go. It was raised on the hand, but instead of securing its liberty, the moment the fingers were unclasped, it lay as if hardly realizing it was indeed free to fly. There, panting from exertion, glittering in all the brightness that could fix the gaze, it lay on the hand resting for flight; then, on wings of music, up, up, and away it sped toward heaven in the glad sunlight of that Sabbath morning.

One minute we stood looking and listening, till the hum of its wings was gone, and its gay colors were lost in the light of the sun, toward which it fled. What wonder we felt a momentary sadness as it left us; yet could we wish it back?

So is it with your boy. Though clad in robes of light, yet you cannot see him for the brightness of that heaven to which he has been called. Though his voice has now a music it never had on earth, it reaches not your ear. You weep because he is gone; yet remembering he is another treasure in heaven, can you wish him back?

SUISSAC.

## HOW TO AVOID A BAD HUSBAND.

1. NEVER marry for wealth. A woman's life consisteth not in the things she possesseth.

2. Never marry a fop, or one who struts about dandy-like, in his silk gloves and ruffles, with silvered cane, and rings on his fingers. Beware!—there is a trap.

2. Never marry a niggard, a close-fisted, mean, sorid wretch, who saves every penny, or spends it grudgingly. Take care lest he stint you to death.

4. Never marry a stranger, or one whose character is not known or tested. Some females jump right into the fire, with their eyes wide open.

5. Never marry a mope or drone, one who drawls and draggles through life, one foot after another, and lets things take their own course.

6 Never marry a man who treats his mother or sister unkindly or indifferently. Such treatment is a sure indication of a mean and wicked man.

7. Never, on any account, marry a gambler, a profane person, one who in the least speaks lightly of God or religion. Such a man can never make a good husband.

8. Never marry a sloven, a man who is negligent of his person or his dress, and is filthy in his habits. The external appearance is an index to the heart.

9. Shun the rake as a snake, a viper, a very demon.

10. Finally never marry a man who is addicted to the use of ardent spirits. Depend upon it, you are better off alone, than you would be were you tied to a man whose breath is polluted, and whose vitals are being gnawed out by alcohol.

In the choice of a wife, take the obedient daughter of a good mother.

## WOMAN'S RIGHTS.

ONE of the most curious documents preserved from the olden time, is the following petition, signed by sixteen maids, to the Governor of South Carolina, praying for relief from the charms and captivations of widows. It bears date March first, the "day of the feast:"

To His Excellency, Governor Johnson.

The humble petition of maids whose names are underwritten:

Whereas, we, the humble petitioners, are at present in a very melancholy disposition of mind, considering how all the bachelors are blindly captivated by widows, and our more youthful charms thereby neglected; the consequence of this our request is, that your Excellency will for the future order that no widow shall presume to marry any young man till the maids are provided for; or else to pay each of them a fine for satisfaction, for invading our liberties; and likewise a fine to be laid on all such bachelors as shall be married to widows. The great disadvantage it is to us maids is, that the widows by their forward carriages, do snap up the young men; and have the vanity to think their merits beyond ours, which is a great imposition upon us who ought to have the preference.

This is humbly recommended to your Excellency's consideration, and hope you will prevent any further insults.

And we poor maids, as in duty bound, will ever pray.

P. S. I being the oldest maid, and therefore most concerned, do think it proper to be the messenger to your Excellency in behalf of my fellow subscribers.

QUEEN VICTORIA AN EXAMPLE TO MOTHERS.—The Archdeacon of London being engaged on one occasion in catechizing the young princes, and being surprised at the accuracy of their answers in the Catechism, said to the Prince:—"Your governess deserves great credit for instructing you so thoroughly in the Catechism." Whereupon the royal boy responded, "Oh, but it is ma who teaches us the Catechism."

How many American mothers, with fewer cares, and fewer temptations to luxurious indulgence, have to confess to an utter neglect of this important duty! Many boys whose parents are nominally Christian can say with truth, Our mothers never taught us the Catechism. We hope some of them may take a profitable hint from a Queenly practice.—*Episcopal Recorder.*

MOORE'S RURAL NEW-YORKER.

ROCHESTER, DECEMBER 17, 1853.

### SPECIAL NOTICES.—TO AGENTS, &c.

☞ AGENTS.—Any person so disposed can act as agent for the RURAL NEW-YORKER,—and all who remit according to terms will be entitled to premiums, &c.

☞ THE RURAL is published strictly upon the CASH SYSTEM—sent no longer than paid for—and all orders should be in accordance with terms.

☞ OUR *lowest* club price is $1,25 for any number of copies over 20—and $1,50 under that number, unless a full club of twenty is obtained.

☞ IN making up clubs for the RURAL, the Wool Grower and Stock Register can be added at 35 cts. a copy, which is the lowest club price.

☞ AGENTS, and those remitting for clubs, will please send Bank Bills or Drafts on New York, instead of Checks on local banks.

☞ IN writing us please be particular to give your P. O address correctly—the name of your Post Office (not Town,) County, and State.

☞ THOSE wishing their papers changed from one address to another, should give the names of both Post Offices.

☞ EXTRA numbers of the RURAL will be forwarded to all disposed to aid in augmenting its circulation.

☞ SEE Terms, Premium List, &c., on next page.

### The Time to do Good.

Now, the ever-present *Now*, is the best time to accomplish a great many laudable objects—and among others to procure subscriptions to the RURAL. "Delays are dangerous," and if you really wish to aid our circulation, the present is the very time to do so most successfully. If you wait until next week or month, perhaps half the persons who would *now* subscribe, will have *sold themselves* by taking some Buncombe or trashy sheet which will prove dear at any or no price—for an immoral, vulgar, or uninstructive paper is a positive evil in any family. Last winter a subscriber wrote us thus:—"Herewith find the money for forty new subscribers, as below. In obtaining this list, I have *beheaded* forty copies of trashy, literary (?) *weak-lics*, and substituted that number of copies of a safe, good and useful family paper. I feel conscious of having performed a good act—one which will prove of lasting benefit to community. God speed the RURAL!"

Now, how many of our readers will "go and do likewise?" The writer of the above extract became a voluntary agent in a place (in Western Pa.,) where but two or three copies of the RURAL were previously taken, and soon made up a list of forty subscribers. There are hundreds of places where we have but one or a few subscribers, in which clubs of from ten to fifty might be obtained by a little *seasonable* effort. But the matter should be atttended to early—before the ground has been canvassed by the agents of the Satanic and Nonsensical Press. Friends of the RURAL, and of a pure and useful literature, will you not, individually, give this subject such attention as may be dictated by your better judgment? If this paper is, in your opinion, what we claim—useful, instructive and unexceptionable in a moral point—then lend it your influence; if you consider it otherwise, then aid such journals and such only, as you can conscientiously. Above all do what you can to stay the tide of foolish and corrupt literature which is depraving and disgracing the Nation.

### Our Mailing Department.

DURING the past year the RURAL has been mailed with unusual accuracy and regularity.—We have employed careful, correct, and therefore reliable men, and feel confident but little cause of complaint has originated in our own office.—And yet, we have often been mortified and provoked at the egregious blunders of distributing clerks and mail agents, whereby our packages have been delayed or missent—for all which we are held accountable. Much of this trouble originated from the change in the Administration, and consequent "rotation" of Postmasters, Mail Agents, &c.—a change which has been progressing through the year, but which we trust is nearly completed. We hear few complaints of late, and anticipate a comparatively pleasant time for the next three years, extraordinaries excepted.

But, though our mailing is already well done, we are instituting some improvements, by which to dispatch each number of our next volume—even with the addition of ten thousand copies to our present issue—in less time than we now occupy. During a recent sojourn of some days in New York, we visited several extensive newspaper establishments, and were kindly shown (especially at the Tribune office) the most expeditious and approved modes of mailing, and shall endeavor to use the knowledge thus acquired to the best advantage.

—Speaking of New York papers, we were greatly surprised at the actual circulation of some which we supposed among the most popular.—Several weeklies of long standing and fair reputation—and concerning which a great deal of noise is made by the publishers—have not, each, more than half or two-thirds as many subscribers as the RURAL NEW-YORKER! This is probably owing to the fact that people prefer papers got up expressly for their benefit, rather than mere re-prints of daily or other journals—and that the *price* and size are not always so much regarded as the quality and intrinsic value of contents.

ILLNESS OF GOV. HUNT.—The ex-governor, WASHINGTON HUNT, has recently been very dangerously ill at his residence in Lockport; so much so that at one time little hope was entertained of his recovery. We are glad to be able to state, however, that he is convalescent, and is now believed to be out of danger.

### Great Fire in New York.

ON Saturday last, a fire broke out in the extensive book printing and binding establishment of the HARPERS, on Cliff-st., N. Y., and entirely destroyed that extensive establishment, together with several other buildings. The entire loss amounts to $1,500,000 of which over $1,200,000 falls upon the enterprising firm above named.—The total insurance upon their property does not exceed two hundred thousand dollars.

The Messrs. HARPER issue a card in which they state that their sheets, stereotype plates, and copy for their Magazine for January were all destroyed; but the issue of that number will not be delayed more than a few days.

Over two thousand persons engaged in the HARPERS' and other establishments, are thrown out of employment by this calamity, and much indirect as well as direct loss is incident thereto. Several persons were injured, but fortunately no lives were lost. The greatest terror and confusion ensued, so rapid was the progress of the flames, and one young lady leaped out of a fourth story window, receiving severe but not fatal injuries from her fearful fall. One of the HARPER'S who was in the building at the time of the fire, on being inquired of what portion of the property should be removed first, answered—"Never mind the property; save the lives!"

The fire was caused by a match which was thrown into a pan of camphene, by a person doing a job of soldering, he supposing the liquid to be water.

### Congressional.

Nothing of importance in the way of legislation has yet been done in Congress, and will not be until the holidays are past. The Houses have been engaged in organizing, choosing officers, appointing committees, and receiving and considering the documents and reports submitted by the executive departments. Notices of many important bills, to be hereafter introduced, have been given, both in the Senate and in the House.

One of the gravest matters for consideration, will be the question of Federal aid to railroad enterprises; and a great deal of log rolling between the friends of various routes may be anticipated. "You tickle me and I'll tickle you," will be the game played, and in many instances no doubt successfully. The plethoric state of the Treasary, just now, is a sad sight to begging politicians and hungry jobbers, and great efforts will be made to bleed Uncle Sam. We shall give a weekly summary of Congressional proceedings after that grave body shall have gotten fairly under way.

### Please "Report Progress."

AGENTS and others forming clubs for the Fifth Volume of the RURAL, will please send in as many names as possibly convenient previous to the first of January. This will enable us to judge in regard to the probable edition that will be necessary, and also facilitate the entering of names upon our books. We are confident, from present indications, of a very large increase of subscribers with the new year and volume, and have already decided upon adding five thousand to our present edition,—but will not the friends of the paper swell the increase to ten or fifteen thousand? This volume will close with nearly seven thousand more than the preceding—and we hope to terminate, if not to commence, the next with at least ten thousand more than at present. Be that as it may, we shall strive to merit whatever measure of support may be accorded. Meantime, if those making up clubs, will send in what names they have at an early day, or before the 1st of January, it will greatly facilitate our arrangements, and not affect their progress in procuring subscribers at a later period. Therefore, friends, please "report progress."

TO SINGLE SUBSCRIBERS.—Our clerks report that the RURAL is mailed to about one thousand post-offices, at each of which only one copy is taken. Now, if those who receive the paper in single wrappers will make a little effort in its behalf, they may secure an advantage, benefit their neighbors, and promote our interest—three important items. The advantage to them will consist in receiving their papers more promptly and regularly. Papers in single wrappers, or very small packages, are often overlooked or neglected by post-office clerks and mail agents on the route—whereas larger packages, commencing with the most bulky, are distributed and dispatched without delay. We send subscription papers, &c., to single subscribers, and trust each will have the kindness to "circulate the documents" for the benefit of all interested.

THE STEAMER HUMBOLDT, the grounding of which off Halifax was mentioned in our last, threatens to prove a total loss. She lies in water up to her spar deck, on a rocky bottom and at the mercy of the winds and waves, at this inclement season. The Halifax papers say she was run aground by an ignorant and imprudent fisherman, who went on board off the harbor pretending to be a pilot. The entire value of the ship and cargo will not fall much below a million of dollars. Some hopes are entertained of yet raising the noble craft.

GRAPES AND PEACHES.—We are indebted to E. A. MCKAY, the celebrated grape culturist, of Naples, N. Y., for a box of his choice Isabellas—of very large size and the right flavor. Would be glad to procure more of the same brand, and will promptly "remit" if Mr. McK. will forward a few boxes.

—To MRS. S. B. TREADWELL, of Jackson, Mich., for a jar of preserved peaches. They are fine, with the flavor of the fresh peach retained. A very agreeable and *tasty* token of remembrance—for which our acknowledgements are tendered.

### The Country Press and the Rural.

THOUGH we have never uttered a word or sentence urging people to take the RURAL instead of the paper published in their own county, some of our contemporaries seem a trifle jealous in the premises. We certainly have not, intentionally, given any cause for this—having ever directed our efforts against the blanket re-prints of the Atlantic cities, and *in favor* of the Country Press. True we have not, like some journals we wot of, coaxed or "palavered" our friends for the purpose of obtaining favors at their hands—but we *have* ever kept in view their rights and interests. Having, years ago, had experience as editor and publisher of a country paper, we are posted on this subject, and can appreciate the arduous labors, and often inadequate reward, of those similarly engaged.

But we have little or no cause of complaint, inasmuch as our friends of the press have almost universally and most generously given the RURAL a cordial greeting and a hearty God-speed. Witness the following notice from the *Wyoming County Mirror*—one of the ablest and best country papers in the whole Union. We copy the notice more particularly, however, because it expresses nearly our own sentiments in regard to supporting country papers, and the benefit to be derived by taking *several* good journals:

"The prospectus for the next volume (1854) of *Moore's Rural New-Yorker* will be found on the inside. There is no foreign paper that can properly supply the place of a county paper; and if there is a good county paper, it is the duty of the people to support it; and yet, if we were about to close up our paper, we know of no one in the United States we would more gladly furnish to our subscribers than the *Rural New-Yorker*. But there is not one farmer in a hundred that need, or ought to be confined to one paper. Ten dollars a year invested in a good selection of weekly papers is more profitable in any family than that amount can be invested in any other way. And yet there are some farmers who think if they take two weekly papers they are extremely liberal, and that it is more for the benefit of the publishers than their own. If every family in Wyoming county should take one of the county papers, *Moore's Rural New-Yorker*, a religious paper and a good literary paper, we believe that in ten years it would make the county wealthier in money, in morals, in prosperity and in happiness; and if it benefited the county, of course it would the individuals of the county. We cannot, then, too strongly recommend the patronage of MOORE'S *New-Yorker*. It is certainly one of the best, and we think we would be safe in saying, *the best* agricultural and family paper in the country. And its circulation in this county need not interfere with the circulation of the *Mirror*. We do not extract half as much from it as we should, did we not suppose that both papers went into many of the same families; and we are sure that either paper is worth more than its subscription price to any family, just for its *educational influences upon children*, to say nothing of all its other variety of matter. We speak of the two papers in this connection because we are warmly in favor of an extensive circulation of the *Rural New-Yorker* in the county, and because we think such circulation ought not to interfere with the circulation of the *Mirror*. We would refer our readers to the prospectus inside, and hope that a great many of them will conclude to take the next volume of the *Rural*."

"PLEASE EXCHANGE."—We cannot comply with the numerous requests of this sort, received from all quarters. Our exchange list is already so large that scores of papers are unread—and beside, but very few of the hundreds of our exchanges (though excellent in their several departments) are of any benefit in making up the RURAL. Hence, we cannot *increase* our present list without some *quid pro quo*. Those who wish the RURAL, have only to publish our brief prospectus, (see next page,) directing attention to the same editorially—and we will send without an exchange.

EDITORS noticing the RURAL will please state terms, and where and by whom published, if they would have us derive benefit therefrom.—Notices lacking these essentials, are of little or no benefit to any party. Please make a note of this, kind friends,—and if you *print* the same, no exception will be taken by this deponent.

THE WEATHER has been remarkably mild for the season, during the past week—more like April than December. Friday, Saturday and Sunday, were peculiarly bright and balmy days,—and Monday and Tuesday ditto, less the sunshine. The canal is of course still clear of ice, but navigation is suspended for the season.

THE TREASURY DEPARTMENT.—It appears from the Treasury Report, that the receipts of the past fiscal year were—from customs $58,931,865; from public lands $1,667,085; from miscellaneous sources $738,624; amounting in the aggregate to $61,337,574. The expenditures amount to $45,026,818. The receipts exceed the expenditures by $7,310,757. This, together with the balance on hand at the beginning of the year, makes a balance of $21,942,802 on the 30th of last June.

The public debt has been reduced during the year to $56,336,157 52. The resources of the country, the Secretary thinks, will justify the application of fifteen millions more to its reduction. The premiums paid to effect its purchase have varied from 8½ to 21 per cent.

The imports of the year amount in value to $267,978,647; the exports to $230,452,250.—Thus the imports have exceeded the exports by $37,526,317, an excess which is the more alarming from the fact that it is the largest that has occurred since the financial disasters of 1836.

BOSTON MUNICIPAL ELECTION.—The Boston municipal election held on Monday, resulted in no choice for Mayor. Benjamin Seaver, supported by the regular Whigs, lacks nearly 1,700 of re-election. The vote stands—Seaver, 5,776; Dr. Smith, Citizen's Union candidate, 4,670; Jacob Sleeper, Young Men's League candidate, 2,079; F. H. Allen, Democrat, 615; and 50 Scattering.—The result greatly elates the Maine Law advocates.

ANOTHER NEW PLANET.—Mr. Hind, the London astronomer, discovered on the 8th of Nov., a new planet in the constellation Taurus, and two degrees south of the Ecliptic. It is rather brighter than stars of the ninth magnitude. This planet is the Ninth (1) which he has discovered since the commencement of a systematic search in 1846, and raises the number of that extraordinary group of worlds between Mars and Jupiter to 27.

## News Paragraphs.

☞ Rev. Henry Slicer, elected chaplain of the Senate, is a politician as well as a minister, and stumped it extensively for Gen. Pierce during the last canvass. Rev. Mr. Milburn, who is elected Chaplain of the House, is a man of a different stamp, and he was elected on other grounds. He is only about thirty years of age,—of decided ability, eloquent in his calling, and of most amiable, excellent and social character. The Senate has in this instance earned for itself the title of the Lower House, and ought to be degraded at once.

☞ The St. Louis Republican of the 28th ult., says:—A number of free persons from the interior of this State, arrived in this city a day or two since, on their way to Liberia. We understand that several applications have been made within a few days to the officers of the Missouri Colonization Society, for aid in being transported to the Colony of Liberia.

☞ Twenty-five years ago the father of M. F. Ward, who killed Prof. Butler, at Louisville, was with difficulty restrained from attacking a teacher who had moderately chastised his son. The example of the father has produced the ripened fruit. The son, at the age of twenty-five, is a murderer, with a brother as an accomplice.

☞ The people of Seneca Falls gave Mr. and Mrs. Bloomer a "public demonstration" on Tuesday evening of last week, on occasion of their emigration to Ohio. Resolutions were passed, and "five tables beautifully spread" were pretty effectually stripped of their oysters, cold ham and boned turkey.

☞ Of 240 convicts confined in the Tennessee Penitentiary, 38 were temperate before sentence, and 202 intemperate; and 127 were drunk when they committed crime. There are 43 whose fathers were temperate, 187 whose fathers were intemperate, of whom 72 were common drunkards.

☞ Daniel Benjamin, a soldier of the Revolution, who has lived in Washington, Warren Co., for many years, died on the 24th ult., ninety-five years of age. His funeral was attended by a great concourse of people, and the military escorted his remains to the grave.

☞ The emigration into Iowa, this year, is immense. The priaries of Illinois are lined with cattle and wagons pushing on for this prosperous State. The addition of the population from September 1st to December 1st, from emigration alone, is computed at 50,000.

☞ In Aarau, a town of 6,000 to 8,000 inhabitants, in Switzerland, the Protestants and Catholics have but one church. They share it peaceably together. What is more, considering man's prejudices, they have but one graveyard, and there their dust mingles.

☞ There were 375 deaths in New York last week. Nine were by cholera. The Com. Advertiser says the cholera victims were mostly immigrants resident in the First Ward, who had recently landed from vessels on board which that disease prevailed.

☞ The laborers in the employ of the O. S. & H. (Canada) Railway, at Barrie, have been notified that from the present time they would receive 4s. 4½d. per day instead of 5s., upon which about forty of them, nearly the whole, left their employment.

☞ Dr. Bridgman says, that the last census of China, which he saw in print, was for the year 1813, which made the population of the Empire more than 361,000,000. He is confident that the present population cannot be less than 400,000,000.

☞ The Gas Company of New Orleans city purchase their coal at 38 cents a barrel, manufacture gas out of it, which they sell at $4 a hundred feet, and then sell the residue of the coal, in the shape of coke, for 75 cents a barrel!

☞ In the Common School of Philadelphia, the Directors furnish the school books, and stationery for the scholars, and as the Books are uniform, and not continually changed, the cost is only 75 cents a year for each scholar.

☞ The Humboldt was valued at $400,000, and is supposed to be fully insured. The cargo, valued at $500,000, was insured in New York, London and Paris. There was a Halifax pilot on board when she run ashore.

☞ The mail train ran over a cow near Dunkirk Dec. 12, throwing one passenger car down an embankment of fifteen feet. Five or six passpassengers were injured, but none fatally.

☞ A correspondent of the Cleveland Plaindealer reports the Ship Canal at the Sault St. Marie as making good progress. Some 400 men are secured for winter operations.

☞ The Vermont Legislature adjourned on the 7th. No Senator was elected. Among the important votes taken was one amending and essentially changing the liquor law.

☞ Advices have been received from Mexico to the effect that Santa Anna will assume the imperial title on the 12th of December.

☞ At a public meeting held in Niagara a few days ago, it was resolved to unite the Erie and Ontario Railroad with the Great Western.

### The Department of the Interior.

IT appears among other things, by the Report of this department, that the surveys of the Public Lands have been steadily prosecuted, and new lands amply sufficient for all the present requirements of emigration have been bro't into market.

In the course of the past year 9,819,111 acres have been surveyed; 10,363,891 acres brought into market; and 1,003,495 sold.

The number of land warrants issued up to the 30th of Sept., 1853, was 266,043. Of these 66,947 are still outstanding.

The public domain is now estimated to contain 1,584,000,000 acres. Its purchase was effected at a cost of $88,994,015. The whole amount received from sales, up to last June, was $142,283,478, or some $53,000,000 more than the cost of the whole.

Wherever lands have been granted to actual settlers, in alternate sections, and wherever they have been given to railroads that have actually been made, the value of those adjacent has been so much increased as to more than compensate for the amount given away.

It is recommended that officers connected with the sale and survey of the public lands, should be prohibited from becoming purchasers, or being interested in their purchase.

The mineral lands of California need early attention, to prevent frauds from being committed there.

The Pension List now reaches 3,000, and will require an annual appropriation of $240,000. In many cases, gross frauds have been committed, to which attention is called.

The business of the Patent Office has largely increased.

## News Brevities.

—— There are seventeen Jesuit Colleges in the United States.

—— The public domain of Texas comprises 102,747,801 acres.

—— A telegraphic cable has been laid across the Ohio at Maysville.

—— The Maine Liquor law went into force in Michigan on Friday of last week.

—— The Whigs of Rhode Island have called a State Convention for the 12th of January.

—— In the Dead Letter Office at Washington last week, a letter was found containing $200.

—— The Poems of James Russell Lowell have just been published in London for a shilling sterling.

—— Horace White, Esq., of Syracuse, N. Y., has given $15,000 to the Hobart Free College, at Geneva.

—— Large quantities of fish, game and oysters, were spoiled at St. Louis, by the recent warm weather.

—— Professor Agassiz has relinquished his connection with the Charleston College, in South Carolina.

—— William Patton, merchant, shot Mr. Turnhull, tobacco inspector, dead—the cause being family troubles.

—— The territory of Minnesota contains 106,000,000 of acres—or nearly three times larger than this State.

—— The Hon. John M. Botts has been appointed Chairman of the Clay Monument Association of Virginia.

—— Jonas Chickering, the well known piano forte manufacturer, of Boston, died suddenly of apoplexy, Dec. 8th.

—— The Swedenborgians have established a College at Urbana, Ohio, which has in attendance nearly 100 students.

—— Col. Benton has selected the seat and desk long occupied by John Quincy Adams, on the Whig side of the House.

—— New Albany, Ind., is a fast city. Sixteen hundred and forty buildings have been erected there within the past year.

—— Business still continues active upon the Penusylvania canal. Very few boats have been withdrawn for the winter.

—— A new Welsh newspaper made its appearance in Utica on Thursday week. Its name is "*Gwyliedydd Americanaidd.*"

—— Four prisoner escaped from the Massachusetts State Prison on Tuesday night. A reward of $5,000 is offered for their arrest.

—— Thirteen hotel, beer-house and oyster cellar keepers in Reading, have been fined $4 each, for selling liquor, &c., on Sunday.

—— The Agent of the Auburn State Prison states that there has been but one case of small pox in the institution this season.

—— Mr. Bancroft has the sixth volume of his history nearly ready for the press. It will comprise the period of the Revolution.

—— The Presbytery of Rochester met on Tuesday last, at St. Peter's, at which time the Church of this society was organized.

—— Pezula, the new Captain General of Cuba, is represented as being a most tyrannical man, and much dreaded by the inhabitants.

—— An Austrian paper states that German exiles to America are already arriving at Constantinople to join Turkey against Russia.

—— The Elmira Republican states that application will be made to the next Legislature for the incorporation of that village as a city.

—— Rev. F. Close, a Puseyite Clergyman, of Cheltenham, England, has just published a pamphlet entitled, Table Turning not Diabolical.

—— A child died near Trenton from the bite of a spider; and Mr. Richard Bamford has been at the point of death in that city from like cause.

—— The Flying Cloud Clipper reached New York on Tuesday of last week, in 92 days from San Francisco, disabled by the loss of her rudder.

—— Mr. Chatfield has resigned his office of Attorney General, and the Governor has appointed Henry Ramsey, of Schenectady, to fill the vacancy.

—— The Grading of the Syracuse and Binghampton R. R. is now nearly completed, the fence built most of the way, and the ties on the ground.

—— There is not at present a captain in the United States navy who was born in this century; the average age of officers of this rank is about 70 years.

—— Three men were crushed to death on Monday, the 7th inst., in an iron mine, at Conshohocken, Pa., by the falling of a piece of rock from the roof.

—— There is a proposition before the Legislature of South Carolina for appropriating $30,000 towards the erection of a monument to the late Mr. Calhoun.

——A new town has been erected in Erie county, lying west of and joining Bennington; it is taken from Alden and Wales. The name of the town is Marilla.

—— Valparaiso papers state that immense discoveries of gold had been made in the valley of the Amazon, and that expeditions had been fitted out to explore the mines.

—— The steamer Australia struck a rock near Hat Island, Upper Mississippi, on the 9th inst., and sunk. The boat and cargo will probably prove a total loss. Insured for $15,000.

—— About 300,000 feet of the best white pine plank are annually sold by the lumber merchants of New Haven, Ct., for the manufacture of the American friction matches in that vicinity.

—— Gen. Twiggs reached New Orleans a few days since, on his return from the Cherokee Nation. He reports the Indians as generally very quiet—no disturbance having occurred of late.

—— Bishop Ives' book, setting forth his reasons for transferring his allegiance from the Protestant Episcopal to the Roman Catholic Church, is to make its appearance in London this month.

——A company of thirty men has just left Gardiner, Me., for Georgia, having been employed at wages ranging from $23 to $30 per month each, to cut hard pine in the Southern part of Georgia,

—— An old paper mill at Bethlehem, Pa., has been purchased by the proprietors of the Pennsylvania Zinc Works, who are about to convert it into a mill for grinding and mixing oxide of zinc.

—— The price of a wife in China varies according to her rank, age and beauty. The choicest article sells for two hundred dollars, while the refuse of the market goes heavily at thirty dollars.

—— The magnetic telegraph is now completed and in constant operation between San Francisco and Marysville, through San Jose, Stockton and Sacramento. Other lines are to be constructed.

# Foreign Intelligence.

## Arrival of the Niagara.

The British Mail Steamer Niagara arrived at Halifax, Wednesday, Dec. 7, and at Boston on the evening of the 9th. She brought to the latter port from Halifax, in addition to her own, the passengers of the wrecked steamer Humboldt—She brings London dates to Nov. 26th, but her news is superseded by the subsequent arrival of the Arctic with later advices.

## Arrival of the Arctic.

The Arctic, from Liverpool the 30th ult., arrived at New York, Dec. 11th, with 93 passengers.

The Africa arrived out Monday, 27th ult.

Very little news occurred along the Danube.—Heavy rain and snow had set in. Strong rumors of an armistice, but doubtful.

The allied fleets lie at Beychas. The Turkish fleet has gone to the Black Sea, to keep open the coast of Circassia.

The English Admiral, Sir L. Lyon, was on his way to take command of the British fleet.

It is reported, contrary to former advices, that Dost Mahomet is hostile to the Russians, as well as all Mahometans of India.

No event of importance has yet taken place along the Moldavian or Wallachian lines. Omar Pacha's operations have received the entire sanction of his government, and discretion was left him to act for and how he may best choose.

His retreat across the Danube was in consequence of the Russians concentrating at a point not anticipated by military men. That movement not being anticipated by the Russians, appears to have baffled Prince Gortschakoff, and has forced him to adopt new combinations. The Russians do not believe the retreat of the Turks as ultimate, and complete ignorance prevails as to their movements, and they were expected to make their appearance at any point and at any time on the left bank of the Danube.

The Russians appear not to have adopted any definite plan. They remain encamped at Oltenitza.

Rain and snow have been heavy in parts of Wallachia, so that operations were to a great extent impracticable.

The fighting since last advices had been unimportant. On or about the 20th, the Russians attacked the fortress of Tultscha, but were beaten off.

Rumors of a Turkish detachment having been attacked by the Servians at Ushitza, on the Scroo, and repulsed with a loss on both sides of 500 men are current.

Latest accounts confirm that the Turks captured and hold the important fortress of St. Nicholas, near Batoum.

Five times have the Russians by sea and land attempted to retake it, and five times been repulsed. The several divisions of the Turkish fleet have entered the Red sea with the purpose of joining Nuchaver, the Pacha's Admiral Slade's squadron.

The captain of a merchant vessel, arrived at Constantinople on the 10th, and reported having met a Russian fleet about three days before, not far from the entrance of the Bosphorus, and sailing to the eastward. Soon after he met the Turkish fleet sailing in the same direction, and he was of opinion that they would not continue their course long without coming in contact.

Malta letters state that the contract just concluded with Maltese houses, for the supply of provisions to the English ships, specify that they shall be delivered where required.

The Turkish Admiralty has provided a special depot for the relief of the French and English steamers.

On the 15th, 500 vessels were loading corn at Odessa.

It is confirmed that the Russian ship-of-war went ashore and to pieces. She had 1,600 men on board, of whom 1,400 perished, and the remainder were rescued by the Turks, and sent as prisoners to Constantinople.

Some distinguished Polish officers have taken position with the Turks, and others have signified their intention to do so.

France and England also, at length consider that the Porte is justified in using all the means at its disposal, and for this reason the Poles are welcomed to the Ottoman ranks.

English Affairs.—A cabinet council met at London on the 25th.

In London it was received as truth, that a treaty had been arranged between Britain and France to guaranty the integrity of Turkey, giving Austria and Prussia an opportunity to join them.

Liverpool Breadstuffs.—Transactions to a fair extent, with reduction of 1d on wheat and 6d a 1s on flour and 1s on corn.

Richardson & Bro., also McMakin & Son quote Western Canal flour 34s a 34s 6d. Philadelphia, Baltimore and Ohio 36s 6d a 37s. U. S. white wheat 10s a 10s 5d. Red and mixed 9s 4d a 9s 10d. White Indian corn 46s a 46s 6d. Yellow 45s a 46s.

Provisions.—McHenry reports beef more saleable. Pork unchanged. Sides and shoulders lower. Lard tends downward. Tallow also lower.

A Statuette of the Virgin.—In cutting a piece of wood with an axe, a French shipwright heard a hollow sound, and found that his axe had met with some obstacle. Examining the chips he perceived some little pieces of earthenware. This seemed strange to him, and he continued his cutting with great precaution. After a while he found to his great astonishment, a statuette of the Virgin, holding an infant Jesus in her arms. It was in a fine state of preservation. The tree from which the piece of wood was obtained was cut down in a forest of La Vendee. A century or two ago, no doubt, some pious person cut a hole in the tree and deposited the statuette, and the statuette being forgotten, the hole, by the growth of the tree, gradually diminished until it became entirely closed.—*Galignani's Messenger.*

London Wool Sales.—The London wool sales were brought to a close on the 17th November, with a very different spirit from that shown at the commencement. The attendance of buyers throughout the entire sales has been large, and prices, toward the close were well supported.—Continental buyers have made several very large purchases, which have contributed materially to the stability of rates. The greater quantity of what was withdrawn during the earlier part of the sales was disposed of before the close at higher rates than previously offered. On Saturday the Australian Agricultural Company's wool was offered, and, being in most excellent condition, was readily purchased by the leading English manufacturers, realizing as usual, better than any other flocks.—*Evening Post.*

# California News,

## Arrival of the George Law.

The Geo. Law from Aspinwall, Dec. 1st., arrived at New York Dec. 12. She brings $888,000 on freight, and 466 passengers and the California mails of Nov. 16th. Among the passengers are Major G. P. Andrews of the Army, Gen. Navearro, late of the Mexican Cabinet, banished for 30 years by Santa Anna.

A line of steamers is talked of, to run between San Francisco and Guayamas.

A company of U. S. dragoons had an engagement on the 1st, near Rogue River, with a party of Indians. Ten Indians were killed, and two Americans, besides a number wounded on both sides.

The Squatters had a meeting at Sacramento, and passed exciting resolutions. Among other things they declared Capt. Sutters claims to be invalid and the lands on which Sacramento is built belong to the United States as overflowed lands.

A party of emigrants were attacked by the Apaches and 21 killed.

It is said a joint stock company is formed with $2,50,000 capital to establish steam navigation on the Gila, and the intentions of the company are looked upon with suspicion.

Oregon dates are to the 28th. Overland arrivals are large. Many parties had suffered severely on the route, and some had been reduced to eating their horses.

Dr. Evans, of Gov. Stephens' surveying expedition reached Portland on the 28th.

The schooner Capacity with government stores had been wrecked at Guaymas.

A duel was fought at Weaversville Shasta Co., between Col. May a State Senator, and Edward Rowe, agent of Rodgers & Co's Express. Rowe was shot in the neck, but not dangerously.

A private Company with $10,000,000 capital has been formed at San Francisco, for a steamship Co.

Mayor Garrison had sent his message to the Common Council. The funded and floating debt of San Francisco was near $2,000,000.

The city was to be lighted with gas on the 1st of January.

## Arrival of the Steamers Danl. Webster and Eldorado.

The steamers Daniel Webster and Eldorado, the former from San Juan and the latter from Aspinwall, arrived at New Orleans Dec. 9th. They bring advices from San Francisco to Nov. 17.

There have been several fires in different parts of California since the departure of the last steamer, but the loss in each instance was not heavy.

San Francisco, Sonora, Stockton, Downieville and Sacramento have all suffered.

From the mines, the news is highly encouraging, and the miners in many localities are doing better than ever. A massive lump of gold averaging eleven pounds, has been found.

Nothing further has transpired regarding the Sonora expedition, and no further movements in that direction are reported.

An earthquake had occurred at Humboldt, but no serious damage had ensued.

The health of California was generally good, and the weather favorable.

In the markets the transactions were rather more brisk, but the prices of nearly all descriptions of produce rule low.

The crops continue to yield well.

From the Sandwich Islands there is but little news of interest. The small pox prevails with no apparent sign of abatement.

No further changes in the ministry had taken place.

Norfolk, Dec. 12th.—The steamer Star of the West from San Juan to New York, put in here for coals, having experienced a terrible gale. She has 400 passengers, about $2,000,000 in gold.

## Interesting Postal Facts.

On the 30th of September last, there were in operation within the United States, 202 Railroad routes; their aggregate length was 13,410⅔ miles; and the cost of mail transportation thereon $1,655,432 33,—being at the rate of $120 26 7-10 per mile. The average cost of steamboat service is $34 45 per mile; coach service $22 88 per mile; and of modes not specified, $7 86 per mile.

The amount of postage stamps sold during the year ending June 30, 1852, was $1,316,563 39, and the sales during the year ending June 30, 1853, amounted to $1,629,261 12, leaving in the hands of Postmasters unsold $198,605 72; stamped envelopes were issued to the amount of $295,292 69. It is estimated that the expenses of the current fiscal year will amount to $8,716,601.—The means of the Department for that period are estimated at $7,558,859 70.

The cost of the service for mail steamship lines and for transportation across the Isthmus for the fiscal year amounted to $1,965,857 33.—The net revenue derived from the same lines was $613,232 16. The number of letters conveyed between the United States and Europe during the year was;—By the Cunard line, 2,774,423; do. Collins, 1,018,345; do. Bremen, 412,117; do. Havre, 406,126. Total, 4,611,011.

The number of newspapers by the Cunard line was 1,034,163; do. Collins, 305,945; do. Bremen, in closed mails, 3,613; do. Havre, in closed mails, 4,987; do. several United States lines, in Prussian closed mails, 33,155. Total, 1,381,873. The postage on the letters sent during the year from Great Britain to the United States by Cunard steamers was $325,200 33; by the Collins steamers, performing just half the number of trips, it was but $106,065 49.—*P. M. General's Report.*

## Information Wanted.

Sometime about the first of June, 1853, a person calling himself Button, informed an individual that a man by the name of James Clark, of Rush, Monroe Co., N. Y., was taken off the cars sick and shortly died, at the house of an Elder Kingsley. The name of the place and the road was forgotten before the intelligence reached those interested.

Any person having any knowledge of these circumstances, would do a humane act to the aged and widowed mother of the deceased, by communicating with L. B. Langworthy, Esq., of Rochester, N. Y.

# Deaths.

In this city, on the 9th inst., of tubercular consumption, STILLMAN B., son of Lyman B. Langworthy, Esq., aged 31 years.

In Henrietta, Dec. 5th, CORNELIUS DEWITT, aged 70 years, formerly of Madison county, N. Y.

O. B. SCOTT, General Agent for a great variety of useful Publications. Woodville, Jeff Co., N. Y. Mr. Scott is Agent for the Rural New-Yorker.

# Commercial.

## BUSINESS AND FINANCE.

The cheerful aspect of the finances heretofore announced, does not essentially vary; and the tone of the money market is buoyant and hopeful. We are drawing towards the close of one of the most successfully prosecuted and enormous business seasons ever experienced in the history of the country or of the world.

Notwithstanding the reduction in rates of canal tolls within a few years past, and the free competition of great lines of consolidated railroad, the State revenues from our public works have nearly reached the highest figure ever before attained; and when the enlargement is completed, as contemplated it will be, the perpetuity of the revenue will be insured for all future time.

The returns of the railroads from month to month, all indicate an increase of business, and in innumerable instances beyond all precedent. The Central, the Erie, the two great lines of Michigan road, the lakes and the Ohio lines, are all prosperous; and even the up-country New England lines, wretched as their financial circumstances are, and ruinous as the investment has been to the poor stockholders, are improving in their business.

A voluminous and minute report from the Directors of the Erie Railroad has just been issued, from which it appears that the whole debts, liabilities, and capital stock of the Company amount to $33,225,843, which is represented by the following property:

| | | |
|---|---|---|
| Construction | | 31,222,831 |
| Cash on hand | 428,431 | |
| Materials | 795,162 | |
| Real estate | 12,859 | 1,236,795 |
| Stock of State Line Co... | 314,390 | |
| Bonds of Blossburg Co.. | 9,000 | 323,390 |
| Advanced Union R. Co.. | 143,427 | |
| Adv'ced own's lake str's. | 154,714 | |
| Adv'd own's lake prop's. | 61,463 | 359,605 |
| Unadjusted accounts... | | 83,306 |
| Total | | 33,225,843 |

The stock issued is $10,090,000; funded debt about $20,000,000, and floating debt about $2,600,000.

The gross earnings for the past twelve months, foots up to the enormous figure of $4,318,962, from which about 52½ per cent. must be deducted for current expenses.—The estimates of gross receipts for next year, is fixed by the Directors at five and a half millions. The whole length of the road is 495 miles; and including double track and turn-outs 715 miles. There are already finished 65 miles of double track, and by the opening of spring 86 miles more will be brought into use. The company own 150 locomotives and have contracted for 60 more.

The steamer Baltic took out to Liverpool on Saturday, $872,000, and the Glasgow, from Philadelphia, the same day, $100,000 more. The four recently arrived California steamers have brought over three millions from our golden sister of the Pacific.

There are rumors of recent enormous gold discoveries in the valley of the Amazon, and expenditions of adventurers to those regions. There is no sort of doubt but that the volcanic regions of South America and the alluvial deposits of her mountain torrents are rich in the precious metals; and if the enterprising Yankee could supercede the ignorant and lazy Spaniard, their riches would be speedily developed. As it is, the influx of gold upon the commercial world from California, Australia, and other mining districts, both old and new, must gradually depreciate its intrinsic value; or which is the same thing, enhance that of other commodities in proportion. When one scale pan sinks, the other must as a necessary consequence kick the beam.

# Market Intelligence, &c.

Rural New-Yorker Office,
Rochester, Dec. 13, 1853.

No essential change in Wheat and Flour since our last quotations. Corn from 68 to 70c.

Pork and Beef are still dull and lower; the former is quoted at $5 to 5,50, and the latter at $4,25@5,25.

Butter 16@18c, and cheese 8@9c.

Smoked hams bring 10@11c with few in market, which makes quotations proportionately higher than those of Pork or Beef.

Fowls plenty and low. Chickens 6@7c; turkeys 7@8c.

Apples scarce and high, ranging according to quality, from 38@75c.

Salt sixpence a barrel lower; wholesale prices $1,69.

The weather is yet mild and below freezing point; what little broken ice is floating in the canal is melting out slowly, and no obstruction is offered to navigation, altho' nothing is doing in that line.

### Rochester Wholesale Prices.

## NEW YORK MARKET.

NEW YORK, December 13, 1853.

FLOUR—Market for Western and State flour 6¼@12½c better. Demand fair for export and the trade. Better grades are sold quite freely at improved prices. Inferior grades scarce and wanted for export. Canadian better and in request. Sales 3500 bbls at $6 75@6 87½. Sales Western Canal, 27,000 bbls, at $6 62½@6 87½ for common to good Ohio and mixed to fancy Michigan and Indiana.

GRAIN—A brisk demand for wheat at improved prices. There is little prime here for export. Mixed Western in fair request for London market. Sales 6000 bush. Genesee at 170; 5000 white Canadian at 157; 7000 red do at 150; 5000 fair white Southern at 167; 1300 red do 150@153; 8900 red Western 145@146.

Oats in demand at 51@54c.

Corn better and in demand. Sales 26,000 bush at 77@78c for new Southern yellow, 78@79c for new white do, 82c for Jersey.

PROVISIONS—Pork market steady. Mess $13 50, and prime $11@11 12. Beef unchanged and in moderate demand—$8 50@11 for country mess, $13@13 50 for repacked Chicago, $5@5 62 for prime.

Lard, Butter and Cheese unchanged.

## ALBANY MARKET.

Albany, Dec. 12.—There is but little doing in our market this morning. Property is coming in by railway, and the bulk of the sales will hereafter be made at the Depot.

Flour—There is but little inquiry for Flour, and the sales have been extremely limited and unimportant.

Grain—In grain we also find but little doing. There is some inquiry for Barley in part for future delivery, and the market is steady. Sales prime two-rowed at 85c In the street Rye is in request at $1 ℔ 60 lbs. Oats dull at 47@48c. Corn 80c for old, and 73c for new ℔ 60 lbs.

Dressed Hogs are rather quiet at the Depot. There are only a few buyers in market at $6@6,75 for fair to good lots, but mainly at $6,25@6,62.

In the street Flax Seed is wanted at $1,25. Beans at $1,25@1,50.—[Alb. Jour.

## BUFFALO MARKET.

Buffalo, Dec. 12.—There is nothing doing on the market this morning above retail lots of flour to the town trade, and quotations are unchanged. The steamer's news has no effect on the market, and hear of no sales of grain.—Buffalo Com. Adv.

## NEW YORK CATTLE MARKET.

NEW YORK, Dec. 5.—At Allerton's Washington Drove Yard—Offered to-day, 2,270 Beef Cattle; offered during the week, 2,618.

Prices.—Owing to the comparatively small number of Beeves on sale, prices have materially stiffened,—the range of the market, to-day, being from 8 to 10c.

Cows and Calves all sold at from $42, 30@55, as in quality. Veal Calves at 4@6½c.

Sheep and Lambs took a wide range, say from $2,50 to $10.

Hogs—There were no hogs on sale at Allerton's this week, but prices are about the same as last week, say from 5⅝, 5 to 5½c. as in quality.

At Browning's—(Lower Bull's Head)—Offered, 518 Beef Cattle, 51 Cows and Calves, and 6,780 Sheep and Lambs.

Business here is greatly increasing, particularly the sale of Beeves. Prices last week ranged at from $8 to $9, and at these rates all were disposed of.

The Cows and Calves all sold at $30@60.

The number of Sheep and Lambs in market to-day was 2,060. The former sold at $2, 5@7,50, and the latter at from $1,50, 2,75@4,50.

At Chamberlain's—(Hudson River Bull's Head)—On sale 300 Beef Cattle, $7,25@10,25. 35 Cows and Calves, $25, 40@65; and 5,000 Sheep and Lambs; Sheep $2,75, 3,50, 4,50@6. Lambs $2,50, 3,50@4. Calves, $5@7,50.

At O'Brien's—(No. 9 Sixth street)—At market, 146 Beef Cattle; 30 Cows and Calves. Sales of the former at from $7@9, as in quality, and the latter at from $30@50.

## ALBANY CATTLE MARKET.

ALBANY, Dec. 12.—W. W. Woolford's, Bulls' Head, Washington street.

Beef Cattle—550 at market. Prices—Extra, $7,50; 1st quality, $6,75@7,00; 2d do. $6.25; 3d do, $5,50.

Cows and Calves—10 in market. Prices at from $25, $30@40.

Sheep and Lambs—1,800 in market. Prices at from $3, 50, $4@5.

Swine—Not any in market.

## CAMBRIDGE CATTLE MARKET

CAMBRIDGE, Dec. 7.—At market, 2,648 Cattle, about 2,100 Beeves, and 218 Stores, consisting of Working Oxen, Cows and Calves, yearlings, 2 and 3 years old.

Prices—Market Beef—Extra 8,00 per cwt.; 1st. quality $7,50@7,75; 2d do, $6,50@7,00; 3d do, $6; ordinary, $5@5,50.

Hides—$6@6½ per cwt.

Tallow—$8,50@9 per cwt.

Pelts—$1@1,37½.

Calf Skins 11½c per lb.

Veal Calves—$6, 8@9.

Barrelling Cattle—$5, 5,25, 5,50@6.

Stores — Working Oxen—$72, 85, 92, 95, 98@104.

Cows and Calves—$25, 30, 32, 34, 36, 38@40.

Yearlings—$12, 13@14.

Two years old—$11, 20, 22, 24, 28, 32@41.

Three years old—$25, 31, 34, 36, 39@42.

Sheep and Lambs—4,435 at market

Prices—Extra, $5, 5,25, 5,38, 5,50, 6@9.

By lot—$2 2,12½, 2,30. 2,50, 3@4.

Swine—Wholesale—All hard corn fed hogs, sold at last week's prices

Remarks—The market is well stocked, both as it regards numbers and quality. The weather is clear and cold, and altogether in favor of the holders, who have done a good business. There were large arrivals of stock yesterday, pretty much on contract at last week's prices. The attendance of buyers is the largest for any day during the present year.

183 cars came over the Fitchburg Railroad, and 190 over the Boston and Lowell railroad, loaded with Cattle, Sheep, Horses, Swine and Fowls.

## BRIGHTON CATTLE MARKET.

BRIGHTON, Dec. 8.—At market, 2,800 Cattle, (say 2,300 Beef and 500 Stores,) 6,000 Sheep, and 1,175 Swine.

Prices—Beef Cattle—Very little change from last week; sales quick. Extra $8@8.25; first quality $7,25@7,75; 2d do. $6.25@7; 3d do. $4,50@5,75.

Working Oxen—Sales $70, 82, 95, 110, 125@138.

Cows and Calves—Sales $22, 27, 29, 34, 38@40.

Stores—Yearlings $7@10.

Two years old $12@18.

Three years old—$21@33.

Sheep—Sales $2, 2,25, 2,75, 3,50@4.

Swine—Lots to peddle 5½@6c. for sows. 6½@7c for barrows. Old hogs 5½@6¼c. At retail from 6@8c.

## MOORE'S RURAL NEW-YORKER,

THE LEADING AMERICAN WEEKLY

### Agricultural, Literary and Family Newspaper.

This Journal is the standard in its sphere,—an assertion fully sustained by its high reputation, wide popularity and very extensive circulation. It embraces more Agricultural, Horticultural, Mechanical, Scientific, Educational, Literary and News Matter, interspersed with many Appropriate and Costly **Engravings**, than any other journal in the Union—rendering it unequalled in Variety and Usefulness of Contents. An actual *increase* of nearly *Seven Thousand Subscribers* during the past year, stimulates and enables us to make the Fifth Volume, for 1854, superior to its predecessors. With a corps of six able Editors, and every facility for publishing in the best style, we are determined that the Rural shall excel in both Contents and Appearance. Independent and out-spoken, it faithfully advocates the best interests of the Rural Population—and is, in all respects, a most valuable, choice, and

### COMPLETE FAMILY NEWSPAPER!

The extraordinary success of the Rural—its circulation being very large and general, especially throughout Western and Central New York,—proves that it is adapted to the wants of the people, and has no superior in the estimation of community. Its reception and progress fully demonstrate that sundry namby-pamby, trashy eastern papers are *not* the greatest favorites with the reading and thinking classes. In judging of it, comparatively, remember that the Rural is not a *monthly* of only 12 issues yearly, but a Large and Beautiful Weekly of Fifty-Two Numbers!

### FORM AND TERMS:

Each number of the Rural New-Yorker comprises Eight Double Quarto Pages (forty columns.) A Title Page, Index, &c., at the close of each year and volume.

Terms—$2 a year; Three Copies for $5; Six (and 1 free) for $10; Ten (and one to agent.) for $15; Twenty for $25. Large Premiums to agents, and for clubs. Specimen numbers, Premium List, &c., sent free; give us your address.

☞ Now is the best Time to Subscribe and form Clubs! Money, properly enclosed, at our risk, if addressed to Dec., '53. D. D. T. MOORE, Rochester, N. Y.

☞ Our exchanges will greatly oblige us, by publishing the above, or giving its main facts in a brief editorial notice. Those who publish, and direct attention to it, sending us marked copy, shall receive our next volume, *without an exchange.*

## The Wool Grower and Stock Register

is the only American journal devoted to the Wool and Stock Growing Interests. It contains a vast amount of *useful* and *reliable* information not given in any other work, and should be in the hands of *Every Owner of Domestic Animals*, whether located East or West, North or South. Published monthly in octavo form, illustrated, at **Only Fifty Cents a Year**—5 copies for $2; 8 for $3. Vol. 5 commenced July, '53. Back volumes furnished. Subscriptions can begin with the July or January number. Address to D. D. T. MOORE, Rochester, N. Y.

Moore's Rural New-Yorker.—This comprehensive and spicy journal stands at the head of its class as an Agricultural and Family newspaper. It is just the paper needed for the masses, and we are glad to learn that its circulation is quite general throughout our own and other States. This is not only complimentary to the enterprising proprietor, but speaks well for the intelligence and good taste of the public; for the paper is high-toned and scientific, admitting nothing stale or uninstructive.—*May its success continue to keep pace with its merits.—Albany Transcript.*

Moore's Rural New-Yorker, is one of the *very best* newspapers we know of, particularly for the Farmer's family, and indeed the Mechanic's also. It is always filled with so much interesting and useful matter that we cannot help running our scissors through it for the benefit of the readers of The Fredonian, although it makes us grieve to spoil for our centre-table so handsome a sheet.—*New Jersey Fredonian.*

A few such papers as the Rural New-Yorker will convince the people that all excellence is *not* confined to the "Model Couriers," and the "Star Spangled Banners," and the "Waverly Magazines" of the day. The Rural is an admirable paper for the fireside and contains a vast amount of valuable information for the farmer and mechanic.—[Pittsburgh (Pa.) Saturday Visitor.

Its leading feature, perhaps is agricultural; but in the departments of the arts, the sciences, education, history, literature and the daily news, it is most ably and admirably sustained—is an honor to the newspaper family, as well as to its editor and proprietor.—*Mich. Chris. Herald.*

Independent of its being the very best agricultural paper that has ever come under our notice, its literary merits are unsurpassed. It is certainly the best and most useful paper of the kind we have ever seen.—*Pa. Whig.*

Moore's Rural New Yorker is a beautifully embellished and richly filled Agricultural Horticultural, and Pictorial weekly journal.—*Rochester Daily American.*

## THE RURAL FOR 1854.

### Rare Inducements to Agents and Others.

As heretofore announced, the Fifth Volume of the Rural New-Yorker, for 1854, will be materially improved, the Proprietor having determined that it shall in all respects excel either of its predecessors, and all contemporary journals. He also offers greater inducements than ever before to each and all disposed to act as agents or form clubs. The attention of all interested is respectfully invited to the following list of very liberal

### PREMIUMS FOR SUBSRCIBERS!

1. SEVENTY-FIVE DOLLARS, in Cash, to the person sending us the greatest number of yearly subscribers (six month subscriptions to be counted proportionally) to the Rural New-Yorker—remitting payment according to our club terms—previous to the 15th of April, 1854.

2. FIFTY DOLLARS, in Cash, to the person sending us the second largest number, as above.

3. THIRTY DOLLARS, in Cash, to the person sending us the next (third) greatest number.

4. TWENTY DOLLARS, in Cash, to the person sending us the next (fourth) greatest number.

5. FIFTEEN DOLLARS, in Plate or Books, to the person sending the next (fifth) greatest number.

6. TWELVE DOLLARS, in Plate or Books, to the person sending the next (sixth) greatest number.

7. TEN DOLLARS, in Plate or Books, to the person send the next (seventh) greatest number.

### JANUARY PREMIUMS!

1. TWENTY-FIVE DOLLARS, in Cash, to the person sending us the largest number of subscribers, according to our terms, previous to the 1st day of January, 1854.

2. FIFTEEN DOLLARS, in Cash, to the person sending the second largest number, as above.

3. TEN DOLLARS, in Cash, to the person sending the third largest number as above.

☞ Persons competing for these Premiums must mail their remittances on or before the 31st of December. They are not excluded from the April prizes, so that one person may secure *One Hundred Dollars, in Cash.*

[In order to give Subscribers, Local Agents and Post-Masters a fair and equal chance, traveling agents, post-riders and citizens of Rochester are excluded from competition for any of the above Premiums.]

### SPECIFIC PREMIUMS.

In order to reach and reward every one who may lend a portion of influence in support of the Rural New-Yorker, we offer to those who do not compete for either of the preceding prizes, the following liberal gratuities:

1. FIVE DOLLARS, in Cash, or a copy of Webster's Unabridged Dictionary, (or $6 in Ag'l Books,) to each person sending payment for fifty or more yearly copies (six month subscriptions proportionally,) according to our terms, previous to the 15th of April, 1854.

2d. FIVE DOLLARS, in Books, or four extra copies of the Rural, to every person remitting payment for forty or more subscribers, as above.

3d. THREE DOLLARS, in Books, or a handsomely bound volume of the Rural for 1853, to every person remitting for thirty subscribers.

4th. To every one remitting for twenty copies, ($25,) we will give an extra copy of the Rural, and four (the present and three past) volumes of The Wool Grower and Stock Register—or, if preferred, an extra copy of the Rural and $1,50 in Books.

5th. To every one remitting for ten copies, ($15,) an extra copy of the Rural and three volumes (past or present) of the Wool Grower—or, instead of vols. W. G., $1 in Books.

6th. To every one remitting for six copies, ($10,) an extra copy of the Rural, either volume of the Wool Grower, and a bound Vol. of Gen. Farmer for 1848 or '49.

7th. To every one remitting for three copies ($5,) either volume of the Wool Grower, *and* a bound volume of Genesee Farmer for 1848 *or* '49.

8th. To every person remitting for one copy, ($2,) we will give a copy of either volume Wool Grower, *or* the Farmer for 1848 or '49, as preferred.

All competitors for premiums are expected to adhere strictly to the following

### TERMS IN ADVANCE:

Two Dollars a Year. Three Copies, one year, $5—Six Copies for $10—Ten Copies for $15—Twenty Copies for $25, and any additional number at the same rate. Names of subscribers written on the papers if desired, however large the club. Club papers sent to different offices if desired.

☞ Specimen numbers, &c., furnished free to all disposed to compete for the Premiums, or who desire to extend the circulation of the New-Yorker. Subscription money, properly enclosed, may be mailed at our risk, if addressed to D. D. T. MOORE,
November, 1853. Rochester, N. Y.

## UNIVERSITY OF ALBANY.

Department of Chemistry.—E. S. Carr, M. D., Professor of Chemistry and its applications to Agriculture and the Useful Arts.

F. E. Dakin, Instructor in Analytical Chemistry.

This Department of the University, having been permanently established, a spacious Laboratory will be opened for the reception of Students, on Tuesday, the 10th day of January next. There will be a Course of Instruction in Practical and Analytical Chemistry, and a Course of Lectures by Prof. Carr, on the applications of Chemistry to Agriculture and the Manufacturing Arts, continuing during a term of three months. The Laboratory will be open from 9 A. M. to 4 P. M.

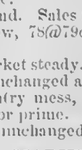
The Lectures will be delivered in the evening, and will be free of charge.

For Laboratory Instruction, $20 per term, or $10 per month, for a shorter period. Students will be charged with breakage and the Chemicals they consume. Students will also have access to the State Agricultural and Geological collections.

Analysis of Soils, Ores, Mineral Waters, &c., made on reasonable terms.

Address Prof. E. S. Carr, at Albany, or either of the following gentlemen:—Luther Tucker, office Albany Cultivator; Hon. B. P. Johnson, State Agricultural Rooms; Dr. J. H. Armsby, 669 Broadway. 207-3t

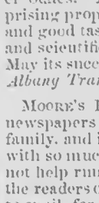
## CANOGA SPRING FARM FOR SALE,



CONTAINING 260 ACRES OF LAND, forty-five acres of valuable timber, chiefly white oak, the remainder cleared and in a good state of cultivation and well adapted to all kinds of grains. It has on it a never failing spring, which waters one hundred acres of the improved land, at all times, which makes it one of the very best farms for the rearing of stock in Western New York. The said premises are situated in and adjacent to the village of Canoga, near Cayuga Lake, in the county of Seneca, N. Y. There is an excellent Grist Mill and two good Saw mills, within a few rods of the said farm; also, District Schools and Churches. Upon the said premises, there are—an elegant and commodious brick edifice, a tenant house, a carriage house, three barns, sheds and other necessary outbuildings,—three young orchards, containing all kinds of the very best fruit. In short, it is a valuable and desirable property, and will be sold by the subscriber at a great bargain.

Direct to SAMUEL McINTOSH,
207-tf Canoga, Seneca Co., N. Y.

## VALUABLE FARM FOR SALE IN GENESEE COUNTY.



I AM about to quit farming and have concluded to offer my Farm for sale. There are few farms more valuable or desirable for any person who wishes a good farm. It is located one mile north of the village of Batavia, on Bank street, and is situated on both sides of the road, with the buildings located nearly in the centre of the farm, so that from them nearly all of it can be seen at a glance. It contains about two hundred and twenty acres, and there are about one hundred and ninety acres of improvements, of which one hundred and seventy-five acres are *first quality wheat land.* The timber is principally beech and maple, with black ash sufficient to keep the farm well fenced. The whole farm is under first rate fences, staked and capped. The soil of the farm is lime, gravel and marl, resting upon limestone. The buildings are commodious and pleasantly located—being a 1½ story framed house, nearly new, three barns, one large shed, two granaries sufficient to store 3,000 bushels of grain, a large corn crib, and other out-buildings, besides a framed house for a hired man. There are three wells upon the place, having good water, and five living springs on different parts of the farm. There are two orchards, in which there is a choice collection of fruit, selected with great care, consisting of Apples, Pears, Peaches, Plums, Cherries, Nectarines, Apricots and Quinces,—with Raspberries, Strawberries and Asparagus beds.

Such is a description of my farm, and I offer it for sale at a bargain. Any one wanting a first rate wheat farm, admirably located upon a good road, and near a beautiful village in one of the finest sections of country in the world, cannot do better than to come and see the farm.—I will give a liberal credit on the sale.

C. R. BRINCKERHOFF.
Batavia, N. Y., Nov. 21, 1853. 205

# Poetical.

Written for the Rural New-Yorker.

## CHILDHOOD'S PRAYER.

BY IDA FAIRFIELD.

By her cot at hush of eve,
Knelt a little winsome one—
Golden curls adown her neck,
Radiant as the setting sun.

Meekly clasped her dimpled hands,
And her upturned brow was fair,
While her softly pouting lips
Lisped out a childish prayer.

Throned in glory and in light,
High the Heaven of Heavens above,
Reigning o'er ten thousand worlds,
Was the mighty Lord of love.

Music soft, around Him swept,
Golden harp and seraph lyre;
Endless hallelujahs breathed
Forth by Heavens rejoicing choir.

But the prayer of childhood stole
Softly to the Heart of Hearts,
Blending with the music spell
Which the cherub's psalm imparts

Guileless, pleading, trustful too,
Holy incense unto Heaven;
Richer gift than angels bring,
Lo! a little child hath given.

New-Haven, Ct., Dec., 1853.

# Rural Sketch Book.

Written for Moore's Rural New-Yorker.

## THE OLD PORTFOLIO:

### A REMINISCENCE OF THE PAST.

BY H. G. EASTMAN.

Surely, "Life is a dream." Not a day passes but we are reminded of the frailty of human existence. To-day we have a friend, the dearest in the circle, one whose step is the lightest, her song the sweetest, and her laugh with the gay. The morrow comes, and this loved one is laid in her "narrow home," and the bending willow only marks the spot.

In my hand, I hold a portfolia, which was my school companion thirteen years ago.—This old portfolio contains many a package bearing dates at that time; and if there are some fair readers of the Rural, who cannot find a worthier object on which to bestow their attention, they may glance at my simple sketch, while I unfold the revealings of this companion of mine, long years ago.—I was a mere child then, but as I look back I can see each familiar face, and remember all that passed with a strange minuteness. How slight a thing will recall these hours, and wake the fond memories lingering with them. On yonder eminence, and a short way from my rural home, stood the old school house, surrounded by gigantic maples of a century's growth. How faithfully does memory recall the many pleasant hours of my childhood, passed beneath the roof of that old school house. A busy band were we; aye, and a happy one too, as we gathered from time to time, in that old school-room,—and these hours of mingled pleasure and toil will ever be remembered as so many bright oases in the desert of life.—Time, in its onward march, has wrought sad changes in that loved spot. The teachers have long been gone, and the old school house, where they were wont to tread, with the young and happy hearted, in life's early march, has long been deserted. Its walls have crumbled in decay, and naught is left to mark the spot where our youthful feet were wont to tread, save the streamlet that glided near, and that still murmurs on.

The memory of those childish days linger around me like the echo of a gentle strain, and as I reflect upon them, they bring many thoughts to mind, both painful and pleasing. They carry me back to the time when I and my pleasure-seeking companions with "feet-steps light as the fawn," roamed far away from home, and all restraint, and played during the long summer day, until we were exhausted with the very excess of enjoyment. Time's dark curtain is drawn aside, and in imagination I see them now, with their laughing eye, glowing cheek, and clustoring hair, sparkling now and then in the sunlight. And I hear again the wild shout of glee, and the ringing laugh of joy and merriment. But ah! this is only a dream! Those who composed that little band, are widely seperated now. While pressing cares have overshadowed many, changes have come upon all. They have gone out into the world, with their different thoughts and aspirations, and their intercourse with it has had different effects upon each. Some perhaps, have met with coldness and neglect, which others have gone on their life's pilgrimage, without care or sorrow to disturb their joy.

But I had nearly forgotten the friend of my early days, who has been so true to his trust, "The Old Portfolio." Now, this much-valued friend contains many precious things. We will first open a package bearing date June, 1840. Here are cards from my school-mates at that time; but where are they who gave them? Some are sleeping beneath the oceans wave; others have severed the fondest ties, that bound them to their native land, and are now toiling beneath the tropic in search of golden treasures. To others we have said the last farewell, for they have departed to that "land from whence no traveler returns." Here is a card upon which is written "Remember Rose." This fair girl I well remember as the sweet pale face of our own village.—She is reposing far away in the western wilds where the prairie flower blooms above her head, and the wild winds chant her requiem. Here is another, bearing the simple inscription, "From Vic." She was a sweet girl of fourteen, whose rounded, healthy cheeks bespoke long life. She was life to her school companions, and an example for their pattern. I distinctly remember her, as she extended her hand, with her dark luminous eye half concealed, and affectionately said, "Good Bye." She was going with her parents to an eastern city. She promised to visit us often; she did visit us once, but then her cheek was delicate as a lily; her lips, once so rich and full, were now thin; and her sweet voice grew plaintive, more plaintive, while I trembled at the lustre in those eyes. It was the lustre of Death. She returned to her new home, to tarry but a few short weeks, and then they folded her snow-white hands over her still heart and laid her in the grave.

Here is a package upon which is beautifully written, "Katie"—"To be opened in five years." Well it has been opened; and do you not remember those curls, which escaped down that neck, fairer than any of your dreams? Well, it contained one of these; and I love to look at it, and then think of the sad fate of the sweet one who gave it. I saw her a few moments before she took passage on that fatal boat, the "Henry Clay." As the news of that terrible disaster came, it also came that Katie was no more. Our teacher, too, has been summoned home. We laid her carefully beneath the grassy mound, in our own little church-yard, where the violets grew and the birds sing all the year round, perched on the polished marble where many a loved name is inscribed.

Another, the pride of all who knew him, is left to sleep on California's distant shore, far away from his childhood home. Altho' his venerated parents, fond brothers and sisters, may not weep at the spot so hallowed by his dust, yet Sacramento's turbid waters will roll past his grave for ages to come, while his memory shall live in the many hearts that loved him. The "grim messenger" which spares neither the lowly nor the lofty, has sent his message into many a happy circle, and the fairest of their number have gone to obey the summons. Thus, one by one, have they "wearied by the way," while changes have come upon all. We enter upon the scenes of childhood, with bright hopes and expectations, but they are often suddenly blasted forever. As we review the season of childhood we may learn a lesson from its departure, that youth is also passing away, and ere we are aware, another stage of our exhistence will be ushered upon us. Then let us improve wisely our youthful moments, that we may be prepared to act with honor to ourselves the part assigned us in the groat drama of life.

Maple Grove, Marshall, N. Y., 1853.

## THE MAIL-AGENT'S STORY.

The following account of a transaction, in which the narrator was one of the parties concerned, is given to show the terrific dangers to which persons in the Railroad employ are subject, and also, as a remarkable instance of escape from what might seem certain death. The story is related as near as possible, in the words of the Mail-Agent himself:

I was at one time in the employ of the Government as Mail-Agent, and on the day in which the following event occurred, which was of a Saturday, about the middle of May, 18—, I was running down with one of the English mails from N— Y— to B—. The dispatch of these trains was irregular, and depended upon the will of the Chief Postmaster, and they have since, I think, been entirely discontinued.

At about 6 P. M. we reached S—, that busiest and prettiest of all the inland New England cities. The trees were just putting on their first garment of fresh green leaves, the wide fields began to shine with verdure, and every boy and girl seemed to have just found some new sport and to utter a new kind of shout, as we dashed into the old depot, with a shriek from the engine (a very powerful one of the first class, called the Ætna,) enough to take one's hair off his head. All I had on the train was just one car behind the tender, carrying the great mails, some valuable express matter, and a live brakeman. I used to think myself a great man in those days, when I was intrusted with sometimes half a million of property, but I had good reason to change my mind before I was over with this special trip, that I'll be bound. What is any amount of dollars and cents compared with the risks that a man must run who is at the head of an Express mail train? We halted in the S—, depot just long enough to wood and water, seize upon a mug of piping hot chickory coffee, and a bit of greasy paste concealing a slab of dried apple-sauce, and called, in courtesy, a pie — when, springing on the train, we left the station somewhat before sunset, and were soon flying along at a headlong pace, in the direction of the sea-board.

Now I doubt not, to you and other gentlemen who are in the habit of sitting in a comfortable Railroad car, on a stuffed seat, reading the last news from Europe, or the pages of some entertaining novel, the mode of travel and the various little incidents on the road seem very delightful. But the thing is very different when you are perched on the seat of an engine, and going down the road at the rate of fifty miles an hour, a velocity not rarely attained where the track is in good order, and getting over the ground the sole consideration in view. I could not endure the solitude of the mail-car, and almost uniformly sat forward, even when it was stormy, and I can conceive of few things more astonishing, and at the same time overpowering, to a sensitive person, than that of a night-trip, when you cannot see an inch ahead, unless you are at the engineer's window, and you sit swaying about after the engine, (or machine, as it is *invariably* called by *employes*) which seems every moment as if it would fling itself off the track, as it continually sags and leans from one side to the other. In the passenger cars no idea *whatever* of the speed, of the momentum, can be obtained; this can only be got by standing near the track as the train whizzes by, or being upon the engine or tender. There is, in addition to the jerks and motion ahead, a universal compound hideous noise made of steam fizzing, the shriek of the whistle, which never seems to be over on a fast train, as it is the custom to whistle at every crossing, and a general groaning of wheels, chains, axles, and the sough of the wind as it draws through the engine. In fact, take a quiet man out of his parlor some stormy evening, with an easterly breeze, from a comfortable confab with his better half, and put him on the engine of a mail-train "devouring the darkness" at the rate of forty-five miles an hour, and if he recovers from the shock in six months, he will have considerably more iron in his nerves than most slow coaches I have known.

But on the evening in question, we had fair weather, and daylight sufficient to last us a good way down, a first rate engine, and a clear run to W——, so far as we knew.

"A fair prospect for a good trip," said I to the engineer, before starting.

"It looks well enough *now*," was his reply. "And little enough time to do it in. I only wish the merchants of B—— had to run these —— mail-trains for themselves, and take the beggarly wages I get for the business. I'll be bound they would not scrape their precious bones over the road more than once, and then twenty-five miles an hour would take the breath out of their bodies."

Thompson, the engineer on this trip, I had ridden with before. He was a tall, black-haired man from the State of Connecticut, a great driver, and silent as death on the road. He kept his eye fixed steadily on the track, except when he was timing his speed. That he possessed the unscrupulous presence of mind, some persons may call it recklessness, possibly demanded by the driver of a fast train, will be shown by the incident that follows:

We had come along very well, and were some way past N—— W——. I think I might have been going at the rate of thirty-five miles an hour, common running time. There was here a slight curve in the road, and on getting round it, I heard Thompsen cry out at the utmost power of his lungs, (not of much account to be sure in the din of the engine,)—"There is something on the road. Hold on for your lives." And as he said this, he put the whole force on the engine, and let off the full power of the whistle in a shriek of such concentrated agony, that it appeared as if the entire chorus of Pandemonium had been let loose, and then, in another second, there was a tremendous crash, a mighty jar that threw me flat on the floor of the engine, and a universal crashing of timber, rattling of wheels, and something like the death-shriek of man or beast. And in another second all this agony was over, the engine was reversed, the brakes put on, and Thompsen exclaimed, "We have run down a train, Mr Collins, and though our time is short, I believe it is but a duty to run back and see if anybody is killed." Thompsen and I thereupon jumped off and ran back about twenty-yards, when we saw in an instant the terrific danger we had past, and the nature of the accident. A party of Irish laborers were now standing by the side of the road, and the engineer of the train we had run down, a red-headed Lowland Scot by the name of McGillies, told us how it had all happened. "You see, men," said Mac., "I had come along down to back up into a gravel-pit, with about thirty men on board the dirt cars, and a car with two horses in it; I knew you would be along, and I believed I had time enough to set the switch, back off my train, and put everything in order before you would be here. But as true as I live at this moment, I hadn't run down more than far enough to get my last car on to the gravel track, and as for the switch, I had not seen it, before I heard you. I believe I considered a second about it, and I said to myself, if this switch is set now, both trains will be altogether broke up; if I leave the train, my men will at least be safe, and he will have some chance of running over or thro' it. Jump men—jump for your lives! was all I said; and we did, and cleared ourselves, and that is just it; and 'What will the Governor be saking about?'" The nature of the ground was all that saved the mail-train. A little plane on one side had been cut down for gravel, and the road laid sidling, while on the right hand an embakment went down a considerable distance, and in a small pond or pool at the bottom of this bank were the victims of our speed and Thompsen's presence of mind, namely, the locomotive, the dirt-cars, and the car in which were the horses, the latter, of course, "kilt intirely." Our engine struck the hindmost of the dirt-cars with the most terrific force, and literally piled the whole train one over the other upon the engine, and the impetus still keeping up, with a violent strain to the right, the locomotive, and in fact the whole concern, had gone over in one mass off the road and out of our way. "Come, Mr. Collins," cried Thompsen, "we have not half a minute to lose; on beard!" and springing on the machine, we were piling down the road at an awful rate, to make up for lost time. On reaching the next station, we found that everything movable in front of our engine had been carried away, our lamp, cow-killer, rails and wood-work; but the heavy, solid engine-head had literally acted like a cannon ball, and swept the whole gravel train off the track, as if it had been so many bundles of straw.

"You look pale, man," said Thompsen, as we got down from the engine in the station-house at W——.

"I *feel* pale," said I. "By the way, it appears to me you raised your steam when you saw that train ahead. Did you know it was a train?"

"I cannot say much about that," he replied with a strange look about his eyes.—"The fact is, I knew there was something ahead, that we were going thirty-five miles an hour, and that to bring up was totally out of the question. The only chance was in running the thing down. I have played the same game before, and I should again if my life was hanging on it. You must do something, and you must do it in short meter. But let me tell you one thing, Mr. Collins, it is the last day that —— red-headed Scotchman, the plague rot him, will drive a train on the W—— road."

"What has happened, Charles!" asked my wife of me, as I entered the sitting-room of my house in W——, for I went no further than this place; "you look more like a ghost than a living man." Out of curiosity I looked in the glass, and it was literally the fact, that my cheeks were a ghastly white, my hair as wet as if I had just been ducked in the river; in fact, I was the exact picture of a criminal who is led out for execution.

"Happened, Mary!" was my reply, "this has happened, that I have taken my last ride as special agent on a mail-train, if the house must be sold over our heads." And then I detailed the above circumstance.

"Horrible, horrible!" exclaimed the poor girl, unable to keep the tears from flowing down her cheeks, "what an awful escape from an awful death. Grant Heaven that you may never go again!"

I learned beyond a doubt, for I made every inquiry, that McGillies, the driver of the gravel train, was an intemperate man, and had been seen hanging about the grog-shops of N—— W—— that afternoon.—Ruin was the cause of this near escape that I had from a horrible death, and I would say, in conclusion, never, on any occasion, ride on special trains, and beware of strong drink as you would a raging poisen.—*N. Y. Tribune.*

# Wit and Humor.

Antiquity.—A lawyer and a doctor were discussing the antiquity of their respective professions, and each cited authority to prove his the most ancient.

"Mine," said the disciple of Lycurgus, "commenced almost with the world's era. Cain slew Abel, and that was a criminal case in common law."

"True," rejoined Esculapius, "but my profession is co-eval with the creation itself. Old mother Eve was made out of a rib taken from Adam's body, and that was a surgical operation."

Seeing Royality.—A person of rather doubtful character, recently returned from Europe, told his friends he had been presented at court while there. Did you see the Queen? asked one. "Wal, no," returned the Yankee, "I didn't see her 'zactly, but I see'd one of her friends—a judge.—"Yer see," he continued, "the court I was presented at happened to be a police court."

The Musical World is informed that at an exhibition given by the Choctaw Indians the other night, they "kindly offored to give a specimen of tomahawking and scalping, if any lady or gentleman in the audience would step forward."

An Irish lad complained the other day of the harsh treatment received from his father. "He treats me," said he mournfully, "as if I was his son by another father and mother."

"Ma, that nice young man, Mr. Saufting, is very fond of kissing."

"Mind your seam, Julia; who told you such nonsense?"

"I had it from his own lips."

"Do you know Mr. John Brown?" "Yes, my dear." "Is he not a very deserving man?" "Yes, he deserves a flogging, and if ever he gallants you home again I will give it to him!"

Drinking water neither makes a man sick, nor in debt, nor his wife a widow.—*Spanish Maxim.*

To find out the way to the Sheriff's office, endorse for a friend, and go security for his house rent.

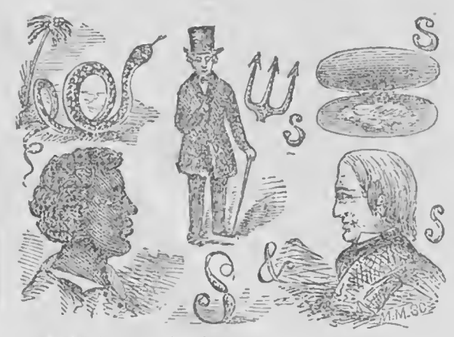
Nothing's so hard, but search will find it out."

## ILLUSTRATED REBUS.—No. 2.



☞ Answer in three weeks.

For the Rural New-Yorker.

## HISTORICAL ENIGMA.

I am composed of 30 letters.

My 1, 2, 19, 23, 29, 17, was one of the seven wise men of Greece.

My 2, 24, 10, 18, 12, 28, was a Grecian poet.

My 3, 8, 4, 23, 18, 28, was a distinguished ancient mathematician.

My 4, 26, 23, 28, 15, 30, 12, 6, was a Spanish dramatical writer.

My 5, 16, 13, 22, is a city in Turkey, of much splendor.

My 6, 3, 30 12, was a Roman Emperor.

My 7, 8, 15, 24, 27, 12, 13, 17. 4, 5, 11, 10, was distinguished for personal beauty.

My 8, 16, 20, 26, 6, first taught the Turks the art of casting cannon.

My 9, 23, 18, 17, 22, was a Queen of Tyre.

My 11, 19, 4, 18, 1, 8, 10, was a Roman historian.

My 14, 16, 9, 17, 4, 5, 1, 11, is an American historian.

My 16, 22, 21, was a celebrated naturalist.

My 20, 8, 30, 27, 10, was a Scotch poet.

My 21, 9, 23, 8, was the first teacher and legislator of the Mongols.

My 22, 2, 26, 20, was the most impious of the Kings of Israel.

My 25, 29, 16, 25 24, 17, was a Persian King.

My whole is an important event in ancient history.

**MOORE'S RURAL NEW-YORKER:**

A WEEKLY HOME JOURNAL,

For both Country and Town Residents.

PUBLICATION OFFICE,

Burns' Block, corner State and Buffalo Sts.,

Rochester, N. Y.

TERMS, IN ADVANCE:

Two Dollars a Year—$1 for six months. To Clubs and Agents as follows:—Three Copies one year, for $5; Six Copies (and one to Agent or getter up of club,) for $10; Ten Copies (and one to Agent,) for $15; Twenty Copies for $25, and any additional number, directed to individuals at the same rate. Six months subscriptions in proportion.

☞ Subscription money, properly enclosed, may be sent by mail at the risk of the Publisher.

Terms of Advertising

One Dollar per square (ten lines—100 words, or less,) for each insertion,—*in advance.* ☞ The circulation of the New-Yorker is much larger than that of any other newspaper published in the State, out of New York city. Only a limited space, however, is devoted to advertisements, and hence preference is given to those most appropriate—such as the cards and notices of dealers in Agricultural Implements and Machinery,—Horticulturists and Seedsmen,—Booksellers and Publishers,—Inventors, etc. All orders by mail should be accompanied with the cash.

To enable us to accommodate as many as possible, brief advertisements are preferred. Patent medicines, &c., will not be advertised in this paper on any terms.

☞ All communications, and business letters, should be addressed to D. D. T. Moore, Rochester, N. Y.

☞ Non-Subscribers into whose hands this number of the Rural may fall, are requested to give it an examination, and, if approved, their support. See Prospectus, Premium List, &c., on preceding page.

# MOORE'S RURAL NEW-YORKER.

VOLUME IV. NO. 52. } ROCHESTER, N. Y.—SATURDAY, DECEMBER 24, 1853. { WHOLE NO. 208.

MOORE'S RURAL NEW-YORKER:
A QUARTO WEEKLY
Agricultural, Literary and Family Newspaper.
CONDUCTED BY D. D. T. MOORE,
WITH AN ABLE CORPS OF ASSISTANT EDITORS

THE RURAL NEW-YORKER is designed to be unique and beautiful in appearance, and unsurpassed in Value, Purity and Variety of Contents. Its conductors earnestly labor to make it a Reliable Guide on the important Practical Subjects connected with the business of those whose interests it advocates. It embraces more Agricultural, Horticultural, Scientific, Mechanical, Literary and News Matter—interspersed with many appropriate and handsome engravings—than any other paper published in this Country

## Rural New-Yorker.

### Progress and Improvement.

### CLOSE OF THE VOLUME.

THIS number completes the Fourth Volume of the RURAL NEW-YORKER, terminating our editorial labors for 1853. The occasion is one of no ordinary interest, and awakens mingled emotions of pleasure and regret, yet the former are most powerful. Not that we rejoice at the flight of Time—that is a source of regret—but that we have been vouchsafed the health and strength to labor almost unceasingly during the days, weeks and months of the year, continually sustained by the approval and substantial encouragement of the thousands whose welfare we have earnestly endeavored to promote.—while many, who began the year as hopefully and vigorously, have been stricken by the hand of affliction, or cut down in the meridian of life and usefulness.

In mentally reverting to the past—the events of even a twelvemonth—many subjects are suggested, comments upon which would be pertinent, yet we have not space for their discussion. But as the occasion permits allusion to personal affairs, we have somewhat to say to all interested in, or who have in any wise augmented, the success of this journal. And yet, our obligations are so great, that we hesitate in writing what we feel constrained to say, lest we should be accused of uttering flattery, instead of the sincere emanations of an appreciating heart. Be that as it may, we cannot consistently add "finis" to this volume, without expressing our warmest acknowledgements to each and all who have seconded our efforts, and thereby contributed to the unexampled success of an enterprise designed to promote, in an eminent degree, the present interests and prospective welfare of community. We feel and know that the success of the RURAL NEW-YORKER—a success so marked and complete as to create unsuccessful imitation and rivalry in different localities—has been achieved by the combined efforts of thousands of generous and influential persons residing in various sections, near and distant. It is to those who have seconded us in every appropriate manner—especially in the capacity of Correspondents, Agents, and Subscribers—that the thanks of the public, and our own acknowledgments, are eminently due for the permanent and prosperous establishment of a journal which we believe is accomplishing a large measure of usefulness.—We feel justly proud of the RURAL and its success, but prouder still of the ardent, active, generous-hearted [illegible] and Improvement" who have enabled us to make it what it is acknowledged to be—the standard Agricultural, Literary and Family Newspaper of the age.

Reader, to prove that we are right, let us see what our friends have accomplished. During the year we have published several hundred articles form Correspondents.—And we must say, that for variety and importance of subjects discussed, for the clear, practical, common sense language in which they are couched, for the spirit of progress, and love of truth with which they are so manifestly imbued,—and above all for that detailed account of experience, the result of close observation and patient investigation, and for the keen appreciation of the advantages of experimental science,—the communications in the practical departments of this volume of the RURAL will challenge comparison with those of any Agricultural journal in the world. This is sincere praise. We are proud of our Correspondents—and others appreciate their merits. One of the ablest and most experienced agricultural editors in the Union, said to us recently;—"No wonder the RURAL is succeeding beyond precedent, *for it possesses one great advantage in having the best contributors and correspondents of any journal in the country*" And he was right. Our correspondents *are* entitled to credit, and in behalf of the great cosmopolitan agricultural community, we return them sincere thanks for past favors, and earnestly solicit a continuance of their valuable contributions.

But there is another and larger class to whom we are equally indebted.—Agents.—This includes a large and influential portion of our readers—for the RURAL has, probably, a more numerous, active and efficient corps of volunteer and regular agents and working friends, than any similar journal in America. During the past year, especially, they have accomplished wonders—even exceeding our most sanguine expectations.—They have not only gathered the names and money of their friends in clubs of five, ten, twenty and thirty, but many furnished lists of from fifty to seventy-five, while others went into the hundreds. In this good work all classes joined. Farmers, Horticulturists Mechanics, Merchants, Post-Masters, Clergymen and Teachers; while many of "Heavens last best gift" have exercised their rights and influence in the same direction. They have generously introduced the RURAL to notice and support throughout the Union, thereby extending its area of circulation and usefulness, and affording us and our correspondents an opportunity of addressing a more numerous audience than that of all the clergy of this city combined; yea, more—of speaking to a greater number than the whole population of Rochester! With the continued confidence and encouragement of such vigilant and substantial friends, we have little to fear in regard to the future.

To the Press generally—Agricultural, Religious, Political and Literary—we are greatly indebted for cordial greeting and warm commendation. For this generous kindness, we bow to our contemporaries in grateful acknowledgement. And, while we strive to excel, we trust the RURAL will enhance rather than impede the prosperity of all useful and rightly conducted journals.

During the year we have endeavored to discharge our duty aright to subscribers and the public. How well we have succeeded others can best determine. Our aim has been to keep pace with the spirit and progress of the age, and to promote the common weal. We have at times been constrained to use very plain terms and strong language in condemnation of wrong and quackery, and shall exercise the like privilege in future, whenever considered necessary to guard and protect the rights and interests of community. While we condemn deception and visionary speculation, we do not subscribe to the "old fogy" creed of those who are continually prating about the ignorance and retrogression of agriculturists. We believe in "Progress and Improvement"—that the world is [illegible], including the agricultural community—and so believing we shall strive, from week to week, to make the truth manifest.

— Our arrangements for the future have already been announced, and we can safely promise that the Fifth Volume of the RURAL NEW YORKER will be more valuable and attractive than either of its predecessors. As heretofore—but with more assistance, and far greater facilities—we shall use our best endeavors to render it eminently instructive, useful and entertaining—worthy the confidence and support of all interested in the various subjects discussed, and an indispensable weekly visitor to the Family Circle. The prospects of the paper were never so bright and flattering as at present, and hence we shall commence the new year and volume under most favorable auspices.

### VALUE OF LEACHED ASHES.

IN conversation with an agricultural friend a few days since, he mentioned that he had found great benefit from the application of old leached ashes to wheat, especially on sandy soils. In one instance, 100 bushels of ashes per acre, spread on the soil after the wheat was sown, gave him an increase of ten bushels per acre. He has spots on his farm where he can see the beneficial effect of unleached ashes, applied nine years ago, every time the lot is sown with wheat. He has tried *unleached* ashes with no benefit to wheat, though he thinks them good for corn. To what is the fertilizing property of old leached ashes owing? We cannot definitely answer this question. We are inclined to think, however, that it is owing in some way to a substitution of the alkali ammonia for the potash and soda which have been leached out. It may be that they contain the double salt of silicate of alumina and soda, to which clay owes its power of retaining ammonia. If this is the case, by adding leached ashes to a sandy soil, we add ammonia, or at least, the means of retaining the ammonia brought to the soil by rain from the atmosphere; and that, too, in the best condition for assimilation by the plant. Taking this view, it would follow that the older the ashes, and the more they had been exposed to rain, the better and stronger would they be.

But whatever difference of opinion there may be as to the cause or reason of the fertilizing value of leached ashes, all agree that they are valuable for wheat on sandy soils.

There are in many parts of the country old asheries, from whence leached ashes can be obtained at a mere nominal price; and it is truly surprising that they are not more extensively used. The fall is the best time to apply them, though they might be spread on the wheat while more or less snow is on the ground in the winter, to advantage.

### WATERING SHEEP IN WINTER.

THAT sheep can do with less water than other domestic animals, is well known.—That they should be *forced* to do with a less quantity than they desire, or compelled to do without any, except what is accidentally supplied by melting snow or rain, no reasonable or merciful man can believe for one moment. In some experiments on South Down sheep, at Rothamstead, we found that in the summer months each sheep eat 3 lbs. of clover hay, and drank about six lbs. of water daily. Thinking that they drank more than was favorable for the deposition of fat, we confined them to a less quantity of water for one week. The result was that during that time they eat less food and *lost weight*. This result satisfied us that sheep knew better than man, though he were scientific, how much water they required.

But we need not quote experiments.—The common sense of every man tells him that sheep, as well as all other animals, should be abundantly supplied with good, fresh water. Cows and sheep, if possible, should have free access to it *at all times*.—For, unlike the horse, they will not always [illegible] regularly observed. A well, pump and troughs would seem, therefore, to be necessary appendages to every well managed barnyard or sheep fold. Kind reader, *act* on this matter, and your sheep and cows will bless you, if not in words, at least in wool, milk and profit.

ANOTHER GOOD COW.—In reply to our question what Western New York thought of MR. SABIN'S cow, we have received several answers. MR. JOSEPH CROCKER, Lockport, writes that he has a cow, a cross between native and Devon, that gave the first week in June last, 16¾ lbs. of butter, and in the second week 17 lbs. with no other feed than good pasture. He has a heifer from this cow which came in when two years old and in one week during the following September gave eight pounds of butter.

### PRESERVATION OF WOODLANDS.

IT is not my present purpose to discuss the importance of *reserving* a certain amount of woodland on each farm, but assuming that every farm of 100 acres in the immediate vicinity of cities or large villages, should contain at least 25 acres devoted to the growth of forest trees, I would offer a few hints on the management of such lands, so as to afford the greatest quantity of timber and fuel, without deterioration.

It has been recommended by some to clear off a certain portion of the land each year, say half an acre, enough for a year's supply, and if cut at the right season of the year, say they, the timber will spring up spontaneously and soon supply the place again, provided cattle are kept out; and this, it may be remarked, should be done in all cases, for it is as certain that the person who expects a grove of young trees to flourish, to which cattle have free access, will as surely be disappointed as he who expects a field of wheat to come to perfection under like circumstances.

But it is found by experience that with the most careful treatment, the trees often fail to germinate in any considerable quantity, and the owner often finds to his mortification, the ground covered with nothing but grass and weeds.

The following method, however, rarely if ever fails. Let the ground be marked out by being encircled with a path made by scraping off the leaves and rubbish for 5 or 6 feet in width, then let it be burned over in a dry time early in the spring, which may be done with safety by having 4 or 5 men to watch and not let the fire break over the prescribed limits.

After the burning it should remain undisturbed for two years. Then let the fallen trees and the greater part of the standing old ones be taken off, leaving scattered over the piece, about twenty trees to the acre. At the end of six years these also may be taken off, and the young growth thinned to the distance of three feet apart on an average, leaving of course the more thrifty and desirable kinds. At the end of ten years let them be again thinned, leaving but three trees to a square rod, or about 300 on an acre. It has been ascertained that most kinds of forest trees will flourish and grow to a large size at about this distance apart, provided the grove is all of the same age.

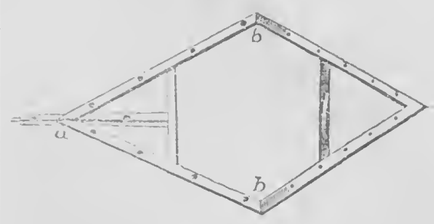
On a piece of three acres that was burned 30 years ago, and has been treated as above described, the trees are now 60 feet high, and near the ground from 14 to 18 inches in diameter, and in all probability in 20 years more the weight of timber will be equal to that of the original forest.

The common practice of going through woodlands yearly, and cutting down such trees for fuel as have come to maturity, if done in the usual way is liable to break down and destroy much of the young timber. But this can be avoided by girdling such trees two years before wanted, in which time the limbs become dry and brittle, and in falling will mostly break off instead of breaking the green limbs with which they come in contact, and at the same time they are rather improved as fuel. C.

FARMERS' CLUBS IN CANADA.—Our Canadian brethren set us a good example in respect to monthly meetings for the discussion of agricultural subjects. We have just read with much pleasure, a discussion at the Hamilton Farmers' Club, on the construction of fences; and one at Guelph, on the most profitable breed of sheep adapted to Canada, and the best and most economical means of wintering them, &c. We have many warm personal friends in Canada, and now that the Great Western railroad is partially in operation, we anticipate, with much pleasure, attending some of these Farmers' Clubs, during the ensuing year, and enriching our columns with reports of their proceedings. By the way, what are our friends in Western and Central New York doing in the way of Farmers' Clubs and discussions?

### AN IMPROVED CULTIVATOR.

EDS. RURAL:—The cultivator used in this section resembling the old fashioned drag in shape, is easily turned out of the way, on level ground, if it meets a trifling impediment on the side. And upon a side hill it turns so much that the upper row of teeth follow one another, leaving the land as tho' it had been lightly furrowed with a plow.—To remedy this, handles have been attached. If the ground be level and not too rough, this is a decided improvement. But if rough or sideling it does not work well, and is much more unpleasant to hold than the plow. Besides, the upper side has to be frequently turned so as not to do its work well, or it will not follow the team.



I will now tell you what I have done by way of improvement. I built a cultivator on the old plan, only I get the width with less length of timber, to have it as light as possible. A drag of light timber with the teeth so set as to follow between the cultivator teeth attached, wide end foremost, with hinges, completes the cultivator. The accompanying sketch will give a better idea of it than a long description. A, is a hook for drawing, b b are hinges to attach the harrow to the cultivator. There are nine cultivator teeth and eight drag teeth.

This pulverizer of the soil will run upon a hard road without sluing round the drag, acting like the tail of a kite, holding it steady. It will fit for the seed an acre of sward land in about half the time required with the old fashioned article—so don't laugh at it till you have tried it.

S. F. SMITH.

Siloam, Madison Co., N. Y., 1853.

### RURAL NOTES FROM ILLINOIS.

In the spring of '53, a farmer in this vicinity plowed a piece of prairie soil which had been under cultivation, producing a good crop annually, for nine years. It was plowed the usual depth and sown with oats, except a strip along one side of sufficient width for six rows of corn. Adjacent to this, several acres more, which had been cultivated the same length of time, were plowed about two inches deeper than the former, and all planted with corn at the same time. As soon as the corn had gained a height of five or six inches, a manifest difference was observed, which continued to increase till the close of the season; that on the deeper plowed soil being full 6 inches taller than the other, and of a better color.

In a former communication, I stated that some farmers in this vicinity were careful of their manures—that crops were improved by the use of them, &c. Such is the case with those lands that have been under cultivation for several years. Instead of manuring, some plow their grounds a little deeper every few years; a practice which might be continued to almost any extent, (on account of the [illegible] depth [illegible] ness of the soil,) but for the fact, that the greatest depth to which a soil can be worked, must at length be reached.

Long continued cropping tends to render the soil heavy, compact, and more inclined to harden and crack in midsummer. This would be the effect generally, if the stubble lands were either burned over or pastured off very close. The same practice tends to keep the ground wet till late in the spring. Many farmers, however, prevent these evils by plowing under the large amount of vegetable matter that, in addition to the stubble, soon covers the ground after the crop is removed. I have seen soil that was formerly quite wet and compact, rendered dry, light and productive by this practice; and others that were preserved by it in all their primitive fertility. H.

# Educational.

### DELIGHTFUL TASK!

"Delightful task, to rear the tender thought,
To teach the young idea how to shoot,"

says the poet, as he sits in an easy chair and picturos in his imagination a school and the appurtenances thereto, such as the actual teacher has never yet seen, and a class of scholars such as never yet existed under heaven. Put the poet aforesaid into some schools we have known in times past, on pay of twelve dollars a month and "board round," a leaky roof, patched windows, green wood and no kindlings, and then be told by the trustees, "it is expected that the teacher will build his own fires." Let Mother Goose hiss at him because he does not rush along on the highway of science her darling gosling, and father Wood grumble because his own blockhead of a son does not progress any faster with the Roots. Let mischievous boys thwart his best efforts to preserve order, let dull boys hang like a dead weight upon his best classes, let ever meddlesome parents interfere with the rules and arrangements of the school, let economical *patrons*, as they call themselves, stint his allowance of food when he comes to board with them, and grumble at the school bill of a few shillings when it comes to be presented afterwards; let him be persecuted with a malicious lawsuit from an enraged man because an unruly boy was made to submit to a little wholesome school discipline; let all these things and a thousand other like annoyances be visited upon the poet's head who wrote the above, and our word for it, his soaring muse would sing in quite a different strain.

School teaching can be made passably pleasant in a sober, enlightened, liberal-minded community where the people regard the institution in its true light, as really one of the most vital importance to the well being of society, but unless they do that teaching is very far from a "delightful task." It is an honorable and an excellent employment for young men and women, at least for a time, and gives them a discipline which can be obtained no where else. It is a profession which might be pursued as the business of a life, that is if the remuneration was commensurate to the services.

What we wish to accomplish by these remarks is this: to impress upon the minds of trustees and parents the necessity of lending to the teacher all aid and encouragement in their power, of removing from his path every obstacle possible, and cheering him and his scholars on in their laborious road. Get good teachers and pay them liberally, and then be sure and sustain them; and above all do not be seduced into the erroneous idea, that the competent and faithful teacher deserves nothing at your hands, because he is performing such a "Delightful Task!"

### "DICTIONARY WORDS."—BE CAREFUL.

FRIEND MOORE:—Occasionally, even in the RURAL, I find a big word, calling for reference to the largest kind of a dictionary, and, thanks to your liberality, an "Unabridged" lies ever on the table in the sitting-room. But "a Waif from Wisconsin," is too much for even WEBSTER'S verbose pages. I read it, (I read everything in the RURAL) and came first to a puzzler in the shape of *accompanible*. Accompanible, however, says WEBSTER, means sociable, and is marked "not used." But "adagial" no search enables us to find—yet, perhaps, it may be made out of the musical term "adagio," slowly, leisurely. Then there's "absinthian," meaning "like worm-wood," and "amaritude," equally bitter in signification. But "agrestial" puts on the climax—if it is a better word than "rural, rustic." But enough.

### PUNCTUATION.

AN ingenious expedient was once devised to save a prisoner charged with robbery, in the criminal court of Dublin. The principal thing that appeared in evidence against him was a confession alleged to have been made by him at the police office, and taken down in writing by a police officer, and the following passage was read from it:

"Magnam said he never robbed but twice said it was Crawford."

This, it will be observed, has no mark of the writer's having any notion of punctuation, but the meaning he attached to it was this:

"Magnam said he never robbed but twice—said it was Crawford."

Mr. O'Gorman, the counsel for the prisoner, begged to look at the paper. He perused it, and rather astonished the peace officer by asserting that, so far from proving the guilt of the prisoner, it clearly proved his innocence.

"This," said the learned gentleman, "is the fair and obvious reading of the sentence: 'Magnam said he never robbed, but twice said it was Crawford.'"

This interpretation had its effect upon the jury, and the man was acquitted.

### CANADA.—No. III.

BY J. CLEMENT.

IN speaking of the prospects of Canada, reference will be had mainly to the Upper Province, where most of the Protestantism and intelligence, and all the enterprise, are found.

The exports of the Province from year to year, indicate a healthy state of things. In 1850 they amounted to nearly eleven million dollars. In spite of heavy duties, her exports through inland custom houses along the frontier, are constantly increasing.—The demand for Canadian lumber in the United States, is such that the trade in this article is swelling with astonishing rapidity. In 1848, the exports through our custom houses, amounted to $3,089,600, and two fifths of this was in the proceeds of the forest. Since that time the call for this article in "the States" has probably doubled.—Canada has new sixteen hundred saw mills, turning out 374,953,000 feet of lumber annually. Immense quantities of her produce pass to the seaboard through the St. Lawrence. The number of barrels of flour cannot be less than four hundred thousand annually, which is also about the amount in bushels of wheat. From eight to ten thousand barrels of beef and pork pass thro' the same channel, with a million pounds of butter, and other articles of export in proportion. The tonnage of vessels registered in the Province does not vary much from one hundred thousand tons. It has quadrupled in fifty years. The commercial prospects of Canada may be regarded as flattering.

Her agricultural prospects are growing brighter. The farmers in Upper Canada are now giving good support to an agricultural periodical—a class of reading to which, a dozen years ago, with rare exceptions, no encouragement was given. The tillers of the soil are getting their eyes open to the *science* of their calling, and are beginning to work their lands to the best advantage. A Provincial Fair is now held annually, and town cattle shows are springing up all over the western part of Canada. These things were a rarity, if ever thought of, a dozen years ago. Their bearing on the prospects of agriculture, it is needless to designate.

Great improvements have been made in the roads of Canada during the last ten or twelve years; and the recent opening of two or three railroads and the projection of several others, are promising indications for internal shipments. Railroads already link Lower Canada at Montreal with Boston and New York, via. Rouse's Point, and with Portland by a road running under the shadow of the White Mountains. In Upper Canada a road connects lake Ontario, at Toronto, with lake Simcoe, and is progressing slowly westward into the mineral region. Another is open from the Falls of Niagara to Hamilton, and will be through to Winsor, opposite Detroit, in a few weeks. Still another is shortly to connect Buffalo, via. Fort Erie, with Brantford and Goderich.—The Grand Trunk road, eventually to form the northern matrimonial "knot" between the Upper Lakes and the Atlantic, is fairly under way, and will probably be completed as far east as Kingston, in two years, and to Montreal in five or six. There will be several feeders to this great road, coming in from the north and northwest, and some of them are already commenced. Canada will have a thousand miles of railroad in four or five years.

In *several* other respects the prospects of Canada are cheering; but, with a word or two in regard to educational matters, those papers will come to a close. The number of common schools in Upper Canada is a little over five thousand, and they are supported at an expense of about four hundred thousand dollars. Besides these, are something like two hundred and fifty private schools; about sixty academies and grammer schools; an excellent normal school, located at Toronto; at least half a dozen theological institutions; and several colleges. Lower Canada boasts of nine colleges. In schools of a lower grade she makes a poor comparison with Upper Canada, not having more than two-fifths as many. Those in Upper Canada are slowly progressing towards the "free" system, and will no doubt be thus established in a few years. Though sadly deficient in school libraries, the people of the Province are becoming sensible of their importance, and are making preparations for their more common introduction.

HISTORICAL RECORDS.—In every town there are records stored away in public and private places, which, if collected, collated and arranged, would furnish many interesting items of useful information.

Selected for Moore's Rural New-Yorker.

### THE SILVER BIRDS NEST.

[FOUNDED on the singular incident of finding the nest of a Hanging-Bird, in a Sycamore tree, formed entirely of silver wires plucked from a soldier's epaulette.]

A stranded soldiers epaulette,
The waters cast ashore;
A little wing'd rover met,
And eyed it o'er and o'er.'
The silver bright, so pleas'd her sight,
On that lone, idle vest;
She knew not why, she should deny
Herself a silver nest.

The shining wires she picked and twirled,
Then bore it to her bough,
Where on a flowery twig 'twas curled—
The bird can show you how.
But when enough of this bright stuff,
The cunning builder bore,
Her house to make, she would not take
Nor did she covet more.

And when the little artisan
With neither pride nor guilt,
Had entered in her pretty plan,
Her resting place had built,
With here and there a plume to spare
About her own bright form,
Of these, inlaid with skill, she made
A lining soft and warm.

But do you think, the tender brood
She fondled there and fed,
Were prouder when they understood,
The sheen about their bed?
Do you suppose, they ever rose,
To higher powers possessed,
Because they knew, they peeped and grew,
Within a silver nest?

11th mo., 18th, 1846. H. F. GOULD.

### IMPORTANT WANTS.

"WANTED—A young man of industry, ability and integrity, &c., &c."

THIS meets our eye daily in the column of "Wants," and it is true as the Pentateuch. Wanted? Of course they are—*always* wanted. The market can never be overstocked; they will always be called for, and never quoted "dull," or "no sale."—Wanted for thinkers—wanted for workers—in the mart, on the main, in the field, in the forest. Tools are lying idle for want of a young man; a pen is waiting to be nibbed; a tree to be felled; a plow to be guided; a village to be founded; a school to be instructed.

They talk about staples and great staples. Honest, industrious, able young men are the great staple of this world of ours.—Young man! you are wanted, but not for a doctor. No, nor a lawyer. There are enough of them for this generation, and one or two to spare. Don't study a profession, unless it be the profession of brick laying or farming, or some other of the manual professions. Don't measure tape if you can help it. It's honorable and honest, and all that, but then you can do better. Of all things, don't rob the women.—It's *their* prerogative to handle silks and laces, tape and thread. Put on your hat, then, like a man, don an apron, and go out doors. Get a good glow on your cheeks, the jewelry of toil upon your brow, and a good set of well developed muscles. We would go if we could, but then we were young, longer ago than we like to think, and you know when one's "old he *can't*."

Besides, if you become a Doctor, you'll have to wait—"because you haven't experience," says an old practitioner; "because you are too young," say all the women. If you are a Lawyer, and likely to rise, they'll put a weight on your head, *a la* Swiss, to keep you under, or, if you make a good argument, some old opponent, as gray as a rat, will kick it all over, by some taunt or other, because you were not born in the year one. And so it will go, until you grow tired and soured, and wish you had been a tinker, perhaps "an immortal" one, or anything but just what you are.

Be a farmer and your troubles are over, or rather, they don't begin. You own what you stand on, "from the center of the earth," as they used to say, "up to the sky;" you are independent all day, and tired, not weary, at night. The more neighbors you have, and the better farmers they are, the more and the better for you.

There's one thing more, young man.—You are wanted. A *young woman* wants you. Don't forget her. No matter if you are poor. Don't wait to be rich. If you do, ten to one if you are *fit* to be married at all, to anybody that's fit to *be* married.—Marry while you are young, and struggle up together, lest in the years to come, somebody shall advertise "Young men wanted," and none to be had.

### GAMBLING IN STOCKS.

WE have seen breaches of trust, direct robberies, and deliberate forgeries, all growing out of unfortunate speculations in stocks. Men whose characters were hitherto unimpeachable have fallen before the assaults of this insidious foe to all commercial honesty and fair dealing. It may be safely set down as a rule, that no one ought to make any purchases of shares of any kind, who cannot afford to hold the same as an investment without infringing upon other business engagements. And those who are abundantly able to meet an unfavorable issue of their speculations ought to think of the pernicious example which they set to others in less favorable circumstances, and particularly to the young men in their service. If the employer takes a "turn" in stocks, the clerk will take his "turn" in imitation; and happy will it be for both employer and clerk if the result be not a broken trust and blighted hopes. The public have been made acquainted with some of the most glaring cases, but there are hundreds of others still unrevealed.—*Hunt's Merchants' Magazine.*

# For the Ladies.

### FEMALE EDUCATION.

WHY should the sister be debarred from the generous education of the brother?—he exploring the glorious fields of science, while she is mewed up to French verbs and Italian canzonettes! Is the wife to be, not the lady, but the lackey of the husband,—her mind shut out by ignorance from communion with his mind, and her heart left to rely wholly upon impulse, instead of knowledge, for its interpretations of duty! For what grander or holier purpose under heaven does a human being need knowledge, than for the training of childhood? Why should the mother be less replenished with knowledge than the father, or less disciplined in all her faculties for the investigation of truth? Does the preparation of soils for the production of crops require more science than the change of those crops into such forms of food and raiment as best promote health, strength, beauty and longevity; or do the "young" of the stable and sheep-fold need a more intelligent nurture than the immortal plants of the nursery; and, of all our instincts, what instinct can profit more by a wise culture than the maternal? If mathematical studies clip the wings of a too adventurous fancy, and make imagination sober, who needs their corrective influence so much as those who are charged with possessing a too adventurous fancy, and a less temperate imagination?—If classical studies discipline the mind, as their advocates so confidently assert, why should half the human race be debarred from the benefits of this discipline? The ability to judge of evidence, to balance probabilities, and to foresee future results from present facts, comes, and only can come, from generous cultivation of all the faculties; and does woman any less than man need this ability for her safe-conduct through all the exposures and perils of life? The rulers of our country need knowledge, (God only knows how much they need it!) but mothers need it more; for they determine, to a great extent, the very capacity of the rulers' minds to acquire knowledge and to apply it. I hold it as an axiom, that the first step which a community, desiring most rapidly and certainly to improve itself is bound to take, is to improve the physical, mental and moral condition of its daughters.—*Horace Mann.*

### MARIA ANTOINETTE.

THE queen seemed to have been created by nature, as a contrast to the king, and to excite, for ages, interest and compassion in one of those State dramas, which are incomplete without the sufferings of a woman. Daughter of Maria Theresa, her life had commenced in the storms of the Austrian monarchy. She was one of these children which the Empress held by the hand, when, presenting herself as a suppliant before her faithful Hungarian subjects, they exclaimed, "Let us die for our King Maria Theresa!" Her daughter also had the heart of a king. At her arrival in France, her beauty had dazzled the whole kingdom; this beauty was still in its splendor. She was of a tall, graceful figure—a true daughter of the Tyrol. The two children she had presented to the throne lent to her person that character of maternal majesty which suits so well the mother of a nation. The presentiments of her misfortunes, and the anxieties of each day had only somewhat paled her first freshness. The natural majesty of her carriage destroyed none of her movements; her neck, rising freely from her shoulders, had those grand bendings which give such expression to attitude. You felt the woman beneath the queen, the tenderness of her heart under the majesty of her destiny. Her light brown hair was long and silky, her forehead high and slightly swelling, her eyes of that clear blue which recalls Northern skies, or the waters of the Danube; her nose aquiline, the nostrils open and distended with emotion—a sign of courage; the mouth large, the teeth dazzling, Austrian lip, that is to say prominent and full, the contour of her countenance oval, her physiognomy changing, expressive, full of emotion, her whole countenance clothed in that indescribable splendor which sparkles in the glance, glows in the shadows and reflections of the flesh, and surrounds all with a halo similar to the warm and colored vapor in which objects bathed with sunshine seem to swim—the highest expression of beauty, which gives to it the ideal, renders it living, and changes it into attraction, together with all these charms, a soul-thirsting for affection, a heart easily moved, and only asking for a resting place, and a smile pensive and intelligent. Such was the unfortunate Maria Antoinette as a woman, a mother, and a queen.

SEAMSTRESSES.—In London, there are now thirty-three thousand needle-women living but one degree above the starvation point, who with perpetual toil can earn only from two and a half to four and a half pence per day, and thus compelled to pass their lives in a hand-to-hand struggle with death! Out of a late meeting of twelve hundred of these, it was found that ninety-eight had earned but one shilling during the preceding week, eighty-two only one shilling and sixpence, and only five had so much as six shillings. In several of our Atlantic cities, the proportion of suffering women is almost as great, and they live as near neighbors to famine. At the same time, the rich and fashionable give a thousand dollars or two thousand dollars an evening to Fanny Ellsler or some other queen of the cyprians.—And, what is worse than this, man takes advantage of the famine he causes, to corrupt the virtue he contemns.—*H. Mann.*

# Sunday Reading.

[From the New York Evening Post.]

### THE CHILD'S GARDEN.

BENEATH the budding lilacs
A little maiden sighed—
The first ower in her garden
That very morn had died.

A primrose tuft, transplanted,
And watered every day,
One yellow bud had opened,
And then it pined away.

I thought, as that child's sorrow
Rose wailing on the air,
My heart gave forth an echo,
Long bound in silence there.

For though time brings us roses,
And golden fruits beside,
We've all some desert garden
Where Life's first primrose died!

### THE GRACE OF GOD ILLUSTRATED.

A CLERGYMAN once represented the conduct of awakened sinners towards God's offers of gratuitous salvation, thus:

A benevolent and rich man had a very poor neighbor, to whom he sent this message—"I wish to make you the gift of a farm."

The poor man was pleased with the idea of having a farm, but was too proud to receive it as a gift. So he thought of the matter much and anxiously. His desire to have a home of his own was daily growing strong, but his pride was great. At length he determined to visit him who had made the offer. But a strange delusion about this time, seized him, for he imagined that he had a bag of gold. So he came with his bag, and said to the rich man, "I have received your message and have come to see you. I wish to own the farm, but I wish to pay for it. I will give you a bag of gold for it."

"Let us see your gold," said the owner of the farm.

The poor man opened his bag and looked, and his countenance was changed, and he said—"Sir, I thought it was gold, but I am sorry to say it is but silver; I will give you my bag of silver for your farm."

"Look again; I do not think it is even silver," was the solemn but kind reply.

The poor man looked, and as he beheld, his eyes were farther opened and he said—"How I have been deceived. It is not silver, but only copper. Will you sell me your farm for my bag of copper? You may have it all."

"Look again," was the only reply.

The poor man looked, tears stood in his eyes, his delusion seemed to be gone, and he said—"Alas, I am undone. It is not copper. It is but ashes. How poor I am! I wish to own that farm, but I have nothing to pay. Will you *give* me the farm?"

The rich man replied—"Yes, that was my first and only offer. Will you accept it on such terms?"

With humility, but with eagerness, the poor man said—"Yes, and a thousand blessings on you for your kindness."

The fable is easily applied. Mather has well expressed the difference between grace and merit in a few words: "God was a God to Adam before he fell, but to be a God to sinners, this is grace. He was a God to Adam, in innocency, by virtue of the covenant of works; but he is not a God to any sinner, but by the way of free grace."—*Dr. Plumer.*

### FATE OF THE APOSTLES.

St. Mathew is supposed to have suffered martyrdom, or was slain with a sword at the city of Ethiopia.

St. Mark was dragged through the streets of Alexandria, in Egypt, till he expired.

St. Luke was hanged upon an olive tree in Greece.

St. John was put in a cauldron of boiling oil at Rome, and escaped death! He afterward died a natural death at Ephesus, in Asia.

St. James the Great was beheaded at Jerusalem.

St. James the Less was thrown from a pinnacle or wing of the temple, and then beaten to death with a fuller's club.

St. Philip was hanged up against a pillar, at Hierapolis, a city of Phyrgia.

St. Bartholomew was flayed alive by the command of a barbarous king.

St. Andrew was bound to a cross, whence he preached to the people till he expired.

St. Thomas was run through the body by a lance, at Cormandel, in the East Indies.

St. Jude was shot to death with arrows.

St. Simeon Zealotes was crucified in Persia.

St. Matthias was first stoned and then beheaded.

### THE LITTLE BOY WITH A STRAW HAT.

A CRIPPLED beggar in a large city was striving to pick up some old clothes that had been thrown him from a window, when a crowd of rude boys gathered around him, mimicking his awkward movements, and hooting at his helplessness and rags. Presently another noble little fellow came up, and hastily pushing thro' the crowd, helped the poor crippled man to pick up his gifts, and fasten them in a bundle. Then, slipping a piece of silver into his hand, he was running away, when a voice far up above him said, "Little boy with the straw hat, look up."

He did so, and a lady, leaning from an upper window, said earnestly, "God will bless you my little fellow. God *will* bless you for that." That lady was the wife of a man so distinguished among the great men of this world, that every one of those boys would have been proud to obtain her approbation; and when she wrote down his name as one she wished to remember, he felt more than paid for all he had done.

MOORE'S RURAL NEW-YORKER.

ROCHESTER, DECEMBER 24, 1853.

## SPECIAL NOTICES.—TO AGENTS, &c.

☞ AGENTS.—Any person so disposed can act as agent for the RURAL NEW-YORKER,—and all who remit according to terms will be entitled to premiums, &c.

☞ THE RURAL is published strictly upon the CASH SYSTEM—sent no longer than paid for—and all orders should be in accordance with terms.

☞ OUR *lowest* club price is $1,25 for any number of copies over 20—and $1,50 under that number, unless a full club of twenty is obtained.

☞ IN making up clubs for the RURAL, the Wool Grower and Stock Register can be added at 35 cts. a copy, which is the lowest club price.

☞ AGENTS, and those remitting for clubs, will please send Bank Bills or Drafts on New York, instead of Checks on local banks.

☞ IN writing us please be particular to give your P. O address correctly—the name of your Post Office (not Town,) County, and State.

☞ THOSE wishing their papers changed from one address to another, should give the names of both Post Offices.

☞ EXTRA numbers of the RURAL will be forwarded to all disposed to aid in augmenting its circulation.

## Close of Volume Four.—The Future.

This number closes the Fourth Volume of the RURAL, and our contract with a majority of its subscribers—all whose subscriptions expire with the year and volume. According to our published terms, a renewal of subscription is necessary to insure the continuance of the paper. Those who would secure the early and complete numbers of the new volume—(we take it for granted that each has already decided to subscribe again, or some member of his family saved him the trouble)—should renew without delay, by calling upon the nearest agent, joining or forming a club, or remitting separately. We trust every friend of the paper will do what he can consistently toward augmenting its circulation and usefulness in his own neighborhood and vicinity.

— In regard to the future, we have little to say in this connection—having previously announced our arrangements for the new year and volume. We may add, however, that the prospects of the paper are far more flattering at this moment, than ever before. Already its friends are sending in lists for the new year and volume—while not a day passes in which we do not receive a score of requests for specimen numbers, and promises to form clubs in places where the RURAL is comparatively unknown. Former friends and agents write us that the paper gives almost universal satisfaction, and that the number of subscribers will, in many instances, be largely increased. Under such flattering auspices, we take a temporary leave of our numerous readers—wishing each and all a "Merry Christmas" and a "Happy New Year," and hoping that we shall have the pleasure of presenting every one of them, and thousands more, on the fifth of January, 1854, the best and handsomest paper obtainable.

## A Holiday at Last!—Almost!

FOR four long years we have labored almost constantly—sometimes wearily, but always hopefully and earnestly—without a seasonable holiday during the whole period. "Christmas" and "New-Year" have usually been busy days with us—and we have even been necessitated to attend somewhat to RURAL interests on each "Glorious Fourth." But now the "good time coming" has arrived. There are fifty-three Saturdays this year—and as no one expects over fifty-two numbers in a volume—especially of such a paper as the RURAL—we are "bound" to recreate and celebrate—Editors, Printers, Clerks, and all hands! Therefore, we shall issue no RURAL next week.—This may be sad news to those who think they cannot "keep house" without a visit from our pet—but it will be all the better, and more appreciated, when it does appear—in a new dress, and with a fresh cargo! But, alas! we fear that same new dress, &c., will spoil our comfort—for is it not to be "cased" and "fitted" and all that sort of thing—occupying much of the time we ought to have for recreation? And then, our friends are already pouring in lists of new subscribers, which must be registered and "booked." Alack-a-day! At this rate when shall we find time to visit Uncle JOHN, and all the cousins—who are so sour at our "distant" behavior, and solemnly declare we think more of the RURAL than all our out-of-town friends and relatives?

— Lest some of our subscribers should be dissatisfied, we add that all will receive the full complement of papers to which they are entitled—as we count by *numbers* and not by time, or weeks. No weekly paper, we believe, gives over fifty-two numbers for a year or volume—some "resting" a week, and others commencing a new volume *before* the new year. As we wish each volume to begin with the year, we adopt the former course—and take our rest (?) now, instead of the first week in July, as did some of our Saturday contemporaries.

THE "RURAL" AS A PRESENT.—Many of our subscribers, at home and abroad, send the RURAL as a present to distant friends and relatives. For the information of all interested, and in answer to inquiries, we would state that where the paper is sent *as a present* we never charge over $1,50, and when it is sent by the getter up or member of a club, only the club price is asked, no matter where the paper is forwarded. Reader, perhaps you cannot make your distant father, son, brother, mother, sister or daughter, a more interesting or acceptable Christmas or New Year gift than a copy of the RURAL. What is your opinion?

## Congressional Summary.

CONGRESS as we said before will do nothing essential in legislation until after the holidays; unless indeed, the passing of a few resolutions and the tabling of a few others, may be deemed essential as indictive of the tone and temper of the two houses. Several resolutions have been introduced in different form, declarative of the power of the general government to lend its aid to the construction of a Pacific railroad; all of which have been tabled by very large majorities. The fact is, the numerous schemes now on foot among speculators to bleed the treasury at every vein, have thoroughly alarmed the whole country, and materially strengthened the hands of the opponents of internal improvement by government.—Witness for instance, the Pacific railroad company organized under a law of this State; and known in common language as the railroad of Chatfield & Co. To the stock of this road Buncombe subscriptions have been made of millions by men notoriously bankrupt, with the settled determination of besieging the treasury of the United States, for a loan of fifty or a hundred million in aid of their gambling and stock jobbing operations.

ROBERT G. WALKER, Mr. POLK's late secretary of the treasury, is a stockholder in the scheme to the amount of $10,000,000; and it is asserted of him that if he would pay his debts to the banks in connection with which the State of Mississippi is involved, that State would not now be laboring under the reproach of repudiation. With such a scheme on foot, and a hundred others equally outrageous, there will be presented a strong combination of leeches prepared to bleed; and Mr. GUTHRIE will need the aid of CERBERUS himself, the three-headed dog that guarded Hades' inexorable gates.

The Adamantines, with the opposition members of the Senate, have defeated the administration candidate for public printer to that body, and elected BERVELY TUCKER of the *Washington Sentinel*, one of the *hardest* even of the Adamantine democracy. The *Union* is very sure over the result. Trouble is anticipated as to the confirmation of some of the Presidential nominations.—On Monday resolutions in honor of the late Senator ATHERTON of N. H., were introduced into both houses, eulogies pronounced, and the houses adjourned over for the day.

## Judicial Infamy.

IT is well known that some time since the United States Marshall with a posse, attempted the arrest of a fugitive slave at Wilkesbarre, Pa., and that the fugitive resisted the officers, and succeeded, after being wounded two or three times by pistol shots, in making his escape.—The officer and his assistants were arrested on a charge of assault and battery with intent to kill, and were discharged from arrest on a writ of *habeas corpus* sued out before Judge GRIER, of the U. S. Supreme Court.

Of the policy or justice of the law, of the conduct of the officers in the attempted arrest, of the manly and fearless vindication of his liberty by the slave, of the propriety of the discharge by the judge, we, at this time, express no opinion. It is in regard to an extra-judicial declaration of Judge GRIER, uttered two years ago, and made public in connection with this affair of which we speak, and which if true, ought to subject its utterer to impeachment and eternal infamy.

"Before Gilbert Burrows, a Justice of the Peace in and for the county of Luzerne, and State of Pennsylvania, personally came John L. Butler, of Wilkesbarre, in said county, and being duly sworn, deposeth and saith as follows, viz:

Abont two years ago, I met Judge Grier in the city of Washington, D. C. The Judge asked me if I knew one Gildersleve, of Wilkesbarre. I replied that I did; that he was a respectable merchant, and conscientious good man. Judge Grier said to me, I hear that he harbors negroes, and gives them arms. I replied, he may harbor negroes, but I think he would not arm them.—Judge Grier then requested me to tell Mr. Gildersleve from him, *that if he, Gildersleve, should ever be brought before him he would hang him;* which message I delivered to Mr. Gildersleve on my return home. J. L. BUTLER.

Sworn and subscribed, Oct. 28, 1853, before me. G. BURROWS, Jr."

The declaration is no more or less than this; that Judge GRIER will use the tremendous power of the highest judicial tribunal in this country, to hang a man, innocent or guilty if ever an opportunity occur! The supreme judges of the United States are the only judicial officers in the country who wear robes while discharging the sacred functions of their office, and that of Judge GRIER ought to be ornamented, like those of the convicts of the *Auto Da Fe*, with devils, and serpents, and flames of fire!

HEAVY DAMAGES FOR LIBEL.—Some five years ago Mr. FRY, of New York, an opera manager, sued BENNETT of the *Herald* for libel. It appears from the evidence that BENNETT entered upon a systematic course of persecution with the avowed intention of ruining FRY, because the latter declined to advertise in the Herald; and that he, (BENNETT) has pursued this course for years in the most unrelenting and vindictive manner. The cause has been continued in court by the "law's delays" for five years; but is closed at last with a verdict against BENNETT of $10,000, damages, and the costs, which the *Tribune* says, amount to $7,000, more. Rather a costly affair this, for the editor of the Herald; and his contemporaries say the punishment is richly deserved. This is the heaviest verdict for libel ever obtained in this country.

READER, if there is no agent, or club forming in your vicinity, don't neglect to forward your own subscription to the RURAL—provided you desire to be posted properly, and preserve peace (and have a good school) in the family. Or, better still, form a club of six, ten or twenty, and secure an extra copy free, and also a premium.

## The Cash vs. Credit System.

As we have before said, the cash system is the best for both subscriber and publisher. It is the only true system for all interested—and has worked most admirably in our case, giving almost universal satisfaction. Indeed, it presents so many advantages to all parties, over the old (we had almost added "fogy") plan, that we are surprised at its not being more generally adopted—as it would be, *if paying subscribers to credit papers understood how they were taxed to cover losses by delinquents!* Gentlemen all, send us the money with your names, and the RURAL shall be forthcoming according to terms—and you shall be perfectly welcome to all the numbers forwarded after your subscriptions have expired. The RURAL must stand or fall upon its own merits, and will never intrude where not wanted—though it occasionally pays a *specimen* visit without special invitation.

— An instance in point. A few days ago we received a letter and enclosure from a gentleman in Tompkins county, requesting us to call upon a certain publisher, pay for two copies of his paper to date, and *stop them if possible.* He stated that he had previously "paid up," and requested a discontinuance, but his efforts were vain—the publisher seeming determined that himself and friend should take the paper for life! Instances are not rare in which people are saddled, and ridden too, in a similar manner. Not long ago, a city friend, on subscribing for the RURAL, to be sent for a year to a distant relative, (which many do, by the way,) remarked, substantially—"Now, stop it at the end of the year, unless I subscribe again. Once I sent a Philadelphia paper to a friend, paying for it a year, and ordering it stopped then; but they continued it for years—my friend supposing it paid for—when, finally, along came a bill of eight dollars, figured at the highest rates! That was cool," he added, "but I'll be blamed if it was *right* or *honest.*" And so thought his listeners. Still—but "comment is unnecessary."

## Catholicism vs. Savings Banks.

FATHER O'CALLAGHAN, the Catholic priest of Burlington, Vt,, in a pamphlet published sometime since, denounces those valuable and philanthropic institutions, the savings banks, in most unmeasured terms. Among other things, he says: "The devil has entered some people in these latter days, that they think, or pretend, that faith only, in Christ Jesus, justifies them, apart from their own works and deservings, and that they may give full scope to their love of money. The serpent having thus corrupted their hearts, throws out a fresh bait to them *by the invention of savings banks* about the year 1812, in England. Having for two hundred years in this net the rich, by means of banks, funds and stocks, he seeks to haul in by the new invention the souls of the poor."

The *Congregationalist* suggests that the cause of the Rev. gentleman's invective is the fact that "the dollars which drop from the Irishman's purse upon the counter of the savings bank, and which go toward the comfort of his future infirm hours, do not drop into the hand of father O'Callaghan." "Any man, be he priest or layman, Catholic or Protestant, who denounces well conducted saving's banks, and discourages the laborer from reserving a portion of his earnings to deposit therein, is either a fool or a scoundrel, and deserves to be branded through the community as a foe to his race!

THE WEATHER.—Winter is upon us in good earnest at last, unmistakably. *Blue noses* are not now confined exclusively to the British provinces, but have invaded in a kind of filibustering expedition the United States. Will Queen Victoria please to issue a proclamation reclaiming them from their lawless expedition? Snow has fallen here to the depth of 8 or 10 inches, "and all goes merry as a marriage bell." The very elements are becoming *Adamantine*, and the *Softs* are likely to have a severe time of it—apples and potatoes included.

The canal itself has become rebellious, for the Commissioners had fixed upon the 20th to shut it up against further navigation; whereupon the refractory ditch took the matter out of the hands of lawful authority, and shut itself up on Saturday night. The Commissioners, very justly indignant at such a spirit of insubordination, drew the water off on Tuesday.

BACK VOLUMES, NUMBERS, &c.—In answer to inquiries on the subject, we would state that we cannot furnish back volumes of the RURAL, the demand having each year far exceeded our calculations. Last year our clerks saved a few extra copies, by placing them aside with regular files; and this year have managed to keep in like manner, some fifty copies of each number for binding. Hence we shall be able to furnish a few bound copies of this volume. We have the regular numbers of this year from 1st of July last—and copies of many of the numbers of the present and preceding volume, from which missing numbers will be supplied to subscribers, *gratis.*

We can furnish all the back volumes of the WOOL GROWER AND STOCK REGISTER—price bound, 50 cents each. The first four volumes, bound in paper, and the fifth (now publishing) in numbers, for $2.

INDIA RUBBER FOR RAILROADS.—The Albany Atlas says:—The New York Central Railroad Company have assumed the expense of laying one or two miles of Rubber under their tracks, intended to obviate the present destruction of rails and machinery, and to do away with the noise attendant upon the motion of trains. If the use of rubber at a reasonable expense, will effect both the objects sought, it is difficult to say who would be most pleased—the companies by the saving of machinery and cars, or the passengers by the absence of noise and jarring.

## LIST OF PATENT CLAIMS

ISSUED FROM THE UNITED STATES PATENT OFFICE

[For the week ending December 13.]

James Cochrane, of New York, N. Y., for improved hydrant-valve.

John Comstock, of New London, Conn., for improvement in bit stocks of braces.

Norman Cook, of New York, N. Y., for mode of fixing the colors of cotton umbrellas.

Carmi Hart, of Bridgeport, Conn., for improvement in car wheels

Jos. Nock, of Philadelphia, Pa., for hinge for inkstand covers.

F. S. Hotchkiss and C. W. Blakeslee, of Northfield, Conn., for improvement in spring-clamps for clothes-lines.

Melvin Jinks, of Wayland, N. Y., for improvement in turnkeys.

Wesley E. Merrill and Freeman Tupper, of Nashua, N. H., for improvement in bedstead fastenings.

Jos. E. Nessen, of Buffalo, N. Y., for improvement in harvesters and binders. Patented in England August 27, 1853.

Chas. Page, of North Danvers, Mass., for improvement in sectional bedsteads.

Joseph Sawyer and Lyman Clark, of South Royalston, Mass, for improvement in peg rasps.

Jno. Wilmington, of South Bend, Ind., for improvements in machines for cutting sheet metal.

Joel R. Bassett, of Cincinnati, O., assignor to James B. Williams, of same place for improved pump valves.

Jno. Butter, of Buffalo, N. Y., assignor to James Sully and Jno. Butter, of same place for improvement in machines for moulding brick.

THE PREMIUM MULES OF KENTUCKY.—Three pair of mules, which have been exhibited and taken premiums and received very high praise and flattering notices of the press at Louisville, Lexington, Paris and Danville, Ky., will arrive in New York in a day or two, and will probably be publicly exhibited. as two pair are for sale, the other pair having been engaged by Mr. Jackson, iron founder, at $1,000, if they answer the description given by the papers and private parties. These mules are three years old, and not fully grown, but are now over 17 hands high, and we suppose from what we have read of them, are the best three pairs of mules ever hitched up together. They are owned by G. J. Salter, one of the largest mule drivers in the South-Western States. We understand that he is bringing them here more as a matter of pride and show than with a hope of profit. His object is to let the New Yorkers see what Kentucky can produce in this kind of stock, and perhaps by introducing such animals into our streets, open a market for them here which may be profitable hereafter.—*N. Y. Tribune.*

A BRAVE-HEARTED BOY.—A friend has furnished us with the particulars of a thrilling incident that happened in this county. On Sunday, the 6th of this month, two of the sons of John Hammond, who lives about nine miles southwest of Greensborough, were playing about a shaft sunk for mining purposes, when the youngest, about six years old, lost his balance and pitched head foremost into the shaft forty feet deep. His brother, twelve years old, immediately let down the bucket, descended by the rope and timbers, gathered up his brother, who had his leg broke by the fall, put him in the bucket, ascended the rope, drew up his brother and carried him on his back home something near a quater of a mile, before he even called for help. The little sufferer is doing well.—*Greensborough Patriot.*

POSTAGE IN ENGLAND.—Letter postage is cheap in England, and the number of letters transmitted by mail has amazingly increased since the cheap system was adopted. It is stated that there now pass daily through the post office, 156,000 letters, and 40,000 papers more than in 1846; the number of letters per week 7,700,000—more than 400,000, 00 in a year. But even now John Bull grumbles at the rate of postage, and gravely puts the following puzzling query:—Why is it that a passenger and his baggage, weighing together from 200 to 300 pounds, can be carried from London to Paris for £3, and that a similar weight of letters cannot be conveyed over the same ground for less than £1,386 13s. 4d?

MRS. BLOOMER, in the last number of her journal, *The Lily*, says:—"Our husband having purchased an interest in *The Western Home Visitor*, published at Vernon, Ohio, and determined upon removing to that place forthwith, we, as a true and faithful wife, are bound to say in the language of Ruth—'where thou goest I will go;' and so before another number of the *The Lily* reaches its subscribers we shall, if all is well, have settled in our western home."

THE Supreme Court of Indiana has decided that portion of the liquor law submitting the question of "license or no license" to a vote of the people, to be unconstitutional. The effect of this decision will be to permit all who may give the required bond to deal out liquor in quantities to suit purchasers.

☞ The ladies who went up on the Lake Shore Road on Thursday week, evinced a proper spirit of indignation at the destroying spirit which has been rampart there for a few days past.—When they arrived at Erie they would not even eat a cracker there, and refusing to ride round the break in Erie wagons, they walked the whole distance.

☞ The property on Broadway and the south corner of Courtland st., fifty feet front by one hundred, has been leased at $8,000 per annum for fifteen years, the lessee to put up a building costing $50,000, to revert to the owner of the ground on the expiration of the lease. A bonus of $100,000, has been offered for the lease, and refused.

☞ Dr. Cutler, of Knoxville, and one of his daughters, and D. S. Jolly, were arrested on Wednesday last, at Corning, charged with counterfeiting. Two or three other persons, were arrested on the same charge.

☞ On the evening of the 30th ult., Chas. C Williams, 3d Assistant Engineer of the Arctic, while on duty in the engine room, came in contact with the starboard-side lever, and was instantly killed.

☞ On Saturday evening, on the Old Colony Railroad, the draw at Nepunset bridge was left open, when a powerful locomtive, with tender and two baggage cars, went through. No lives lost.

☞ The convict labor in the Clinton County State prison, has been let to the Messrs. Kingslands, citizens of Keeseville. The prisoners will be principally employed in the manufacture of iron

☞ The New York Herald states that it has received propositions from the Tribune for an advance of the price of these sheets to three cents a copy instead of two.

## THE MARKETS.

ROCHESTER, Dec. 21.—Prices have not essentially varied since last week. Flour is selling at $7@7,25.—Wheat $1,57 and supply light.

Dressed meats are active, and private families are obtaining more liberal supplies in consequence of the cold weather, which allows it to be kept longer fresh. Pork brings $5@5,50. Beef $4,25@5,25. Poultry at last quotations, and so of other things.

NEW YORK, Dec. 19.—Flour, straight State $7; Canadian $6,87@7; Western $7@7,06.

GRAIN—Wheat scarce—red Southern $1,62; best white do. $1,70; white Canadian $1,74. Oats dull and heavy at 49@53c. Barley, two-rowed, 52c. Corn plenty and lower at 76c to 82c.

PROVISIONS—Dressed hogs $6. Lard 9½@10¾. Butter State dairies 16@19c. Cheese 7½@9½c.

ALBANY, Dec. 19.—Nothing doing in Flour. Wheat, white Genesee sold at $1,80. Rye $1. Corn 75@76c for new, and 82@83c for old. Oats 45@46c. Dressed hogs sold at $6@6,25 for ordinary, and $6,51 for extra.

BUFFALO, Dec. 19.—Market quiet. The only wholesale transactions are 300 bbls. of Wisconsin flour at $6,12½ and 200 bbls. Michigan at $6,25. No sales in grain.

## THE CATTLE MARKETS.

NEW YORK, Dec. 11.—Beeves—Prices range 7 to 10c per lb. Cows and Calves sold at from $30@45. Veal Calves 4@7c. Sheep and Lambs took a wide range, say from $3@13. Hogs sold at 5c, live weight.

BRIGHTON, Dec. 15.—Beef cattle declined in price—ranging from $5,25 to $7,25 Working oxen, $68 to $115. Cows and calves, $20 to $12. Stores—Two year old. $12@18; three year old, $21@33. Sheep—Store sheep $2; those to slaughter $2,50 to $7. Swine—dull; sales 5@6¼; at retail from 5½ to 7½c.

CAMBRIDGE, Dec. 14.—Cambridge markets do not vary essentially from the Brighton.

## THE RURAL FOR 1854.

### Rare Inducements to Agents and Others.

As heretofore announced, the Fifth Volume of the RURAL NEW-YORKER, for 1854, will be materially improved, the Proprietor having determined that it shall in all respects excel either of its predecessors. and all contemporary journals. He also offers greater inducements than ever before to each and all disposed to act as agents or form clubs. The attention of all interested is respectfully invited to the following list of very liberal

### PREMIUMS FOR SUBSRCIBERS!

1. SEVENTY-FIVE DOLLARS, IN CASH, to the person sending us the greatest number of yearly subscribers (six month subscriptions to be counted proportionally) to the RURAL NEW-YORKER—remitting payment according to our club terms—previous to the 15th of April, 1854.

2. FIFTY DOLLARS, IN CASH, to the person sending us the second largest number, as above.

3. THIRTY DOLLARS, IN CASH, to the person sending us the next (third) greatest number.

4. TWENTY DOLLARS, IN CASH, to the person sending us the next (fourth) greatest number.

5. FIFTEEN DOLLARS, IN PLATE OR BOOKS, to the person sending the next (fifth) greatest number.

6. TWELVE DOLLARS, IN PLATE OR BOOKS, to the person sending the next (sixth) greatest number.

7. TEN DOLLARS, IN PLATE OR BOOKS to the person send the next (seventh) greatest number

### JANUARY PREMIUMS!

1. TWENTY-FIVE DOLLARS, IN CASH, to the person sending us the largest number of subscribers. according to our terms, previous to the 1st day of January, 1854.

2. FIFTEEN DOLLARS, IN CASH, to the person sending the second largest number, as above.

3. TEN DOLLARS. IN CASH, to the person sending the third largest number as above.

☞ Persons competing for these Premiums must mail their remittances on or before the 31st of December. They are not excluded from the April prizes, so that one person may secure *One Hundred Dollars, in Cash.*

[In order to give Subscribers, Local Agents and Post-Masters a fair and equal chance, traveling agents, post-riders and citizens of Rochester are excluded from competition for any of the above Premiums.]

### SPECIFIC PREMIUMS.

In order to reach and reward EVERY ONE who may lend a portion of influence in support of the RURAL NEW-YORKER, we offer to those who do not compete for either of the preceding prizes, the following liberal gratuities:

1. FIVE DOLLARS, IN CASH, or a copy of WEBSTER'S UNABRIDGED DICTIONARY, (or $6 in Ag'l Books,) to EACH PERSON sending payment for FIFTY or more yearly copies (six month subscriptions proportionally,) according to our terms, previous to the 15th of April, 1854.

2d. FIVE DOLLARS, in Books, or four extra copies of the RURAL, to every person remitting payment for FORTY or more subscribers, as above.

3d. THREE DOLLARS, in Books, or a handsomely bound volume of the RURAL for 1853, to every person remitting for THIRTY subscribers.

4th. To every one remitting for TWENTY copies, ($25,) we will give an extra copy of the RURAL, and four (the present and three past) volumes of THE WOOL GROWER AND STOCK REGISTER—or, if preferred, an extra copy of the RURAL and $1,50 in Books.

5th. To every one remitting for TEN copies, ($15,) an extra copy of the RURAL and three volumes (past or present) of the WOOL GROWER—or, instead of vols. W. G., $1 in Books.

6th. To every one remitting for six copies, ($10,) an extra copy of the RURAL, either volume of the Wool Grower, and a bound Vol. of Gen. Farmer for 1848 or '49.

7th. To every one remitting for THREE copies ($5,) either volume of the Wool Grower, *and* a bound volume of Genesee Farmer for 1848 *or* '49.

8th. To every person remitting for ONE copy, ($2,) we will give a copy of either volume Wool Grower, *or* the Farmer for 1848 or '49, as preferred.

All competitors for premiums are expected to adhere strictly to the following

### TERMS IN ADVANCE:

TWO DOLLARS A YEAR. Three Copies, one year, $5—Six Copies for $10—Ten Copies for $15—Twenty Copies for $25, and any additional number at the same rate. Names of subscribers written on the papers if desired, however large the club. Club papers sent to different offices if desired.

☞ Specimen numbers, &c., furnished free to all disposed to compete for the Premiums, or who desire to extend the circulation of the NEW-YORKER. Subscription money, properly enclosed, may be mailed at our risk, if addressed to D. D. T. MOORE,

November, 1853. ROCHESTER, N. Y.

**TO PRINTERS.**—TYPE FOR SALE.—The Type upon which this paper is now printed—consisting of about 550 lbs. Bourgeois, 250 lbs. Brevier, and 150 lbs. of Nonpareil—will be sold at a bargain. Also, other material—such as leads, dashes, &c. The type is not half worn, as may be seen from it impression in this number.

**HOLIDAY PRESENTS.**

STARR'S PREMIUM Piano-Fortes are a first rate article for that purpose, as numbers who bought them last year will testify I have on hand from 10 to 20 finished instruments, beside 50 to 80 others constantly in process of construction; and shall at all times be happy to supply those who (AFTER EXAMINATION HAD, TO DO WHICH ALL ARE INVITED,) believe them to be the best in market. Every instrument will be warranted to give entire satisfaction, at 47 Main street, up-stairs. FREDERICK STARR

Rochester, Dec. 20, 1853. 208-2t*

**FANNY FERN'S NEW BOOK FOR THE HOLIDAYS.**

20,000 *Ordered in Advance of Publication!*

**Will be Ready Monday, December 5th, 1853.**

LITTLE FERNS for Fanny's Little Friends, by the Author of "Fern Leaves." One elegant 16mo, 300 pages—6 Illustrations. Price 75 cents. The same—gilt edge $1,00.

Copies sent by mail, post paid, on receipt of price.

Published by

DERBY & MILLER, Auburn, N. Y.

DERBY, ORTON & MULLIGAN, Buffalo.

For sale by all Booksellers throughout the United States and Canadas. 206-3t

# Poetical.

## MIDNIGHT RHYMES.

BY BARRY CORNWALL.

O! 'tis merry when stars are bright
To sing, as you pace along,
Of the things that are dreamt by night,
To the motion of some old song;
For the fancy of mortals teems
Whether they wake or sleep,
With figures, that shine like dreams,
Then—die in the darkness deep.
O! merry are Christmas times,
And merry the belfry chimes,
But the merriest things
That a man e'er sings
Are his Midnight Rhymes.

'Tis night when the usurers feel
That their money is thrice repaid;
'Tis night when adorers kneel,
By scores to the sleeping maid;
'Tis night when the author deems
That his critics are all at bay.
And the gamester regains in dreams
The gold that he lost by day.
O! merry are Christmas times, &c.

At night, both the sick and the lame
Abandon their world of care;
And the creature that droops with shame
Forgetteth her old despair!
The boy on the raging deep
Laughs loud that the skies are clear;
And the murderer turns in sleep,
And dreams that a pardon's near!
O! merry are Christmas times, &c.

At night all wrongs are right,
And all perils of life grow smooth;
Then why cometh the fierce daylight,
When fancy is bright as truth!
And hearts 'tween the earth and the moon
Recover their hopes again:
Ah—'tis pity so sweet a tune
Should ever be jarred by pain!
Yet—merry are Christmas times, &c.

# Rural Sketch Book.

[Re-written for Moore's Rural New-Yorker]

## SANTA CLAUS:
### OR
### A STORY OF CHRISTMAS EVE.

BY EDWARD WEBSTER.

"A BLESSING on Santa Claus and a merry Christmas to you!" exclaimed PETER JENKS, an intimate friend of mine, bouncing into my room one Christmas morning before I was up; "a blessing on St. Nick and a merry Christmas to all mankind, say I!"

PETER JENKS, was a Benedict of three years standing, and was blessed with one of the sweetest and best of wives, who exercised an absolute control over her husband—ruling him, however, not with a rod of iron, but with the more potent sceptre of gentleness and love. PETER had lived to be something of a crusty bachelor before the mischievous young archer had deigned to make a target of his heart; but now the feat had been fairly accomplished, the arrow driven home, and the ancient victim offered up as fitting sacrifice upon the altar of Hymen.—Since this great change had taken place, my friend had manifested a disposition, consonant to the feelings of all good husbands, namely, to spend his evenings at home, enjoy the comforts of his own fireside, and instead of meeting his quondam friends, at the club-room, or the theatre, he now and then invited them to take a social game of backgammon beside his own comfortable grate. He was not in the habit of going into ecstacies, and his excitement on this occasion somewhat surprised me.

"I have come over," he continued, "to invite you to our house this evening, for the purpose of meeting a few mutual friends; and also to tell you of a personal interview I had last evening with the veritable St. Nicholas himself. I was sitting beside the grate, on which was glowing brightly a mass of burning coal, having not long before completed the perusal of the evening papers. My wife was quietly engaged setting matters to rights previous to retiring, for the hour was something late; and I was gazing vacantly into the glowing embers before me, tracing grotesque images in the burning mass, when a sound reached my ear from the roof above, very much like the pawing of a tiny hoof. While I was speculating upon it, and revolving in my mind what might be the cause of the strange sound, I heard a hustle in the chimney, as if occasioned by the descent of a sweep whose dimensions were quite too large for our modern flues. The idea of thieves and robbers came into my mind, and seizing the poker, I was waiting for further developments, when a little fat man leaped down upon the hearth, puffing at a short Dutch pipe, and shaking from his garments the dust and soot which had accumulated upon them during the descent. "These new fangled chimneys," said he, "are a plague to such as me! If I was not endued with more than mortal powers, these modern improvements, as they are called, would compel me to forego my Christmas eve excursions; and then all the presents for the little ones, whose patron Saint I am, would be obliged to come to them through the commonplace instrumentality of a toy shop." So saying he seized upon a pair of woolen socks of mine, which my wife had just been darning, and had laid aside in a tiny willow basket, in which she kept her spools, and balls of thread, &c., and unfolding them, exclaimed, eyeing first them and then me with some sternness, "What are these? Not *juvenile*, are they?"

"*Not very*," I answered deprecatingly, for they themselves had grown somewhat old as well as myself. "Here is a newer pair, however, and they belong to that dear creature there, (pointing to my wife) who is my junior almost ten years."

"Pshaw!" said he, interrupting me impatiently, "I am looking for the stockings, of those younger than either of you, by a generation."

"You won't find any of that kind here," I answered exultingly. "We are contented and happy as we are, and our quiet is not disturbed by any of those amiable squallers which give a man no peace. How much more comfortable we are now, than if we had half a dozen of the 'generation' you were speaking of."

"*Half a dozen!*" he repeated, with a merry twinkle in his eye. "How many years have you been married, pray?" Is it more than *three years* last past?"

"Well," I responded somewhat tartly; "there is no necessity of going into particulars. I was only stating a general proposition."

"Hark you!" said St. Nicholas. "I know all about you and your affairs. You think a family of children an annoyance and a curse, instead of a real blessing as they are! You are a fool to think so, too, and will see your folly one of these days. I remember you only a few years ago a crusty old bachelor, railing against the female sex, and shunning one of their bright sunny faces as you would a Gorgon's head. Now you are tied to a woman's apron string, who leads you wherever she lists. She is one of earth's best, I know; and leads you gently, which is far better than you deserve, stubborn and stiff necked as you were to resist their kindly influences so long! What would you be now without a wife; and what would induce you now to return again to the lonely self-existence of which you were wont to boast so much?"

I raised my hands deprecatingly to the Saint, who did not deign to notice the appeal, but continued holding up to view a bundle of reds. "You see these *fusses*," said he; "I leave them in the stockings of refractory children; but when I come here again next Christmas eve, if I find things in the same condition they are now, I'll leave a whole bundle of them for you; and what is more, I'll send a *Lictor* to use them too!"

So saying, Santa Claus shouldered his knapsack of trinkets and vanished up the chimney to the roof, whence I heard the crack of a whip, the rattling of tiny hoofs, and a sound dying away in the distance like that of a passing breeze.

"Well, wife dear," I exclaimed, starting to my feet, "what is to be done now?"

"To be done about what?"

"About what St. Nicholas said. Did'nt you see him? Did'nt you hear him?—Din'nt you observe the awful look he gave me just now, when he went away?"

"No," she answered, "I have seen nothing, heard nothing except your hard breathing; for you have been dozing in your chair."

It was difficult for me to convince her that it was all a reality, although I insisted upon it so earnestly; and I am not exactly sure she believes it even now, notwithstanding she concurred at length in what I said, or rather ceased to argue against it; and when I spoke of the threatened visitation of the Saint next year, she said, putting her arm around my neck—

"Don't let that trouble you, dear PETER; for in the event of such a necessity, I'll borrow one of the children of sister Sue, who has just the number of half a dozen you have deprecated so often."

"So now that difficulty is off my mind," continued my friend Peter, after he had finished his narration, "come over this evening, and you shall receive such a welcome at our hands as a contented and happy man can give to one of his best friends."

GREAT FEATS IN DIVING.—Among the remarkable feats of diving lately performed in Bath, England, it is mentioned that a seaman dove down with a pair of laced boots on his feet and a pair of Wellingtons in his hand, but returned to the surface wearing the Wellingtons and carrying the laced boots. He afterwards dove with a jacket and a pair of trowsers in his hand, dressed himself while under water, and on returning to the surface, took a pipe filled with tobacco, struck a light, and smoked while floating on his back.—*Scientific American.*

## HIRING A BRAKEMAN.

Many years since, soon after the opening of the Norwich and Worcester Railroad, a stout looking innocent, about six feet in his stockings, with thews and thighs to match, stood in the depot at Worcester, gazing with evident admiration at the "bran new" cars and snorting locomotive, which had just arrived at the station. A roguish citizen who stood near him, watched his undisguised wonder attentively, and drawing near, entered into conversation with him.

He was "down from Vermont arter work, and wanted to get a chance on one o' these railroads."

"Do?" said the joker, "why don't you go and see the Superintendent?"

"W-a-a-l, I would of I knew whar to find him."

"Oh, well, come along with me—I'm going right by his office."

And accordingly off went the twain, straight to the store, where that demurest of all hoaxers, Jem B. stood like a patriarchal spider, waiting for an unsophisticated human fly that might flounder in his net.

"Ah!" said the wag who acted as pilot, "*there* he is. Here's a young man, Mr. B., who wants a berth on the road, as brakeman"

Jem was posted immediately.

"Well, I don't know; we've had a great many applications for the post, and in fact, I had engaged a man to go out upon this train, but as he was not up to his engagement, I will talk to you. Have you been accustomed to railroading?"

"W-a-a-l, no I hain't, but I guess I could learn it mighty soon What's the wages?"

"Thirty-six dollars a month and clothes."

"W-a-a-l, Mister, I'm ready, ef you say so, to take right hold"

"Very well, then, I'll send you out on this train; but I wish to put you on your guard, with reference to one matter, and that is, there is a set of troublesome fellows continually hanging round the train, pretending to belong to the road. Some of them may interfere with you; if they do, put them off the cars at once—tell them I put you on the train, and take no orders or impudence from any of them. As to your duties—when you hear one whistle, screw on your brakes; if two alarms are sounded, screw them down hard! and then when three are given, loosen the brakes for the train to go on. I'll go with you and put you on the train. You return here to-night, and then I will see about your boarding place."

Accordingly, down they went to the station, and there the pretended superintendent showed his employee the brakes and mode of using them, leaving him with a fresh injunction to "knock down any one who attempted to interfere with him."

Before many minutes the Vermonter had a customer. The whistle sounded and on went the brake.

"What are you doing there with that brake?" shouted a legitimate brakeman; jump off there in a hurry, if you don't want your head broke."

Jonathan looked at his rude interrogater (a small man) with contempt, but disdained to reply.

"S-h-ree! a-h-ree! who-e-ree!" went the whistle, and the new brakeman screwed away for life, until snap! went the chain.

This was the cup too much, and off went the infuriated little brakeman for assistance.

"What are you doing there?" asks the conductor, who returned with the man; and stepping upon the platform, placed his hands upon Jonathan, with a view to a summary ejectment. A brief struggle ensued, at the termination of which, the conductor lay prostrate upon his back, with the small brakeman's head jammed between his legs.

"Come on, ye darned heathins!" shouted Jonathan, now fairly aroused; "come on—I'll learn ye to cut up yer didos around me! I'm hired, I be; Mr. —— hired me for this bizniss, and of I don't learn ye to tend to yer own bizness, It'll be coz yer stouter'n I be."

A fresh struggle ensued between our hero and some half dozen others employed on the train, who had gathered around, and Jonathan was finally overpowered, when an explanation took place, and the Superintendent's "store" was sought for, but could not be found, as the incorrigible wag had not been so incautious as to make the engagement in his own store; and although he was strongly suspected as being the author of the practical joke, no proof could be had, for by a shrewd management of the face and cool assurance, aided by a different dress, he succeeded in arguing Jonathan out of his suppositions, the latter having charged him with the joke. The best part of the joke was the denouement. The actual Superintendent, hearing of the affair, and of the indomitable pluck displayed by the Vermonter, sent for him, and did actually engage him; and it is said that he now fills a satisfacto[illegible] po[illegible] t[illegible] great Western railroads.

But such jokes being serious with six-footers, Jem has been compelled to forego similar luxuries from that day to this.—*Clinton Courant*

WORK.—there is a perennial nobleness and even sacredness in work. Were he ever so benighted, forgetful of his high calling, there is always hope in a man that actually and earnestly works; in idleness alone is there perpetual despair. Doubt, desire, sorrow, remorse, indignation, despair itself, all those, like hell-dogs, lie beleaguering the soul of the poor day-worker as of every man; but he bends himself with free valor against his task, and all these are stilled—all these shrink murmuring far off into their caves.—*Thomas Carlyle.*

EXAMPLE is more forcible than precept.—My people look at me six days in the week, to see what I mean on the seventh.—*Cecil.*

## WHITE-WASHING EXTRAORDINARY.

The Rev. Jas. Williams, the well known and philanthropic missionary, so long resident in the South Sea Islands, taught the natives to manufacture lime from the coral of their shores. The powerful effect produced upon them, and the extraordinary uses to which they applied it, he thus facetiously describes:

"After having laughed at the process of burning, which they believed to be to cook the coral for their food, what was their astonishment, when in the morning they found his cottage glittering in the rising sun, white as snow; they danced, they sung, they shouted and screamed with joy. The whole island was in commotion, given up to wonder and curiosity, and the laughable scenes which ensued after they got possession of the brush and tub, baffle description. The *bon ton* immediately voted it a cosmetic and kalydor, and superlatively happy did many a swarthy coquette consider herself, could she but enhance her charms by a dab of the white brush. And now party spirit ran high, as it will do in more civilized countries, as to who was or was not best entitled to preference. One party urged their superior rank; one had got the brush and was determined at all events to keep it; and a third tried to overturn the whole, that they might obtain some of the sweepings. They did not even scruple to rob each other of the little share that some had been so happy as to secure. But soon new lime was prepared, and in a week not a hut, a domestic utensil, a war club or a garment, but what was white as snow; not an inhabitant but had a skin painted with the most grotesque figures; not a pig but what was similarly whitened, and even mothers might be seen in every direction capering with extravagant gestures, and yelling with delight at the superior beauty of their white-washed infants."

# Wit and Humor.

## ANECDOTE OF SHERIDAN.

A CERTAIN wealthy nobleman invited the dramatist to visit him during the shooting season, at his country seat. Sheridan went, but being no sportsman found it rather dull work. At length, finding himself one day left alone, he concluded to take a gun, (and fixing,) and try his luck. An attentive game-keeper proffered his services as attendant, which were peremptorily declined, determined that his want of skill should not be made the subject of remark in the servants' hall. The result of his tramp might be anticipated, and he found himself returning homeward without even a feather for a trophy, convinced of one of two things to wit: either that the gun was a very poor one, or that he did not understand its use.

Crossing a field, in the centre of which was a pond, and around which were gathered a large flock of geese, ducks, hens, &c., he noticed the farmer leaning upon the fence, watching their gambols; and was seized with an irresistible desire to try his skill upon the feathered objects of his attention. Accordingly he marched up to "Hodge," who seemed quite indifferent to his approach, and thus accosted him:

"My friend, what shall I give you for permission to discharge both barrels into the midst of that flock?"

"Wull," answered the north countryman, "ai dun know, art thou mooch iv or shot?"

"*Much of a shot.* Oh, (slightly embarrassed,) middling, only middling."

"Wull, how fur wilt thou stan' off?"

"*How far?* Oh, say about twenty yards."

"Wull, ai shood think thou migh'st giv I half a guiny."

"Half a guinea? Pretty good price: however I'll do it."

Accordingly the ground was measured, Sheridan took his stand, and, with deliberate aim, discharged both barrels, killing and wounding many more than even he had anticipated.

"Ha! ha! (he laughed, gathering up the spoils, and approaching the old farmer, who seemed quite undisturbed by the result,) you did'nt expect I should kill so many, did you?"

"Wull, noa! I carnt say as I did, but still yer knaw, *its nothing to I, yer knaw, becas they're not mine.*"

After the "shock" was over, the wit gave him an extra "half" for his shrewdness, and a five pound note for his solemn promise never to mention it, and treating the matter as unintentional, he paid the *owner*, and returned home with "a new wrinkle."

IT is characteristically related of Cuvier, that he once saw in his sleep the popular representation of Satan adv[illegible] him, and threatening to e[illegible] me!" exclaimed the philosopher, with the eye of a naturalist, and then added, "Horns! hoofs! *graminivorous!* Needn't be afraid of him!"

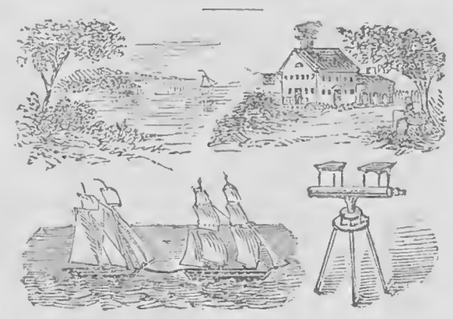
A CONNECTICUT minister having walked through a village church-yard, and observed the indiscriminate praise bestowed upon the dead, wrote upon the gate-post the following line:—"Here lie the dead, and here the living *lie!*"

FROSTY.—Mrs. Frost, who edits a paper out in Ohio, excused the absence of editorial in a late number of her paper, saying that "a *slight Frost occurred* at our place on Wednesday last!"

A GENIUS out West has just patented a machine for making sweet potatoes. He is a brother of the old gentleman who put handles on prickly pears and sold them for currycombs.

# Youth's Corner.

## ILLUSTRATED REBUS—No. 3.



☞ Answer in three weeks.

We will forward the RURAL three months, free of charge, to *each* of the first *four* persons (residing out of the city) who send correct answers to the above Rebus previous to the publication of the solution.

## MISCELLANEOUS ENIGMA.

I am composed of 27 letters.
My 2, 9, 12, is a deep vessel.
My 21, 11, 9, 9, 26, 24, is a vegetable.
My 7, 23, 6, 20, 3, is a person belonging to a secret fraternity.
My 6, 15, 23, 13, 16, is a species of stone.
My 7, 22, 27, 5, 18, denotes less.
My 1, 5, 12, 14, 2, 19, is a town in the State of New York.
My 25, 10, 4, 21, 15, 8, is a congealed substance.
My 17, 15, 8, is a kind of beverage.

My whole is a combination of persons formed for their mutual interest in the county of Seneca.

E. D. C.

Junius, N. Y.

☞ Answer in our next number.

For the Rural New-Yorker.

## PROBLEM.

A certain No. consists of three digits, which are in arithmetical progression; and the number divided by the sum of its digits is equal to 26; but if 198 be added to it, the digits will be inverted. What is the number?

B

Hunt's Hollow, Dec. 3, 1853.

☞ Answer in our next number.

## ANSWER TO ENIGMA, &c., IN NO. 50.

Answer to Illustrated Rebus, No. 1.—*America and Americans will Americanize the world.*

☞ The first correct answer to the above Rebus was received from C. L. NORTON, of Dansville, to whom we shall send the RURAL for 1854. Other correct answers were furnished, and several very queer *supposed* solutions.

Answer to Miscellaneous Enigma—*The conquest of Persia by Alexander.*

Answer to question—1, 3, 9, 27, 18.

MOORE'S RURAL NEW-YORKER.—A large quarto weekly: by D. D. T. MOORE, Rochester, N. Y. Single copies $2; much less to clubs.

Now, here is a paper after our own heart—home-like, sprightly, cordial and companionable—a paper to make its way into families and leave its impress where it goes—a true family paper, with its few professional precepts dropping as gently on the tired mind, as the dews of heaven on the sleepy earth, and nearly as refreshing. Ah, friend Rural, *you have* often come to us a true friend though sometimes a flatterer; but there is no fear of our saying too much in *your* praise. Even the little children appreciate your amiable qualities, and seldom let us see you in the wrapper.—*Prairie Farmer.*

MOORE'S RURAL NEW-YORKER.—This comprehensive and spicy journal stands at the head of its class as an Agricultural and Family newspaper. It is just the paper needed for the masses, and we are glad to learn that its circulation is quite general throughout our own and other States. This is not only complimentary to the enterprising proprietor, but speaks well for the intelligence and good taste of the public; for the paper is high-toned and scientific, admitting nothing stale or uninstructive.—May its success continue to keep pace with its merits.—*Albany Transcript.*

MOORE'S RURAL NEW-YORKER, is one of the *very best* newspapers we know of, particularly for the Farmer's family, and indeed the Mechanic's also. It is always filled with so much interesting and useful matter that we cannot help running our scissors through it for the benefit of the readers of The Fredonian, although it makes us grieve to spoil for our centre-table so handsome a sheet.—*New Jersey Fredonian.*

Independent of its being the very best agricultural paper that has ever come under our notice, its literary merits are unsurpassed. It is certainly the best and most useful paper of the kind we have ever seen.—*Pa. Whig.*

MOORE'S RURAL NEW-YORKER:
A WEEKLY HOME JOURNAL,
For both Country and Town Residents.

PUBLICATION OFFICE,
BURNS' BLOCK, CORNER STATE AND BUFFALO STS.,
ROCHESTER, N. Y.

[illegible] IN ADVANCE:

TWO DOLLARS A YEAR—$1 for six months. To Clubs and Agents as follows:—Three Copies one year, for $5; Six Copies (and one to Agent or getter up of club,) for $10; Ten Copies (and one to Agent,) for $15; Twenty Copies for $25, and any additional number, directed to individuals at the same rate. Six months subscriptions in proportion.

☞ Subscription money, properly enclosed, may be sent by mail at the risk of the Publisher.

Terms of Advertising

ONE DOLLAR per square (ten lines—100 words, or less,) for each insertion,—*in advance.* ☞ The circulation of the NEW-YORKER is much larger than that of any other newspaper published in the State, out of New York city. Only a limited space, however, is devoted to advertisements, and hence preference is given to those most appropriate—such as the cards and notices of dealers in Agricultural Implements and Machinery,—Horticulturists and Seedsmen,—Booksellers and Publishers,—Inventors, etc. All orders by mail should be accompanied with the cash.

To enable us to accommodate as many as possible, brief advertisements are preferred. Patent medicines, &c., will not be advertised in this paper on any terms.

☞ All communications, and business letters, should be addressed to D. D. T. MOORE, Rochester, N. Y.
